M. C. BRACKENBURY, *Major, R.E.,*
Offg. Deputy Secretary.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

ACQUISITION BY GOVERNMENT UNDER THE TREASURE TROVE ACT OF ARTICLES OF ARCHÆOLOGICAL INTEREST.

Cir. No. $\frac{24}{4-2}$ Arch.

Extract from the Proceedings of the Government of India, Revenue and Agricultural Department,—dated 28th March 1889.

ARCHÆOLOGY.

Read the following Resolutions recorded in the Home Department, No. 3—167-181, dated 8th November 1882, and No. 1—58-71, dated 8th June 1883.

Read also a despatch received from Her Majesty's Secretary of State for India, No. 79 (Statistics and Commerce), dated 8th November 1888.

RESOLUTION.

The subject dealt with in the Resolutions quoted in the preamble was the conservation and location in provincial or national museums of objects of archæological interest. The attention of the Government of India having been again called to the question by an enquiry from Her Majesty's Secretary of State whether more effective action cannot be taken to prevent the undue appropriation by private persons of such Indian antiquities as are worthy of being preserved in the national institutions of this country, the following instructions and suggestions are placed on record by the Government of India for the consideration of Local Governments and Administrations, who are invited to take such action and lay down such rules in connection therewith as may be deemed useful and desirable.

2. The opinion was expressed in the 4th paragraph of the Resolution first quoted, that the Government has never claimed any indefeasible rights in archæological objects, and that no such right could be asserted without legislation. This is true in regard to all objects of archæological interest of which the discovery could not be brought within the scope of the Treasure Trove Act. But it appears to the Governor General in Council that a material portion of discovered antiquities will be ascertained on enquiry to have been found in circumstances which would bring them under the provisions of Act VI of 1878. Such will be the case in respect to all ownerless antiquities of any value "hidden in the soil, or in anything affixed thereto." Statuary and remains of buildings, as well as coins, would, if buried underground, usually satisfy the required conditions, and could be classed as treasure under the definition of the Act which, as indicated by the extracts quoted in the Appendix, was intended by its framers to apply to objects of antiquarian interest discovered below the surface of the soil. Indeed the definition of treasure as framed in the original Bill was enlarged by the Select Committee for the express purpose of covering sculptures and similar antiquities, as well as coins.

3. The Treasure Trove Act permits the Government to claim the possession of treasure of which, as laid down in Section 4 of the Act, the amount or value is over ten rupees. Such "value" is not, as in Section 16, the price which the mere materials of the article found would fetch, but the market value or the price which the discovered object might, if offered for sale, reasonably be presumed to realize. The conditions under which the finder of treasure is to be

compensated in cases where the claim of Government is asserted, are described in section 16 of the Act. The value at which the treasure is to be assessed is there defined as the value of the materials only, plus one-fifth of such value. The extra price which the discovered article might realize in virtue of its value as an object of archæological interest need not enter into account. It will not therefore be difficult to secure for preservation in national institutions the most important antiquities which may be discovered in any part of British India, without inordinate expenditure.

4. The Governor General in Council now desires that the conditions under which the Government can claim articles of antiquarian interest should be made generally known, as well to the officials upon whom the responsibility rests of giving effect to the provision of the Treasure Trove Act, as to the general public. His Excellency in Council is convinced that the Local Governments and Administrations will, on every occasion on which it may be considered proper to exercise the rights conferred by the law upon the State, act with due liberality, and with proper consideration for the natural claims and expectations of the finders of treasure, and will bear in mind that the object in view will be defeated if those who may discover objects of archæological value are not induced by the prospect of a sufficient reward to make their discoveries known to the officials of Government. On the other hand, it must be enjoined on all servants of the State that it is their duty to protect national interests so far as to ascertain the particulars of any discovery which may be brought to their notice, and to report the circumstances to the proper authorities under such rules and instructions as may be laid down for their guidance by the Local Government or Administration.

5. With regard to antiquities which cannot be brought under the definition of "treasure," in the Act of 1878, and of which the location in a national institution is considered desirable, no further action can be advised than to ascertain from the finder whether he is willing to surrender the object to Government at a reasonable price.

6. Nothing in this Resolution should be held to interfere with the instructions which are contained in the Resolution No. $\frac{1}{38\text{-}71}$ of 8th June 1883 for dealing with discoveries made by Government officials, and which for the purpose of easy reference, are reprinted in the Appendix to this Resolution. The same instructions will be applicable, *mutatis mutandis*, to objects of archæological interest claimed and purchased under the Treasure Trove Act.

7. With the above remarks the Governor General in Council is content to leave the matter to the discretion of Local Governments and Administrations, but desires that any action which may be taken under this Resolution should be briefly noticed in the Annual Report of the Department of Land Records and Agriculture, as the Department which in most Provinces is connected with the administration of Museums.

ORDER.—Ordered, that the above Resolution be forwarded to the Local Governments and Administrations noted on the margin; also that a copy be forwarded to the Director General of the Archæological Survey of India, the Honorary Secretary to the Trustees of the Indian Museum, and the Home, Public Works, Legislative and Foreign Departments for information; also that it be published in the Supplement to the *Gazette of India*.

E. C. BUCK,
Secretary to the Government of India.

APPENDIX I.

Extract from the Speech, dated the 29th November 1876, of the HON'BLE MR. E. C. BAYLEY, C.S.I., *on the Treasure Trove Bill.*

The Bill further proposed to adopt one other provision which, as indicated before, was taken from the modern law of Denmark. This was to give the Government a claim, on the payment of a specified percentage in excess of the intrinsic value, to the possession of such articles as it should consider worthy of preservation in the interests of the public, as being of historic or artistic interest. This provision was inserted some years ago in the law of Denmark, and the practical result had been to make the Government collection of national antiquities in that country the finest now existing. In India such a provision would be of the very greatest value. There was much hidden treasure in India, and as he (Mr. Bayley) could say from personal knowledge, much was being perpetually brought to light in various parts of the country, and a very large proportion of it was of importance, as illustrating either the history, the social habits, the religious beliefs, or the artistic skill, of the races who inhabited the country in past times. In truth, most of the only trustworthy information which we possessed of the history of India antecedent to the Muhammadan invasion was furnished by articles, especially by coins, discovered as "treasure trove."

It was, therefore, an object to prevent articles of this kind from being lost or destroyed and the provision the Bill proposed to make was, he believed, sufficiently liberal to secure to the Government an opportunity of purchasing such articles as they might consider of real public interest. Indeed, the present Lieutenant-Governor of the Punjab, Sir Henry Davies had recently acted on this principle in a very important case, with the consent of the finder, and had preserved from destruction articles of extreme historic interest.

Extract from letter from the Government of the Punjab, No. 636, dated 19th February 1877, on the original draft of the Bill to amend the law relating to Treasure Trove.

Mr. Kipling, Superintendent of the Government School of Industrial Art at Lahore, while considering the Bill effectual as regards precious metals, notes that there is a general misapprehension of the right of Government as regards stone, sculpture, wood, terra-cotta, and objects of this description. The Lieutenant-Governor thinks that the attention of the Legislative Council should be directed to this point, as there is considerable doubt as to whether these articles would be covered by the term "Treasure" in section 3 of the Act.

Extract from the report of the Select Committee, dated 31st January 1878.

The only other changes of importance we have made, besides those in the penal clauses, will be found in the definition of treasure, and in the clause (the first of section 4), which fixes the minimum value of treasure to which the Bill applies. We have enlarged the definition of the word "treasure," as it was urged by some of those consulted that it was desirable to do so in order to secure to the public (under section 15 of the Bill) objects of antiquarian interest which would not have been covered by the definition as first framed, and, with a similar view, we have reduced the minimum value of treasure to which the Bill applies.

Extract from the speech, dated the 13th February 1878, of the HON'BLE SIR E. C. BAYLEY, K.C.S.I., *on the Treasure Trove Bill.*

* * * And finally the Bill provided means whereby the Government would be able to procure for the national museum articles of historical or archæological value which it might be desirable to secure. Special provisions had been largely introduced into legislation in Europe for this purpose, and had the effect of preserving for national use much very valuable property and articles of great historical importance which would otherwise have been destroyed. He hoped that such might also be the result in India.

APPENDIX II.

Extract from the Proceedings of the Government of India in the Home Department (Archæology),—No. 1—58-71, dated Simla, the 8th June 1883.

RESOLUTION.—In the Resolution of the 8th November 1882, read above, the Government of India, after stating the general principles which should, in their opinion, regulate the utilization and disposal of objects of archæological interest in India, requested to be favoured with the remarks of Local Governments and Administrations on the subject. The replies received show that, while the general principles enunciated in paragraphs 3 and 4* of the Resolution are accepted by all Local Governments, there is some difference of opinion as to whether the place of deposit for such objects as it is not desirable to maintain *in situ* should preferentially be the Central Indian Museum, or the Local Museum of the Province or District, where such exists. After giving the matter his further consideration, the Governor General in Council thinks that all differences of opinion will be reasonably met by compliance with the following instructions:—

I.—All discoveries of objects of archæological interest made by Government officers (whether belonging to the Archælogical Survey or not) should be reported by them to the head of the Local Government or Administration within which the discovery is made. When such a report is made, it will rest with the Local Government or Administration to issue orders for the preservation of the objects discovered *in situ*, or for their removal to a Provincial or Local Museum, where such exists, in accordance with the general principles set forth in the paragraphs marginally quoted above. Where there is no Local Museum, the object should be sent to the Imperial Museum, if the Trustees, to whom information of the discovery should be conveyed by the Local Government or Administration, should so desire.

II.—Local Governments and Administrations will furnish the Trustees of the Indian Museum with lists of all Museums in the Province and with descriptive catalogues of their contents, and will report to the Trustees all fresh discoveries dealt with under the preceding clause.

III.—The Trustees will be at liberty to arrange with Local Governments and Administrations either for the transfer to the Indian Museum of any object the Trustees may require or for acquiring it by exchange or for obtaining casts or other impressions of it, any points as to which there is a difference of opinion being referred to the Government of India for final decision. In dealing with such applications from the Trustees, Local Governments and Administrations will not fail to attach due weight to the desirability of completing any particular archæological series to which the Trustees of the Indian Museum may attach importance.

3. As regards the question of preservation *in situ* as opposed to removal to, and exhibition in, a museum, it may be observed that the great majority of the discoveries made by the Archæological Survey of India consist of the remains of buildings, massive pillars or inscribed blocks, which cannot be removed, and should for many other reasons be preserved where they stand. The case is, however, different with isolated figures, not *in situ*, especially if they are the remains of an extinct religion such as Buddhist figures, which are not unfrequently, mutilated by the people, unless they happen to have been adopted by the Brahmans as belonging to Hindoo cults. In regard to such isolated figures and to others which although not mutilated, are lying neglected about the country, it appears to the Government of India that these might with propriety be removed to some safe place of deposit, such as the Indian Museum, where they could be seen and studied by all persons who take an interest in Indian Art. The Governor General in Council desires to make it clear that he is entirely opposed to the removal of any objects which are still *in situ*, such as the monoliths attached to Buddhist *stupas* and Brahminical temples; but on the other hand, there seems no sufficient reason why isolated remains, such as a capital which is found lying without a shaft, or stray statues the original site of which is unknown, should not be removed to some museum in order to save them from future injury. To this class also belong the sculptures which have been found scattered about the Buddhist ruins of the ancient Gándhára now occupied by the Yusufzai Afghans, whose custom is believed to be to mutilate such remains, unless this is prevented by their prompt removal to a place of safety.

4. In making the above remarks, the Governor General in Council has not lost sight of the fact that it may be argued that the claim of the Government to objects of archæological value rests upon no sufficient legal or other foundation. The Government has in fact never claimed any indefeasible right property in such objects, nor could such a right be asserted without legislation. Experience has, however, shown that the arrangements necessary for securing any object of worthy removal to a museum, or for preserving it in any other way, can in most cases be made without difficulty by Local Governments or local officers. This being so, it does not appear necessary to take any legal powers of compulsory acquisition.

Director General of Railways' No. 19 (Statistical), dated the 21st February 1889, forwarding the Abstract Returns of Accidents to Trains, &c., on the open lines of Railway in India for the quarter ended 30th September 1888.

OBSERVATIONS.—As compared with the average of the five corresponding previous quarters, the number of accidents to trains, rolling stock, permanent-way, &c., shows an increase of 33, or 4·41 per cent., with an increase of 2,077·75 miles, or 16·94 per cent., in the mean mileage open, and of 1,657,717

miles, or 16·51 per cent., in the train mileage. The following are the railways on which the more important fluctuations occurred :—

Railway.	Number of accidents.	Accidents.				Train mileage.	
		Increase.	Decrease.	Percentage of increase.	Percentage of decrease.	Percentage of increase.	Percentage of decrease.
Rajputana-Malwa	74	...	26	...	26·00	15·36	...
Southern-Mahratta	57	38	...	200·00	...	132·53	...
North-Western	84	...	81	...	49·09	25·71	...
South Indian	83	21	...	33·87	...	21·37	...
Great Indian Peninsula	25	..	26	...	50·98	19·60	...
Dibru-Sadiya	124	68	...	121·43	...	4·93	...
The Nizam's	26	18	...	225·00	...	24·48	...

2. The principal variations on the Rajputana-Malwa Railway were a decrease of 30 accidents under "Trains running over cattle on the line" and an increase of 14 under "Failure of axles," the total number showing a decrease of 26·00 per cent. against an increase of 15·36 per cent. in the train mileage.

3. The increase on the Southern Mahratta Railway chiefly occurred under "Trains running over cattle on the line" and "The flooding of portions of permanent-way," the number of accidents recorded under the former being 23 against 8 and under the latter 12 against 2. The increase appears to have been mainly due to the increased mileage worked which was 854·5 miles against 363·75 miles. No portion of this line was open in 1883.

4. On the North-Western Railway, with an increase of 27·49 per cent. in the open mileage and 25·71 per cent. in the train mileage, the number of accidents was less by 81, or 49·09 per cent. The principal decreases were 7 under "Goods trains or parts of goods trains, engines, &c., leaving the rails," 18 under "Trains running over cattle on the line," 16 under "Failure of machinery, springs, &c., of engines," 7 under "Failure of couplings," and 9 under each of the heads "Fire in trains" and "Other accidents."

5. The increase on the South Indian Railway was apparently due to the working of the Cuddapah-Nellore line, which was opened for traffic on 15th September 1887. With the exception of an increase from 35 to 43 in the number of cattle accidents, there is no noticeable variation under any other head.

6. Of the decrease of 26 accidents on the Great Indian Peninsula Railway, 8 occurred under "The flooding of portions of permanent-way" and 6 under "Goods trains, or parts of goods trains, engines, &c., leaving the rails." No accident is returned under the latter head for the quarter under review.

7. Of the large number of accidents (124) on the Dibru-Sadiya Railway, a very heavy proportion arose from failure of couplings, and the remainder occurred in derailments.

8. On the Nizam's Railway the number of accidents rose from 8 to 26, or by 18, of which 8 appear under "Trains running over cattle on the line" and 4 under "Failure of machinery, springs, &c., of engines." The mean mileage worked during the quarter was 297, or larger by 90·69 per cent., and the train mileage run 112,432, or larger by 24·48 per cent.

9. The casualties resulting from accidents to trains, &c., were, among passengers and others, 1 killed and 8 injured, against 1 killed and 9 injured, and among servants, 2 killed and 6 injured, against 1 killed and 6 injured. Of the casualties to passengers, 4 passengers were slightly injured on the East Indian Railway in consequence of a down train colliding with the dead end buffers at Jamalpur. This accident was caused by the driver running at an excessive speed and being unable to pull up the train owing to the slippery state of the rails.

10. The following table exhibits the number of accidents under the different classes, due to accidents to trains, rolling stock, permanent-way, &c., and the number of persons killed and injured thereby, *vide* Tables Nos. 3 and 4 :—

		Average of corresponding quarters of 5 previous years.	Third quarter, 1888.					Total all classes.	
			No.	Number of passengers and others.		Number of servants.			
				Killed.	Injured.	Killed	Injured.	Killed.	Injured.
1	Collisions between passenger trains, or parts of passenger trains	0	2	...	2	...	1	...	3
2	Collisions between passenger trains and goods, or mineral trains, engines and vehicles standing foul of the line	10	8	...	...	...	...	...	...
3	Collisions between goods trains, or parts of goods trains	13	12	...	...	...	...	...	...

Total	1888	...	782	1	8	2	6	3	14
	Average of corresponding quarters of five previous years	...	749	1	9	1	6	2	15

11. The principal variations occurred under "Passenger trains, or parts of passenger trains, leaving the rails," 32 against 26; "Goods trains, or parts of goods trains, engines, &c., leaving the rails," 94 against 83; "Trains running over cattle on the line," 265 against 283; "Failure of axles," 25 against 7; and "Failure of couplings," 86 against 60.

12. The increase under "Passenger trains, or parts of passenger trains, leaving the rails," "Goods trains, or parts of goods trains, engines, &c., leaving the rails" and "Failure of couplings," was due to the numbers recorded under these heads on the Dibru-Sadiya Railway being very large, *viz.*, 20, 28, and 65 against 4, 13 and 30, the average of the two corresponding quarters of 1886 and 1887, respectively, for which returns were received.

13. Omitting the Dibru-Sadiya Railway, the number of cases under the head "Goods trains, or parts of goods trains, engines, &c., leaving the rails" was highest on the Madras and South Indian Railways, *viz.*, 11 on each.

14. The cattle accidents were numerous on the South Indian and North Western Railways, being 43 and 32 respectively. As compared with the average of the corresponding quarters of 5 previous years, there was a decrease of 18 accidents on the latter line.

15. Of the 25 cases of "Failure of axles" 16 occurred on the Rajputana-Malwa Railway alone; and of the 45 cases of "The flooding of portions of

* Not Passengers.

permanent-way" 12 occurred on the Southern Mahratta, and 11 on the North Western.

16. The total number of accidents classified as "Other accidents" was 47, of which 20 were recorded on the Bombay, Baroda and Central India Railway.

17. The casualties to passengers from causes other than accidents to trains, &c., *vide* Table No. 2 were:—

Cause of accident.	3rd Quarter, 1888.		Average of corresponding quarters of 5 previous years.	
	Killed.	Injured.	Killed.	Injured.
From falling between carriages and platforms.	2	2	...	1
Falling on to the platform, ballast, &c., when getting into or out of trains.	1	3	1	4
Whilst crossing the line at stations	...	...	1	...
By closing of carriage doors	...	2	...	1
Falling out of carriages during the travelling of trains.	3	20	5	16
Other accidents	4	10	1	6
Total	10	37	8	28

18. The accidents to servants in the employ of Railways or of contractors, whilst performing duties connected directly with the transit of passengers and goods, from causes other than accidents to trains, &c., were as follows, *vide* Table No. 2:—

Cause of accidents.	3rd Quarter, 1888.		Average of corresponding quarters of 5 previous years.	
	Killed.	Injured.	Killed.	Injured.
During shunting operations	3	12	4	12
Falling off engines, vans, wagons, &c.	6	6	4	14
Coming in contact with overbridges, &c., during the travelling of trains	...	...	1	...

Whilst walking, crossing, or standing on the line	8	4	9	7
Whilst passing between vehicles	...	1	...	1
Whilst attending to the machinery of engines, cleaning them, &c.	...	4	...	4
Whilst attending to gates at level-crossings	1	1	...	1
Falling, or being caught between vehicles and platforms	1	...	1	2
Falling off ladders, scaffolds, platforms, &c.	2	5	1	4
By falling of lamps, wagon doors, timber, weights, &c.	1	8	...	6
Whilst coupling or uncoupling wagons	...	10	1	7
Miscellaneous	6	50	5	26
Total	38	127	33	112

19. Of other persons killed and injured by running trains, &c., 4 were killed and 4 injured, whilst passing over the line at level-crossings; 52 killed and 15 injured whilst trespassing on the line; 5 committed suicide; and 2 were killed and 1 injured from miscellaneous causes.

20. The following table exhibits the total number of persons killed and injured from all causes on the whole Indian Railway System, as compared with the average of the corresponding quarters of five previous years, *vide* Table No. 1:—

	3rd Quarter, 1888.		Average of corresponding quarters of 5 previous years.	
	Killed.	Injured.	Killed.	Injured.
Passengers.				
From causes beyond their own control	4	7	2	11
From misconduct or want of caution	7	36	7	26
Servants.				
From causes beyond their own control	8	24	5	17
From misconduct or want of caution	32	109	30	101
Others.				
Whilst passing at level-crossings	4	4	2	2
Trespassers, including suicides	57	15	51	17
Other persons	2	1	4	4
Total	114	196	101	178
Total open mileage	14,341¾		12,264	
Total train mileage	11,700,413		10,042,696	

21. In addition to the above, 8 persons are reported to have been killed and 41 injured in yards, workshops, &c., and 91 persons to have died in carriages and at stations from causes unconnected with the working of trains.

Resolution.—The Government of India observes that a large number of cases of "Failure of axles" has occurred upon the Rajputana-Malwa Railway during the quarter, 16 cases being reported against an average of 2 during the corresponding quarters of the five previous years.

The number of "Failure of couplings" on the Dibru-Sadiya Railway appears to necessitate enquiry.

The Governments of Madras, Bombay, Bengal, the North-Western Provinces and Oudh, and the Punjab.
The Chief Commissioners of the Central Provinces, Burma and Assam.
The Resident at Hyderabad.
The Agents to the Governor General for Central India, Rajputana and Baluchistan.
The Director General of Railways.
The Consulting Engineers to the Government of India for Railways, Calcutta, Lucknow and Central Division.

Order.—Ordered that this Resolution be communicated, for information, to the Local Governments, Administrations and Officers noted in the margin.

Ordered also that copies be forwarded for the information of Her Majesty's Government.

Ordered further that this Resolution, with the Abstract Returns, be published in the Supplement to the *Gazette of India*.

M. C. BRACKENBURY, *Major, R.E.*,
Offg. Deputy Secretary.

Documents accompanying.

Abstract Returns of accidents for the third quarter of 1888, together with an extract from a report on an accident to a mail train on the Great Indian Peninsula Railway.

TABLE No. 1.

GENERAL TOTAL.

NUMBER of PERSONS reported during the Third Quarter of 1888 as KILLED or INJURED on the several RAILWAYS open for Traffic in INDIA, distinguishing between PASSENGERS, RAILWAY SERVANTS, and OTHER PERSONS; and distinguishing also, in the case of the two former classes, between ACCIDENTS happening from Causes beyond their own Control and ACCIDENTS happening otherwise.

(j) Not passengers (see note (e) at foot of Table No. 3 under Southern Mahratta Railway.
(k) Includes several trivial accidents.
(l) Of this number two were not passengers.
(m) See note (k) above.

Extract from a Report on the Accident which occurred at mile 115½ North-East Line, Great Indian Peninsula Railway, at 3-20 a.m., on the 23rd July 1888, to the Up Mail Train, from Jubbulpore to Bombay.

This accident took place on a bridge about ¾ths of a mile from the Násik station in the direction of Devláli. The bridge consists of nine spans of 30 feet arches, the height of rail level above the deepest point of the Nulla is about 40 feet, the bed of the Nulla is of rock, and on the night of the accident the stream was running about 50 feet wide and 2 to 3 feet deep.

The Jubbulpore Mail left Nándgaon at 12-55. The train had been examined there by Carriage Inspectors, and found in perfect running order. Everything went well between this station and Násik, which the mail reached up to time and left at 3-20. The distance between Násik and Devláli is 3½ miles and the time allowed to cover this distance is 8 minutes.

The train reached the bridge at a speed of about 20 miles an hour. Two-thirds of the bridge had been passed over safely when the engine and tender left the rails followed by 9 out of the 13 vehicles composing the train. They ploughed along the ballast and eventually came to a stop when the engine tender and front brake-van had cleared the bridge. The rest of the train remained on the bridge, all the carriages being in most perilous proximity to the parapet, so near indeed were they that had not the guard of the train stopped the passengers, some would certainly have been killed or injured by jumping into the river which they were on the point of doing. The total detention of the train was 6½ hours.

When it was daylight and an examination became possible, it was at once seen that the accident had been caused by removal of the fish plates, fish bolts and keys which formed the fastenings of one inside rail of the up track at a point one-third of the length of the bridge from its west or Devláli end.

From the Appendix it will be seen that eleven pairs of rails and their sleepers and fastenings were injured or destroyed. The damage done to the rolling-stock, considering the speed at which the train was running, is extraordinarily small, and amounts to only a few buffers cracked and a few carriage springs broken.

APPENDIX.

Description.	Number.	Remarks.
Rails, iron, 24'	8	Broken.
Ditto	8	Badly bent.
Sleepers, wooden	20	Broken.
Chairs	36	,,
Pots, cast-iron	(pairs) 42	,,
Plates, fish	10	,,
Bolts ,,	20	,,
Keys, wooden	100	,,

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

CIVIL WORKS.

Irrigation.

REVENUE REPORT OF IRRIGATION WORKS IN THE NORTH-WESTERN PROVINCES FOR 1887-88.

No. 681, dated Calcutta, the 29th March, 1889.

RESOLUTION—By the Government of India, Public Works Department.

Read—

Letter No. 703 I., dated the 1st March 1889, from the Government of the North-Western Provinces, forwarding the Revenue Report of Irrigation Works in the North-Western Provinces for 1887-88, and the Resolution of that Government reviewing the Report.

RESOLUTION.—The following table shows the capital outlay during the year 1887-88 and up to the end of that year :—

	No. of Works.	During the year 1887-88.			To end of the year 1887-88.		
		Direct.	Indirect.	Total.	Direct.	Indirect.	Total.
		₹	₹	₹	₹	₹	₹
Major Works.							
Protective Works (account head 35)	1	75,705	8,253	83,958	38,92,990	2,07,254	41,00,244
Productive Works (account head 49)	4	15,18,440	1,02,252	16,20,692	6,71,49,209	47,63,776	7,19,12,985
Minor Works.							
Works of which Capital and Revenue Accounts are kept (account head 43)	...	...	...	...	...	...	...
Works in operation	4	3,179	184	3,363	22,82,495	1,91,359	24,73,854
Surveys	3	84	—1	83	2,49,210	31,026	2,80,236
Total Minor Works	7	3,263	183	3,446	25,31,705	2,22,385	27,54,090
GRAND TOTAL	...	15,97,408	1,10,688	17,08,096	7,35,73,904	51,93,415	7,87,67,319

The Capital outlay of the year was principally on the Lower Ganges Canal. A sum of ₹14,51,354 was expended chiefly on the Nadrai aqueduct (which is now approaching completion, and will, it is believed, be open for the irrigation of the rabi crop, 1889-90) and on two drainage syphons in its neighbourhood. The remaining expenditure was mainly on drainage and distributaries on the Ganges, Agra and Betwa Canals.

2. There is a balance of nearly four lakhs unexpended on the estimate of the one Protective Work, the Betwa Canal. On three of the Productive Works (Ganges, Agra and Eastern Jumna) about 38½ lakhs remain to be spent to complete the projects. On the Lower Ganges Canal the expenditure is more than fifteen lakhs in excess of the sanction: a revised estimate of this project has been long promised by the Government of the North-Western Provinces. The following statement shows the stage of construction which the different Major Works have reached :—

		Sanctioned.		Completed.	
		Miles of canal.	Miles of distributaries.	Miles of canal.	Miles of distributaries.
Major Works.					
Protective Works	Betwa Canal	182	379	167	259
Productive Works	Ganges Canal	463	3,000	437	2 559
	Lower Ganges Canal	566	2,457	564	2,021
	Agra Canal	149	600	109	558
	Eastern Jumna Canal	130	648	130	648
Total Major Works		1,490	7,084	1,407	6,045

The Minor Works, which consist of 20 miles of canals and 511 miles of distributaries, are completed.

3. The following statement shows the financial results of the year based on actual collections as compared with working expenses :—

Canal.	Capital outlay to end of 1887-88.	Gross Revenue.			Working Expenses.			Net Revenue.	Percentage of Net Revenue on Capital outlay.
		Direct.	Indirect.	Total.	Direct.	Indirect.	Total.		
1	2	3	4	5	6	7	8	9	10
	₹	₹	₹	₹	₹	₹	₹	₹	
Major Works.

Note.—These figures differ from the Finance Accounts in the following respects:—The Capital outlay, as shown in column 2, differs from the Finance Accounts, as it includes indirect charges which are not shown in the Finance Accounts. The indirect charges in column 7, which are mainly a calculation of liability for leave and pension allowances, are not shown in the Finance Accounts. Of the indirect receipts in column 4, which are a share of Land Revenue credited to Canals only that portion which pertains to "Major Works" is shown in the Finance Accounts.

The loss on the Betwa Canal is rather greater than in the previous year; but the table in para. 4 shows that the working of the canal is improving as the assessments of the year rose to ₹66,428. The irrigated area also has risen from 8,608 acres to 24,135 acres. There was an increase however in the cost of Establishment and of Repairs, and the net revenue both in the year under review and in the previous years has been considerably less favourable than the forecasts of the project anticipated.

In the Productive Works there has been a decrease in receipts and a slight increase in working expenses, the net revenue being about four lakhs below that of the previous year: the percentage on Capital is 3·8 as compared with 4·5. The decrease has occurred on the Ganges and Agra Canals, and is mainly due to the great falling off in the irrigated area of 1886-87, the rabi charges for which fall to be collected within the year 1887-88 as compared with 1885-86. The Lower Ganges Canal is still partially crippled by the failure of the Nadrai aqueduct, which is under reconstruction, and is only working at about three-fourths of its full power. The Minor Works, on the other hand, though the revenue has slightly diminished from ₹2,46,090 to ₹2,31,230, show a much larger decrease in working expenses, and the net revenue is more

	1887-88. ₹	1886-87. ₹
Ganges	24,12,443	26,48,937
Agra	4,79,301	6,11,477

than double that of the previous year. The percentage of net revenue to Capital on these canals was 3·2 in 1887-88 as compared with 1·48 in the previous year.

The Revenue Accounts of the Major Works in the North-Western Provinces show, on the whole, a profit of about 55 lakhs of rupees since the commencement of operations. That is to say, the net revenue up to date has exceeded the charges for interest on Capital by that amount. This favourable result is mainly due to the Eastern Jumna Canal, which has a surplus of ₹126 lakhs The other canals, with the exception of the Lower Ganges, have still considerable balances against them. The Ganges Canal will, in all probability, soon clear off the charges remaining against it. The following statement shows the figures for the last four years :—

	Excess of Interest charges over net Revenue from commencement to date.			
	1887-88.	1886-87.	1885-86.	1884-85.

The rate charged per acre compares thus with the rate in other Provinces for the same year—

North-Western Provinces	3·4
Punjab	2·2
Bombay	5·3
Madras	3·3

The assessed revenue of the year shows an improvement of nearly 4½ lakhs on that of 1886-87 which was an unusually, bad year, but it is more than 8 per cent. below the average of the previous six years. The explanation of this decrease in the assessment is due to the falling off in the irrigated area which, in the year under review, was about 300,000 acres or 16 per cent. below the average of the previous six years.

5. The areas irrigated by the different canals are compared with those of previous years in the following statement :—

	1887-88.	1886-87.	1885-86.	1884-85.
	Acres.	Acres.	Acres.	Acres.
MAJOR WORKS.				
Protective Works—Betwa Canal	24,135	8,608	12,356	...
Productive: Ganges Canal	601,904	574,440	741,636	683,939
Productive: Lower Ganges Canal	470,942	359,003	462,302	534,833
Productive: Agra Canal	124,557	122,096	176,721	128,002
Productive: Eastern Jumna Canal	176 243	203,429	215,356	166,407
TOTAL PRODUCTIVE WORKS	1,373,646	1,258,968	1,596,015	1,513,181
MINOR WORKS.				
Works for which Capital and Revenue Accounts are kept—				
In operation: Dun Canals	15,398	12,472	12,306	12,553
In operation: Rohilkhund Canals	93,694	78,554	79,927	85,198
In operation: Bijnor Canals	8,510	4,183	6,588	4,547
In operation: Bundelkhand Irrigation Works: Jhansi Lakes	589	309	996	412
In operation: Bundelkhand Irrigation Works: Hamirpur Lakes	1,316	721	1,488	1,414
TOTAL MINOR WORKS IN OPERATION	119,507	96,239	101,305	104,124
GRAND TOTAL	1,517,288	1,363,815	1,709,676	1,617,305

There has been an increase in the areas, as compared with those of the previous year, in all canals except the Eastern Jumna, where there was a large falling off in the rabi area. The general decrease in the irrigated area, compared with that of the average of previous years, which is referred to in the previous paragraph, is explained, first, by the fact of the excessive rainfall of the year in question, and, secondly, by the fact that for four consecutive years the rainfall has been above the average: the amount of moisture in the soil generally tends to reduce the demand for irrigation.

6. The value of the crops irrigated during the year aggregated ₹5,20,72,286, which is about 76 lakhs in excess of the corresponding figure for the previous year. The average value per acre is ₹34·3, and the total value of the crops is considerably more than half the total capital invested in the works. The wheat crop is the largest and most valuable one: the area under wheat was one-third of the total area irrigated, and the value of the crop was 203 lakhs of rupees. Sugarcane and indigo are next in order: the sugarcane crop was valued at ₹130 lakhs, and the indigo at ₹42½ lakhs; the latter, however, was somewhat the larger in area.

7. The duty of each cubic foot of water entering the canals classed as Productive Works varied in the kharif crop from 41 acres on the Lower Ganges to 94 acres on the Eastern Jumna. In the rabi crop the duty varied from 67 acres on the Agra canal to 185 acres on the Lower Ganges.

8. The working expenses of the year are higher than those of 1886-87, and exceed those of any previous year. The increase is almost entirely on the Betwa, Ganges and Lower Ganges canals. The Minor Works show a considerable reduction in expenditure. The following statement gives the figures :—

	1887-88.	1886-87.	1885-86.	1884-85.
	₹	₹	₹	₹
MAJOR WORKS.				
Protective Works—Betwa Canal	89,696	76,277	2,136	...
Productive: Ganges Canal	9,43,691	9,13,293	9,23,901	9,90,454
Productive: Lower Ganges Canal	9,15,057	8,38,020	8,75,593	8,76,454
Productive: Agra Canal	2,58,283	2,97,925	2,76,792	2,70,022
Productive: Eastern Jumna Canal	2,06,352	2,20,288	1,95,730	2,06,883
TOTAL PRODUCTIVE WORKS	23,23,383	22,69,520	22,72,016	23,43,813
MINOR WORKS.				
Works for which Capital and Revenue Accounts are kept—				
Dun Canals	36,807	34,946	32,944	37,043
Rohilkhand Canals	1,02,289	1,59,822	1,55,989	1,16,447
Bijnor Canals	4,101	4,086	4,065	5,216
Bundelkhand Irrigation Works: Jhansi Lakes	3,668	5,135	3,978	2,776
Bundelkhand Irrigation Works: Hamirpur Lakes	4,250	5,409	12,238	9,817
TOTAL MINOR WORKS IN OPERATION	1,51,115	2,09 398	2,09,214	1,71,299
GRAND TOTAL	25,64,194	25,55,201	24,83,366	25,15,112
Rate per acre irrigated	1·69	1·87	1·45	1·55

The rate per acre for the Major Works was 1·85 in 1886-87 as compared with 1·72 in the year under review, the corresponding figures for Minor Works being 2·17 and 1·27 respectively. The total rate for this and other Provinces for the past year is compared in the following table :—

North-Western Provinces	1·69
Punjab	1·22
Bombay	5·29
Madras	0·80

9. The increase in the working expenses of the Betwa Canal is said to be due to the greater length of channels (some 200 miles) to be maintained. The increase on the Ganges Canal was due to extensive repairs to the Hardwar Dam and to Protective Works below the falls necessary on account of the large supply passed on to the Lower Ganges Canal. The increase on the Lower Ganges Canal is due to the larger sum written back to Revenue on account of the cost of the old Nadrai aqueduct, ₹1,72,858 having been so adjusted in 1887-88 as compared with ₹1,01,000 in 1886-87.

10. The details of the working expenses shown in the preceding paragraph are as follows :—

	1887-88.	1886-87.
	₹	₹
Works and Repairs	12 03,962	11,96,586
Establishment	11,76,685	11,62,338
Tools and Plant	19,737	34,707
Indirect Charges	1,63,810	1,61,570
TOTAL	25,64,194	25,55,201

The charge for establishment again is made up of the following items :—

	1887-88.	1886-87.
	₹	₹
Share of Direction	1,71,259	1,65,893
Executive Officers	6,22,399	6,00,006
Medical	8,625	5,489
Revenue	2,28,232	2,27,469
Fees to Lambardars and Patwaris	(a) 1,13,536	(a) 1,32,410
Navigation	19,823	18,639
Plantations	12,811	12,432
TOTAL	11,76,685	11,62,338

(a) Includes collection charges in the Civil Department on account of owner's rates.

The cost of Direction and Accounts is divided rateably between the Irrigation, the Roads and Buildings, and other branches; the figure shown above is the proportion chargeable to Maintenance and Working Expenses. The Executive Officers employed on irrigation works form a distinct staff, but the actual cost of their salaries is divided between Capital and Maintenance; the charge shown above is the share of this cost, debited to the Revenue account of the canals. The share charged to Capital (including also the proportionate share of Direction and Accounts) amounted in 1887-88 to ₹2,56,937, *i.e.*, about 23 per cent. of the cost of the Capital works. The charge for Medical Officers is almost entirely the cost of separate establishment employed on the canals. The cost of the Revenue employés includes the pay of the Civil Establishment as well as the pay of Deputy Magistrates, Zilladars, Amins and petty establishment employed on the Supervision of Irrigation, and the preparation of the returns on which the revenue is collected. Fees to Lambardars and Patwaris represent the commission paid to them at about 2½ per cent. on the revenue collected and paid into Civil Treasuries by them. The Navigation Establishment consists of a Traffic Manager, Assistant Toll Collectors and their menial establishments. The last head indicates the pay of Foresters, Gardeners, &c., employed on the supervision and maintenance of canal plantations.

11. The navigation receipts on the Upper and Lower Ganges Canals and on the Agra Canal were smaller than in the previous year: the working expenses were also smaller. The receipts were ₹25,235 as compared with ₹31,554 in the previous year, and the working expenses were ₹35,889 as compared with ₹41,450. The decrease in revenue was chiefly under the head of private boats on the Ganges Canal. Attention has frequently been drawn by the Government of India, and recently by the Secretary of State, to the fact that Navigation in the North-Western Provinces is carried on at a loss. It is explained that at present the main canal is closed between Gopalpore and Cawnpore every alternate week, to supply water to the Etawah Branch; but when the Nadrai aqueduct is completed there will be a continuous supply of water down both branches; and when the few remaining low bridges on the Upper Ganges Canal have been raised, it is believed that much larger use will be made of the opportunities for Navigation. There has also been a considerable reduction made in the cost of establishment during the current year. The value of the goods carried on the canals was about 25 lákhs of rupees.

12. The revenue realised from water-power on the Canals fell from ₹89,361 in 1886-87 to ₹69,362 in 1887-88: the decrease is explained to be due to the long canal closure of the year, and to the weaker demand for the mills: the decrease was mainly on the Eastern Jumna and the Ganges Canals. The revenue from plantations has been steadily increasing for some years past; it is now ₹1,79,754.

13. In addition to the Irrigation systems, which have been referred to in the foregoing paragraphs, there are certain canals in the Tarai and Bhábar which are under the jurisdiction of the Superintendent of the Tarai and the Assistant Commissioner of Kumaon Districts; but which have received a certain amount of attention in engineering details from the Public Works Department since 1886.

The Canals are mentioned in the Revenue Report for the first time. The areas irrigated amounted to 114,187 acres.

14. The Report which was due on the 15th November 1888 was received by the Government of India on the 4th of March 1889: though still much in arrears, this is an improvement on the previous year, when it was not received until the 15th of April. The Government of India trusts that the report will in future years be submitted on the date fixed.

ORDER.—Ordered, that copies of this Resolution and of the Report be forwarded to the Finance and Commerce, and the Revenue and Agricultural Departments for information.

Ordered also, that copies of this Resolution be forwarded to the Government of the North-Western Provinces for information and guidance, and that copies of the Resolution be forwarded to the Local Governments and Administrations in the Public Works Department noted in the margin, for information, and to the Foreign Department for communication to the Government of Mysore.

The Governments of Madras, Bombay, Bengal, and the Punjab.
The Chief Commissioner, Central Provinces, Burma and Assam.
The Resident at Hyderabad.
The Agents to the Governor-General for Central India and Rajputana.

Ordered further, that this Resolution, and the Resolution by the Local Government, be published in the Supplement to the *Gazette of India*, and that copies of this Resolution be forwarded to Her Majesty's Secretary of State for India.

J. G. FORBES, *Colonel, R.E.*,
Offg. Deputy Secy. to the Govt. of India.

NORTH-WESTERN PROVINCES.

Irrigation Revenue Report for the year ending 31st March, 1888.

No. 372½ I OF 1889.

GOVERNMENT OF N.-W. P. & OUDH.

PUBLIC WORKS DEPARTMENT.

IRRIGATION BRANCH.

DATED ALLAHABAD, THE 8TH FEBRUARY, 1889.

RESOLUTION—By His Honor the Lieutenant-Governor, North-Western Provinces, and Chief Commissioner, Oudh.

READ:—

Irrigation Revenue Report of the North-Western Provinces for the year ending 31st March 1888, by the Chief Engineer, Irrigation Works, North-Western Provinces and Oudh.

CAPITAL OUTLAY.

RESOLUTION.—The total outlay on the capital account of canals in the North-Western Provinces and Oudh for and to the end of the financial year 1887-88 is shown below:—

	CANAL.	OUTLAY ON CONSTRUCTION UNDER ALL HEADS.	
		During 1887-88.	To end of 1887-88.
		₹	₹
Capital expenditure on Public Works not charged against Revenue. 49—Irrigation Works.	Upper Ganges	97,250	2,82,39,680
	Lower Ganges	14,51,354	3,14,95,555
	Agra	52,57	90,41,583
	Eastern Jumna	19,518	31,36,167
	TOTAL OUTLAY ON PUBLIC WORKS NOT CHARGED AGAINST REVENUE	16,20,692	7,19,12,985
Irrigation. 43—Minor Works and Navigation.	Dún Canals	737	6,37,731
	Rohilkhand Canals	2,685	16,83,748
	Bijnor Canals	—59	69,977
	Bundelkhand Irrigation Works	...	82,398
	Ditto ditto Survey	199	1,74,145
	Sarda Canal Survey	—116	49,345
	Cawnpore Branch Extension Survey	...	56,746
	TOTAL OUTLAY ON MINOR WORKS AND NAVIGATION	3,446	27,54,090
Famine relief and insurance. 35—Construction of Protetive Irrigation Works.	Betwa Canal	83,958	41,00,244
	GRAND TOTAL	17,08,096	7,87,67,319

The Capital Expenditure was ₹2,01,532 less than in the previous year. The chief decreases, due to the approaching completion of works, were ₹1,62,314 on the Lower Ganges Canal, and ₹56,748 on the Betwa Canal.

ASSESSMENTS.

2. The gross assessments amounted to ₹55,84,205, or ₹4,43,235 more than in 1886-87; and the working expenses were ₹25,70,640, or an increase of ₹6,544.

The total net revenue was ₹30,13,565, or 3·83 per cent. on the total Capital of ₹7,87,67,319 invested in the Productive, Minor, and Protective Irrigation Works of the Province.

The net revenue on the four Productive Works alone, *viz.*, the Upper and Lower Ganges Canals, the Agra Canal, and the Eastern Jumna Canal, amounted to ₹29,41,755 or 4·09 per cent. on the Capital expended on them.

The interest charge on the total Capital amounted to ₹28,09,805; deducting which amount from the total net revenue, the assessments show a profit of ₹2,03,760 against a deficit in the previous year of ₹1,64,495.

REALIZATIONS.

3. The income actually realized from all sources was ₹53,56,135. After deducting working expenses and interest charges as before, there is a deficit of ₹24,310, due to loss on Famine Protective Works. The profit on the Productive and Minor Works amounted to ₹1,89,035; but this was counterbalanced by a loss of ₹2,13,345 on the Betwa Canal.

TOTAL INTEREST CHARGES.

4. The total interest charges on the Capital expended on all classes of Irrigation Works since their inception in the North-Western Provinces in 1830, amount to ₹5,31,63,270. The total *net* revenue derived since the above date, amounts to ₹5,98,56,391; thus showing a clear profit of ₹66,93,121, or 8·5 per cent. on the total Capital outlay

WORKING EXPENSES.

5. The working expenses under all heads, direct and indirect, amounted in 1887-88 to ₹25,70,640, or ₹6,544 more than in the previous year.

Under the sub-head of Establishment, there was an increase of ₹10,672, but a decrease of ₹1,10,342 as compared with 1885-86.

The percentage of working expenses to assessments on the four Productive Works is shown in the statement below:—

YEAR.	UPPER GANGES CANAL.		LOWER GANGES CANAL.		AGRA CANAL.		EASTERN JUMNA CANAL.	
	Assessments.	Percentage.	Assessments.	Percentage.	Assessments.	Percentage.	Assessments.	Percentage.
	₹		₹		₹		₹	
1883-84	28,40,019	32·48	16,81,426	41·42	8,13,712	31·00	8,21,088	25·61
1884-85	21,04,551	47·11	14,04,856	62·42	4,51,010	62·35	6,02,811	34·33
1885-86	23,05,116	40·12	12,47,323	70·27	6,63,655	42·11	7,04,507	27·84
1886-87	18,84,846	48·63	9,81,794	85·66	4,76,057	62·98	6,86,629	32·17
1887-88	20,17,654	46·86	12,53,357	73·19	4,83,271	53·90	6,44,802	32·20

The percentage remains practically the same on the Eastern Jumna Canal, but there is a satisfactory decrease on the other canals. As the assessments however depend so largely on the nature of the season, any percentages based on them cannot be entirely accepted as a true index, but only as an indication of the comparative ratio of the working expenses

The cost of measuring irrigation and preparing demand statements amounted to ₹35,472, or ₹2·33 per 100 acres against ₹2·58 in 1886-87. Owing to the bulk of the work being done by the permanent establishment, there is little difference in the total cost of different years, and the rate per 100 acres varies inversely as the area irrigated.

The cost incurred by the Civil Department in collecting the water-rate was ₹1,10,319 or 2·71 per cent. on the gross collections against 2·93 per cent. in 1886-87.

Under Owner's rate the total balance outstanding was ₹3,881; and under Occupiers' rate ₹33,501. Of this amount, ₹33,412 was in course of liquidation, and only ₹89 was reported as irrecoverable.

Mileage of Canals.

6. The following statement shows that 9,782 miles of channels have annually to be maintained:—

Canal.	Main canal and branches.	Navigation channels.	Escapes and mill channels.	Distributaries.	Drainage cuts.	Total.
	Miles.	Miles.	Miles.	Miles.	Miles.	Miles.
Upper Ganges	437	19	62	2,559	895	3,972
Lower Ganges	564	...	68	2,021	317	2,970
Agra	109	25	10	558	37	739
Eastern Jumna	130	...	23	648	313	1,114
Betwa	167	...	12	259	12	450
Dún	...	...	...	74	3	77
Rohilkhand	20	...	...	331	3	354
Bijnor	...	...	...	36	...	36
Jhánsi Lakes	...	...	...	45	...	45
Hamírpur Lakes	...	...	...	25	...	25
Total	1,427	44	175	6,556	1,580	9,782

There was an increase during the year of 94 miles of distributaries, 82 miles of which were on the Betwa Canal. Nine miles of new drainage cuts were also constructed.

Irrigated Area.

7. The following table gives the area of "kharif" and "rabi" crops for 1887-88 and the previous five years:—

	Kharif.	Rabi.	Total.	Percentage.	
	April to September.	October to March.		Kharif.	Rabi.
	Acres.	Acres.	Acres.		
1882-83	740,390	1,233,785	1,974,175	37·50	62·50
1883-84	825,747	1,471,927	2,297,674	35·94	64·06
1884-85	773,603	843,701	1,617,304	47·83	52·16
1885-86	702,259	1,007,417	1,709,676	41·08	58·92
1886-87	541,821	821,994	1,363,815	39·73	60·27
1887-88	612,436	904,852	1,517,288	40·36	59·64

The total area is 1,517,288 acres, or 12·7 per cent. less than the average area irrigated during the last 10 years; but compared with the preceding year there is an increase of 153,473 acres, or 11·3 per cent.

The early part of the "kharif" season was normal with occasional showers in April. Rain fell between the 13th and 23rd June, lessening the demand for irrigation. On the 2nd July the monsoon broke, and after that no more irrigation was done, except on the Eastern Jumna, Dún, and Rohilkhund Canals, which remained open for irrigation of rice. During July and August the rainfall was above the average, and good rain, in some places excessive, fell about the middle of September.

Nearly all the "rabi" crop was consequently sown without the aid of canal water. Towards the end of December light rain fell, but in the greater part of the country there was a good demand for water until the 22nd of January, when there was general rain which entirely stopped all demand except for fields previously irrigated.

Principal Crops Irrigated.

8. The statement below compares the acreage of the principal crops during the last six years:—

Crop.		1882-83.	1883-84.	1884-85.	1885-86.	1886-87.	1887-88.
		Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
Kharif	Sugarcane	198,322	155,147	153,652	175,944	168,452	197,532
	Rice	104,046	111,512	92,687	100,706	109,513	102,367
	Indigo	316,145	294,429	392,302	297,314	164,013	212,756
	Cotton	52,493	93,545	66,791	60,580	41,835	47,912
Rabi	Wheat	728,385	824,982	512,324	550,891	495,370	508,263
	Barley	266,651	286,073	108,267	118,569	70,881	79,937
	Gram	48,400	61,123	16,954	42,087	27,793	33,091
	Poppy	16,233	16,370	10,762	15,629	14,679	12,957

The area under sugarcane was 197,532 acres, or only 1,009 acres less than that irrigated in 1882-83, which is the highest on record.

Indigo shows an increase of 48,743 acres, but the area under this crop is still 18 per cent. below the average.

Rice and poppy have slightly decreased, and cotton, wheat and barley increased. These fluctuations depend chiefly on the nature of the season.

During 1887-88 the double-cropped area was 15·6 per cent. of the total area, and 38·6 per cent. of the area under "kharif."

76·4 per cent. of the total irrigation was done directly by flow, and 23·6 by lift.

Value of Crops.

9. The total value of crops raised with canal water was ₹5,20,72,286 as shown in table below, which is prepared from data supplied by the Agricultural Department:—

Year.	Area irrigated.	Value of crops.	Occupier's rate.	Value of crops per acre.	Occupier's rate per acre.	Percentage on value of crops.
	Acres.	₹	₹	₹	₹	
1885-86	1,709,676	4,97,91,920	43,21,185	29·12	2·53	8·68
1886-87	1,363,815	4,44,17,015	35,31,976	32·56	2·58	7·95
1887-88	1,517,288	5,20,72,286	39,03,962	34·32	2·57	7·50

Villages and Outlets.

10. During the year 9,016 villages received water from 37,355 outlets. In addition to the above, 221 villages were watered from the Tarái Canals. The statements do not show the number of villages watered from the Bhábar Canals and the Bundelkhand Lakes.

Irrigating Duty.

11. The irrigating duty and the value of each cubic foot of water on the four main Canals are detailed in the accompanying table:—

Canal.	Area irrigated per cubic foot of water at head.			Total water-rate per cubic foot of water at head.		
	1885-86.	1886-87.	1887-88.	1885-86.	1886-87.	1887-88.
	Acres.	Acres.	Acres.	₹	₹	₹
Upper Ganges	216	198	194	760	756	760
Lower Ganges	138	111	166	415	343	491
Agra	164	101	120	584	360	431
Eastern Jumna	208	215	187	850	907	859

The water-rate per cubic foot is highest on the Eastern Jumna Canal and lowest on the Agra Canal, notwithstanding that the higher occupiers' rates are in force on the latter. The difference is chiefly due to the large area under first class crops, sugarcane and rice, on the Eastern Jumna Canal, as shown below :—

	Percentage of area under 1st class crops.
Upper Ganges Canal	22·8
Lower Ganges ,,	5·4
Agra ,,	2·7
Eastern Jumna ,,	43·5

MAINTENANCE CHARGES PER ACRE.

12. The maintenance charges per acre irrigated are as follows :—

CANAL.	RUPEES.				
	1883-84.	1884-85.	1885-86.	1886-87.	1887-88.
Upper Ganges	0·91	1·45	1·25	1·60	1·60
Lower Ganges	1·06	1·64	1·89	2·34	2·00
Agra	1·02	2·20	1·58	2·46	2·20
Eastern Jumna	0·76	1·24	0·91	1·09	1·18

NAVIGATION OPERATIONS.

13. The results of the year's navigation operations are given in the following table :—

CANAL.	1887-88.			1886-87.			1885-86.		
	Gross Revenue (Receipts).	Working expenses	Deficit	Gross Revenue (Receipts)	Working expenses.	Deficit.	Gross Revenue (Receipts).	Working expenses.	Deficit.
	₹	₹	₹	₹	₹	₹	₹	₹	₹
Upper and Lower Ganges	14,700	28,449	13,749	19,820	35,119	15,299	20,026	31,924	11,898
Agra	10,535	7,440	−3,095	11,734	6,331	−5,403	5,674	5,321	−353
TOTAL	25,235	35,889	10,654	31,554	41,450	9,896	25,700	37,245	11,545

On the Upper and Lower Ganges Canals there was a loss of ₹13,749 against a loss of ₹15,299 in the previous year. As noted in previous reports, no material improvement can be expected until the new Nadrai Aqueduct is completed and constant running introduced on the Cawnpore Branch.

The Agra Canal shows a profit of ₹3,095 against a profit of ₹5,403 in 1886-87.

MINOR RECEIPTS.

14. The actual receipts realized from minor sources of income are exhibited below :—

	1883-84.	1884-85.	1885-86.	1886-87.	1887-88.
	₹	₹	₹	₹	₹
Plantations	1,47,040	1,49,502	1,60,657	1,75,542	1,79,754
Water-power	72,765	60,668	73,761	89,361	69,362
Miscellaneous	54,263	50,917	50,404	48,540	53,694

The decrease under water-power is mainly on the Ganges and Eastern Jumna Canals, and is due to the long canal closure and to weaker demand for the mills. In addition to the above the sum of ₹31,995 was realized by the Superintendent, Kumaun-Bhábar, on account of water-power on the Bhábar Canals.

RAINFALL.

15. This was the fourth consecutive year of heavy rainfall. Over the whole of the Upper and Lower Ganges Canal the *mean* rainfall recorded during the last four years has exceeded the normal amount as shown by the Meteorological Department by 25 per cent.; on the Eastern Jumna Canal by 22 per cent.; on the Agra Canals by 20 per cent.; on the Rohilkhand Canals by 17 per cent.; and on the Dún Canals by 12 per cent.

At isolated spots, however, the falls have been far heavier. For instance, on the Narora Division of the Lower Ganges Canal, the Fatehgarh Branch of which traverses the Districts of Etah and Farukhabad, the actual rainfall during the four years ending 1887-88 was 156·3 inches, or more than double the amount that fell in the previous four years, *viz.*, 74·8 inches. Even in this small area the amount that fell in 1887-88 varied largely. From the head of the Lower Ganges Canal at Narora to the 12th mile of the Fatehgarh Branch the rainfall was 29 inches; from the 12th mile to the tail at the 60th mile the fall was 42 inches.

Owing to this abnormal rainfall, the country in this portion of the Etah and Farukhabad districts has become supersaturated; and it will require a series of dry years to restore it to the state it was in six or seven years ago.

DRAINAGE WORKS.

16. In the Resolution on the Irrigation Revenue Report for 1882, it was noted that complaints were made of the country being overdrained, and of the pasture lands suffering in consequence of the number of drainage cuts made by the Irrigation Department. At the present time, after a small cycle of wet years, the cry, even in some districts which complained before, is that sufficient drainage cuts have not been made.

There are now 1,580 miles of drainage cuts, of which 207 miles, besides very many masonry works, &c., for the passage of drainage, have been constructed since 1882: more drainage works will have to be made in certain localities; but it must be borne in mind that the primary function of a drainage cut is not, *per se*, to reduce the height of spring level, but to prevent the rain water being entirely absorbed into the ground and thus raising the spring level.

SPRING LEVEL OBSERVATIONS.

17. Spring Level Observations continue to be carefully recorded as usual. The observations show a considerable rise during the four years 1883-84 to 1887-88; but there is little difference between the measurements of 1887-88 and the previous year.

As might be expected from the abnormally heavy rainfall, the portions of the Etah and Farukhabad districts traversed by the Fatehgarh Branch of the Lower Ganges Canal show a continuous rise. At the 7th mile from the head the spring level is 2·2 feet higher than it was in 1884-85; at the 25th mile it is 4·1 feet higher; at the 50th mile 6·3 feet; and three miles below the tail at the 60th mile it is 6·1 feet.

RIVER SUPPLIES.

18. The supplies in all the rivers were more than sufficient to meet requirements except for a few days in May and June, when the Jumna fell very low and short supply was obliged to be run in the Eastern Jumna and Agra Canals.

PROFITS OF PRODUCTIVE WORKS.

19. The following statement summarizes and compares the net profits and the percentage on capital of the four Productive Works :—

	Upper Ganges.		Lower Ganges.		Agra.		Eastern Jumna.	
	Net profit.	Percentage on capital.	Net profit.	Percentage on capital.	Net profit.	Percentage on capital.	Net profit.	Percentage on capital.
	₹		₹		₹		₹	
1883-84	23,60,388	8·45	11,92,654	4·45	5,61,425	6·47	8,32,307	27·96
1884-85	15,55,938	5·54	7,35,746	2·67	1,69,814	1·91	6,17,349	20·14
1885-86	18,23,237	6·48	5,78,616	2·04	3,84,202	4·32	7,29,881	23·51
1886-87	14,11,235	5·01	3,48,628	1·16	1,76,223	1·96	6,87,266	22·05
1887-88	15,15,236	5·37	5,44,980	1·73	2,22,802	2·46	6,58,738	21·00

FAMINE PROTECTIVE WORKS.

20. The year under review was the second in which irrigation was done during both crops from the Betwa Canal.

In 1886-87 the revenue was ₹23,157, and the expenses ₹76,348; thus showing a loss of ₹53,191.

In 1887-88 the revenue was ₹66,428 and the expenses ₹89,713; or a loss of ₹23,285.

The area of crops sown was small, and there was ample supply of water. During the "kharif" season the level of water in the reservoir fell 10·8 feet against 11·5 feet in the previous year.

MINOR WORKS.

21. On the Rohilkhand Canals there was a profit of ₹28,162 against a loss of ₹40,435 in 1886-87. On the Bijnor Canals the profit was ₹19,002 against ₹11,454 in the previous year.

On the Dun Canals there was a profit of ₹48,543 against ₹41,012 in 1886-87. On the Bundelkhand Lakes there was a loss of ₹613 against a loss of ₹4,318.

The Tarái and Bhabar Canals are for the first time shown in the Revenue Report of the year; but the returns regarding them are not included in the Canal statements, as no actual water-rate is levied

The following statistics are given from data supplied by the Superintendent of the Tarái and Bhabar respectively :—

TARÁI CANALS.

Area irrigated	24,410	Acres.
Revenue	24,309	₹
Expenditure	15,934	,,
PROFIT	8,375	,,

BHABAR CANALS.

Area irrigated	84,099	Acres.
Revenue	1,47,068	₹
Expenditure	46,906	,,
PROFIT	1,00,162	,,

Apparently an arbitrary rate has been taken on both Canals as showing the probable revenue derivable from the water. In the case of the Tarái Canals this seems to be about ₹1·00 per acre; and ₹1·9 on the Bhabar Canals. The

large area under oilseeds on these latter Canals is noticeable. It was reported as 14,974 acres, while the area on the rest of the Canals in the province was only 3,458 acres.

TOTAL NET PROFITS, INCLUDING ALL CLASSES OF WORKS.

22. The net profits and the per centage on the total Capital outlay from all the Canals in the North-We stern Provinces, except in the Tarái and Bhabar, is compared with the results of the ten previous years in the following statement :—

Year.	Capital at end of each year.	Net profits.	Percentage on capital.
	₹	₹	
1877-78	4,34,66,488	31,55,858	7·26
1878-79	4,46,21,616	38,28,437	8·57
1879-80	4,60,35,380	28,06,249	6·09
1880-81	6,45,61,716	35,38,941	5·48
1881-82	6,62,06,214	40,82,750	6·17
1882-83	6,76,33,960	43,01,052	6·36
1883-84	6,90,92,987	50,69,145	7 33
1884-85	7,02,83,698	31,28,769	4·45
1885-86	*7,51,49,595	35,44,623	4·72
1886-87	*7,70,59,223	25,76,874	3·34
1887-88	*7,87,67,319	30,13,565	3·83

* Including the Betwa Canal.

ORDER.—Ordered that the above Resolution be submitted to the Government of India, and that it be published in the *North-Western Provinces and Oudh Gazette.*

Ordered also, that it be circulated to other Governments and Departments, as usual.

J. G. FORBES, *Col., R.E.,*
Secretary, Public Works Department, N.-W. P. and Oudh.

DEPARTMENT OF FINANCE AND COMMERCE,
(*Statistical Branch*).

E. J. SINKINSON,
Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and prospects of the Crops.

Madras.—*For week ending 10th April, 1889.*—No rain in Ganjam, Godavari, Nellore, Madras, Chingleput, South Arcot, and South Canara; fair in the Nilgiris; and slight elsewhere. Standing crops generally good; but suffering from want of rain in Ganjam, Vizagapatam, Bellary, North Arcot, Trichinopoly, Tinnevelly, and Coimbatore. Wet crops withering in parts of Cuddapah, Anantapur, and Chingleput. Pasture deficient in Ganjam, Vizagapatam, Cuddapah, Bellary, North Arcot, Madura, Tinnevelly, Coimbatore, Nilgiris, Salem, and Malabar. Prices falling in Ganjam, Vizagapatam, and seven other districts; rising in eight; and stationary in others. General prospects favourable, except in Ganjam; improving in Coimbatore. Labourers employed last day of week—Rushikulya works, 12,747; Gopalpore Canal, 7,979; Taptapani road, 408.

Bombay.—*For week ending 10th April, 1889.*—Slight rain in parts of Ratnagiri. Late crops in one taluka of Sholapur unsatisfactory. Exotic cotton in parts of Dharwar blighted. Opium in Baroda good. Harvesting of late crops and ploughing for next season's crops progressing. Probable outturn of late crops in Hyderabad 12 annas. Fodder scarce in Khandeish and parts of Karachi, Poona, Ahmednagar, Dharwar, Kathiawar, and Baroda.

Bengal.—*For week ending 9th April, 1889.*—Showers reported in a few places in East Bengal, in Midnapur, and Calcutta; elsewhere the province has been without rain. Rain is generally much wanted for spring rice and other standing crops, and for the cultivation of autumn rice and jute. The *rabi* harvest is nearly finished, and the outturn, as estimated in some districts, is between 10 and 12 annas, in Pubna and Furreedpore about 8 annas, and in the Chota Nagpur districts from 6 to 12 annas. No estimate of the *rabi* outturn has yet been received from the Behar districts. Opium weighments are still proceeding in Durbhanga, Mozufferpore, Sarun, and Chumparun. Young indigo is suffering from caterpillars in Bhagulpore, the Sonthal Pergunnahs, and Hazaribagh. A good *mahwa* crop has been secured, but in Manbhoom and the Palamow subdivision the outturn is about eight annas only. No marked fluctuation in the price of rice during the week, though in some districts an upward tendency is observed. The latest report regarding the distressed tract in the Patna division shows that the general condition of the people is unchanged, and that the increased pressure experienced in two localities of the Madhubani subdivisions has been relieved by the opening of special relief works.

North-Western Provinces and Oudh.—*For week ending 10th April, 1889.*—Weather getting hot. Barley crops all harvested. Threshing operations in progress. A fair outturn expected. Opium collection completed. Markets well stocked, but prices are fluctuating. The condition of cattle is good, except in Gonda and Kumaun.

Punjab.—*For week ending 10th April, 1889.*—Rain has fallen in Rawalpindi, Dera Ismail Khan, and Peshawar. Prices rising in Delhi, falling in Rawalpindi and Shahpur; stationary elsewhere. Sowings of cotton and sugarcane and ploughing for other *kharif* crops in progress. Harvesting of *rabi* crops commenced in certain districts. Prospects of *rabi* crops are generally good; damage done to crops *nil*. Stock cattle are healthy. Fodder sufficient, except in Sadr station, Lahore. Poppy reaping commenced in Jullundur.

Central Provinces.—*For week ending 10th April, 1889.*—Weather hot and cloudy. Threshing of winter crops continues. Outturn of wheat in

Jubbulpore 8 to 10, Hoshangabad 6, Nagpur 8, and Bilaspur 9 annas. Water-supply deficient in places.

Burma.—*For week ending 6th April, 1889.*—Slight rainfall in Toungoo. The price of paddy remained stationary in most districts; there was a fall in the price in Prome and Toungoo, and a rise in Amherst, Shwegyin, Shwebo, and the Upper Chindwin.

Assam.—*For week ending 10th April, 1889.*—Weather warm. Slight rain in most districts. Sowing of early rice continues. Preparation of land for late rice commenced. Prospects of tea good.

Mysore and Coorg.—*For week ending 10th April, 1889.*—Slight rain in parts of Mysore. Crops in good condition, except in parts of Kolar, where there is a scarcity of water. Prospects of season favourable. Prices slightly fallen in Shimoga and risen in Kolar.

Good showers have fallen in two *nads* in South Coorg, but not elsewhere. Rain much needed.

Berar and Hyderabad.—*For week ending 10th April, 1889.*—Threshing of *rabi* crops completed in some places. Ploughing commenced in some districts. Prospects generally good. Cattle healthy. Fodder insufficient in Amraoti and Buldana districts. Water-supply ample, except in Buldana district. Prices high in the Akola and Buldana districts.

Slight rain in Hyderabad during the week. *Rabi* and hot-weather crops continue to be harvested. Tanks drying. Scarcity of fodder still felt. Prices stationary.

Central India.—*For week ending 10th April, 1889.*—No material change in crops or weather since last report.

Rajputana.—*For week ending 10th April, 1889.*—Outturn of harvests, average in Kotah, Harrowti, Ajmere, Jeypore, and Ulwar; below average in Marwar, Kherwara, and Jhallawar. Agricultural stock good. Pasturage or fodder sufficient, except in Marwar, Kherwara, and Meywar. Prices steady generally.

Nepal.—*For week ending 4th April, 1889.*—No rain during the week. Weather seasonable. Prospects of wheat and potato harvest good. Land being prepared for Indian corn.

E. C. BUCK,

Secretary to the Government of India.

STATISTICAL BRANCH;
Calcutta, 16th April, 1889.

E. J. SINKINSON,
Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 13th April, 1889.*—No rain in Godavari, Kistna, Nellore, Cuddapah, Bellary, Anantapur, Kurnool, Madras, and South Canara; very slight in Ganjam and Vizagapatam; fair in Travancore; and slight elsewhere. Standing crops generally good; but suffering from want of rain in Ganjam, Vizagapatam, and parts of Bellary, North Arcot, South Arcot, Tinnevelly, and Coimbatore. Wet crops withering in parts of Cuddapah, Anantapur, and Chingleput. Pasture deficient in Ganjam, Vizagapatam, Cuddapah, Bellary, North Arcot, Madura, Tinnevelly, Coimbatore, Nilgiris, Salem, and Malabar. Prices almost stationary in Ganjam and seven other districts; falling in five and rising elsewhere. General prospects favourable, except in Ganjam; improving in Coimbatore. Labourers employed on last day of week—on Rushikulya works, 7,056, and on Gopalpore Canal, 4,575. Decrease due to prevalence of cholera.

Bombay.—*For week ending 17th April, 1889.*—Rain throughout Sind and in parts of Belgaum. Late crops in one taluka of Sholapur unsatisfactory and in parts of Shikarpur damaged by storms. Exotic cotton in parts of Dharwar blighted. Harvesting of late crops and preparations for next season's crops progressing. Probable outturn of wheat in Upper Sind Frontier fourteen annas. Fodder scarce in Khandeish and Nasik and in parts of Karachi, Poona, Ahmednagar, Dharwar, Kathiawar, and Baroda.

Bengal.—*For week ending 16th April, 1889.*—Pretty general rain reported in South-West and East Bengal, Chota Nagpur, and Orissa; very little rain fell in North Bengal; and none in Behar, with the exception of a few showers in the Sonthal Parganas, where much good was done; but more moisture is wanted for the standing crops and for the cultivation of lands for the autumn rice and jute sowing. The *rabi* harvest is closing; and in Behar outturn is estimated at from ten to twelve annas, and eight annas in the affected areas of Durbhanga and Muzaffarpur. Opium weighments are almost finished. *Mahua* outturn is from twelve to sixteen annas in Bhagulpore, the Sonthal Parganas, and Hazaribagh, and eight annas in Manbhum and Palamow. Lac gathering has begun in Chota Nagpur; and the outturn is eight annas in Manbhum and only four annas in Singhbhum.

North-Western Provinces and Oudh.—*For week ending 17th April, 1889.*—Weather hot. Crops nearly harvested. Fair outturn expected. Markets well supplied. Prices fluctuating. Condition of cattle on the whole good.

Punjab.—*For week ending 17th April, 1889.*—Rain has fallen in nine out of thirteen districts and hail in six villages of Peshawar. Prices rising in Delhi, Mooltan, and Peshawar; falling in Rawalpindi and Shahpur; and stationary in others. Harvesting of *rabi* crops commenced. Ploughing for *kharif* in progress. Weeding of cotton and sugarcane going on. Prospects of standing crops good. Crops in a few villages of Tánk tahsil have been injured by hail. Stock cattle are reported healthy. Fodder sufficient, except in Sadr station, Lahore. Poppy harvesting commenced in Amritsar. Outturn average in Jullundur.

Central Provinces.—*For week ending 17th April, 1889.*—Weather cloudy and hot. Slight rain in Raipur and Sambalpur. Threshing of wheat nearly completed, estimated outturn, Saugor 10, Hoshangabad 6, Nagpur 8, and Bilaspur 9 annas. Water-supply deficient, except in northern districts.

A

Burma.—*For week ending 13th April, 1889.*—Slight rain fell in Toungoo, Bhamo, Myadoung, and Yeu. The price of paddy has risen in Pegu, Bassein, Thongwa, Henzada, and Mergui in Upper Burma; prices remain stationary, except in the Upper and Lower Chindwin, where a rise is noticeable. In Upper Burma dry weather crops in Bhamo and Myadoung want rain. Food-supply is sufficient.

Assam.—*For week ending 17th April, 1889.*—Weather warm. Moderate rain in all districts, except Garo and Khasi Hills. Sowing of summer rice and preparation of land for late rice continue. Tea prospects good.

Mysore and Coorg.—*For week ending 17th April, 1889.*—No rain in Mysore. Crops in parts of the Kolar districts are suffering from want of water. Elsewhere they are reported to be in good condition. Prospects generally favourable. Water-supply diminishing in parts of the Mysore and Kolar districts. No material change in prices.

Rain wanted for coffee blossoms in Coorg.

Berar and Hyderabad.—*For week ending 17th April, 1889.*—Fields are being prepared for ensuing *kharif* crops in Berar. *Rabi* prospects favourable. Agricultural stock generally good. Fodder and water scarce. Prices high in some districts.

No rain during the week in Hyderabad. *Rabi* and hot weather crops continue to be harvested. Scarcity of fodder felt almost everywhere. Prices stationary.

Central India.—*For week ending 17th April, 1889.*—No material change in crops or weather since last report. Crops slightly damaged at Baoni in Bundelkhand by hail. Prices rising at Neemuch.

Rajputana.—*For week ending 17th April, 1889.*—Some rain in Shahpura and slight in eight of the other States. Standing crops harvested. Agricultural stock good. Prices rising in Meywar, Kotah, Kishengurh, and Bhurtpore. Opium fair in Jeypore.

Nepal.—*For week ending 11th April, 1889.*—Slight rain. Weather hot; mornings and evenings cool. Thunderstorm occurred on afternoon of 6th. Outturn of wheat expected fair.

E. C. BUCK,
Secretary to the Government of India.

(*j*) Includes the Northern Bengal, Dacca, Kaunia-Dharla and Assam-Behar State Railways.

M. C. BRACKENBURY, *Major, R.E.,*
Offg. Deputy Secretary.

SIMLA, *18th April, 1889.*

Printed and published for the GOVERNMENT OF INDIA *at the* GOVERNMENT CENTRAL PRESS, *Simla.*

SUPPLEMENT TO

The Gazette of India.

No. 17.} CALCUTTA, SATURDAY, APRIL 27, 1889.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in* PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

WEATHER SUMMARY FOR MARCH 1889.

The month of March usually witnesses the commencement of the hot weather in Central and Northern India. The cold weather rarely lasts later than the middle of March on the Gangetic Plain. Hence it is a month of large change of meteorological conditions, mainly caused by rapid increase of temperature. The distribution of pressure changes considerably. Pressure decreases in the whole Indian area,—most rapidly in Northern India, and least in the Bay of Bengal and Southern India. The area of minimum pressure is usually transferred to the Eastern districts of the Central Provinces and Chutia Nagpur, which determines and accompanies an imperfect cyclonic circulation of the air over that and the adjacent districts.

The atmospheric disturbances of the month of March are usually of a different character from those of the preceding two months. The latter are usually due to the appearance of depressions in Upper India which drift eastwards and always give cloud, and frequently light to moderate rain to the districts near and on the north of the depression. In March the atmospheric disturbances are much more local in character and are chiefly due to the contrasts of conditions produced by the rapidly increasing temperature of the interior. The interaction of land and sea currents and of air motion between the plains and hills give rise to the various classes of storms comprised under the term hot weather storms, which include the nor-wester of Bengal, the thunderstorms and hailstorms of the Gangetic Plain and the adjacent hill districts, and the 'duststorms of Central and Upper India. Their cause is by no means yet fully understood, nor have the conditions of their occurrence been determined. The month of March is hence a transition month between cold weather and hot weather conditions in Northern India. It is usually a dry month, and the rainfall, which usually occurs, is sometimes due to storms similar to those of the cold weather and sometimes to local series of thunderstorms in the hot weather storms. In at least two cases out of three, when February has been wetter than usual, March is an unusually dry month and characterized by excessive temperature and unusually rapid increase of temperature.

The past month has been an example of a very dry March following an abnormally wet February.

The following gives a brief account of the more important depressions and large atmospheric disturbances of the month.

A shallow depression lay over Sind on the 7th, on which day temperature was 5° above the normal in the Central Provinces. The depression passed rapidly across the head of the Peninsula, and gave rain chiefly as thunder showers in some parts of the Central Provinces, North-Western Provinces, Bengal, and Behar. It filled up on the 3rd, and the barometer was very high in Upper India for three or four days afterwards. A very shallow depression formed

or appeared in Sind on 13th, but it disappeared on the next day without giving rain. Immediately before this, temperature was excessive in North-Western India. Thus in Sind and Rajputana the mean temperature of the 10th was 7° above the normal of the day, of the Punjab 5°, and of Guzerat and Central India 4°. Another depression appeared in Sind on the 13th and 14th, which was preceded by excessive temperature, *viz.* :

Punjab 9° above average.
Sind and Rajputana 8½° above average.
Guzerat and Central India 5½° above average : and
North-Western Provinces 5° above average.

It apparently passed across the head of the Peninsula and gave some thunder showers, chiefly in Bengal, Assam, and Burmah.

Another similar disturbance appeared in Sind on the 17th. It gave thunderstorm showers on that day in parts of the Punjab, North-Western Provinces, and Rajputana, and even caused a brief rapid reduction of temperature. Almost immediately afterwards, a depression formed in North Bengal and Behar and the adjacent hill districts. It gave rise to very strong south-westerly winds in South Bengal, and to much cloud, rain, and disturbed weather in the hills. Numerous duststorms occurred in Behar on the 20th, and some thunderstorms in Bengal and Assam on the 21st and 22nd.

After a brief period of rapid increase of temperature lasting until the 25th, a depression again formed in North Bengal under similar conditions to the preceding. It gave few showers, chiefly in Assam, and probably storms in the adjacent hills, and passed away on the 28th, after which ordinary weather prevailed until the end of the month.

Pressure.—The preceding discussion has hence shown that the month was unusually free from large disturbances. The chief feature was the excessive pressure which prevailed and which accompanied, contrary to the usual rule, increased temperature. The mean pressure for the month was ·051″ above the normal. The excess was greatest at the hill stations, thus showing that the unusual pressure conditions were probably due chiefly to abnormal conditions of the higher strata.

The relative anomalies were smaller than during the previous month. Pressure was relatively in slight defect in Northern India, and in slight excess in the Deccan. In the preceding month the excess in the Deccan was very prominent, but the change initiated by the hot weather conditions of March has already diminished this excess considerably, and hence it will probably pass away entirely during the present hot weather, and conditions more favourable to a strong Bombay monsoon current be established than have obtained during the past two years.

Temperature.—Owing to the absence of any large disturbances during the month the sky was unusually free from cloud, and hence the mean temperature of the month was everywhere above the normal. The greatest excess of temperature was in Sind and Rajputana (+1·9°), but this was closely approached by Bengal and Assam with an excess of 1·8°, and by the Punjab, the Central Provinces and Berars with an excess of 1·7° each. On the whole, the excess of the mean minimum temperature was greater than that of the mean maximum.

Rainfall.—No rain fell throughout the month in the Berars, Khandeish, Guzerat, or the Konkan, and in several other divisions, as will be seen in the following table, the total rainfall of the month was quite insignificant. There was a trifling excess in Rajputana, Sind, and Cutch, but both the actual and the average rainfall for March in those Provinces is very small, and the slight excess reported is unimportant.

The following table shows the actual average rainfall and the normal rainfall of the month of the twenty-one districts into which the country is divided, so far as it is indicated by the telegraphic reports of a few stations in each district :

Districts.	Number of stations.	Normal average rainfall in March.	Actual average rainfall in March 1889.	Difference from the average in March 1889.

W. L. DALLAS,

SIMLA, *17th April, 1889.* *Assistant Meteorological Reporter to the Government of India.*

E. C. BUCK,

Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and prospects of the Crops.

Madras.—*For week ending 20th April, 1889.*—Rainfall slight in Ganjam, Vizagapatam, Madura, Tinnevelly, Coimbatore, Nilgiris, Salem and Malabar; none elsewhere. Standing crops generally good, but suffering from want of rain in Ganjam, Vizagapatam, Chingleput, North Arcot, Trichinopoly and Tinnevelly; wet crops withering in parts of Cuddapah, Anantapur and Coimbatore. Pasture deficient in Ganjam, Vizagapatam, Cuddapah, Bellary, Kurnool, North Arcot, Madura, Tinnevelly and Coimbatore. No great fluctuations in prices; prices of rice and ragi falling in Ganjam. General prospects favourable, except in Ganjam; improving in Coimbatore. Labourers employed on last day of week—on Rushikulya works, 5,618; on Gopalpore Canal, 2,570; decrease due to outbreak of cholera, on Taptapani road, 482.

Bombay.—*For week ending 24th April, 1889.*—Rain has fallen in parts of Upper Sind Frontier, Sholapur, Belgaum, and Dharwar. Late crops in one taluka of Sholapur unsatisfactory. Cotton in parts of Dharwar blighted. Harvesting of late crops and preparations for next season's crops progressing. Probable outturn of late crops in Thana seven annas on average, and of cotton in Belgaum nine annas. Fodder scarce in Khandesh, and in parts of Karachi, Nasik, Poona, Ahmednagar, Sholapur, Dharwar, Kathiawar, and Baroda.

Bengal.—*For week ending 23rd April, 1889.*—Rain in East Bengal and parts of Central Bengal during the week has much benefited the standing crops and the cultivation of the autumn crops. More rain is generally wanted throughout the Province. Spring rice, *cheena*, indigo, and sugarcane are still doing fairly well, but the prospects of *cheena* are unsatisfactory in Muzaffarpur and Champarun, here but a small yield is expected. The *rabi* harvest is practically over, and the general outturn is from 10 to 12 annas in the majority of districts, while in the Chota Nagpur districts and in Bankura, Pubna, and Faridpur it is about 8 annas. The result of the opium weighments as far as carried out shows that the actual outturn will be about 40 per cent. approximately below the estimate. The latest report from the Patna division shows that there is a noticeable tendency to rise in the prices of food-grains, but that there is no marked increase in pressure anywhere.

North-Western Provinces and Oudh.—*For week ending 24th April, 1889.*—No rain. Weather very hot. *Rabi* harvest nearly completed. Markets full. Prices on the whole steady. Condition of cattle satisfactory.

Punjab.—*For week ending 24th April, 1889.*—No rain, except a slight fall in the Rawalpindi and Peshawar districts. Prices rising in Delhi and Mooltan; falling in Jullundur, Lahore, Rawalpindi, Shahpur, and Peshawar; stationary elsewhere. Harvesting of *rabi* crops going on, also weeding of cotton and sugarcane. Ploughings for other *kharif* crops in progress. Prospects of *rabi* crops good. Crops of six villages in Peshawar tahsil have suffered somewhat from hail. Fodder sufficient, except in Sadr station, Lahore. Opium produce small in Rawalpindi.

Central Provinces.—*For week ending 24th April, 1889.*—Weather cloudy and rather stormy. Threshing and winnowing in progress. Wheat outturn expected in Saugor 12, Hoshungabad 6, Nagpur 8, and Bilaspur 9 annas. Water scarce, except in northern districts.

Burma.—*For week ending 20th April, 1889.*—Slight rain fell in Toungoo, Tavoy, Bhamo, Shwebo, Yamethin, and Pyinmana. In Lower Burma there was a slight rise in the price of paddy in Rangoon, Tharrawaddy, Prome, and Tavoy and a fall in Henzada. In Upper Burma prices remained much the same, except in the Upper and Lower Chindwin, where a fall in the price is noticeable. Food-supply sufficient.

Assam.—*For week ending 24th April, 1889.*—Weather seasonable. Sufficient rain in most districts. Sowing of early rice nearly finished. Preparation of lands for late rice continues. Tea doing well.

Mysore and Coorg.—*For week ending 24th April, 1889.*—Slight rain reported in one taluka of the Shimoga district. Standing crops in good condition, except in parts of the Tumkur and Kolar districts. Paddy sown and sugarcane planted in parts. Outturn of crops harvested generally favourable. Supply of water diminishing in parts of the Mysore and Kolar districts. Prices slightly risen in the Mysore district.

Showers have fallen in parts of Coorg. The prospects of coffee and cardamom crops have already been affected by the prolonged drought. No pasturage.

Berar and Hyderabad.—*For week ending 24th April, 1889.*—Harvesting of *rabi* crops almost completed everywhere. Ploughing operations in progress for preparing fields for next crops. Agricultural stock good. Fodder insufficient, and prices of food-grains high in some districts.

No rain during week at Hyderabad. Harvesting of *rabi* crops concluded, that of hot weather crops continues. Scarcity of fodder and water felt. Prices stationary.

Central India.—*For week ending 24th April, 1889.*—Slight rain in Indore and Bhopawar, where weather has been cloudy and hot. Harvest gathered in Bhopal, Bundelkhand, and Baghelkhand. Land being prepared for *kharif* sowings in Bhopawar. No other material changes since last report.

Rajputana.—*For week ending 24th April, 1889.*—Slight rain in Bikaneer. Standing crops gathered in. Outturn of harvests average in some States. Agricultural stock good. Pasturage or fodder sufficient, except in Marwar, Kherwara, Meywar, and parts of Serohi. Prices rising in some States. Opium fair in Ajmere and Jeypore.

Nepal.—*For week ending 18th April, 1889.*—Slight rain. Weather cloudy. Harvesting of onion and garlic and wheat crops commenced.

E. C. BUCK,

Secretary to the Government of India.

SUPPLEMENT TO

The Gazette of India.

No. 18.] SIMLA, SATURDAY, MAY 4, 1889.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor-General will in future be published in* PART VI. *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI. *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and prospects of the Crops.

Madras.—*For week ending 27th April, 1889.*—No rain at Godavari; good at Madras, Tanjore, Trichinopoly, Madura, Tinnevelly, Coimbatore, Nilgiris, Salem, and Malabar; slight elsewhere. Standing crops generally good, but suffering from want of rain in Ganjam, Vizagapatam, Chingleput, North Arcot, and Trichinopoly. Wet crops withering in parts of Cuddapah, Anantapur, Chingleput, and Tinnevelly. Pasture deficient in Ganjam, Vizagapatam, and eight other districts. Prices rising in Ganjam, Vizagapatam, and six other districts; falling in five and stationary in others. General prospects favourable, except in Ganjam; much improved in Coimbatore by recent rain. Labourers employed on last day of week—on Rushikulya works, 5,991; Gopalpore Canal, 4,862; and Taptapani Road, 536.

Bombay.—*For week ending 1st May, 1889.*—Rain throughout Deccan and Southern Mahratta Country and in parts of Hyderabad, Ahmedabad, Khandesh, and Nasik. Exotic cotton in parts of Dharwar reviving. Harvesting of late crops and preparations for next season's crops progressing generally, and sowing commenced in Karachi. Fodder scarce in Khandesh and in parts of Nasik, Poona, Ahmednagar, Sholapur, Dharwar, and Kathiawar.

Bengal.—*For week ending 30th April, 1889.*—Showers reported in East and North Bengal and in a few places in Central Bengal; but no rain elsewhere. General rain is wanted throughout the Province for the standing crops and for the cultivation of the autumn crops. Spring rice has begun to be harvested, but for want of rain the outturn will not be so good as was expected. *Cheena* is doing well in Gya, Shahabad, and Sarun, but its prospects are unfavourable in Darbhanga, Muzaffarpur, and Chumparun, where but a small yield is expected. Sugarcane and indigo are still in fair condition; mulberry is doing fairly well in Midnapore, but in Murshidabad there is scarcely any leaf available for silk rearing; in Maldah an average mulberry crop has been reaped. Mango is generally a very short crop this year, except in Darbhanga, Muzaffarpur, and certain other districts in Behar, where it is plentiful. Prices of all foodgrains, particularly rice, show a marked tendency to rise throughout the Province.

North-Western Provinces and Oudh.—*For week ending 1st May, 1889.*—Weather seasonable. Slight rain in a few districts. Threshing of *rabi* crops in progress. Sugarcane and indigo being irrigated. Markets well supplied. Prices generally steady. General condition of agricultural stock is satisfactory.

Punjab.—*For week ending 1st May, 1889.*—Slight rain in parts of Hissar, Delhi, and Ferozepore. Prices falling in Rawalpindi; unsettled in Peshawar; stationary elsewhere. *Rabi* crops are being harvested. Ploughings for *kharif* sowings in progress. Cotton being sown in Shahpur and Dera Ismail Khan. Prospects of *rabi* and *kharif* are promising. Stock-cattle reported healthy. Fodder sufficient, except in Sadr station of Lahore. Poppy almost harvested in Amritsar. Opium produce small at Rawalpindi.

Central Provinces.—*For week ending 1st May, 1889.*—Rain in all districts, except Chhattisgarh. Threshing continues. Ploughing commencing for autumn crops. Water scarce in most districts. Prices rising in Saugor.

Burma.—*For week ending 27th April, 1889.*—Slight rain fell in Prome, Moulmein, Amherst, Toungoo, Tavoy, and Mergui. In Upper Burma rain fell in Bhamo, Myadoung, Lower Chindwin, Meiktila, Yamethin, and Pyinmana. Prices of paddy show a slight rise in Bassein, Thongwa, Henzada, and Moulmein. In Upper Burma there is a rise in prices in Myadoung, Magwe, and Pyinmana, and a fall in Shwebo. In the Bhamo district some of the dry weather crops have been destroyed owing to want of rain.

Assam.—*For week ending 1st May, 1889.*—Weather seasonable. Rain sufficient in almost all districts. Condition and prospects of crops good. Tea doing well.

Mysore and Coorg.—*For week ending 1st May, 1889.*—Some rain in the civil and military station Bangalore. Rain also reported throughout the Mysore State. Condition of crops good, except in parts of one taluk of Tumkur district, where water is much wanted. Agricultural operations in progress. Prospects generally favourable. No material change in prices.

Good rain has fallen throughout Coorg.

Berar and Hyderabad.—*For week ending 1st May, 1889.*—Preparation of land for *kharif* crops in progress in Berar. Agricultural stock generally good. Fodder insufficient in some districts. Prices almost stationary.

No rain during the week in Hyderabad. Reaping of hot-weather crops continues. Scarcity of fodder and water felt almost everywhere. Prices stationary.

Central India.—*For week ending 1st May, 1889.*—Slight rain in many parts during the week. Prices of foodgrains stationary in Neemuch; falling in Gwalior, rising in Baghelkhand. Condition of agricultural stock and pasturage in Western Malwa reported indifferent, and below average in Bundelkhand.

Rajputana.—*For week ending 1st May, 1889.*—Rainfall good in Meywar and Kotah; slight in Jhallawar. Average outturn of harvests in some States. Agricultural stock good. Prices rising in Meywar. Opium below average in Kotah.

Nepal.—*For week ending 25th April, 1889.*—Weather cloudy at times. Midday very hot. Rice is being sown. Sowing of Indian corn delayed for want of rain.

(*j*) Includes the Northern Bengal, Dacca, Kaunia-Dharlla and Assam-Behar State Railways
(*k*) Receipts for week ending 30th March, 1889.
(*l*) Total receipts from 1st April, 1888, to 30th March, 1889.

SIMLA, *2nd May, 1889.*

M. C. BRACKENBURY, *Major, R.E.,*
Officiating Deputy Secretary.

Printed and published for the GOVERNMENT OF INDIA *at the* GOVERNMENT CENTRAL PRESS, *Simla.*

SUPPLEMENT TO

The Gazette of India.

No. 19.} CALCUTTA, SATURDAY, MAY 11, 1889.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in* PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

DEPARTMENT OF FINANCE AND COMMERCE.

RAILWAY TRAFFIC.

GENERAL RULES FOR WORKING INDIAN RAILWAYS.

No. 69 R. T., dated Simla, the 26th April 1889.

RESOLUTION—By the Government of India, Public Works Department.

Read again—

Section 8 of Act IV (the Indian Railway Act) of 1879.

Public Works Department Notification No. 299, dated 13th September 1880, publishing the General Rules for all Railways in India, and Public Works Department Circular No. 17 Railway, dated 21st August 1880.

Public Works Department letter No. 1062 R. T., dated 20th October 1886.

Read also—

Bombay Government letter No. 459, dated 26th February 1887.

Notification by the Government of India in the Foreign Department, No. 1343-I., dated the 28th March 1889.

OBSERVATIONS.—In accordance with the provisions of Section 8 of the Indian Railway Act IV of 1879, as extended by the Notification of the Government of India in the Foreign Department read above, to the lands occupied by the Bhavnagar-Gondal-Junagadh-Porbandar Railway in the territories of the Rulers or Representatives of the States of Baroda, Junagadh, Gondal, Wadhwan, Bhavnagar, Limli, Chura, Wala, Lathi, Piparia, Bantwa, Jetpur and Porbandar, the Manager of that Railway has applied that the General Rules for Indian Railways, which have received the sanction of the Governor General in Council and were published in the *Gazette of India*, dated 18th September 1880, may be applied to the Bhavnagar-Gondal-Junagadh-Porbandar Railway, with the exception of Rules 342 and 343, which he requests may be modified so as to read as follows :—

"No. 342.—No engine or train shall be moved from any station until the Driver has in his possession a "Line Clear," "Caution Message," or other permission written on the authorized form showing that he can proceed to the next station. The Driver is to receive this written permission from no other person than the Guard of his own train, or from the Station Master, or from one of the Station staff duly authorised for such duty; but on all occasions when the Guard does not personally deliver the permission to the Driver, it must be countersigned by the Guard before delivery to the Driver. The Driver must also receive from the Guard the usual starting signal before moving.

When a train is arranged to run through a station without stopping, the written permission to proceed to the next station may be handed to the Driver direct by the Station Master or other authorised person of the Station staff, and a duplicate of it handed to the Guard in the same manner.

"No. 343.—The Station Master, or other authorised person of the Station staff, is to hand the written permission to the Guard, who must satisfy himself that it is properly filled up and dated with the time added, and is signed in full and in ink, and that it applies to the particular train or engine for which it is given and received before handing it to the Driver. The Driver must also satisfy himself on these points before starting.

This written permission is never to be given to the Driver until the train is to start; and when waiting to pass another train, it must not be given to the Driver until the whole of such other train has come in and is clear of the points.

When a train is not timed to stop at a station, and the written permission is handed both to the Driver and Guard of the train, the Station Master will be held wholly responsible that it applies to the particular train or engine for which it is given, and that it is properly filled up and dated, with the time added, and is signed in full and in ink."

RESOLUTION.—With Rules 342 and 343 altered as proposed, and with the exception of section XVII which refers to the working of a single line of railway on the system termed in Rule 3 of the said Rules "Train Despatching," the Governor General in Council is pleased, under Section 8 of the said Act as so extended, to sanction the application to the Bhavnagar-Gondal-Junagadh-Porbandar Railway of the General Rules for Indian Railways as published in the *Gazette of India* dated 18th September 1880.

ORDER.—Ordered that the General Rules, which have been published in the *Gazette of India*, be further notified to the Railway servants and the public by a copy thereof [with the exception and alterations noted] and of this Resolution being kept open to inspection, free of any charge, in the office of the Station Master of every station on the said Railway.

Ordered also that this Resolution be communicated to the Secretary to the Government of Bombay, Public Works Department, for information and guidance, with reference to his letter No. 459, dated 26th February 1887, and that it be published in the *Gazette of India*.

R. C. B. PEMBERTON, *Colonel, R. E.*,

(1) The area irrigated in Jind State from the Western Jumna Canal is not shown, as the Jind distributaries were handed over to the State on 1st April 1888.
(2) This is the correct acreage and differs from that shown in the return for kharif 1887.
(3) Include 6,150 acres as approximate irrigated area of Changa Manga Plantation.

Area irrigated in Kharif 1888 . . 532,274 acres.
ditto 1887 . . 543,030 ,,
Net decrease . 10,756

There would have been an increase of about 20,000 acres if the Jind irrigation had been included.

Irrigation.

STATEMENTS OF IRRIGATION OPERATIONS IN THE NORTH-WESTERN PROVINCES FOR THE KHARIF SEASON OF 1888-89.

GOVERNMENT, N.-W. P. AND OUDH.

PUBLIC WORKS DEPARTMENT.

Irrigation Branch.

Irrigation Operations, North-Western Provinces, for the "Kharif" Season (1st April to 30th September) 1888.

No. 7061., dated Allahabad, the 2nd March 1889.

RESOLUTION—By His Honor the Lieutenant-Governor, North-Western Provinces, and Chief Commissioner, Oudh.

READ—

Statements A23, B23, and C23, showing Irrigation Operations for kharíf, 1888, of Canals in the North-Western Provinces.

OBSERVATIONS.—The area irrigated during kharíf, 1888, was 702,959 acres against 650,597 acres in 1887, and 589,908 in 1886; an increase of 8·04 and 19·16 per cent. respectively.

All canals, except the Agra and Bijnor Canals and the Bundelkhand Lakes, show an increase.

The monsoon broke early in July southwards of Aligarh, but not till about a fortnight later northwards of that place; and continued with no general or well-defined "break" nearly to the end of September. No crops, except rice, were irrigated after the rains commenced.

The assessments on account of occupiers' rate amounted to R21,90,933 against R19,95,753 in 1887 and R17,57,488 in 1886; an increase of 9·73 and 24·66 per cent. respectively.

2. Table I shows the areas under the different crops for the past four years:—

TABLE I.

Crops.	1885.	1886.	1887.	1888.
	Acres.	Acres.	Acres.	Acres.
Sugarcane	175,638	169,123	197,604	225,280
Rice	95,986	151,232	134,822	141,852
Bájra and Juár	6,062	4,304	4,452	3,917
Maize	14,505	13,929	9,868	23,781
Other food-grains	7,109	8,758	9,783	9,554
Fodder Crops	5,878	6,415	7,753	6,966
Fibres (Cotton)	57,341	41,373	47,671	36,042
Dyes (Indigo)	297,282	163,957	212,732	224,160
Miscellaneous	42,457	30,817	25,912	31,407
TOTAL	702,258	589,908	650,597	702,959

Sugarcane shows an increase of 26,676 acres, or about 14 per cent.; indigo an increase of 11,428 acres, or 5·4 per cent.; rice an increase of 7,030 acres, or 5·3 per cent.

Owing to the late setting in of the rains the area under maize is nearly 2½ times as great as in 1887.

Cotton shows a decrease of 11,629 acres, or 24·4 per cent.; due partly to the large area under sugarcane, which required all the available supply on the Upper Ganges and Eastern Jumna Canals.

3. Table II compares the areas by canals during the last two years:—

TABLE II.

Canals.	1887.	1888.	More.	Less.
	Acres.	Acres.	Acres.	Acres.
Upper Ganges	259,992	278,037	18,045	...
Lower Ganges	143,778	161,681	17,903	...
Agra	58,949	48,638	...	10,311
Eastern Jumna	90,754	103,942	13,188	...
Betwa	2,290	3,478	1,188	...
Dún	6,300	6,781	481	...
Rohilkhand	45,657	46,379	722	...
Bijnor	4,367	4,238	...	129
Hamírpur Lakes	282	203	...	79
Jhánsi Lakes	67	65	...	2
Tarái	13,000	20,805	7,805	...
Bhábar	25,161	28,712	3,551	...
TOTAL	650,597	702,959	52,362	...

The decrease on the Agra Canal is said to be due to the restricted sowings under the apprehension of another year of heavy rain and to the insufficient supply of water during the hot weather.

4. The assessments on account of occupiers' rates by canals for the last four years are shown in Table III.

TABLE III.

Canals.	1885-86.	1886-87.	1887-88.	1888-89.
	R	R	R	R
Upper Ganges	10,04,071	8,64,057	9,54,667	10,65,814
Lower Ganges	4,86,755	2,79,488	3,82,510	4,19,888
Agra	1,97,862	1,57,631	1,79,914	1,55,690
Eastern Jumna	3,87,940	3,87,572	3,95,953	4,56,706
Betwa	...	4,760	12,187	18,371
Dún	16,339	17,877	19,597	20,278
Rohilkhand	38,966	40,966	41,011	44,569
Bijnor	6,641	4,077	8,891	8,873
Bundelkhand Lakes	815	1,060	1,023	744
TOTAL	21,39,359	17,57,488	19,95,753	21,90,933

The Upper Ganges and Eastern Jumna Canals show the largest increase, owing to the large area under 1st class crops, sugarcane and rice, on these canals.

The rate per acre irrigated is R3·12 against R3·26 in the previous year.

By order, &c.,

G. T. SKIPWITH, *Lieut.-Col., R.E.,*
Offg. Joint-Secy. to Govt., N.-W. P. and Oudh, P. W. D., Irrigation Branch.

ORDER.—Ordered that copies of this Resolution be submitted to the Government of India, that it be circulated to other Governments and to Local Departments, and that it be published in the *North-Western Provinces and Oudh Gazette.*

PUBLIC WORKS DEPARTMENT, N.-W. PROVINCES.

H. W. CONDUITT,
Asst. Secy. to Govt., N.-W. P. and Oudh, P. W. D.

ALLAHABAD:
The 2nd March 1889.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and prospects of the Crops.

Madras.—*For week ending 4th May, 1889.*—No rain in Kistna, Nellore, Madras, and Chingleput; fair in Coimbatore, Nilgiris, Salem, and Malabar; slight elsewhere. Standing crops generally good, but suffering from want of rain in Ganjam, Vizagapatam, and North Arcot; wet crops withering in parts of Cuddapah and Anantapur. Pasture deficient in Ganjam, Vizagapatam, Bellary, Madura, Salem, and Malabar. Prices rising in eleven districts, falling in four, and stationary in others; price of rice and *cumbu* has risen in Ganjam. Labourers employed on last day of week—on Rushikulya works, 6,791; Gopalpore Canal, 4,352; and Taptapani and three other roads, 1,210. General prospects favourable, except in Ganjam; much improved in Coimbatore.

Bombay.—*For week ending 8th May, 1889.*—Rain throughout Southern Mahratta Country and in parts of Sholapur and Satara. Exotic cotton in parts of Dharwar reviving. Harvesting of late crops continues in parts. Preparations for next season's crops progressing generally, and sowing in parts of Karachi and Sholapur. Fodder scarce in Khandesh and Nasik and in parts of Poona, Ahmednagar, Sholapur, Dharwar, Kanara, Kathiawar, and Baroda.

Bengal.—*For week ending 7th May, 1889.*—Good and general rain has fallen in East Bengal, and some showers are also reported in North Bengal; but the rest of the Province has been without rain. The cultivation of the autumn crops is going on in East Bengal and parts of North Bengal; but over greater part of the Province is retarded for want of rain. The standing crops are also suffering in many districts from intense heat and want of moisture. The spring rice is being harvested, and the general outturn is expected to be below the average. In Behar the *cheena* will not be so good as was expected. The price of common rice is steadily rising all over the Province; of the affected districts in the Patna Division, Muzaffarpur reports 11 seers for the rupee, Chumparun $11\frac{1}{2}$ seers, and Darbhanga $13\frac{1}{8}$ seers. The pressure in the Chumparun district is said to be on the increase.

North-Western Provinces and Oudh.—*For week ending 8th May, 1889.*—Weather hot. Threshing of *rabi* crops in progress. Sugarcane being irrigated. Supplies sufficient. Prices generally steady. General condition of agricultural stock is satisfactory.

Punjab.—*For week ending 8th May, 1889.*—No rain during the week, except a slight fall at Rawalpindi. Prices rising in Amballa; falling in Ferozepur, Sialkot, Shahpur, and Peshawar; and stationary elsewhere. Harvesting of *rabi* crops nearly over. Threshing operations in progress. Crops are reported to be in good condition. Outturn good in Jullundur and below average in Amritsar. Wheat crop slightly suffered on account of high winds in Peshawar. Stock-cattle are reported healthy. Fodder sufficient, except in Sadr Station of Lahore.

Central Provinces.—*For week ending 8th May, 1889.*—Weather cloudy and hot. Crops all harvested. Fields being manured and ploughed for autumn sowings. Water-supply scarce in most districts. Prices generally steady.

Burma.—*For week ending 8th May, 1889.*—Rain fell in Akyab, Sandoway, Hanthawaddy, Pegu, Bassein, Thongwa, Thayetmyo, Moulmein, Amherst, Shwegyin, and Tavoy in Lower Burma. In Upper Burma rain fell in Mandalay, Bhamo, Myadoung, Shwebo, Yeu, Sagaing, Upper Chindwin, Lower Chindwin, Myingyan, Minbu, Magwe, Meiktila, Yamethin, and Pyinmana. Food-supply

sufficient. There is a rise in the price of paddy at Prome, Thongwa, Thayetmyo, and Moulmein, and a fall in Bassein and Henzada. In Upper Burma there is a rise in the price in Lower Chindwin and a fall in Shwebo and Magwe. In ten other districts the price remains the same as last week.

Assam.—*For week ending 8th May, 1889.*—Weather stormy. Sufficient rain in most districts. Condition and prospects of crops good, except in Garo Hills. Tea doing well.

Mysore and Coorg.—*For week ending 8th May, 1889.*—Rainfall fair in Kadur district, elsewhere slight. Standing crops good, except in parts of Tumkur district, where water is wanted. Outturn of crops harvested generally favourable. Prices slightly risen in Bangalore and Shimoga districts.

Prospects favourable in Coorg. Slight rain.

Berar and Hyderabad.—*For week ending 8th May, 1889.*—Threshing of *rabi* crops completed in Berar. Everywhere ploughing operations continue. Cattle healthy. Fodder and water scarce. Prices of grain increased in some districts.

No rain during the week in Hyderabad. *Rabi* crops suffering for want of water. Scarcity of fodder and drinking-water felt. Prices—wheat 11¼, coarse rice 9¼, white *juar* 18, yellow *juar* 20, and *tur* 16½ seers per current sicca rupee.

Central India.—*For week ending 8th May, 1889.*—No material change in condition of crops and weather since last report. Apprehensions still entertained of drought in neighbourhood of Neemuch.

Rajputana.—*For week ending 8th May, 1889.*—Outturn of harvest expected excellent in Kerowli. Agricultural stock good. Pasturage or fodder sufficient, except in Marwar, Kherwara, and Meywar. Prices rising in Meywar, Jhallawar, Bhurtpore, and Ulwar, and steady elsewhere.

Nepal.—*For week ending 2nd May, 1889.*—Slight rain. Weather hot. Rain wanted for sowing of Indian corn and rice.

E. C. BUCK,
Secretary to the Government of India.

SUPPLEMENT TO

The Gazette of India.

No. 20.} SIMLA, SATURDAY, MAY 18, 1889.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor-General will in future be published in* PART VI. *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI. *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and prospects of the Crops.

Madras.—*For week ending 11th May, 1889.*—No rain at Godavari, Nellore, Cuddapah, Bellary, Kurnool, Madras, Chingleput, and North Arcot; fair rainfall at Tinnevelly, and slight elsewhere. Standing crops generally good, but suffering from want of water in Ganjam and Vizagapatam; wet crops withering in parts of Cuddapah, Anantapur, and Chingleput. Pasture deficient in Ganjam, Vizagapatam, Cuddapah, Bellary, Malabar, and in parts of North Arcot, Trichinopoly, Madura, Tinnevelly, and Coimbatore. Prices rising in six districts, falling in five, and stationary in others; prices of rice and *cholum* rose in Ganjam. Labourers employed last day of the week—on Rushikulya works, 6,327; Gopalpore Canal, 4,472; and Taptapani Ghat Road, 589. General prospects favourable, except in Ganjam.

Bombay.—*For week ending 15th May, 1889.*—Rain in Southern Mahratta Country and Deccan and in parts of Karachi, Shikarpur, and Ratnagiri. Harvesting of late crops continues in Hyderabad; preparations for next season's crops progressing in most districts; and sowing in Karachi. Fodder scarce in Khandesh and Nasik and in parts of Karachi, Thana, Poona, Ahmednagar, Dharwar, Kathiawar, and Baroda.

Bengal.—*For week ending 14th May, 1889.*—Weather hot and dry. No rain during the week, except a few showers in East and North Bengal; rain generally much wanted for the cultivation of the autumn crops, which is delayed. Cultivation is only going on in East Bengal and parts of North Bengal, which have had fair rain of late. The standing crops are also in need of rain; in Behar the *cheena* has suffered much in the unirrigated tracts, and but a small

outturn is expected in Darbhanga, Muzaffarpur, and Chumparun. The spring rice is being harvested, and the outturn will be below the average. The price of rice has risen everywhere.

North-Western Provinces and Oudh.—*For week ending 15th May, 1889.*—No rain. Weather very hot. Threshing operations in progress. Sugarcane, cotton, tobacco, and indigo being watered. Supplies sufficient. Prices show a tendency to rise. The condition of agricultural stock generally satisfactory.

Punjab.—*For week ending 15th May, 1889.*—Slight rainfall in certain districts. Prices rising in Jullundur; falling in Sialkot, Shahpur, and Peshawar; stationary elsewhere. Harvesting and threshing of *rabi* still in progress, and ploughings for *kharif* are still going on. Sugarcane and cotton crops are in good condition, outturn of *rabi* from good to average. Stock-cattle are reported healthy. Fodder sufficient, except in Sadr Station of Lahore.

Central Provinces.—*For week ending 15th May, 1889.*—Weather cloudy and hot. Fields are being ploughed and manured for rainy weather crops. Water scarce almost everywhere. Fodder scarce in Raipur.

Burma.—*For week ending 11th May, 1889.*—Slight rain fell in Hanthawaddy, Tharrawaddy, Prome, Thongwa, Thayetmyo, Moulmein, Amherst, Shwegyin, Tavoy, and Mergui. In Upper Burma rain fell in Myadoung, Shwebo, Yeu, Sagaing, Kayaukse, and Lower Chindwin. In Lower Burma the price of paddy has risen in Tharrawaddy, Bassein, Henzada, and Thayetmyo, and a slight fall in price is noticeable in Prome. In Upper Burma the price has risen considerably in Bhamo, Shwebo, Lower Chindwin, and Yamethen, and fallen in Upper Chindwin. Food-supply is sufficient, but in Bhamo rain is much wanted.

Assam.—*For week ending 15th May, 1889.*—Weather stormy. Rainfall insufficient in Garo Hills, excessive in Sylhet and Nowgong, and sufficient elsewhere. Prospects of crops in general good. Tea doing well.

Mysore and Coorg.—*For week ending 15th May, 1889.*—Some rain in Kadur and Shimoga districts of Mysore. Wet crops in parts of Tumkur and Shimoga districts suffering from want of water. Elsewhere condition of crops generally good. Sugarcane planted in parts. Prospects favourable. Prices slightly risen in Kadur district.

Slight rain in Coorg during the week. Prospects good.

Berar and Hyderabad.—*For week ending 15th May, 1889.*—Preparations for *kharif* crops still going on in Berar. General condition of cattle good. No marked change in the prices of food-grains.

Slight rain in Hyderabad during the week. Reaping of hot-weather crops continues. Preparations for *kharif* sowings commenced. Scarcity of water and fodder felt almost everywhere. Prices stationary.

Central India.—*For week ending 15th May, 1889.*—No material change in condition of crops and weather since last report. Prices of food rising in Bundelkhand and Baghelkhand; elsewhere steady.

Rajputana.—*For week ending 15th May, 1889.*—Agricultural stock good. Pasturage or fodder sufficient, except in Marwar, Kherwara, Meywar, Dholepur, and parts of Sirohi. Prices rising in some places.

Nepal.—*For week ending 9th May, 1889.*—Slight rain and hail during the week. Weather comparatively cool. Price of rice has risen owing to damage of ripe wheat by hail. Sowing of Indian corn is in progress.

E. C. BUCK,
Secretary to the Government of India.

M. C. BRACKENBURY, *Major, R.E.*,
Officiating Deputy Secretary.

SIMLA, *16th May, 1889.*

Printed and published for the GOVERNMENT OF INDIA *at the* GOVERNMENT CENTRAL PRESS, *Simla.*

SUPPLEMENT TO

The Gazette of India.

No. 21.] CALCUTTA, SATURDAY, MAY 25, 1889.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Governments of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in* PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending 8 a.m. on Monday, May 20th, 1889.

The weekly meteorological summary and rainfall return which was commenced last year is now resumed on the approach of the rainy season.

The summary includes a short review of the changes, &c., in the principal meteorological elements and a detailed statement of the rain received in the different Provinces of India during the week. The collection of rainfall is now carried out at nearly all the district head-quarters throughout India and Burma, and the information telegraphed to the Meteorological Department weekly consists briefly of the rainfall for each day of the week under review at the district officer's head-quarters and the total rainfall for the seven days. It also shows the average rainfall of the whole district of which the head-quarters office is the centre. This average is derived from the returns sent in by the sub-divisional offices. The normal average of the district is also given. These figures are not absolutely correct, as daily returns from all the districts are not available, and hence the normal average has been estimated by comparing the monthly averages of the various districts with the monthly averages of neighbouring districts, where the daily fall is known, and estimating the weekly fall accordingly. The final columns of the table give the total rainfall in the various districts since the 13th of May up to the date of the return (in this case the morning of the 20th), the normal fall for the same period, and the variation of the rainfall of the season under review from that normal.

During the past week the distribution of pressure has been remarkably steady. It has been high throughout the week on the west and south coasts of the Peninsula and over the south and centre of the Bay. From these regions it has decreased towards the north,—on some days slowly, on others more briskly,—and was lowest over the east of the Central Provinces, West Bengal, the Gangetic plain, Rajputana, and Sind. Within this low-pressure area there were ordinarily three centres of depression,—one over West Bengal and the east of the Central and North-West Provinces, a second over the plain along the foot of the mountains in the North-West Provinces and the Punjab, and a third over Sind. In the neighbourhood of each of these centres the winds were cyclonic in their movements, though the circulation was in each case feeble and irregular. In other parts of the country the general wind directions were fairly normal except on the west coast. In this region the normal wind is a fresh breeze from west (west-south-west—west-north-west), but during the past week light breezes from all directions, including even east, have prevailed on that coast. Over the head of the Bay there has been a strong southerly wind on most days, but in the south and centre the wind has been light and variable. The week has been marked by an absence of travelling storms or cyclones both over the land and sea.

So far, there does not appear to have been any serious advance of the south-west monsoon into the Indian region. There have been one or two falls of rain over Southern India, but they appear to have been attributable to local causes, and have generally been accompanied with light and variable breezes.

The changes of pressure compared with the normal have been large. At first the barometer was below the average over Northern India and the west and south of the Peninsula. It then rose above the average, except in Assam and Malabar. This distribution continued during the 16th and 17th, but on the 18th pressure gave way and fell below the normal again over Northern India. During the next two days this deficiency continued and extended to Central India and the north of the Peninsula.

During the first two days of the week the weather was very cool in the Punjab for the time of year, but was hotter than usual in all other Provinces. On the 16th the departure of temperature from the normal was generally small in all Provinces. This was in a modified degree the case on the 17th also, but on the 18th the thermometer rose again, and from that date till the close of the week the mean average temperature was almost everywhere considerably above the normal average.

On the 15th the chart showed large contrasts of temperature in different parts of India, the deficiency in the Punjab and the excess in Bengal being very remarkable.

Punjab Maximum.		° °	Bengal and North-Western Provinces Maximum.		° °
Ludhiana	...	97·3— 5·7	Burdwan	...	105·7+10·1
Lahore	...	90·1—11·5	Berhampore	...	107·7+13·2
Sialkote	...	89·1—11·9	Purneah	...	104·3+11·1
Rawalpindi	...	88·5— 7·4	Durbhanga	...	104·4+10·0
Simla	...	66·2— 9·3	Gorakhpore	...	108·8+10·2

West and Central Bengal and the east of the North-West Provinces have been the hottest parts of India relatively to the average during the week, though the absolutely highest temperature has as a rule been reported from the Western Desert.

Rain.—The rainfall of India has been very defective. The only divisions recording an excess are East Bengal, the Assam Valley, Coorg, the Konkan, the Bombay Deccan, and South Madras; and of these divisions, the only one which has received an important addition to its rainfall is the Assam Valley, where an inch more than usual fell. The rainfall in Upper India, extending from Chota Nagpur and Behar north-westward across the North-West Provinces to the Punjab, was practically nil, as the few light showers received in the Punjab and North-Western Provinces were of no importance. It will however be seen from the second column of the table that hardly any rain is expected in these regions during this period. The same is true of the central parts of the country,—Khandeish and Rajputana—where the small average which usually falls during the week under review has not been reached.

In Burma only about ¼ of the normal rainfall has been received, while in East Bengal and the Surma side of Assam there has been an excess or only a slight deficiency. Over this portion of the Indian region some moderately heavy rainfalls have already occurred. For instance, in the Amherst district of Tenasserim one subdivisional station received 8·3 inches of rain; Tongail in the Mymensingh district received 6 inches; and Sadiya in Dibrugarh received 7 inches. In Deltaic Bengal and also in Northern Bengal rain, though slight, occurred fairly generally, but on leaving those divisions rainfall, as noted above, practically ceased.

On the South-West Coast rain occurred almost daily, but the amounts were small and the average was not reached; while in the Konkan on the contrary, though there were only one or two wet days, yet owing to heavy falls in the North Kanara district, the average was exceeded. In the Deccan rain fell in all the divisions—heavily in some—and the total was larger than the normal.

In the Madras divisions there were no heavy falls, and the total was short of the normal.

SIMLA, *23rd May, 1889.*

W. L. DALLAS,
Assistant Meteorological Reporter to the Government of India.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and prospects of the Crops.

Madras.—*For week ending 18th May.*—No rain in Godavari district, Chingleput, and South Arcot; slight in Ganjam, Nellore, Cuddapah, Bellary, Kurnool, North Arcot, and Trichinopoly; and fair elsewhere. Crops generally good, but suffering from want of water in Ganjam, Vizagapatam, North Arcot, and Salem. Wet crops withering in parts of Cuddapah and Anantapur. Scarcity of water very severely felt in Ganjam. Water-supply insufficient in Nellore, Cuddapah, Bellary, North Arcot, and Salem. Pasture deficient in Ganjam, Vizagapatam, North Arcot, and Trichinopoly. Prices rising in Ganjam, Vizagapatam, Kistna, and four other districts; falling in seven, and stationary in others. Labourers employed on last day of week—on Rushikulya works, 5,809; Gopalpore Canal, 4,734; Road works, 1,676. General prospects favourable, except in Ganjam.

Bombay.—*For week ending 22nd May.*—Rain in Deccan and Southern Mahratta Country and in parts of Ahmedabad, Khandesh, Nasik, and Ratnagiri. Harvesting of late crops finished in Karachi; continues in Hyderabad. Preparations for next season's crops progressing in most districts, and sowing in Kanara. Rice sowing commenced in Belgaum. Fodder scarce in Khandesh and in parts of Nasik, Thana, Poona, Dharwar, Kathiawar, and Baroda. Drinking-water failing in parts of Khandesh; scarce in parts of Nasik, Ahmednagar, Sholapur, Dharwar, and Kathiawar.

Bengal.—*For week ending 21st May.*—Showers have fallen in almost all districts of Bengal Proper and in Cuttack, Balasore, Singhbhoom, and Manbhoom. These showers have done some good to the standing crops and have assisted in ploughing and sowing operations, but more are much needed. In Behar rain still holds off, and the crops are suffering in consequence. *Cheena* and *mung* have been considerably damaged, but indigo is still bearing up, and sugarcane is being irrigated. The spring rice harvest is nearly over, and the outturn is estimated at ten annas in some places. The price of rice is still increasing in many districts, and the rates reported from the affected districts are—Durbhanga 12½ seers, Mozufferpore 11 seers, and Chumparun 10 seers per rupee.

North-Western Provinces and Oudh.—*For week ending 22nd May.*—Weather very hot. Clouds with light rain here and there. *Rabi* harvest nearly over. Indigo, sugarcane, and other summer crops being irrigated. Supplies sufficient. Prices generally steady. Condition of cattle satisfactory.

Punjab.—*For week ending 22nd May.*—Slight rain in a few districts. Prices rising in Hissar; falling in Delhi, Shahpur, and Peshawar; stationary elsewhere. Harvesting and threshing operations nearly completed. Ploughings for *kharif* sowings are in progress. Outturn of *rabi* is reported to be good. Cotton and sugarcane crops promising. Stock cattle are generally healthy. Fodder sufficient.

Central Provinces.—*For week ending 22nd May.*—Weather hot and cloudy, with slight storms and rain. Ploughing in progress. Rice sowing commenced in Bilaspur. Water-supply deficient. Prices generally steady.

Burma.—*For week ending 18th May.*—Slight rain fell in several districts in Upper and Lower Burma, but rain is still wanted in Bhamo in Upper Burma. Reaping of dry weather crops is generally finished, and in some cases early paddy is being planted. The price of paddy has risen in Pegu, Prome, Henzada, Thayetmyo, and Tavoy in Lower Burma, and in Minbu in Upper

Burma; while prices have fallen in Yamethin and Tharrawaddy, and elsewhere are stationary.

Assam.—*For week ending 22nd May.*—Weather seasonable. Rainfall sufficient in all districts. Ploughing and transplanting of late rice progressing. Prospects of tea and other crops good.

Mysore and Coorg.—*For week ending 22nd May.*—Rainfall fair in Mysore district, scanty in others. Standing crops good, except in parts of Tumkur district, where water is still wanted for wet crops. Crops harvested generally favourable. Prices slightly fallen in Kolar district.

Slight rain in Coorg. Ploughing of wet lands commenced. Prospects good.

Berar and Hyderabad.—*For week ending 22nd May.*—Ploughing operations continue in Berar. Cattle healthy, but fodder and water insufficient. Prices of food-grains high in some districts.

Central India.—*For week ending 22nd May.*—No material change in condition of crops and weather since last report. Slight rain in Bhopawar. Prices of food-grains falling in Manpur, Bhopawar, and Neemuch.

Rajputana.—*For week ending 22nd May.*—Some rain at Abu and Ajmere. Condition of agricultural stock good. Pasturage or fodder scarce in Marwar, Kherwara, Meywar, and parts of Sirohi. Prices rising everywhere, except in Sirohi, Marwar, Kherwara, and Jhallawar.

Nepal.—*For week ending 16th May.*—Slight rain during the week. The rain will do good to rice and Indian corn. Chillies being planted.

E. C. BUCK,

Secretary to the Government of India.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

CIVIL WORKS.

Irrigation.

REVENUE REPORT OF IRRIGATION WORKS IN BENGAL FOR 1887-88.

No. 99 I., dated Simla, the 22nd May, 1889.

RESOLUTION.—By the Government of India, Public Works Department.

Read—

The Revenue Report of Irrigation Works in Bengal for 1887-88 and the Resolution thereon by the Government of Bengal, No. 4581A., dated 18th March 1889.

OBSERVATIONS.—In the Bengal Province there are four Major Works; the Orissa and the Sone Canals, which are mainly for purposes of irrigation, the Midnapur Canal, which is mainly, and the Hidgellee Tidal, which is entirely, for navigation purposes. There are three Minor Provincial Works in operation; the Sarun Canals (for irrigation) and the Orissa Coast Canal and the Calcutta and Eastern Canals for navigation. There are also two works in abeyance, the Tirhut and Damudar Projects, on which in past years 7¾ lakhs of rupees have been spent on surveys and preliminary work. The following statement shows the Capital expenditure during and up to the end of the year 1887-88 for the construction of these works:

	Number of works.	Capital Expenditure during the year.			Capital Expenditure to the end of the year.		
		Direct.	Indirect.	Total.	Direct.	Indirect.	Total.
		Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
MAJOR WORKS.							
Productive	4	5,45,628	12,348	5,57,976	5,81,08,956	16,40,329	5,97,49,285
MINOR WORKS AND NAVIGATION.							
Works of which Capital and Revenue Accounts are kept Imperial (in abeyance)	2	—1,200	...	—1,200	6,83,760	90,889	7,74,655
Provincial (in operation)	3	3,37,445	8,797	3,46,242	99,05,058	1,85,594	1,00,90,652
GRAND TOTAL ...	9	8,81,873	21,145	9,03,018	6,86,97,780	19,16,812	7,06,14,592

There are no Protective Works in Bengal, but a grant-in-aid of Rs. 8,66,000 (included in the above figures under Minor Works in operation) has been given from Protective funds for the Orissa Coast Canal. There are three works in Bengal of which no Capital accounts are kept,—the Nuddea River, the Eden Canal, and the Madhuban Canal.

The Capital expenditure of 9 lakhs was chiefly on the Orissa Canals (about 4 lakhs), the Orissa Coast Canal (about 3¼ lakhs), and on the Sone Canals (about 1½ lakhs). The expenditure on the Orissa Canals was chiefly on drainage and protective works, and on the extensions of the Taldanda and Matchgong Canals; 26½ miles of new distributaries were completed. On the Orissa Coast Canal the money was chiefly spent in completing the earth-work of the canal and on the locks. The expenditure on the Sone Canals was almost entirely on drainage works and on 8 miles of distributaries.

2. The sanctioned estimates of the four Major Works aggregate about 719 lakhs, of which 597½ have been expended, leaving 121½ lakhs to be spent; of this balance 89 lakhs are on the Orissa Canals, and 32 lakhs on the Sone Canals.

The following statement shows the progress on construction of the works:

	Number of works.	Sanctioned.		Completed.	
		Miles of Canals.	Miles of Distributaries.	Miles of Canals.	Miles of Distributaries.
MAJOR WORKS.					
Productive Works	4	752	3,623	701	2,168
MINOR WORKS.					
Of which Capital and Revenue Accounts are kept (in operation)	3	145	*Nil*	143	*Nil*
TOTAL ...	7	897	3,623	844	2,168

There are 53 miles of canals and 1,455 miles of distributaries to be constructed to complete the projects, of which 52 miles of canals and 1,429 miles of distributaries are in the Orissa Irrigation System.

3. The actual financial results of the year under review on the works in operation are shewn in the following statement:

		Capital outlay to end of the year.	Gross Revenue.	Working Expenses.			Net Revenue.	Percentage of Net Revenue on Capital outlay.
				Direct.	Indirect.	Total.		
MAJOR WORKS.		Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Productive Works.	Orissa Canal ...	2,34,30,685	2,22,679	4,80,949	21,501	5,02,450	—2,79,771	*Nil*
	Midnapur Canal ...	84,47,003	2,33,925	2,39,613	10,783	2,50,396	—16,471	*Nil*
	Hidgellee Tidal Canal.	18,40,296	41,858	64,895	2,081	66,976	—25,118	*Nil*
	Sone Canal ...	2,60,31,901	5,88,618	7,01,979	50,369	7,52,348	—1,63,730	*Nil*
Total Productive Works ...		5,97,49,285	10,87,080	14,87,436	84,734	15,72,170	—4,85,090	*Nil*
MINOR WORKS AND NAVIGATION.								
Works of which Capital and Revenue Accounts are kept.								
Sarun Canals ...		6,96,113	20,665	28,120	1,277	29,397	—8,732	*Nil*
Orissa Coast Canal ...		41,55,123	53,837	80,868	2,639	83,507	—29,670	*Nil*
Calcutta and Eastern Canals		52,39,116	5,79,934	2,12,312	12,344	2,24,656	3,55,278	6·78
TOTAL ...		1,00,90,652	6,54,436	3,21,300	16,260	3,37,560	3,16,876	3·14

NOTE.—The indirect charges under Working Expenses (which are mainly a calculation of liability of Leave and Pension Allowances) are not shown in the Finance Accounts.

4. It will be seen from this that only one work in Bengal paid its working expenses during the year. As regards the Major Works, the loss of Rs. 4,85,090 is the largest which has been recorded for the last 20 years, during which time the gross Revenue from the Major Works has in nine years more than covered their working expenses. The large loss of the year under review is due both to increase in working expenses and to decrease in revenue, but chiefly to the latter cause. The revenue of the year (Rs. 10,87,080) is nearly 3 lakhs less than that of the previous year, and is less than that of any year since 1880-81, while the working expenses are the highest on record.

5. The decrease in the receipts from the Major Works is almost entirely due to a falling off in the collections of water-rates. The cause of this is explained as follows in the review of the Local Government:

An examination of the figures by canals shows that, although there is a small falling off on the Midnapur Canal, the decrease under water-rates is otherwise wholly on the Sone

Canals, there having been satisfactory increments both on the Orissa and Sarun Canals. The decrease on the Sone Canals is due to three causes:—*firstly*, the good collecting work of the year or two immediately preceding the year under review had largely diminished the arrears, so that there was actually less to collect; *secondly*, the comparatively small area irrigated in 1886-87 reduced the amount of the current demands; and *thirdly*, the agitation amongst the cultivators, which retarded the collections, so that there was a considerable increase in the closing balance as compared with the opening balance of the year.

The increase in the working expenses is almost entirely due to an alteration in the system of accounting for the charges for establishment. Formerly a percentage was charged against Irrigation Works in Bengal, while all the remaining cost of establishment was debited to "Roads and Buildings." During the current year a different procedure has been adopted, and the actual cost of the establishment employed on irrigation, or mainly so employed, has been charged to that head; this system, while it is more correct in itself, adds materially to the charges against irrigation for establishment. This point is enlarged on in paragraphs 18 to 21 below.

6. With reference to the Minor Works of which Capital and Revenue Accounts are kept, however, the results are very different. The net revenue is, with two exceptions, the largest on record; and it would have been absolutely the largest on record but for the loss on the Orissa Coast Canal, which is a work that has not yet reached its full development. The working expenses shew a moderate increase over those of the previous years: the increase is due partly to the Orissa Coast Canal, and partly to the new method of debiting the establishment charges.

7. The Revenue Accounts of the Major Works in Bengal shew, on the whole, a loss of over 330 lakhs of rupees since the commencement of operations. That is to say, the simple interest on Capital and the working expenses up to date have exceeded the gross Revenue by that amount. The simple interest for the year 1887-88 amounted to Rs. 23,13,446, and the loss on Revenue Accounts, for direct charges, was (14,87,436 —10,87,080) Rs. 4,00,356, making a total of Rs. 27,13,802, which falls on the revenues of the Province, as the works in Bengal are all provincialised. Under the terms, however, of the last Provincial Contract, a sum of Rs. 20,89,000 was the net assignment to Bengal from Imperial Revenues on account of four Major Works, so that a loss of only Rs. 6,24,802 really falls on Provincial Revenues, and the remaining sum is paid out of Imperial Revenues of India.

8. The figures in the foregoing paragraphs have been based on the actual receipts collected within the year and credited in the Treasury Accounts. The following statement shews the *assessed* revenue of the year compared with that of the three previous years:

	1887-88.			Total Assessed Revenue.		
	Assessed water-rates.	Rate per acre irrigated.	Total Assessed Revenue.	1886-87.	1885-86.	1884-85.
Major Works.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Productive Works. — Orissa Canal ...	1,50,297	1·37	2,35,472	2,08,311	2,05,527	1,74,525
Productive Works. — Midnapur Canal ...	1,02,532	1·56	2,46,073	2,32,101	2,64,643	2,63,469
Productive Works. — Hidgellee Tidal Canal*	*Nil*	...	41,858	54,404	52,455	43,507
Productive Works. — Sone Canal ...	7,25,810	2·30	8,10,173	7,87,054	8,92,025	12,07,514
Total Productive Works ...	9,78,639	1·99	13,33,576	12,81,870	14,14,650	16,89,015
Minor Works.						
Works for which Capital and Revenue Accounts are kept.						
Sarun Canals	21,850	5·18	21,445	23,104	23,156	24,144
Orissa Coast Canal* ...	...	...	53,854	29,488	13,718	*Nil*
Calcutta and Eastern Canals* ...	...	...	5,79,934	4,83,654	4,79,484	5,69,726
Total Minor Works ...	21,850	5·18	6,55,233	5,36,246	5,16,358	5,93,870

* These canals are for navigation only.

9. The above statement gives a more accurate view of the working of the canals as irrigation systems during the year than does the statement of actual collections in paragraph 3. On both the Orissa and the Sone Canals the rainfall of 1887 was deficient, and the irrigated area was considerably larger than in the previous year, and the assessed water-rates were consequently higher.

The increase on the Midnapur Canal was entirely due to navigation revenue; there was a slight decrease in the irrigation assessments. The decrease in revenue on the Hidgellee Tidal Canal is due to the closure on account of silt clearance. The assessed revenue on the Sarun Canals is exceptional; it is not assessed on the area irrigated, but is almost entirely made up of amounts which are guaranteed by the indigo planters of the district, whatever area may be irrigated.

10. The rate per acre assessed as water-rate on occupiers in Bengal (Rs. 1·99) compares unfavourably with that of all other Provinces* in India: this is partly due to the fact that the water-rates are lower, and partly to the fact that no addition is made to the land revenue paid by landowners on account of the supply of facilities for irrigation.

* *Rate per acre in 1887-88.*

	Rs.
Bombay	4·88
Madras	3·3
Punjab	2·19
North-Western Provinces	3·4

11. The areas actually irrigated during the year are compared in the following statement with those of the previous three years:

	1887-88.	1886-87.	1885-86.	1884-85.
MAJOR WORKS.				
Productive Public Works—	Acres.	Acres.	Acres.	Acres.
Orissa Canal	109,506	77,709	72,339	57,362
Midnapur Canal	65,864	69,762	70,604	69,294
Sone Canal	315,380	268,204	332,570	370,661
TOTAL ...	490,750	415,675	475,513	497,327
MINOR WORKS.				
Sarun Canal	4,218	2,146	4,565	7,223
TOTAL AREA IRRIGATED ...	494,968	417,821	480,078	504,550

12. It is mentioned in paragraph 13 of the Chief Engineer's note that the irrigated area in Orissa is nearly half of the area which is provided with distributaries; this, coupled with the fact that there has been an increase of nearly 50 per cent. in the area as compared with that of the previous year, is satisfactory. The existing main canals in Orissa are capable of carrying a much larger volume of water than can at present be delivered on the fields by the existing distributaries. Liberal estimates were sanctioned in 1883 for the extension of the distributary system, but the progress made is extremely slow, as is shewn by the following figures:

	EXPENDITURE ON DISTRIBUTARIES.		Total number of miles of distributaries completed at end of year.
	During year.	To end of year.	
	Rs.	Rs.	Miles.
1884-85	41,750	14,00,288	641
1885-86	38,548	14,38,836	645
1886-87	90,879	15,29,715	691½
1887-88	91,414	16,21,282	718

The sanctioned estimate provides a total sum of nearly 49 lakhs for expenditure on 2,147 miles of distributaries from the Orissa Canal; so that only one-third of the capital required has been spent and only one-third of the distributaries completed. A reference to the Irrigation map shews that many miles of distributaries have been commenced from Ranges 2 and 3

of the High Level Canal, on which construction must have made extremely slow progress, and on three Branch Canals which are shewn as completed (the Patamundi, Golri, and lower part of Kendrapara), no distributaries appear to have been begun. It is to the completion of these distributaries that Government must look both for a proper utilisation of the water-supply and for a moderate return on its outlay; and the extension of irrigation from the distributaries which are completed appears to warrant a more rapid execution of the remainder of those which have been sanctioned. The Government of Bengal was specially addressed on this subject in October last.

13. The value of the crops irrigated during the year is stated as being Rs. 89,19,633, or about 2½ lakhs less than last year, although there was an increase of 77,147 acres irrigated. From the remarks made in para. 113 of the Chief Engineer's note, it appears that the statistics concerning the value of irrigated crops are not very accurate. Crop experiments were recorded on the Orissa and Sone Canals; in Orissa the experiments gave the following results:

	Outturn of— Paddy. Mds.	Straw. Mds.
Canal-irrigated rice lands	12·32	16·84
Unirrigated rice lands	9·38	12·0

Both in irrigated and unirrigated lands the results are considerably less than the averages of previous years.

On the Sone Canal the results were—

	Outturn of— Paddy. Mds.	Straw. Mds.
Canal-irrigated rice lands	17·67	39·45
Unirrigated rice lands	10·75	23·67

The accuracy of the crop experiments recorded by the Canal Officers was much questioned during the enquiry made by the Irrigation Commission, which was appointed by the Local Government in 1888 to enquire into the working of the Sone Canal System. The general accuracy of the returns has, however, been substantially confirmed by a report lately submitted by an officer of the Civil Service, who personally conducted a large number of experiments in the khareef season of 1888.

14. The Working Expenses (including indirect charges) are shewn in the following statement:

	Working Expenses. 1887-88.	Rate per acre irrigated.	Working Expenses. 1886-87.	1885-86.	1884-85.
	Rs.	Rs.	Rs.	Rs.	Rs.
Major Works.					
Productive Works. Orissa Canal ...	5,02,450	4·58	5,20,548	3,56,672	3,29,288
Midnapur Canal	2,50,396	3·80	2,35,038	2,18,127	2,31,803
Hidgellee Tidal Canal* ...	66,976	...	22,735	50,147	38,248
Sone Canal ...	7,52,348	2·38	5,97,521	5,73,345	6,28,075
Total of Irrigation Systems ...	15,05,194	3·06	13,53,402	11,48,144	11,89,166
Total Productive Works ...	15,72,170	...	13,76,137	11,98,291	12,27,414
Minor Works. *Works of which Capital and Revenue Accounts are kept.*					
Sarun Canal	29,397	6·96	28,659	23,331	25,593
Orissa Coast Canal* ...	83,507	...	61,426	30,712	*Nil*
Calcutta and Eastern Canals*	2,24,656	...	1,92,264	1,96,209	2,91,214
Total Minor Works ...	3,37,560	...	2,82,349	2,50,252	3,16,807
Total of Irrigation Systems (Productive and Minor) ...	15,34,591	3·10	13,82,061	11,71,475	12,14,759
Grand Total ...	19,09,730	...	16,58,486	14,48,543	15,44,221
Rate per acre irrigated in Irrigation Systems ...	3·10	...	3·30	2·44	2·40

* These are canals for navigation only.

15. The rate per acre of the working expenses in Bengal is higher than that of other Provinces of India* except Bombay, but it is necessary to remember that, although this method of general comparison is perhaps the best which can be adopted, it is not one which can be made with absolute accuracy: the circumstances of the various Provinces are not parallel. In Bengal, for instance, a considerable proportion of the working expenses of the irrigation systems is directly due to navigation, and is quite without connection with the irrigated area; but in the North-Western Provinces and the Punjab the proportion which is fairly chargeable against navigation is much smaller.

Rate per acre in 1887-88.	Rs.
* Madras	0·80
Punjab	1·22
North-Western Provinces	1·69
Bengal	3·10
Bombay	5·29

This is shewn by the fact that in the North-Western Provinces 31 per cent. of the mileage of the irrigation canals are navigable, in the Punjab 14 per cent.; but in Bengal 67 per cent. of the four irrigation systems are open for navigation.

16. The large increase in the working expenses of the Orissa Canal in 1886-87 and 1887-88 is mainly due to the repairs to the breach in the Mahanadi weir, the maintenance and repairs of the headworks having cost Rs. 59,689 in 1885-86, Rs. 2,31,706 in 1886-87, and Rs. 1,91,350 in 1887-88. There was also exceptionally heavy expenditure on the headworks of the Sone Canal, due to the failure of the under sluice piers. The increase in the working expenses of the Hidgellee Tidal Canal is due to heavy silt clearance: a project is about to be recommended for the sanction of the Secretary of State to obviate the heavy expenditure which is periodically necessary for this purpose and which materially interferes with the efficiency of this canal.

17. The details of the working expenses shown in the preceding paragraph are as follows:

	1887-88. Rs.	1886-87. Rs.
Extensions and Improvements	7,010	5,092
Maintenance and Repairs	9,74,942	9,81,196
Establishment	7,21,376	5,16,714
Tools and Plant	1,05,408	83,143
Indirect Charges	1,00,994	72,341
Total ...	19,09,730	16,58,486

The charge for Establishment is made up of the following items:

	1887-88. Rs.	1886-87. Rs.
Share of Direction and Accounts ...	49,112	49,216
Executive Officers	3,90,246	1,77,175
Medical	...	...
Revenue Establishment	1,98,840	2,04,819
Navigation	83,678	85,504
Total ...	7,21,376	5,16,714

18. It has already been explained that the increase in the working expenses of the works in Bengal has been mainly due to a change in the method of dealing with the establishment charges. The figures given above display this fact clearly, the increase under Establishment (Rs. 2,04,662) and that under Indirect Charges (Rs. 28,653) being entirely due to this change.

19. The entire cost of establishment in Bengal for all branches of the Public Works Department during the last three years has been—

	Rs.
In 1885-86	22,79,650
„ 1886-87	22,79,424
„ 1887-88	21,91,041

The charges in the first two years are practically the same; the decrease in the last year is mainly due to revisions of establishment, and partly to a less charge under "Fees and Allowances for the Collection of Revenue," consequent on the reduced revenue realized.

20. The above charges were distributed as follows:

	Buildings and Roads Branch.	Irrigation. Branch.	Other Departments.
	Rs.	Rs.	Rs.
1885-86	13,74,853	8,10,028	95,269
1886-87	14,00,411	8,20,778	58,235
1887-88	8,54,592	11,10,454	2,25,995

It will thus be seen that, as the result of the new procedure adopted for the distribution of the cost of establishment between the different branches of the Public Works Department, the charges to irrigation have risen from a little over 8 lakhs of rupees to over 10 lakhs of rupees, whilst the charges to the Buildings and Roads Branch have fallen from 14 lakhs to 8½ lakhs.

21. The percentages which the expenditure on establishment bore to that on Works and Repairs in the Buildings and Roads and Irrigation Branches in these years were—

	Buildings and Roads Branch.	Irrigation Branch.
	Rs.	Rs.
1885-86	68·02	23·00
1886-87	48·12	23·00
1887-88	29·26	35·25

The percentage charged to Buildings and Roads Branch in 1885-86 was abnormally high, owing to the grants for Works and Repairs being unusually low (20 against 29 lakhs); but the reduction in 1887-88 below the percentage of the previous year is very marked. In the Irrigation Branch the increase is also very noticeable.

22. The largeness of the arrears in the collection of water-rates was specially noticed last year by the Government of India in reviewing the operations of the year 1886-87. It was said, in para. 8 of the Resolution, "the Governor-General in Council trusts that the measures which have been introduced may be worked with persistent energy until the results obtained are more in consonance with those which are recorded in other Provinces." The improvement in the collections which was observed in 1886 and 1887 has not, however, been maintained, the outstanding balances of water-rates have increased on each of the four irrigating systems, the aggregate figures being—

	Rs.
Water-rates outstanding on 1st April 1885	9,24,311
Ditto ditto 1886	5,49,089
Ditto ditto 1887	3,96,226
Ditto ditto 1888	5,87,148

The increase has been chiefly on the Sone Canal, where the outstandings were Rs. 2,31,582 in 1887 and Rs. 4,11,281 in 1888. It is explained that the cause of this was the agitation among the cultivators and the appointment of a Committee of Enquiry, which seriously retarded the collections, as the cultivators anticipated that remissions of outstandings would probably result.

23. The statistics given in the Chief Engineer's note concerning the complaints do not shew clearly the number of complaints received, disposed of, and outstanding. The number of complaints about irrigation matters in Bengal is very large: in Orissa 2,743 complaints were received about assessments alone, of which a large proportion were admitted as valid; the number not disposed of (1,503) appears unduly large: in Midnapur 841 complaints were received, and a large proportion were disposed of: in the Sone Canal the number of complaints received is not stated, but the total number to be dealt with was 8,835: of complaints against assessment, remissions were granted in 37·3 per cent. of the cases.

24. No information is given concerning the progress of collections by the certificate procedure in Orissa. In Midnapur no certificates were issued in connection with the current demand, but 16,052 were issued with reference to arrears, 72 per cent. of all certificate cases were disposed of, and in 85 per cent. of the cases the dues were realised. The information given concerning the certificate procedure on the Sone Canal is not complete. There was a considerable increase in certificates in the Patna district, and a very large decrease in Shahabad. The progress made in collecting dues in the Patna district is slow, and the arrears are large.

25. The Government of India trusts that energetic measures will be adopted to ensure the collection of the current demand as soon as it is due; such action will, more than anything else, tend to reduce the necessity of resorting to the certificate procedure.

26. The following statement shews the navigation revenue of the year and that of the previous three years:

	Navigation Revenue.		Navigation Revenue.		
	1887-88.	Per mile of Navigable Canal.	1886-87.	1885-86.	1884-85.
	Rs.	Rs.	Rs.	Rs.	Rs.
Works partly for Irrigation and partly for Navigation—					
Orissa Canal	71,004	416	67,048	84,012	79,802
Midnapur Canal	1,26,574	1,758	1,09,693	1,37,578	128,747
Sone Canal	55,904	256	54,254	46,243	51,761
Works for Navigation only—					
Hidgellee Tidal Canal ...	40,406	1,393	51,904	52,143	41,382
Calcutta and Eastern Canals ...	5,74,766	*21,238	4,77,199	5,01,141	5,20,495
Orissa Coast Canal ...	52,828	542	28,587	13,663	...
TOTAL ...	9,21,482	1,500	7,88,685	8,34,780	8,22,187

The figures in this statement are taken from column 5 in Form I. C.

* This rate is calculated on 27 miles of artificial canal; but there is an extensive system of navigable rivers which are connected with the system known as the "Calcutta and Eastern Canals."

27. In addition to the above works, there is a system of navigable rivers—the Nadiya rivers—which are maintained by the Public Works Department. The navigation revenue on these rivers has been—

	1887-88.	1886-87.	1885-86.	1884-85.
Nadiya Rivers	1,98,675	2,03,250	1,83,781	1,95,457

The revenue of these rivers has hitherto been collected under the orders of the Board of Revenue, but, from the close of the year under review, this duty has been made over to the Irrigation Branch of the Public Works Department. There has been an increase of 50 per cent. in the working expenses of these rivers in 1887-88; this is partly due to the alteration in the system of charging for establishment, but mainly to an actual increase in maintenance and repairs, due to training works on the Bhagirati river, which, however, have not yet succeeded in keeping the channel open through the dry season.

28. The increase in the navigation revenue in Bengal is satisfactory. It is extremely difficult to calculate the portion of working expenses on irrigation systems which is properly due to navigation: an attempt to do this is made in Form I. D. attached to the report under review, which results in showing that navigation in Bengal returned a net profit of Rs. 4,59,521. There is no doubt about the remunerative character of the Calcutta and Eastern Canals: the net revenue of the year (including indirect charges) was Rs. 3,55,278 on a Capital expenditure of Rs. 52,39,116, or 6·78 per cent.

29. The quantity and value of goods carried on the canals were as follows:

	Tons of Goods.		Value.	
	1887-88.	1886-87.	1887-88.	1886-87.
	Tons.	Tons.	Rs.	Rs.
Orissa Canal	75,761	...	50,32,093	42,56,181
Midnapur Canal	128,476	115,127	1,18,44,841	97,25,587
Hidgellee Tidal Canal	44,563	53,587	26,13,351	31,48,826
Sone Canal	70,073	78,681	56,80,508	64,65,651
Orissa Coast Canal	46,252	27,656	21,64,699	11,91,892
Calcutta and Eastern Canals... ...	956,527	860,934	6,35,62,493	5,30,42,670
Total ...	1,321,655	...	9,08,97,988	7,78,30,807

The figures given for the quantity of goods carried do not include the rafts of bamboos and timber which are expressed in the returns either in number or in cubic feet.

30. Besides the larger works treated of in this Resolution for which separate Capital and Revenue Accounts are kept, there are three systems of which only Revenue Accounts are kept, and for which the following table gives the same information as is given in paragraph 3 for the larger system:

	Gross Revenue.	Working Expenses.			Net Revenue.
		Direct.	Indirect.	Total.	
	Rs.	Rs.	Rs.	Rs.	Rs.
Nadiya Rivers	1,98,675	92,022	...	92,022	1,06,653
Eden Canal	918	41,769	...	41,769	—40,851
Madhuban Canal	9	9,821	...	9,821	—9,812
Total ...	1,99,602	1,43,612	...	1,43,612	55,990

Of these, the Nadiya River system has already been referred to in para. 27. The Eden Canal is mainly for the supply of drinking water to Burdwan and to villages along its banks. The Madhuban Canal is intended for irrigation, but the weir, breached in 1886, was only restored by the end of the year under report, and no irrigation has as yet been possible.

31. In the Resolution of the Government of India on the report of the year 1886-87 the attention of the Government of Bengal was drawn to the very late date on which the report was submitted to the Government of India. The report under review has nevertheless been received by the Government of India some days later than that of the previous year, and more than four months after it was due, although the reports of Superintending Engineers and Commissioners were, with one exception, received by the Government of Bengal in good time. His Honour the Lieutenant-Governor, in para. 15 of the review by the Local Government, has specially referred to the necessity for increased punctuality in dealing with this report: the Government of India trusts that measures will be adopted which will ensure that result. The reasons given in the last paragraph of the Chief Engineer's note cannot be accepted as sufficient excuse for the great delay which occurred in its preparation.

Order.—Ordered, that copies of this Resolution and of the Report be forwarded to the Finance and Commerce and the Revenue and Agricultural Departments for information.

Ordered also, that copies of this Resolution be forwarded to the Government of Bengal for information and guidance; and that copies of the Resolution be forwarded to the Local Governments and Administrations in the Public Works Department noted in the margin for information, and to the Foreign Department for communication to the Government of Mysore.

The Governments of Madras, Bombay, North-Western Provinces, and the Punjab.
The Chief Commissioners, Central Provinces, Burma, and Assam.
The Resident at Hyderabad.
The Agents to the Governor General for Central India and Rajputana.

Ordered further, that this Resolution, and the Resolution by the Local Government, be published in the Supplement to the *Gazette of India*, and that copies of this Resolution be forwarded to Her Majesty's Secretary of State for India.

R. HOME, *Colonel, R.E.,*
Deputy Secy. to the Government of India.

IRRIGATION.

THE CANAL REVENUE REPORT FOR 1887-88.

No. 458 I.A., dated Calcutta, the 18th March 1889.

RESOLUTION—By the Government of Bengal, Public Works Department.

Read—

The Canal Revenue Reports for 1887-88 and the Chief Engineer's Note on the same.

The total outlay, direct and indirect, to the close of the year 1887-88 on canals in Bengal of which Capital accounts are kept has been Rs. 7,06,14,592. Of this sum, Rs. 8,66,000 have been contributed by the Imperial Government from Famine Relief and Insurance Funds, Rs. 92,24,652 have been provided from Provincial Revenues, and Rs. 5,97,49,285 have been charged to Loan Funds. In addition to the sums mentioned above, Rs. 7,74,655 have been expended on surveys and investigations for irrigation works which have not been carried out.

2. There are now in actual operation in Bengal 844 miles of canal, of which 614½ miles are navigable. The total area commanded by irrigation canals is 2,698,846 acres; of which area, 1,768,811 acres are irrigable by the completed projects, and 1,398,147 acres are irrigable by the existing works.

Of this last area, 475,138* acres, producing crops of the estimated value of Rs. 90,70,980, were irrigated during the year. The total number of boats plying in the canals was 190,839, of which 24,709 were passenger boats. The total value of goods passing through the canals in boats and rafts aggregated Rs. 9,08,97,988 approximately.

3. The receipts from, and expenditure on, the canals in operation for the last three years are given in the statement below; the figures include indirect charges:

Name of Canal.	1887-88.		1886-87.		1885-86.	
	Receipts.	Expenditure.	Receipts.	Expenditure.	Receipts.	Expenditure.
MAJOR IRRIGATION WORKS.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Orissa Canals	2,23,044	5,02,815	1,79 611	5,20,635	2,07,350	3,56,678
Midnapore Canal	2,34,378	2,50,849	2,34,185	2,35,249	2,62,484	2,18,127
Hidgellee Tidal Canal	41,858	66,976	54,404	23,645	52,455	50,147
Sone Canals	6,03,949	7,67,679	9,18,429	6,13,558	10,62,646	5,84,002

Orissa Coast Canal	53,854	83,524	29,488	61,426	13,718	30,712
TOTAL ...	6,54,453	3,37,577	5,25,569	2,82,349	5,34,345	2,50,252
GRAND TOTAL ..	17,57,682	19,25,896	19,12,198	16,75,436	21,19,280	14,59,206

There was thus a deficit for the year of Rs. 1,68,214. In addition to this, interest amounting to Rs. 23,13,446 was payable to the Imperial Government, so that the total deficit to be met from Provincial Revenues was Rs. 24,81,660. The unfavourableness of the results for the last three years has thus been increasing, the deficits in 1885-86 and 1886-87 having been Rs. 15,89,119 and Rs. 19,56,284 respectively, and is again due both to falling off in receipts and increase in expenditure (though much more to the former than the latter) as compared with the previous year.

4. The increase in expenditure is to a very large extent a purely nominal one, so far as the Provincial Revenues are concerned, and is due to a new method of accounting for the establishment, the charges for which are distributed approximately according to the establishments actually employed in divisions, instead of the Irrigation Department being assessed, as heretofore, with a fixed charge by percentage on expenditure, the remainder of the cost of establishment being shown against the Roads and Buildings Branch. The present method appears to be the fairer, and at any rate it shows in a clearer light what is the cost of establishment employed on the various canals. Chiefly on account of this alteration, the charges for Direction and Executive Establishments have increased by Rs. 2,12,967 as compared with last year, thus nearly accounting for the total increase in the working expenses. On the Orissa Canals there was, on the whole, a fair decrease, notwithstanding the increase in establishment charges, and the fact that a portion of the expenditure on repairing the breach made in the Mahanudi weir during the floods of 1886 fell in the year under review. On the Hidgellee Tidal and Orissa Coast Canals there was an increase, due, in the former case to the necessity for carrying out the long-postponed silt clearance, and in the latter to the repairing damages caused by the cyclone of 1885. The comparatively small fluctuations on the other canals do not call for remark.

* Exclusive of 5,975 acres irrigated in an unauthorised manner in the Orissa Canals, and 13,855 acres of hot weather irrigation on the Sone Canals: this latter irrigation is almost entirely sugarcane, and is included already in the kharif.

5. The revenue collected in the last three years on the works mentioned in the above statement is shown below:

Head.	REVENUE.		
	1887-88.	1886-87.	1885-86.
	Rs.	Rs.	Rs.
Water-rates	7,69,362	10,43,343	12,33,612
Navigation	9,21,482	7,88,685	8,34,780
Miscellaneous	66,838	80,170	50,888
TOTAL ...	17,57,682	19,12,198	21,19,280

It will be seen that practically the falling off is entirely under Water-rates, whilst under Navigation there is a very satisfactory increase, to which reference will be made further on. An examination of the figures by canals shows that, although there is a small falling off on the Midnapore Canal, the decrease under Water-rates is otherwise wholly on the Sone Canals, there having been satisfactory increments both on the Orissa and Sarun Canals. The decrease on the Sone Canals is due to three causes: *Firstly*, the good collecting work of the year or two immediately preceding the year under review had largely diminished the arrears, so that there was actually less to collect; *secondly*, the comparatively small area irrigated in 1886-87 reduced the amount of the current demands; and *thirdly*, the agitation amongst the cultivators, which retarded the collections, so that there was a considerable increase in the closing balance as compared with the opening balance of the year.

6. The assessments or earnings of the same year are as follows:

Head.	EARNINGS.		
	1887-88.	1886-87.	1885-86.
	Rs.	Rs.	Rs.
Water-rates	10,00,489	9,49,260	10,45,339
Navigation	9,21,482	7,88,685	8,34,780
Miscellaneous	66,838	80,171	90,481
TOTAL ...	19,88,809	18,18,116	19,70,600

Judged by the standard of earnings, the working of the year would show for all canals a small excess over expenditure of Rs. 62,913.

7. The arrears of water-rates outstanding at the close of each of the last three years are shown in the statement following:

Name of Canal.	ARREARS.		
	1st April 1888.	1st April 1887.	1st April 1886.
	Rs.	Rs.	Rs.
Orissa Canals	92,109	87,458	64,884
Midnapore Canal	56,493	50,749	69,972
Sone Canals	4,11,281	2,31,582	3,98,321
Sarun Canals	27,265	26,437	16,912
TOTAL ...	5,87,148	3,96,226	5,49,089

The increase in the outstanding balance is practically wholly on the Sone Canals, where, as already explained, the agitation amongst the cultivators and appointment of a Committee of Enquiry retarded the collections very seriously. The remissions were comparatively small, and were less even than those of last year.

8. It is necessary to distinguish between the collections of arrears and those of the current demand to understand clearly the results of the year's work. Of the outstandings of former years, a sum of Rs. 3,26,147, or over 76 per cent., was adjusted ; 89·1 per cent. of this amount being collected, 4·9 remitted, and 6·0 written off. On the whole, this is more favourable than last year, and the success was undoubtedly due in a great measure to the arrears in the Shahabad district having been collected before the agitation on the Sone Canals began. Of the current year's demand (which includes Rs. 1,30,559 due but not payable till after the expiry of the year), Rs. 4,59,375, or about 50 per cent. only, was adjusted, about 1 per cent. of this having been remitted, and the rest, with the exception of a small sum of Rs. 86 written off, collected. The results cannot be considered satisfactory, but so far as the Sone Canals are concerned, the falling off in the results is fully accounted for by the agitation to which reference has already been made. Notwithstanding however this difficulty, the Sone Canals, as a whole, show better results than Orissa or Midnapore, in neither of which was 50 per cent. of the current year's demand collected. A considerable sum—some Rs. 19,000—was again written off as irrecoverable on account of old arrears on the Sone Canals, chiefly in the Shahabad district. In the Sarun Canals the total collections were a few hundred rupees short of the current year's guarantee, so that there was a slight increase in the outstanding balance as compared with the previous year. This is a vast improvement on the work of last year, but is still unsatisfactory. Excluding the sum due but not payable until after the close of the year, the total outstandings amount to Rs. 4,56,589. On the whole, and making allowances for the abnormal difficulties on the Sone Canals, the results can scarcely be deemed very unsatisfactory; and the Lieutenant-Governor notices with approval that the matter continues to receive the attention of the district officers. The necessity however to reduce the arrears, which still amount for years previous to the year under review to about a lakh of rupees, has not ceased; and Sir Steuart Bayley trusts that the subject will receive attention, especially in Orissa, which, on the whole, is the most backward in this respect.

9. The total number of certificates for the recovery of arrears issued in all districts, save Gya (the figures for which are not given) but they were very few during the year), was 28,805 against 30,504 issued in the previous year; and the pending cases were reduced from 28,953 to 19,369, good progress having been made in Orissa and in Shahabad. The progress however in Midnapore was not good, whilst the work in Patna, owing apparently to shortness of establishment, was very unsatisfactory. The reduction in the number of certificates issued continues.

10. The information regarding complaints, though fuller than that given last year, is still very incomplete. So far as can be gathered from the figures afforded in the reports, 10,332 complaints against assessments were pending from the previous year, or filed during the year, on the "Major works" systems : of these, 8,120 were disposed of, leaving 2,212, or rather more than 21 per cent., still pending. Considering the circumstances of irrigation in Bengal, the number filed, although large, does not appear to be out of proportion on the whole, though the following table would seem to show that there is considerable room for improvement on the Orissa Canals in the assessment of water-rate and administration generally ; since not only were the complaints more in proportion to the area irrigated than even on the Sone Canals, where

the number was abnormally raised by agitation, but the percentage of complaints admitted was very high :

	Orissa.		Midnapore.		Sone.		Total.	
	No.	Percentage on cases disposed of.	No.	Percentage on cases disposed of.	No.	Percentage on cases disposed of.	No.	Percentage on cases disposed of.
Pending or filed during the year	2,743	.....	841	.....	6,748	.....	10,332	.....
Disposed of { Admitted ...	1,109	89·4	285	37·6	2,285	37·3	3,679	45·3
Disposed of { Dismissed ...	131	10·6	472	62·4	3,838	62·7	4,441	54·7
Total ...	1,240	100·0	757	100·0	6,123	100·0	8,120	100·0
Pending on 31st March 1888 ...	1,503	.....	84	.....	625	.....	2,212	.....
Area irrigated in 1887-88 (Acres)	1,09,506		65,864		315,380		490,750	
Proportion of acres irrigated to one complaint ...	39·9		78·3		46·7		47·5	

The above table, for want of the necessary details, is not quite correct as regards the proportion of acres to one complaint, inasmuch as it has been impossible to separate the arrears from the complaints filed in the year, whilst the area for the year has been taken. Still for practical purposes of comparison it can be accepted ; and the Lieutenant-Governor trusts that the above comparison will show the officers concerned of the Orissa Canals the necessity for greater care in assessing water-rates and in the administration of their duties generally.

11. The areas irrigated (actuals) during the last three years are detailed in the following table :

		1887-88.	1886-87.	1885-86.
		Acres.	Acres.	Acres.
Orissa...	Kharif ...	108,867	75,115	70,563
	Rabi ...	502	2,440	1,605
	Perennial ...	137	154	171
	Total ...	109,506	77,709	72,339
Midnapore	Kharif ...	65,864	69,762	70,604
Sone...	Kharif ...	57,595	30,082	80,792
	Rabi ...	27,501	16,662	50,610
	Perennial ...	6,265	11,626	10,527
	Hot weather ...	13,855	15,278	10,857
	Five years' lease ...	210,164	194,556	179,784
	Total ...	315,380	268,204	332,570
	Total Major Works ...	490,750	415,675	475,513
Sarun	Kharif ...	1,699	606	888
	Rabi, including hot weather ...	2,519	1,540	3,677
	Total Minor Works ...	4,218	2,146	4,565
Grand Total Major and Minor Works ...		494,968	417,821	480,078

There is a very satisfactory increase on the Orissa Canals, and a satisfactory increase on the Sone Canals, due chiefly to the favourable character of the season from an irrigation point of view. Most of the increase on the Orissa Canals, and a fair proportion of that on the Sone Canals, is under long leases, so that the anticipation of an extension of irrigation expressed in the Resolution on last year's report appears to be receiving confirmation. The

irrigated area on the Midnapore Canal continues unfortunately to decrease. The cause is said to be the irregularity and insufficiency of the supply in the Cossye river; and for this hitherto no practicable remedy has been found.

12. The tollage collections from the various canals for the last three years are given in the table following:

Year.	Orissa Canals.	Midnapore Canal.	Hidgellee Tidal Canal.	Orissa Coast Canal.	Sone Canals.	Calcutta and Eastern Canals.	Total.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
1885-86 ...	64,093	1,25,331	52,143	13,663	41,712	4,97,578	7,94,520
1886-87 ...	58,664	1,09,693	51,904	28,587	49,665	4,73,193	7,71,706
1887-88 ...	66,628	1,26,574	40,406	52,828	50,984	5,71,872	9,09,292

The increase is about 15 per cent. on the total collections of last year, and upwards of a lakh more than the collections of any previous year since 1882-83 inclusive, from which date only the whole of the figures are readily available. The chief increase is on the Calcutta and Eastern Canals, on which there was a small defect last year. It was, however, mentioned in last year's Resolution that the decrease did not point to any permanent decline; and the figures for the year under review confirm this opinion. The increase is due to the expansion of the grain and jute traffic. The receipts on the Orissa Canals are the highest since 1882-83, when they were almost the same figures, *viz.*, Rs. 66,736, the highest on record. On the Midnapore Canal they are the highest on record, excluding transport service receipts. The falling off in the Hidgellee Tidal Canal revenue is due to the closure of the canal for silt clearance. The increase in revenue on the Orissa Coast Canal is satisfactory, being in excess of the forecast.

13. On the Nuddea rivers there was a small falling off in the receipts, attributable to the impossibility during 1887-88 of maintaining more than one of the three alternative routes between the Ganges and Calcutta in a navigable condition, on account of the deterioration of the entrances from the Ganges.

14. The Lieutenant-Governor observes that the necessity for further enquiry and the collection of opinions from experts has hitherto prevented any action being taken on the report of the Commission that enquired in 1888 into the working of the Sone Canal system. These have now been brought to a completion, and the report will be disposed of without further delay.

15. With the exception of the Revenue report of the Commissioner of the Orissa Division, all reports were received with fair punctuality. The Examiner's Finance Accounts were received about the same time as last year. Both in submitting and in dealing with the Revenue reports, there is need, in the Lieutenant-Governor's opinion, for increased punctuality.

ORDER.—Ordered, that a copy of this Resolution, and of the Note and its accompaniments, be submitted to the Government of India, in the Public Works Department, for information; also that copies be forwarded to the Appointment, Revenue and Financial Departments of this Government; the Board of Revenue, Lower Provinces; the Commissioners of the Presidency, Burdwan, Patna and Orissa Divisions; the Collectors of the 24-Pergunnahs, Nuddea, Hooghly, Midnapore, Burdwan, Patna, Shahabad, Gya, Sarun, Cuttack, and Balasore; the Superintending Engineers of the Orissa, South-Western, and Sone Circles; and the Examiner, Public Works Accounts, Bengal, for information.

By order of the Lieutenant-Governor of Bengal,

C. W. I. HARRISON, *Lieut.-Col.*, R.E.,
Offg. Joint-Secy. to the Govt. of Bengal,
P. W. Dept.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT

WEATHER SUMMARY FOR APRIL 1889.

Hot weather conditions, which are initiated in the month of March, are confirmed and developed during April. The distribution of pressure, which during March is subject to large and sudden fluctuations, sometimes approximating to hot weather conditions and at others reverting suddenly to those characteristic of the cold season, is much more stable and continuous during April. The larger atmospheric storms which in late seasons sometimes disturb the weather of March are almost unknown during April, and any storms which appear are almost invariably of local character, produced by the large contrasts of temperature which prevail between the heated plains on the one hand and the relatively cool mountain and sea-surfaces on the other. Under the influence of the steady increase of temperature, which is characteristic of this month, there ordinarily occurs a considerable decrease of pressure. This decrease varies directly with the changes of temperature,—being least in the extreme south, where the average rise of temperature is about 5°, and greatest in Upper and North-Western India, where the average rise of temperature is about 10°. The general distribution of pressure is similar in many respects to that obtaining in March, but the high readings, which in the earlier month are shown over the Punjab and Sind, disappear or are very much contracted in the later month. Pressure is high over the West Coast, over Ceylon, over the centre and south of the Bay, and over Tenasserim. From these regions it steadily

decreases, and areas of low pressure are shown over the eastern portions of the Central Provinces, over the Gangetic plain, and over the Western desert.

Roughly speaking, there is then an area of deficient pressure over the whole of Northern and Central India and a general indraught of winds, circulating in the ordinary manner, towards this region. Within the low pressure area itself however, instead of the small air motion, which is the ordinary characteristic of such a distribution, there are strong north-westerly and westerly winds. These winds are the hot winds of the Indian plains. They spring up about 9 or 10 in the morning and blow with considerable force till 4 or 5 in the evening or later. The temperature distribution of April is very simple. Temperature is highest over the Deccan and the Central Provinces, whence it decreases in all directions. It is lowest in the north of the Punjab and at the head of the Assam Valley, between which places and the region of greatest heat there is a mean difference of about 15°.

The normal rainfall of April is greater than that of March over Bengal (except Behar) and over the Peninsula and Ceylon, but is less in Upper India and over the central parts of the country. The whole of the rainfall, except perhaps that in the extreme south, is mainly due to the occurrence of thunderstorms and nor'westers.

During the month under review the weather has been, as is usually the case, fairly quiet, the only disturbing features being local thunderstorms, and these have on the whole been less intense than normally, and much less than those which occurred during April 1888. The variations of pressure from the average have in general been slight. They comprise a slight deficiency over Burma, Bengal, Malabar, Sind, and the East of the Peninsula, and an excess elsewhere. There have been no travelling depressions of any importance during the past month, though over Sind and the Punjab tendencies favouring the formation of depressions appear to have existed, while the excessive heat which prevailed over parts of Bengal, the North-Western and Central Provinces during a part of the month resulted in low pressures over those regions.

Temperature.—The temperature changes during the month have been large, and the contrasts between different parts of the Indian region considerable. During the first few days there was a considerable excess over North-Western India and a considerable deficiency over Bengal, but a fall commenced in the extreme north-west on the 5th, and the high temperature area began an easterly movement, which eventually carried it to Bengal, and finally into Assam and Burma. On the 9th a fresh wave of high temperature was shown over the Western Punjab, and this wave in its turn marched across Northern India, though less distinctly than the former. On the 14th a third wave of high temperature appeared in the Indus Valley. By the 15th it had spread out eastward and embraced the whole of the Punjab, Western Rajputana, Sind and Guzerat, and from this date it continued to extend its limits till by the 20th it had spread over practically the whole of India. On the 21st the rear trough of the wave showed itself in the shape of deficient temperatures in the Indus Valley. The movement then became more rapid. The apex of the wave passed quickly eastward across Bengal to Burma; the trough passed quickly across Rajputana, &c., to the Central Provinces, and was followed by another wave of heat in the Punjab. On the 25th the mean temperature was 8·7° above the normal at Dera Ismail Khan, 11·6° below the normal at Jubbulpore, and 6° above the normal at Sibsagar,

Thyetmyo, and Tounghoo. These conditions lasted in a modified degree till the 29th, when the trough over the central parts of the country largely filled up and high temperatures were experienced everywhere. The hottest part of India absolutely was the Berars and the Deccan and, relatively to the average, Eastern and Lower Bengal.

Rain.—Except in Assam and Cachar, the normal average rainfall of April is a very small quantity. Yet over nearly the whole of Northern India, and also in the Deccan and Lower Bengal, even this small average was not reached. In the Peninsula and the central parts of the country the average was exceeded, and in Ceylon there was a considerable excess, owing largely to the exceptionally heavy fall which occurred in the extreme south on the 24th.

The following table shows the actual average rainfall and the normal rainfall of the month of the twenty-one districts into which the country is divided, so far as it is indicated by the telegraphic reports of a few stations in each district:

Districts.	Number of stations.	Normal average rainfall in April.	Actual average rainfall in April 1889.	Difference from the average in April 1889.
Punjab, West	7	1·42	1·61	+0·19

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending 8 a.m. on Monday, May 27th, 1889.

The weather during the past week has been remarkably unsettled for the time of year. Rain has fallen in the great majority of districts, and temperature has been lowered in most parts of India to far below the normal.

The Chart of the 21st showed slight depressions off the Madras Coast, over the Central Provinces and West Bengal, and over Sind, while high pressures were reported from the West Coast of the Peninsula and from Assam and Upper Burma. On the 22nd the only change of importance was the westerly advance of the Central Provinces depression, the centre of which then lay near Hoshangabad. The depressions off the Madras Coast and over Sind still held, and a fresh disturbance was apparently forming over the eastern half of the Bay. The high pressures were practically unchanged. On the following day, the 23rd, the depression off the Madras Coast had apparently broken up, while that which was forming over the east of the Bay had developed considerably and had become a large, shallow, irregularly shaped depression. At the same time a barometric rise had taken place in the Punjab and west of the North-Western Provinces, and a band of relatively high pressure had been developed along the foot of the North-West Himalayas, with a trough of low pressure across the head of the Peninsula and the Central parts of the country. This distribution is characteristic of the rainy season. On the 24th the depression which had formed over the Bay had moved westward or north-westward and was advancing into Bengal. On the 25th it had advanced as far as the Central and North-Western Provinces, but was apparently filling up, as the barometer was rising generally. On the 26th pressure was still rising, and the position of the depression was almost unchanged, but a small centre had been formed off the Madras Coast, while a shoulder of relatively high pressure had been developed, extending north-eastward from Guzerat through Central India and Rajputana to the North-Western Provinces. On the 27th the distribution was very simple, relatively low pressures existing over Sind on the one hand and over Bengal, the north and west of the Bay, and the east of the Peninsula on the other, with an intervening shoulder of high pressure over Guzerat, Central India, and Rajputana. The differences in pressure have been much slighter than is normally the case at this season of the year, and the general distribution has been abnormal. The columns of barometric variations have shown that pressure on most days of the week has been most abnormally high for the time of year over North-Western and Central India. As these regions are ordinarily the seat of the lowest pressure, it follows as a consequence that there have not been the usual differences of pressure between this region and places to the south-south-east and east of it, and with this diminution of pressure differences there has been a diminution in the air motion towards Central and Upper India.

Winds have been very variable in direction, being influenced by the various depressions which have appeared over India during the week. During

the passage of the small dust and thunder storms, which have been one of the results of the unsettled conditions, the wind has frequently blown with considerable force and on some occasions with actual violence, but the directions have varied with the passage of the storm, and the moderately strong steady winds, which are ordinarily characteristic of this month over a great part of India, have been absent.

Temperature became remarkably low over nearly the whole of India during the week. On the 21st the mean average temperature of the different Provinces was in excess for nearly the whole of India, but on the 22nd a sudden and considerable fall took place over the North-Western Provinces and spread over nearly the whole of Northern and Central India. In the Peninsula there was still an excess. On the 23rd there was some increase in the intensity of the depression of temperature, as well as a southward advance of the cool area. On the 24th the only Provinces reporting an excess of temperature were Burma and Madras, and the deficiency over the Gangetic plain was most remarkable. These conditions lasted until the close of the week, with the result shown in the following table:

Provinces.	Difference of mean temperature from normal.
Burma	+ 1·8°
Bengal	— 2·2°
North-Western Provinces	— 6·3°
Punjab	— 4·4°
Bombay	+ 0·5°
Central Provinces and Berar	— 4·3°
Guzerat, Central India	— 4·5°
Sind and Rajputana	— 2·8°
Madras	+ 2·2°

These figures deal only with the mean average temperatures of the various Provinces, but by dealing with the maxima of individual stations, the remarkable coolness of the past week becomes much more strongly emphasised: thus—

At Gorakhpur on the 21st the maximum was 86·8°, or 16·9° below normal.
At Lucknow on the 21st the maximum was 91·3°, or 15° below normal.
At Patna on the 22nd the maximum was 87·9°, or 15° below normal.
At Benares on the 23rd the maximum was 90·8°, or 16° below normal.
At Allahabad on the 23rd the maximum was 92·4°, or 16° below normal.
At Delhi on the 23rd the maximum was 87·1°, or 19° below normal.
At Lahore on the 23rd the maximum was 85·1°, or 19° below normal.
At Ludhiana on the 24th the maximum was 83·2°, or 22° below normal.

At the close of the week temperature was rising again almost everywhere, but the average was still much below the normal.

Rain has been much more general and heavier during the present than during the past week. In no single division has there been an entire absence of rain, though in some there has again been a deficiency. It is important, however, to remember that, as was the case last week, the normal rainfall of a large number of the divisions of India for this week is very small, and hence, while the percentage variations may appear large, they are in reality often founded on a comparatively small excess or defect of rain.

Of the fifty-one divisions into which India has been divided for rainfall purposes, two have not sent in any returns, twenty-four report an excess of rain, and

twenty-three a deficiency of rainfall, while in one division there is no departure from the average and in another no comparison can be made.

In Burma the division of Tenasserim reports an excess of rain for the week and for the season, but the other divisions of that Province, as well as the whole of Assam and Eastern, Deltaic, and North Bengal, show a deficiency, both in the weekly and seasonal fall, though in several divisions the deficiency is small. In Central Bengal and from that division westward and north-westward through Chota Nagpur, Behar, the North-Western Provinces as far as the west of the Punjab, the weekly fall has largely exceeded the normal, and in many parts of this region the seasonal rainfall is also surpassed. In Malabar and Bombay the fall has been short, while in the Berar there has been an excess and in the Central Provinces a deficiency. In the divisions of Kattiawar and Guzerat there appears to have occurred a series of heavy local storms, and the normal rainfall of that region has been exceeded many times, so that the seasonal rainfall shows an excess from six to nine times as great as the average rain for the period. Central India East and Rajputana have participated in a modified degree in this excessive rain. Over the whole of Madras the rainfall has been short, but not by very large amounts.

The returns of maximum falls show no very large falls in the Eastern Provinces, though Burma and Central Bengal report amounts between 4 and 7 inches. In the North-Western Provinces and the Punjab the maxima were relatively large, one station in the Kumaun district registering nearly 4 inches, one station in the Montgomery district 2½ inches, and one station in the Bannu district 3⅜ inches. In Bombay there were no heavy falls, and a large part of the Deccan was almost rainless. The Berar and Central Provinces had frequent but light showers. In Guzerat and Kattiawar the rainfall was remarkably heavy.

Kaira received 3 inches.

Kalal (Panch Mahals), 3¼ inches.

Veramgam (Ahmedabad), 3⅛ inches.

Wadhwan (Kattiawar), 2⅛ inches.

Sind was nearly rainless, while Central India and Rajputana received frequent, though in general slight showers. Ganjam had several falls exceeding 2 inches, but south of Ganjam in the east of the Peninsula the falls were generally moderate or light.

W. L. DALLAS,
Assistant Meteorological Reporter to the Government of India.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and prospects of the Crops.

Madras.—*For week ending 25th May.*—Rainfall slight in Kistna, Nellore, Bellary, Anantapur, Kurnool, Madras, Chingleput, North Arcot, and Tinnevelly, and fair in all other districts. Crops generally good, but withering in parts of Cuddapah, Anantapur, and Chingleput, and suffering from want of water in Vizagapatam, North Arcot, Coimbatore, and Salem. Water-supply scarce in Ganjam,—insufficient in parts of Nellore, Bellary, Tinnevelly, and Salem. Prices rising in five northern districts and in seven others; falling in South Canara and Malabar, and stationary in the rest. Stock suffering very badly, chiefly from rinderpest, in Malabar and Tanjore and badly in Trichinopoly and Cuddapah. Cholera severe in Ganjam, 1,429 deaths during week. Labourers employed on last day of week—on Rushikulya works, 5,731; Gopalpore Canal 5 180, five Ghat Roads, 1,461; average daily number on drinking-water tanks and wells, 10,351. General prospects favourable, except in Ganjam.

Bombay.—*For week ending 29th May.*—Rain in Guzerat and Southern Mahratta Country and in parts of Shikarpur, Hyderabad, Khandesh, Nasik, Thana, Ratnagiri, Ahmednagar, Sholapur, Satara, Kathiawar, and Baroda, relieving water scarcity in parts of Kathiawar. Harvesting of late crops continues in Hyderabad and Kaira; preparations for next season's crops progressing in most districts. Sowing commenced in Kaira, and progressing in Karachi, Belgaum, and Kanara. Fodder scarce in Khandesh and in parts of Karachi, Thana, Poona, Ahmednagar, Dharwar, and Baroda. Drinking-water failing in parts of Ahmednagar, and scarce in parts of Khandesh, Sholapur, and Dharwar.

Bengal.—*For week ending 28th May.*—Rainfall during the week has been general, and has improved the agricultural prospects generally; in some districts however the rain has been scanty and more is needed. Ploughing and sowing are now in progress and the standing crops are better. In Rungpur much of the newly sown early rice has been already injured by drought, and the prospects of this crop are also poor in Bogra, Dacca, and Faridpur. Some damage to the crops in low lands is apprehended, owing to the sudden rise of the Padma. High prices of rice and all other foodgrains continue in all districts.

North-Western Provinces and Oudh.—*For week ending 29th May.*—Some rain fell during week throughout the Provinces. Weather cloudy and cool. Indigo, sugarcane, and extra crops being irrigated. Markets well supplied. Prices generally steady. Condition of cattle good.

Punjab.—*For week ending 29th May.*—Rainfall good in most districts during the week. Prices stationary, except in Shahpur, where they are falling. Threshing operations still in progress. Ploughings for and sowings of *kharif* crops going on Prospects of *kharif* crops fair. Cotton and sugarcane crops promising. Outturn below average in Amritsar and above in Shahpur and Dera Ismail Khan. Crops are slightly damaged by recent rain in Sialkote and Mooltan. Stock cattle are reported healthy. Fodder sufficient throughout the Province.

Central Provinces.—*For week ending 29th May.*—Weather cloudy with slight rain. Land being prepared for autumn sowings. Rice sowing commenced in Bilaspur. Sugarcane thriving. Water-supply deficient in most districts. Fodder scarce in Nimar and Raipur.

Burma.—*For week ending 25th May.*—Heavy rain fell in all districts in Tenasserim division, except in Toungoo; in other districts in Lower Burma slight rain fell, and a little rain fell in every district in Upper Burma. In Upper Burma reaping of dry-weather crops still continues, and in some districts ploughing is in

progress, and in places transplanting has commenced. Cattle-disease is severe in Prome, Toungoo, and Bhamo, and is prevalent to some extent in several other districts, but in four districts it is abating. In Myadaung the price of paddy has risen 17 per cent., and has fallen 14 per cent. in Upper Chindwin and 12 per cent. in Pyinmana. The food-supply is sufficient, except in Mawteik in Myadaung district, where slight scarcity prevails.

Assam.—*For week ending 29th May.*—Weather seasonable. Rainfall general. Ploughing for late rice continues. Blister blight on tea reported from Sibsagar, and red spider from Cachar. Prospects of other crops generally good.

Mysore and Coorg.—*For week ending 29th May.*—No rain in Civil and Military Station of Bangalore, elsewhere slight. Crops good. Sowing operations in progress in parts. Prospects generally favourable. Rain wanted in parts of Kolar, Tumkur, and Shimoga districts. No material change in prices.

Slight rain in Coorg. Prospects favourable. Health good.

Berar and Hyderabad.—*For week ending 29th May.*—Slight rainfall during the week in Berar. Ploughing operations in active progress. Cattle in fair condition. Fodder insufficient. Prices rising in some districts.

Slight rain during week in Hyderabad. Some scarcity of fodder and water felt. Prices stationary.

Central India.—*For week ending 29th May.*—There has been rain throughout Central India during the week,—heaviest at Sirdarpur and Neemuch. Land is being prepared in Bhopawar Agency for *kharif* sowings. Probable outturn of harvest unchanged. Condition of agricultural stock generally fair. Prices of foodgrains are generally steady,—high in Bhopal Agency, and falling at Neemuch.

Rajputana.—*For week ending 29th May.*—Rainfall more or less throughout the Province. Agricultural operations commenced in some places. Condition of agricultural stock fair. Prices rising in Harowtee, Kishengurh, and Bhurtpore; steady elsewhere.

Nepal.—*For week ending 23rd May.*—Hailstorm with good rain. Hail damaged fruits of the season. Early rice and Indian corn progressing.

E. C. BUCK,

Secretary to the Government of India.

GOVERNMENT OF THE PUNJAB.

CIVIL WORKS.

Telegraph.

ADMINISTRATION REPORT OF THE INDO-EUROPEAN TELEGRAPH DEPARTMENT FOR THE YEAR 1887-88.

No. 142T., dated Simla, the 27th May, 1889.

RESOLUTION—By the Government of India, Public Works Department.

Read—

Letter from the Officiating Director-General of Telegraphs, No. 31E., dated the 8th April, 1889, and its enclosure, the Report for 1887-88.

OBSERVATIONS.—The Capital Account of the Indo-European Telegraph Department was increased by £3,783 during the year 1887-88. This raised the total Capital to £1,128,160.

2. The receipts for the last three years have been—

	£
1885-86	101,928
1886-87	100,380
1887-88	99,234

The first of these years was an exceptional one on account of the Afghan Boundary Commission. The falling off in the year under review is partly attributed to the reduced rates of the Berlin Convention having been in force for the

whole year, whereas they were only in force for 9 months in 1886-87, and partly to depression of trade.

3. The working expenses of the year were £83,530, and the net revenue was £15,704. In the previous year, the department worked at a profit of £13,827 and in 1884-85 at a profit of £30,502.

4. The working expenses of the last three years have been as follows:—

Year.	Repairs.		Cable Steamer.	Miscellaneous.	Establishment.	Tools and Plant.	Total.
	Ordinary.	Extraordinary.					
	₹	₹	₹	₹	₹	₹	₹
1885-86 .	1,28,024	7,63,693	1,32,686	19,765	5,29,243	46,663	16,20,074
1886-87 .	1,75,888	778	1,09,944	14,487	5,30,488	33,944	8,65,529
1887-88 .	1,21,538	...	1,13,660	36,299	5,18,865	44,944	8,35,306

The expenditure of 1885-86 was abnormally large on account of renewal of cables. The decrease in 1887-88 as compared with the previous year would have been greater but for an exceptional item of £2,129 paid for presents made to His Imperial Majesty the Shah of Persia and to some of his Ministers on the occasion of the renewal of the Convention.

5. The traffic transmitted during the year was again smaller both in number of messages and of words than in the previous one. The average length of commercial messages remains practically unaltered, but is slightly greater than in previous years.

6. The new cables in the Persian Gulf which were laid in 1885 and 1886 are in excellent order, but the older India-rubber cables are in a very weak condition. The total interruptions on the route during the year were very slight on the Indo-European lines between Karachi and Teheran, being only some 18 hours in duration, but there were serious and prolonged interruptions on the lines of the Indo-European Company extending from Teheran to England which lasted more than 66 days in the aggregate.

7. The speed of transmission of the three routes between England and Calcutta has been—

	Vid. Teheran.	*Vid.* Turkey.	*Vid.* Suez.
	H. M.	H. M.	H. M.
1887-88	1 11	16 11	2 42
1886-87	1 31	13 23	2 31

The errors in the transmission of messages were 0·23 per cent. of the words transmitted.

8. The Indo-European Telegraph Department was under the charge of Major-General Sir R. M. Smith, K.C.M.G., as Director-in-Chief, during the greater part of the year under review: he retired in February 1888, when the appointment of Director-in-Chief was abolished and the charge of the Department was made over to the Director General of the Telegraphs of India.

9. The report was not received by the Government of India until the 9th April 1889. This date is considerably later than that on which the report of the previous year was received, but the Government is aware that the transfer of the Indo-European Telegraph Department (which formerly had a Director-in-Chief and Assistants of its own) to the Indian Telegraph Department entailed a considerable increase in the ordinary current work and also necessitated a study of the working of a Department, with the details of which the Director-General was quite unacquainted, and the examination of past records, most of which were not available for some time after the transfer. In addition to these facts, further delay was caused by the absence of the Director-General of Telegraphs from

the 20th October 1888 to 21st February 1889, under the orders of the Government of India, on a tour of inspection of the Persian and Indo-European Department lines, an inspection which has, no doubt, rendered his report more useful than it would have been had it been prepared before he had obtained a personal knowledge of the general state of the communications and of the personnel employed. Whilst, therefore, noticing the fact of the late date at which this report has been submitted, the Government of India has no intention of imputing blame on this account to the Director-General.

ORDER.—Ordered, that a copy of this Resolution be forwarded to the Director General of Telegraphs for information and guidance.

Also that copies of the Report and Resolution be forwarded to the Department of Finance and Commerce and the Home Department for information.

Also to the Government of Bombay for information.

Ordered further, that the Report and the Resolution be forwarded to the Secretary of State for the information of Her Majesty's Government, and published in the *Gazette of India*.

R. C. B. PEMBERTON, *Colonel, R.E.*,
Secretary to the Government of India.

ADMINISTRATION REPORT

OF THE

INDO-EUROPEAN TELEGRAPH DEPARTMENT

FOR

1887-88.

CAPITAL.

The Capital of the Department was but slightly altered during 1887-88, the debits and credits were chiefly in adjustment of suspense items (stores advances, &c.,) and resulted in an increase of £3,783-3-7 to Capital account, which, on the 31st March 1888, stood at £1,128,159-11-9. (Appendix A)

REVENUE.

2. **B. Revenue Account.**—The Receipts in 1887-88 reached the satisfactory total of £99,234-7-5. The slight decrease of £1,147, compared with the previous year, is attributable partly to a partial falling off in traffic from depression of trade, and partly to the circumstance that the whole of the traffic during 1887-88 was carried at the reduced rates of the Berlin Convention, while in the previous year only nine months' traffic was so carried. In addition to the receipts brought to account the *Patrick Stewart* earned on account of work performed for other Departments £289-6-0.

3. The Expenditure for 1887-88, Appendix B, was £83,530-12-2, showing a decrease compared with the previous year of £3,022, thus arrived at—

	Increase.	Decrease.
	£	£
Repairs	...	5,513
Establishment	...	1,757
Tools and Plant	1,207	...
Presentation Stores	2,129	...
Cable Steamer	372	...
Chief Direction, London and Constantinople Offices	594	...
Advertizing and Agencies—(share of)	38	...
* Royalty for Brown-Allan relays	...	100
Stores	54	...
Stationery	...	46
	£4,394	—£7,416
NET DECREASE	£3,022	

The chief item of increase, £2,129, is a special charge. It represents the value of presents made to His Imperial Majesty the Shah of Persia and to some of his ministers on the renewal of the Convention, by which the British Government is allowed to maintain a telegraph line in his dominions.

4. The result of the working for 1887-88 was a balance to credit of £15,704, or £1,876 better than in the previous year, representing a profit of about 1½%.

* The decrease of £100 Royalty for relays is only apparent, the regular payment is £200 a year, but three half-yearly bills were paid in the preceding year.

TOTAL INTERRUPTIONS—(APPENDIX C.)

5. The Indo-European route suffered very severely from total interruption in 1887-88, the aggregate during the year being 67¼ days, compared with 7⅛ days in 1886-87 and 34⅓ in 1885-86. Of the aggregate of 67¼ days, less than 1 day is chargeable against the Persian and Persian Gulf Sections of the Indian Government, the whole of the remainder having occurred on the section worked by the Indo-European Company. The Company had total interruptions of an ordinary kind, lasting a day or two, in May and December, and an extraordinary interruption which commenced at the end of January, and was not repaired by the end of the official year. The sub-marine wires leased by the Company, one in Reuter's Cable, and one in the German Union Company's Cable, were both broken and remained unrepaired during this almost unprecedented length of time, apparently from defective repairing clauses in the Company's leases.

6. This total interruption would have cost Government the loss of upwards of two months' receipts, had it not been for the Common Purse arrangement, under the terms of which there was a loss of £2,226 on Indian messages, and a "set-off" of £1,963* on trans-Indian messages, making the net loss £263 only.

7. The Turkish route had an opportunity of replacing to some extent the Indo-European Company's broken section, but its service remained entirely unequal to the task. The Turkish route was totally interrupted 59 days 3 hours 29 minutes in 1887-88, against an aggregate of 108 days 4 hours in the preceding year. For the interruptions *vid* Turkey (excluding days of grace), the Department had to pay £32-12-3 to the Eastern Company, and £12-1-3 to the Indo-European Company, under the Common Purse arrangement.

PARTIAL INTERRUPTIONS NOT STOPPING TRAFFIC.

8. By a partial interruption is meant an interruption of one or more wires on a circuit which has still an available line or lines left for communication. The partial interruptions in the Persian Gulf amounted to 265 days on the cables and 15 days on the land line The partial interruptions in Persia amounted to 342 hours, of which 106 hours were due to wilful damage.

TRAFFIC.

9. The Regulations and Tariffs of the Berlin Convention remained in force during 1887-88.

10. The paid telegrams and words carried by the Department were—

	1887-88.		1886-87.	
	Telegrams.	Words.	Telegrams.	Words.
Government	2,514	90,238	2,916	118,552
Commercial and Private	78,850	1,050,757	86,462	1,124,074
Press at reduced rates {	1,079	52,572	1,355	121,566
	97	73,282		

There was thus a slight falling off in Government and Commercial telegrams, and a very slight increase in the number of words in cheap press telegrams.

11. The average length of Commercial telegrams was 13.326, or a trifle higher than for several years preceding, when it fluctuated between 12 and 13 words, indicating that the art of codification remained stationary in 1887-88.

* The interruption percentages being higher than the normal percentages for Far East traffic.

SPEED OF TRANSMISSION.

12. The average speed of transmission by each of the three routes from England to Calcutta during the year 1887-88, was—

	Vid Teheran. H. M.	*Vid* Turkey. H. M.	*Vid* Suez. H. M.
In 1886-87 it was	1 11	16 11	2 42
	1 31	13 23	2 31

From England to Karachi the comparative average speed of transmission was as follows :—

	Vid Teheran. H. M.	*Vid* Turkey. H. M.
In 1886-87	1 05	10 45
In 1887-88	0 55	14 54

13. The average speed of homeward messages *vid* Teheran was about the same as of outward. In the two months of August and October, the average was only 57 and 56 minutes, respectively, from Calcutta, and 50 and 40 minutes from Karachi. As these are the first instances of monthly averages under the hour since the establishment of telegraphic communication between England and India, the fact appears deserving of notice.

Appendix D shows the monthly mean rate of transmission by the two Sections between Karachi and Teheran. From Karachi to Teheran, 11 minutes 42 seconds, and from Teheran to Karachi 12 minutes 40 seconds. If the two exceptional months of bad working—in December and January—are excluded, the average during the remaining ten months is 9 minutes 7 seconds and 11 minutes 10 seconds, respectively.

Appendix E gives the rate of transmission from the United Kingdom *vid* Teheran to Karachi, and compares favourably with that of the previous year.

Vid Turkey.—The rate continues unsatisfactory, and there were numerous interruptions reported between Fao and Bagdad, and judging from the frequent receipt of messages by the Bashkali line, many stoppages were apparent on the Bagdad-Diarbekir Section.

CHECK OF ERRORS.

14. Fifty per cent. of the messages passing between Teheran and Karachi were examined for errors, and it was found that 99·770 per cent. of the total number of words were transmitted correctly, as against 99·614 in the previous year.

RECTIFYING MESSAGES AND PUBLIC COMPLAINTS.

15. There were fewer rectifying messages in 1887-88 than in the previous year, the decrease being evidence of an improvement in accuracy. The number of public complaints in proportion to volume or traffic was about the same. The figures are—

	1887-88.	1886-87.
Rectifying messages	1,464	1,709
Public complaints (through London Office) . .	64	65

TRANSFERRED TRAFFIC.

16. In consequence of the serious interruptions of the Indo-European route (Company's Section, spoken of under paragraph 5) the Indo-European Company transferred 2,960 messages to the Eastern Company in London in 1887-88. The number transferred from the Eastern to the Indo-European route was 4 only.

SPECIAL WIRES, ADVERTIZING AND AGENCIES.

17. There was a decrease in the traffic between India and Liverpool, and a slight fluctuation in that with Manchester, by the special wires of the Indo-European route. The figures are—

	Liverpool Messages.	Manchester. Messages.
To	2,218	3,853
From	1,520	2,044
Total, 1887-88	3,738	5,897
„ 1886-87	4,698	6,039
„ 1885-86	6,202	6,237

18. Notice was given to the Indo-European Telegraph Company that the departmental contribution towards the expense of the special wires, advertising, and agencies in England, would cease from 31st December 1887.

CREDIT SYSTEM IN ENGLAND.

19. Eleven firms in Great Britain were added to the credit list of the Indo-European Company in 1887-88, and it is to be noted that the Department shares with the Company, under certain defined conditions, the risk of bad debts on this account.

GENERAL TRAFFIC ARRANGEMENTS.

20. An arrangement made in 1886-87, under which, during partial interruptions on the Indo-European route, outward traffic gives way to homeward after 2-30 P.M., Greenwich time, appears to have worked satisfactorily during 1887-88.

COMMON PURSE.

21. The reduction of tariff in 1886-87 by about 13 per cent. sensibly affected the total receipts of the Common Purse, as shown in the report for that year and in the subjoined table. The effect of the reduction was also felt throughout 1887-88, but an improvement took place in Far East traffic, raising the total of the Purse from £545,553 in the first-named year to £551,431 in the latter year.

22. The following table exhibits the growth and fluctuation of the Common Purse from the time the Department joined it :—

Table A.

Year.	First year's actual net receipts and hypothetical increase of 5 per cent. per annum.	Actual net receipts of Common Purse.	Actual increase per cent. per annum on first year's working.	Average increase per cent. per annum.	Fluctuation of each year, compared with preceding year.

24. The following table exhibits the yearly amounts paid into and received from the Common Purse by the Department. The result of the 10 years' working is that the Department has paid in £756,757 and received £754,815. The approximation of these large aggregates is somewhat remarkable, and affords evidence of the care taken in negotiating the intricate terms of the Common Purse arrangement :—

YEAR.	Credited to Purse.	Drawn from Purse.
	£	£
1878-79 . . .	42,309	62,264
1879-80 . . .	52,488	68,877

1886-87 . . .	80,980	75,206
1887-88 . . .	71,808	73,976
	756,757	754,815

Sub-Division of Traffic.

25. Extracting from the Common Purse traffic the percentage carried by the Department, the following figures will show its sub-division between the Teheran and Turkish routes :—

1887-88.

Carried by Department.	SUB-DIVISION.	
Indians and Trans-Indians combined.	*Viâ* Teheran.	*Viâ* Turkey.
13·02%	12·52%	0·50%

In 1886-87 the figures were :—

14·84% 14·45% 0·39%

COMMON PURSE ACCOUNTS—Checking of—

26. The usual test check was applied to the traffic accounts of the Eastern Telegraph Company with the usual result; no error was detected.

27. The Indo-European Company's Common Purse accounts for the month of August were checked throughout. About 25 errors of detail were discovered :—

	Frcs.
Over-credited on Indian traffic	8·59½
Short-credit on Trans-Indian traffic	79·09

The under-credit will be paid into the Purse.

SETTLEMENTS.

28. The settlements with India were effected at the market values of the monthly franc balances; the average rate for the year being 169·18*d* per rupee. The exchange between francs and sterling was 25·21 per £ for the year.

29. The local collections of the Persian Section were adjusted at the rate 1 franc=26 Shahis, and credit to the Government of India at 255 krans=100 rupees.

30. The settlements with Turkey and the Companies were, as usual, at the rate of 25 francs=£1.

PERSIAN GULF TELEGRAPHS.

CABLES.

The lengths of the cables at the end of the last two years were—

	1887-88.	1886-87.
Gutta-percha cable	1228·651	1228·86
India-rubber cable	502·81	501·54
Viz.:—		
Gutta-percha—		
Fao to Bushire	152·04	152·04
Bushire to Jask	519·051	519·55
Jask to Gwadur	267·65	267·30
Gwadur to Manora	271·94	271·94
Manora to Karachi	17·97	17·97
TOTAL	1228·651	1228·86
India-rubber—		
Bushire to Jask	502·81	501·54
	1731·46	1730·40

In addition to the above there are two other cables laid in the Karachi Harbour,—one for the Defence-works, 10·006 knots long, and the other for the Port Department, length 4·15 knots.

ELECTRICAL CONDITION OF THE CABLES.—Appendix G.

The insulation of the Fao-Bushire cable remains low owing to the occurrence in November 1886 of a small fault of high resistance which does not interfere with the working of the circuit.

The low insulation of the Bushire-Jask new gutta-percha cable is also due to the presence of a small fault which does not affect the working.

In February 1888, a partial fault* (not affecting the working) developed in the Bushire-Jask india-rubber cable. Owing to its variable resistance, this fault was not localised until after the return of the ship to Karachi.

* Cut out in May.

FAULTS AND INTERRUPTIONS.—Appendix H.

During the pastyear, thirteen faults have been removed. Of these, two faults stood over for repair from the previous year. In addition to the above there were on 1st April four faults still remaining. Of these, one fault in the Gwadur-Manora Section and one in the Bushire-Jask india-rubber Section will be cut out on the first opportunity, leaving two faults, one in the Bushire-Jask new gutta-percha cable, and one in the Fao-Bushire Section, which have not yet been localised owing to their high resistance.

One circuit between Karachi and Bushire was available throughout the year, except for seven hours on 22nd February last, during the repair of the Bushire-Jask new gutta-percha cable. The second circuit was available except for 51 days 19 hours, whilst the india-rubber cable between Bushire and Jask was interrupted.

Statement B shows all faults, repairs and renewals to the cables, whereas Statement C shows only the total interruptions in this section affecting communication with Europe, *viz.*—

Viâ Persia	7 hours.
Viâ Turkey	*nil*

MAINTENANCE AND REPAIRS.

The Engineering establishment were absent from Karachi on repairing duty 162 days. Whilst carrying out the various repairs it was found that out of the 107 miles of cable disturbed—

60% had to be left on the ground owing to the india-rubber being too weak to bear lifting, and the gutta-pecha cable being buried;
25% has been stripped for the core;
14% was found good enough to be relaid after repairs;
and 1% consisting of short pieces has been sold.

EXPENDITURE OF CABLE AND CABLE IN STOCK.—Appendix I.

106·566 knots of cable have been expended during the past year in making thirteen repairs, giving 8·20 knots as the average per repair. This includes two large repairs or rather renewals of 17·30 and 16·40 knots in the Jask-Gwadur cable, and one renewal of 29·77 knots in the india-rubber cable.

The cable in the Manora tanks kept ready for repairs on 1st April 1888 amounted to 73·524 knots.

SUMMARY OF THE HISTORY OF THE CABLES DURING 1887-88.

Fao-Bushire Cable.

Since this Section was renewed in July 1886, no total interruption has occurred.

In November 1886, whilst removing a partial fault (due to manufacture), a second defect was found to exist in this Section. Its resistance has, however, remained so high that up to the present the fault has not been localised, but its presence does not in any way interfere with the working.

Bushire-Jask new gutta-percha cable.

Two partial earth faults have been cut out during the past year, and one partial fault, which occurred in December 1885, still remains in. Of the two faults cut out, only one occurred during the year under review, the other having developed in March of the previous official year.

During the past year this Section was only interrupted for 15 hours whilst repairing two faults.

During the repair of this Section on 22nd February last, owing to the india-rubber cable being interrupted on the same date, a total interruption to traffic occurred, lasting 7 hours.

Jask-Gwadur Cable.

Altogether 6 faults have been cut out of this Section, of which 5 occurred during the past and one during the previous official year. Of these faults, 4 were partial earths (which did not interfere with the working) and 2 were total breaks. One of the partial faults was due to manufacture, the remainder were all caused by the corrosion of guards and fish-bites.

This Section was interrupted for 167 days 14 hours, of which 120 days 4 hours were due to repairs being postponed till after the monsoon.

Gwadur-Manora Cable.

Two faults were cut out of this section, both total breaks, due to the corrosion of the guards. A third fault (partial earth, not affecting the working) occurred on 4th January, about 9½ miles from Manora. This fault has not yet been repaired, though an attempt was made in March last, which owing to the heavy swell had to be abandoned.

This Section was interrupted for 136 days 10 hours; of which 131 days 11 hours were due to the repairs being postponed until after the monsoon.

Bushire-Jask Old Gutta-percha Cable.

In November 1885, when this section was abandoned as a working circuit, its length was 507·67 knots—

Up to 31st March 1887 total amount recovered was	121·78	knots.
And the amount left on ground as unrecoverable was	18·89	„
Thus leaving at the beginning of 1887-88 to be recovered	367·00	„
During 1887-88 we have recovered	98·50	„
And left on ground as unrecoverable	39·00	„
Leaving at end of year to be recovered	229·50	„

Allowing, say, 30 per cent. as unrecoverable, we may, I think, expect to recover another 160 miles of cable.

Of the 98·50 knots recovered during the past year, 35 knots were good enough to be relaid after repair. Five knots were kept for sale and the remainder stripped for the core to be remade into cable.

Harbour Cables.

Since the renewals last year no faults have occurred in these cables.

A small fault of high resistance was cut out from the lead-covered wire laid last year for the Military Department between Batteries Nos I and II. The fault looked as if it had been made.

Since the new cable for the Military Department was laid between Baba Island and Battery No. III, the site of No. III Battery has been changed, thus necessitating a corresponding alteration in cable.*

* Since done.

CABLE HOUSES AND LAND LINES.

All cable-houses and cable land-lines at the various stations are in good order.

The Bushire cable land-lines have been strengthened by the erection of a double line of posts, which have been bolted together as was previously done at Jask.

MECHANICAL CONDITION OF THE CABLES.

The Fao-Bushire Section (which was renewed in July 1885) and the Bushire-Jask new gutta-percha cable, which was laid in November 1885, are both in excellent mechanical condition.

The Bushire-Jask india-rubber cable (laid in 1869) is now 19 years old, and is in a very weak condition. During the past year a large renewal of nearly 30 miles, extending eastward from Big Tamb Island, was made in this section, thus cutting out some very bad cable.

The Jask-Gwadur Cable is in better condition than the india-rubber cable. Off Charbar, however, when making repairs in December 1887, the cable was found very weak, and a long renewal of over 16 miles was made. Nearer Gwadur (off Ras Jeyuni and Ras Ganz), a renewal of upwards of 17 miles was made, but this was due to the cable being buried in that locality. A further renewal of about 12 miles is proposed between this and Gwadur.

The Gwadur-Manora Section is in about the same condition as the Jask-Gwadur Cable. In October 1887, during two repairs, nearly 12 miles of cable were renewed, and another renewal of about 15 miles remains to be made near the same spot.

Although the *Patrick Stewart* made eight voyages during the past official year (same as in 1886-87), only 12 repairs were made as against 23 during the previous year. Whilst the number of faults were 15 and 26 respectively. This in a great measure accounts for the renewals being much less anticipated.

Owing, too, to the ship not having occasion to go beyond Jask as frequently as before, the amount of old gutta-percha cable recovered has been less.

In addition to the above statements, I add two others—(*a*) Statement F, shewing the total number of faults which have occurred in our cables up to date, and (*b*) Statement G, showing the amount of cable undisturbed up to date.

MEKRAN COAST LINES.

The corrected lengths of these lines at the close of the year under report were as follows:—

	Miles of line.	Miles of wire.
Karachi to Sonmeanee Branch	48·75	97·50
Sonmeannee Branch	2·00	2·00
Sonmeanee Branch or Ormara	165·75	331·50
Ormara to Pusnee Branch	88·90	177·00
Pusnee Branch	3·25	3·25
Pusnkee Branch to Gwadur	76·50	153·0
Gwadur to Charbar	116·00	232·0
Charbar to Jask	101·50	203·00
TOTAL	702·25	1399·25

MAINTENANCE AND REPAIRS TO LAND-LINE.

In the Gwadur Division 35·5 miles of wire were renewed during the year, the right wire was fitted with 1,094 fluid and 88 Schomberg insulators. At the Shadi Kaur River near Pusnee, new iron compound masts, each 60 feet long, were erected, and near Gwadur a short diversion of 2¼ miles was made.

In the Gwadur-Jask Division, an iron cylinder, 36 feet long, 4 feet 9 inches diameter (built up in sections), was sunk in the middle of the Rapch River. In this a post was erected and the span wires placed on it. Also a compound mast, 42 feet long, was erected on the west bank of the Sharhno in place of an old telescopic mast.

The right wire for 201½ miles has been thoroughly overhauled, 90 miles of new wire has been inserted; the whole of the original joints, numbering 4,007, have been cut out and replaced by 1,590 of the Brittania form.

The insulation of the left wire throughout to Jask with fluid insulators was completed this year, 96 miles being the length finished.

INTERRUPTIONS.

On the Mekran Coast line two interruptions affecting both wires occurred. One was on the 7th October and lasted 15 hours 15 minutes, caused through corrosion of the wires, and the other on the 11th February, when a post was blown over near the Dasht river; this lasted 20 hours 30 minutes. During these interruptions the Karachi-Gwadur Cable was working.

Partial interruptions, not affecting communication, were 18 in number, and aggregated 18 days 21 hours 57 minutes as noted below. They were, with two exceptions, caused through the wire breaking through corrosion; but much of this corroded wire has now been removed:—

	D.	H.	M.
Karachi to Ormara	0	16	0
Ormara to Gwadur	9	9	40
Gwadur to Charbar	3	7	15
Charbar to Jask	5	13	2
	18	21	2

CABLE FACTORY.

The following is a summary of the work done in the factory during the past year:—

	Knots.
Cable manufactured	49·32
Cable repaired and retaped	49·89
Cable stripped for the core	63·62
Short pieces of cable repaired and kept for sale	7·95
MAKING THE TOTAL PASSED THROUGH FACTORY	170·78

CABLE STEAMER "PATRICK STEWART."

This ship, although the property of the Telegraph Department, was on the list of the Indian Marine until the 31st May 1887.

She was placed entirely under the orders of the Director-in-Chief of the Indo-European Department on the 1st June 1887, but her officers were not relieved until some months later.

Captain Tindall and Mr. Townsend, her present Commander and First Officer, who arrived in India on the 17th October and 24th November 1887, respectively, were both appointed under covenant by the Secretary of State, and both were selected for their experience in cable ships.

The usual tabular statement shewing the work done by the steamer is forwarded in Appendix J. She made eight trips during the year and steamed about 10,500 miles.

The value of work done for other Departments by the steamer amounted to R2,892-14-2.

PERSIAN TELEGRAPHS.

LINE MAINTENANCE AND REPAIRS.

Of the 3 wires on the Persian line, that used by the Persian Administration is called No. 1, the one principally used for International traffic No. 2, and No. 3 was only used for Departmental messages up to April 1887, since which time it has carried International traffic for only 6 hours a day, consequently more attention has been paid to the maintenance of No. 2 than of No. 3 wire.

No. 2 wire was, during the autumn of 1887, re-insulated with Johnson and Philip's patent fluid insulators for 159½, out of 176, miles of line, near Teheran, which passes over a desert country, the soil of which is impregnated with saline matter. The damp exhalations arising from this saline desert in winter time cause very faulty insulation, where insulators of the original iron-hooded pattern are employed, and the re-insulation with the fluid insulators had a beneficial effect; when the traffic increases to such an extent as to require a second circuit to be kept open at night as well as by day, it will be necessary to re-insulate No. 3 wire as well.

On the rest of the line the work executed was of the ordinary nature of repairs, except that in the 4th Section the direction of the line was changed for a distance of 5 miles in order to avoid a small lake and considerable marsh, which had formed directly under the line rendering its inspection difficult.

WILFUL DAMAGE.

There were 48 acts of wilful damage committed during the past year, for which a sum of 3,841 krans was received in compensation from the Persian Government. The greater part of the above sum was paid by the local Governors of districts, and only a balance of 1,770 krans had to be referred to Her Britannic Majesty's Legation and recovered through its agency.

This wilful damage, which principally consists of using iron telegraph poles as a means of testing the "penetration" of a gun before purchase, caused an aggregate interruption of No. 1 wire for 120 hours 31 minutes. The table below shows a comparison of the interruptions caused by wilful damage during the last two years:—

	1 Wire.	2 Wires.	3 Wires.
1886-87	166·15	1·45	*Nil.*
1887-88	120·31	*Nil.*	*Nil.*
DECREASE	45·44	1·45	*Nil.*

INTERRUPTIONS.

The line stood well throughout the winter of 1887-88. A single case of interruption, however, did occur in the neighbourhood of Shiraz, and was due to an exceptionally heavy snowfall on the 15th January, which caused a cessation of communication for 8 hours and 58 minutes.

The above was the only total interruption that occurred during the past financial year.

Of all interruptions, total and partial, the following table shows an improvement on 1886-87:—

In	1 Wire.	2 Wires.	3 Wires.
1886-87	636·56	129·1	59·23
1887-88	342·32	50·32	8·55
DECREASE	294·24	78·29	50·28

Working parties caused interruptions thus—

In	1 Wire.	2 Wires.	3 Wires.
1886-87	21·4	·59	*Nil.*
1887-88	2 58	*Nil.*	*Nil.*
DECREASE	18 6	·59	*Nil.*

This decrease is due to the fact that the only alteration of the direction of the line undertaken during the past year was where it crossed open country, whereas the change made in 1886-87 was from one side to another of the Pulvar river at its passage through a long and difficult gorge.

Birds caused interruptions thus—

In	1 Wire.	2 Wires.	3 Wires.
1886-87	92·45	*Nil.*	*Nil.*
1887-88	5·15	*Nil.*	*Nil.*
DECREASE	87·30	*Nil.*	*Nil.*

It was in a great measure to avoid the contacts caused by birds that the direction of the line was changed near "Cyrus's tomb" as mentioned above. Since the change has been made no further trouble has been experienced in respect to such contacts.

Camels caused interruption, thus—

In	1 Wire.	2 Wires.	3 Wires.
1886-87	3·20	10·35	*Nil.*
1887-88	24 30	*Nil.*	*Nil.*
INCREASE	21·10	10·35	*Nil.*

The interruptions due to wilful damage have already been specified.

TRAFFIC.

Attached are returns—

I.—Showing the average accuracy.—Appendix I.

II.—Showing the average speed with which messages were transmittted.—Appendix J.

The improvement shown by both returns is remarkable; that as regards speed is mostly due to the use of the second circuit.

The total number of words transmitted over this section during the financial year 1887-88, were 1,184,799, or 196,082 less than the average for the previous three years—a decrease to be accounted for by the fact that the Indo-European Company's lines were interrupted during 63 days in 1887-88.

MESHED LINE.

The line from Teheran to Meshed which, although it forms part of the Persian system of telegraphs, has been maintained and partly worked by the British Government since the 14th December 1885.

This line was interrupted for 1,611 hours 15 minutes during the year, the greater number of interruptions being caused by camels, but one interruption of 21½ hours in August was purposely caused by the followers of Sirdar Ayub Khan when he made his escape from Teheran.

In addition to the expense incurred on account of this line by the British Government, the Persian Minister for Telegraphs gave 6,750 krans for new poles, besides a supply of wire and insulators.

In connection with this line there are now lines open from Meshed to the East as far as Sarakhs and to the West *vid* Kuchan to Bujnurd; and the Persians are also constructing one *vid* Kelat-i-Nadari to Deraghez.

PERSIAN AUTHORITIES.

Our relations with the Persian authorities and inhabitants everywhere are of a very friendly nature. An unfortunate event happened at Shiraz on the 20th of December 1887, but this was not so much a demonstration against the English as a desire on the part of the inhabitants to discredit the Governor who then misruled the province.

On the occasion here referred to, Mr. Smith and his wife, together with a Dutch merchant, agent for Messrs. Hotz and Company, accompanied by servants carrying lanterns, were returning from the telegraph quarters outside Shiraz to the gates of the town, when a volley was fired by some people on the reverse side of the wall that bounds the road; none of the shots took effect, but on Mr. Smith rushing forward to try and capture one of his assailants, his wife received a charge of slugs from a pistol held by a man standing only one pace from her, and the merchant was cut by a sword on the left hand. Four of the slugs fired from the pistol took effect, and Mrs. Smith was consequently for some time in a precarious state of health. The Governor and many of the principal inhabitants expressed the warmest sympathy, and a payment of 5,000 krans was made in compensation; but notwithstanding the efforts of the British Minister, the perpetrators of this outrage have never been brought to justice.

The new Governor H. R. H. the Itesham-ud-Dowleh, cousin of H. I. M. the Shah, who was appointed to the province of Fars on the 21st of March 1888, is determined to put a stop to many malpractices that had gained head under his predecessor. Wilful damage and other annoyances of a like nature may be expected to decrease under his firm rule.

His Excellency the Mukhber-ul-Dowleh, Minister of Telegraphs, by his tact and hearty co-operation, has enabled the species of dual control of the Meshed line to be worked without friction, and with advantage both to the Persian and British Governments. The services His Excellency has rendered to the Indo-European Government Telegraph Department are well known, and his desire to do the best in his power to facilitate the working of the Persian Section proves to be as great now as it ever has been.

ESTABLISHMENT.

Major-General Sir R. M. Smith, K.C.M.G, the last Director-in-Chief of the Indo-European Telegraph Department, having retired on the 15th February 1888, Her Majesty's Government decided that no successor should be appointed to him, but from that date placed the administration of the system under Sir A. J. Leppoc Cappel, the Director General of the Indian Telegraphs, in addition to his other duties. Throughout the year Mr. B. Ffinch, as Director, was in charge of the Persian Gulf Section, and Major H. Wells, R.E., officiated as Director of Telegraphs in Persia—a post which he has held since Major-General (then Colonel) Sir R. M. Smith proceeded on furlough in May 1885.

Sir A. J. Leppoc Cappel having taken furlough on the 9th March, or 23 days after assuming charge of the Indo-European Department, the charge of it has since been vested in me.

H. A. MALLOCK, *Colonel, Bengal Staff Corps,*
Officiating Director General of Telegraphs.

CALCUTTA,
16th March 1889.

Director, Persian Gulf Section.

APPENDIX I.

Statement of work done by the Telegraph Cable Steamer "Patrick Stewart" during the year 1887-88.

Date. From	Date. To	Particulars.
1887. April 1 .	1887. April 12 .	Employed picking up old cable off Bushire, repaired fault in new gutta percha south of Furar Island, and another in Gwadur-Jask Section and returned to Karachi, calling at Jask, Gwadur, and Ormara.
„ 13 .	May 5 .	At moorings in Karachi harbour discharging cable, coaling, preparing ship for sea, receiving stores, &c.
May 5 .	„ 15 .	Left Karachi for Persian Gulf with Director-in-Chief. Director, reliefs and stores for stations, picked up old gutta-percha and arrived at Fao.
„ 16 .	„ 27 .	Left Fao, picked up old gutta-percha cable, repaired fault in Gwadur-Jask Section, and returned to Karachi, calling at Charbar, Gwadur, and Ormara.
„ 28 .	June 15 .	At moorings in Karachi harbour.
June 16 .	„ 26 .	Left Karachi to repair two faults in the cable in Karachi-Gwadur and Gwadur-Jask Sections, but owing to heavy south-west monsoon-sea, the faults after several attempts could not be repaired, returned to Karachi.
„ 27 .	July 14 .	At moorings in Karachi harbour.
July 15 .	„ 31 .	Left Karachi for Persian Gulf with stores and passengers, called at Charbar and Jask, repaired a fault in the India-rubber cable, Bushire-Jask Section, about 176½ miles from Jask, and returned to Karachi, calling at Jask-Gwadur and Ormara.
Aug. 1 .	Aug. 14 .	At moorings in Karachi harbour.
„ 15 .	„ 18 .	Left for Bombay, arriving there on the 18th.
„ 19 .	Sept. 4 .	Hauled into dock, undergoing repairs to engines, cleaning vessel's bottom, &c.
Sept. 5 .	„ 15 .	Hauled out of dock and laying at moorings in Bombay harbour, completing repairs, &c., which proved satisfactory.
„ 16 .	„ 19 .	Left for Karachi with a steam-launch for the Karachi harbour defences in tow, arriving 19th.
„ 20 .	Oct. 1 .	At moorings in Karachi harbour.
Oct. 2 .	„ 25 .	Left Karachi, repaired the two faults which were left off unrepaired in Karachi-Gwadur and Gwadur-Jask Sections; also picked up some old cable about 13 miles from Jask, and returned to Jask 18th; received intimation of another fault in Karachi-Gwadur Section, after repairing it returned to Karachi.
„ 26 .	Dec. 7 .	At moorings in Karachi harbour.
Dec. 8 .	„ 24 .	Left Karachi for cable work, called at Ormara-Gwadur and Gwether, to land line stores, and Charbar, repaired two faults in gutta-percha cable, Gwadur-Jask Section, and returned to Karachi, calling at Gwadur and Ormara.
„ 25 .	1888. Jan. 9 .	At moorings in Karachi harbour.
1888. Jan. 10 .	Mar. 7 .	Left for Gulf, with Director on board, on annual inspection of stations with reliefs and stores, repaired two faults in India rubber cable and one in gutta-percha, picked up some old cable and returned to Karachi.
Mar. 8 .	„ 21 .	At moorings in Karachi harbour.
„ 22 .	„ 26 .	Left Karachi to repair a fault in the Karachi-Gwadur Section off Manora, about 9 miles, but unable to carry out the repairs owing to the heavy sea and swell; returned to Karachi.
„ 27 .	„ 31 .	At moorings in Karachi harbour.

B. FFINCH,
Director, Persian Gulf Section.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Memorandum on the Snowfall in the Mountain Districts bordering Northern India, and on the Abnormal Features of the Weather in India during the preceding months.

The following preliminary note and forecast will be followed in the early part of June by a final forecast drawn up by the Meteorological Reporter, based on the information of snowfall on the Himalayas during the months of April and May and the meteorological observations for the month of May.

The premises hitherto accepted are that the strength and extent of the south-west monsoon current in India appear to depend mainly on three factors:

1st.—The amount of snowfall and the period of its occurrence in the northern mountain districts of India.

2nd.—The local peculiarities of the weather in India itself immediately antecedent to the rains, and mainly impressed upon it during the preceding hot weather. These are chiefly measured by the local variations of pressure from the mean.

3rd.—Local peculiarities in the Bay of Bengal and Arabian Sea, over which the monsoon current passes before it reaches India.

The first factor appears to be mainly influential in determining the northward limits of the monsoon rains, heavy and prolonged snowfall in the Himalayas either delaying or preventing the extension of the monsoon current over Upper India during the rainy season.

The second factor appears to determine those large local district and provincial variations of rainfall during the monsoon which are evidently due to local conditions and peculiarities, and not to general causes, such as snowfall over the whole Himalayan region, or as variations in the number of sunspots.

The third and last factor is of equal importance with the preceding, but it is that on which information is least in amount and is longest in being received.

In the present note it is only possible to state the snowfall conditions in the mountain districts of Northern India and the abnormal features (chiefly of pressure) in India itself.

Summary of Snowfall information.—Over the Afghan Highlands the snowfall seems to have been on the whole decidedly less than the normal. The snowfall on the Spinghar was about the same as that of last year, but it was followed by heavy rain, which melted much of it and it is probable there was very little snow on these ranges by the end of February. There appears to have been little or no snow in March. There was also a marked absence of cold winds, which may probably be accepted as an indication of deficiency of snow.

On the hills to the north of the Punjab there is a good deal of difference in the amount of snow received in different districts. In Ladak and Kashmir there has been extremely little snow. In Lahoul, Plach, and Kulu, on the contrary, there was an abnormally early and abnormally heavy snowfall: the snow is deeper and will probably lie longer than it has for several years past. At Naini Tal and Mussoorie, on the contrary, there was apparently no snow of importance.

In the Eastern Himalayas the snowfall has been normal or less than normal. There is, however, some evidence that the early snow which characterised the winter in Lahoul, Kulu, and Plach extended into the Eastern Himalayas also, as the Deputy Commissioner, Darrang, says the Bhutias explained their late appearance by referring to the quantity of snow in the passes.

I.—AFGHAN HIGHLANDS.

(*a*) Hills west of Dera Ismail Khan.

The Deputy Commissioner, Dera Ismail Khan, furnishes the following report on the snowfall on the ranges west of the Indus in the season 1888-89:

The season was marked by the absence of cold winds, and was dry till the rainfall of February and March. There was no snow observable till the

end of November, when slight snow was seen on the peaks of the Takht-i-Suleman hills. The snow gradually increased and extended, but towards the middle of February it slowly disappeared.

(*b*) Hills west of Kohat.

The Officer in charge of the Thull Outpost forwards the following information through the Deputy Commissioner of Kohat:

December 1888.—Snow to the depth of about 2 feet fell on the Spinghar, Piwar, Shalozan, and Kirman, and to the depth of about 6 inches on the Terah on the 21st.

January 1889.—There was a good snowfall on the Spinghar between January 28th and February 1st. After this fall heavy rains occurred which washed the snow away from the lower hills and the maidans, only the Sufed Koh and higher ranges remaining white.

February 1889.—There was a good snowfall from the 18th to the 23rd, and again on the 25th of February. The following was the approximate depth of snow which fell:

Sufed Koh (Spinghar)	
Dandaghar	12 to 13 inches.
Zawa	2 to 3 ,,
Sumana	4 to 5 ,,
Terah	1 to 1½ ,,
	4 to 4½ ,,

The Deputy Commissioner, Kohat, is of opinion that any snow of less than 7 inches depth soon melts away at this season, so that there can have been but little snow on these ranges by the end of February.

(*c*) Hills west of Peshawar.

The Assistant Commissioner, Mardan, through the Deputy Commissioner, Peshawar, forwards the following information:

January 1889.—Snow fell to a depth of from 1 to 2 feet on the hills bordering the Sadhum Valley during January 1889.

February.—About 2 feet of snow fell on the Bahman hills in February. None fell in March.

The Political Officer, Khyber Pass, reports that—

January.—Snow fell on three occasions in Rajgal and the maidan of Terah, the total depth being 3 feet, and on two occasions on the Lakka hill to a depth of 2 feet.

February.—Heavy rains fell during February in the Terah hills, followed by snow. Depth of snow 2 feet or a little more.

The snowfall in the Khyber and Lakka and Tartara hills was between one and two feet.

II.—THE HIMALAYAS.

I.—The Punjab and Kashmir Himalayas.

(*a*) *Leh.*—The Reverend F. Redslob reports that there has been extremely little snow during the winter. There has not been so little snow since the winter of 1885. On the Kashmir highlands also there is very little snow.

(*b*) *Lahoul.*—The Reverend A. W. Heyde reports that heavy rain and snow fell in the autumn of 1888, and that the passes were closed most unusually early; but, with this exception, "the present winter, which is now nearing its end, has on the whole been a normal one."

(*c*) *Murree.*—The following gives the monthly snowfall at Murree and on the hills adjacent to Kahuta:

	Murree. Ft. in.	Kahuta. Ft. in.
January 1889	4 9	2 6
February	2 6	1 9
March	*Nil*	*Nil*
April	*Nil*	*Nil*

(*d*) *Kangra and Kulu.*—The Assistant Commissioner, Kulu, reports an extraordinary fall of snow in the autumn months, as was the case in Lahoul.

There was also an exceptionally heavy fall of snow between January 30th and February 2nd.

The following are the reported depths of snow at the end of each month on the chief passes in the Kulu and Plach districts:

Kulu District.

Name of Pass.	Height.	Depth of snow at end of		
		January.	February.	March.
	Feet.	Feet.	Feet.	Feet.
Rotang	13,000	13½	18	17
Hamta	14,500	11	14	16
Chandar Khani	...	13	14	10
Barsai	...	7	11	6
Pushtari	...	6	7	3
Bubu	10,000	9	11	6
Lori Achri	...	9	10	5
Majang	...	6	5	2
Baragarh	...	8	8	3

Plach District.

Name of Pass.	Height.	Depth of snow at end of		
		January.	February.	March.
	Feet.	Feet.	Feet.	Feet.
Jalori	10,500	8	16	4
Raghopur	...	8	16	5
Namu	...	4	11	4
Chul	...	10	22	6
Srikand	15,000	30	55	56
Basleo	11,000	8	17	6
Palhach	...	5	10	10
Maghian	...	7	16	6
Dundku	...	8	16	6
Gargarasan	17,000	9	18	12
Suphakun	...	4	12	8
Tirath	...	10	20	13
Himri	...	4	13	4
Sigran	...	...	12	4

The Assistant Commissioner is of opinion that last year's figures were exaggerated, as the snowfall of the past winter was very much heavier than that of the winter before. Snowfall is said to be heavier and later than has been known for many years. It may be taken that the snow is deeper on the high ranges and will probably lie longer this year than it has for several years past. All over Kulu, Plach, and Lahoul there had been an unusually large quantity of snow during the winter.

II.—North-Western Provinces Himalayas.

Neither at Naini Tal nor at Mussoorie does there appear to have been any snow of importance.

III.—Assam Himalayas.

(*a*) The Deputy Commissioner, Kamrup District, writes that from enquiries made during his (the Deputy Commissioner's) visit to Dewangiri he is of opinion that the fall of rain and of snow was much less during the past year than during preceding years.

(*b*) The Deputy Commissioner, Darrang, writes: "On making enquiries during the winter from the different hill tribes, &c., ... it appears that the snowfall was less this year than last."

On the Koriapara side "the snowfall in the hills appears this year to have been normal."

"The Bhutias explained that their late arrival is due to the extra quantity of snow that had fallen in December and January, but it is doubtful to what extent their statements are trustworthy. They were in want of an explanation for their late arrival, and gave this as their reason for the same."

Abnormal features of pressure in India during the past four months.—In January the pressure variations were small, comprising a slight excess over the Punjab and the Peninsula and a deficiency elsewhere. In February they were even smaller than in January, hardly exceeding 0·02″ in any part of India. They were in addition very irregularly distributed. In March the pressure variations assumed a more distinct distribution, though they remained generally small. They showed that a deficiency of pressure existed over Burma and the greater part of Bengal, and an excess over Behar, the North-Western Provinces, and the Punjab. In the south of the Peninsula, both on the west and east sides, there was also a slight deficiency, while the Deccan, the whole of the Central parts of the country, Sind, and Rajputana participated in the excess noticed over Upper India. The greatest excess was in Central India. In April approximately the same distribution of the abnormals obtained. There was again a slight deficiency over Burma, Bengal, and the south of the Peninsula, and an excess over the Central parts of the country and in Upper India. In Sind, however, a change had occurred, and the excess of the preceding month had been replaced by a deficiency. The barometric anomalies for the first half of May show two important changes. In Burma pressure has become excessive, while in the North-Western Provinces the excess, which has been maintained since the commencement of the year, has given way and been replaced by a considerable deficiency. At the same time the deficiency, which has prevailed over Bengal all the year, has intensified considerably. An excess of pressure is reported from the Punjab, Sind, Rajputana, the whole of the Central parts of the country, and the north and east of the Peninsula. In the southwest from Goa southward to Madura and Colombo there is a slight deficiency.

Summarising this information, it appears that there has been an excess of snow over a limited area of the mountain range to the north of the Punjab and an excess of pressure over the Punjab, Rajputana, the Central parts of the country, and the north of the Peninsula; deficient or not more than normal snowfall over the mountain ranges to the west of the Indus, as well as over the whole of the Himalaya range from the North-Western Provinces eastward to Assam; and a deficiency of pressure in Assam, Bengal, a portion of the North-Western Provinces, and in the south of the Peninsula.

Premising that a heavy snowfall and high average pressure are not conducive to the proper extension of the monsoon current, it would appear that in the Punjab and Rajputana there is a probability of the rainfall being scanty;

that over the Central parts of the country and the north of the Peninsula the monsoon rainfall will be normal or slightly below the normal, with a tendency to scantiness in Central India, Khandeish, and the Bombay Deccan.

Premising that a slight snowfall and low average pressure are conducive to rainfall, it would appear that the monsoon rainfall will be heavy in Assam, Bengal, the greater part of the North-Western Provinces—more particularly along the foot of the hills—and the south-west of the Peninsula.

So far as the land observations are concerned, there is very little that would lead to the supposition that the "bursting" of the monsoon would be delayed on either side of India; but for some days antecedent to the present date pressure has apparently been abnormally high over the Bay, and this may be an indication of a delay in the establishment of the monsoon current over Bengal. The high pressures which now obtain in Burma would seem to indicate that there will be a strong set of the monsoon towards Orissa and the north-east angle of the Bay.

Briefly, the indications are in favour of—

A good monsoon rainfall over North-Eastern India, including Upper Burma, Assam, Bengal, and the greater part of the North-Western Provinces, and also over the south-west and west of the Peninsula.

A normal or slightly deficient (more particularly in Central India, Khandeish, and the Bombay Deccan) monsoon rainfall over the Central parts of the country and the north of the Peninsula.

A deficient rainfall in the Punjab and parts of Rajputana.

W. L. DALLAS,

Assistant Meteorological Reporter to the Government of India.

SIMLA, *20th May, 1889.*

E. C. BUCK,

Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending 8 a.m. on Monday, June 3rd, 1889.

The weather has been less unsettled than it was last week, and conditions have been generally more normal. The distribution of pressure has on the whole been such as is characteristic of the period preceding the appearance of the monsoon current; and the relative coolness which was so remarkable last week has disappeared and been succeeded by a period of somewhat excessive heat. At the close of the week a remarkable storm appeared on the West Coast and ushered in the monsoon to that region with considerable violence. Previous to the appearance of this storm incursions of monsoon winds had occurred over Southern India; but the current had on each occasion retreated again to the southward, and what is popularly described as the "burst" of the monsoon on the West Coast followed in the wake of the above mentioned storm.

The Chart of the 28th showed that the barometer was falling everywhere—briskly in Sind. Pressure was highest on the West Coast, with relatively low readings over Sind on the one hand and the Central and North-Western Provinces on the other, with an intervening shoulder of relatively high pressure over Rajputana and Central India. On the following day there was comparatively little alteration in the general distribution of pressure, though both low pressure areas had to a limited extent filled up, and readings were more uniform. On the South-West Coast there was a considerable deficiency of pressure when compared with the normal. On the 30th another general barometric fall was reported. The change was greatest in the Northern and Central parts of the country, and there was hence an increase in the steepness of the barometric gradients. The area of relatively low pressure off the South-West Coast was even more marked than on the previous day. The depression was apparently travelling north-westward up the Coast. On the 31st the barometer had risen on the West Coast, while it had fallen elsewhere—briskly in the north—and the general distribution approximated fairly closely to the normal. The relative depression of the South-West Coast was less defined than on the two preceding days. On the 1st, while the general conditions were such as are normally experienced at this season, the observations around the Bay and from the Malabar Coast gave indications of unsettled conditions in both those regions. On the following day, the 2nd, the observations showed that a feeble depression had developed over the Bay, off the Madras Coast, and that a more important depression was approaching the Bombay Coast from the Arabian Sea. On the 3rd the Madras disturbance was no longer observable as a distinct depression; but the storm on the West Coast had become more defined and was causing a rapid fall of the barometer at Bombay and Ratnagiri.

Winds.—On the 27th an exceptionally strong northerly component was shown in the winds over Rajputana, the Central parts of the country, Khandeish, and the North Konkan; but as pressure fell in the north and increased in the south of India, the winds over the greater part of the country assumed the normal directions, blowing from the westward over the Central districts, from south over the Bay and Lower Bengal, from east in Assam and North Bengal, and from north-west down the Gangetic plain. On the West Coast the wind was steadily from the south-eastward or eastward—a direction due to the indraught towards the depression off that Coast.

Temperature.—As noticed above, the past week has been one of generally excessive temperature. The increase of heat which was in progress almost everywhere at the close of the preceding week was maintained and the mean average temperature of the different Provinces continued to increase as the week advanced. The maximum temperature of the week was 123·5°, recorded at Jacobabad on June 1st. The following table shows the excess or defect of the

mean average temperature of the different Provinces and the change which has taken place since the preceding week:

Provinces.	Difference of mean temperature of week from normal.	Rise or fall since preceding week.
Burma	+ 3·6°	+ 1·8
Bengal	+ 3·3°	+ 5·5
North-Western Provinces	+ 2·8°	+ 9·1
Punjab	+ 2·0°	+ 6·4
Bombay	+ 2·0°	+ 1·5
Central Provinces and Berar	+ 4·0°	+ 8·3
Guzerat, Central India	+ 5·0°	+ 9·5
Sind and Rajputana	+ 3·7°	+ 6·5
Madras	+ 1·2°	— 1·0

From this it will be seen that there has been a rise of from 8° to 9° in the mean average temperature over the North-Western Provinces, the Central Provinces, Berar, Guzerat, and Central India.

Rain.—Except in parts of the Peninsula and in Burma and Assam, where it has fallen daily, rain has been less general and less heavy than it was last week. Showers were reported from the Deccan, the north of the Punjab, Lower Bengal, and Orissa on the 28th; from Lower Bengal and Orissa on the 29th; from Lower Bengal and the Circars on the 30th; from the Deccan on the 31st and 1st; and from the Circars, North Bengal, Khandwa, and Amraoti on the 3rd. These falls were however generally light showers, accompanying in many cases thunder or dust storms; and the only regions where there was heavy or continuous rain are the Provinces noted above.

Of the fifty-one rainfall divisions, seven report no rain; in eight divisions there was an excess; and in the remainder, a deficiency. The only important excess is in Assam, where the Southern Valley has received $6\frac{3}{4}$ inches and the Northern Valley $2\frac{3}{4}$ inches more than usual. In the divisions in other parts of India which report an excess the amount of the excess is generally under $\frac{1}{4}$ inch. The greatest absolute defect is reported from Burma; but, relatively to the average, the greatest deficiency is in the North-Western and Central divisions of India.

Eastern, Deltaic, and Central Bengal have received much less than the usual amount, while in North Bengal there has been a slight excess. Orissa, Chota Nagpur, and the whole of Behar have received hardly any rain; and the North-Western Provinces and Oudh were practically rainless. The Punjab had showers in all except the hill districts; and in the submontane districts the small normal rainfall was slightly exceeded.

Malabar and Mysore received slightly more than the average rainfall; but in the other divisions in the west of the Peninsula the rainfall was short—largely so in Coorg. All over the Central parts of the country nothing more than a few slight showers are reported; and the same is true of Bombay (North), Rajputana, and Central India. On the East Coast all the divisions, except the south, report deficient rains.

The column giving the state of the seasonal rainfall shows that up to the present date the rainfall has been rather largely deficient throughout the greater part of Burma—excessive in Assam, but deficient over the whole of the Bengal Presidency, except Orissa. In the east of the North-Western Provinces and in Oudh there has been a local excess; but in other divisions within these Provinces, the rainfall, like that of Bengal, has been decidedly deficient. In the Punjab on the contrary, except in the hill districts, the rainfall up to date has been exceptionally heavy. All over the Peninsula and the Central parts of the country the rainfall is, so far, largely deficient; but in Guzerat, Kattiawar, the east of Rajputana, and the west of Central India there is a large excess—the result of the heavy rain of last week.

In the returns of maximum falls within the districts there are very few amounts of any importance—a condition which was to be expected in face of the generally deficient averages. In Burma there are no falls requiring notice, but in Assam the amounts are larger: Cherrapunji received $37\frac{3}{8}$ inches, and Sibsagar and Goalpara 7 inches. North Bengal received fairly large amounts, Cooch Behar reporting 9 inches and Alipore (in Jalpaiguri) $8\frac{1}{2}$ inches. In no other part of Bengal were there any large amounts. In Upper India no station reports one inch of rain. In the south-west of the Peninsula the heaviest amounts vary between 10 and 13 inches.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 1st June.*—No rain in Madras; good on West Coast and Nilgiris, Trichinopoly, and Tanjore; fair in Ganjam, Vizagapatam, Bellary, North Arcot, and Salem; and slight elsewhere. Crops generally good, but withering in parts of Cuddapah, Anantapur, Chingleput, and South Arcot; affected also from want of water in Vizagapatam, North Arcot, and Coimbatore. Gingelly blighted in Vizagapatam. Water-supply scarce in Ganjam; insufficient in Vizagapatam, Nellore, and Tinnevelly. Stock suffering very badly, chiefly from rinderpest, in Malabar, and badly in Trichinopoly, Tanjore, and Anantapur. Prices rising in eleven districts, falling in four, and stationary in others. Prices of rice and *ragi* risen in Ganjam 1,452 deaths from cholera in Ganjam. Labourers employed last day of week—on Rushikulya works, 5,408; Gopalpore Canal, 5,394; Ghat Roads, 1,267; average daily number on drinking-water tanks and wells, 3,694; on minor irrigation works, 2,268. General prospects favourable, except in Ganjam.

Bombay.—*For week ending 5th June.*—Rain in Deccan and Southern Mahratta Country and in parts of Karachi, Shikarpur, Nasik, Colaba, and Ratnagiri. Preparations for next season's crops progressing generally. Sowing commenced in Ahmedabad, Colaba, Ratnagiri, and Poona, and continues in Belgaum and Kanara. Fodder scarce in parts of Nasik, Thana, Poona, Ahmednagar, Dharwar, Kathiawar, and Baroda. Drinking-water scarce in parts of Nasik, Thana, Sholapur, and Dharwar.

Bengal.—*For week ending 4th June.*—Moderate rain has fallen in East and North Bengal and in parts of South-West Bengal, and also in the Bhagalpur district. Agricultural prospects have slightly improved in consequence of this rain and the general rain reported last week. More rain is still generally wanted, and in some places the cultivation is retarded and the newly sown *aus* and jute crops are suffering. Sugarcane and indigo are better, but are also in want of more rain in places. The spring rice harvest is nearly over, and the reaping of the *cheena* crop in Behar continues. No material improvement in the prices of food-grains, which continue to be high throughout the Province. Concerning the distress in the Patna division, the latest report shows that the pressure is being felt beyond the limits of the affected tracts, and that the number of persons employed on relief works is increasing. The attendance on relief works in the Sonthal Parganahs is said to have fallen off considerably.

North-Western Provinces and Oudh.—*For week ending 5th June.*—No rain. Weather very hot. Harvesting nearly over. Sugarcane, indigo, and extra crops being irrigated. Markets well supplied. Prices fluctuating. Condition of cattle good.

Punjab.—*For week ending 5th June.*—Slight rainfall in several districts. Prices falling in Sialkote and Shahpur,—unsettled in Peshawar, and stationary elsewhere. Threshing operations nearly completed, and ploughing for and sowing of *kharif* crops still in progress. Cotton and sugarcane crops progressing favourably. Outturn is reported poor from Amritsar, average from Lahore, and good from Rawalpindi. Stock cattle are reported healthy. Pasturage or fodder sufficient throughout the Province.

Central Provinces.—*For week ending 5th June.*—Weather cloudy and hot, with slight rain in Sambalpore. Ground being prepared for autumn sowings. Early rice sowings commenced in Sambalpore. Scarcity of water in almost all districts. 400 cattle are reported to have died from scarcity of water and fodder in the Khandwa tahsil.

Burma.—*For week ending 1st June*—Rain fell in all districts, except Minbu and Yamethin in Upper Burma. Ploughing has commenced in some districts. Cattle-disease is reported to be severe in Shwegyin district. The price of paddy has risen 11 per cent. in Sandoway. Elsewhere there are no marked fluctuations. The food-supply is sufficient, except in Mawteik in Myodoung; but even there scarcity is not likely to become serious.

Assam.—*For week ending 5th June*—Weather seasonable. Rainfall sufficient. Ploughing for winter rice continues. Prospects of tea and other crops generally good.

Mysore and Coorg.—*For week ending 5th June.*—Light rain in Civil and Military Station of Bangalore. Rain reported throughout the State. Standing crops good. Sowing continues in parts. Want of rain felt in parts of Bangalore, Tumkur, and Hassan districts. Elsewhere prospects are favourable. Prices slightly risen in the Kolar district.

Good rain during the week in Coorg. Light continuous rains set in on 3rd instant. Prospects good. Health good.

Berar and Hyderabad.—*For week ending 5th June.*—Weather very hot. Slight rainfall during the week. Preparation for *kharif* crops still continues. General condition of cattle good. Fodder sufficient, except in the Amraoti district. Prices generally steady.

Slight rain in Hyderabad during week. Reaping of hot-weather crops still continues. Scarcity of fodder and water felt generally. Prices stationary.

Central India.—*For week ending 5th June.*—Slight rain in Baghelkhand and Western Malwa, with hailstorm. Ploughing commenced in Bhopal. *Kharif* sowings will shortly commence in Bhopawar. Agricultural operations completed in Goona. Condition of agricultural stock improved in Goona. Weather cloudy and hot.

Rajputana.—*For week ending 5th June.*—Rain has fallen in Bikaneer. Agricultural operations progressing in some States. Agricultural stock fair generally. Fodder sufficient, except in Marwar, Kherwara, and Meywar. Prices rising in Meywar and Bhurtpore.

Nepal.—*For week ending 30th May.*—Slight rain. Weather fair. Prospects good.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

(*Statistical Branch*).

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

EXAMINATIONS FOR THE SELECTION OF CANDIDATES FOR THE UPPER AND LOWER DIVISIONS OF THE GOVERNMENT CLERICAL SERVICE, TO BE HELD AT DIFFERENT TIMES INSTEAD OF SIMULTANEOUSLY.

No. $\frac{14}{1023-36}$.

Extract from the Proceedings of the Government of India in the Home Department (Public),—under date Simla, the 11th June, 1889.

Read—

Home Department Notification No. 1817, dated the 3rd July, 1888, publishing revised rules for the regulation of appointments in the Secretariat Clerical Service of the Government of India and attached Offices.

RESOLUTION.

The Government of India has had under consideration the question whether the examinations for the Upper and Lower Divisions of candidates for admission to clerkships in the Government of India Secretariats and attached Offices should not be held at different times instead of simultaneously as has been done hitherto. Under the existing practice, a candidate who fails for the Upper Division is unable to present himself for examination for the Lower Division in the same year; and as it is possible that this arrangement may prevent candidates who would make specially efficient members of the Lower Division from competing at the examination for it, the Governor-General in Council is pleased to decide that in any future year in which examinations are held for both Divisions, they shall not be held simultaneously. Under the system as now modified the examination for the Upper Division will be held first, and after its results have been announced, the Lower Division examination will begin. Candidates who fail in the examination for the Upper Division will thus have an opportunity to present themselves at the examination for the Lower Division, provided they pay the fees prescribed by the rules for both examinations. When examinations for both Divisions are to take place in the same year, the date on which the examination for each Division is to be held will be duly notified.

ORDER.—Ordered, that a copy of this Resolution be forwarded to the Governments of Bengal, North-Western Provinces and Oudh, and the Punjab, and the Chief Commissioner, Central Provinces, for information;

that a copy be forwarded to the Secretary to the Board of Examiners, Calcutta, for information;

that a copy be communicated to all Departments* of the Government of India for information; and

that a copy be communicated to the Heads† of Offices under the Home Department for information.

* Except Foreign Department.

† Surgeon-General / Sanitary Commissioner with the Government of India. / Registrar of the Calcutta University.

Ordered also, that the Resolution be published in the Supplement to the *Gazette of India* for general information.

REVENUE AND AGRICULTURAL DEPARTMENT.

Circular No. 37/29—3 Exhibitions.

Extract from the Proceedings of the Government of India, Revenue and Agricultural Department,—(Museums and Exhibitions), dated Simla, the 8th June, 1889.

The following papers received from the Administrator of the Government of New Zealand relative to the New Zealand and South Seas Exhibition to be held at Dunedin in 1889-90, are published for general information:

NEW ZEALAND AND SOUTH SEAS EXHIBITION.

Patrons:

His Excellency Major-General Sir WILLIAM F. DRUMMOND JERVOIS, C.B., G.C.M.G., R.E., etc.

His Excellency the Right Honourable the EARL OF ONSLOW, G.C.M.G.

President:

JOHN ROBERTS, Esq.

Vice Presidents:

The Hon. Sir HARRY ALBERT ATKINSON, K.C.M.G., Premier of New Zealand.
Sir F. DILLON BELL, Agent-General for New Zealand.
Count DE JOUFFROY D'ABBANS, Consul-General of France, New Zealand.
The Hon. T. FERGUS, Minister of Justice and Defence, New Zealand.
The Hon. Sir W. FITZHERBERT, K.C.M.G., Speaker of the Legislative Council, New Zealand.
Sir GEORGE GREY, K.C.B.
The Hon. Sir JOHN HALL, K.C.M.G., M.H.R.
Sir JAMES HECTOR, K.C.M.G.
The Hon. R. OLIVER, M.L.C.
The Hon. Sir MAURICE O'RORKE, Speaker of the House of Representatives, New Zealand.
The Hon. W. H. REYNOLDS, M.L.C.
The Hon. Colonel SARGOOD, M.L.C., Victoria.
The Hon. Sir ROBERT STOUT, K.C.M.G.
The Hon. Sir JULIUS VOGEL, K.C.M.G., M.H.R.
His Honour Mr. JUSTICE WILLIAMS.
His Worship the Mayor of Dunedin (H. GOURLEY, Esq.)

Executive Commissioner:

R. E. N. TWOPENY, Esq.

Commissioners:

A. BARTLEMAN, Esq., J.P.
Rev. Dr. BELCHER.
GEO. BELL, Esq., J.P.
T. BROWN, Esq.
THOS. BRYDONE, Esq., J.P.
W. CARLTON, Esq.
J. H. COCK, Esq., Chairman, Wellington Chamber of Commerce.
Capt. COLBECK, President, Auckland Chamber of Commerce.
W. DAWSON, Esq.
D. DUNN, Esq., Mayor of Oamaru.
J. DUTHIE, Esq., J.P., Mayor of Wellington.
H. S. FISH, Esq., J.P., M.H.R.
Hon. G. FISHER, Minister of Education.
T. FLEMING, Esq., Mayor of Invercargill.
W. GOW, Esq.
B. HALLENSTEIN, Esq., J.P.
T. M. HOCKEN, Esq., M.D.
M. JOEL, Esq.
A. KAYE, Esq., President, Canterbury Chamber of Commerce.
A. LEE SMITH, Esq.
C. LOUISSON, Esq., Mayor of Christchurch.
M. J. MAUDE, Esq., Mayor of Hokitika.
J. MILLS, Esq., M.H.R.
J. H. MORRISON, Esq., J.P.
V. PYKE, Esq., M.H.R.
G. W. RIELY, Esq., Mayor of Blenheim.
A. H. ROSS, Esq., M.H.R.
D. M. ROSS, Esq., Mayor of Timaru.
J. B. ROY, Esq., Mayor of New Plymouth.
JOHN SHARPE, Esq., Mayor of Nelson.
G. H. SWAN, Esq., Mayor of Napier.
J. WHITE, Esq.

Treasurer:

A. BARTLEMAN, Esq.

Secretary:

D. HARRIS HASTINGS.

OFFICIAL PROGRAMME.

It is intended to celebrate the Fiftieth Anniversary of the Foundation of the Colony of New Zealand, by holding in the City of Dunedin an Exhibition of arts, industries, resources, and manners of New Zealand, Australia, and the other Countries and Colonies in the Southern Pacific.

The principal objects of this Exhibition are to practically illustrate the development of the resources of New Zealand during the first half century of her existence, in comparison

with the progress made by other Colonies, British and Foreign; to stimulate industry and promote Intercolonial commerce; to strengthen the natural ties which connect all the Countries in the South Pacific Ocean, and to call attention to their position and potentialities.

The recent improvement in the commercial condition of New Zealand, and the prospect of prosperity immediately before her, offers special opportunities for the development of industry and the extension of Intercolonial commerce; whilst many considerations point to the desirability of bringing the importance of the South Sea Islands into notice, and cultivating a closer acquaintance with their peoples.

The Exhibition is held by, and at the risk of a number of New Zealand colonists, who have subscribed a Guarantee Fund for the purpose, after the model of those upon which the Great Exhibition of 1851, the London International Exhibition of 1862, and the Adelaide Jubilee Exhibition of 1887 were carried out.

The Government of New Zealand have recognised this Exhibition as the Official Celebration of the Jubilee of the Colony, and issued invitations to the Governments of Australia and the other Colonies and Islands in the Southern Pacific to be officially represented thereat. They have further undertaken to assist the Exhibition by erecting the main building, which will contain the picture galleries, and themselves exhibiting collections illustrating the fauna, flora, geology, and mineralogy of New Zealand, as well as objects of historical interest. The Government will also with the assistance of the native chiefs, organise a representation of Maori life and customs.

The Commissioners invite exhibits of all kinds from all Colonies, British and Foreign, wheresoever situated, as well as from Islands under British rule in the South Pacific. They are also desirous of obtaining Works of Art, Educational, Scientific, and Machinery Exhibits from other countries; but ordinary Industrial Exhibits from Europe and America can only be admitted under special conditions. Inducements will be offered for the exhibition of processes of manufacture.

With the consent and support of the other chief cities of New Zealand, the Exhibition will be held in Dunedin, which is the centre of the railway system of the southern and most populous island of the Colony. A suitable site has been obtained in the heart of the town, close to the railway station and intercolonial wharves. A line of railway will deliver exhibits into the grounds.

The Exhibition will be open to the public on Tuesday, 26th November, 1889, and close about the middle of April, 1890. It will be open in the evening as well as the day time.

The Government will issue customs regulations for the free admission of Intercolonial and Foreign Exhibits, similar to those in force at Melbourne and other Intercolonial Exhibitions, and similar railway privileges will be allowed for exhibits. The reproduction of exhibits will be prohibited by law.

CONDITIONS AND REGULATIONS.

1. Governments intending to take part in this Exhibition are requested to intimate the same as soon as possible. Applications for space for exhibits from Colonies officially represented must be made through the Commissioners of the Colonies to which the applicant belongs. Applications from countries and colonies not officially represented should be addressed directly to the Secretary at Dunedin.

2. Applications for space, with full particulars, are invited as early as possible, and in the allotment of space precedence will be given, as far as possible, to priority of application. No application will be received later than the 1st of July, 1889. Forms of application and all information can be obtained from the Secretary.

3. The ordinary charge for space will be £1 1*s.* for the first ten square feet or any less space, and a shilling for every additional square foot. Sculpture and paintings approved by the Fine Arts Committee will be admitted free, as well as educational and scientific exhibits shown by Government departments, and exhibits in Classes 34 and 35. Machinery and bulky exhibits will be shown in special annexes, in which space will be charged for at the reduced rate of £1 1*s.* for the first 20 feet, and sixpence for every additional foot. Wall space will be charged at the same rate as machinery. All applications must be accompanied by payment of the full amount of the space required. Special arrangements can be made for the exhibition of articles in the grounds.

4. The Exhibition will be ready for the reception of exhibits on October 1, 1889, and space not occupied by November 1, 1889, will revert to the Commissioners for reassignment. The Executive Commissioner shall at any time have power to reserve or reduce space which, in his opinion, is not fully occupied or misused.

5. The Executive Commissioner may issue at his discretion weekly licenses for the sale of articles manufactured in the Exhibition, but no other exhibit will be allowed to be taken out of the buildings until the close of the Exhibition; and any exhibitor selling goods for immediate delivery renders himself liable to the forfeiture of his space and all rights as an exhibitor.

6. The Exhibition building will be constituted a bonded store, but exhibits sold will be subject to duty.

7. The introduction of dangerous substances is strictly prohibited.

8. Packages intended for the Exhibition must be painted or labelled with the following device as a distinctive mark N.Z.E. together with the name of the exhibitor and country or colony in which court the exhibit will be shown.

9. Customs entries, transportation, receiving, and arranging articles for exhibition must be undertaken by the exhibitor at his own expense, but no charge will be made for the carriage of goods intended for exhibition on the railway lines. New Zealand and Island exhibits will be carried free on the Union S.S. Company's boats, and Australian exhibits the double journey at single freight.

10. The protection of invention capable of being patented and of designs is secured by the patent law of New Zealand. No exhibit may be drawn, copied or reproduced in any manner whatsoever without the joint consent of the exhibitor and the Executive Commissioner. The Commissioners, however, reserve to themselves the right of authorising the production of general views.

11. If exhibits are not intended for competition, notice must be given in the application for space.

12. An official catalogue will be published in English by the Commissioners, by whom the sale of catalogues is reserved. Anything beyond the ordinary description of the exhibit, together with the name of the exhibitor, must be paid for as an advertisement.

13. The representatives of countries and colonies will be allowed to group their exhibits as they may think fit in that portion of the Exhibition buildings allotted to them, subject always to the approval of the Executive Commissioner.

14. Motive power will be supplied to exhibits of processes of manufacture free of charge on application to the Executive Commissioner; but the right is reserved of reducing the amount asked for, or to make a charge for certain portions of the motive power supplied at discretion. The Commissioners desire to encourage the display of machinery in motion, and of all descriptions of manufactures in progress. Requests for motive power must be made to the Secretary prior to 1st July, 1889.

15. All shafting, pulleys, belting, machines, &c., for the transmission of power from the main shafting, must be provided by and at the cost of the Exhibitor.

16. Judges will be appointed by the Commissioners, acting mainly upon the recommendation of the exhibitors themselves. Certificates of first, second, and third order of merit will be awarded.

17. The removal of exhibits from the Exhibition buildings and grounds must be completed within one month from the close of the Exhibition. Goods remaining after that period will be removed by order of the Executive Commissioner, at the risk of exhibitors and sold by auction or otherwise disposed of at his direction, and the net proceeds handed to the exhibitors or their duly appointed agents.

18. Every person who becomes an exhibitor thereby acknowledges and undertakes to observe the rules and regulations established from time to time for the government of the Exhibition.

19. The Commissioners reserve the right to alter, explain, or add to these regulations at any time, whatever may be deemed necessary.

20. Precaution will be taken to preserve exhibits from injury and to guard the buildings, but no responsibility will be taken for damage or loss from whatever cause. Exhibitors will make their own arrangements for effecting insurances.

Form of applications for space and all further information can be obtained from

D. HARRIS HASTINGS, *Secretary.*

CLASSIFICATION OF EXHIBITS.

CLASS 1.—Geological and Mineralogical Collections.
2.—Mining and Metallurgical Machinery and Appliances.
3.—Chemical Manufactures.
4.—Glassware, Pottery, etc.
5.—Household Furniture, Brushware, etc.
6.—Heating and Lighting Apparatus.
7.—Textile Fabrics.
8.—Ready-made Clothing, etc.
9.—Printing, Stationery, etc.
10.—Armament, Native Weapons, etc.
11.—Surgical and Pharmaceutical Appliances.
12.—Hardware.
13.—Carriages, Horse furniture, etc.
14.—Educational Appliances.
15.—Scientific Instruments.
16.—Musical Instruments.
17.—Sanitary and Athletic Appliances.
18.—Works of Art.
19.—Photographs.
CLASS 20.—Machinery for Wood and Metal Working, etc.
21.—Sewing, Knitting, Printing Machines.
22.—Heavy Machinery, Castings, Ship Models, etc.
23.—Forestry Products.
24.—Agricultural Products.
25.—Wines, Spirits, Beers, Cordials, Ærated Waters, and Cooperage.
26.—Animal Food Products.
27.—Boots, Shoes, Saddlery, Leather, etc.
28.—Wood and Fibres.
29.—Stuffed Animals, Insects, Bee-keeping Appliances.
30.—Traps for Game, and Fishing Tackle.
31.—Agricultural Machinery and Implements.
32.—Flowers, Fruit Models, Garden Appliances.
33.—Silversmiths' Work.
34.—Artisan's Individual Work.
35.—Women's Work.

Circular No. $\frac{37}{29-3}$ Ex.

ORDER.—Ordered, that the foregoing papers be published in the Supplement to the *Gazette of India* for general information, and that copies be forwarded to the Local Governments and Administrations noted on the margin,* with a request that the prospectus may be published in the Local Gazette, and that such steps may be taken to make it known among merchants and manufacturers as may be considered desirable.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Final Memorandum on the Snowfall of the Cold Weather, 1888-89, in Northern India.

Three snowfall reports have come to hand since the preparation of the preliminary note on the cold weather snowfall in the mountain districts bordering Northern India and the abnormal features of the weather in India during the period January to May, 1889, published in last week's gazette.

The Deputy Commissioner of Kangra has sent the following statement of the reported depth of snow on the higher passes in the Kulu and Plach districts at the end of April. The reported depths at the same date of the two previous years are also given for comparison :

District.	Name of Pass.	Height.	Reported depth of snow, April 30th, 1889.	Reported depth of snow, April 30th, 1888.	Reported depth of snow, April 30th, 1887.
Kulu	Rotang	13,500	15½ feet	4 feet	7 feet
	Hamtu	14,500	13 ,,	3 ,,	8 ,,
	Chandarkhani	...	7 ,,	5 ,,	...
	Barsai	...	1½ ,,	1 foot	...
	Pushtari	...	1 foot	*Nil*	...
	Bubu	10,000	2 feet	4 feet	4 feet
	Lori Achri	...	3 ,,	3 ,,	...
	Majang	...	*Nil*	*Nil*	...
	Baragarh	...	1 foot	2 feet	...
Plach	Jalori	1,000	1 ,,	*Nil*	½ foot
	Raghopur	...	1 ,,	*Nil*	...
	Namu	...	*Nil*	*Nil*	...
	Chul	...	1 foot	1 foot	...
	Basleo	10,500	2 feet	1 ,,	1 foot
	Maghin	...	2 ,,	1 ,,	...
	Dindku	...	2 ,,	3½ feet	...
	Srikand	15,000	55 ,,	14 ,,	17 feet
	Gargarasan	17,000	2 ,,	7 ,,	13 ,,
	Supakhun	...	1 foot	5 ,,	...
	Tirath	...	11 feet	7 ,,	...
	Lambisigran	...	1 foot	*Nil*	...
	Palbach	...	?	2 feet	...

The Assistant Commissioner also states that there was heavy rain on the 10th in these districts, and that snow fell on Sahraj down to 10,000 feet, and in Upper Kulu as low down as 7,000 feet. Slight showers were frequent during the last week or ten days of the month, but on the whole the snow steadily decreased in depth on the higher hills although the quantity still lying is above the normal. The Rotang pass has been open to foot passengers and the Bubu to mules throughout the month. Snow is still lying on the shady sides of the Jalori and Basleo passes, but the Jalori was it is stated crossed by mules towards the end of the month.

The Reverend F. Redslob describes the weather in Ladakh during the month of May as follows: "After very unusual heat during April, May has been for the most part cloudy. Snow fell on two occasions, and rain on the 18th. It has also been occasionally frosty at nights, but the weather is now (May 21st) clearing up and is of the usual character."

The Deputy Commissioner of the Rawalpindi district writes to the effect that no snow fell on the hills adjacent to Kahuta during the month of May.

It will be seen that this additional information confirms the conclusions given in the preliminary note. Hence it may be accepted :

1st.—That the snowfall of the past winter occurred chiefly during the months of December to February, and that the snowfall since that period has not been large in amount. There has been apparently no abnormally heavy snowfall in any part of the Himalayas during the past three months.

2nd.—In the Afghan Highlands the snowfall was not only less in amount than usual, but was melted with greater rapidity than usual in consequence of the occurrence of heavy rain afterwards.

3rd.—The distribution of snowfall in the North-West Himalayas appears to have been very variable. Apparently larger amounts than usual fell on the outer ranges. In the lower elevations of the outer ranges the snowfall was followed by heavy rain which assisted to melt it, and hence the depth of snow is practically no greater in the lower passes of Kulu, &c., than it was last year. The case is different with the higher elevations above 13,000 or 14,000 feet, where the snowfall was unusually heavy, and was not followed by rain. There is hence an unusual accumulation of snow in the higher passes and elevations of Kulu, Plach, and Lahoul. As this extra depth of snow probably only occurs over the area of perpetual snow, it is almost certain that it will have little direct influence on the weather conditions of Northern India. There has on the other hand been less snow than usual in Cashmere and Ladakh. The information of the snowfall in the Gurhwal Himalayas is very limited, but so far as can be judged from the accounts it was not excessive.

4th.—In the Eastern Himalayas the snowfall is, so far as can be judged by the reports of the hillmen, less than it was last year and is probably somewhat below the average.

Experience has shown that it is chiefly abnormally heavy snowfall in the hot weather months of March, April, and May which is influential in modifying the pressure conditions to such an extent as to either retard the monsoon current or deflect it from Upper India into Central or North-Eastern India. The snowfall reports are hence favourable. There has been no heavy unseasonable snowfall during the hot weather months, nor was there during the winter any excessive accumulation of snow on the lower elevations. Hence it may be accepted that the conditions in the mountain districts of Northern India are favourable to an early and steady monsoon.

Abnormal pressure and other weather conditions in India.—These were fully stated for the first four months of the year in the preliminary note. The whole period presents several remarkable features. Amongst the most striking were the excessive rainfall over the whole of Northern India from the Punjab to Behar in the month of February, and the abnormally high temperature and excessive dryness of the air which has prevailed during the months of April and May over the greater part of the country and more especially in the North Deccan, the Central Provinces, Central India, the North-Western Provinces, Behar and Rajputana.

Experience shows that the hot weather is on the whole most influential in modifying the pressure anomalies. The chief feature during the past two years has been excessive pressure in the Deccan, more especially along the eastern base of the West Ghâts. This abnormal feature which has exercised a very powerful influence on the rainfall during the past two years has fortunately disappeared.

The following gives the more important pressure anomalies of the month of May :

(1) Pressure was relatively to the general state in defect over the greater part of the Peninsula and in Burma, Assam, Bengal, Behar, and the northern half of the North-Western Provinces. The deficiency was not large in amount in

the Peninsula or Burmah. It was excessive in Behar and Central Bengal as is shown by the following statement which gives the anomalies:

Burdwan	—·038″
Berhampore	—·046
Dhubri	—·038
Purneah	—·042
Durbhanga	—·044
Patna	—·038

(2) Pressure was relatively in excess in North-Western India including the Punjab, Sind, and Rajputana, but the anomalies are only large in the Punjab, *e.g.*—

Peshawar	+·043″
Dera Ismail Khan	+·031
Multan	+·039
Lahore	+·029
Sirsa	+·028

Experience shows that when the monsoon current invades India it tends to drift more strongly towards areas of deficient pressure and to be diverted from areas of higher pressure than usual, and that any such modification at the commencement of the monsoon tends to become permanent throughout the season.

Assuming this principle and the principle underlying the snowfall theory, the following are the chief inferences respecting the probable character of the south-west monsoon of the present year:

1st.—The weather conditions in May over the land area of India and the character of the cold weather snowfall are both favourable to the probable occurrence of an early and strong monsoon this year. The commencement of the monsoon appears however to depend to a greater extent upon conditions in the south of the Bay and Arabian Sea than upon those of the land area of India, and hence this probability as based on known conditions is not large (not more than three to two).

2nd.—Conditions are unusually favourable to a good monsoon and probably heavier rain than usual over the whole of North-Eastern India, including Burmah, Assam, Bengal, Behar, and the greater part of the North-Western Provinces. It is difficult to estimate the effect of the pressure conditions in Behar, as they were much less plainly marked during the second-half of the month than during the first-half, and are hence to some extent temporary in character. The tendency of a persistent low pressure area in Behar during the monsoon would be to give increased rainfall over that area and the districts to the east, south and south-west, that is, over Behar, the greater part of Bengal, Chutia Nagpur, and the Central Provinces, and to diminish the rainfall to the west in the North-Western Provinces. Hence there is a strong probability of Behar, Bengal, and the Central Provinces receiving normal to abundant rain, and of Burmah and the North-Western Provinces receiving normal rainfall.

(3) The conditions in the Peninsula are on the whole favourable, and hence it is probable that the Bombay monsoon current will be at least of normal strength and give normal rainfall over the Peninsula generally.

(4) The conditions in Upper India and more especially the Punjab are more or less unfavourable. The rainfall of the Punjab depends to a somewhat larger extent on the strength of the Bombay current than on that of the Bay of Bengal. The rainfall in the Punjab and Rajputana will hence be probably less than the normal. The deficiency will depend largely on the effect of the Behar low pressure area in diminishing the effect of the Bay of Bengal current in Upper India. If that

be a temporary and not a permanent feature of the present monsoon, the deficiency will probably not be marked. On the other hand, if it be permanent, and also deflect the Bombay monsoon current more directly across the Peninsula than usual, the deficiency will probably be large and be relatively greatest in the central and western districts of the Province.

(5) The observations from the observatories in Ganjam and the Northern Circars are unfortunately slightly discrepant and hence somewhat doubtful. So far however as can be judged from these observations, it is on the whole probable that those districts will receive normal rainfall during the present season.

It may be added that the year which approximates most closely in its weather conditions to the present year is 1879. It was characterized by excessive heat in April and May, and the pressure anomalies were very similar. The monsoon rainfall of that year was in excess in all provinces except the Punjab and Rajputana.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending 8 a.m. on Monday, June 10th, 1889.

The past week has been chiefly remarkable for the passage of a large and important cyclonic storm along the Bombay Coast, and for the establishment, whether permanently or not it is difficult to say, of monsoon conditions over a large part of India.

The Chart of the 4th showed that the storm on the West Coast, the first indications of which were noticed last week, was a large and important cyclone. The barometer had fallen about 0·075″ at the West Coast stations, and the centre of the storm apparently lay outside the Coast between Goa and Ratnagiri. At the latter station the barometer read nearly $\frac{1}{10}$ of an inch below the normal height, and a south-easterly strong wind was blowing. On the following day the centre of the storm lay off the Port of Bombay, and the barometer had again fallen there. An east-south-east gale was blowing at Ratnagiri and a strong south-east wind at Bombay. The Chart of the 6th June showed that the storm had apparently been caught within the angle formed by the North Konkan and Kattiawar Coasts and had developed there. The barometer had fallen nearly one-tenth of an inch at Bombay, and the reading was nearly $\frac{1}{4}$ inch below the normal. A strong east-south-east gale was blowing there and fresh gales all around the storm area. On this day pressure was also falling over the Bay, and a disturbance seemed to be forming there. On the 7th the West Coast storm was passing west-north-westward out into the Arabian Sea, and the barometer was rising briskly on the West Coast, though the wind there still blew with the force of a gale. The depression over the Bay proved to have been very slight. By the morning of the 8th the storm had passed out of the region of the Chart, and the barometer had risen moderately to quickly over Sind, Kattiawar, and the Konkan. On this and on the preceding day there had occurred a brisk barometric decrease over the Punjab. The Chart of the 9th showed that a small depression was forming off the Orissa and Ganjam Coasts and that elsewhere the distribution was fairly normal. On the following day the Chart showed that the depression off the Orissa Coast had increased considerably in size, though not in intensity, and had moved north-westward towards the Central Provinces and Behar. A strong southerly wind prevailed on its eastern side, and this wind drawing into east over Bengal passed up the Gangetic plain and joined the circulation existing around the low pressure area over the Indus Valley. At the same time the monsoon current from the West Coast blew over the Central parts of India and of the Peninsula and north-eastward across Guzerat into Rajputana, &c. There was thus established a set of conditions such as ordinarily accompanies a general fall of rain, and the Chart of the 10th showed that, with the exception of one or two regions, rain was falling throughout the country.

Temperature.—The excessive temperatures which prevailed during the previous week continued during the week under review. Maxima varying between 110° and 118° prevailed throughout the week over the Upper Gangetic plain, Sind, Guzerat, Rajputana, and the Central Provinces, and on the 5th a reading of 120° was recorded at Jacobabad. On the 9th and morning of the 10th a rapid fall of temperature occurred, coinciding with the change to damper or rainy conditions noticed in the preceding paragraph.

The following table shows the excess or defect of the mean average temperature of the different Provinces from the normal, both for the present and for the preceding week:

Provinces.	Difference of Mean Temperature of last week from normal.	Difference of Mean Temperature of present week from normal.
Burma	+ 3·6°	+ 3·4°
Bengal	+ 3·3°	+ 1·0°
North-Western Provinces	+ 2·8°	+ 3·9°
Punjab	+ 2·0°	+ 5·1°
Bombay	+ 2·0°	— 0·3°
Central Provinces and Berar	+ 4·0°	+ 4·4°
Guzerat and Central India	+ 5·0°	+ 3·1°
Sind and Rajputana	+ 3·7°	+ 3·9°
Madras	+ 1·2°	+ 1·2°

This table shows that, except in Bombay, where the heavy rainfall occasioned a brisk decrease of temperature, the excess of last week has been maintained, and in Upper India and the Central Provinces has increased.

Rain.—The rainfall over India during the week has been attributable to three sources. There has been, firstly, the heavy daily rainfall which has occurred on the West Coast, due to the northerly progress of the cyclone noticed above; secondly, there has been the steady but generally moderate rain which has fallen over Bengal in connection with the small depressions which have formed off the Orissa and Ganjam Coasts; and thirdly, there has been the general burst of rain which occurred, with the establishment of monsoon conditions, at the close of the week.

On the 4th heavy rain was reported from the West Coast from Cochin to Goa, moderate rain in Assam, slight rain in Lower Burma and Lower Bengal, and a few drops at Ranikhet and Mussoorie. On the 5th heavy rain continued on the West Coast and had extended as far north as Ratnagiri, and slight rain was reported from Burma and Assam. The reports of the 6th showed that heavy rain continued in the West and had spread to Bombay. Heavy showers had fallen at Dacca and Jessore, and slight rain in Assam and Burma. On the 7th there was little change, except that the West Coast rainfall had extended inland over the Central parts of the Peninsula. Slight rain continued in Burma and Bengal. Similar conditions prevailed on the 8th. On the 9th the fall on the West Coast had become light, but rain had extended to the Central Provinces and the East coast of the Peninsula. On the morning of the 10th rain was general. Of the fifty-one rainfall divisions, one gives no returns, three report no rain, twenty-one an excess of rain, and the remainder a deficiency of rain for the week. The greatest excess is reported from the West Coast, but relatively to the average there was considerable excess in Assam, the North-Western Provinces, and the northern parts of Madras. The greatest absolute deficiency is in Burma, but relatively to the average the greatest defect is over Upper and North-Western India.

In Burma all divisions exhibit a deficiency. In Bengal, except the Delta, Orissa, and Chota Nagpur, the rainfall has been heavy. The same is true of the North-Western Provinces, except the Western division. In the south of the Punjab there was a trifling excess, and in other parts of the Province a more or less considerable deficiency. All along the West Coast and inland over Coorg and the Bombay Deccan the rainfall was heavier than the average, and Guzerat to a limited extent shared in this excess; but in Khandeish, all over the Central parts of the country, and the east of the Peninsula, except the north of Madras, the rainfall was short.

The column giving the state of the seasonal rainfall shows that more or less considerable deficiency prevails in Burma, East Bengal, Deltaic Bengal, Chota Nagpur, the west of the North-Western Provinces, the Central and Hill districts of the Punjab, Mysore, Khandeish, the Central parts of the country, Sind, and the Madras Presidency. A more or less considerable excess in Assam, the North-Western Provinces and Oudh, the south of the Punjab, the Konkan, Guzerat, and Kattiawar. Elsewhere the rainfall up to date is fairly normal.

The returns of maximum and minimum are comparatively uninteresting, except in the case of the West Coast. There were no large falls in Burma or Bengal, and even at Cherrapunji the total amount during the week was only 15 inches. In Oudh and the North-Western Provinces there were some falls of between 2 and 3 inches, but these were the largest amounts in Upper India. In Malabar very different conditions prevailed. At one station in Calicut 26 inches and at one in South Kanara 30 inches were collected, while Kumpta in North Kanara received 39 inches. In this district the average rainfall throughout was 34 inches for the week. In the Deccan two places record amounts exceeding 10 inches. Heavy falls were however entirely confined to the West Coast districts, and in the remainder of the divisions there are no falls of any magnitude, though the occurrence of 1 inch of rain at Surada in the Ganjam district is not unimportant in face of the scarcity at present existing there.

SIMLA, *13th June, 1889.*

W. L. DALLAS,
Assistant Meteorological Reporter to the Government of India.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 8th June.*—No rain in Madura and Tinnevelly; good rain on the West Coast and Nilgiris; fair in Ganjam, Vizagapatam, Kurnool, Chingleput, South Arcot; slight elsewhere. Crops generally good, but withering in parts of Cuddapah, South Arcot, and Salem; suffering from want of rain in parts of Vizagapatam, North Arcot, and Coimbatore. Indigo blighted in Cuddapah. Water-supply scarce in Ganjam, insufficient in parts of Vizagapatam, Nellore, Anantapur, Chingleput, and North Arcot. Stock suffering very badly, chiefly from rinderpest, in Malabar, Tanjore, and Anantapur, and badly in Kistna, South Arcot, and Trichinopoly. Prices falling in Bellary, stationary in seven districts, and rising in all others. Prices of all grains have risen in Ganjam. 1,020 deaths from cholera in Ganjam. Labourers employed on last day of week—on Rushikulya works, 5,681; Gopalpore Canal, 5,199; Ghat Roads, 1,426. Average daily number on drinking-water tanks and wells, 4,363. On minor irrigation and other works, 2,439. General prospects favourable, except in Ganjam.

Bombay.—*For week ending 12th June.*—Rain in Guzerat, Konkan, Deccan, Southern Mahratta Country, and Hyderabad. Preparations for *kharif* crops in progress generally. Probable *rabi* outturn in Shikarpur thirteen annas. Damage done to crops by crickets in Upper Sind Frontier.

Bengal.—*For week ending 11th June.*—General rain during the week—heaviest in the Northern and North-Eastern districts. Agricultural prospects have consequently improved, and ploughing and sowing are generally in progress. More rain is however still required in parts of Western and Central Bengal and Behar, Chota Nagpur, and Orissa generally. The early rice and jute seedlings are coming up well; and the condition of sugarcane, indigo, and other standing crops is fair. In Rungpur and Bogra the early rice is said to have suffered considerably from drought, and will be a short crop. Prices of foodgrains are high and almost steady in the affected districts of Durbhunga, Muzaffarpur, and Chumparun. Common rice is quoted at 13¼ seers, 12 seers, and 11 seers per rupee respectively. Distress continues in the Contai subdivision of the Midnapur district.

North-Western Provinces and Oudh.—*For week ending 12th June.*—Good rain has fallen in all districts but Rae Bareilly, Allahabad, Banda, Farukhabad, Agra, and Jhansi, where the heat is intense. Sugarcane and other summer crops being irrigated. Markets fairly supplied. Prices show an upward tendency in some districts. Health of cattle good.

Punjab.—*For week ending 12th June.*—Moderate rain in several districts. Prices stationary throughout the Province, except in Peshawar, where they are unsettled. Threshing operations nearly over. Ploughings for and sowing of *kharif* still in progress. Standing *kharif* crops are in good condition. Outturn is reported good from Rawalpindi. Stock-cattle are reported healthy. Pasturage or fodder sufficient throughout the Province.

Central Provinces.—*For week ending 12th June.*—Weather cloudy, with slight showers; a good fall of rain in Nimar. Land being ploughed and manured. Rice being sown in Bilaspur and Sambalpur. Scarcity of water continues.

Burma.—*For week ending 8th June.*—Heavy rain fell in several districts in Upper Burma. The rainfall generally is seasonable. Ploughing and transplanting are progressing. Cattle-disease is severe in Pegu, Toungoo, and

Bhamo. Fluctuations in the price of paddy are but slight, but, at Henzada prices have risen 10 per cent. in the last fortnight, and during the week under report 9 per cent. at Mergui and 11 per cent. at Sagaing. The food-supply is sufficient.

Assam.—*For week ending 12th June.*—Weather seasonable. Rainfall general. Transplanting of late rice continues. Prospects of potatoes in Khasi hills fair. Tea and other crops doing well.

Mysore and Coorg.—*For week ending 12th June.*—Rainfall good in the Shimoga and Kadur districts; elsewhere slight. Standing crops good. More rain wanted in parts of Bangalore, Kolar, and Tumkur districts; otherwise prospects generally favourable. Paddy and sugarcane harvested in parts. No material change in prices.

Very good and general rain in Coorg. Standing crop in good condition. Fevers prevalent.

Berar and Hyderabad.—*For week ending 12th June.*—Weather hot in Berar. A little rain during the week. Preparations for the *kharif* crops completed in some districts. Agricultural stock in good condition. Fodder and water insufficient. Marked change in the price of foodgrains.

Slight rain during the week in Hyderabad. Reaping of hot-weather crops concluded. Preparations for *kharif* sowings commenced. Scarcity of fodder and water still felt. Prices stationary.

Central India.—*For week ending 12th June.*—Slight rain throughout Central India during the week—heaviest fall at Sirdarpur. Fair also in Western Malwa. Sowings commenced in Western Malwa and many parts of Bhopawar. Prices of foodgrains slightly risen in Dhar, and steady and high in Bhopal.

Rajputana.—*For week ending 12th June.*—Rainfall in most States. Agricultural operations commenced. Agricultural stock poor in Meywar and Bikanir. Pasturage or fodder insufficient in Marwar, Kherwara, and Meywar. Prices rising in Meywar, Kotah, and Bhrutpore.

Nepal.—*For week ending 6th June.*—Good rain fell during the week. Weather hot. Prospects improved in the Valley.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

Calcutta, 17th June, 1889.

E. J. SINKINSON,
Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

MODE OF SUBMISSION OF MEMORIALS ADDRESSED TO PARLIAMENT.

No. 16 / 1098—1114.

Extract from the Proceedings of the Government of India in the Home Department (Public),—under date Simla, the 20th June, 1889.

Read—

Despatch from the Right Honourable the Secretary of State for India, No. 13 (Political), dated 14th March 1889.

RESOLUTION.

A case having recently occurred in which a memorial addressed to the House of Commons was withheld under Rule XII., clause 3, of the Rules for the submission of Memorials to Her Majesty the Queen, Empress of India, or to the Right Honourable the Secretary of State for India, His Lordship, while expressing the opinion that memorials addressed to Parliament cannot be withheld under the rules above referred to which do not properly apply to such Memorials, has decided that if a petition against the orders of the Secretary of State for India in Council is prepared for presentation to Parliament, it should be submitted to the House of Parliament to which it is addressed through the medium of some unofficial Member of the House, and not through the Secretary of State.

ORDER.—Ordered, that copy, with copy of extracts from the Journals and Standing Orders of Parliament enclosed in the Despatch from the Secretary of State read in the preamble, be forwarded to Local Governments and Administrations for information;

that a copy, with copy of extracts, be forwarded to the several Departments of the Government of India for information; and

that the Resolution and extracts be published in the Supplement to the *Gazette of India* for general information.

(True Extract.)

A. P. MACDONNELL,
Secretary to the Government of India.

HOUSE OF COMMONS.

PUBLIC PETITIONS.

Every Member presenting a Petition to the House must affix his name at the beginning thereof. (*Vide* Commons' Journals, 1833, March 20; 1883, February 19.)

Every Petition must be written and not printed or lithographed. (*Vide* Commons' Journals, 1793, May 6; 1817, March 12.)

Every Petition must contain a prayer. (*Vide* Commons' Journals, 1843, July 10.)

Every Petition must be signed by at least one person on the skin or sheet on which the Petition is written. (*Vide* Commons' Journals, 1817, March 12.)

Every person signing a Petition must write his address after his signature or his signature will not be counted. (*Vide* Appointment of the Select Committee on Public Petitions, 1879, February 18.)

Every Petition must be written in the English language, or be accompanied by a translation certified by the Member who shall present it. (*Vide* Commons' Journals, 1821, March 16; March 21.)

Every Petition must be signed by the parties whose names are appended thereto by their names or marks, and by no one else except in case of incapacity by sickness. (*Vide* Commons' Journals, 1675, November 8; 1689, November 14; 1774, June 2; 1826, December 13; 1836, June 28.)

No letters, affidavits, or other documents, may be attached to any Petition. (*Vide* Commons' Journal, 1826, February 20; November 28; 1856, March 14.)

No erasures or interlineations may be made in any Petition. (*Vide* Commons' Journals, 1827, March 2; 1831, August 12.)

No reference may be made to any Debate in Parliament. (*Vide* Commons' Journals, 1822, March 28.)

No application may be made for any grant of public money, except with the consent of the Crown. (*Vide* Standing Orders.)

No application may be made for a charge upon the revenues of India, except with the consent of the Crown. (*Vide* Standing Orders.)

All Petitions, after they have been ordered to lie upon the Table, are referred to the Committee on Public Petitions, without any question being put; but if any such Petition relate to any matter or subject with respect to which the Member presenting it has given notice of a Motion, and the said Petition has not been ordered to be printed by the Committee, such Member may, after notice given, move that such Petition be printed with the Votes. (*Vide* Standing Orders.)

A Member cannot present a Petition from himself. It is quite competent to any honourable Member to petition the House, but then his Petition ought to be presented by another Member. (*Vide* Rules, Orders, and Forms of Proceeding of the House of Commons.)

MEM.—*Every Petition offered to be presented to the House should be addressed "To the Honourable the Commons of the United Kingdom of Great Britain and Ireland, in Parliament assembled."*

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending 8 a.m. on Monday, June 17th, 1889.

The weather of the past week has been much quieter than during the week preceding. No storms of any magnitude have been developed, and the general conditions over the greater part of the country have been such as normally accompany a fairly general incursion of monsoon winds and well distributed rainfall. The Bombay branch of the monsoon current has been far stronger than that from the Bay of Bengal, and hence the rainfall over the Peninsula has been more general and heavier than that over the Gangetic plain. In the latter region there has been comparatively little rainfall, the major part of the monsoon current from the Bay feeding into slight shallow depressions which formed over Lower Bengal and produced the slight but continuous precipitation which characterised that region.

The chart of the 11th showed conditions similar in many respects to those which prevailed at the close of the preceding week. A large but shallow depression, with its centre off the Circars and Orissa coasts, overlay Bengal, the east of the North-West and Central Provinces, and the Circars; a second depression was shown in the Indus Valley, while the highest pressures were reported from Malabar, Ceylon, and the south of the Bay. The winds were normal in direction. A strong westerly wind blew across the West Coast and over the Peninsula; in the Bay of Bengal it drew into south-westerly, and in Burmah and Lower Bengal into south-easterly, while in North Bengal and up the Gangetic plain it was easterly to south-easterly. In North-Western India there existed a partial circulation around the Indus Valley low pressure. On the 12th the principal changes consisted of alterations in the positions of the two areas of low readings. The centre of depression which on the 11th lay off the Orissa and Circars Coasts had passed northward into Lower Bengal, while the Indus Valley depression had passed southward and concentrated in Lower Sind. The winds were very little changed, except that the south-easterly winds from the Bay were interrupted over the North-Western Provinces and no longer penetrated into Upper India. On the 13th the only change of importance was the slight intensifying and northerly movement of the Bengal depression. The general distribution was unaltered, readings being high in the extreme south and relatively low in the Indus Valley and in Bengal. The chart of the 14th showed that the small depression over Bengal had more or less broken up, but that that over Sind had intensified. Gradients were consequently very steep over Sind, and all over that region very strong winds were blowing. The Bombay monsoon current on this day was everywhere exceptionally strong. On the 15th there was very little change in the distribution of pressure. The winds were also very little changed, the Bombay monsoon blowing with abnormal strength, while the Bengal current was weak and irregular. On the 16th there was a marked tendency to the formation of an area of depression and cyclonic circulation in Bengal, but no other change of importance. The chart of the 17th showed that a depression was steadily forming over Bengal, so that while the Bombay monsoon continued strong there was very little passage of air from the Bay into Upper India.

Temperature.—The week on the whole has been a cool one. The rainfall of the earlier days of the week effected a large decrease of temperature, and the showery weather which subsequently prevailed in Northern India prevented any very extensive recovery in that region, while the strong monsoon winds and more or less daily rain which occurred over the region affected by the Bombay current maintained low temperatures over the greater part of the remainder of India.

The coolest day on the whole was the 12th, when very low maxima for the season were experienced. At Patna and Gya on that day the maximum readings exhibited a deficiency of 10½°; at Gorakhpur and Lucknow of 17°; at Lahore of 18°; at Bareilly of 22°; and at Sirsa of 26°. From that day on to the close of the month the changes of temperature were somewhat irregular, but with a general tendency to rise.

The following table shows the excess or defect of the mean average temperatures of the different Provinces from the normal, both for the present and for the preceding week:

Province.	Difference of Mean Temperature of Last Week from Normal.	Difference of Mean Temperature of Present Week from Normal.
Burmah	+ 3·4°	+ 0·1°
Bengal	+ 1·0°	— 1·3°
North-Western Provinces	+ 3·9°	— 6·8°
Punjab	+ 5·1°	— 3·7°
Bombay	— 0·3°	+ 0·2°
Central Provinces and Berar	+ 4·4°	— 2·0°
Guzerat and Central India	+ 3·1°	— 3·3°
Sind and Rajputana	+ 3·9°	— 2·3°
Madras	+ 1·2°	+ 0·5°

From this table it will be seen that relatively to the average there has been a large fall of temperature compared with the preceding week. The only Provinces where the excess of last week has been maintained are Burmah and Bengal. In Bombay the slight deficiency of last week has been changed into a slight excess, while in all other Provinces there has been a deficiency of temperature varying from nearly 1½° in Bengal to nearly 7° in the North-West Provinces. As mentioned above, the maxima have been abnormally low.

Rain has been fairly general throughout India during the week. Over a large part of the country it was of almost daily occurrence, but both in the east of the Peninsula and in the north-west of India it has been somewhat uncertain, rainy periods alternating with comparatively fine intervals.

The table at the end of this summary shows that of the 51 divisions into which India is divided, only one division, *viz.* Sind, received no rain; in 30 there was a greater or less excess, and in 19 the rainfall was more or less deficient. The greatest excess was in Burmah, where Tenasserim received 10¾ inches and Arrakan 17 inches more than the normal. In other parts of the Indian region neither the excess nor the deficiency was relatively large. The maximum falls reported from Burmah were in some cases very large. Tavoy received 26 inches; Moulmein and Amherst, 17 inches; Bassein, 19 inches; Akyab, 36 inches; and Sandoway, 31 inches. Beyond Burmah there were no very heavy falls. Cherrapunji received 23 inches during the week, but this is not a large amount for this proverbially wet station. Falls of between 5 and 8 inches were common throughout Bengal, but advancing north-westward up the Gangetic plain the amounts rapidly decreased, and in the North-Western Provinces and Oudh, except in the submontane districts, falls of 5 inches were the exception. In the Punjab the maximum falls were generally between 1 and 2 inches.

In the West Coast districts, with the exception of Calicut and South Kanara, no heavy falls are reported. In the Central parts of the country good average rain has been received, but in Kattiawar and Sind there has been little or none. In Rajputana there has been heavy, and on the East Coast there has been general and in places fairly heavy rain.

The concluding column of the table shows the state of the seasonal rainfall.

Province.	Division.	Rainfall Data for Week ending June 17th, 1889.			Rainfall Data from May 13th to June 17th, 1889.		
		Average Actual Rainfall of Division.	Average Normal Rainfall of Division.	Excess or Defect, in inches.	Average Actual Rainfall of Season to date.	Average Normal Rainfall, May 13th to June 17th.	Excess or Defect of (Seasonal) Rainfall expressed as a percentage.

SIMLA, *20th June, 1889.*

W. L. DALLAS,
Assistant Meteorological Reporter to the Government of India.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 15th June.*—No rain in Tinnevelly; slight in Madras, Tanjore, Trichinopoly, Madura, and Coimbatore; good elsewhere. About 1¼ inches fell in Ganjam. Crops generally good, but withering in parts of Cuddapah and South Arcot; suffering from want of rain or water in parts of Vizagapatam, North Arcot, Trichinopoly, Tinnevelly, Coimbatore, and Salem. Indigo blighted in Trichinopoly. Water-supply insufficient in Ganjam, parts of Vizagapatam, Nellore, Chingleput, North Arcot, Coimbatore, and Salem. Stock suffering badly, chiefly from rinderpest, in Malabar, Kistna, and Tanjore. Prices rising in eleven districts, falling in five, and stationary in others. Prices of all grains rose in Ganjam: 865 deaths from cholera in that district. Labourers employed last day of week:—Rushikulya works, 3,797; Gopalpur Canal, 2,968; Ghat Roads, 1,646. Average daily number on drinking-water tanks and wells, 4,779; on minor irrigation and other works, 2,623. General prospects favourable; beginning to improve in Ganjam.

Bombay.—*For week ending 19th June.*—Rain in Guzerat, Konkan, Deccan, Southern Mahratta Country, and Shikarpur; insufficient in parts of Karachi, Thana, Nasik, Poona, Sholapur, Dharwar, and Kathiawar. Sowing finished in Colaba; progressing in several districts, but retarded in five talukas of Poona for want of sufficient rain. Young crops doing well in Sholapur, Kanara, and Baroda. Transplantation commenced in Poona. Locusts appeared in Kandiaro taluka of Hyderabad, but no damage done.

Bengal.—*For week ending 18th June.*—The monsoon has now fairly set in, and the rainfall during the week has been general and in many districts considerable. More rain is however needed throughout the Patna Division. Agricultural prospects have improved generally. Ploughing and sowing are general, and the rice and jute where already sown are coming up well. Sugarcane, indigo, and other standing crops have been much benefited by the rain. Prices continue high and almost stationary.

North-Western Provinces and Oudh.—*For week ending 19th June.*—The weather has been unsettled during the week. The eastern districts generally report an average rainfall, the central only light showers, and the western ones little or none at all. Ploughing is in progress in all districts, and *kharif* sowings have commenced in most. Markets are fairly well stocked, and prices are almost stationary, three districts only, Allahabad, Farukhabad, and Moradabad, reporting an upward tendency. From Cawnpore a scarcity of fodder in one tahsil is reported.

Punjab.—*For week ending 19th June.*—Good rain in most districts. Prices rising in Sadr station Lahore, falling in Rawalpindi, unsettled in Peshawar, and stationary elsewhere. Threshing operations nearly completed. Ploughings for and sowing of *kharif* still in progress. Crops are reported to be in good condition in Amritsar. Cotton and sugarcane crops promise well. Outturn of *rabi* is average in Lahore. Cotton slightly damaged by hail in Chunian, and fruit by storm in Sharakpur, Lahore district. Stock cattle are reported healthy. Fodder sufficient throughout the province.

Central Provinces.—*For week ending 19th June.*—Rain general and sufficient. Land being prepared for autumn sowings, which have commenced in some districts under favourable conditions. Prices steady.

Burma.—*For week ending 15th June.*—The rainfall was heavy throughout Burma. Ploughing and sowing are progressing. Cattle-disease continues to be severe in Bhamo. The price of paddy has risen 25 per cent. in parts of Sandoway and 11 per cent. in Tavoy; elsewhere the fluctuations in prices are but slight. The food-supply is everywhere sufficient.

Assam.—*For week ending 19th June.*—Weather seasonable. Rainfall general. Ploughing for winter rice continues. Tea and other crops in general doing well.

Mysore and Coorg.—*For week ending 19th June.*—Good rain in Civil and Military Station; rainfall good in parts of Kadur and Shimoga districts, and insufficient in Bangalore and Kolar districts. Crops good. Agricultural operations progressing. Outturn of crops harvested generally favourable. Prices slightly fallen in Kadur district.

Heavy rain in Coorg. Prospects fair. Much sickness prevalent since wet-weather set in.

Berar and Hyderabad.—*For week ending 19th June.*—Rainfall fair in Berar. Weather warm and cloudy. Cotton sowing in progress. General condition of agricultural stock good. Fodder insufficient. Prices steady.

Good rain at Hyderabad. *Kharif* sowing in progress. Scarcity of fodder still felt. Prices stationary.

Central India.—*For week ending 19th June.*—Rain throughout Central India Agency during the week: heaviest fall in the Bhopawar Agency; slight in Gwalior, Western Malwa, and Goona. Prospects improved in Bhopal, Baghelkhand, and Bundelkhand. Sowing operations in progress in Neemuch, Western Malwa, Bhopawar, and Bhopal.

Rajputana.—*For week ending 19th June.*—Rainfall more or less throughout the Province. Agricultural operations progressing. Agricultural stock poor in Meywar and Bickaneer. Pasturage or fodder sufficient, except in Marwar, Kherwara, and Meywar. Prices rising in Meywar, Harowti, and Dholepore. Steady elsewhere.

Nepal.—*For week ending 13th June.*—Good rain. Weather cloudy. Late autumn rice is being transplanted in the valley. General prospects good.

E. C. BUCK,

Secretary to the Government of India.

GENERAL RULES FOR WORKING INDIAN RAILWAYS.

No. 240 R. T., dated Simla, the 14th June, 1889.

RESOLUTION—By the Government of India, Public Works Department.

Read again—

Section 8 of Act IV (the Indian Railway Act) of 1879.

Notification by the Government of India in the Foreign Department, No. 136-I.J., dated 10th June 1879.

Public Works Department Notification No. 299, dated 13th September 1880, publishing the General Rules for all Railways in India and Public Works Department Circular No. 17-R., dated 21st August 1880.

Public Works Department letter No. 1062-R.T., dated 20th October 1886.

Notifications by the Government of India in the Foreign Department, Nos. 1143, 1144, and 1145-I., dated the 22nd March 1888.

Read also—

Letter from the Government of Bombay, No. 1598, dated the 19th July 1887, and enclosures.

Notification by the Government of India in the Foreign Department, No. 2065-I., dated the 22nd May 1889.

OBSERVATIONS.—In accordance with the provisions of Section 8 of the Indian Railway Act, IV of 1879, as extended by the Notification of the Government of India in the Foreign Department, No. 136-I.J., dated 10th June 1879, to the Hyderabad Assigned Districts, in which are situated the Khamgaon and

Amraoti State Railways; and as extended by the Notifications of the Government of India in the Foreign Department, Nos. 1143-I., 1144-I. and 1145-I., dated 22nd March 1888 and 2065-I., dated 22nd May 1889, to the lands in the territory of His Highness the Nizam of Hyderabad occupied by the Dhond and Manmad State Railway; the Agent of the Great Indian Peninsula Railway Company has applied that the General Rules for Indian Railways, which have received the sanction of the Governor-General in Council and were published in the *Gazette of India*, dated 18th September 1880, may be applied to the Khamgaon, the Amraoti and the Dhond and Manmad State Railways which are worked by the Great Indian Peninsula Railway Company.

RESOLUTION.—With the exception of Section XVII, which refers to the working of a single line of railway, on the system termed in Rule 3 of the said Rules "Train Despatching," the Governor-General in Council is pleased, under section 8 of the said Act, as so extended, to sanction the application to the Khamgaon, the Amraoti, and the Dhond and Manmad State Railways, of the General Rules for Indian Railways as published in the *Gazette of India*, dated 18th September 1880.

ORDER.—Ordered that the General Rules, which have already been published in the *Gazette of India*, be further notified to the railway servants and the public by a copy thereof [with the exception noted] and of this Resolution being kept open to inspection free of any charge in the office of the Station Master of every station on the said Railways.

Ordered also, that this Resolution be communicated to the Secretary to the Government of Bombay, Public Works Department, for information and guidance, and that it be published in the *Gazette of India*.

R. C. B. PEMBERTON, *Colonel, R.E.*,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

WEATHER SUMMARY FOR MAY 1889.

General Weather conditions of the month.—The chief feature of the month is the increase of temperature which proceeds more rapidly in Upper than in Central India. The hottest area during the early part of the month usually includes the Central Provinces, Central India, and the eastern districts of the North-Western Provinces. It is usually transferred to Rajputana and Sind in the third or fourth week of the month. The continued high temperature in Central and Upper India usually diminishes pressure rapidly during the month in those areas and establishes the baric gradients necessary for the extension of the south-east trades winds across the equator and their continuance northwards as the south-west monsoon winds into India.

Usually one or two feeble advances of these humid winds occur during May which give moderate rain to Ceylon, Malabar, and to Tenasserim. The great advance however does not usually take place until the end of May or the beginning of June. This forms what is known as the setting in of the south-west monsoon. Over the whole of Central and Northern India the weather is generally very hot and dry, but hot weather storms occasionally occur and sometimes give very heavy showers, more especially in Bengal and Assam, and in and near the hills in Behar and the North-West Provinces. In Bengal and Assam the amount of rain received from the local thunderstorms is sometimes very considerable, and the showery weather of May occasionally merges at the end of the month almost imperceptibly into the rain of the south-west monsoon.

Temperature.—The past month has been characterized by higher average temperature than usual in all districts except the Punjab and Assam.

The following give the mean temperature data for the various Provinces :

Provinces.	Mean Maximum Temperature May.	Variation from Normal.	Mean Minimum Temperature May.	Variation from Normal.	Mean Daily Temperature May.	Variation from Normal.
	°		°		°	
Burmah	97·4	+ 4·4	78·2	+ 2·6	87·8	+ 3·5
Bengal	98·9	+ 3·5	79·3	+ 2·7	89·1	+ 3·1
Assam	85·4	— 1·2	72·1	— 0·1	78·8	— 0·6
North-Western Provinces .	105·8	+ 1·8	77·7	+ 0·1	91·8	+ 1·0
Punjab	100·6	— 1·6	72·2	— 0·5	86·4	— 1·1
Sind and Rajputana . .	104·1	+ 0·1	78·9	+ 1·5	91·5	+ 0·8
Central India . . .	105·9	+ 0·8	76·6	— 0·3	91·3	+ 0·3
Central Provinces . .	107·5	+ 1·3	80·9	+ 0·9	94·2	+ 1·1
Bombay	96·2	+ 2·3	77·7	+ 1·0	87·0	+ 1·7
Madras	99·8	+ 0·8	80·3	+ 1·5	90·1	+ 1·2

This table shows that the excess of temperature was greatest for Burmah and Bengal.

Temperature was considerably above the average at the commencement of the month. The 3rd and 4th were very hot days in Bengal and Burmah, and at many stations the maximum day temperature was from 8° to 12° above the normal.

Dry hot weather with excessive temperature continued steadily until the 20th. The 10th and 11th were very hot days in North-East India. The mean maximum temperature averaged 7° above the normal in Bengal and the North-West Provinces, 5° in Burmah, and 4° in the Central Provinces. The hottest area at this time was the eastern districts of the Central Provinces and the adjacent districts of Bengal. The hottest area was transferred to the eastern districts of the North-West Provinces and Central India on the 18th and 19th, on which days very high temperatures were recorded at Allahabad and other stations in these areas. A very rapid reduction of temperature took place on the 22nd in consequence of showers over the greater part of Northern and Central India. In many cases the day temperature was reduced from 20° to 30°. Thus on the 23rd the maximum temperature was 18° below the normal at Sutna, 15° below it at Patna, and 14° at Allahabad. On the 25th it was 22° below it at Ludhiana, 19° at Sialkote, and 15° at Agra. This very cool period lasted until the 26th, during which occasional showers continued to be received. With the cessation of rain the temperature began to rise steadily, and at the end of the month was again considerably above the normal. The excess averaged 7° in the Central Provinces; 5° in Bengal, Central India, Sind, Guzerat, and Rajputana; and 4° in the North-West Provinces and the Punjab. During this period of increasing temperature the area of highest temperature was transferred to Sind.

The following gives the highest temperatures registered during the month at selected stations in Northern India and the highest temperature registered during the same month in the previous 14 years for comparison:

Stations.	Highest Maximum Temperature.	Date.	Highest Maximum Temperature in month of May since 1875.	Year.
Toungoo	107·7	12th & 13th	106·5	1881
Thayetmyo	109·7	9th & 17th	109·5	1881
Jessore	114·3	11th	103·2	1885
Calcutta	101·9	3rd & 5th	105·3	1879
Burdwan	113·7	12th	110·7	1879 & 1885
Berhampore	113·2	12th	113·0	1876
Purneah	108·3	19th	109·7	1879

Pressure.—One of the most important effects of the prolonged heat of May is to intensify previously existing barometric or pressure anomalies and to develop new ones. The mean pressure of the month for the whole of India was ·031″ above the normal.

The following gives the pressure anomalies or the variations of the mean pressure in each district relative to the general condition of excessive pressure as stated above:

Province.	Mean Pressure Variations.		
	May 1st to 15th.	May 16th to 31st.	May.
Burmah	+·015	—·019	—·002
Bengal	—·036	—·001	—·019
Assam	—·041	—·007	—·024
Behar and Chutia Nagpur	—·052	—·002	—·027
North-West Provinces	—·029	+·012	—·009
Punjab	+·023	+·024	+·024
Sind and Rajputana	+·022	+·006	+·014
Central India	+·019	+·011	+·015
Central Provinces	+·007	+·005	+·006
Madras	+·002	—·013	—·006
Bombay	+·002	—·010	—·004

The chief features as indicated by the above are:

(*a*) Slightly defective pressure in the south and west of the Peninsula.

(*b*) Increased pressure in Upper India, more especially in Rajputana and the Punjab and the adjacent districts of the North-West Provinces. This feature was very persistent throughout the month and was unaffected by the changes of weather during the month. It will hence probably modify to a considerable extent the northward extension of the south-west monsoon current in June.

(*c*) Slightly increased pressure, small in amount, and hence probably of little importance, in Central India and the Central Provinces.

(*d*) Very deficient pressure in Behar, Bengal, Assam, and Burmah. This deficiency was to a large extent produced by the excessive temperature which prevailed in these areas during a large part of the month. This feature was however not so persistent as the excessive pressure in Upper India. The deficiency was large in the first half of May in Bengal, Assam, and Behar, and during the second half of May in Burmah. It will hence probably influence the extension of the south-west monsoon current in June (in the manner stated in the forecast already published), but it is difficult to estimate to what extent.

The only other feature of importance in the pressure conditions of the month are the local depressions. These were in all cases small and in no case gave rise to stormy winds over large areas. The following gives a brief statement of these depressions:

(1) Depression in Central Burmah on the 8th and 9th. It caused moderate rain in South and Central Burmah, and filled up on the 10th.

(2) Depression in Behar on the 14th which accompanied a strong inrush of south-west winds across the Bengal Coast and gave moderate to heavy thundershowers over the greater part of Bengal on that day. It filled up on the morning of the 15th.

(3) Depression in Sind on the 17th, 18th and 19th. This was apparently due to hot weather conditions, and was shortly afterwards followed by the transfer of the area of minimum pressure to Sind and Upper India.

(4) Small depression off the Coromandel Coast on the 21st and 22nd. It gave some light showers on that Coast, and filled up on the 22nd.

(5) Depression of May 22nd to 26th. On the 22nd a small depression lay over the Central Provinces and another over the north of the Bay. The former disappeared on the 23rd, and the depression in the Bay developed slightly and moved westwards towards the coast districts and eastern districts of the Central Provinces. It was throughout a large but a very shallow depression. It determined more or less general rain over a large portion of Central and Northern India, which occurred chiefly as thundershowers in Bengal, the North-West Provinces, Rajputana, Central India, and the Central Provinces. The depression filled up on the 26th and 27th.

(6) A depression began to form off the South Malabar Coast on the 29th. It was at first apparently of small importance, but in the first week of June it advanced northwards along the Bombay Coast and developed into a cyclonic storm. Its history will be given in next month's report.

Storms.—The previous paragraph has shown that there was no large cyclonic storm during the month. Duststorms and thunderstorms were unusually numerous in Northern India, and were in some cases very violent. The following were reported during the month: Severe duststorms at Gya and Nowgong on the 4th; hailstorm at Belgaum on the 7th; violent duststorm at Jacobabad on the 7th; thunderstorm at Negapatam on the 12th, during which 4 inches of rain fell; violent duststorm at Karwar on the 14th; very severe thunderstorm with hail at Kishnaghar on the 19th; duststorm at Sirsa on the 21st; violent duststorm with rain at Indore on the 21st; violent duststorm with hail and rain at Mount Abu on the 22nd; severe duststorm at Sirsa on the 22nd; a very heavy thunderstorm preceded by winds of almost hurricane force lasting for half an hour at Neemuch on the 22nd; and a severe nor'-wester at False Point on the 29th when the wind velocity averaged 32 miles per hour for a short period.

Rainfall.—The rainfall of the month has been of a somewhat unusual character. Rain fell daily in Assam from the 1st to the 13th; occasional showers were also received during this period in East Bengal and Burmah (chiefly on the 8th and 9th). The Punjab obtained local showers on the 10th and 13th, but the amounts were small.

Rain fell in large amounts in Assam from the 14th to the 18th, and nearly the whole of Bengal received moderate to heavy rain from thundershowers during the same period. Berhampore in Bengal obtained 4¼ inches during a thunderstorm on the evening of the 15th. Two feeble advances of moist winds into the south of the Peninsula occurred during this period. The first took place on the 14th and 15th, and the second on the 17th and 18th. As usual the largest rainfall amounts were received in Ceylon and on the Malabar Coast. A brief interval of dry hot weather preceded a period of showery weather extending from the 21st to the 26th over a large part of the country including Burmah, Bengal, the North-West Provinces, Central Provinces, Central India, and Rajputana. Numerous thundershowers occurred during this period over the greater part of Northern and Central India, the chief effect of which was to cool the air very considerably and give a welcome break in the intensely hot weather which prevailed during the greater part of the month.

Assam and Burmah received moderate rain on the 29th, 30th and 31st. Heavy rain fell on the 29th in South-West Ceylon, and on the 30th and 31st on the South Malabar Coast. Colombo received 3½ inches and Mangalore 2¼ inches on the 29th; Cochin 4 inches and Mangalore 2½ inches on the 30th, and Cochin 3¼ inches on the 31st. This burst of rain was the commencement of that advance of south-west winds and general rain along the West Coast which is usually considered as the setting in of the south-west monsoon.

The month was drier than usual over the greater part of India. This was more especially the case in Lower Burmah and Bengal, in which moderately heavy rain is usually received. The actual rainfall in Lower Burmah was only 3·93 inches, the normal being 8·99 inches. The actual average rainfall of Bengal was 3·3 inches and the normal 6 inches. Rajputana, Central India, Guzerat, and the northern districts of the Central Provinces received larger amounts than usual in May due to the unusual fall in the fourth week of the month. The amounts were however not large, and the rainfall hence unimportant. The rainfall of the month was in moderate excess in Ceylon, and considerably above the average in Assam, which received an average of 19·4 inches or 4·8 inches above the normal. The variations in other districts were small and of no great importance.

The following table gives complete data and shows the actual average rainfall and the normal rainfall of the month of the twenty-one districts into which the country is divided, so far as it is indicated by the telegraphic reports of a few stations in each district:

Districts.	Number of Stations.	Normal Average Rainfall in May.	Actual Average Rainfall in May, 1889.	Difference from the Average in May, 1889.

SIMLA, *26th June, 1889.*

JOHN ELIOT,
Meteorological Reporter to the Government of India.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending 8 a.m. on Monday, June 24th, 1889.

The weather has again been quiet during the past week. A small depression which was developed over Bengal passed westward into the central parts of the country during the early part of the week. During its existence normal monsoon weather prevailed over the greater part of the country. After its disappearance both the Arabian Sea and the Bay of Bengal currents became somewhat irregular, and the rainfall became patchy instead of general, and the heat, particularly over North-Western India, became very oppressive.

The Chart of the 18th showed that the depression which was forming over Lower Bengal at the close of the previous week had commenced a westerly advance, and its centre lay to the south of Hazaribagh. A strongish current from the Bay blew across the Bengal Coast, and as a south-east wind penetrated far into Upper India. Fairly normal conditions prevailed in other parts of India, though pressure in the western half of the country was more uniform than is usually the case. By the morning of the 19th the depression had reached the Central Provinces, the centre lying between Jubbulpore and Saugor. A well marked but comparatively feeble cyclonic circulation existed around the storm area. In other parts of the Indian region the winds were fairly normal, a westerly current blowing across the Peninsula and the Central parts of the country, a southerly current in Bengal, and a south-easterly current up the Gangetic plain. On the 20th relatively low pressures were reported from the whole of Bengal, the North-Western Provinces, and the north of the Central Provinces, but there was no well marked disturbance such as existed during the two previous days. The cyclonic circulation had consequently ceased, and the south-easterly current up the Gangetic plain had become much weaker and less general. Calms had at the same time appeared on the West Coast, and the wind became variable over the Peninsula, but on the Sind and Guzerat Coasts and inland over that region a strong monsoon was blowing. The Chart of the 21st showed that the south-easterly current up the Gangetic plain had entirely disappeared. On the West Coast and over the Peninsula calms and variable winds prevailed, while in Sind, Guzerat, and Central India strong westerly and south-westerly winds continued to blow. Pressure remained highest in Malabar and lowest in the Indus Valley, while small local depressions were shown in different parts of North-Eastern India. On the 22nd conditions were similar to those reported on the 21st. There was a large difference of pressure between the Malabar Coast and the Punjab, the major part of the difference occurring over North-Western India, where gradients were very steep. The monsoon current blowing from the Arabian Sea into the Peninsula was not strong, but over Sind, Guzerat, and Central India the force of the wind was high. South-westerly winds prevailed in the Gangetic plain, and the current from the Bay, instead of travelling northwestward up the Gangetic plain, passed into Eastern Bengal, Assam, and Burma. The Charts of the 23rd and 24th showed no important change beyond a further weakening of the monsoon current on the West Coast of the Peninsula.

Temperature has been high throughout the week in Upper India, but has been on the whole low elsewhere, more particularly over the Central Provinces, where on the 20th and 21st there was a deficiency of about 10°. In the Peninsula and Bengal temperature has been steady, and the mean average temperature of most days showed very little departure from the normal.

A comparison of the maximum readings of the 20th with the normals for that day exhibits very large variations of temperature over India; for instance, at Dera Ismail Khan the maximum was 119°, or 11° above the average; at Multan 118·8°, or 13° above the average; and at Jacobabad 122·5°, or 11° above the average, while at Hoshangabad the maximum was only 76·2°, or 20° below the average; and at Khandwa 77·2°, or 19·8° below the average.

The following table shows the excess or defect of the mean average temperatures of the different Provinces from the normal, both for the present and for the preceding week:

Province.	Difference of Mean Temperature of Last Week from Normal.	Difference of Mean Temperature of Present Week from Normal.
Burmah	+ 0·1°	+ 0·7°
Bengal	— 1·3°	— 0·2°
North-Western Provinces	— 6·8°	— 3·0°
Punjab	— 3·7°	+ 4·0°
Bombay	+ 0·2°	+ 0·2°
Central Provinces and Berar	— 2·0°	— 4·5°
Guzerat and Central India	— 3·3°	— 2·0°
Sind and Rajputana	— 2·3°	+ 0·2°
Madras	+ 0·5°	+ 0·7°

These figures show that the relatively cool weather which prevailed last week has, except in the Punjab, continued. The main features of the table for the present week are the general agreement of the mean temperature with the normal, the considerable deficiency over the central parts of the country, and the considerable excess in the Punjab.

Rain has fallen in all parts of India, except the west of Rajputana, though all over North-Western India the amounts are very slight. There were some large amounts in connection with the depression which formed over Bengal, but as a rule the rainfall of the past week is made up of moderate general falls.

The reports of the 18th showed that slight rain had fallen in the south-west of the Peninsula; general rain over Burmah, the head of the Bay, Lower Bengal, and the Central Provinces, and scattered showers at a few places in the Gangetic plain. On the 19th rain had become more general both over the Peninsula and over the Gangetic plain, but otherwise the fall was similar to that of the 18th. On the 20th rainfall decreased again in the Gangetic plain, but otherwise there was again no change. The reports of the 21st showed an extension of rain into the Punjab, but that the rainfall all over the country was light. On the 22nd rain ceased all over the central parts of the country, and the fall was practically confined to the Peninsula, Burmah, Assam, North Bengal, and a small tract of country in Upper India containing the stations of Delhi, Lucknow, Bareilly, and Roorkee. On the 23rd rain was a trifle more general in the Gangetic plain, but on the 24th it again fell off, and the principal rainfall districts were the regions noted on the 22nd.

Of the fifty-one rainfall divisions one gives no return, one is not comparable with any average, one reports no rain, fourteen exhibit an excess, and thirty-four exhibit a deficiency.

In Burmah all the divisions, except Central Burmah, exhibit a deficiency. This is also the case in East Bengal and in Assam (Surma), but in Assam (Brahmaputra), Deltaic, Central, and North Bengal as well as in Orissa and Behar the rainfall has exceeded the average. Chota Nagpur and the greater part of the North-Western Provinces have received deficient rainfall, but along the line of the hills both in the North-Western Provinces and Oudh there has been an excess. The Punjab hills also had more than the average, but on the plains, as in the North-Western Provinces, there was a deficiency. The Peninsula and the central parts of the country, with the exception of the following divisions, Madras (South Central), Central Provinces (West), and Central India (East), had less than the normal amount, though in the majority of divisions the deficiency was not very large.

The final column of the table shows that up to date the season's rainfall over the greater part of the country has been fairly good. The divisions, where the deficiency is large, are the North-West Provinces (West), the Punjab (Central), Mysore, Khandeish, Sind, Kattiawar, Hyderabad, and Madras (South). Over Northern India, except the Punjab, there is a general excess.

Simla, *27th June, 1889.*

W. L. DALLAS,
Assistant Meteorological Reporter to the Government of India.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 22nd June.*—Slight rain in Nellore, Cuddapah, Madras, Trichinopoly, Madura, Tinnevelly, Coimbatore; good on West Coast and Nilgiris; fair elsewhere; nearly ¾ inch in Ganjam. Crops generally good, but withering in parts of Ganjam and Cuddapah; suffering from want of rain or water in parts of Vizagapatam, North Arcot, Trichinopoly, Tinnevelly, Coimbatore, and Salem. Dry crops blighted in Coimbatore. Water-supply insufficient in Ganjam, parts of Vizagapatam, Cuddapah, Coimbatore, Tinnevelly, and Salem. Stock suffering badly, chiefly from rinderpest, in Tinnevelly, Malabar, Tanjore, and Anantapur. Prices rising in seven districts, falling in seven, and stationary in others. Prices of all grains rose in Ganjam: 1,478 deaths from cholera in that district. Labourers employed last day of week,—on Rushikulya works, 4,986; Gopalpore Canal, 2,345; Ghat Roads, 1,168. Average daily number on drinking-water tanks and wells, 6,222; on minor irrigation and other works, 5,282. Number on gratuitous relief on 15th, 8,848. No exact information regarding stocks of grain; but judging from special weekly and fortnightly reports, they are believed to be fair. General prospects favourable and beginning to improve in Ganjam.

Bombay.—*For week ending 26th June.*—Rain throughout Presidency Proper and in Karachi, but insufficient in parts of Ahmedabad, Kaira, Broach, Surat, Khandesh, Nasik, Poona, Ahmednagar, Sholapur, Satara, Belgaum, Dharwar, and Kathiawar, and sowing therefore retarded in many places. Sowing progressing in parts of Surat, Thana, Poona, Satara, Bijapur, Dharwar, and Kanara. Young crops good in Colaba, Poona, Sholapur, Belgaum, Kanara, and Baroda, and cotton flourishing in Shikarpur. Transplantation progressing in Poona. *Rati* blight in Mirpur Botoro in Karachi district. Locusts appeared in parts of Karachi, but no damage done. Fodder scarce in Khandesh and in parts of Guzerat, Karachi, Nasik, Poona, Ahmednagar, and Dharwar. Water scarce in parts of Khandesh, Ahmednagar, and Dharwar.

Bengal.—*For week ending 25th June.*—Heavy and general rain during the week. A break is now desirable. Cultivation is proceeding satisfactorily. Paddy and all *bhadoi* sowings are in progress, and the early sown paddy and jute crops are coming up well. Sugarcane, indigo, and all other standing crops have improved by the rain and are now promising. Prices remain steady and high throughout the Province. In the affected districts of Durbhanga, Muzaffarpur, and Champarun common rice is quoted at 12½ seers, 12 seers, and 11 seers per rupee, respectively. In the Sonthal Pergunnahs district test relief works are still going on. Distress continues in the Contai sub-division of Midnapore, and is also reported from the Orissa Tributary Mehals.

North-Western Provinces and Oudh.—*For week ending 26th June.*—Rain has fallen more or less generally over the Provinces, but its distribution has been very unequal: Gorakhpur reporting 9·5 inches, and none in Benares. In Meerut rain is wanted for the area already sown. Ploughings and sowings for the *kharif* are everywhere in progress. Markets are well supplied, though prices have risen in Lucknow, Benares, Ballia, Farukhabad, Sitapur, Kumaun, and Meerut.

Punjab.—*For week ending 26th June.*—Rain has fallen in most districts. Prices rising in Jullundur and Rawalpindi; falling in Shahpur; unsettled in Peshawar; and stationary elsewhere. Ploughings for and sowings of *kharif* in progress. Some *rabi* crops are still uncleaned in certain districts. More rain wanted for *kharif* sowings in Hissar, Delhi, Sialkote, and Shahpur. Standing

crops in good condition. Stock-cattle are reported healthy. Pasturage or fodder sufficient throughout the Province.

Central Provinces.—*For week ending 26th June.*—Good rain has fallen in northern districts, and sowings are progressing favourably, they are somewhat retarded in the south for want of rain. The fall has been moderate in the eastern districts, but enough for sowing.

Burma.—*For week ending 22nd June.*—The rainfall was heavy in most districts throughout Burma. The food-supply is sufficient. Cattle-disease is still prevalent in some of the Lower Burma districts, and is reported to be prevalent in some of the Upper Burma districts. In Lower Burma the fluctuations in the price of paddy are very slight. In Upper Burma a slight rise is noticeable in Shwebo and Kyaukse, in other districts the price is stationary.

Assam.—*For week ending 26th June.*—Weather seasonable. Sowing of winter rice continues. Reaping of summer rice commenced. Prospects of tea good, except in Cachar, where red spider prevalent.

Mysore and Coorg.—*For week ending 26th June.*—Rainfall good in parts of Kadur and Shimoga districts in Mysore, elsewhere scanty. Standing crops good, except in Mysore district. Sowing operations continue in parts, but more rain is wanted in Bangalore, Kolar, and Mysore districts. No material change in prices.

Light intermittent rains in Coorg during the week. Health indifferent.

Berar and Hyderabad.—*For week ending 26th June.*—Weather warm and cloudy in Berar. Average rainfall fair. Cotton sowing in progress. Fodder insufficient. Agricultural stock good. Prices stationary.

Some rain during the week in Hyderabad. *Kharif* sowings in progress. Scarcity of fodder still felt. Prices stationary.

Central India.—*For week ending 26th June.*—Agricultural operations started in Baghelkhand and Goona Agencies. Condition of pasturage slightly improved in Bundelkhand. Prices of food-grains rising in Bundelkhand and Neemuch. Rain fairly general throughout Central India, but Neemuch and Western Malwa still report fall insufficient.

Rajputana.—*For week ending 26th June.*—Rainfall in some States. Agricultural operations progressing generally. Agricultural stock poor in Meywar and Bickaneer. Pasturage or fodder sufficient, except in Marwar, Kherwara, Meywar, and Dholepore. Prices rising in Marwar, Meywar, Harowti, Kishangarh, Kerowli, and Dholepore.

Nepal.—*For week ending 20th June.*—Seasonable rain. Weather hot and cloudy. Agricultural operations are in progress. Prospects good.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

RAILWAY TRAFFIC.

No. IX OF 1889-90.

APPROXIMATE STATEMENT OF GROSS RECEIPTS AND EXPENSES OF INDIAN RAILWAYS.

N.B.—As regards the figures in column *Total Receipts from 1st April to date*, audited figures have been used as far as possible.

Latest Return received.	Railways.	Total mean length open.	Receipts for week ending 2nd June, 1888. Total.	Per mile open.	Total mean length open.	Receipts for week ending 1st June, 1889. Total.	Per mile open.	Total Receipts from 1st April to 2nd June, 1888. Total.	Per mile open per week.	Total Receipts from 1st April to 1st June, 1889. Total.	Per mile open per week.	Total increase in 1889-90.	Total decrease in 1889-90.

Irrigation.

REVENUE REPORT OF IRRIGATION WORKS IN SIND FOR 1887-88.

No. 122 I., dated Simla, the 28th June, 1889.

RESOLUTION—By the Government of India, Public Works Department.

Read—

Letter from the Government of Bombay, No. 56 W. I.—783, dated 29th April 1889, submitting the Revenue Report of the Irrigation Department in Sind for 1887-88, with a Memorandum by the Commissioner in Sind and the Resolution of the Government of Bombay on the subject.

The Irrigation system of Sind consists of a great network of canals led off from the Indus, watering a country which is almost rainless and devoid of wells, and which but for these canals would produce hardly any crops, except in basins flooded by the spill of the river. It also includes a system of embankments whose object it is to shut in the flood waters of the river and prevent its spill. But though these canals and embankments practically constitute one combined system, managed indiscriminately by the same engineering and collecting staff, they are distinguished for account purposes into four classes according to the nature of the funds employed in their construction. In the first class, Major Works, are four canals constructed from Loan Funds; in the second, Minor Works for which Capital and Revenue Accounts are kept, are seven canals constructed from Revenue. The rest of the canals fall into the third class, Minor Works for which only Revenue Accounts are kept, having for the most part been constructed from Revenue in earlier years before a careful system of Capital Accounts was started. The fourth class, Agricultural Works, consists chiefly of the embankments in Upper Sind, which are less closely connected with irrigation than with the protection of the country and the retention of the river in its proper course. Few of these canals are entirely new, though all have been greatly improved under British rule. In order to shew what credit is due to the capital expended on them, a calculation has been made of the earnings of the first two classes before improvement; and this sum is deducted from the figures which shew what the financial returns of those canals are. This amount has been fixed for the present at Rs. 4,03,007; but no similar allowance has been made on the other side for the former average cost of maintenance and collection.

2. The main features of the year under review were that the inundation of 1887 was a poor one. The river rose late and fell early; and though it rose to a height at Bukkur which, with one exception, was the highest recorded, it only remained for one day at this height. The general results of the year were nevertheless very satisfactory on the whole. The area irrigated was larger by 56,464 acres than in the previous year; the collections were greater by Rs. 1,06,270. The assessments or gross earnings, including actual miscellaneous receipts, were greater by Rs. 1,26,032; but the expenditure increased, by Rs. 1,68,173. Thus the net earnings of the canals fell off by Rs. 42,141, or about 2 per cent. of the entire net earnings of the Canal system.

3. The Irrigation system was increased by three miles of canals and eight miles of embankments constructed in the Eastern Nara district during the year 1887-88. It consists now of 5,827 miles of canals and 610 miles of

embankments. Capital Accounts are kept of the works on which expenditure is shewn in the following statement; they comprise in all 2,552 miles of canals and 236 miles of embankments:

	Number of Works.	During the Year 1887-88.			To End of the Year 1887-88.		
		Direct.	Indirect.	Total.	Direct.	Indirect.	Total.
		Rs.	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*
MAJOR WORKS.							
Productive Public Works . . .	4	1,87,226	6,615	1,93,841	80,34,617	2,76,461	83,11,078
MINOR WORKS.							
Works of which Capital and Revenue Accounts are kept.	7	...	...	...	30,75,900	1,35,284	32,11,184
TOTAL .	11	1,87,226	6,615	1,93,841	1,11,10,517	4,11,745	1,15,22,262

The Capital Expenditure was chiefly on the distributaries of the Desert and Eastern Nara Canals. The estimated cost of the four Productive Works is Rs. 88,16,984, including indirect charges, so a little over five lakhs remain for expenditure. The estimates of the Minor Works aggregate Rs. 32,98,676, of which only a sum of Rs. 87,492 is still unspent.

4. The following statement shews the actual collections and expenditure on the first two classes of Canals in the year 1887-88:

Canal.	Capital Outlay to end of 1887-88.	Gross Revenue. Irrigation.		Gross Revenue. Plantations and Miscellaneous Refunds.	Gross Revenue. Total.	Working Expenses. Direct.	Working Expenses. Indirect.	Working Expenses. Total.	Net Revenue.	Deduct Average Receipts before improvements.	Balance or Net Revenue due to Capital Expenditure.	Percentage of Net Revenue on Capital Outlay.
		Government Land.	Jaghir Land.

TOTAL FOR 1886-87	1,13,28,421	18,43,767	1,11,385	28,013	19,83,195	6,58,129	18,145	6,76,274	13,06,921	4,03,007	9,03,914	7·97

NOTE.—These figures, which are compiled from Statements I B. and I C., combined with Table VIA., differ from the Finance Accounts in the following respects.—The Capital Outlay in column 2 includes Indirect charges, which are not shewn in the Finance Accounts. The indirect charges in column 8, which are mainly a calculation of liability for leave and pension allowances, are not shewn in the Finance Accounts. The figures in column 7 (Direct Working Expenses) do not agree with the Finance Accounts in that they include Collection charges in the Civil Department, which in the Finance Accounts are deducted from Indirect Revenue. Of the Receipts in column 3, which are shewn in the Accounts under the head "Indirect Receipts," only that portion which pertains to Major Works after deducting Average Receipts before improvements (column 11), is shewn in the Finance Accounts.

The net revenue of the Major Works is Rs. 62,547 greater, and that of the Minor Works Rs. 39,948 less, than in the previous year, the aggregate return on capital being 8·04 as compared with 7·97 per cent.

5. The third class of canals, chiefly in the Hyderabad and Karachi districts, for which only Revenue Accounts are kept, comprise 3,275 miles of channels and 374 miles of embankments. These gave the following results in 1887-88:

	Gross Revenue.	Working Expenses.	Net Revenue.
Direct	(a) 44,739	10,02,394	...
Indirect	17,71,973	...	...
TOTAL 1886-87	18,16,712 18,05,069	10,02,394 8,47,630	8,14,318 9,57,439

(a) NOTE.—This figure differs from that shewn in the Finance Accounts (Rs. 44,979) by Rs. 240, due to an adjustment of that amount on account of an error in the preliminary Canal return received in the Examiner's Office by transfer from Works for which Capital and Revenue Accounts are not kept to Works for which Capital and Revenue Accounts are kept.

6. The fourth class, called Agricultural Works, cost Rs. 1,12,491 for extensions, maintenance, and establishment; and a revenue of Rs. 7,212 was realised.

7. Thus the actual gross revenue collected and working expenses incurred in 1887-88 on the Irrigation Works in Sind as compared with that for the preceding year were—

	Gross Revenue.		Working Expenses.	
	1887-88.	1886-87.	1887-88.	1886-87.
(1) Major Works	7,79,977	7,10,178	2,43,023	2,35,771
(2) Minor Works of which Capital and Revenue Accounts are kept	13,00,479	12,73,017	5,07,913	4,40,503
(3) Minor Works of which Revenue Accounts only are kept	18,16,712	18,05,069	10,02,394	8,17,630
(4) Agricultural Works	7,212	9,846	1,12,491	1,73,744
TOTAL	39,04,380	37,98,110	18,65,821	16,97,648

8. But the figures, which shew the amount paid by the canals into the Government Treasury during the year, do not fully express the gross earnings of the works from a commercial point of view. There is a further sum, known as the "difference of assessment in Jaghir lands," which has to be added. This sum is the difference between the assessment actually made on these lands and that which would be made were they not specially favoured at the expense of the canals on account of their tenure. The "difference of assessment on Jaghir lands" in 1887-88 was Rs. 4,00,830, divided thus:

	Rs.
Class (1)	70,750
Class (2)	1,73,186
Class (3)	1,56,894

If the Net Revenue (given in column 12 of the statement in paragraph 4) be increased by the amounts belonging to classes (1) and (2), it will be found that the Irrigation Works in Sind of which Capital Accounts are kept paid in 1887-88 more than ten per cent. on their Capital cost.

Indeed, it is doubtful whether the works might not fairly be credited with even higher profits; for the "working expenses" include the repairs of the embankments in Sind. And these, although they are, in many cases, essential for the protection of irrigated lands, also serve other useful purposes.

9. The major irrigation works in Sind, that is, the four Productive Public Works, shew, collectively, a net profit to the State up to the end of the year of Rs. 7,26,982; that is, the total net revenue up to the end of the year has exceeded the interest charges by that amount. This result is obtained by the profitable working on three out of the four systems; but one, the Eastern Nara Canal, has at present a deficit of Rs. 8,57,285. Commencing from 1887-88, a reduction in the deficit has been made; and there is every reason to expect that further reductions will annually occur.

10. The foregoing paragraphs refer to the revenue collected during the year.

In the following statement, which has been prepared from Tables III and VI and Form I-C., columns 2, 3, 8, and 9 shew the assessments of the year on account of irrigation alone, omitting miscellaneous receipts from plantations, &c. In order to obtain the true rate at which the charge for water is assessed on the irrigated acre, columns 4 and 10 have been added, which shew the amount assessed on Jaghir land but remitted to the Jaghirdars.

	1886-87.							1887-88.						
	Water Share of Net Revenue.	Hakaba.	Difference on Jaghir Assessments.	Total.	Area irrigated.	Rate per acre.		Water Share of Net Revenue.	Hakaba.	Difference on Jaghir Assessments.	Total.	Area irrigated.	Rate per acre.

Minor Works of which Capital and Revenue Accounts are not kept	17,40,688	27,352	1,32,036	18,99,976	818,089	2·32		17,67,461	26,231	1,56,894	19,50,586	821,110	2·37	
TOTAL	35,79,847	1,23,598	3,50,214	40,53,659	1,809,381	2·24		37,13,333	1,18,295	4,00,830	42,32,458	1,867,274	2·26	

The Hakaba assessments are taken from Form I.-C. and Table D., page 4 of the report. It is uncertain whether the figures given under this head under Minor Works for which Capital and Revenue Accounts are not kept are quite accurate; they are nowhere separately given in the Report.

11. The areas irrigated in 1887-88 by the different classes of works are shewn in the following statement as compared with those of the three previous years:

	1887-88.			1886-87.	1885-86.	1884-85.
	Government Lands.	Jaghir Lands.	Total.			
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
Productive Public Works . .	373,895	72,444	446,339	409,171	402,004	392,388
Minor Works (of which Capital and Revenue Accounts are kept)	526,394	73,431	599,825	582,121	541,070	592,448
Minor Works (of which Capital and Revenue Accounts are not kept)	749,498	71,612	821,110	818,089	790,973	791,355
Agricultural Works . .	3,840	...	3,840	5,269	5,872	3,984
TOTAL . .	1,653,627	217,487	1,871,114	1,814,650	1,739,919	1,783,173

The area irrigated is greater than that of the previous year, which was the largest on record except that of 1878-79. The increase was distributed over the majority of the works, but was largest on the Eastern Nara Canals. There was a decrease in Irrigation on the Begari and Ghar Canals and on some few of the other works. The decrease on the Begari Canal was due to the defective supply in June, caused partly by the low inundation of the year, and partly by the defective supply in a channel called the Waddu Dhand.

12. The following statement shews the working expenses, including indirect charges, of the year under review, compared with the corresponding figures of the previous three years:

	Working Expenses.	Rate per acre irrigated.	Working Expenses.		
	1887-88.		1886-87.	1885-86.	1884-85.
MAJOR WORKS—CLASS (1).	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*
Productive Public Works—					
Desert Canal	50,925	0·57	48,915	39,992	41,642
Unharwah	17,201	0·58	15,935	9,870	...
Begari Canal	85,021	0·53	76,683	78,861	83,054
Eastern Nara Canals...	89,876	0·52	94,238	90,229	88,964
TOTAL PRODUCTIVE PUBLIC WORKS . .	2,43,023	0·54	2,35,771	2,18,952	2,16,660

	Working Expenses.	Rate per acre irrigated.	Working Expenses.		
	1887-88.		1886-87.	1885-86.	1884-85.
MINOR WORKS—CLASS (2) *of which Capital and Revenue Accounts are kept.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*
Sukkur Canal	44,480	0·61	30,444	41,416	32,791
Ghar Canal	1,64,140	0·98	1,69,591	1,98,721	1,88,385
Mehrabwah	9,386	0·72	15,420	9,562	17,581
Alibhar Kacheri Canal	6,125	0·92	5,936	7,938	8,822
Marak Great Canal	18,559	0·45	16,207	16,477	19,543
Surfrazwah	12,174	0·51	15,990	11,466	12,334
Fuleli Canal	2,53,049	0·91	1,86,915	1,95,600	2,12,186
Total Minor Works of which Capital and Revenue Accounts are kept . . .	5,07,913	0·84	4,40,503	4,81,180	4,91,642
Grand Total Works of which Capital and Revenue Accounts are kept	7,50,936	0·71	6,76,274	7,00,132	7,08,302
Rate per acre irrigated	...	0·71	0·68	0·74	0·71
(CLASS 3.)					
Minor Works of which only Revenue Accounts are kept	10,02,394	1·22	8,47,630	8,13,623	8,37,165
Rate per acre irrigated	...	1·22	1·04	1·02	1·05

Indirect charges are not shewn in the case of Works of the third class.

The average rate per acre of working expenses on all the three classes of canals has been—

	1887-88.	1886-87.	1885-86.	1884-85.
Area	1,867,274	1,809,381	1,734,047	1,779,189
Amount	1,753,330	1,523,904	1,518,755	1,545,467
Rate per acre of working expenses. . .	0·93	0·84	0·87	0·86

For the Agricultural works the figures are—

	Working Expenses.	Working Expenses.		
	1887-88.	1886-87.	1885-86.	1884-85.
	Rs.	*Rs.*	*Rs.*	*Rs.*
Working Expenses	1,12,491	1,73,744	63,238	55,935

13. It will be noticed that the working expenses of all the three classes of canals have increased in the year under review. This increase is explained generally by the Superintending Engineer (paragraph 13, page 7) in the following words:

"The excess expenditure was rendered necessary by the short amount of grants in previous years and the consequent decay of the canals. However, it is a matter of congratulation that the expenditure well paid for itself, and there is no doubt that a much larger expenditure on canals in Sind would be much more than covered."

The Government of Bombay does not admit the accuracy of this statement. The matter is ably dealt with in paragraphs 14 to 18 inclusive of the Resolution of that Government. It is shewn that the allusion to the decay of the canals

is refuted by evidence in the report itself, and the following extract gives the opinion of the Government of Bombay:

"Government concur in the advantage financially of a liberal expenditure on canals in Sind; but the question as to the specific direction in which outlay may be made most productive is one requiring very careful consideration. As regards clearances, it is observed that the revenue is dependent principally on the character of the inundation and not on actual bed clearances; and it is apparent that money spent in any one season on extraordinary bed clearances of the canals running much below the level of the country might be almost, if not entirely, wasted, if the following inundation was a favourable one. This is exemplified by the reports, which shew that in 1886-87, after a good inundation and comparatively small expenditure, there were no complaints; whereas in 1887-88, after a poor inundation and large expenditure, there are demands for increased outlay. The outlay beyond a certain point is, in fact, only an insurance against an unfavourable inundation level; and it is a question if better *average* results would not be obtained by improvements in alignment, width, &c., rather than by extra clearance outlay, except perhaps on the tails of some of the canals, *e.g.*, the Fuleli, which require thorough clearance, as well as improvements."

The Government of India concurs generally in this opinion. With regard to the conclusion that, provided financial requirements admit, an average of nine lakhs of rupees should be annually devoted to the maintenance and repairs of these canals, the reply of the Bombay Government is awaited to the call for information on the subject of the cost of clearances in Sind which was made in the course of 1888. On the 30th October 1888 the Government of Bombay reported that that information was ready and would be forwarded at once; but it has not yet been received.

14. The details of the working expenses of works of Classes 1 and 2 for which Capital and Revenue Accounts are kept are as follows:

	1887-88. Rs.	1886-87. Rs.
Extensions and Improvements	17,552	25,036
Maintenance and Repairs	4,34,190	3,52,520
Establishment	2,81,556	2,78,219
Tools and Plant	681	2,354
Indirect Charges	16,957	18,145
TOTAL	7,50,936	6,76,274

The charge for Establishment is made up of the following items:

	1887-88. Rs.	1886-87. Rs.
Share of Direction and Accounts	31,946	34,855
Executive Officers	89,189	94,770
Establishment under Civil Officers	1,60,421	1,48,594
	2,81,556	2,78,219

The Establishment charges are distributed in the same manner as those in the Bombay Presidency (*vide* paragraph 9 of Government of India Resolution No. 30-I. of 22nd February 1889). The establishment under Civil Officers is a share of the cost of Civil Establishments employed in collecting revenue, and is calculated at 10 per cent. on the actual revenue collected in that department.

15. The Commissioner in Sind, in paragraphs 38 to 40 of his memorandum No. 399 of 31st January 1889, refers to the expenditure on Working Expenses. He points out that the establishment charged to "Works and Repairs" is more costly than the regular establishment, which is accounted for under its proper head. The comparison made by the Commissioner is not quite an accurate one, as he omits to notice that a considerable proportion of the charge for permanent establishment is properly chargeable to "Revenue management" and not to "Maintenance." However, there can be no doubt that the charges for "work establishment" are most abnormally large, being, for the works for which Capital Accounts are kept, apparently more than half the total charges to "Works." This matter appears to call for the early attention of the Government of Bombay.

26 JUL 89

16. The remissions of Revenue on Government lands were Rs. 61,937, less than half those of the previous year, and considerably below the average of former years. The unrealized balance on account of Government lands were considerably decreased during the year. The amount outstanding for 1886-87 was 92,055; that for 1887-88, only Rs. 42,597. The unrealized balance for Jaghir lands, however, increased from Rs. 90,289 to Rs. 94,813. In this case the largest arrears are in Khelat: the question of the assessments and collections in this territory is now under the consideration of the Government of India.

17. The report is accompanied by a memorandum by the Commissioner in Sind, which contains some important suggestions concerning the following points:

(1) The necessity of early clearances and early openings of the canals.

(2) The danger of canalising the Indus.

(3) The injury done by keeping out spill water, which used to fertilise the land. If this is set against the advantages of the canals, the result is a less and not a greater cultivated area.

(4) Absorption of water by landholders living near the heads of the canals.

(5) Payment for the use of surplus water let out over grazing lands.

(6) Fuller information as to cultivation and crop areas on each canal, and as to expenditure on maintenance.

The Government of Bombay has decided to refer the suggestions of the Commissioner for the opinion and remarks of the Superintending Engineer and the Examiner of Public Works Accounts. The Government of India will be glad to learn the result of these references.

18. The Government of India has under separate consideration the question of the very late date on which the Revenue Report of Irrigation operations in Sind is invariably submitted. It is noticed that in the forwarding letter the Government of Bombay again mentions the time taken in printing as one of the chief causes of delay. This reason is not one to which much weight should be attached, as the amount of printing is trifling.

ORDER.—Ordered, that a copy of this Resolution be forwarded to the Government of Bombay in the Public Works Department for information.

Ordered also, that a copy of this Resolution, of the Report, and of the Resolution by the Government of Bombay, be forwarded for information to the Governments noted in the margin in the Public Works Department; and that a copy of this Resolution, of the Report, and of the Resolution by the Government of Bombay, be forwarded to the Department of Finance and Commerce, and to the Revenue and Agricultural Department, for information.

Madras; Bengal; the North-Western Provinces and Oudh; and the Punjab.

Ordered further, that a copy of this Resolution, the Resolution by the Local Government, and the Memorandum by the Commissioner in Sind, together with the General Abstract of Financial Results, be published in the Supplement to the *Gazette of India*; and that copies of this Resolution be forwarded to Her Majesty's Secretary of State for India.

R. HOME, *Colonel, R.E.,*
Deputy Secy. to the Govt. of India.

C

Enclosure to Public Works Department Resolution No. 122-I. of 1889.

RESOLUTION—*By the Government of Bombay, Public Works Department.*

No. 56 W. I.—783, dated 29th April 1889.

Read—

Letter from the Superintending Engineer for Irrigation in Sind, No. 3861, dated 20th December 1888.—Submits the Revenue Report of Irrigation Works in Sind for 1887-88, with the usual tables, charts and index map of Sind, and also a comparative statement showing a series of readings of the gauges at Bukkur and Kotri.

Memorandum from the Commissioner in Sind, No. 399, dated 31st January 1889.—Forwards the above with remarks.

Letter from the Superintending Engineer for Irrigation in Sind, No. 540, dated 11th February 1889.—Forwards an explanation of certain mistakes noticed by the Commissioner in Sind in the Tables attached to the Revenue Report for 1887-88. Submits fresh copies of Tables IV and VIA, which are now correct.

Telegram from the Superintending Engineer in Sind, dated 4th April 1889 :—"Discrepancy, Government Resolution 812, due to write off. Alter column 2, gross revenue to Rs. 34,94,180 and collection charges to Rs. 3,42,170."

Telegram from the Superintending Engineer in Sind, dated 4th April 1889 :—"Please adopt Examiner's figures of Revenue Account."

Telegram from the Superintending Engineer in Sind, dated 4th April 1889.

Telegram from the Superintending Engineer in Sind, dated 6th April 1889.

RESOLUTION.—The inundation of 1887 is characterised by the Superintending Engineer as a very poor one: the river rose late and fell early, and, though the maximum height at Bukkur was the highest on record, except that of 1882, it only remained at that height for one day—a most unusual incident. The Commissioner in Sind describes it as somewhat irregular and deficient, but says the season was on the whole favourable, as the rainfall was seasonable and the prices of produce ruled unusually high.

2. The mileage of canals and river embankments was 5,827 and 610 miles respectively, or practically the same as in the previous year.

3. The agricultural operations and financial results of the year are the best on record. The area of cultivation on the canals was 1,871,114 acres, including 217,487 acres of jaghir: the irrigation share of net consolidated assessment was Rs. 37,20,291, and the total canal revenue (assessed) was Rs. 38,82,426, as follows:

Treated in the Accounts as Indirect Revenue.

	Rs.
Consolidated land and water assessments	41,95,588
Deduct—Remissions	61,937
Net consolidated assessments	41,33,651
Deduct—Land share	4,13,360
Irrigation or water share of net consolidated assessments	37,20,291

Revenue accounted for as Direct Receipts.

	Rs.	
Assessments on jaghir cultivation	1,18,295	
Deduct—Remissions	1,450	
		1,16,845
Miscellaneous Receipts (actuals)		45,290
		38,82,426

4. The expenditure on maintenance and repairs was Rs. 13,02,617 and that on extensions and improvements Rs. 2,04,096. The charge debited to the canals for share of collection charges incurred in the Revenue Department was Rs. 3,42,170. The total charges were thus Rs. 18,48,883. This is exclusive of a charge of Rs. 16,957 under Indirect charges (Leave and Pension Allowances) included in the Examiner's statement showing the Financial Results of the works for which Capital Accounts are kept.

The outlay incurred on Capital Account during the year amounted to Rs. 1,93,841. To this there is no allusion anywhere in the report. It was incurred wholly on the four works classed as Major Works.

5. Comparing the results of the year with those of the previous year (one of 'very good' inundation), there was an increase in the area of cultivation of 56,464* acres. Of the increase on the Government lands, 29,523 acres was in the rabi area. The irrigation share of net consolidated assessments shows an increase of Rs. 1,30,792, of which Rs. 55,806 was in the rabi assessments.

	1886-87.	1887-88.	Difference.
* Government	1,593,666	1,653,627	+59,961
Jaghir	222,984	217,487	−3,497
Total	1,814,650	1,871,114	+56,464

The total canal revenue (assessed) shows an increase of Rs. 1,45,814, as follows:

	Rs.
Increase in net consolidated assessments	1,30,792
Increase in net assessment on jaghir cultivation	18,189
	1,48,981
Deduct—Decrease in miscellaneous receipts	3,167
Net increase	1,45,814

The increase in jaghir assessment is due to a large reduction in the remissions, which, in 1886-87, were Rs. 24,942,† as compared with Rs. 1,450 in 1887-88. Of this latter amount, Rs. 170 were on account of the previous year.

† Written off as irrecoverable in Khelat Territory.

The decrease in miscellaneous receipts is explained by the Commissioner as principally due to decreased receipts from fisheries.

6. The expenditure of the year again shows a large increase, amounting to Rs. 1,69,375, as follows:

	Outlay. 1886-87.	Outlay. 1887-88.	Increase.	Decrease.
	Rs.	Rs.	Rs.	Rs.
Extensions and Improvements	2,00,615	1,67,420	...	33,195
Maintenance and Repairs	8,27,922	10,41,501	2,13,579	...
Public Works Establishment	3,21,577	2,97,792	...	23,785
Total in Public Works Department	13,50,114	15,06,713	1,56,599	...
Revenue (collection charges)	3,29,394	3,42,170	12,776	...
TOTAL	16,79,508	18,48,883	1,69,375	...

No description is given of the works carried out from expenditure classed as extensions and improvements. This omission should be supplied in future reports. The expenditure on maintenance and repairs was largely in excess of that in the previous year, or in any previous year, and almost the whole‡ of the increase was spent on the canals themselves and not on the river embankments.

‡ 92 per cent.

It is argued from the smallness of the remissions of Government revenue (less than half those of the average of the previous six years and only 1·5 per cent. on the assessed revenue) that the canals were in excellent order, and, had this not been so, the admirable results shown for the year's cultivation and revenue would not have been realised owing to the poor inundation. From the figures given relating to cultivation on the Ghar (see paragraph 21 of this Resolution) the decrease in remissions would appear to be largely due to the flexibility of the irrigational settlement.

The charge for Public Works Establishment shows a reduction of Rs. 23,785. Including the sums debitable to Capital, the Establishment charges were—

	1886-87. Rs.	1887-88. Rs.
Capital	41,379	47,252
Revenue	3,21,577	2,97,792
	3,62,956	3,45,044

showing a net reduction of Rs. 17,912.

7. The net canal revenue (assessed) during the year was Rs. 20,33,543, as compared with Rs. 20,57,104 in 1886-87, showing a decrease of Rs. 23,561, or only 1 per cent., in spite of the heavy charges incurred. In both cases the charges for river embankments are treated as debits to revenue, though those for the bunds in Upper Sind are accounted for under Agricultural Works for which no Capital or Revenue Accounts are kept.

8. There were, it is reported, no very sweeping changes in the course of the river during 1887, but in the delta, where the river bifurcates, extensive erosion took place, and further changes seem likely.

9. The suggestion made in paragraph 24 of last year's review, in regard to distinguishing between figures showing assessments and realizations, has been followed in the tables accompanying the report, but not in those given in the body of the report. Tables A and B in paragraphs 5 and 6 both show assessments, but in the latter and again in paragraph 7 the expression "consolidated revenue" is used where "consolidated assessments" are referred to. The Table C in the latter paragraph and Table D (*a*) in paragraph 10 include the irrigation share of the net consolidated assessments and actual receipts under Hakaba—an inconvenient combination: in respect of miscellaneous receipts included in Table C, it may not be feasible to give the assessments. There is a small discrepancy in the total shown as actual realizations in Table D, as compared with the corresponding figures in Tables D (*a*) and II and III.

10. The question of the irrigation in Khelat Territory is under reference to the Government of India, and it is hoped that arrangements may be made for the systematic assessment of the lands irrigated beyond the Frontier, and for the control of remissions and the punctual realization of the revenue. It is observed that the water supply was reported as good, and that, on the basis of partial measurements, a large increase in cultivation in Khelat Territory was at one time anticipated, but the returns show a decrease. In the Finance Accounts of the year, the Examiner explains the delay in realizing the revenue in Khelat Territory as due to the removal of the Naib and his establishment by His Highness the Khan of Khelat. This is not alluded to by the Superintending Engineer.

11. The sum shown as loss to the canals by the difference between the Hakaba levied on jaghir cultivation and the assessment thereon calculated at the ordinary rates in force for Government lands, is Rs. 4,00,830, as compared with Rs. 3,80,214 in the previous year. A large proportion of this loss is on the canals in the Hyderabad District. The Commissioner observes that in some instances additional contributions in the shape of enhanced Hakaba may be possible, and the subject is engaging his attention.

12. The Table E gives a comparison between assessments and realizations of the consolidated land and water revenue (not the total revenue as stated). The total for collection should apparently be—

	Rs.
Outstandings	92,055
Net assessments of the year	41,33,651
	42,25,706

instead of Rs. 42,05,183. A similar discrepancy was remarked upon last year, and it was subsequently explained as due to deductions of remissions on account of previous years. Instructions were given that explanation regarding such discrepancies should be given in future reports, but this has not been attended to. The form of Table E should be modified to afford the information in future.

13. The remissions of the year amounted to Rs. 61,937, or Rs. 74,482 less than the previous year, and with the exception of 1881-82 were considerably lower than in any of the previous six years. This, as observed by the Commissioner, is very satisfactory: the inference drawn therefrom as regards the state of the canals and the effect of the irrigational settlement, has already been commented upon.

14. The statement made in paragraph 13 of the Superintending Engineer's report that the excess expenditure incurred in 1887-88 was rendered necessary by the short amount of grants in previous years and the consequent decay of the canals, requires some explanation. The subject was reviewed at some length in a Resolution of this Government of 25th January 1888,* which showed that ever since 1881-82 inclusive, the estimate of the requirements put forward by the Irrigation Officers in Sind had been accepted by this Government, and not only so, but that the grants actually allotted were considerably in excess of those estimates. The expenditure in 1886-87 was—

* No. 10 W. I.—188 A. of 1888.

	Rs.
Major Works	1,20,178
Minor Works	7,07,744
	8,27,922

as compared with—

	Rs.
Major Works	1,52,000
Minor Works	6,64,000
	8,16,000

the estimate of requirements framed by the Superintending Engineer in 1884. It should be noted that as regards Major Works there never has been any difficulty or restriction on

allotments, and the fact that the outlay was less than the estimate must be understood as implying that the canals of that class did not require a larger expenditure for their maintenance. It will be observed that the outlay on canals classed as Minor Works was in 1886-87 Rs. 43,744 in excess of the estimates of 1884. That this was sufficient may further be judged from the fact that no complaints as to the insufficiency of the clearance grants or as to the state of the canals were made in the Report for 1886-87. The inundation of 1886 was a very good one, and the Commissioner reported the results of the year "in all divisions were satisfactory so far as they could be controlled by the department." From the date of the enquiry ordered by the Secretary of State, or from 1881-82 to 1886-87 inclusive, therefore no complaint can hold good which would attribute any shortcomings in the state of the canals to short amount of grants in previous years, unless it is intended to imply that the estimates of requirements put forward by the then responsible officers were insufficient and that those officers were ignorant of the state in which the canals were, as the result of the expenditure which even exceeded those estimates.

As regards the year 1887-88 the Original Budget grant was—

	Rs.
Major Works	1,24,000
Minor Works	7,16,000
	8,40,000

or, as regards Minor Works, still considerably in excess of the estimate of requirements framed in 1884. In January 1887, before the issue of the Budget for 1887-88, the Superintending Engineer in Sind represented that this grant would be insufficient, and referring to a report he had written in February 1886 on the financial question of provincializing the works in Sind then under consideration, urged that the grant for repairs in 1887-88 should be increased to the amount therein estimated as the basis for such an arrangement, namely 9 lakhs. He further then reported that he had been sanctioning clearance estimates on the supposition that under the new Provincial contract the full amount of 9 lakhs would be granted for 1887-88. In other words, he had in 1886-87 been forestalling the grant for 1887-88 and in consequence in October 1887 his successor represented that only Rs. 1,34,429 were then in hand for the entire Province to commence work with and carry on up to 31st March 1888. He represented a further grant as absolutely necessary partly on these grounds and partly on the grounds that owing to the numerous rises and falls of the river during the previous season (1887) the canals were more silted than usual. A large additional grant was sanctioned on this representation, but it is evident from the foregoing explanation that it was necessitated partly to put a stop to the system of forestalling grants and partly by reason of special conditions resulting from the character of the inundation of the year 1887.

15. Further the allusion to the decay of the canals is refuted by evidence in the report itself, which shows that the canals were in excellent working order, and that, had this not been so, the revenue would have been affected by the poor inundation, and not have increased in the satisfactory way it is shown to have done. Moreover, if there was any such decay, it was the duty of the Superintending Engineer to have reported it at once. This was not done, neither is there any allusion to the matter, important as it is, in any of the previous Revenue Reports, and Government must regard the expression as one entirely unsupported by any evidence.

16. Government concur in the advantage financially of a liberal expenditure on canals in Sind, but the question as to the specific direction in which outlay may be made most productive is one requiring very careful consideration. As regards clearances it is observed that the revenue is dependent principally on the character of the inundation and not on actual bed clearances, and it is apparent that money spent in any one season on extraordinary bed clearances of the canals running much below the level of the country might be almost, if not entirely, wasted, if the following inundation was a favourable one. This is exemplified by the reports which show that in 1886-87, after a good inundation and comparatively small expenditure, there were no complaints, whereas in 1887-88, after a poor inundation and large expenditure there are demands for increased outlay. The outlay beyond a certain point is, in fact, only an insurance against an unfavorable inundation level, and it is a question if better *average* results would not be obtained by improvements in alignment, width, &c., rather than by extra clearance outlay, except perhaps on the tails of some of the canals, *e.g.*, the Fuleli, which require thorough clearance as well as improvements.

17. The Commissioner, in paragraph 8 of his report, alludes to 9 lakhs of rupees a year, which he, the late Commissioner, and late Superintending Engineer, as well as the present Superintending Engineer, agree in considering essential for the ordinary clearance and maintenance of Sind canals. This is the estimate of February 1886, above referred to, and the amount is comprised as follows:

	Rs.	Rs.
Major Works		1,31,000
Minor Works—		
Canals	6,46,000	
Bunds	1,23,000	
		7,69,000
		9,00,000

Transfers from the head Major Works to Minor Works are not allowable, and the foregoing statement is in excess of the actual demands under the head Major Works, as submitted in the Superintending Engineer's Budget for the last two years, which demands have been complied with in full:

The grant for 1888-89 was—

	Rs.
Major Works	1,24,000
Minor Works	7,99,000
	9,23,000

That for 1889-90 is—

	Rs.
Major Works	1,24,000
Minor Works	7,69,000
	8,93,000

The latter figures were communicated to the Superintending Engineer on 19th January last, the earliest possible date.

18. Government are not prepared to admit that the possible fluctuations in Budget grants under this head are such as to interfere with the preparation of a well-considered programme for the season's operations, but if it will in any way aid to such an end, it may be assumed that the grant will, as recommended, not be less in the ensuing five years than rupees 9 lakhs, of which Rs. 1,31,000 is for Major Works, the actual grant under that head being fixed according to the detailed Budgets.

19. The question of adjusting a portion of the cost of the maintenance of the river embankments in Upper Sind to the debit of the Railway is an accounts one. It is undoubtedly incorrect that the whole amount should be treated as a charge against the canal revenue, but in fact this is done in determining the net canal revenue of the Province for comparative purposes only. The outlay on the Kashmor and Kasimpur bunds in Upper Sind is accounted for under the head Agricultural Works for which no Capital or Revenue Accounts are kept. On the other hand, it is wrong that special repairs to protective embankments should, when required, be executed at the expense of the canals. This, however, is a matter which rests entirely with the Superintending Engineer, who, if special grants for embankments not solely for the protection of canal revenue are required, should represent it, and not sanction them by re-appropriation from the grants for canals. Such re-appropriations involve a transfer from Revenue Account Works to Agricultural Works, and it will perhaps be advisable to make a rule prohibiting such transfers without the previous sanction of Government. The question is moreover not of the importance that might be supposed from the figures given in Table G (*a*), as, for instance, out of the total of Rs. 1,82,743, shown as expenditure on repairs to bunds in 1887-88, Rs. 89,585 was on embankments in Lower Sind, purely for the protection of canal revenue, and therefore presumably just as essential as canal clearances.

20. The financial result of the four Major Works for the year are as follows:—

	During the year.			To end of the year.		
	Direct.	Indirect.	Total.	Direct.	Indirect.	Total.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Major Works—Capital Outlay	1,87,226	6,615	1,93,841	30,34,617	3,76,461	33,11,078
Gross Revenue	78,491	6,73,186	7,51,677	9,51,747	92,86,601	1,02,38,348
Working Expenses	2,36,607	6,416	2,43,023	45,99,982	1,66,168	47,66,150
Net Revenue		5,08,654			54,73,198	
Simple Interest		3,17,639			47,45,216	
Net profit after paying Interest.		1,91,015			7,26,982	

In the previous year the net profit was Rs. 1,36,908, and the figures thus show an improvement of Rs. 54,107, or nearly 40 per cent. All the works show an increase except the Begari Canal, which suffered from a deficiency in the supply in the Dhand (side channel or back water) from which it is fed; its working expenses too were heavier than in the previous year. The increase was largest on the Eastern Nara Works, which show satisfactory progress.

The comparison with figures of the previous year is as follows:

	1886-87. Rs.	1887-88. Rs.
Gross Revenue	6,81,883	7,51,677
Working Expenses	2,35,776	2,43,023
Net Revenue	4,46,107	5,08,654

21. The Minor Works for which Capital and Revenue Accounts are kept show the following results, as compared with the previous year:

	1886-87. Rs.	1887-88. Rs.
Capital Outlay	32,11,184	32,11,184
Gross Revenue	8,98,310	9,25,791
Working Expenses	4,40,503*	5,07,932†
Net revenue	4,57,807	4,17,859

* Includes Rs. 11,385 for indirect charges.
† Includes Rs. 10,541 for indirect charges.

The increase in Gross Revenue was principally on the Fuleli and Sukkur Canals: on the Ghar, on the other hand, there was again a large falling off, due to the lower assessment on jowari crops, which, owing to the deficient inundation, extensively replaced rice. The area of the latter crop fell from 128,889 acres in 1886-87 to 44,539 acres in 1887-88, while that of the former increased from 28,230 to 81,089 acres. The increase in Working Expenses was principally on the Sukkur Canal and Fuleli: on the former Rs. 14,036, and on the latter Rs. 66,134.

22. The class "Works for which only Revenue Accounts are kept" gave the following results:

	1886-87. Rs.	1887-88. Rs.
Gross Revenue	18,05,069	18,16,712
Working Expenses	8,47,630	10,02,394
Net Revenue	9,57,439	8,14,318

23. Under the head "Agricultural Works for which neither Capital nor Revenue Accounts are kept," which includes the Kashmor and Kassimpur Bunds in Upper Sind, the figures of the year compare with those of the previous year as follows:

	1886-87. Rs.	1887-88. Rs.
Outlay—		
Original Works	1,07,883	53,085
Repairs	37,858	40,106
Establishment and Tools and Plant	27,790	19,595
Collection charges	965	696
Total	1,73,744	1,12,491
Receipts—		
Direct	194	254
Indirect	9,652	6,958
	9,846	7,212

The decrease in expenditure is on the Loop Bund near Kashmor. The decrease in revenue is not explained, but is probably due to the deficient inundation.

24. Recapitulating the results of the year under all heads, they were as follows:

	Gross Revenue.	Working Expenses.	Net Revenue.
	Rs.	Rs.	Rs.
Major Works	7,51,677	2,43,023	5,08,654
Minor Works—			
Works for which Capital and Revenue Accounts are kept	9,25,791	5,07,932	4,17,859
Works for which only Revenue Accounts are kept	18,16,712	10,02,394	8,14,318
	34,94,180	17,53,349	17,40,831
Agricultural Works	7,212	1,12,491	—1,05,279
	35,01,392	18,65,840	16,35,552

The figures under Gross Revenue exclude the average net revenue before improvement on the Works for which Capital and Revenue Accounts are kept. The deduction on this account was Rs. 4,03,007, and with this addition the total is Rs. 39,04,399, as follows :

	Rs.
Irrigation share of collections of year, Table E. . . .	37,46,333
Hakaba, Table III	1,12,503
Miscellaneous Receipts, Table III.	45,290
	39,04,126

This discrepancy of Rs. 273 is not explained.

Again under Working Expenses, the figures differ from those in previous portions of the report by reason of the inclusion here of Rs. 16,957 for indirect charges (Leave and Pension Allowances). The following is an analysis of the total expenditure other than Capital during the year :

	Major Works.	Minor Works.			Total.
		Works for which Capital and Revenue Accounts are kept.	Works for which only Revenue Accounts are kept.	Agricultural Works.	
Extensions and Improvements.	Rs.	Rs.	Rs.	Rs.	Rs.
Works { Canals	...	17,552	4,697	1,454	23,703
Works { Bunds	...	...	93,136	50,581	1,43,717
Establishment and Tools and Plant . .	...	4,226	21,729	10,721	36,676
Total . .	...	21,778	1,19,562	62,756	2,04,096
Maintenance and Repairs.					
Repairs { Canals	1,21,620	3,12,570	4,23,941	608	8,58,739
Repairs { Bunds	...	...	1,43,186	39,557	1,82,743
Public Works Establishment and Tools and Plant	46,330	71,260	1,34,652	8,874	2,61,116
Refunds of Revenue	...	19	...	...	19
Total Maintenance and Repairs . .	1,67,950	3,83,849	7,01,779	49,039	13,02,617
Total in Public Works Department . .	1,67,950	4,05,627	8,21,341	1,11,795	15,06,713
Civil Establishment (collection charges) .	68,657	91,764	1,81,053	696	3,42,170
Indirect charges	6,416	10,541	...	...	16,957
Grand Total . .	2,43,023	5,07,932	10,02,394	1,12,491	18,65,840

25. The duty of the water per cubic foot per second shown in Table VIII. shows an improvement in every case as compared with the previous year, except on the Begari and Fuleli Canals and the Imamwah. In the case of the Fuleli the figures show an increase in the area of rice cultivation from 147,282 to 160,694 acres, but this may be due to the change of system in gauging this canal, referred to in paragraph 20 of the Superintending Engineer's report. It is explained that under the former system the discharge used off the old Fuleli head was omitted, and presumably the area cultivated thereon also : now both are included. The normal rates of duty, namely 50 acres per cubic foot per second for a dry crop canal and 30 acres per cubic foot per second for a wet crop canal, seem fair for the purposes of estimating the financial prospects of future proposals for new canals. The former figure is perhaps high and the latter somewhat low.

26. This review deals with the main features of the year's operations and incidentally with the question of the clearance grant, which the remarks in the report appeared to call for.

The memorandum by the Commissioner in Sind refers to several matters affecting canal administration generally, and will be carefully enquired into and dealt with separately. With this in view the recommendation and suggestions should in the first instance be referred for the opinion and remarks of the Superintending Engineer in Sind and Examiner of Public Works Accounts.

27. Government concur with the Commissioner in Sind in the opinion that the report should in future comprise a more complete account of the operations of the year under all heads. The matter is of such importance that the fullest details should be available for criticism and as a record for future comparison. It is also imperative that there should be no discrepancies in the figures, or where such are unavoidable they should be fully explained.

28. Government are pleased to observe that the Commissioner bears testimony to the excellent work done by Mr. Lambert, the Superintending Engineer, and the officers of the Department during the year, and are further glad to notice the encomium passed on Messrs. Coghlan, Young, and Single for the condition and management of the canals in their respective districts.

29. Copies of the report and of this review should be forwarded to the Government of India and Secretary of State for India, as usual.

No. 399 of 1889.

PUBLIC WORKS DEPARTMENT.

Commissioner's Office, Camp Tharwah, 31st January 1889.

* Superintending Engineer's letter No. 3661, dated the 20th December 1888, forwarding Rabi Irrigation Revenue Returns submitted to Government for 1887-88.

2. The Superintending Engineer's report submitted on the 20th December 1888, reached the Commissioner on the 1st January 1889. The date of submission is three days earlier than in the previous year. Last year's report was delayed because discrepancies discovered in Canal Returns VIII and VIII-A had to be rectified, and also because the preparation of the report was new to Mr. Lambert, who had besides very heavy current work which took up most of his time. This year the delay is attributed to the non-receipt from the Examiner of—the General Revenue Accounts, the General Abstract of Financial results and other statements, and also to "the pressure of other work" in Mr. Lambert's office. The returns from the Examiner did not reach Mr. Lambert until the 7th December and the report was not taken in hand until the 12th. The actual preparation of the report thus appears to have taken only seven or eight days, so that the responsibility for the delay, which has been the subject of telegraphic communication from Government, would appear to rest with the Examiner of Public Works Accounts.

3. The season was on the whole favorable. The inundation was dangerous [illegible] and deficient, but the rainfall was seasonable and the prices of produce ruled unusually high. The rain that fell in the kharif season saved crops that would have suffered from the low inundation, and throughout the rabi season heavy showers were frequent all over the province and brought to maturity a bumper rabi crop. The remissions asked for and granted were below the average of recent years, the deficiency in outturn in some localities having been counterbalanced by the high prices obtained for grain and seeds. The areas (kharif and rabi) cultivated, the realizations on account of Canal Revenue, and the remissions granted in each Canal Division during the year under report are contrasted with those of the preceding year in the following table :

CONTRAST.										
1887-88.	Area cultivated.		Total Canal Revenue (i.e., Consolidated Revenue).	Revenue taken credit for by the Irrigation Department (i.e., Water share).	Remissions.	Area cultivated.		Total Canal Revenue.	Revenue taken credit for by the Irrigation Department.	Remissions.

The principal extensions of kharif cultivation occurred on the Eastern Nara and Fuleli Canals. That on the Eastern Nara Canals is in keeping with the steady growth of cultivation observed there for some years past, and that on the Fuleli is due to the clearance of one of the tails in the Badin Taluka that restored to cultivation lands that had been swamped for some years. The increase on these canals amounts to about 40,000 acres, and that on all other canals, except on those in the Ghar Division where the extent of kharif cultivation was less by about 22,000 acres than in 1886-87, aggregates 12,343 acres. The decline of cultivation in the Ghar Division, which has been progressive for several years, is due to the vagaries of the river in the neighbourhood of the two mouths of the Ghar Canal. The chief increase of rabi cultivation (21,536 acres) occurred in the Ghar Division and is made up as follows:

	Acres.
Sukkur Canal	5,258
Ghar Canal	7,566
Western Nara	8,113
Wahar Canal	585
Bands	14
TOTAL	21,536

Of these canals the Sukkur Canal is the only one that carries a Rabi supply. Rabi cultivation on the other canals abovementioned and on most other canals in Sind is from waterings obtained during the kharif season aided by showers that almost always fall in the cold weather and by well irrigation. Well cultivation has been greatly extended in recent years, especially in the Hyderabad and Shikarpur Districts.

4. The river began to rise on the 12th May and reached on the 15th a height of 8′ 7″; fluctuating slightly between the 15th and 20th, it fell a little till the 25th, when it rose again and, with one slight fall in the interval, reached 10′ 5″ on the 8th June. Then followed a gradual fall to 8′ 4″ on the 2nd July, when it began to rise once more, and finally attained its maximum height for the year (16′ 7″) on the 18th August.

5. It would appear from this account of the inundation that the river had risen sufficiently high in the early part of May to have afforded many of the canals their first supply; but, except in the case of a few canals, the supply in the river was not made available to cultivators till the end of the month or the early part of June. The report shows for some canals, but not for others, the dates on which they were opened. The Fuleli and Eastern Nara Canals and some others, were opened in good time. Those in the Hyderabad Canals Division were the latest of all. It appears from other correspondence that only two of these canals were opened before the end of May. The rest were opened on various dates between the 1st and 15th June, a fortnight to three weeks later than in the preceding year, and consequently lost the benefit of the first rise of the river. Water was not admitted into some of them until after the second rise had begun to subside.

6. Mr. Lambert dwells on the disheartening effect which a low inundation in June has on the cultivators in curtailing their preparations for cultivation, &c., but, from what the Commissioner has learned from reports by Collectors and seen and heard in the course of his tours, he is convinced that the loss of the first rise in the river has a still more serious effect. With the first appearance of water in the canals the people begin to bestir themselves to make preparations for cultivation and, even if the supply comes in before the time has arrived for sowing the staple crops, it is most valuable for drinking purposes and for the growth of green forage and vegetables, as well as for raising seedlings and for wetting land for the plough. There can be no doubt that the area of cultivation is diminished, and that both cultivators and the revenue suffer, when preparations for cultivation are unnecessarily and unduly delayed. Complaints by cultivators of delays in opening canals, and of calls made on them for assistance in completing clearance at times when they ought to have been working in their own fields, have not been absent in recent years.

7. All canals should be in working order by the 15th May at latest, and all ordinary clearance should be completed by the 30th April, to allow of the work done by contractors being measured up and checked before water comes in and renders exact measurement impossible. The popular view—which is very openly expressed—is that contractors in some Divisions delay clearance work in order to prevent check measurements being made by the European officers of the Public Works Department. The Commissioner expresses no opinion as to the correctness or incorrectness of this view, or as to the responsibility attaching to individual officers for delays that have occurred, but as even greater delay in opening canals occurred in 1888, and as delay has again occurred in beginning clearance in some talukas for the current season, notwithstanding the efforts that have been made to press on this work, the Commissioner considers that occasion has arisen for his bringing the subject prominently to the notice of Government.

8. The clearance of silt from canals and the repair of their embankments and heads form the chief work of the Irrigation Department in Sind, and on its due execution the agricultural prosperity of the province mainly depends. A very large quantity of such work, scattered over nearly 6,000 miles of canals, has to be done in the six months of each working season, and though it is work of a simple kind, close supervision must be exercised over it while it is in progress, because much of it is lost to sight as soon as water enters the canals, and contractors can and will scamp it unless they are well looked after. It is of great importance, therefore, that clearance should be begun early, and that Executive Engineers and their chief subordinates should be constantly on the move and exercising supervision throughout the working season. Most of the canals are dry in October, and clearance might well be put in hand early in November, but as a matter of fact very little is done before

January; the whole time of the establishments during the first two months of the season is taken up in preparing plans and estimates, and arranging other preliminaries required by the departmental rules. The Commissioner is aware that the Superintending Engineer and other officers have done all in their power to bring about an earlier beginning of clearance in the current season, but very little improvement has resulted, and it seems scarcely possible that much more will be obtained unless the preliminaries to the execution of work are simplified. Then again, when works are in progress, Executive Engineers and Overseers are unable to devote the amount of personal attention they would wish to give to their outdoor duties of supervision and measurement, as they are constantly occupied in rendering returns and accounts and explanations to the Examiner, Public Works Accounts, the preparation of which confines them to their offices. Some special rules for canal clearance work in Sind, as regards preliminaries to the execution of work, as well as the rendering of accounts and returns of work in progress, would seem to be urgently called for. The executive work of the department would also be greatly facilitated, and the money granted for clearance and maintenance would certainly be more economically and profitably spent, if a definite programme of works to be carried out in each working season could be settled some time before the opening of the season. This is impossible under existing arrangements, as the annual grant for clearance and maintenance is not a fixed amount, and the Budget allotments* for expenditure in the latter part of each season are not announced until after the season has well advanced. This subject has already been brought to the notice of Government, and the Commissioner would strongly recommend that the grant for the next five years be fixed at 9 lakhs of rupees a year, the amount which the late and present Commissioner and the late and present Superintending Engineer for Irrigation are agreed in considering essential for the ordinary clearance and maintenance of Sind canals. If a fixed annual grant cannot be conceded, the amount to be expended in each entire season should be settled and announced not later than the month of July in each year.

* Those for 1889-90, *i.e.*, for expenditure after 31st March 1889 have not yet been announced.

9. In para. 3 of his report Mr. Lambert notes with satisfaction the effect of the protective embankments in Upper Sind in improving the river supply to all canals below Sehwan. With reference to similar observations in the report for 1886-87, Government expressed a desire (paras. 8 and 9 of Government Resolution No. 48 W. I. 662 of 1888) that the subject might be further studied and investigated. The present report, however, adds little to the information previously before Government. These embankments, which line the right bank only of the river above Sehwan, were practically completed 9 years ago, and the officers of the Irrigation Department must have formed an opinion by this time of their effects on cultivation, and of their success financially. Since their completion a chain of similar embankments has been gradually extended along both banks of the river, from a point a few miles south of Hyderabad and Kotri to the Delta proper. This double line of embankments does not seem to have been built in pursuance of any definitely stated and sanctioned project, but piece by piece, and the Commissioner has not been able to find any clear exposition of the conditions affected by the undertaking or of the objects it was intended to achieve. The artificial raising of the flood level of the Indus described by Mr. Lambert extends over the part of the river walled-in by embankments on either side, as well as for some distance above it. The influence of the tides makes itself felt within the double line of bunds, and impedes the outflow through them of the river when in flood. The rise in the flood level brought to notice by Mr. Lambert did not apparently attract attention until after considerable progress had been made in the Lower Sind embankments, and may very likely be connected with their construction. It seems to the Commissioner that there may possibly be danger here in years of excessive inundation, or on the occurrence of cyclones or unusually high tides during the inundation season, of some disastrous accident like that which happened on the Missisipi under somewhat similar conditions a few years ago. The embankments on both sides of the river have been breached in almost every year since they were built, although as yet they have been subjected to the pressure of only moderate inundations. They have lately been raised to a height above that of the original design, and the level of the floods held between them must now frequently rise to several feet above that of the surrounding country. In this connexion, the Commissioner invites attention to remarks made by Mr. Lambert in para. 79 of this year's report, as follows:—"although considerable sums have been expended on these embankments "during the last few years, their relative strength has not been increased, *as the highest level "of the river has been yearly rising and almost outstripping the improvements to the bunds.*" There has been no unusual flood in the Indus since the Upper Sind embankments were completed. The lands on the unprotected left bank have enjoyed equal immunity from destructive floods with those on the right bank since 1880, while the lands on both banks were flood-swept several times between 1874 and 1880, and similar floods may again occur in any year.

10. As regards the effect of the Upper Sind embankments on cultivation between Kashmor and Sehwan, the cultivation affected is that of (*a*) the whole of the Upper Sind Frontier District; (*b*) the Sukkur, Larkana, and Mehar Sub-divisions of the Shikarpur District; (*c*) the Dadu, Johi and Sehwan Talukas of the Karachi District. It must be remembered that floods that caused extensive damage have never been of very frequent occurrence, and that the action of all floods is† beneficial to the extent to which they may water lands not supplied by canals, and increase and prolong the duration of the supply in the lower reaches of canals. Before the embankments were made the spill from the river wetted lands for kharif cultivation, and filled shallow depressions that were cultivated with rabi crops when the water dried up, as well as deeper depressions that fed the tails of canals, besides giving a direct supply that was lifted on to lands for rabi cultivation and providing large stretches of good grazing. This spill is now completely shut out from Kashmor to Sehwan, and the only water that the protected lands regularly receive is the canal supply, which, except in the Upper Sind Frontier District, is no larger now than it was before the embankments were built. The natural consequence is a vast diminution of the grazing area, as well as of the supply to lands that formerly were cultivated on flood water and to the lower reaches of main canals and their branches, and a general drying up of the lands within the protected area.

† The greater part of the cultivation on the left bank of the river in the Shikarpur District (the Rohri Sub-division) is on lands watered by floods. The revenue collected in these talukas exceeds 5 lakhs of rupees a year.

11. The heavy floods that did the greatest amount of damage to kharif cultivation and threatened the North-Western Railway and the Military Cantonment at Jacobabad swept in through the Upper Sind Frontier District. The Kashmor and Begari Bunds that were built to exclude them were the first Bunds built, and there can be no question as to their usefulness. They have of course shut out water that was useful along with that which did damage, but the canal supply of the Upper Sind Frontier District has been considerably increased since they were constructed and the result in that district of the twofold improvement is a large increase in the cultivated area. The Shahdadpur Taluka, watered by the tails of the Begari and Ghar Canals, is the only part of the District in which the supply is now deficient. The case as regards the protected area of the Shikarpur and Karachi Districts is quite different. Here there has been no increase of canal-supply since the flood-waters were shut out by embankments. The effect of their construction is illustrated in the following statement, which shows the areas under cultivation in the protected talukas of the Shikarpur District in each year since 1873-74, and the average cultivation for the 6 years before, and for the 9 years after, the completion of the embankments.

No.	Year.	Kharif.	Rabi.	Total.	Remissions.	Net Revenue Realizations.	Remarks.

12. It will be observed that the total cultivation has fallen from an average of 599,503 acres for the 6 years ending 1878-79 to one of 519,663 acres for the 9 years ending 1887-88; and that kharif cultivation has diminished by 28,100 acres and rabi cultivation by 66,661* acres for the same periods. The actual diminution of cultivation is probably greater than that shown by these figures, for the reason that under the settlements in force in the earlier years of the series, assessment was levied only on areas actually cultivated as ascertained by annual inspection and measurement; whereas, under the settlements recently introduced, whenever any portion of a survey number is cultivated the entire number is entered as cultivated and assessment is levied accordingly. The figures in the statement show areas assessed throughout. As might be expected, the contraction in rabi cultivation is much greater than in kharif cultivation, and it would have been greater than it has been were it not for the large number of wells that have been dug in recent years to supplement the canal supply. The decrease in the area cultivated, again, does not fully represent the losses suffered by cultivators, as the outturn of many fields on which assessment has been paid has been seriously diminished by the insufficiency of the available water-supply. Figures have been added to the statement showing the amounts remitted and the net revenue collected in each year of the series. The remissions granted since the embankments were built show a decrease averaging about Rs. 58,000 a year, and the net revenue realizations have increased by nearly Rs. 3,34,000 a year, notwithstanding the contraction of the cultivated area. The increased realizations are almost entirely due to changes in the settlements and rates of assessment levied, introduced during the last 10 years.

* The discrepancy between the figures showing total cultivation and those showing kharif and rabi cultivation separately arises from the circumstance that details are wanting of kharif and rabi cultivation for three of the series of years to which the total cultivation figures relate.

13. Cultivation returns for the three northern talukas of the Karachi District, which now depends mainly upon the lower half of the Western Nara, will be submitted separately. The results of the shutting out of the floods from these talukas are similar to those above shown for the Shikarpur District. The same cause has operated to diminish the supply in the Manchar Lake, where cultivation has decreased seriously, especially in the last two years.

14. Throughout the whole of the protected area in the Shikarpur and Karachi Districts the supply towards the tails of all main canals and branches is altogether insufficient, and a general displacement and transfer of cultivation has taken place. The water-supply is now used up on lands lying on the upper reaches of main canals and branches, where, since protection has been afforded by the embankments, cultivation has increased. The zamindars holding lands on the lower reaches of canals have suffered greatly, and there is urgent need for expenditure to restore to them the water-supply that they have lost. This displacement of cultivation is a serious matter. In some cases, but not in all, it has arisen from causes beyond administrative control. The Revenue Department and the Irrigational Department share responsibility for allowing landholders on the upper reaches of canals to use for the extension of their own cultivation water that properly belongs to lands lower down the canals. Many instances have come to the Commissioner's notice in which cultivators have been deprived, as it seems to him unfairly, of their customary water-supply, through the extension of cultivation, or the substitution of rice for dry crop cultivation, on lands higher up the canals. The attention of Collectors and Executive Engineers has been called to this subject. The rules under the irrigational settlements, which permit zamindars to cultivate without restriction rice or any other crop they please, are partly in fault and will be amended. Under former settlements landholders were not allowed to extend their rice cultivation without permission and it will be necessary to restore the old rule, or to enforce some equivalent precaution.

15. The statement in para. 11 above shows that 80,000 acres in Shikarpur, now barren, were cultivated 10 years ago. To this must be added the area thrown out of cultivation in the Karachi District. The contraction of cultivation in the Shikarpur and Karachi Districts, and in the Shahdadpur Taluka, which was transferred a few years ago from Shikarpur to the Upper Sind Frontier District, that has followed the construction of the Upper Sind embankments does not fall far short of 100,000 acres, and there can be no doubt that the resident population can cultivate quite as much land now as it did before 1880. The wealth and resources of the whole province, and especially of Upper Sind, have been greatly augmented by the large Government expenditure on supplies for the Afghan campaigns, and at Quetta, and on railway works in Sind and Baluchistan, while the growth of well cultivation and the high prices now obtainable for land with a canal supply show how eager the people are to extend cultivation. The average assessment on canal lands in the tract referred to may be taken at between 3 and 4 rupees per acre, so that Government will be quite safe in expending 50 lakhs of rupees, or more if necessary, in improving its water-supply. The Commissioner does not think that any improvement of existing canals will suffice to give with constancy the additional supply required, because these canals draw water from a part of the river that is always shifting; their heads are eroded in one year and in another obstructed by silt deposits thrown in front of them, and the discharge through them is always precarious. He would strongly recommend Government to take into immediate consideration the construction of a large supply channel taking off from the river above Sukkur, where its course is more permanently established than in any other locality, to feed the whole system of Ghar Canals, and if practicable those of the Western Nara also. Great part of the supply in the Sukkur Canal is now used up on the lands near the river, and the scheme should embrace the feeding of the tails of that canal. There is a very much better chance of a permanently profitable investment here than in the construction of new feeders to the Ghar and Western Nara drawing their river supply from any place below Sukkur. The supply of any new feeders constructed there will be just as precarious and unreliable as that of the present channels feeding the Ghar and Western Nara Canals.

16. As regards the effect of the embankments on cultivation *below* Sehwan. Although the rise in the inundation level noticed by Mr. Lambert has raised the head of water in all canals below that town, no great increase of cultivation has taken place upon them as yet. In the Hyderabad District there is every prospect of a very large increase after the completion of improvements to canals in the Hyderabad and Fuleli Canals Divisions of which a beginning has now been made, but there is no such prospect in the Karachi District, on account of the scantiness of the population and the unhealthiness of the Delta Talukas.

17. Speaking of the embanments generally, the Kashmor and Begari Bunds, and those for some distance below Sukkur, as well as others protecting particular points on the river, are no doubt works of the greatest utility; but the question whether it is safe and otherwise expedient to maintain a continuous chain of embankments along the whole course of the river through Sind would seem to need very careful investigation. The fact that this work has been carried out without sufficient examination of all the conditions involved has already been noticed. The Fuleli Canals and those in the Karachi District were not designed or constructed to carry the additional head of water forced into them by the rise in the flood-level of the river brought about by the construction of the embankments, and large expenditure will yet have to be incurred in raising and strengthening their banks, and in providing drainage channels and escapes for the outflow of their surplus waters, as well as on strengthening the river embankments, if the present head of water is maintained in the river. The remarks made in paras. 79 and 80 of Mr. Lambert's report regarding the flooding of the Delta Talukas and the need for strengthening the banks of the Baghar Canal and for additions to the river embankments should be read in this connexion.

18. The average expenditure on river embankments during the last 6 years, as shown in para. 14 of Mr. Lambert's report, exclusive of the cost of supervising establishments, and the interest on the original cost of construction, has amounted to Rs. 1,90,000 a year. The heavy outlay on their maintenance has necessitated a corresponding curtailment of expenditure on the clearance and repair of canals, and is one of the causes of the unsatisfactory condition of the canals of the Hyderabad District. The charges on account of *abkalani* establishment employed on these embankments are enormous and have been increasing, although apparently they ought to have been reduced as embankments constructed in the earlier years became consolidated. The Commissioner is inclined to the opinion that the embanking of the river generally has been overdone and specially so in Lower Sind, and that the question of the maintenance of the embankments in the Delta Talukas should be considered not merely with reference to their own cost and the risks attendent on them, but also with reference to the expenditure on improvements to canals and drainage that their maintenance will necessitate and the revenue results that the entire expenditure may be expected to produce. The Upper Sind embankments should also be examined, and, if practicable, regulators should be built in them to admit spill-water from the river at places where it can be profitably utilised for grazing and rabi cultivation. Some of the depressions through which flood-water used to enter in former years might apparently be put to good account in this manner.

19. With reference to the remarks in para. 6 of Mr. Lambert's report regarding the grant of remissions, it should be stated that remissions are never granted when a cultivator who has only sufficient water to grow a dry crop—bajri or juari for instance—speculates and tries to grow rice, or any other crop that requires a superior supply. They are only granted in cases in which cultivation reasonably attempted has failed through insufficiency of the water-supply or has been injured by floods or other causes beyond the cultivator's control.

20. The figures given in paras. 7 and 8 of Mr. Lambert's report are for the financial year ending March 31st, and on that date, as explained in para. 5 of the Commissioner's forwarding remarks on the report for 1886-87, several instalments remain to be received. The collections on account of hakaba in the revenue year show an increase of Rs. 4,291-4-11 over those of the previous year. The miscellaneous revenue is collected by the Revenue Department direct, and by the Mukhtyarkars on the requisition of the Executive Engineers. The decrease is mostly in the Eastern Nara and Fuleli Divisions and is principally due to decreased receipts from farms of fisheries in canals and dhands. The following statement shows the state of outstanding balances at the end of the revenue year 1887-88 as contrasted with those of the previous year:

REVENUE FOR 1887-88.

No.	District.	Outstanding balances of last year 1886-87, (i.e., 1st August 1887).	Gross Revenue.	Deduct Remissions.	Net Revenue for Collection.	Total Revenue for collection (i.e., total of Columns 3 and 6).	Total Collections.	Outstanding Balances on 1st August 1888.	Remarks.
1	2	3	4	5	6	7	8	9	10
		Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.

	Decrease	8,870 2 6	* 5,484 13 8	.....	0	0	0	0	

* Decrease owing to decreased revenue (Rs. 2,941-0-8) from lands in Kalat territory, the arrangements regarding which are not in the hands of the revenue officers in Sind, and to decreased revenue in the Hyderabad and Karachi Districts, owing to lapse of and less cultivation in jagirs.

The outstanding balances are chiefly an account of hakaba on lands in Kalat territory. The Government of Bombay referred to this subject in para. 15 of their Resolution No. 48 W. I. 622 of 27th March 1888, and the Government of India in their Resolution No. 96 I., dated 22nd May 1888, remarked that "matters connected with Irrigation Revenue and Remissions" were not in a satisfactory condition in Kalat territory. See also correspondence ending with this office No. 3244 of 12th September 1888.

27. The Commissioner fails to follow Mr. Lambert in the remarks made in the 9th para. of the report regarding the two classes of political pensioners. It is hardly correct to speak of the Jagirdars of Sind as "Imperial Pensioners." A few of them received jagirs in lieu of pensions after the conquest, but the majority of them are properly speaking privileged landholders; and in some cases they or their predecessors in title originally excavated canals now controlled by the Irrigation Department and were in possession of their estates and water-supply before Sind became a British province. In such cases it would be by no means easy to make the adjustments suggested; still, the Commissioner has no doubt that in some instances, notably in the case of jagirs in the Hyderabad District, additional contributions in the shape of enhanced hakaba may be possible, and this subject is engaging his attention.

22. The balances reported in Mr. Lambert's paragraph agree with those given by the Collectors and Deputy Commissioners as outstanding at the end of the revenue year. In the Upper Sind Frontier District postponements were granted in the Shadadpur Taluka on account of deficient water-supply, and there is a disputed item due by Mazari Chiefs residing in the Dera Gazi Khan District of the Punjab, who refuse to pay until the terms on which they are to be allowed to hold land on the Frontier of Upper Sind are settled. This matter is before Government. In Karachi, postponements were granted by the Collector up to December 1888 and April 1889, owing to failure of crops, and there are some items due by the Manager, Incumbered Estates. In Shikarpur and Hyderabad the balances are due principally by the Manager, Incumbered Estates.

23. The diminution in remissions granted, reported by Mr. Lambert in para. 12, is very satisfactory. The largest remissions for the year occurred in the Begari, Ghar, and Karachi Divisions. Those in the two former were mainly due to insufficiency of water-supply in the tails of the canals, and those in the Karachi District to breaching of the river embankments.

24. The Commissioner considers it unnecessary to follow Mr. Lambert in his detailed observations on the working of the various canals, but he will state his opinion on this subject generally, as well as with respect to several details noticed by the Superintending Engineer on which comment seems desirable. The canals in the Upper Sind Frontier District are in good order, and do the full work required of them, except in the Shadadpur Taluka, the irrigation of which is to be transferred from the Begari to the Sukkur Canal when the improvements [illegible] for the latter are carried out. The same may be said of the Eastern Nara Canal. The condition and management of the canals in these two divisions reflects, in the Commissioner's opinion, very great credit on the Executive Engineers who have long held charge of them, Messrs. J. A. Coghlan, and J. Young. An additional water-supply for part of the Upper Sind Frontier District is immediately available if the head regulator on the Sind Dora (where it passes through the Kashmor Bund) is worked. Inquiries are being made with a view to the early utilisation of this supply, if practicable. The few canals in the Shikarpur Division are in fair order, and the irrigational condition of the division is creditable to Mr. Single, the Executive Engineer in charge, though undue delay occurred in opening the canals in the year under report. The canals in the Ghar Division, excepting the Sukkur Canal, have not worked well for some years, owing to constant changes in the river. They also were not opened soon enough in the year under report. The supply they carry is quite insufficient to meet the present requirements of cultivation. An increase in the rabi supply admitted into the Sukkur Canal is very desirable, and apparently might be provided at very moderate cost by increasing the discharge capacity of the regulator. The deficient supply in come branches of the Ghar has been supplemented at different times by cutting feeders to them from the Western Nara. This abstraction of water from the Nara has of course reduced the supply in the lower part of that canal, and has caused a contraction of profitable cultivation in the Karachi District, causing loss and hardship to zamindars who had a better claim to the supply. The Commissioner entirely agrees with Mr. Lambert as to the [illegible] of placing the tails of the Western Nara under the charge of a [illegible]

25. The canals of the Hyderabad District, speaking generally, are not in a satisfactory state. Those in the Hyderabad Canals Division are low-level "lift" canals, and sufficient attention has not been paid to them for some years. Few, if any of them, have been cleared to their bed stones or to their full width, and the heads of some of them are in bad order. The expenditure made on them from the clearance grant for the last five years is shown in the margin. It will be noticed that the expenditure on clearance has materially decreased year by year, while that on establishments has increased from Rs. 18,487 in 1882-83 to Rs. 35,719 in 1886-87. The charges under the head "Repairs" relate mainly to "jungle cutting," which is work of a very unprofitable nature and might well be postponed when money is wanted for silt

Years.	Clearance.	Repairs.	Establishments.
1882-83	1,20,914	11,210	18,487
1883-84	1,16,416	9,788	29,043
1884-85	93,600	20,027	31,361
1885-86	74,342	20,724	31,870
1886-87	77,344	21,326	35,719

clearance. The charges for jungle cutting have been unusually heavy in this division, and they, as well as establishment charges, ought to be reduced considerably. There is great need for increased expenditure on these canals. They seem to have been viewed with disfavor by the Irrigation Department, because they are "lift" canals and their returns per acre irrigated are lower than those of "flow" canals; but the population cultivating from them is as industrious, and the cultivation is as good, as any in the province. The cotton grown in this division is the best in Sind. There is no lack of resident population, and any amount of additional labour wanted can be obtained from Jeysalmir and Jodhpur, from which States a considerable immigration has already set in to the lands under the Eastern Nara Canals. The only thing necessary to lead to a large extension of cultivation here is improvement of the existing canals. Until this is effected, no good use will be made of the improved river-supply that is now available to them. The need for improvement is greatest in the Sakrand, Shahdadpur, Hala, and Tando Allahyar Talukas, where cultivation has fallen off. Small improvements made last season at the Collector's instance in the Naushahro Sub-division produced very good results and paid for themselves at once. The Executive Engineer in charge of this Division and most of his chief subordinates live in Hyderabad, outside its limits and at a long distance from their work. The Commissioner thinks that the Executive Engineer's head-quarters should be transferred from Hyderabad to Daulatpur, where a good bangalow is available, or to some other place in the centre of the Division.

26. The present water-supply in the Fuleli is perhaps the finest in the province, and after it has been brought under control by improvements now begun and the lands towards the tails of the canals have been reclaimed by clearing the silted up drainage channels, a very large expansion of cultivation and of revenue will be apparent. For several years previous to the year under report the clearances on the Fuleli Canals were altogether insufficient and many zamindars have suffered very severely from the swamping of their lands by the recurring overflow of canals whose beds and tails were blocked with silt. It will be necessary for some time to come to devote a considerable share of the clearance grants to the canals in the Fuleli and Hyderabad Canals Divisions to make up for deficient expenditure on clearance in the past. Expenditure is also required to fit the Fuleli Canals to carry the increased volume of water now poured into them and for the construction of regulators to distribute the supply. Government have recently allotted funds for the construction of a regulator at the head of the Fuleli main canal, and the Commissioner trusts that they will make further grants for the provision of additional regulators and other improvements needed, as he is satisfied that the expenditure will be immediately profitable in a marked degree. Money for these works cannot be spared from the grants for maintenance and repairs and the cost of their execution would not form a proper charge against those grants. A well digested project for the gradual improvement of the Fuleli Canals to suit the changed condition of their river supply should be drawn up and submitted for sanction after full consideration of all the conditions to be served, and each approved work should be executed in the order of its importance as decided on in consultation with the Revenue officers. The total expenditure, ordinary and special, on these accounts will amount to several lakhs of rupees, and it should be made under proper sanction and systematically. Clever men and capitalists of Hyderabad have grasped the situation and have acquired rights to water in favourable positions high up the canals which should not be extended beyond their just limits. There will be many claimants to the improved supply, and the claims of those zamindars whose lands have been flooded and thrown out of cultivation by no fault of their own should receive the first consideration. Special attention should be paid by the Executive Engineer and the Collector, whilst the improvements are in progress, to the private watercourses through which water is drawn from the canals. Reference is made to this subject in another sense in para. 74 of the Superintending Engineer's report. Since the canals have fallen into their present surcharged condition, the Irrigation officers have encouraged landholders to enlarge the heads of their watercourses and to keep them constantly open and to allow water to flow continuously over rice crops and to make new openings to lead water on to uncultivated lands, in order to reduce the pressure on the canal banks and prevent their breaching. All these watercourses have been shewn in the maps prepared by the Survey Department for the settlements just made in the Fuleli Talukas, and unless the matter is taken in hand and dealt with promptly, unfounded claims to water-supply and complications are likely to ensue hereafter. It is very desirable that the number of private watercourses should be reduced, as also the dimensions of the heads of many of them. The Collector and the Executive Engineer should do all in their power to encourage zamindars to build masonry heads to them, and the Collector should grant loans freely for this purpose. Another matter connected with the Fuleli water-supply that requires attention is the use made of it on jagir lands and the hakabo paid for it. There are large jagirs on the Fuleli and the jagirdars use more water than they pay for. They are only required under the Hakabo Rules to pay for water irrigating cultivated land, and they pay nothing for land wetted but not cultivated. The cultivated area is ascertained each year, and Re. 1 per acre is charged for the water-supply. Their cultivators let water flow continuously over their rice fields whenever they can get it, for the sake of the silt that falls and fertilizes the soil, and the surplus water is led off on to low-lying lands that grow grass and other useful products. The jagirdars should be required to build regulators at the heads of all their canals which should be worked under the orders of the Executive Engineer, and those who use a continuous supply for rice cultivation should pay a higher rate of hakabo and something should also be charged for water used on lands that are not cultivated.

27. The question of levying some payment for the use of Fuleli water irrigating zamindari and unoccupied grazing lands has been noticed by Government, and the subject has received attention from the Collector of Hyderabad and the Commissioner. Most of these lands are in the flooded portions of the Tando Bago, Badin and Guni Talukas, and many of them were formerly cultivated and will be cultivated again when the canals are put in order. Colonel Trevor is averse to the levy of grazing fees at present, on account of the impoverished state of the cultivators who own many of the cattle and the hardships that they and the zamindars have suffered by the flooding of their lands, and the Commissioner agrees with him to a certain extent. But the question should soon now be taken up in earnest, as the *Haris* (labouring cultivators) are becoming demoralized and inclined to neglect cultivation for breeding and grazing milch cattle, which affords a very easy means of livelihood when grazing is free.

28. The condition of the canals in the Karachi District may be described as good in the Delta Talukas and unsatisfactory in the talukas above Manjhand. Clearance has been neglected on the Western Nara, as shown in para. 77 of Mr. Lambert's report; but the silting of the Aral and other canals connected with the Manchar Lake is due to causes practically beyond control. A very large expenditure has been incurred on canals and river embankments in the Karachi District for some years past, but the results obtained have been altogether incommensurate with the outlay, as is shown by the figures given in para. 81 of the report. The bulk of the money has been spent for the benefit of the Delta Talukas, whose population is scanty and thinned by fever and frequent outbreaks of cholera and other epidemic disease. The average charges against the canal revenue of these talukas for the last five years probably exceed 80 per cent. of the receipts, and there is no reasonable expectation, in the Commissioner's opinion, of any large increase of cultivation occurring in them even if expenditure at the present rate is continued. Drainage works are now talked of, and their construction would doubtless tend to improve cultivation and probably the sanitary condition also, but their cost will be considerable. These talukas would probably have returned a much larger net revenue than they do at present, if they had been treated in the same way as the Rohri Sub-division and left to depend mainly on spill-water for their irrigation. The whole position in these talukas as regards present and prospective expenditure and realizations and the risks run in the attempt to retain the river floods at a high level between the double line of embankments referred to in paras. 9 and 17 above needs careful examination, and the Commissioner thinks that the Superintending Engineer should be called on for a full report on the subject. If expenditure in these talukas can be curtailed, the money set loose can certainly be expended much more profitably elsewhere.

29. The question raised in para. 38 of the report regarding the assessment of dubari cultivation on the Sukkur Canal is under consideration. There is a difference of opinion as to the facts of the case, and as to the remedy to be applied. It appears that the greater part of the 18,348 acres reported by the Superintending Engineer as cultivated with both kharif and rabi crops was irrigated in the kharif season only, and received none of the rabi supply; much of it is rice land on which a second crop was raised on the moisture remaining in the soil after the rice crop was harvested. For such poor rabi cultivation as this the rate settled by Mr. Erskine is probably sufficient in the case of the Sukkur Canal as Mr. Lambert admits it to be for other canals. For lands for which both kharif and rabi supply is taken the rate is certainly insufficient, and the question pending settlement is as to the treatment of such twice-watered lands. The Commissioner is inclined to think that the best immediate solution is to refuse a rabi supply to lands cultivated with kharif crops, as both the kharif and the rabi supply at present available in the canal are insufficient to meet the whole demand for water, and what there is ought to be distributed as evenly as possible. Mr. Lambert has not noticed the extent of the rabi supply discharged through the Sukkur Canal or the area that it sufficed to irrigate.

30. Rice cultivation on the Ghar Canals, to which reference is made in paras. 39 and 41 of the report, has fallen off considerably in the last few years, and in the year under report juari was largely cultivated on rice lands. The areas under rice and juari respectively in each of the last 10 years are shown in the margin. In the Larkana Taluka, where the revised settlement is still in force, the insufficiency of the canal supply has pressed heavily on zamindars holding lands assessed at rice rates, who have had to choose between leaving their fields uncultivated and growing inferior crops. If the juari crop had not been an unusually good one, and if prices of produce had not ruled at exceptionally high rates, in the year under report, the remissions on these lands would have been heavy.

	Rice.	Juari.
1878-79 . .	151,127	24,848
1879-80 . .	157,496	10,808
1880-81 . .	170,342	24,548
1881-82 . .	133,424	34,863
1882-83 . .	146,688	49,803
1883-84 . .	145,617	13,868
1884-85 . .	153,448	20,782
1885-86 . .	141,787	11,398
1886-87 . .	128,689	28,230
1887-88 . .	44,539	81,089

31. The special clearance on the Gul Mahamedwah branch of the Western Nara, noticed in para. 43 of the report, led to new cultivation on lands commanded by the Ghar. The revenue thus obtained in the Shikarpur District was realized at the cost of the Karachi District, and the diversion of the water-supply was unfair to landholders on the lower part of the Western Nara Canal, who were deprived of water to which they had a distinctly prior claim. Another and larger diversion of water from Nara to Ghar lands has resulted from special clearances in the Arthurwah, begun in the year under report and finished before the inundation of 1888. The Arthurwah is a branch of the Western Nara, and the special clearances, on

which Rs. 26,000 were expended, included the widening of the regulator at its head, the construction of a second regulator half-way down it, and the excavation of some three miles of new canal to join it with the Chilowah, a branch of the Ghar insufficiently supplied from the main canal. This work should not have been executed in presence of the known insufficiency of the supply in the lower part of the Western Nara, and it is not a work that should have been executed at the cost of the Maintenance and Repairs grant. Increased attention should be paid in carrying out new works and improvements to the customary rights of landholders in the matter of water-supply, and the attention of Collectors and irrigation officers has been drawn to this subject.

32. The results reported by Mr. Lambert in para. 48 for the Eastern Nara Canals are most satisfactory and encouraging. The Commissioner understands that the water drawn from the river through the existing supply channel at Rohri is now doing nearly all the duty that can be got out of it, and that some expansion of the river supply will very soon become necessary. A branch taking off from the Jamrao Dhand to water the eastern part of the Sakrand and Shahdadpur talukas of Hyderabad is very much wanted, and would pay as well as any of the canals of the system. Part of this tract was watered from the Nara some years ago, but the supply was cut off when the works for the new canals were undertaken. There is every prospect of a large increase of cultivation and of revenue in the Nara Valley, and no want of labour for cultivation. The great want of the district is railway communication with Hyderabad, in order to give its cultivators a good market for their produce. A project for a cheap feeder-line from the Nara river to the North-Western Railway is before Government.

33. The Commissioner cannot admit the justice of the remarks made by the Superintending Engineer in para. 74 of his report attributing the numerous breaches of canal banks that occurred in the Fuleli Division to the neglect of zamindars and cultivators to keep in proper order the heads supplying their private water-courses. These accidents and the damage they occasioned were mainly the result of insufficient clearance and the silting up of the tails of the Fuleli Canals, coupled with the increased volume of water poured into the Fuleli Main Canal by the rise in the flood level of the river, to which reference has already been made. The construction of the regulator at the head of the Fuleli lately sanctioned, and the clearance of the tails now in progress will diminish the risk of breaches in future years.

34. The project for a new feeder to the lower part of the Western Nara, referred to in para. 77 of the report, has been submitted to Government, with a recommendation that the condition of the whole canal should be thoroughly investigated before decision is come to regarding the steps to be taken for improving its supply. The consideration on which the project is based extended only to that part of the canal which is in the Kurrachee District.

35. The Commissioner has not supported the project for improving the Kalri Canal mentioned in para. 80 of Mr. Lambert's report, because he does not think it likely to lead to any real extension of cultivation, as full use is not made of the supply already afforded by canals in the Delta Talukas.

36. The present report, following the scheme of former reports, contains full information regarding the revenue results obtained in each Canal Division, but few details regarding the progress of cultivation. Fluctuations in revenue collections are dependent in great measure on settlements in force and rates of assessment levied,* and conclusions as to the condition and working of canals cannot safely be founded on examination of their revenue returns alone. It seems desirable that in future reports cultivation returns for each Canal Division, and for each important canal, should be added for the same series of years for which revenue figures are given. The following form is suggested as convenient for the cultivation returns:

* See the table in para. 11 above, and remarks in para. 12.

Years.	Cultivation receiving a perennial supply.		Kharif.										Rabi.						Total cultivation.	
			Rice.		Juari.		Bajri.		Other crops.		Total Kharif.		Wheat.		Other crops.		Total Rabi.			
	A.	G.	A.	G.	A.	G.	A.	G.	A.	G.	A.	G.	A.	G.	A.	G.	A.	G.	A.	G.

37. It is desirable also that a clear and comprehensive account should be given in these reports, or separately, of the manner in which the grants for maintenance and repairs and for

extensions and improvements are applied and expended. The average expenditure under these heads of the last 6 years, as shown in para. 13 of the report, has amounted to more than Rs. 11,00,000 a year, but the only information published regarding it is that contained in the brief summary given in the General Administration Report prepared in the Public Works Secretariat. The Superintending Engineer should give an account of his stewardship, and the operations of the Department should be laid open to examination and criticism.

38. The grants made, large as they are, are admittedly insufficient to allow of the simultaneous execution of every desirable improvement. The money available must be spent economically, and it is most necessary that canals should be cleared to their full depth and width, that their banks should be repaired, and that their heads should be put into the best working order possible, before expenditure is devoted to other work of less immediate utility. If this principle is to be observed, a clear account of work executed and expenditure made must be rendered. Each canal has its sanctioned section, and its condition with reference to that section should be reported yearly and explanations should be given of deviations from the standard. A full description of the work executed in each Canal Division should be given, and the expenditure incurred should be classified under some such heads as the following:

(1) Silt clearance.
(2) Repairs to canal embankments.
(3) Clearance and improvement of canal heads.
(4) Jungle-cutting and removing fallen trees.
(5) Inspection path-ways along the sides of canals.
(6) Construction and repairs of inspection bungalows.
(7) Construction and repairs of canal chowkies and tool-houses.
(8) Regulators and sluices.
(9) Sloping canal banks and cutting of angles.
(10) Establishments charged against works. The expenditure under this head should be shown in clear detail—the rates of pay allowed, the number of men employed at each rate, the periods of their employment, and the manner of their employment, should be stated and increases and decreases should be shown and accounted for.

Corresponding details should be given regarding expenditure on river embankments in each Canal Division. It will then be possible to contrast the expenditure made in the several divisions and to compare it with the results obtained. Good management or the reverse on the part of the Divisional Officers will be apparent and improvements effected in one division may be extended to others.

39. Some figures of expenditure are given in paras. 13 and 14 of Mr. Lambert's report, but they are not in sufficient detail for administrative or critical purposes, and while they nominally show the expenditure on "Establishments" separately from that on "Works," they do not show the actual outlay under either head. The Establishment charges entered are only those on account of the Permanent Establishment of Executive Engineers, Supervisors, Overseers, Clerks, &c., &c., but other large charges are also incurred on account of Establishments and are included under the head "Works." The following statement exhibits the actual outlay on Works and on Establishments respectively for five of the years treated by Mr. Lambert. Figures for the years 1881-82 and 1887-88 are not in the Commissioner's possession:

Year.	Works.	Establishment.			Total expenditure.
		Permanent.	Charged against works.	Total.	
1882-83	6,47,604	2,22,036	2,21,387	4,43,423	10,91,027
1883-84	6,42,586	2,14,128	2,36,230	4,50,358	10,92,944
1884-85	6,10,523	2,13,717	2,43,234	4,56,951	10,67,474
1885-86	5,72,872	2,48,524	2,58,276	5,06,800	10,79,672
1886-87	5,54,157	2,71,930	2,73,765	5,45,695	10,99,852
Total	30,27,742	11,70,335	12,32,892	24,03,227	54,30,969
Average	6,05,548	2,34,067	2,46,578	4,80,645	10,86,193

The establishment charges thus amounted to 79 per cent. on the outlay for works and, considering that much of the work done was earth excavation and embankment executed under contract, they appear enormous, after making allowance for the *abkalani* establishments employed

during the inundation season to watch embankments. It will be observed that while the outlay on works has steadily diminished from Rs. 6,47,604 in 1882-83 to Rs. 5,54,157 in 1886-87, that on establishment has progressed year by year from Rs. 4,43,423 to Rs. 5,45,695. Other instances brought to notice in the foregoing remarks indicate that there is room for improvement in the application of the Maintenance and Repairs grants, and the Commissioner thinks that cause has been shown for the submission of a more detailed account of the administration and expenditure of the Department than has hitherto been supplied. The Revenue officers, who are in the best position to ascertain and represent the wants of the people in the matter of water-supply and are responsible for the working of the revenue settlements the maintenance of which depends on irrigation should have a greater voice than has been allowed them in directing the expenditure of the maintenance grants. The work to be executed in each season should be settled in consultation between the Revenue and Irrigation officers and the programme settled on should be carried out.

40. A large share of the maintenance grants has been devoted for the last 10 years to the protective embankments along the river, and the Commissioner concurs in the opinion expressed in para. 14 of the report as to the advantage of setting free a portion of that outlay for expenditure on canal clearances, which, as Mr. Lambert says, "are invariably attended with increased cultivation and revenue." He also concurs in the recommendation made by Mr. Lambert in the same para. that the North-Western Railway should be required to contribute its share of the cost and maintenance of the Upper Sind river embankments, which were doubtless constructed and are maintained partly for the protection of that railway against floods.

41. In the above imperfect review the Commissioner has found occasion to comment in an unfavourable sense on some of the work of the Irrigation Department in Sind, especially in the matter of the direction of expenditure of the Maintenance and Repairs grants. His attention was specially attracted to this subject by the circumstance that his predecessor, Mr. Erskine, reported to Government shortly before he left Sind that some of the revenue settlements made in the last few years could not be maintained unless more money was spent on the clearance of canals, and that not long after he had taken up the office of Commissioner he was obliged to submit a similar representation. Government were pleased to accept the recommendations submitted by the Superintending Engineer and supported by the Commissioner, and made a liberal additional grant at the beginning of 1888 that has sufficed to improve the condition of many of the canals. But much remains to be done, and no prospect has been held out by Government of any permanent addition to the clearance grant, while under present financial conditions no increase can be immediately expected. It is therefore essential that irrigational expenditure should be economised in every way possible, and that it should be confined to works that are necessary for securing water-supply to lands the holders of which have a rightful claim to water, until those claims are satisfied. It was necessary that an examination of the expenditure of past years should be made, in order to discover items in which economy may be exercised, as well as items the execution of which will bear deferment. Some of the criticisms offered by the Commissioner accordingly refer to conditions and circumstances with which he was not personally conversant, and he would not have referred to them if other means had been open to him of forming conclusions and suggesting improvements that seem to him to be called for. He desires to acknowledge the ready and cordial assistance he has received from the Superintending Engineer in this inquiry, as well as in all other matters, and the excellent work done by Mr. Lambert and the officers of the Sind Irrigation Department during the year under report.

C. B. [illegible]
Commissioner in Sind.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on Monday, July 1st, 1889.

Normal monsoon conditions have prevailed throughout the greater part of India during the past week. On some days the currents have been partially interrupted, and hence their extension into a large portion of North-Western India has not been complete, and that part of India has been more or less rainless with a high temperature. With this exception, however, rain has been general, and at several stations has been heavy. Accompanying this general rainfall, there have been moist cloudy weather and comparatively low temperatures.

The Chart of the 25th June exhibited the ordinary high pressure area over the Malabar Coast and the ordinary low pressure area over the Indus Valley; but, in addition to this, there existed an area of relatively low readings over the head of the Bay of Bengal, the east of the Central Provinces, and the whole of the North-West Provinces. Within this low pressure were three centres of depression—one over the north-western angle of the Bay, a second over Behar and the east of the North-Western Provinces, and a third between Nowgong and Agra. These depressions occasioned local cyclonic circulations of the wind over the portion of India covered by them, but elsewhere normal monsoon breezes prevailed. The monsoon over the Peninsula was fresh, and over Sind, Guzerat, Central India, and Rajputana strong. On the following day the depression over the Bay had developed somewhat and become a well defined storm. That which lay over Behar and east of the North-Western Provinces had moved slightly westward, and absorbed into it the small Nowgong-Agra disturbance. With these exceptions, there had been no change of importance in the distribution, and the winds direction and force were generally unaltered. By the morning of the 27th the small depression, which had been shown over the north-west angle of the Bay had passed westward, and had also become absorbed into the general depression over the central parts of the country. A well marked cyclonic circulation existed around this depression, but otherwise the winds were normal. The Chart of the 28th showed that the depression, without changing its intensity, had advanced west-north-westward through the Central Provinces, and that its centre lay near Saugor. The cyclonic circulation around it was very well marked. Normal winds prevailed elsewhere, though over the head of the Bay the force of the wind was exceptionally high. Between the 28th and the morning of the 29th the storm moved north-westward, and at 8 A.M. on the 29th the centre lay immediately to the south-east of Ajmere and Jeypore. There was no alteration in the winds. They continued to circulate cyclonically around the storm area, and to blow strongly both over the Bay and across the West Coast. The observations of the 30th showed that the barometer was rising in all districts, except North-Eastern India, and that the depression which lay near Jeypore on the 29th had filled up after an existence of nearly a week. There was much less difference of pressure between the south and north of India than is ordinarily the case at this season of the year, and there were again indications of a tendency to depression formation over Bengal. With the decrease in the barometric

gradient noticed above, there had occurred a decrease in the force of the monsoon currents, which were moderate only on both sides of India. The Chart of the 1st July showed that a depression was commencing over Central Bengal. Otherwise there was little alteration, and the monsoon currents remained below the normal strength.

Temperature.—The departures of temperature from the normal have been much less during the past week than during the two or three preceding weeks. The monsoon current, with its cloudy skies, high humidity, and fairly constant rain, has prevailed over the greater part of the country and, except where local heavy falls of rain have occasioned rapid local changes of temperature, has maintained a fairly constant temperature. The largest variations from the normal have occurred in Sind, Guzerat, and Rajputana; the smallest in Burma. The former districts were those where the monsoon currents were most intermittent in their action, while the latter district was steadily influenced by them throughout the week.

The past week was a cool one generally, but especially so in Bengal and the North-Western Provinces, where on every day of the week the average mean temperature was below the normal.

The following table shows the excess or defect of the mean average temperature of the different Provinces from the normal, both for the present and for the preceding week:

Province.	Difference of Mean Temperature of Last Week from Normal.	Difference of Mean Temperature of Present Week from Normal.
Burmah	+ 0·1°	0
Bengal	— 1·3°	— 1·3°
North-Western Provinces	— 6·8°	— 2·5°
Punjab	— 3·7°	+ 0·6°
Bombay	+ 0·2°	— 0·3°
Central Provinces and Berar	— 2·0°	+ 0·5°
Guzerat and Central India	— 3·3°	— 1·1°
Sind and Rajputana	— 2·3°	— 1·4°
Madras	+ 0·5°	— 0·1°

From this table it will be seen that the relative coolness is less this week than last. A slight excess has replaced in the Punjab and Central Provinces the considerable deficiency which prevailed last week, while elsewhere the deficiency is generally slighter than it was last week.

Rain.—The distribution of rain has been approximately the same as that reported last week. Over the greater part of the country rain has fallen generally and almost daily, but in North-Western India it has been scattered and partial and entirely absent at some stations. In Southern Madras similar conditions have prevailed.

The following is a brief description of the daily distribution of rain. On the 25th there was no rain reported from the Punjab, Rajputana, Sind, or Eastern Madras (south of Masulipatam), but general rain elsewhere,—heaviest in Bengal. The reports of the succeeding day showed a similar distribution, except that rain had extended north-westward along the line of the hills in the Punjab. The amounts were generally moderate. The only change shown by the reports of the 27th was the much heavier fall on the West Coast, where Mangalore reported 3 inches, Karwar 6, and Goa 7 inches. On the 28th general rain continued with patches of large amounts over the central stations and the West

Coast. On the 29th the amount of rainfall had become much slighter, but the area covered remained unchanged. On the 30th the falls were still lighter, and on the 1st both the amount of the rainfall and its extent had alike decreased.

The table at the close of the summary shows that at 32 out of the 51 divisions into which India has been divided the average rainfall of the week has been exceeded, and that at 17 the rainfall has been deficient, though in the majority of cases the deficiency has been small, not reaching 1 inch.

In Burmah, Tenasserim, and Arakan, show that notwithstanding heavy local rain at Akyab, the week's fall has been short of the average; but in Lower and Central Burmah there is an excess. Excessive rain is also reported from the whole of Bengal, the North-Western Provinces (East), (West), and (Submontane) and Oudh (North); but in the North-Western Provinces (Central) and Oudh (South) there has been a deficiency of about half an inch. In all parts of the Punjab, except the hill districts and the Indus Valley, there have been deficient rains. The Malabar Coast had slightly, and Coorg considerably, less than usual while Madras (South Central), Mysore, and the Konkan had an excess. The whole of the district comprising the Deccan, Khandeish, the west of the Central Provinces, and Kattiawar had deficient rainfall, while Guzerat, Central India, Rajputana, and Sind had more than usual. In Madras there was a general though slight excess.

The maximum falls are as a rule not remarkable. Cherrapunji had 27 inches, and some stations in North and Central Bengal between 10 and 12 inches. Behar, both North and South, and the adjoining parts of the North-Western Provinces received falls of between 10 and 12 inches; but further to the westward the amounts decreased, and there was nothing very important over Upper India. In the Malabar Coast districts falls of 13 or 14 inches, and in the Konkan of between 16 and 19 inches, are reported. At one station in the Kolhapur district of the Deccan 20 inches were received. Fair, moderate rains were experienced over the Central parts of the country and the Peninsula, and good rain in Ganjam.

The concluding column of the table shows the state of the seasonal fall. There is more or less deficiency in Burmah and East Bengal, excess in other parts of Bengal and over nearly the whole of the North-Western Provinces, and a rather large deficiency in the Punjab. Over the West Coast districts the variations are somewhat irregular, but all over the Central Provinces and in Kattiawar there is a deficiency. In Central India, Rajputana, and generally over Madras the rains have been good.

Simla, *4th July, 1889.*

W. L. DALLAS,
Assistant Meteorological Reporter to the Government of India.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 29th June.*—Rainfall good in Ganjam, Vizagapatam, Kistna, North Arcot, Nilgiris, and West Coast; fair in Godavari, Bellary, Kurnool, Chingleput, Coimbatore, and Salem; slight elsewhere. Crops generally good, but withering in parts of South Arcot and Tinnevelly; suffering from want of rain or water in Cuddapah, North Arcot, Trichinopoly, and Salem; dry crops blighted in Coimbatore. Water-supply insufficient in Cuddapah, Chingleput, North Arcot; Coimbatore, and Salem. Stock suffering badly, chiefly from rinderpest, in Malabar, Tinnevelly, and Kistna. Prices rising in Ganjam, Vizagapatam, and nine other districts; falling in five; stationary in others. 749 deaths from cholera in Ganjam. Labourers employed last day of week,—on Rushikulya works, 4,252; Gopalpur Canal, 1,769; Ghat Roads, 1,259. Average daily number on drinking-water tanks and wells, 4,765; on minor irrigation and other works, 3,657. Number on village relief on 22nd June, 24,880; fed in kitchens, 1,969. No reliable estimate of stocks, but apparently fair, except in Chinna Kimedi. General prospects favourable, and improving in Ganjam.

Bombay.—*For week ending 3rd July.*—Rain throughout Presidency Proper and Sind, but insufficient in many places. Sowing progressing in several districts, but retarded in parts of Broach, Nasik, Khandesh, Sholapur, Poona, Ahmednagar, Bijapur, and Belgaum for want of sufficient rain. Harvesting of *Rabi* crops in Karachi district completed. *Rati* blight in Mirpur Botoro; and sugarcane in Sákro in Karachi district attacked by disease. Locusts in one taluka of Karachi and one of Hyderabad; also passed through some villages of Ahmedabad. Mitho Indus embankment in Shikarpur breached by floods, which are spreading and endangering Larkana town.

Bengal.—*For week ending 2nd July.*—General and rather excessive rain throughout the Province during the week. A break is now much needed. Prospects so far are favourable. Cultivation is well forward, and all standing crops are making good progress. Paddy and *bhadoi* sowings are nearly complete, and transplanting of seedlings has begun. The excessive rain and rise of rivers have caused some damage to the lowland crops in Pubna, Julpaiguri, Dacca, Furreedpore, Muzaffarpur, and Chumparun. Prices continue high and almost stationary. The attendance on relief works in the distressed tracts of the Sonthal Pergunnahs is said to be gradually diminishing.

North-Western Provinces and Oudh.—*For week ending 3rd July.*—Cloudy weather has prevailed throughout the week, and average rain has fallen generally; though in Jhansi it has been inadequate, and in Moradabad more is urgently wanted. *Kharif* sowings continue. Markets are amply supplied and prices remain steady, except in Partabgarh, Allahabad, and Moradabad, where they have an upward tendency. Agricultural stock in good condition.

Punjab.—*For week ending 3rd July.*—Rain has fallen in all districts, except Hissar and Peshawar. Prices falling in Shahpur; unsettled in Peshawar, and stationary elsewhere. *Rabi* harvesting over; *kharif* ploughings and sowings in progress. Rain anxiously expected in Hissar and Lahore. Standing crops are in good condition. Sugarcane and cotton crops promise well. Stock cattle are reported healthy. Fodder sufficient, except in Hissar district.

Central Provinces.—*For week ending 3rd July.*—Rain general and sufficient. There have been heavy showers, followed by clear weather, which have been very favourable for sowing. Rice being transplanted in Sambalpore. Prospects good. Much loss of cattle in Hoshangabad from want of fodder.

Burma.—*For week ending 29th June.*—The rainfall was heavy throughout Lower Burma, except in Thayetmyo. In Upper Burma, except in the Ruby Mines, Bhamo, Upper Chindwin, and Yamethin districts, the rainfall was light; but no reports of its being insufficient have yet been received. Cattle-disease is severe in Shwegyin. The food-supply is sufficient. The price of paddy has risen 3 per cent. in Rangoon, 6 per cent. in Myadoung, and 11 per cent. in Pyinmana, and has fallen 11 per cent. in Prome, 4 per cent. in Thayetmyo, and 5 per cent. in Sagaing.

Assam.—*For week ending 3rd July.*—Weather seasonable. Sowing of late rice and reaping of summer rice continue. Blight on tea in Cachar. Prospects of other crops in general good.

Mysore and Coorg.—*For week ending 3rd July.*—Slight rain in the Civil and Military Station of Bangalore. Rainfall good in Kadur and Shimoga districts, and insufficient in the Mysore district. Crops good, except in Mysore district. Sowing operations completed in parts. No material change in prices.

Good rain in Coorg during the week. Crops in good condition.

Berar and Hyderabad.—*For week ending 3rd July.*—Average rainfall fair in Berar. Cotton sowing continues. *Jowari, túr,* and *til* sowings in progress. Prices steady. General condition of agricultural stock good. Fodder insufficient.

Rainfall fair in Hyderabad during week. Week's rain useful for sowing operations, but rainfall since commencement of monsoon insufficient. Scarcity of fodder still felt. Prices stationary.

Central India.—*For week ending 3rd July.*—Rain throughout Central India during the week; heaviest fall in Bhopawar Agency, but slight only in Gwalior, where more is needed. Prospects improved considerably in Western Malwa Agency. Prices of food grains generally steady in Bhopawar. Condition of pasturage is reported good.

Rajputana.—*For week ending 3rd July.*—Heavy rain at Abu, Erinpura, and Meywar; moderate elsewhere. Slight in Tonk and Ulwar. Agricultural operations progressing. Agricultural stock poor in Meywar and Bickaneer. Pasturage or fodder insufficient in Meywar and Ulwar. Prices rising in Kerowli and Bhurtpore.

Nepal.—*For week ending 27th June.*—Good rain. Weather fair. Prospects of crops good.

E. C. BUCK,

Secretary to the Government of India.

GOVERNMENT OF INDIA.
PUBLIC WORKS DEPARTMENT.
RAILWAY TRAFFIC.

No. X OF 1889-90.

APPROXIMATE STATEMENT OF GROSS RECEIPTS AND EXPENSES OF INDIAN RAILWAYS.

N.B.—As regards the figures in column *Total Receipts from 1st April to date*, audited figures have been used as far as possible.

Latest Return received.	Railways.	Total mean length open.	Receipts for week ending 9th June, 1888. Total.	Per mile open.	Total mean length open.	Receipts for week ending 8th June, 1889. Total. SUPPLEMENT TO

The Gazette of India.

No. 28.} CALCUTTA, SATURDAY, JULY 13, 1889.

OFFICIAL PAPERS.

A SUPPLEMENT to the GAZETTE OF INDIA will be published from time to time, containing such Official Papers and information as the Government of India may think fit for communication to the Public, and such as may usefully be made known. The DEBATES of the Legislative Council of the Governor General will in future be published in PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

DEPARTMENT OF FINANCE AND COMMERCE,
(*Statistical Branch.*)

E. J. SINKINSON,
Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on Monday, July 8th, 1889.

There has been no important change of weather during the past week. Normal monsoon conditions have prevailed throughout the period, uninterrupted either by any considerable break in the rains or by any considerable storm. In the Western Desert, Khandeish, part of the Bombay Deccan, and Madras there has been less rain than usual; but with these exceptions the rainfall, though nowhere very heavy, has been steady and sufficient.

The Chart of the 2nd showed the ordinary monsoon distribution over the greater part of the country, but in Northern India there were some irregularities. In the first place, a small depression lay over Northern Bengal; in the second, the shallow depression which ordinarily exists over the Gangetic plain was absent, and pressure decreased gradually but steadily right up to the foot of the hills. In consequence, the south-easterly winds which usually prevailed over Northern India were not shown, and the winds over the Punjab and North-Western Provinces were apparently part of the West Coast current. On the 3rd the Chart showed that the depression over Bengal had begun to move west-south-westward and at the same time to fill up. There existed on this day a low pressure area over Western Bengal and the east of the North-Western and Central Provinces, and a second over the west of the Punjab, with an intervening region covering the North-Western Provinces, the east of the Punjab, and Rajputana of very uniform pressure. Over the Peninsula gradients were also slight for the time of year. The monsoon currents were consequently light or moderate generally, and on the West Coast there was much variability in the wind direction. By the morning of the 4th the Bengal depression had reached the centre of the Central Provinces. A well marked though feeble cyclonic circulation existed around it, and hence easterly and south-easterly winds had appeared in Upper India. The wind was still very variable on the West Coast, but elsewhere normal monsoon directions prevailed. By the 5th the depression had almost filled up, though there were traces of the centre between the stations of Jeypore and Indore and Neemuch and Jhansi. Except on the West Coast, the normal monsoon circulation existed. On the 6th the depression had entirely disappeared, but otherwise there was no change. On the 7th a rapid fall of the barometer was reported from North-Western India, while pressure rose in the south. Hence gradients became steeper and the wind stronger. The Chart of the 8th showed that the fall in the North-West continued, and the barometric difference between the south and north of India became again about normal. At the same time the wind became westerly and south-westerly over the Peninsula.

Temperature.—Very small variations of temperature from the mean are again reported this week. The conditions which maintained the uniform temperature of last week have again been effective in preventing any large changes, and the variations from the normal, which are shown in the table given below, are everywhere less than $1\frac{1}{2}^{\circ}$. Larger variations than the above occurred on some days in particular districts. For instance, owing to the rather heavy rainfall in the Indus Valley at the end of last week, the mean temperature of Guzerat and Sind was low on the 2nd, while, owing to moderately heavy rain in Upper India at the close of the present week, the mean temperature of the North-Western Provinces and the Punjab was low on the 7th and 8th.

During the first two days of the week the maxima were high all over North-Western India, exceeding 100° at all stations; but on the 4th a rapid fall occurred over Upper India (except the Indus Valley), and the maxima from that day till the close of the week were generally considerably below the normal.

The following table shows the excess or defect of the mean average temperatures of the different Provinces from the normal, both for the present and for the preceding week:

Province.	Difference of Mean Temperature of Last Week from Normal.	Difference of Mean Temperature of Present Week from Normal.
Burmah	0°	+ 1·2°
Bengal	— 1·3°	— 0·2°
North-Western Provinces	— 2·5°	— 0·8°
Punjab	+ 0·6°	— 0·5°
Bombay	— 0·3°	+ 1·0°
Central Provinces and Berar	+ 0·5°	+ 1·4°
Guzerat and Central India	— 1·1°	— 0·7°
Sind and Rajputana	— 1·4°	— 1·1°
Madras	— 0·1°	+ 0·1°

This table shows that there has been a slight excess of temperature in Burmah, Bombay, the Central Provinces, and Madras, and a slight deficiency elsewhere.

Rain.—In North-Western India and in Madras the rainfall of the week has again been rather scattered than general, and in Sind and the west of the Punjab there has been none of any consequence; but in all other parts of India rain has been general and has fallen in most districts on every day of the week.

The following is a brief description of the daily distribution:

On the 2nd there was no rain over the south and west of the Punjab, Upper Sind, Central India, the west of the Central Provinces, the Bombay Deccan, or the Carnatic. Elsewhere rain was general, and in parts of Bengal heavy. On the 3rd a similar distribution obtained, but the amounts had decreased somewhat in Bengal. On the 4th there was rather more rain in the Punjab, and a fairly general fall over Central India, Khandeish, and the Bombay Deccan, and larger amounts on the West Coast. On the 5th rain ceased again in Khandeish, Berar, the west of the Central Provinces, and decreased in amount on the West Coast; but elsewhere there was no change. The Chart of the 6th showed larger amounts again on the West Coast and general rain in all parts of the country, except the south of the Punjab and the Western Desert. On the 7th rain was still heavier on the West Coast, but there was no other change; and the Chart of the 8th showed rain in all places, except parts of Rajputana and the Indus Valley.

The table at the close of the Summary shows that out of the 51 divisions into which India is divided, 23 divisions had more rain during the week than is usually received, and that 24 received less than the average; 1 district had exactly the normal, and from the other 3 districts there was no information or no average. In the great majority of districts the variations are small and often unimportant.

In Burmah all the divisions, except Arakan, had less rain than usual; and the same is true of all districts in Bengal, except Deltaic Bengal, North Bengal, and Chota Nagpur, where there was an excess. The whole of Upper India, except the districts of Oudh north, Punjab central, and Punjab west, had exceedingly good rain, the excess in some districts being considerable. Malabar had only two-thirds of its normal amount; but Madras, south central, and Coorg had heavy rain. The Konkan has more than the average rain; but behind the Ghâts in Mysore and the Bombay Deccan, as well as northward into Khandeish, Berar, and the west of the Central Provinces, there was a rather large deficiency. The east of the Central Provinces and Central India had good rains, while Guzerat had a considerable and Sind a trifling deficiency. The East Coast districts exhibit a slight excess or a trifling deficiency.

The concluding column of the table shows the state of the seasonal rainfall. Burmah and East Bengal are below the average; but over the rest of Bengal, as well as over by far the greater part of Northern India, the rainfall has been exceedingly good. The only important exception is the Punjab central, where only about half the normal amount has fallen. The West Coast districts have had fair rain; but Mysore and the whole of the districts comprising Khandeish, Berar, and the west of the Central Provinces have had short rain. In Central India, Guzerat, and Sind the rainfall has been about the normal; but in Kattiawar it has been deficient. In Madras the changes are irregular and on the whole not large.

SIMLA, *11th July, 1889.*

W. L. DALLAS,
Assistant Meteorological Reporter to the Government of India.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 6th July.*—Rainfall good in Ganjam, Vizagapatam, Godavari, Kistna, Bellary, Nilgiris, Salem, and West Coast; slight in Madras and Chingleput, and fair elsewhere. Crops generally good; but withering in parts of Cuddapah, South Arcot, and Tinnevelly, and suffering from want of rain or water in North Arcot, Trichinopoly, Coimbatore, and Salem. Crops damaged by excessive moisture in Vizagapatam and blighted by insects in Coimbatore. Water-supply insufficient in Chingleput and Salem. Stock suffering badly from disease in Tanjore, Kistna, Tinnevelly, and Malabar. Prices rising in eight districts, falling in six, and stationary in others. Cholera severe in the three northern districts, but abating in Ganjam. Labourers employed last day of week in Ganjam,—on Rushikulya works, 4,118; Gopalpur Canal, 1,334; Ghat Roads, 1,879. Average daily number on drinking-water tanks and wells, 5,039; on minor irrigation and other works, 3,055: decrease due to agricultural operations and partly to floods in Gopalpur Canal. Number on village relief on 29th June, 27,163; fed in kitchens, 2,907. No reliable estimate of stocks of food-grains in Ganjam. Imports during week by sea and land 1,208 tons. General prospects favourable; continue to improve in Ganjam.

Bombay.—*For week ending 10th July.*—Rain throughout the Presidency Proper and Sind, but deficient in parts of Guzerat, Deccan, and Southern Mahratta Country. Sowing progressing in several districts, but retarded for want of sufficient rain in parts of Khandesh, Nasik, Poona, Ahmednagar, Satara, Bijapur, and Dharwar. Standing crops good in Sholapur, Belgaum, and Kanara,—damaged by caterpillars in four talukas of Kaira, and suffering for want of moisture in three talukas of Bijapur. Transplantation progressing in Surat, Thana, Kolaba, Ratnagiri, and Kanara. Fodder scarce in parts of Poona, Ahmednagar, Dharwar, and Kathiawar. Water scarce in parts of Ahmednagar and Dharwar. Prices rising in parts of Khandesh and Nasik.

Bengal.—*For week ending 9th July.*—Ordinary monsoon weather prevails throughout the Province, and ample rain has fallen in all districts, except Balasore. A partial break in the rains appears to have set in and will be beneficial to the crops. The excessive rain has caused damage to the crops on low lands in places in the Rajshahye and Dacca divisions, the damage being rather considerable in the south of Rungpore. Sowing of paddy and *bhadoi* crops is nearly completed, and transplanting of seedlings has begun. Prospects of early rice, jute, and sugarcane are promising. Indigo manufacture has begun, and the produce is expected to be fair, except in Midnapore and Chumparun. The price of rice remains high and steady throughout the Province. The latest report regarding the affected tract in the Patna division shows that the attendance on relief works has fallen off considerably; but in Muzaffarpur and Darbhanga, owing to interruption of communications caused by heavy rain, prices have risen almost to famine rates. In Chumparun anxiety is felt for the crops for want of fine weather, and destitution is said to be spreading.

North-Western Provinces and Oudh.—*For week ending 10th July.*—Good rain everywhere. *Kharif* operations progressing satisfactorily. Prices almost stationary. Markets fairly supplied.

Punjab.—*For week ending 10th July.*—Good rain has fallen in all districts, except at Peshawar. Prices are falling in Shahpur, fluctuating in Peshawar,

slightly rising in Mooltan, and stationary elsewhere. Ploughings for and sowings of *kharif* crops in progress. Rain has done much good to the crops at Sialkot. Prospects of standing crops are good. Sugarcane and cotton crops promise well. Stock cattle are reported healthy. Fodder sufficient, except in the Dera Ismail Khan district.

Central Provinces.—*For week ending 10th July.*—There has been sufficient rain in all districts, with a very heavy fall in the Jubbulpore tahsil. Sowing and weeding continue. Prospects favourable. Prices steady.

Burma.—*For week ending 6th July.*—Seasonable rainfall throughout Lower Burma. In Upper Burma in the Kyaukse and Meiktila districts the rainfall was slight and in Yamethin very heavy, destroying some crops. The price of paddy has risen in Prome and Toungoo, and slightly in Pegu and Thayetmyo; the prices at other districts in Lower Burma remain unchanged. In Upper Burma a rise is shown in the prices in the Ruby Mines, Sagaing, and Yamethin, and a fall in Myingyan and Pyinmana districts. The food-supply is sufficient.

Assam.—*For week ending 10th July.*—Heavy rain in most districts. Rivers high. Transplanting of winter rice and reaping of early rice impeded in some districts by floods. Tea and growing crops doing well.

Mysore and Coorg.—*For week ending 10th July.*—Good rain in Civil and Military Station of Bangalore, and heavy rain in the Bangalore district. Rain has fallen more or less throughout the State. Standing crops good, but more rain wanted in one taluka of the Hassan district. Outturn of crops in Tumkur district averages from half to two annas. Prices slightly risen in the Bangalore district.

Rains continue light in Coorg. Standing crops in good condition.

Berar and Hyderabad.—*For week ending 10th July.*—Average rainfall fair. Cotton sowing nearly finished. Sowing of *jowari, til,* and *tûr* continues. Fodder sufficient, except in Amraoti district. Prices stationary. Agricultural stock good.

Some rain in Hyderabad during the week. Scarcity of fodder still felt. Prices stationary.

Central India.—*For week ending 10th July.*—Rain throughout Central India during the week; heavy in Gwalior. Agricultural operations completed in Bhopal; elsewhere in progress. Condition of standing crops and of pasturage good. Prices are high, except in Neemuch, where they are falling.

Rajputana.—*For week ending 10th July.*—No rain in Bickaneer and Dholepur; elsewhere moderate. Agricultural operations progressing. Agricultural stock good, except in Meywar and Bickaneer. Pasturage or fodder scarce in Kherwara and Meywar. Prices steady generally.

Nepal.—*For week ending 4th July.*—Good rain. Weather cloudy. Rain daily during the week, but weather very warm. Indian corn progressing. Late autumn rice replanted.

E. C. BUCK,
Secretary to the Government of India.

Director General of Railways' No. 82 (Statistical), dated the 13th June 1889, forwarding the Abstract Returns of Accidents to Trains, &c., on the open lines of Railway in India for the quarter ended 31st December 1888.

OBSERVATIONS.—As comparedwith the average of the five* corresponding previous quarters, the number of accidents to trains, rolling-stock, permanent-

* Except where statistics for five quarters are not available for any line.

way, &c., shows an increase of 14, or 2·24 per cent. with an increase of 1,976·5 miles, or 15·84 per cent. in the mean mileage open, and of 1,598,973 miles, or 14·55 per cent., in the train mileage. The following are the Railways on which the more important fluctuations occurred :—

Railway.	Number of accidents.	Accidents.				Train mileage.	
		Increase.	Decrease.	Per centage of increase.	Per centage of decrease.	Per centage of increase.	Per centage of decrease.
Bengal-Nagpur	30	22	...	275·00	...	58·27	...
Southern Mahratta	37	26	...	236·36	...	113·35	...
North-Western	76	...	62	...	45·93	21·20	...
Eastern Bengal	60	...	11	...	15·49	37·46	...
Great Indian Peninsula	29	...	10	...	25·64	7·91	...
Oudh and Rohilkhand	43	24	...	126 32	...	24·87	...
The Nizam's	19	11	...	137·50	...	35·81	...

2. Of the increase of 22 accidents in the Bengal-Nagpur Railway, 5 were under "Goods trains or parts of goods trains, engines, &c., leaving the rails" and three were under "Trains running over obstructions on the line."

3. On the Southern Mahratta Railway the number of accidents rose from 11 to 37, or 236·36 per cent., with an increase of 424·25 miles, or 98 61 per cent., in the mean mileage worked, and of 215·238 miles, or 113·35 per cent., in the train mileage run. The increase chiefly occurred under "Trains running over cattle on the line" and "Fire in trains," the number recorded under the former being 16 against 5 and under the latter 7 against *nil*.

4. Of the decrease of 62 accidents on the North-Western Railway, 14 appear under "Goods trains or parts of goods trains, engines, &c., leaving the rails" 6 under "Bursting of tubes, &c., of engines"; 8 under "Failure of couplings"; 7 under "Fire in trains"; and 10 under accidents classed as "Other accidents."

5. The decrease on the Eastern Bengal State Railways was mainly due to 17 cattle accidents having been returned against an average of 27 accidents during the five corresponding previous quarters.

6. On the Great Indian Peninsula Railway there was a decrease of 9 accidents under "Goods trains, or parts of goods trains, engines, &c., leaving the rails," and 5 under "Trains running over cattle on the line"; and an increase of 5 under 'Fire in trains."

7. On the Oudh and Rohilkhand Railway the number of cattle accidents exhibits the largest increase, being 23 against 9.

8. On His Highness the Nizam's Guaranteed State Railway, the only noticeable difference was an increase from 1 to 6 under "Failure of machinery, springs, &c., of engines."

9. The casualties resulting from accidents to trains, &c., were, among passengers and others, 1 killed and 6 injured against 2 killed and 10 injured, and, among servants, 3 killed and 11 injured, against 3 killed and 7 injured. Of the casualties to passengers, 4 were persons slightly injured on the Burma State Railway in consequence of a down goods train colliding with an up mixed train

which was standing on the platform line at Hpoogyee station, the pointsman having turned the down goods train on to the wrong line.

10. On the Tirhoot State Railway a serious collision took place between a mixed train and 18 wagons at the Motiharee goods-shed line, on the 24th November, 1888, owing to the carelessness of the station staff. Three coolies who were loading goods into the wagons were killed on the spot, and 4 seriously injured.

11. The following table exhibits the number of accidents under the different classes, due to accidents to trains, rolling-stock, permanent-way, &c., and the number of persons killed and injured thereby, *vide* Tables Nos. 3 and 4 :—

		Average of corresponding quarters of five previous years.	Fourth Quarter 1888.					Total all classes.	
			No.	Number of passengers and others.		Number of servants.			
				Killed.	Injured.	Killed.	Injured.	Killed.	Injured.
1	Collisions between passenger trains, or parts of passenger trains	1	2	...	1	...	...	...	1
2	Collisions between passenger trains, and goods or mineral trains engines and vehicles standing foul of the line	11	7	...	4	3	4	3	8
3	Collisions between goods trains, or parts of goods trains	15	24	...	...	...	2	...	2
4	Collisions between light engines	2	5	...	...	...	2	...	2
5	Passenger trains or parts of passenger trains leaving the rails	20	20	...	...	...	1	...	1
6	Goods trains, or parts of goods trains, engines, &c., leaving the rails	85	68	...	...	...	...	...	...
7	Trains or engines travelling in the wrong direction through points	12	9	...	...	...	...	...	...
8	Trains running into stations or sidings at too high a speed	2	2	...	...	...	...	...	...
9	Trains running over cattle on the line	198	193	1	...	...	...	1	...

12	The bursting of boilers of engines	21	23	...	...	...	...	...	...
12a	The bursting of tubes, &c., of engines								
13	The failure of machinery, springs, &c., of engines	55	61	...	...	...	...	...	...
14	The failure of tyres	3	6	.	...	..	...	...	...
15	Ditto of wheels	...	...	...	...	...	...	...	...
16	Ditto of axles	6	19	...	...	...	...	...	...
17	Ditto of brake apparatus	...	...	...	...	...	...	...	...
18	Ditto of couplings	42	19	...	...	...	...	...	...
19	Ditto of tunnels, bridges, viaducts culverts, &c.	...	...	...	...	...	...	...	...
20	Broken rails	10	9	...	...	...	...	...	...
21	The flooding of portions of permanent-way	9	12	...	...	...	...	...	...
22	Slips in cuttings or embankments	4	1	...	...	...	...	...	...
23	Fire in trains	36	41	...	...	...	...	...	...
24	Fire at stations, or involving injury to bridges or viaducts	5	12	...	...	...	...	...	...
25	Other accidents	56	54	...	1	...	2	...	3
	1888	...	638	1	6	3	11	4	17
	TOTAL. Average of corresponding quarters of five previous years*	...	624	2	10	3	7	5	17

* Except where statistics for five quarters are not available for any line.

12. The principal variations occurred under "Collisions between goods trains, or parts of goods trains," 24 against 15; "Goods trains or parts of goods trains, engines, &c., leaving the rails," 68 against 85; "Trains running through gates at level-crossings, 23 against 11; "Failure of axles," 19 against 6; and Failure of couplings," 19 against 42.

13. The increase under "Collisions between goods trains, or parts of goods trains" was chiefly due to the number of accidents recorded on the Rajputana-Malwa State Railway being 9 against 2.

14. The number of "Goods trains, or parts of goods trains, engines, &c., leaving the rails" principally decreased on the North-Western and Great Indian Peninsula Railways, being on the former 1 against 15, and on the latter 1 against 10. The largest number of accidents of this class occurred on the Dibru-Sadiya Railway, *viz.*, 10 against 9, the average of three corresponding quarters.

15. Of the 23 cases of "Trains running through gates at level-crossings" 8 occurred on the South Indian Railway, and of 61 cases of "Failure of machinery, springs, &c., of engines," 17 occurred on the North-Western Railway, 13 on the Eastern Bengal State Railway and 8 on the South Indian Railway.

16. On the Rajputana-Malwa State Railway, there were 10 cases of "Failure of axles" out of a total of 19.

17. The decrease of 23 accidents under "Failure of couplings" was mainly due to decreases on the Rajputana-Malwa State, North-Western, and Dibru-Sadiya Railways.

18. The number of cases of "Fire in trains" was the largest on the North-Western Railway, *viz.*, 13 out of a total of 41; but as compared with the average of five corresponding previous quarters, there was a decrease of 7 accidents under this head.

19. Of the 54 accidents classified as "Other accidents," 26 have been returned by the Bombay, Baroda and Central India Railway.

20. The casualties to passengers from causes other than accidents to trains, &c., *vide* Table No. 2, were:—

Cause of accident.	Fourth Quarter, 1888.		*Average of corresponding quarters of five previous years.*	
	Killed.	Injured.	Killed.	Injured.
From falling between carriages and platforms	2	4	1	3
Falling on to the platform, ballast, &c., when getting into or out of trains	2	9	2	3
Whilst crossing the line at stations	1	3	...	...
By closing of carriage doors	...	1	...	1
Falling out of carriages during the travelling of trains	6	14	4	13
Other accidents	1	8	2	4
Total	12	39	9	24

* Except where statistics for five quarters are not available for any line.

21. The accidents to servants in the employ of Railways or of Contractors, whilst performing duties connected directly with the transit of passengers and goods, from causes other than accidents to trains, &c., were as follows, *vide* Table No. 2:—

Causes of accident.	Fourth Quarter, 1888.		Average of corresponding quarters of five previous years.*	
	Killed.	Injured.	Killed.	Injured.
During shunting operations	10	9	5	8
Falling off engines, vans, wagons, &c.	9	12	3	10
Coming in contact with over-bridges, &c., during the travelling of trains	...	1	...	1
Coming in contact, while shunting, with vehicles, &c., standing in adjoining lines	...	1	...	1
Getting on or off trains, engines, &c.	1	8	3	8
Whilst loading, unloading or sheeting	1	17	1	11
Whilst breaking, spragging, or choking wheels	...	1	...	...
Whilst working at cranes or capstans	...	3	...	1
Whilst working on the permanent-way or in sidings	1	4	1	4
Whilst walking along the line on the way home, or to work	2	4	2	2
Whilst walking, crossing, or standing on the line	9	11	7	8
Whilst passing between vehicles	1	...	1	1
Whilst attending to the machinery of engines, cleaning them, &c.	1	1	...	4
Whilst attending to gates at level-crossings	...	...	1	1
Falling, or being caught between vehicles and platforms	...	2	1	2
Falling off ladders, scaffolds, platforms, &c.	...	7	...	4
By falling of lamps, wagon doors, timber, weights, &c.	2	8	...	5
Whilst coupling or uncoupling wagons	3	8	3	7
Miscellaneous	6	43	4	18
Total	44	140	32	96

22. Of other persons killed and injured by running trains, &c., 1 was killed and 3 injured whilst passing over the line at level-crossings; 41 were killed and 19 injured whilst trespassing on the line; 14 committed suicide, and 2 were injured in attempting to commit suicide; and 4 were killed and 2 injured from miscellaneous causes.

23. The following table exhibits the total number of persons killed and injured from all causes on the whole Indian Railway system, as compared with

* Except where statistics for five quarters are not available for any line.

the average of the corresponding quarters of five previous years, *vide* Table No. I :—

	Fourth Quarter, 1888.		Average of corresponding quarters of five previous years.*	
	Killed.	Injured.	Killed.	Injured.
Passengers.				
From causes beyond their own control	1	10	2	12
From misconduct or want of caution	12	35	9	23
Servants.				
From causes beyond their own control	8	32	2	13
From misconduct or want of caution	39	119	32	91
Others.				
Whilst passing at level-crossings	1	3	1	1
Trespassers, including suicides	55	21	40	11
Other persons	4	2	4	2
Total	120	222	90	153
Total open mileage	14,456½		12,480	
Total train mileage	12,588,692		10,989,719	

24. In addition to the above, 11 persons are reported to have been killed and 44 injured in yards, workshops, &c., and 138 persons to have died in carriages and at stations from causes unconnected with the working of trains.

Resolution.—The Government of India again notices the number of cases of "Failure of axles" on the Rajputana-Malwa Railway, 10 cases being reported during the quarter out of a total of 19 for all Railways. There was also a noticeable increase on the Rajputana-Malwa Railway under "Collisions between Goods trains or parts of Goods trains."

2. Under "Goods trains or parts of Goods trains, engines, &c., leaving the rails," the Government of India is pleased to observe the decrease on the North-Western and the Great Indian Peninsula Railways.

3. Of 61 cases of "Failure of machinery, springs, &c., of engines," it is noticed that 17 occurred on the North-Western Railway and 13 on the Eastern Bengal Railway. A satisfactory decrease in the number of failures of couplings is shown for the Rajputana-Malwa, North-Western and Dibru-Sadiya Railways.

* Except where statistics for five quarters are not available for any line.

Order.—Ordered that this Resolution be communicated, for information, to the Local Governments, Administrations and Officers noted in the margin.

The Governments of Madras, Bombay, Bengal, the North-Western Provinces and Oudh, and the Punjab.
The Chief Commissioners of the Central Provinces, Burma, and Assam.
The Resident at Hyderabad.
The Agents to the Governor General for Central India, Rajputana, and Baluchistan.
The Director General of Railways.
The Consulting Engineers to the Government of India for Railways, Calcutta, Lucknow and Central Division.

Ordered also that copies be forwarded for the information of Her Majesty's Government.

Ordered further that this Resolution, with the Abstract Returns, be published in the Supplement to the *Gazette of India*.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on Monday, July 15th, 1889.

The weather during the week under review has, like that of the two preceding weeks, been on the whole quiet and of the normal monsoon character. Towards the close of the period a storm commenced to form over the Bay of Bengal, but the disturbance had not assumed any considerable proportions by the close of the week, and its effect on the weather, except in Northern India, was slight and unimportant. The differences of pressure between the south and north of the Indian region have been on the whole slighter than is ordinarily the case, and the monsoon currents have been in most cases below their normal strength.

The chart of the 9th showed the ordinary low pressure area over Sind and high pressure area over Malabar and the south of the Bay, with a trough of relatively low pressure over the Gangetic plain. This distribution is ordinarily associated with the most extended distribution of the monsoon current, and the chart shows moist rain-bearing winds in almost all parts of the Indian region. The principal features of this distribution were reproduced on the chart of the 10th, but the barometric difference between south and north was smaller and the force of the monsoon current lower. On the morning of the 11th the barometer was falling in all parts of the Indian region, except Bengal and Burma. The changes had not however affected the general distribution, which remained practically unchanged The wind directions were generally fairly normal, but around the upper part of the Bay there was an irregular indraught towards the centre of the Bay, which probably indicated the existence of a small low pressure area between the Arakan and Circar Coasts. The Chart of the 12th showed a brisk to moderate barometric rise over North-Western India and a fall in most other places. These changes resulted in the production of very uniform pressures over the whole of Northern and Central India, accompanying which were very light and variable winds. Over the Peninsula moderate gradients existed and the wind blew strongly, more particularly on the North Konkan Coast. Around the upper part of the Bay the wind directions were unchanged. There was very little alteration on the 13th, except that the isobaric lines over the Bay now gave definite indication of the presence of a low pressure area over the centre of the Bay. Calms and light breezes prevailed over Northern and Central India, but over the Peninsula the monsoon continued to blow strongly. Conditions were unsettled on the Kattiawar Coast, where the wind directions were irregular and the weather squally. On the 14th the barometer was falling everywhere and the depression over the Bay was much better defined. Gradients were increasing over the Peninsula and the Bay, and the monsoon was blowing freshly, though at Bombay the force of the wind had decreased. The Bay monsoon apparently fed into the depression, as the winds over Northern India were light and rather variable. On the 15th the depression over the Bay displayed a well defined centre lying near the Orissa Coast. The barometer was falling everywhere, briskly in the North-West, and the general conditions presented a well marked example of a type of weather which is not uncommon during the progress of the south-west monsoon. The winds were cyclonic around the storm area; fairly normal elsewhere.

Temperature.—The variations of temperature from the mean have been much larger during the present than during the preceding week. This result is attributable to the variations in the extent of the monsoon currents; hence the irregularities are greatest in Upper India, where the variations in the monsoon current have been most marked. In Burma and the Central Provinces the mean temperature has been above the normal throughout. In Bengal, the North-Western Provinces, the Punjab, Guzerat, Central India, Sind, and Rajputana the earlier days of the week, when the monsoon current extended well over Northern India, were cool, while the latter days of the week, when the monsoon, under the action of the Bay depression, was inturrupted, were considerably warmer than the average. In the Punjab the mean temperature was 9·3° below the normal on the 9th and 3·6° above on the 15th, giving a range of 13° for the week. In Madras the variations of temperature were the reverse of those

in Upper India. The first days of the week, when the rainfall was light, were warmer, and the latter days, when the depression was forming and rain falling, were cooler than the average. The maxima followed the same course as the mean temperature, only, of course, the variations were larger. For instance, the maximum at Lahore on the 9th was 22° below the normal, and on the 15th was 4° above.

The following table shows the excess or defect of the mean average temperatures of the different Provinces for the present and for the preceding week:

Provinces.	Difference of Mean Temperature of Last Week from Normal.	Difference of Mean Temperature of Present Week from Normal.
Burmah	+ 1·2°	+ 2·9°
Bengal	— 0·2°	+ 1·5°
North-Western Provinces	— 0·8°	— 0·2°
Punjab	— 0·5°	— 3·6°
Bombay	+ 1·0°	+ 0·1°
Central Provinces and Berar	+ 1·4°	+ 2·1°
Guzerat and Central India	— 0·7°	+ 0·6°
Sind and Rajputana	— 1·1°	+ 1·7°
Madras	+ 0·1°	— 0·4°

This table shows that there has been some deficiency of heat in the North-Western Provinces, the Punjab, and Madras, and some excess elsewhere.

Rain.—The principal features of the general rainfall of India during the past week have been the steady rain in the west and centre of the country, the sudden cessation of the rain in Northern India on the 13th, and the increase in the rainfall on the East Coast on the 14th.

The following is a brief description of the daily distribution.

On the 9th rain was general, except in Sind, where there was none, and on the East Coast, where there were only scattered showers. Lucknow had a heavy downpour, but otherwise the amounts were not large. On the 10th there was some falling off in the amount of rain received over Northern India, but no other change. The chart of the 11th showed that a large part of North-Western India, including the south of the Punjab, Rajputana, Guzerat, and Sind, were without rain, but that it had fallen in all other districts. On the 12th and 13th the same distribution prevailed, but on the 14th a sudden change took place, and rain almost ceased during that and the following day over Northern India, though it continued generally and fairly heavily elsewhere.

The table at the close of this Summary shows that at twenty-six out of the fifty-one divisions the rainfall of the week has exceeded and at twenty-three been less than the normal. The excess has been most marked over the Peninsula, where nearly every division reports an excess—in many cases very large. Over the whole of Burma, Bengal, and Assam, except the divisions of Assam (Brahmaputra) and Bengal (North), the week's rainfall has been deficient; but in Upper India the rain has been much heavier, the only districts reporting a deficiency in the North-Western Provinces and the Punjab being North-Western Provinces East, Oudh North, and the Punjab hill districts: in all other parts of those Provinces the rainfall has exceeded the average. Along the whole length of the West Coast from Malabar northward to Guzerat and Kattiawar the rainfall has been very heavy, but inland over the Deccan, Khandeish, and the Central Provinces the amounts are again short. Sind, Central India, and the east of Rajputana have also had deficient rains, but Rajputana West, as well as the whole of the eastern parts of the Peninsula, have had rains more or less above the normal.

The maximum amounts were unimportant in Burma and the greater part of Bengal and Assam. Perhaps the strongest evidence of the feebleness of the rains in this part of India is given by Cherrapunji, where the rainfall of the week was only 9¼ inches. North Bengal had several heavy amounts, and in Upper India the maximum amounts were generally above the normal. Falls of from 10 to 22 inches were measured along the West Coast, but in the interior of the Peninsula and over the Central parts of the country, except Berar, there were no important amounts. In Madras the extreme falls varied between 2 and 8 inches. The concluding column of the table shows that the seasonal rains are deficient over Burma, excessive over the whole of Northern India, except Bengal East, Orissa, Oudh North, and Punjab Central and Submontane. In Malabar and Mysore there is a certain amount of deficiency, but the other West Coast districts show an excess. In the central parts of the Peninsula and of India the rains are still deficient, while in Guzerat, Kattiawar, Rajputana, as well as over Madras, there is a fairly general excess.

Simla, *18th July, 1889.*

W. L. DALLAS,
Assistant Meteorological Reporter to the Government of India.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 13th July.*—Rainfall slight in Tinnevelly; fair in Ganjam, Nellore, Trichinopoly, Madura, Coimbatore, and Salem; good elsewhere. Crops generally good, but withering in parts of Tinnevelly and Coimbatore, and suffering from want of rain or water in parts of North Arcot and Salem. Crops damaged by excessive moisture in parts of Vizagapatam. Water-supply insufficient in Chingleput, Coimbatore, and Salem. Stock suffering very badly, chiefly from rinderpest, in Malabar and badly in Kistna and Anantapur. Prices rising in eleven districts, falling in eight, and stationary in others. Cholera severe in the three northern districts. Labourers employed on last day of week,—on Rushikulya works, 4,105; Gopalpur Canal, 2,114; Ghat Roads, 1,927; drinking-water tanks and wells, 2,820; minor irrigation and other works, 3,615: decrease due to agricultural operations and cholera. Number on village relief on 6th July, 30,625; fed in kitchens, 5,549. Imports during week by sea and land, 613 tons. General prospects favourable, and considerably improved in Ganjam.

Bombay.—*For week ending 17th July.*—Rain general but deficient in parts of Deccan and Southern Mahratta Country, and sowing consequently retarded in parts of Nasik, Poona, Ahmednagar, Satara, Belgaum, and Dharwar. Standing crops good in parts of Shikarpur, Surat, Khandesh, Colaba, and Belgaum; *bajri* crop doing well in Ahmedabad, but insects damaging it in two talukas; young crops also damaged by caterpillars in two talukas of Kaira. Transplantation progressing in Shikarpur, Surat, Thana, and Colaba. Fodder scarce in parts of Nasik, Ahmednagar, Dharwar, and Kathiawar. Water scarce in parts of Ahmednagar and Dharwar. Prices rising in Khandesh and two talukas of Nasik, and falling in Panch Mahals.

Bengal.—*For week ending 16th July.*—The monsoon winds from the Bay have been feeble, and the rainfall of the week has been generally light and irregular. In Orissa general rain fell on the 15th and 16th, and showers were also numerous on these days in North and East Bengal. There was a break in the rains over the greater part of the Province, which was very welcome for agricultural purposes. More rain is however wanted in Burdwan, Hooghly, Balasore, Singbhoom, and Manbhoom. Cultivation is well forward. Rice and *bhadoi* sowings are nearly complete, and transplanting of seedlings is in progress. Early rice, jute, and sugarcane are doing well. Early rice has begun to be harvested in places in North Bengal, and is expected to be below an average crop. Indigo manufacture is proceeding. The prices of rice are high and almost stationary. According to the latest report, the attendance on relief works in Muzaffarpur and Durbhanga has fallen off from 17,278 and 14,656 to 10,114 and 6,270 respectively, and in certain localities prices have risen owing to interruption of communications by heavy rain.

North-Western Provinces and Oudh.—*For week ending 17th July.*—Average rain has fallen during the week, and the *kharif* prospects are everywhere good. Markets continue well supplied, and prices generally remain steady. The condition of cattle is good.

Punjab.—*For week ending 17th July.*—Rainfall general throughout the Province. Prices rising in Jullundur and Rawalpindi, falling in Shahpur, unsettled in Peshawar, and stationary elsewhere. Ploughings for and sowings of *kharif* crops in progress. More rain is wanted in Hissar. Prospects of standing crops good. Stock cattle are reported healthy. Fodder is said to be sufficient throughout the Province.

Central Provinces.—*For week ending 17th July.*—Good rain has fallen in all the northern districts, except in the Sihora tahsil of Jubbulpore, where the fall is short. More rain is also required for rice in Nagpur and parts of Chhattisgarh, but cotton and other crops are thriving. Nearly 1,600 cattle are reported to have died in Nimar during June.

Burma.—*For week ending 13th July.*—In Lower Burma, except in Moulmein and Tavoy, the rainfall was light. Rain is wanted in Sandoway, Henzada, and Prome. In Upper Burma heavy rain fell in Mandalay, Ruby Mines, Upper Chindwin, and Meiktila; elsewhere but little rain fell. The price of paddy rose 2 per cent. in Rangoon, 5 per cent. in Pegu, 8 per cent. in Tharrawaddy, 7 per cent. in Prome, 5 per cent. in Shwegyin, 12 per cent. in Ruby Mines, 5 per cent. in Minbu, and 12 per cent. in Yamethin. Prices fell in Thayetmyo, Toungoo, and Magwé; elsewhere there was but little change. The food-supply is sufficient.

Assam.—*For week ending 17th July.*—Weather sultry. Rain wanted in Cachar. Some damage to crops by floods in Goalpara and Garo Hills. Transplanting of winter rice and reaping of summer rice continue. Prospects of tea good.

Mysore and Coorg.—*For week ending 17th July.*—Good rain in Civil and Military Station of Bangalore. Rainfall general. Crops good. Paddy and sugarcane harvested in parts. Prospects favourable. No material change in prices.

Very heavy rain in Coorg. Standing crops good.

Berar and Hyderabad.—*For week ending 17th July.*—Average rainfall good in Berar. Cotton sowing completed. Sowing of *jowari*, *túr*, and *til* nearly finished. Fodder sufficient, except in the Amraoti district. Agricultural stock good. No change in the price of food-grains. In Jalgaon, Akola district, cotton suffering from want of rain.

Slight rain at Hyderabad during the week. Prices stationary.

Central India.—*For week ending 17th July.*—No change of any importance. Fair rain throughout the week. Western Malwa reports crops not damaged and probable outturn good.

Rajputana.—*For week ending 17th July.*—Moderate rainfall throughout the Province,—heavier in Kerowlee and Dholepore. Agricultural operations satisfactory. Standing crops good. Agricultural stock poor in Meywar. Pasturage or fodder scarce in Meywar. Prices steady generally.

Nepal.—*For week ending 11th July.*—Good rainfall. Weather hot. Transplantation of rice is busily in progress. Prospects of Indian corn good.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

Calcutta, 23rd July, 1889.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Circular No. $\frac{50}{63-5}$ S.

Extract from the Proceedings of the Government of India in the Revenue and Agricultural Department (Surveys),—dated Simla, the 23rd July, 1889.

Read—

The General Report on the Operations of the Survey Department of India for the year 1887-88.

RESOLUTION.

The Survey Department was under the direction of Colonel H. R. Thuillier, R.E., throughout the year, and the report, which presents a record of varied and useful work in survey and exploration, indicates that the Department continues to be maintained in a state of high efficiency.

2. Field operations were prosecuted by twenty-six parties, of which one was devoted to Trigonometrical Surveys, six to Topographical Surveys, nine to Cadastral and Forest Surveys, six to Traverse Surveys, one to Geographical Surveys, and three to Geodetic and Tidal and Levelling Operations.

3. The Party employed on Trigonometrical Surveys completed the 370 miles remaining of secondary triangulation along the east coast of India. Secondary triangulation was also carried out for an aggregate length of 270 miles by the parties employed in Baluchistan as a basis for topographical surveys in that region. The work of the Geodetic Party comprised the measurement of seven arcs of longitude in Southern India; and the Tidal Survey Party continued its observations with self-registering tide gauges at the several stations along the coast where tidal observatories are established and the connected operations of spirit levelling.

4. Geographical Surveys and Explorations have been carried out vigorously in Upper Burma, with the result that triangulation has been extended over an area of 23,000 square miles, and that nearly 21,000 square miles have been surveyed and mapped on the $\frac{1}{4}$ inch scale. The Survey officers who accompanied the Hukong Valley Expedition on the Eastern, and the Black Mountain expedition on the Western Frontier, succeeded in mapping large areas in comparatively unknown country on both sides of India, while a valuable addition was made to the geographical knowledge of Afghanistan and its borders by the Native Surveyor deputed with the Afghan Boundary Rectification Commission. A reconnaissance along the Nepal boundary has supplied a rough basis for a more accurate and detailed survey of the northern frontier when opportunity offers; and interesting additional information regarding Bhutan and Thibet has been obtained from the adventurous travels of native explorers trained and sent thither by the Survey Department. On the whole, the work accomplished during the year in Geographical exploration is satisfactory, and shows that this important and difficult section of the duties of the Department has received a full share of attention.

5. The number of parties devoted to Topographical and Forest Surveys within India was reduced from eight to six, one party having been transferred to Upper Burma for Geographical, and the other to the Central Provinces for Forest Surveys. Belgaum, Dharwar, and Guzerat in Bombay, and Madura and the Native States of Travancore and Cochin in Madras, were the field of operations in the Southern Presidencies. The Party in Madras took over the Topographical programme from the Provincial Survey Department, and by thus relieving the latter of this class of work enabled it to extend the surveys required for purposes of settlement. In Northern India the Military Surveys in Baluchistan on the

½ inch scale were continued; and a Party in the Punjab operated in Kangra and the Simla Hill States, and provided in the British districts within these tracts a skeleton traverse or frame, which it is intended that the Settlement Department should fill in, for purposes of land assessment in accordance with the system advocated in the eighth and ninth paragraphs of the Survey Resolution of 1882. New Topographical maps were also constructed for a large area in the Punjab by the Traverse party employed in that Province; and a Topographical section, working in conjunction with a Cadastral party, completed the survey of the district of Mirzapur in the North-Western Provinces. The aggregate outturn amounted to 15,673 square miles, forming a substantial addition to the data in course of collection for the new maps which are constantly being required for purposes of general administration.

6. Forest Surveys conducted by the Survey of India Department were carried out in the Central Provinces, Lower Burma, the North-Western Provinces, Orissa, and Bombay. The outturn in the forests of Hoshangabad in the Central Provinces was small, as is usual in initiating operations in a difficult and unhealthy tract. In Burma the absence of disturbances enabled a larger area to be surveyed. In the North-Western Provinces and Orissa the Forest Surveys were performed by parties employed on cadastral work, and in Bombay by the two Topographical parties engaged in the Presidency. Under recent arrangements with the Government of Bombay one of these parties will in future be exclusively employed on the survey of Government Forests, and will compile complete maps on a 4 instead of an 8 inch scale. This change, while admitting of a larger outturn of work, will not affect the value of the maps for the purposes of forest management, for which they are primarily needed.

7. In pursuance of the programme laid down four years ago, the greater part of the available Survey force is now devoted to work designed to combine the requirements of Revenue administration with the demands of Cartography. Under this head may be included the Forest Surveys, already referred to, as well as Cadastral and Traverse Surveys, which occupied thirteen out of twenty-six parties. The diversion of what may be termed unremunerative to remunerative work is indicated by the following table in which the classification of the several parties employed in 1884-85 and 1887-88 is based upon the character of the work upon which they were employed. The first term "necessary" implies that, for military or administrative purposes, the survey is urgently required. The second term "unremunerative" comprises topographical surveys, which can be postponed without great inconvenience to the Administration.

	1884-85.			1887-88.		
	Necessary.	Unremunerative.	Remunerative.	Necessary.	Unremunerative.	Remunerative.
Number of parties...	8	11	7	11	2	13
Total Cost Rs.	(a) 3,02,000	7,15,000	8,66,000	(a) 4,72,000	1,43,000	13,65,000

(a) Exclusive of cost of 4 Scientific Parties (Coast Triangulation, Tidal and Levelling and Astronomical).

Taking Cadastral and Traverse Surveys together, the area covered during the year was upwards of 25,000 square miles. These extensive operations will aid materially in securing the punctual assessment of large tracts of country in which the settlement engagements are about to expire; and the Government of India desires to record its appreciation of the cordiality and zeal with which the Survey Department has lent itself to carrying out the programme, imposed upon it by pressing fiscal and administrative considerations in this important section of its duties.

8. Cadastral Surveys, involving the plotting of interior details, have been restricted to tracts where no village maps and no village officials trained in survey at present exist, or where, owing to the inferior training of the village staff, the existing village maps have become inaccurate and obsolete. Seven parties were thus employed in the Central and North-Western Provinces, Assam, Burma, and Bengal; and the aggregate outturn was 5,435 square miles. The system pursued varied in each case; but in every instance measures are, as far as possible, being taken to train the local and permanent officials to assist in the work and to maintain the maps and records provided by the professional survey.

Owing to the necessity for adapting the plan of operations to the widely differing conditions and circumstances of the tracts in which Cadastral Surveys were prosecuted, no useful conclusion can be drawn from a comparison of cost rates. But efforts have been continuously and systematically directed to reducing the cost to the lowest possible limits; and the average rate, which in 1884-85 was about Rs. 300 per square mile, is now brought down to something like Rs. 150 per square mile.

9. In Traversing, the principal field of operations continued to be the Central Provinces, where five parties were engaged in providing skeleton plots on the 16 inch scale, and completed 14,287 square miles. These plots are intended to furnish a scientific framework and check for the field survey by trained village officials, which follows. The only other Province in which Traversing formed the special work of a Survey party was the Punjab, where one party was employed and furnished skeletons for 5,795 square miles. In this case the object of the survey was to provide correct outlines for new Topographical maps, the details being taken from the village maps compiled by the Land Record establishment, on the accuracy of which the traverse at the same time serves as a check. The average cost of Traverse surveys did not much exceed Rs. 20 per square mile.

10. It remains to notice the good work done by the Head Quarters Offices. Of new maps, 4,062 were published during the year, and heavy demands continued to be made on the Drawing Office for trans-Frontier maps and maps of Upper Burma. The Photographic and Lithographic Offices show the large outturn of 1,203,861 copies issued during the year, which is in some measure due to requisitions for high class illustrations for archæological and other reports, for the production of which the copying processes perfected in the Photographic Office are admirably adapted. The transactions of the Mathematical Instrument Office also increased; the number of instruments supplied being 57,293, and of those received into store, 70,093.

11. In his concluding remarks in Part I. of the Report, the Surveyor General alludes to the difficulty of providing officers to superintend the various field operations, and the necessity of further recruitment in view of the large number of prospective retirements. These matters are under the separate consideration of the Government of India.

ORDER.—Ordered, that the foregoing Resolution be forwarded to the Surveyor General of India; to the Local Governments and Administrations noted on the margin; and to the Foreign and Military Departments.

Madras.	Punjab.
Bombay.	Central Provinces.
Bengal.	Burma.
North-Western Provinces and Oudh.	Assam.
	Coorg.

Ordered also, that it be published in the Supplement to the *Gazette of India*.

(True Extract.)

E. C. BUCK,

Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

WEATHER SUMMARY FOR JUNE 1889.

General Weather conditions of month.—The chief feature of the month is the gradual advance of the south-west monsoon humid currents from the Arabian Sea and Bay of Bengal over India. As stated in last month's report, partial advances occur in the month of May over portions of Southern India and Tenasserim, but it is usually not until the last week of May or the first week of June that the great advance occurs which finally terminates in the establishment of the monsoon over India. It advances with more or less regularity northwards up the Arabian Sea and the Bay of Bengal, and thence extends over the interior of India. The rate and manner of advance depend very largely upon the pressure and other weather conditions prevailing at the time in India. Excessive temperature usually prevails over the whole of Central and Northern India at the commencement of the month. The advance of the monsoon currents over the interior increases the humidity and gives rise to more or less cloud. Hence temperature falls, and the area of excessive temperature retreats northwestward into Sind, the West Punjab, and North-West Rajputana, where temperature remains permanently high throughout the whole of the monsoon, and the highest maximum temperatures of the year are frequently recorded in that area in June and July, and even in August.

This great change from great heat and dryness to moderate heat, excessive humidity, and frequent rain showers is usually not completed over Northern India until the third or fourth week of June, by which date the monsoon currents have penetrated into the Upper Punjab.

Weather is always more or less squally in front of the advancing monsoon currents up the Arabian Sea and Bay of Bengal; and this squally weather frequently develops into a cyclonic, storm which carries the first heavy burst of monsoon rainfall, as it were, with it in its rear.

Again, after the south-west monsoon winds are fully established, there is a marked tendency to the formation of small cyclonic storms in the Bay of Bengal and in Bengal (more especially East Bengal). These small cyclonic storms form one of the more conspicuous features of the rains proper. In June and July they usually advance in a west or west-north-west direction across the head of the Peninsula, and give heavy rain over the area they traverse. As they draw away the rain for the time being from other districts and concentrate its fall over the narrow area they traverse, they are one of the chief causes of the irregular distribution of the monsoon rainfall. This effect is exaggerated by the tendency of these cyclonic storms to follow the same general path during the months of June, July, and August, or during the height of the monsoon.

Cyclonic storms and barometric depressions of the month.—The following are the more important depressions of the month:

(1) *Depression and cyclonic storm in the Arabian Sea of June 1st to 9th.*—This storm was formed in front of the south-west monsoon current as it advanced northwards along the West Coast of India. Heavy rain began to fall on the Malabar Coast on the 30th and 31st, and weather was very squally off that Coast. On the 2nd heavy rain had extended northwards to Ratnagiri, and the wind directions at the West Coast stations indicated that the squally weather in front of the advancing humid current had developed into a cyclonic storm, the centre of which on the morning of the 2nd was to the west-south-west of Goa. Very heavy rain fell along the West Coast on the 3rd, and the centre of

the storm on the morning of the 4th was west of Ratnagiri. The depression at the centre was now considerable, as pressure at Goa and Bombay was a sixth of an inch below the normal. The depression continued to advance slowly northwards and to deepen. On the morning of the 5th the centre was west of Bombay, where the barometer was a quarter of an inch below the normal. The storm now covered the angle between the Kathiawar and Bombay Coasts, and it was blowing a heavy gale on the Konkan Coast. The average wind velocity at Bombay on the 6th was 37 miles per hour and on the 7th 33 miles per hour. The storm either filled up slowly on the 8th off the Kathiawar Coast or recurved to north-west or west. No reports have been received as yet from ships of the weather at this time in the Arabian Sea; but, so far as can be judged from the Kurrachee observations, the storm drifted to the north-west and marched parallel to the Kathiawar and Sind Coasts on the 8th and 9th. It probably filled up as it advanced and broke up in the neighbourhood of the Makran Coast west of Kurrachee on the evening of the 9th. The chief feature of the storm was the very heavy burst of rain which the westerly winds in the south quadrant gave to the West Coast districts. The following gives the total rainfall received during this period at several of the West Coast Ports:

Stations.	Rainfall of 24 Hours preceding 8 A.M. of							Total Rainfall of Week.
	June 1st.	June 2nd.	June 3rd.	June 4th.	June 5th.	June 6th.	June 7th.	
Cochin	3·24	0·83	0·10	2·61	2·79	0·39	3·92	13·88
Calicut	1·47	0·73	1·10	4·43	1·50	3·49	6·62	19·34
Mangalore	0·02	2·76	2·12	5·40	3·40	3·04	4·08	20·82
Karwar	...	0·55	3·92	5·10	7·30	5·60	10·15	32·62
Goa	...	0·14	1·46	6·00	5·06	5·28	3·22	21·16
Ratnagiri	0·01	2·77	...	0·20	2·56	3·72	0·06	9·32
Bombay	...	...	0·05	...	...	0·07	5·80	5·92

(2) *Depression and small cyclonic storm of 9th to 14th of June.*—Weather was unsettled and squally in the south of the Bay at the commencement of the month. A very small depression was in existence off the Coromandel Coast on the morning of the 2nd. It apparently advanced slowly northwards without showing any sign of further development until the morning of the 9th, when it covered the north-west of the Bay, off the Orissa and Ganjam Coasts. The centre was probably east of Gopalpore on the morning of the 9th, and east of False Point on the morning of the 10th. The depression at the centre was very small, and winds were probably only of moderate intensity in the southern quadrant. The centre at 8 A.M. of the 11th was midway between False Point and Saugor Island. It continued to advance northwards, and was between Burdwan and Berhampore on the 12th. It drifted slowly through Central Bengal on that day, and the centre was to the south-west of Dhubri on the 13th. The storm disappeared before morning of the 14th. It was hence throughout a diffused storm of feeble intensity, and was remarkable for its slow progression northwards, at a rate probably never exceeding 5 miles per hour. This storm carried the south-west monsoon current up the Bay, and general rain began to fall in Bengal on and from the 9th. The breaking up of the Arabian Sea storm, which also occurred on that day, was followed by a rapid advance of westerly humid winds and general rain over nearly the whole of Central and Upper India on the 10th and following days. The present storm gave very heavy rain on the Arakan Coast and moderate rain to Bengal. The following are some of the heaviest

falls throughout the storm and illustrate the distribution of the accompanying rainfall:

Stations.	Rainfall of 24 Hours preceding 8 A.M. of					Total Rainfall of Period.
	June 9th.	June 10th.	June 11th.	June 12th.	June 13th.	
Akyab	2·88	6·05	11·02	4·53	5·60	30·08
Calcutta	0·88	...	0·05	0·05	0·07	1·05
Jessore	1·42	0·16	2·14	0·38	1·25	5·35
Dacca	0·02	3·01	1·38	0·92	1·27	6·60
Burdwan	0·02	0·04	0·02	1·36	0·42	1·86
Berhampore	...	0·04	0·15	2·09	0·09	2·37
Dhubri	0·05	0·14	0·07	0·89	1·35	2·50

(3) *Land-formed depression of June 16th to 20th.*—After the dispersion of the previous storm strong south-westerly winds blew across the Bengal Coast, and weather was squally in Bengal. Slight indications were shown on the 15th and 16th of a tendency towards the formation of a depression in East Bengal, and on the 17th there was a small but well marked depression and cyclonic circulation, the centre of which was between Calcutta and Dacca. It marched westwards, and was south of Hazaribagh on the 18th and in Central India, between Sutna and Saugor, on the 19th. Heavy rain fell over the Central Provinces and Berars at this time. The depression at the centre was a sixth of an inch. It began to fill up on the 20th, on which day the storm was advancing between Saugor and Jhansi into Rajputana. It merged into the area of permanent depression in Rajputana and Sind on the evening of the 20th. This storm gave a moderately heavy burst of rain to the whole of Bengal, Behar, Chutia Nagpur, Orissa, the Central Provinces, and Central India.

(4) *Depression and small cyclonic storm of June 24th to 30th.*—The first indications of the formation of this storm were shown on the morning of the 24th. It originated in the north-west angle of the Bay. The centre was between False Point and Saugor Island on the morning of the 26th, and the depression at the centre probably exceeded two-tenths of an inch. It advanced westwards across the North Orissa Coast in the afternoon and passed between Sambulpur and Hazaribagh on the 27th. It was in Central India (probably between Saugor and Jhansi) on the morning of the 28th. Heavy rain was received at this time in the northern and western districts of the Central Provinces and Berars. The storm continued to advance to the west-north-west and was a little to the south of Jeypore on the morning of the 29th, at which time the depression was an eighth of an inch. It merged into the area of permanent low pressure in Upper India on the 30th. It gave general rain to the whole of Bengal, Orissa, Behar, Chutia Nagpur, the Central Provinces, Berars, Central India, and South-East Rajputana.

Pressure.—The chief barometric movements during the month occurred in connection with the cyclonic storms described above. Although they were large in amount, the mean pressure of the month for the whole of India was almost identical with the normal mean—being only ·005″ in excess. The following table gives the pressure anomalies or the variations of the mean pressure freed from the general variation (·005″) for each of the larger Provinces and the corresponding anomalies of May for comparison:

Province.	Barometric Anomalies or Pressure Variations.	
	Month of May.	Month of June.
Burmah	—·002	+·011
Bengal	—·019	+·008
Assam	—·024	+·019
Behar and Chutia Nagpur	—·027	+·006
North-West Provinces	—·009	+·003
Punjab	+·024	—·016
Sind and Rajputana	+·014	—·013
Central India	+·015	—·001
Central Provinces	+·006	—·004
Bombay	—·006	—·001
Madras	—·004	—·002

Hence, as frequently happens, the first effect of the establishment of the south-west monsoon in 1889 has been not only to diminish the amounts of the barometric anomalies but also to reverse their character over the greater part of India. The abnormals over the whole of North-East India for the month of June were positive and over the whole of Western and North-Western India they were negative, and were in all cases, except Bombay and Madras, opposite in character to those of the preceding month. They were, however, small in amount for all stations, except the following:

Dera Ismail Khan	—·030 inch.
Mooltan	—·028 ,,
Jacobabad	—·027 ,,
Sibsagar	+·028 ,,

whence approximately normal average pressure conditions obtained during the month, and the abnormals indicate the continuance of steady and strong south-west monsoon currents, more especially from the Arabian Sea.

Storms.—The large cyclonic storms of the month have been described above. The following local storms were reported during the month:—A tornado at Mymensingh on the morning of the 4th June, which caused some loss of life and property; severe duststorms at Nagpur and Hoshangabad on the afternoon of the 5th, and violent duststorms on the 9th at Allahabad, Sutna, and Lucknow in the North-West Provinces, and at Krishnagarh in Bengal. No severe local storms have been reported since the 10th, by which date humid monsoon winds extended over nearly the whole of the country.

Temperature.—The temperature conditions of the month were mainly determined by the rainfall distribution. At the commencement of the month temperature was excessive over the whole of India. The greatest excess of temperature at this time occurred in the area defined by the stations of Ajmere, Agra, Jhansi, Delhi, Jubbulpore, Saugor, and Hoshangabad. The 2nd was a

particularly hot day. The following gives the temperature variations of that day for these stations :

Stations.	Variation of Maximum temperature from normal of day.	Variation of Minimum temperature from normal of day.	Variation of Mean temperature from normal of day.
Ajmere	+10·1	+10·3	+10·2
Agra	+10·5	+10·7	+10·6
Jhansi	+10·2	+11·3	+10·8
Delhi	+11·1	+11·6	+11·4
Jubbulpore	+11·6	+ 9·9	+10·8
Saugor	+10·4	+ 9·3	+ 9·9
Hoshangabad	+10·2	+ 5·3	+ 7·8

With the advance of the monsoon currents up the Arabian Sea and Bay of Bengal temperature diminished generally, and the area of greatest excess of temperature was transferred northwards to the Punjab.

The following gives the highest temperatures at stations in the Punjab on the 8th, which was one of the hottest days of the month in the Punjab :

Stations.	Variation of maximum temperature from normal of day.	Variation of Minimum temperature from normal of day.	Variation of Mean temperature from normal of day.
Sirsa	+ 2·7	+10·4	+ 6·6
Delhi	+ 7·9	+13·0	+10·5
Ludhiana	+10·2	+ 9·6	+ 9·9
Lahore	+10·2	+ 5·9	+ 8·1
Sialkot	+11·1	+ 9·4	+10·3
Rawalpindi	+12·2	+ 4·9	+ 8·6
Peshawar	+11·0	+ 5·3	+ 8·2

A rapid advance of humid monsoon winds commenced on the 9th and increased humidity and diminished temperature very rapidly over the whole country. The reduction of temperature was mainly due to the rapid spread of cloud over Upper India and the occurrence of general rain in all districts, except Sind, the West Punjab, and West Rajputana.

The following table, which gives the temperature variations at several stations in Upper India on the 10th, furnishes remarkable examples of the very large reduction of temperature effected by rainfall at the commencement of the south-west monsoon :

Stations.	Variation of Maximum temperature from normal of day.	Variation of Minimum temperature from normal of day.	Variation of Mean temperature from normal of day.
Sambhar	—11·4	—13·0	—12·2
Jeypore	—11·7	—12·9	—12·3
Bareilly	—14·6	— 7·3	—11·0
Meerut	—18·2	— 8·7	—13·5
Roorkee	—20·1	— 7·6	—13·9
Delhi	—16·2	— 7·6	—11·9
Ludhiana	—23·5	— 5·0	—14·3
Sirsa	—30·3	—12·9	—21·6
Lahore	—13·5	— 6·8	—10·2
Sialkot	—15·1	— 5·7	—10·4

During the remainder of the month the variations of temperature in Upper and Central India depended almost entirely upon the occurrence or non-occurrence of continued rainfall. They were similar in character to those just described, but much smaller in amount. The following give a summary of the temperature data for the month, and shows the general character of the variation of temperature from week to week in different parts of the Empire :

Meteorological Area.	Variation of Mean Temperature from Normal for the Week ending					Variation of Mean temperature of month from normal.
	June 3rd.	June 10th.	June 17th.	June 24th.	June 31st.	
Burmah	+ 3·6	+ 3·4	+ 0·1	+ 0·7	0	+ 1·4
Bengal	+ 3·3	+ 1·0	— 1·3	— 0·2	— 1·3	+ 0·4
North-Western Provinces	+ 2·8	+ 3·9	— 6·8	— 3·0	— 2·5	— 1·2

Rain.—The south-west monsoon current advanced along the West Coast as far as Broach in the first week of the month and gave very heavy rain to the West Coast districts. It began to extend into the interior after the breaking up of the cyclonic storm in the Arabian Sea on the 9th and blew very steadily throughout the remainder of the month.

The Bay of Bengal current was not so strong as the Bombay current. A small diffused storm formed in the Bay during the first week of the month and

drifted very slowly northwards. It crossed the Orissa Coast on the 11th and began to give general rain to Bengal from the 10th. The unusual strength of the Bombay monsoon current at this time was shown by its rapid extension across Central India into the North-West Provinces and East Punjab on the 9th and 10th. General rain over nearly the whole of Northern India due to the advance of both currents hence dates from the 10th June. The distribution of rainfall during the remainder of the month was largely determined by the course of the three small cyclonic storms described above.

Two of the three small cyclonic storms of the month advanced in a general westerly direction across the head of the Peninsula. The indraught to them from the Bay of Bengal gave general and nearly continuous rain during the latter half of the month to Bengal, Behar, the North-Western Provinces, and Central India. The strong indraught to the same storms during the latter part of their existence from the Arabian Sea gave heavy rain to the Central Provinces, the Bombay Coast districts, and North Deccan.

In consequence of these conditions, the Punjab received slightly less than its normal amount, whilst the strong westerly or west-south-westerly deflection of the Bombay current, determined by the advance of the last two cyclonic storms, caused the rainfall of Khandeish, Guzerat, and Kathiawar and part of Berar to be considerably below the average. The deficiency in these districts varies within wide limits and averages forty-five per cent. There was also a slight deficiency in Hyderabad and Mysore and a moderately large deficiency in the Carnatic, due chiefly to the more rapid advance than usual of the monsoon currents and their early establishment over Northern India.

In all other districts the rainfall of the month was more or less above the average and was in some districts excessive. Assam received an average of 12 inches more than its normal amount; Malabar, 11 inches; Behar, Orissa, the Circars, and Lower Burmah, 6½ inches; the Konkan, 5½ inches; Lower Bengal and the greater part of the North-Western Provinces (*i.e.*, to the north of the Ganges), 3½ inches, and North Bengal, Rajputana, and Central India, 2 inches in excess.

One very noticeable feature of the present monsoon has been the favourable rainfall in certain districts, including Ganjam, North Behar, the Central Provinces, Khandeish, and Guzerat, where it was more or less deficient during the whole of last season. Thus Ganjam, North Behar, and the Central Provinces received normal or abundant rainfall during the month of June. The rainfall of June was, on the other hand, very much below the average in Khandeish and Guzerat, but heavy rain has fallen during the present month (July) in these districts also.

The large rainfall of the month was mainly due to the earlier advance of the south-west monsoon into the interior of the country and the prevalence of strongly marked monsoon conditions during the last three weeks of the month.

The following example of heavy rainfall during this month appears to deserve record:—Kumpta in North Kanara received 39 inches during the week ending 10th June, and the average fall of the whole district for the same period was 34 inches. Very heavy rain was received in Burmah during the following week, when Akyab received 36 inches, Sandoway 31 inches, Tavoy 26 inches, and Bassein 19 inches. As a rule very heavy rainfalls have been quite the exception, which is in accordance with the general rule that a strong monsoon gives well distributed and continuous moderate to heavy rain, and a weak monsoon tends to give excessive local falls and very irregularly distributed rain.

The following table gives complete data and shows the actual average rainfall and the normal rainfall of the month of the twenty-one districts into which

the country is divided, so far as it is indicated by the telegraphic reports of a few stations in each district:

Districts.	Number of Stations.	Normal Average Rainfall in June.	Actual Average Rainfall in June, 1889.	Difference from the Average in June, 1889.

JOHN ELIOT,
Meteorological Reporter to the Government of India.

SIMLA, *18th July, 1889.*

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on Monday, July 22nd, 1889.

The principal feature in the weather of this week has been the storm, the commencement of which was noticed in the last Summary, which was formed over the Bay and after a period of little or no movement off the Orissa Coast subsequently travelled north-north-westward into Behar. This storm was at no time very deep, the greatest barometric variations from the normal being—·241″ at False Point on the morning of the 19th, and—·238″ at Saugor Island on the morning of the 20th. Owing, however, to a brisk barometric rise which occurred to the south of the storm, just before the centre crossed the Coast, the gradients on the southern quadrants were steep, and strong winds and gales were experienced over the Bay and at the Sandheads. The storm filled up quickly as soon as the centre passed inland, but not without giving very unsettled weather and heavy rain to parts of Bengal and the North-Western Provinces. In those parts of the country unaffected by the storm normal monsoon weather prevailed, though on the North Konkan Coast, accompanying local pressure irregularities, the current was largely above its normal monsoon strength.

The chart of the 16th showed the ordinary high pressure area in the extreme south and low pressure area over the Punjab. Imposed on this distribution there was a well-defined storm area overlying the north-west of the Bay, Orissa, the Circars, and the east of the Central Provinces. The centre, or centres (for this part of the storm was probably less clearly defined than would appear from the chart) of the disturbance lay off the Orissa Coast, the lowest barometer being 29·388″ at False Point. The wind circulated cyclonically around the storm area, though without much force, but in other parts of India the normal monsoon directions prevailed. On the 17th the storm occupied approximately the same position, but the barometer had fallen briskly in its neighbourhood, and the lowest reading reported was 29·329″ at False Point. On the North Konkan Coast the wind had "backed" to south-south-east and increased in force apparently in connection with some small local irregularity lying off that Coast. Elsewhere there was no important change. On the 18th the barometer was rising over the head of the Bay, and the storm had lost in definition, while the lowest reading was 29·356″ at False Point. The winds were still very variable about the North Konkan and Kattiawar, the direction at Rajkot being north-north-west, at Surat south-east, and at Bombay west. At the last station the force had again risen. The chart of the 19th showed that pressure had increased briskly over the Peninsula, but had decreased over the whole of Northern India, including the head of the Bay. The storm over the Bay had again developed, and the lowest pressures were shown over the north-west angle of the Bay, apparently midway between the stations of False Point, Saugor Island, and Balasore. There was still very little strength in the wind even close to the storm centre. On the West Coast the direction of the wind had become normal throughout, but the force had risen and a strong breeze was blowing at Bombay. Early in the morning of the 20th the storm crossed the Bengal Coast between

Balasore and Saugor Island, travelling on a north-north-west course. The lowest barometer reading reported was 29·300″ at Saugor Island. Squally and rather strong cyclonic winds prevailed over Lower Bengal and gales over the Bay. On the West Coast the winds remained westerly, but a slight gale was blowing at Bombay. By 8 A.M. on the 21st the storm had reached the neighbourhood of Benares. The barometer was rising, except in the immediate vicinity of the storm centre, and the storm was apparently filling up. Normal monsoon conditions prevailed over the greater part of India, and the force of the wind at Bombay had fallen. On the 22nd the chart showed that the storm had still further filled up without moving its position and that elsewhere normal conditions continued.

Temperature.—Variations from the mean have been rather large—more especially in the Punjab and Bombay, where there was a decided excess of heat about the beginning and a deficiency about the close of the week. In Burma, Bengal, the North-Western Provinces, Sind, and Rajputana the weather throughout the whole week was warmer than usual; but in the Punjab, Bombay, the Central Provinces, Central India, and Guzerat the mean temperature at the close of the week fell below the normal. In the Punjab the mean excess was 5·4° on the 16th and the mean defect 3·6° on the 20th, giving a range of 9° for the week. In Madras, with the exception of a trifling excess on the 19th, the average mean temperature was low throughout. Rather high maxima have been experienced over the Punjab and Sind, more particularly during the earlier days of the week. The highest reading recorded was 114·2° on the 19th at Jacobabad.

The following table shows the excess or defect of the mean average temperatures of the different Provinces for the present and for the preceding week:

Provinces.	Difference of Mean Temperature of Last Week from Normal.	Difference of Mean Temperature of Present Week from Normal.
Burmah	+ 2·9°	+ 1·6°
Bengal	+ 1·5°	+ 2·1°
North-Western Provinces	— 0·2°	+ 1·8°
Punjab	— 3·6°	+ 0·7°
Bombay	+ 0·1°	— 0·1°
Central Provinces and Berar	+ 2·1°	+ 1·5°
Guzerat and Central India	+ 0·6°	+ 2·3°
Sind and Rajputana	+ 1·7°	+ 3·4°
Madras	— 0·4°	— 0·6°

From this table it will be seen that the weather over Northern and North-Western India, including Guzerat and Central India, has, relatively to the average, been warmer than during the previous week, and that elsewhere there has been very little change.

Rain.—The principal features of the rainfall of the past week are the steady, constant rainfall over the Peninsula, the Central parts of the country, Burma, and Lower Bengal; the heavy local rain in Behar and the east of the North-Western Provinces in connection with the breaking up of the storm; and the slight, local, and scattered rainfall in Upper India.

The following is a brief description of the daily distribution of rain:—On the 16th rain was general over the Peninsula, the Central parts of the country,

Orissa, East Bengal, and Burma, but over the whole of Northern India from Behar to the Indus the only rainfall was a few local showers. The heaviest rain was on the West Coast. The rain reported on the 17th was distributed in the same manner as that on the 16th, except that there was a little more over Northern India. On the 18th the only difference was the increasing heaviness of the showers in some parts of Northern India. The chart of the 19th still showed the same distribution, but on the 20th, when the storm crossed the Coast, rain became more general over Northern India, and on the 21st and 22nd there was a heavy burst of rain over Bengal and the North-Western Provinces. The Punjab has been visited by showers only throughout the week.

The table at the close of this Summary shows that at twenty-two out of the fifty-two divisions there has been an excess of rain during the week and that at twenty-eight there has been a deficiency. The excess has been most marked over Guzerat and Kattiawar, but has been fairly large over the greater part of the Peninsula, in the central districts, and in Orissa and Tenasserim. The deficiency has been greatest over Upper India.

Tenasserim, as mentioned above, has a considerable excess, but all the other divisions of Burma and all divisions in Bengal and Assam, except the Surma and Orissa divisions, have had less rain than the normal. Oudh had a slight excess of rain, but the North-Western Provinces and the whole of the Punjab exhibit a deficiency. The greatest defect is in the hill districts. The Peninsula, Malabar and Mysore show slightly deficient rains, but all the other western districts, *viz.*, Madras (South Central), Coorg, the Konkan, the Bombay Deccan, Khandeish, Guzerat, and Kattiawar received excessive rains. The Central Provinces and Berar shared in this excess, but in Central India and Rajputana the amount of rain varied considerably. On the East Coast also the variations were irregular and small, some divisions reporting a slight excess, while neighbouring divisions reported a deficiency.

The maxima in Burma were in general moderate, but Tavoy received 23 inches and one station in Amherst $21\frac{3}{4}$ inches within the week. Cherrapunji received $14\frac{1}{4}$ inches and Kurseong $14\frac{3}{4}$ inches, these being the largest amounts in Bengal and Assam. In the North-Western Provinces the maximum falls varied considerably. They were generally small in the plains districts and rather large in the submontane district. In the Punjab there were no falls of any importance.

On the West Coast several large falls occurred. One station in Calicut recorded $21\frac{1}{2}$ inches, one in Ratnagiri 25 inches, and one in Colaba 20 inches. In the Bombay Deccan the station of Banda in the Kolhapur district received 33 inches. Large amounts were also reported from several central stations and from Guzerat. In Madras the amounts were everywhere small.

The concluding column of the table shows, that the seasonal rains have been deficient over Burma and Eastern Bengal, that from Central Bengal westward as far as Oudh there has been an excess, and that from Oudh westward to the Indus the amount of rain received relatively to the average is very variable. Most of the Peninsula districts, except Mysore, are about or over the average. The Central Provinces show very little departure from the normal, and Guzerat and Kattiawar show an excess.

SIMLA, *25th July, 1889.*

W. L. DALLAS,
Assistant Meteorological Reporter to the Government of India.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 20th July.*—Rainfall general; good in most districts, slight in South Arcot, Trichinopoly, Madura, Coimbatore, and Salem. Agricultural operations retarded in Chicacole in Ganjam by excessive rain. Crops generally good, but withering in parts of Salem and Coimbatore; suffering from want of rain in parts of North Arcot, Trichinopoly, and Tinnevelly; damaged by excessive moisture in parts of Vizagapatam; affected by insects or disease in parts of Ganjam, Bellary, Coimbatore, and South Canara. Water-supply insufficient in Chingleput and Salem. Stock suffering badly from rinderpest in Anantapur. Prices rising in ten districts, falling in six, and stationary in others. Cholera abating in the three northern districts, but still bad in Ganjam and Vizagapatam. Labourers employed on last day of week,—Gopalpur Canal, 1,473; Ghat Roads, 530: drinking-water tanks and wells, 3,369; minor irrigation and other works, 1,850. Number on Rushikulya and some roads not reported. Number on village relief during week ending 13th July, 49,431; fed in kitchens, 9,034. Imports during week by sea and land, 380 tons. General prospects favourable and greatly improved in Ganjam.

Bombay.—*For week ending 24th July.*—Rain general and sufficient, except in two talukas of Khandesh, where the crops are consequently unhealthy, and in parts of Nasik and Belgaum, where sowing is retarded. Rain deficient also in parts of Dharwar. In two talukas of Surat sowing is retarded owing to incessant rain. Young *bajri* crop doing well in Ahmedabad district, except in taluka Sanand, where it is slightly damaged by caterpillars; young crops also damaged by caterpillars in four talukas of Kaira. Transplantation progressing in Surat, Thana, Ratnagiri, Kanara, Shikarpur, and Baroda; commenced in two talukas of Ahmedabad, and nearly completed in Colaba. Fodder scarce in parts of Nasik, Ahmednagar, Dharwar, and Karachi. Water scarce in parts of Dharwar. Prices rising in one taluka of Nasik.

Bengal.—*For week ending 23rd July.*—The break in the rains lasted in many districts up to the middle of the week, but since the 20th, ordinary monsoon weather has set in and the rainfall has become general. The rain has been very beneficial to the transplanting of the winter rice seedlings now in progress. All over the Province early rice, jute, and sugarcane are doing well. In Rungpore, Bogra, and Pubna some early rice and jute have been destroyed by excessive rain and floods. In Behar the prospects of the *bhadoi* crops are promising. Indigo manufacture everywhere proceeding well. Prices of rice steady and high throughout the Province. Of the affected districts, in the Patna division Chumparun and Motihari report 11 seers per rupee, Durbhanga and Madhoobani 10 seers, and Muzaffarpur and Sitamarhi $7\frac{4}{5}$ to $10\frac{1}{3}$ seers. In Durbhanga the average attendance on relief works has been 5,673 during the week.

North-Western Provinces and Oudh.—*For week ending 24th July.*—A short break in the monsoon has been followed by fair general rain, and *kharif* prospects are favourable. Markets are well supplied, and prices are stationary.

Punjab.—*For week ending 24th July.*—Rainfall general throughout the Province. Prices rising in Rawalpindi; falling in Shahpur; unsettled in Peshawar; stationary elsewhere. Ploughings for and sowings of *kharif* crops still in progress. Rain is reported to be still insufficient in Sialkote. Prospects of standing crops good. Crops on the Jhelum in the Shahpur district slightly injured by river inundations. Cotton crops are under water in parts of Dera Ismail Khan owing to heavy flood in the Indus. Stock cattle are reported healthy. Fodder sufficient, except in Sirsa in district Hissar.

Central Provinces.—*For week ending 24th July.*—Rain general. Crops thriving, but more rain is required for rice in Nagpur and parts of Jubbulpore and Bilaspur. Rice sowings were delayed in Sambalpur, but good showers have now fallen, and prospects are improved.

Burma.—*For week ending 20th July.*—The rainfall in Lower Burma, with the exception of Thongwa, has been very light, taking the total inches to date as compared with 1888. Rain is badly wanted in North Tharrawaddy, and the want is felt in Thayetmyo and Toungoo. In Rangoon 29·78 inches have fallen since the commencement of the year against 54·46 in 1888. In Upper Burma the total rainfall since the commencement of the year has been in excess of the fall in 1888 in most districts, but in Shwebo the want of rain is felt, also in Yeu and Meiktila. In Lower Burma the price of paddy has fallen in Mergui, but in other districts the prices remain more or less stationary. In Upper Burma there is a slight rise in prices in Upper Chindwin and Pyinmana, and a fall in Lower Chindwin. The food-supply is sufficient.

Assam.—*For week ending 24th July.*—Weather sunny, with heavy showers. Harvesting of early and transplanting of winter rice continue. Tea doing well. Prospects of crops in general good.

Mysore and Coorg.—*For week ending 24th July.*—Rainfall good in the Shimoga and Kadur districts of Mysore and scanty in other parts. Standing crops good. Outturn of crops harvested fair. Prices slightly risen in the Bangalore district.

Good rain in Coorg. Transplanting of paddy in progress. Crops in good condition.

Berar and Hyderabad.—*For week ending 24th July.*—Average rainfall good in Berar. Sowing of *jowari* and *tur* completed. Weeding operations continue. Cotton plants in good condition. Fodder and water sufficient. Prices stationary. Agricultural stock in good condition.

Good rain in Hyderabad during the week. Sowing of *abi* and *kharif* crops still continues in some talukas and weeding commenced in others. Water in tanks insufficient. Scarcity of fodder felt in one taluka only. Prices stationary.

Central India.—*For week ending 24th July.*—Good rain throughout Central India during the week. Prospects good. Prices falling in Western Malwa and Alirajpur and Jhabua in Bhopawar Agency.

Rajputana.—*For week ending 24th July.*—Heavy rain in Kherwara and Shahpura; slight in Marwar, and moderate elsewhere. Agricultural operations and standing crops satisfactory. Agricultural stock good. Pasturage or fodder sufficient. Prices falling in Meywar, Harowti, and Dholepore; steady elsewhere.

Nepal.—*For week ending 18th July.*—Good rain. Weather fair. Prospects good.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on Monday, July 29th, 1889.

The weather of the past week has been very quiet. No storm of any importance has been developed or appeared within the Indian region, and the force of the monsoon currents on both sides of India has decreased steadily during the week. A slight break in the rains has prevailed over North-Western India and to a less extent over the Central parts of the country during the greater part of the period under review, but quite at the close of the week the rainfall area was extending and rain apparently spreading into Upper India.

The Chart of the 23rd showed fairly normal monsoon conditions over nearly the whole country. There was a difference of half an inch in pressure between the south and north of India, and a fairly strong monsoon was blowing on both sides of India. The only important irregularity in the distribution of pressure was that the low pressure trough, which ordinarily lies along the centre of the Gangetic plain, was pushed northward to the foot of the hills. In consequence the slightly higher pressures which normally prevail between the Ganges and the foot of the hills were absent, and with them the south-easterly winds, which under average conditions prevail along the northern side of the Gangetic plain. A similar distribution of pressure prevailed on the 24th, and the wind was westerly (west-south-west—west-north-west) over nearly the whole of India, except the Bay, Burma, and Bengal, where the wind drew into south. The Arabian Sea monsoon blew freshly across the West Coast from Karachi to Bombay and inland over Guzerat, Rajputana, and the Central parts of the country. To the south of Bombay the wind was lighter and the Bay monsoon was not strong, except just at the head of the Bay. The Chart of the 25th showed that the area of lowest pressure which during the two previous days had existed over the north of the Punjab had been transferred to Lower Sind. This change in the distribution was accompanied by the appearance of easterly and south-easterly winds at a few stations in Northern India, but otherwise the wind circulation was the same in all important respects as that reported on the preceding day. On the 26th a moderate to brisk barometric rise was reported from Northern India and a slight fall from the Peninsula. In consequence the difference of pressure between the south and north had decreased, and the 0·50″ which was the difference on the 23rd had been reduced to 0·35″. This reduction in the gradient had been accompanied by a fall in the wind force, and the monsoon currents were generally feeble. By the morning of the 27th the area of lowest pressure had been retransferred to the north of the Punjab, and the distribution as well as the accompanying wind circulation were the same as those reported at the commencement of the week. On the 28th there was no change in the relative positions of the areas of high and low pressures, but the barometric difference had become even slighter and the monsoons were very feeble and variable. The Chart of the 29th showed that a very shallow barometric depression was drifting across the Central parts of the country. In consequence the southerly winds from the Bay now drew into south-east and east up the Gangetic plain, and the wind circulation was less abnormal than it had been during the whole of the week.

Temperature has, over the greater part of India, been fairly steady and uniform. In Burma, Bengal, and the North-Western Provinces the mean temperature has oscillated by small amounts about the normal; but in the Punjab, Bombay, the Central Provinces, Guzerat, Central India, Sind, and Rajputana it has been continually and on the whole steadily above the normal average, while in Madras it has been almost equally steadily below it. The maxima have been several degrees higher than usual over Western and Central India, the hottest days being the 28th and 29th, when readings considerably exceeding 100° were recorded all over North-Western India. The highest reading reported during the week occurred however as early as the 25th, when Jacobabad recorded 116°.

The following table shows the excess or defect of the mean average temperatures of the different Provinces for the present and for the preceding week:

Province.	Difference of Mean Temperature of Last Week from Normal.	Difference of Mean Temperature of Present Week from Normal.
Burmah	+ 1·6°	+ 0·7°
Bengal	+ 2·1°	— 0·1°
North-Western Provinces	+ 1·8°	+ 0·3°
Punjab	+ 0·7°	+ 3·1°
Bombay	— 0·1°	+ 1·3°
Central Provinces and Berar	+ 1·5°	+ 2·2°
Guzerat and Central India	+ 2·3°	+ 1·4°
Sind and Rajputana	+ 3·4°	+ 1·9°
Madras	— 0·6°	— 0·1°

This table shows that the weather relatively to the average has been hotter than it was last week in the Punjab, Bombay, the Central Provinces, Berar, and Madras, and that elsewhere it has been generally cooler. The largest changes are in Bengal and the Punjab.

Rain.—There has been a partial break in the rains over Upper India and the Central parts of the country. This has been due apparently to two causes. In the first place, owing to the abnormally northerly position of the low pressure area over the Gangetic plain, the south-easterly winds, which are the usual accompaniments of rain in Upper India, have been absent; and in the second place, to the weakness of the monsoon on the West Coast. It is important to note that, though the plains have been to a large extent without rain, the hill and submontane stations have received heavy amounts.

The following is a brief description of the daily distribution of rainfall:

On the 23rd there was no rain over the Punjab, Rajputana, Central India, the Western desert, or the east and centre of the Peninsula, except the extreme north and south. Elsewhere rain was general, and heavy in parts of Bengal and the North-Western Provinces. On the 24th there was a little rain along the foot of the hills in the Punjab, but otherwise the distribution was the same as on the 23rd. On the 25th the only change of importance was the extension of the rainfall on the East Coast. On the 26th there was hardly any rain over the whole of North-Western and Central India, but general rain elsewhere. The same distribution continued during the 27th and 28th, but on the 29th rain again extended along the foot of the hills, reaching as far as Rawalpindi in the Punjab.

The table at the close of the Summary shows that at 18 of the rainfall districts the amount of rain has been in excess of the normal rainfall of the week, and that at 32 the rain has been defective. In Burma, Deltaic Bengal, Orissa, the North-Western Provinces Central and West, and the whole of the Punjab except the hill stations, the rainfall has been short, but in all other parts of Northern India it has been excessive—more particularly so on, and along the foot of, the hills. All over the western districts of the Peninsula, the Central parts of the country, Bombay (North), and Rajputana the rainfall is defective, while in the eastern half of the Peninsula the variations are irregular. The regions of greatest excess are Assam (Surma), North Bengal, Oudh (North), and the hill districts of the Punjab. The maximum falls are not on the whole remarkable over North-Eastern India, but Cherrapunji received 63 inches and Kurseong 28 inches. In Upper India all the more important falls occurred on or near the hills: thus Dera Dun received 12⅝ inches, Naini Tal 26 inches, Padraura (Gorakhpur) 17¼ inches, and Simla 14½ inches. All over the Peninsula and the Central parts of the country none of the falls were remarkable.

The column giving the state of the seasonal rainfall shows that in Burma and East Bengal the rain is deficient, but that in all other parts of Bengal, as well as in Oudh and the east of the North-Western Provinces, the rainfall has equalled or exceeded the average. The western parts of the North-Western Provinces and the whole of the Punjab, except the submontane and hill districts, have had short rain. In the West Coast districts, Madras (South Central), the Konkan, Guzerat, and Kattiawar have all had more than the normal rainfall, but the other districts, as well as those in the Central parts of India and of the Peninsula, have had less. On the East Coast the variations are irregular.

Simla, *1st August, 1889.*

W. L. DALLAS,
Assistant Meteorological Reporter to the Government of India.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 27th July.*—Rainfall general; good in twelve districts, slight in Kistna, Nellore, Bellary, Anantapur, Madras, Tinnevelly; fair in Godavari, Chingleput, North Arcot, Madura, and Coimbatore. Crops generally good, but withering in parts of Tinnevelly and Coimbatore; damaged by excessive moisture in Vizagapatam; affected by insects or disease in Bellary, Coimbatore, and South Canara. Water-supply insufficient in parts of Chingleput, Tinnevelly, Coimbatore, and Salem. Stock suffering badly, chiefly from rinderpest, in Malabar and Tanjore. Prices rising in ten districts, falling in five, and stationary in others. Prices of *ragi* fell and of other grains rose in Ganjam. Cholera abating in Ganjam and Vizagapatam, but still bad there and in Godavari. Labourers employed last day of week,—on Rushikulya works, 2,991; Gopalpur Canal, 1,396; Ghat Roads, 1,236: drinking-water tanks and wells, 3,850; minor irrigation and other works, 3,746. Number on village relief on 20th July, 69,521; fed in kitchens, 11,377; total 80,898, of whom 48,990 were children. Imports during week by sea and land, 824 tons. General prospects favourable and greatly improved in Ganjam.

Bombay.—*For week ending 31st July.*—Rain during week general; total fall insufficient for sowing in parts of Nasik, Poona, Ahmednagar, Satara, Belgaum, Dharwar, and Ahmedabad. Young crops suffering for want of moisture in parts of Poona and Ahmednagar, and damaged by floods in parts of Karachi and Shikarpur, by locusts and breaches in canals in parts of Hyderabad, and by caterpillars in parts of Kaira and Kathiawar. Standing crops otherwise good, except in Dharwar and three talukas of Khandesh, where they are middling. Sowing and transplantation progressing generally. Fodder scarce in parts of Karachi, Hyderabad, Nasik, Poona, Ahmednagar, and Dharwar. Water scarce in parts of Upper Sind Frontier, Ahmednagar, and Dharwar. Prices rising in one taluka of Nasik.

Bengal.—*For week ending 30th July.*—General rain during the week, the falls have been particularly heavy in North-East Bengal and North Behar. Transplanting of the winter rice seedlings is now making good progress everywhere, but more rain is still wanted in places in the Burdwan and Chota Nagpur divisions and the Balasore district. All autumn crops and sugarcane are doing well. In North and East Bengal early rice and jute are being harvested, and the outturn in some districts is reported to be below the average. In Chumparun the *bhadoi* crops have been considerably damaged by excessive rain and floods; loss of these crops by floods is also apprehended in Purneah, Bhagulpur, and Maldah. Food stocks are sufficient throughout the affected tract in the Patna division. In Muzaffarpur and Chumparun all relief works are closed, but gratuitous relief is being given. In Durbhanga the attendance on relief works has fallen from 8,968 to 5,673. In Chumparun prices have risen and paupers are increasing on account of the floods.

North-Western Provinces and Oudh.—*For week ending 31st July.*—The weather continues seasonable with average rain generally. *Kharif* crops are doing well. Markets are well supplied and prices steady.

Punjab.—*For week ending 31st July.*—Slight rain has fallen in Umballa, Jullundur, Amritsar, Rawalpindi, and Dera Ismail Khan. Prices rising in Delhi, Ferozepore, and Rawalpindi; falling in Shahpur, and stationary elsewhere. Ploughings for and sowings of *kharif* crops are still in progress. Standing crops are in good condition, except in Delhi. Prospects are discouraging in Peshawar for want of rain. More rain wanted in Hissar, Delhi, Lahore, and Shahpur. Stock cattle are generally healthy. Fodder sufficient, except in Hissar.

Central Provinces.—*For week ending 31st July.*—Weather cloudy, with showers occasionally. Young crops are in good condition, but more rain is required, especially for rice. Ground being prepared for winter sowing.

Burma.—*For week ending 27th July.*—Seasonable rain fell during the week throughout Lower Burma, but more rain is wanted in North Tharrawaddy, Prome, Shwegyin, and Toungoo. In Upper Burma heavy rain fell in Bhamo, Ruby Mines, and Upper Chindwin districts, and moderate rain in Yamethin and Pyinmana, but elsewhere little or no rain fell; and in Shwebo, Kyaukse, Minbu, and Meiktila the want of rain is likely to affect the crops. In Lower Burma the price of paddy has risen slightly in Henzada and Rangoon. In Upper Burma prices have risen 25 per cent. in the Ruby Mines, 9 per cent. in Lower Chindwin, 5 per cent. in Pakokku. Prices have fallen 5 per cent. in Tharrawaddy and Minbu and 3 per cent. in Mandalay; elsewhere prices are stationary. The food-supply is sufficient.

Assam.—*For week ending 31st July.*—Rain in all districts from 0·68 to 8·56 inches. Lands in Goalpara, Sibsagar, and plains portion of Garo Hills submerged. Reaping of early and transplanting of late rice continue. Tea blight in Cachar.

Mysore and Coorg.—*For week ending 31st July.*—Rainfall good in the Shimoga and Kadur districts of Mysore, and fair elsewhere. Crops good. Paddy and sugarcane harvested in parts, and coffee transplanted in Manjarabad taluk. Prospects fair, but more rain wanted for crops in parts of the Kolar and Mysore districts. Prices fallen in Bangalore, Tumkur, and Mysore districts.

Good rain in Coorg. Coffee and rice crops in good condition. Prices have risen slightly.

Berar and Hyderabad.—*For week ending 31st July.*—Rainfall average. Weeding operations continue. Cotton and *jowari* plants in good condition. Fodder sufficient. No change in prices of food-grains. Agricultural stock good.

Slight rain in Hyderabad during the week. *Kharif* and *abi* crops thriving. Weeding of crops continues. Water in tanks insufficient. Prices stationary.

Central India.—*For week ending 31st July.*—Rainfall slight in Central India during the week; none in Gwalior and Goona. Standing crops in Goona suffering slightly for want of rain. Crops in Bhopawar Agency are reported to be doing well, and prospects are good. Prices of food-grains falling in Bundelkhund, Western Malwa, and Neemuch.

Rajputana.—*For week ending 31st July.*—Rainfall slight generally. Good in Pertabgarh. Agricultural operations satisfactory. Standing crops are in want of rain in Marwar, Kerowlee, and Bhurtpore. Agricultural stock good. Pasturage or fodder sufficient, except in parts of Ulwar and Marwar. Prices rising in Kerowlee.

Nepal.—*For week ending 25th July.*—Sufficient rain. Weather hot. Agricultural prospects good. Transplantation of winter rice completed. More rain still required for the upland rice.

E. C. BUCK,
Secretary to the Government of India.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in* PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

RAILWAY TRAFFIC.

GENERAL RULES FOR WORKING INDIAN RAILWAYS.

No. 353 R. T., dated Simla, the 23rd July 1889.

RESOLUTION—By the Government of India, Public Works Department.

Read again—

Section 8 of Act IV (the Indian Railway Act) of 1879.

Public Works Department Notification No. 299, dated 13th September 1880 (publishing the General Rules for all Railways in India) and Public Works Department Circular No. 17 Railway, dated 21st August 1880.

Notification by the Government of India, in the Foreign Department, No. 4587-I., dated 21st October 1887.

Read also—

Letter from the Consulting Engineer to the Government of India for Railways, Central Division, No. 1479-T., dated 4th July 1889, and enclosure.

OBSERVATIONS.—In accordance with the provisions of Section 8 of the Indian Railway Act, IV of 1879, as extended, by the Notification of the Government of India in the Foreign Department read above, to the lands occupied by the Bhopal State Railway in the territories of Her Highness the Begum of Bhopal, the Agent and Chief Engineer of the Indian Midland Railway Company has applied that the General Rules for Indian Railways, which have received the sanction of the Governor General in Council and were published in the *Gazette of India*, dated 18th September 1880, may be applied to the Bhopal State Railway, now worked by that Company, with the exception of Section XVII, which

refers to the working of a single line of railway on the system termed "Train Despatching" in rule 3 of the said Rules, and of Rules 342 and 343 which he requests may be modified so as to read as follows:—

"No. 342.—No engine or train shall be moved from any station until the Driver has in his possession a "Line Clear," "Caution Message," or other permission written on the authorised form showing that he can proceed to the next station. The Driver is to receive this written permission from no other person than the Guard of his own train, or from the Station Master, or from one of the Station staff duly authorised for such duty, but on all occasions when the Guard does not personally deliver the permission to the Driver, it must be countersigned by the Guard before delivery to the Driver. The Driver must also receive from the Guard the usual starting signal before moving.

When a train is arranged to run through a station without stopping, the written permission to proceed to the next station may be handed to the Driver direct by the Station Master or other authorised person of the Station staff, and a duplicate of it handed to the Guard in the same manner.

"No. 343.—The Station Master, or other authorised person of the Station staff, is to hand the written permission to the Guard, who must satisfy himself that it is properly filled up and dated, with the time added, and is signed in full and in ink, and that it applies to the particular train or engine for which it is given and received, before handing it to the Driver. The Driver must also satisfy himself on these points before starting.

This written permission is never to be given to the Driver until the train is to start; and when waiting to pass another train, it must not be given to the Driver until the whole of such other train has come in and is clear of the points.

When a train is not timed to stop at a station, and the written permission is handed both to the Driver and Guard of the train, the Station Master will be held wholly responsible that it applies to the particular train or engine for which it is given, and that it is properly filled up and dated, with the time added, and is signed in full and in ink."

RESOLUTION.—With Rules 342 and 343 altered as proposed, and with the exception of Section XVII which refers to the working of a single line of railway on the system termed in Rule 3 of the said Rules "Train Despatching," the Governor General in Council is pleased, under Section 8 of the said Act as so extended, to sanction the application to the Bhopal State Railway of the General Rules for Indian Railways as published in the *Gazette of India*, dated 18th September 1880.

ORDER.—Ordered that the General Rules, which have been published in the *Gazette of India*, be further notified to the Railway servants and the public by a copy thereof [with the exception and alterations noted] and of this Resolution being kept open to inspection, free of any charge, in the office of the Station Master of every station on the said Railway.

Ordered also, that this Resolution be communicated to the Consulting Engineer to the Government of India for Railways, Central Division, for information and guidance, with reference to his letter No. 1479-T., dated 4th July 1889; and that it be published in the *Gazette of India*.

EXCLUSION OF CERTAIN OFFICES FROM THE OPERATION OF THE RULES FOR THE REGULATION OF APPOINTMENTS IN THE SECRETARIAT CLERICAL SERVICE OF THE GOVERNMENT OF INDIA.

No. $\frac{22}{1368-82}$.

Extract from the Proceedings of the Government of India in the Home Department (Public),—under date Simla, the 5th August, 1889.

Read—

Home Department Resolution No. 1817, dated the 3rd July 1888.
Home Department Resolution No. 39-2970-84, dated the 13th November 1888.

RESOLUTION.

In modification of the rules for the regulation of appointments in the Secretariat clerical service of the Government of India and attached Offices, published in the Resolution of the 3rd July 1888, the Governor-General in Council is pleased to direct that these rules shall not apply to the Traffic and Statistical Sections of the Railway Branch of the Public Works Secretariat and the Offices of Consulting Engineers to the Government of India for Railways, when these Sections and Offices fill vacancies by recruitment of Officers already serving in the Offices of Traffic Superintendents and District Officers on State lines. When recruitment is not effected in this way, the rules will apply.

ORDER.—Ordered, that a copy of this Resolution be forwarded to all Departments of the Government of India; to the Heads* of Offices under the Home Department; to the Governments of Bengal, North-Western Provinces and Oudh, and the Punjab; and Chief Commissioner, Central Provinces; and to the Secretary to the Board of Examiners, Calcutta, for information, in continuation of Home Department communications Nos. 39-2970-84, dated the 13th November 1888.

* Surgeon General, Sanitary Commissioner, Registrar, Calcutta University, with the Government of India.

Ordered also, that the Resolution be published in the *Gazette of India* for general information.

[True Extract.]

A. P. MACDONNELL,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

TRANSMISSION OF MARRIAGE RETURNS BY REGISTRARS APPOINTED UNDER ACTS III. OF 1872 AND XV. OF 1865 TO REGISTRARS GENERAL OF BIRTHS, DEATHS AND MARRIAGES UNDER ACT VI. OF 1886.

No. $\frac{6}{1074-85}$.

Extract from the Proceedings of the Government of India in the Home Department (Judicial),—under date Simla, the 9th August, 1889.

Read—

The undermentioned letters on the subject of the transmission of Marriage Returns by Registrars appointed under Acts III. of 1872 and XV. of 1865 to Registrars General of Births, Deaths and Marriages under Act VI. of 1886:

From the Government of Bombay, No. 2502, dated 27th June 1889.

From the Government of the Punjab, No. 165S., dated 1st July 1889.

RESOLUTION.

In exercise of the powers conferred by section 13A. of Act III. of 1872 *(to provide a form of marriage in certain cases)*, and section 8A. of the Parsi Marriage and Divorce Act, 1865, the Governor-General in Council is pleased to issue the following orders.

Copies of entries in the Marriage Certificate Book prescribed in section 13 of Act III. of 1872 and in the Register of Marriages referred to in section 6 of the Parsi Marriage and Divorce Act, 1865, which Registrars* under these Acts are required to send to the Registrars General of Births, Deaths and Marriages appointed under the Births, Deaths and Marriages Registration Act, 1886, shall be certified in the form set forth in the following schedule, and shall be sent at intervals of three months, on or as nearly as possible after the 1st January, April, July, and October in each year.

* Except the Registrar appointed by the Chief Justice of the High Court of Judicature at Bombay under Act XV. of 1865.

Should no entries be made in a Marriage Certificate Book, or a Register of Marriages, as the case may be, during the preceding three months, a certificate to this effect shall be sent to the Registrar General concerned.

SCHEDULE.

Form of Certificate of truth of copies of entries in Marriage Certificate Book under Act III. of 1872 [or Register of Marriages under the Parsi Marriage and Divorce Act, 1865, *as the case may be*] *to be sent to Registrar General.*

Certified that the above, which contains entries from No. regarding to No. regarding , is a true copy of all the entries in the Marriage Certificate Book under Act III. of 1872 (*or* Register of Marriages under Act XV. of 1865, *as the case may be*) kept by me for the three months ending the day of 18 .
Dated the of

(*Signature.*)

Registrar of Marriages under Act III. of 1872, (*or* Registrar under the Parsi Marriage and Divorce Act, 1865, *as the case may be*) for (*local area*).

ORDER.—Ordered, that the above Resolution be communicated to Local Governments and Administrations, and to the Foreign Department.

Ordered also, that it be published in the Supplement to the *Gazette of India*.

[True Extract.]

A. P. MACDONNELL,

Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on Monday, August 5th, 1889.

The quiet undisturbed weather which prevailed during last week has continued during the week under review. The monsoon on both sides of India has been moderate in force, and except quite at the close of the week there has been no storm in any part of the Indian region. Owing to this and to the absence of any exceptional strength in the monsoon currents, the rainfall, though fairly steady and continuous, has been generally moderate or light. In North-Western India, including the Punjab, Rajputana, and Sind, there has been a break in the rains during the greater part of the week.

The chart of the 30th July exhibited normal monsoon conditions, except that a very slight depression existed in the neighbourhood of Allahabad. Gradients were somewhat slighter than is ordinarily the case, so that, though winds from the usual monsoon directions prevailed in most parts of India, in the south of the Peninsula calms and variable breezes were reported. On the morning of the 31st a well marked depression was shown over Sind, while that reported from Allahabad on the previous day had disappeared. These were the only important changes in pressure. Gradients had become somewhat steep over Sind and Guzerat, and the monsoon in that part of India was blowing freshly. Elsewhere the winds were moderate generally, but in the south of the Peninsula and over the Gangetic plain light variable breezes prevailed. The chart of the 1st showed that the depression over Sind had largely filled up, and that considering the time of year, pressure was generally uniform and the winds light in force. On the 2nd, owing to a general barometric fall in the North and a rise in the South, gradients had increased. Monsoon winds of normal direction and force consequently again prevailed over the greater part of India, the only exception being in the Gangetic plain, where variable airs and calms were still reported. The reports of the 3rd showed a further fall of pressure over Northern and Central India, and a further rise in the south of the Peninsula. Depressions had formed over the Indus Valley and over Bengal, and a difference of over four-tenths of an inch of pressure existed between these regions and the south of the Bay. On the 4th there was very little change, except that the barometric fall had extended to the south of the Peninsula, and that a slight recovery had commenced in North Bengal and Assam. On the 5th the observations showed that a small shallow storm had formed over the head of the Bay. Otherwise there had been little change.

Throughout the whole of the past week the distribution of pressure over Northern India has, notwithstanding daily oscillations, exhibited one constant characteristic, *viz.*, low pressures over the Indus Valley and over Bengal, with an intervening shoulder of higher pressure over Rajputana, the east of the Punjab, and the west of the North-Western Provinces. This shoulder of high pressure appears to act as a barrier to the free extension of the monsoon currents into Upper India, and hence the region lying to the west or north-west of it experiences deficient rainfall.

Temperature has been high for the time of year over nearly the whole of India. Over Burma, Bengal, Bombay, the central parts of the country, Guzerat, Sind, and Rajputana the average mean temperature has exceeded the normal on all days; but in the Punjab, the North-Western Provinces, and Madras the mean temperature has been subject to considerable fluctuations from day to day. On the last day of the week the temperature exceeded the normal in all Provinces. The maxima in North-Western India have undergone large fluctuations during the week; but at the close they were generally largely above the average, a reading of 109·8° being reported from Jacobabad, of 107·5° from Dera Ismail Khan, and of 106° from Multan and Peshawar.

The following table shows the excess or defect of the mean average temperature of the different Provinces for the present and for the preceding week:

Provinces.	Difference of Mean Temperature of Last Week from Normal.	Difference of Mean Temperature of Present Week from Normal.
Burmah	+ 0·7°	+ 1·5°
Bengal	— 0·1°	+ 0·9°
North-Western Provinces	+ 0·3°	— 1·2°
Punjab	+ 3·1°	+ 0·4°
Bombay	+ 1·3°	+ 1·8°
Central Provinces and Berar	+ 2·2°	+ 1·8°
Guzerat and Central India	+ 1·4°	+ 1·7°
Sind and Rajputana	+ 1·9°	+ 2·9°
Madras	— 0·1°	— 0·2°

This table shows that temperature relatively to the normal average has decreased considerably in the Punjab and North-Western Provinces and slightly in the Central Provinces and Berar, and that elsewhere it has risen or remained stationary.

Rain.—There has again been a partial break in the rains over a large part of North-Western India, including Sind, the west of Rajputana, and the greater part of the Punjab. This region has throughout the week been to the westward and north-westward of the shoulder of high pressure noticed in a preceding section, and the deficient rainfall of this region is probably due to its position with respect to this shoulder and to the direction of rain bearing winds.

The following is a brief description of the daily distribution of rainfall. On the 30th there was no rainfall reported in Sind, Guzerat, or the greater part of Rajputana and of the Punjab (except the hills), but there was general, though generally light, rain elsewhere. On the 31st the distribution was the same, except that there was more rain both in Rajputana and in the Punjab, a fair fall having taken place all along the line of the hills in the Punjab. On the 1st (when the monsoon was very light) the rain bearing current retreated again from the Punjab and Rajputana, and in addition there was no rain in the Deccan or the North Konkan, but elsewhere there were small amounts. On the 2nd there was general rain, except in the Punjab, Western Rajputana, and Sind. This distribution continued on the 3rd, and in a modified degree on the 4th and 5th; but on the two later dates there was no rain on the East Coast or in Rajputana.

The table at the close of the Summary shows that on the whole the rainfall of the week has been deficient. Only at twenty-one out of the fifty-one districts reporting does the week's fall exceed the average, and in most of these the excess is very small. The most general excess is reported from Behar, the North-Western Provinces, and Madras, in all of which regions the majority of places have received more than the normal amount. In Burma, with the exception of Tenasserim, and in Bengal and Assam, with the exception of the Brahmaputra, Bengal North, and the Behar divisions, all divisions report a deficiency. In the North-Western Provinces, on the contrary, Oudh South and North-Western Provinces Central are the only divisions where the rainfall is short; but in the Punjab the amounts are everywhere below the normal. In the West Coast districts Madras (South Central) and Mysore exhibit an excess; all the remainder, a deficiency. The centre and east of the Central Provinces, the east of Central India, and the east of Rajputana have had, like the North-Western Provinces, more than the usual amount of rain, but all the other central districts, as well as Sind, Kattiawar, and Guzerat, have had less. On the East Coast as mentioned above the rainfall has been heavy.

The maximum amounts were again generally unimportant. In Burma no station received more than 12 inches during the week, and in the greater part of Bengal the falls were much smaller. Cherrapunji registered only 14 inches, and the sole heavy fall in that part of India was 21½ inches at the station of Falacutta in the Jalpaiguri district. Throughout Behar and the greater part of the North-Western Provinces there were no exceptional falls, but in the submontane district the majority of districts report falls of between 10 and 13 inches. In the Punjab the only moderately heavy fall was 9·9 inches at Kangra. There is nothing of importance in the records of the West Coast districts or in those of the central districts of the Peninsula and of India. Fair falls are reported from all parts of the East Coast from Ganjam in the north to Madura in the south.

SIMLA, *8th August, 1889.*

W. L. DALLAS,
Assistant Meteorological Reporter to the Government of India.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 3rd August.*—Rainfall general; good in most districts. Crops generally good, but withering in parts of Tinnevelly and Coimbatore; damaged by excessive rain in Vizagapatam and Godavari; affected by insects in Coimbatore and South Canara. Water supply insufficient in parts of Chingleput, Tinnevelly, Salem, and Coimbatore. Prices rising in five districts, falling in seven, and stationary in others. Labourers employed on last day of week,—on Rushikulya works, 3,117; Gopalpore Canal, 1,382; Ghat Roads, 1,196: drinking-water tanks and wells, 1,801; minor irrigation and other works, 3,727. Number on village relief on 27th July, 70,184; fed in kitchens, 9,318. Imports during week by sea and land, 695 tons. General prospects favourable and greatly improved in Ganjam.

Bombay.—*For week ending 7th August.*—Rain during week general; more required in Nasik and parts of Guzerat, Khandesh, Poona, Ahmednagar, Satara, Bijapur, Belgaum, and Dharwar. Young crops withering for want of moisture in parts of Nasik, Poona, and Ahmednagar and damaged by floods and crabs in parts of Karachi; standing crops otherwise good, except in three talukas of Khandesh. Sowing and transplantation progressing in several districts. Preparations for late crops commenced in Sholapur, Bijapur, and Dharwar. Fodder and drinking water scarce in parts of Nasik, Ahmednagar, and Dharwar. Prices rising in one taluka of Nasik.

Bengal.—*For week ending 6th August.*—General rain fell during the week, but the fall in many districts was light and scanty. Transplanting of winter rice is proceeding, but more rain is wanted in almost all parts of the Burdwan division, in places in the Presidency division, and also in the Balasore and Hazaribagh districts. Early rice, jute, sugarcane, and *bhadoi* crops are generally doing well. In North Behar the *bhadoi* and winter rice crops have suffered from excessive rain and floods; the loss of the *bhadoi* in the Chumparun district is considerable. In North and East Bengal the harvesting of early rice and jute is progressing. Foodstocks are everywhere sufficient. In the afflicted area in the Patna and Bhagalpur divisions the price of common rice is 10 seers per rupee at Madhubani and Motihari and 10½ seers at Sitamarhi. No relief works in Muzaffarpur and Chumparun. 272 persons employed on two relief works in the north of Bhagalpur. Persons receiving charitable relief are 4,800 in Muzaffarpur, 288 in Chumparun, and 129 in the Contai subdivision of Midnapur.

North-Western Provinces and Oudh.—*For week ending 7th August.*—The weather continues favourable, and the *kharif* crops are doing well. Markets are fully stocked, and prices are mostly stationary; but a fall is reported from a few districts. Fodder for cattle is abundant.

Punjab.—*For week ending 7th August.*—Partial rain in most districts. Prices rising in Rawalpindi and Shahpur, and stationary elsewhere. Ploughing for *kharif* crops are nearly over; sowings still in progress. Standing crops are flourishing and are in good condition. The standing crops at Hissar and Peshawar have suffered for want of rain. It is reported from Hissar that there is much fear of an almost complete failure of *kharif*. More rain wanted in almost all parts of the Province. Stock cattle are reported healthy, except in four villages of Sialkot tahsil. Fodder sufficient, except in Hissar.

Central Provinces.—*For week ending 7th August.*—Weather seasonable. Good rain in most districts; more rain is wanted in Nimar and in parts of Jubbulpore and Bilaspur. *Kharif* crops in good condition. Prospects favourable. Fodder sufficient.

Burma.—*For week ending 3rd August.*—In Lower Burma the rainfall during the week was under 2 inches in Rangoon, Tharrawaddy, Toungoo, and Mergui and under 1 inch in Prome and Thayetmyo. Elsewhere there was heavy rain. Ploughing is backward, and the early crops are suffering from want of rain in Prome, Tharrawaddy, and Toungoo; elsewhere in Lower Burma the crop promises well. In Upper Burma heavy rain fell during the week in Mandalay, Bhamo, and Ruby Mines; fair in Shwebo, Yeu, Sagaing, and Myingyan districts; elsewhere but little rain fell. Rain is urgently wanted in Kyaukse and Minbu and to a less extent in Shwebo. Ploughing and sowing for the wet weather crops in Upper Burma are generally progressing favourably. The price of paddy, owing to heavy demands from Singapore, has risen 5 per cent. in Rangoon. Prices in other districts have risen as follows:—Pegu 10 per cent., Tharrawaddy 11 per cent., Toungoo 5 per cent., and Minbu 5 per cent. In the other districts there have been little or no fluctuations.

Assam.—*For week ending 7th August.*—Weather seasonable. Rainfall light. Harvesting of summer rice and transplanting of winter rice continue. Some damage has been done to crops in Nowgong and Sibsagar districts by floods.

Mysore and Coorg.—*For week ending 7th August.*—Good rainfall in the Civil and Military station of Bangalore and in the Bangalore district. Rainfall more or less throughout the State. Standing crops good, except in parts of the Mysore district, where more rain is wanted. Harvesting of paddy continues in parts. Outturn fair. No material change in prices.

Heavy rain in Coorg since 5th. Health improved.

Berar and Hyderabad.—*For week ending 7th August.*—Average rainfall fair in Berar. Weeding of cotton and *jowari* in progress *Kharif* crops in good condition. Agricultural stock good. Fodder sufficient. Prices stationary.

Rainfall fair during the week in Hyderabad. *Kharif* and *abi* crops prospering. Water in tanks insufficient. Prices stationary.

Central India.—*For week ending 7th August.*—Good rain throughout Central India during the week. Heavy falls in Gwalior, Bundelkhand, and Goona. Prospects appear good throughout, especially in Goona, where condition of standing crops has improved. Condition of agricultural stock in Bhopal is reported as indifferent this week.

Rajputana.—*For week ending 7th August.*—Rainfall slight in Sirohi and Marwar, heavy in Deoli, and moderate elsewhere. Agricultural operations satisfactory. Standing crops want rain in Marwar and Sirohi. Agricultural stock good. Pasturage or fodder insufficient in parts of Marwar and Ulwar. Prices rising slightly in Marwar and Ajmere.

Nepal.—*For week ending 1st August.*—Beneficial rain fell. Autumn and winter rice progressing. Prospects of Indian corn good.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

RAILWAY TRAFFIC.

ADMINISTRATION REPORT ON INDIAN RAILWAYS FOR 1888.

No. 381 R.T., dated Simla, 5th August, 1889.

RESOLUTION—By the Government of India, Public Works Department.

Read—

Letter No. 68 (Statistical) of the 29th May 1889, from the Director General of Railways, submitting the Administration Report on the Railways in India for the year 1888, Part I.

OBSERVATIONS.—The Annual Administration Report for 1888 has been submitted by the Director General of Railways with punctuality, and is in improved form in many details. The distribution of the several chapters has been rearranged, and the first chapter of the Report furnishes an interesting and useful summary of the principal results of the year's working.

Principal incidents.

2. The transfer to the State of the Oudh and Rohilkhand Company's undertaking on the 1st January 1889; the Railway Conference which was held at Simla in September 1888; and the completion during the year of the "Lansdowne" bridge over the Indus at Sukkur, with its formal opening on 27th March 1889, are referred to as being the principal events. The tunnel through the Khwaja-Amran mountains, commenced in 1887, was vigorously pushed on during the year, the length bored to the 31st March 1889 being 7,373 feet out of a total of 12,400.

Abstract of statistical results.

3. The main facts related in Chapter I. of the Report may for general convenience be briefly recapitulated thus:

During the twelve months ending 31st March 1889 there were opened for public traffic 886 miles of railway, as compared with 988 miles opened during 1887-88; the total open mileage at the end of 1888-89 was 15,245 miles.

The Capital expended upon Railways directly by the State to end of the calendar year 1888 was Rs. 1,12,01,06,776, against Rs. 1,09,47,54,468 at the end of the calendar year 1887; while that expended by Companies for these two periods was respectively Rs. 80,69,19,877 and Rs. 79,70,90,168.

This does not include expenditure in Native States, which was Rs. 5,08,75,527 and Rs. 6,23,65,740, respectively, to end of 1887 and 1888.

The gross earnings on all Railways during 1888, inclusive of Steam-boat services, amounted to Rs. 19,76,44,749, against Rs. 18,46,47,937 during 1887.

During 1888 the number of passengers carried was 103,156,013, the coaching earnings being Rs. 6,43,50,321, and the passenger mileage 4,349,054,980; while during 1887, 96,289,324 passengers were carried, with coaching earnings of Rs. 6,02,83,498 and passenger mileage of 4,089,914,830.

The aggregate tonnage of goods, material, and live stock carried during 1888 was 22,393,202 tons, which earned Rs. 12,79,03,904, the ton-mileage being 3,576,997,334. In 1887 the totals were 20,195,677 tons, with an earning of Rs. 11,92,70,989 and a ton-mileage of 3,195,563,738.

The total working expenses amounted in 1888 to Rs. 9,87,43,474, or 49·96 per cent. of the gross earnings, as compared with Rs. 9,15,68,849, or

49·59 per cent. in 1887, the distribution under the several Departmental heads of expenditure being as under—

	1888.	1887.
Maintenance	14·12 per cent.	13·79 per cent.
Locomotive	16·15 „	15·80 „
Carriage and Wagon... ...	4·35 „	4·50 „
Traffic	7·98 „	8·11 „
General	5·26 „	5·48 „
Steam-boat	0·52 „	0·51 „
Special and Miscellaneous ...	1·58 „	1·40 „
TOTAL	49·96 „	49·59 „

The net earnings realised during 1888 were Rs. 9,89,01,275 against Rs. 9,30,79,088 in 1887, giving a return on the Capital expenditure on open lines, including Steam-boat services and Suspense accounts, of 5·12 per cent., against 5·09 per cent. in the previous year.

Financial results of Railway working.

4. The financial results of the working of the year 1887-88 are given in paragraph 13 of Chapter I. of the Report, and show a net loss of Rs. 1,97,54,770. The year 1887-88 was a peculiarly unfavourable year; and as the figures for the calendar year 1888 are given in pages 86-89 of the Report, and though liable to some small alteration, are approximately correct, it will be useful to show what the results of Railway working for that year were. And here it must be remarked that the proper way of treating this subject is a matter of some complexity. The statistical results of Railway working are one thing; the financial results to the State are another. In the former the payments made to Companies for surplus profits and the share of profits paid on leased lines to the lessees, are excluded; in the latter they are included. Again, the Capital outlay on a Railway is one thing; the actual cost to the State when it has bought that Railway at 25 per cent. premium, as in the case of the East Indian Railway, or at 50 per cent. premium, as in the case of the Eastern Bengal Railway, is another thing. The following table shews the Capital expended on construction up to the 31st December 1888, the interest in rupees (sterling being converted at standard rates of exchange, not at contract rates in the case of Guaranteed Railways), the actual net earnings, as well as that portion of the net earnings which passed into the Government Treasury:

	East Indian.	State Commercial.	State Military.	State lines leased to Companies.	Guaranteed Railways.	TOTAL.
	Rs.	Rs	Rs.	Rs.	Rs.	Rs.
Capital outlay to 31st December 1888 ...	39,33,63,060	35,02,81,031	39,54,63,485	22,64,16,718	62,33,28,324	1,98,88,52,618
Interest for the year ...	2,60,16,053	1,51,42,187	1,91,87,394	88,03,392	3,96,83,855	10,88,32,881
Net earnings ...	3,00,27,370	1,85,32,091	82,82,706	19,18,121	3,71,08,236	9,58,68,524
Surplus or deficit ...	40,11,317	33,89,904	—1,09,04,688	—68,85,271	—25,75,619	—1,29,64,357
Percentage of net earnings on Capital ...	7·63	5·29	2·1	0·85	5·95	4·82
Net receipts of the State	2,92,86,543	1,78,82,276	80,05,617	19,91,402	3,14,13,238	8,85,79,076
Surplus or deficit ...	32,70,490	27,40,089	—1,11,81,777	—68,11,990	—82,70,617	—2,02,53,805
Percentage of net State receipts on Capital ...	7·44	5·1	2·02	0·98	5·04	4·45

High interest the cause of the State loss on its Railways.

5. The net earnings of the Railways were less than the interest which had to be paid on them by 130 lakhs of rupees. Of this sum, 69 lakhs accrued on the "State Railways leased to Companies," which are only partially open and far from their

full working power. The rest of the deficit is due to the Military Railways and to the loss on the Guaranteed lines, which have to earn nearly 6½ per cent., in order that enough gold may be purchased to pay the guaranteed interest in sterling in England. It will be observed that the total interest of the year amounts to nearly 5·5 per cent. on the Capital outlay. This is accounted for partly by the high rate on the Guaranteed lines, partly by the purchase of three of the old Guaranteed lines at a considerable premium, and partly by the fact that the figure shown as interest contains about 25 lakhs of rupees, which really are a sinking fund towards the extinction of the Capital debt raised to purchase those three lines. The cardinal fact to be noticed is that, after all deductions made, the Railways earned 4·82 per cent. on their Capital, of which the State received 4·45 per cent.; so that had the whole debt been raised at 4 per cent., which is the rate at which the Government can now borrow in silver in India, there would have been a profit of about 89 lakhs of rupees received in the Treasury. That this profit was turned into a loss of 202 lakhs of rupees is due to the fact that in past years the credit of the State was not so good, and it was forced to borrow at higher rates, in gold instead of silver, and through Guaranteed Companies, instead of coming directly on the market.

Comparative figures of five years.

6. The main results in gross earnings and working expenses on all Railways for the last five years are compared in the following table:

	1884.	1885.	1886.	1887.	1888.
	Miles.	Miles.	Miles.	Miles.	Miles.
Open mileage on 31st December ...	11,639·17	12,210·48	12,870·39	11,059·34	11,459·97
Mean mileage worked during the year ...	11,036·79	12,014·91	12,508·36	13,532·74	14,378·54
Gross Earnings—					
	Rs.	Rs.	Rs.	Rs.	Rs.

Ratio of net earnings to Capital outlay ...	5·06	5·60	5·69	5·09	5·12

Growth of gross earnings.

7. The gross earnings from all sources show steady improvement between 1884 and 1886. The falling off in 1887 may be attributed to a deficient wheat crop in the spring of that year and to failure in the cotton crop of 1886. The total weight of goods lifted during 1887 was greater than the previous year, but the ton-mileage was less, the increased tonnage being principally over the Eastern Bengal and Southern Mahratta lines, with a comparatively short lead; while there was a decrease in the tonnage lifted on the North Western and the Rajputana-Malwa Railways. This decrease in the ton-mileage appreciably affected the earnings. The gross earnings in 1888 show improvement as contrasted with 1887, consequent upon more favourable harvests and larger demands from England for wheat supplies; but they do not compare favourably with the figures for the years 1884-85-86, when the additional mean mileage worked is considered, the results being lower in earnings per mean mile in 1888 than those of any of the three years last named. This may partly be accounted for by the reduced earnings in carriage of construction material due to completion of several lines, and partly by the fact that extension of Railways seems, for the time at least, to have overtaken expansion of traffic.

Growth of working expenses.

8. Under Working expenses, the cost per mean mile worked shows unfavourably in comparison with 1887. The mean mileage worked was increased by 6·25 per cent., while the Maintenance expenses increased by 9·61, the Locomotive expenses by 9·34, and Steam-boat, Special, and Miscellaneous expenditure by 17·50 per cent. Apart from the increased ordinary outlay due to more extended mileage, these high percentages of increase in Departmental working may be explained (*a*) under "Maintenance" by heavy renewals in permanent way on the East Indian, the Bombay, Baroda and Central India, the North Western, and the Southern Mahratta Railways; (*b*) under "Locomotive" by renewals and replacement of locomotive engines on the East Indian, the Great Indian Peninsula, and North Western Railways; by increased train-mileage worked over the Great Indian Peninsula, the Bombay, Baroda and Central India, and the Rajputana-Malwa Railways, and by the higher cost of fuel upon those Railways which drew supplies from England; and (*c*) under "Steam-boat and Special and Miscellaneous" by heavy repairs to steamers and replacement of barges for the river traffic on the Eastern Bengal Railway, and by provision made by the Oudh and Rohilkhand Railway for claims unadjusted and disputed at the end of the year, and for bonus to the Company's staff.

Earnings per mile per week.

9. The gross earnings per mile of Railway per week (excluding Steam-boat) in five-yearly periods from the commencement up to the year 1888 are given in the following table, the lines being arranged in the order of their intake in 1888:

Railway (including Branches and leased Lines).	1853.	1858.	1863.	1868.	1873.	1878.	1883.	1888.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Bombay, Baroda and Central India ...	...	...	138	287	260	298	497	532
Great Indian Peninsula	119	173	175	357	282	394	467	526

Bengal and North-Western ...	...	...	...	...	...	...	...	102

(*a*) Excluding the Bengal Central Railway.
(*b*) Excluding the Viramgam-Mehsána-Vadnagar State Railway.
(*c*) Excluding the Villupuram-Dharmavaram State Railway, Nellore Branch.

10. The following table shows the percentage of working expenses to gross earnings, and gross earnings per mile open per week, on the principal Railways for 1887 and 1888:

Earnings per mile per week with ratio of working expenses for two years.

Railways (including Branches and leased Lines.)	1887.		1888.	
	Percentage of Working expenses to Gross earnings (excluding Steam-boat).	Gross earnings per mile open per week (excluding Steam-boat).	Percentage of Working expenses to Gross earnings (excluding Steam-boat).	Gross earnings per mile open per week (excluding Steam-boat).
		Rs.		Rs.
Bombay, Baroda and Central India ...	41·89	508	44·11	532
Great Indian Peninsula	46·84	511	46·96	526
East Indian	32·69	529	34·16	525
Eastern Bengal (*a*)	51·61	268	45·77	283
Rajputana-Malwa (*b*)	50·84	191	48·26	215
North-Western	72·11	182	67·27	202
Oudh and Rohilkhand	52·83	186	57·38	197
Madras	64·76	189	58·72	195
Burma	53·12	192	62·33	178
South Indian(*c*)	68·20	149	68·98	158
Bengal and North-Western	56·81	90	53·50	102

11. The average statistical cost of carrying one passenger one mile on the principal Railways during 1888 is as follows:

Cost per passenger.

		Pies.
Standard gauge.	Eastern Bengal	0·60
	East Indian*	0·76
	Madras	1·02
	Oudh and Rohilkhand	1·13
	Bombay, Baroda and Central India*	1·17
	Great Indian Peninsula*	1·41
	North-Western*	1·45
Metre gauge.	Rajputana-Malwa	0·82
	Bengal and North-Western	0·99
	South Indian, including Pondicherry	1·05
	Burma	1·50
	Southern Mahratta*	1·74(*d*)

12. The average statistical cost of hauling one ton of goods one mile during the year is —

Cost per ton.

		Pies.
Standard gauge.	East Indian*	2·05
	Bombay, Baroda and Central India*	3·15
	Oudh and Rohilkhand	3·47
	Great Indian Peninsula*	3·74
	North-Western*	4·23
	Eastern Bengal*	4·70(*d*)
	Madras	4·96
Metre gauge.	Bengal and North-Western	3·45
	Rajputana-Malwa	3·64
	Burma	5·49
	South Indian, including Pondicherry	6·82
	Southern Mahratta*	6·61(*d*)

13. On Maintenance of Way and Works the average expenditure for the year per mean mile maintained on the principal standard gauge lines is Rs. 2,502 and on the metre gauge,

Cost of Maintenance.

(*a*) Excluding the Bengal Central Railway.
(*b*) Excluding the Viramgam-Mohsána-Vadnagar State Railway.
(*c*) Excluding the Villupuram-Dharmavaram State Railway, Nellore Branch.
(*d*) Corrected from the Analysis of Working.
* Including Branches and leased Lines.

Rs. 1,364. Excluding the cost of permanent-way, the cost of maintenance per mile of track, including sidings, is the lowest for its gauge on the East Indian Railway, with a mean age of 23·95 years. Of the metre gauge lines, the Bengal and North-Western Railway is the lowest. The details are given in the following table:

Railways (including Branches and leased Lines).	Cost per mile of track, including sidings.			Cost per mean mile maintained.	Ton-mileage per mean mile worked.	Total cost of maintenance per 1,000 gross ton-miles.
	Mean age in years.	Excluding Permanent-way.	Permanent-way.			
				Standard Gauge.		
		Rs.	Rs.	Rs.		Rs.
East Indian	23·95	481	1,571	3,131	1,902,252	1·62
North-Western	10·97	823	1,022	2,152	940,071	2·28
Eastern Bengal (*a*)	12·54	583	845	1,795	797,588	2·12
Madras	24·96	834	567	1,652	745,911	2·21

Bengal and North-Western	3·73	356	245	663	400,100	1·65

14. The differences in the average prices of coal per ton render any comparison of working on the basis of Locomotive cost misleading. A better comparison can be made if the cost of fuel be deducted from the Locomotive expenses. Excluding the cost of fuel, the Locomotive expenses per 1,000 gross ton-miles on the principal standard and metre gauge lines compare as follows:

Locomotive Expenses.

Standard Gauge.

1887.	Rs.	1888.	Rs.
East Indian* ...	1·01	East Indian* ...	1·04
Oudh and Rohilkhand ...	1·22	Oudh and Rohilkhand ...	1·18
Bombay, Baroda and Central India* ...	1·51	Eastern Bengal* ...	1·36
Eastern Bengal* ...	1·59	Bombay, Baroda and Central India* ...	1·42
North-Western* ...	2·01	Madras ...	1·69
Great Indian Peninsula*	2·05	North-Western* ...	1·87
Madras	2·07	Great Indian Peninsula* ...	1·90
Metre Gauge.			
Bengal and North-Western ...	1·16	Bengal and North-Western ...	1·29
Burma	1·69	Rajputana-Malwa ...	1·68
Rajputana-Malwa	2·02	Burma	1·69
Southern Mahratta* ...	2·03	Southern Mahratta* ...	2·02
South Indian*	2·15	South Indian* ...	2·21

15. Particulars of the fuel consumption and supply are given in Chapter IX. Compared with 1887, the consumption of coal on all Railways was greater by 12¼ per cent. The quantity of English coal rose by 11¾ per cent., while the quantity of country coal consumed rose by 12⅓ per cent. The total consumption of coke and wood

Cost of fuel.

(*a*) Excluding the Bengal Central Railway, excepting in two last columns.
(*b*) Excluding the Viramgam-Mohsána-Vadnagar State Railway.
(*c*) Excluding the Villupuram-Dharmavaram State Railway, Nellore Branch.
* Including Branches and leased Lines.

increased by 30¼ per cent. and 10 per cent. respectively, and that of patent fuel decreased by 7 per cent.

The cost of fuel per train-mile and the consumption per 1,000 gross ton-miles on the principal Railways are stated below:

Railways (including Branches and leased Lines).	Standard or Metre Gauge.	Cost per train-mile.	Consumption per 1,000 gross ton-miles.	Source and description of fuel.
		Annas.	lbs.	
East Indian	S	0·83	136·17	Bengal coal.
Eastern Bengal ...	S	2·08	196·64	Bengal coal.
Bengal and North-Western	M	2·32	152·73	Bengal coal.
South Indian... ...	M	3·29	191·62	English and Australian coal; principally the former.
Oudh and Rohilkhand ...	S	3·43	145·17	Bengal coal.
Madras	S	3·74	(a)398·53	Wood and patent fuel; principally the former.
Burma	M	3·84	135·28	English coal, patent fuel and wood.
Southern Mahratta ...	M	3·88	(a)612·95	English coal and wood; principally the latter.
North-Western ...	S	4·30	126·58	English, Bengal, Khost and Dandot coal, also patent fuel and wood.
Rajputana-Malwa ...	M	4·40	155·88	English and Bengal coal; principally the latter.
Great Indian Peninsula ...	S	4·41	177·59	English, Warora, Umaria, Mohpani, Singareni coal, and wood; but principally English coal.
Bombay, Baroda and Central India.	S	4·67	113·84	English coal and wood; a very small percentage of the latter.

Carriage and Wagon Expenses.

16. The Carriage and Wagon expenses for the principal standard and metre gauge lines open for traffic show the following comparison of cost per 1,000 vehicle miles run by home vehicles:

Standard Gauge.

1887.	Rs.	1888.	Rs.
East Indian*	4·84	Oudh and Rohilkhand ...	4·26
Oudh and Rohilkhand ...	5·10	East Indian*	4·47
Eastern Bengal*	7·33	Eastern Bengal*	8·46
Bombay, Baroda and Central India*	9·11	Bombay, Baroda and Central India*	9·80
North-Western*	11·52	North-Western*	10·96
Great Indian Peninsula*	11·93	Great Indian Peninsula* ...	11·70
Madras	15·45	Madras	13·64

Metre Gauge.

Southern Mahratta* ...	2·57	Bengal and North-Western ...	2·08
Bengal and North-Western ...	2·72	Southern Mahratta* ...	3·98
Burma ...	5·49	Burma	4·62
Rajputana-Malwa ...	5·98	Rajputana-Malwa	5·00
South Indian* ...	7·53	South Indian*	6·27

(a) In terms of wood.
* Including Branches and leased Lines.

Cost of Train Staff.

17. The following table compares the cost of Train staff in annas per train-mile, the lines being arranged in order of cheapness:

Railways (including Branches and leased Lines).	Cost per train-mile.
	Annas.
South Indian	0·334
Bengal and North-Western	0·498
Bombay, Baroda and Central India	0·544
Southern Mahratta	0·562
Rajputana-Malwa	0·571
Madras	0·602
Eastern Bengal	0·715
Oudh and Rohilkhand	0·746
Burma	0·875
North-Western	0·973
East Indian	1·001
Great Indian Peninsula	1·308

Cost of Traffic expenses per train-mile.

18. The Traffic expenses per train-mile are given in the following table; the cost is highest on the Burma State Railway and lowest on the South Indian Railway:

Railways (including Branches and leased Lines).	Train-mileage per mean mile worked.	Average distance between stations, in miles.	Cost per train-mile.
		Miles.	As.
Standard Gauge.			
Great Indian Peninsula	6,129	7·30	4·88
Oudh and Rohilkhand	2,972	6·86	5·05
North-Western	3,026	7·59	5·09
Bombay, Baroda and Central India ...	5,063	5·62	5·26
Madras	2,849	6·71	5·36
East Indian	5,055	8·66	5·61
Eastern Bengal (a)	3,786	4·88	6·92
Metre Gauge.			
South Indian (b)	3,096	6·49	3·48
Rajputana-Malwa (c)	3,643	7·24	3·78
Bengal and North-Western	2,001	5·88	4·15
Southern Mahratta	1,949	8·06	4·43
Burma	2,954	7·00	6·99

General Charges.

19. The General Charges, on the basis of percentage on Gross earnings, vary as follows on the principal standard and metre gauge lines:

Standard Gauge.

Rs.†	1887.	Per cent.	Rs.†	1888.	Per cent.
(26,597)	Great Indian Peninsula* ...	3·12	(27,846)	Great Indian Peninsula*	3·11
(27,559)	East Indian*	4·38	(27,639)	Bombay, Baroda and Central India.*	4·13
(26,388)	Bombay, Baroda and Central India.*	4·56	(27,333)	East Indian*	4·22
(14,857)	Eastern Bengal ...	5·01	(15,698)	Eastern Bengal ...	4·26

(5,170)	Bengal and North-Western	13·19	(4,495)	Southern Mahratta* ...	12·73

Spirit in which statistics should be studied.

20. The figures in the various tables are for the most part the bare results of the working as shown in the published Revenue Accounts of the various lines. When contrasting the results, the Government of India is fully aware how much the varying conditions under which the traffic is worked on the different lines affect these results. The amount of the earnings per mile per week; the want of balance in the up and down traffic; the fluctuations in the amount of traffic at different periods of the year; the gradients; the price of fuel—all these, together with other varying local conditions, greatly influence the results of the working and may account for the divergences shown.

Nature of goods traffic.

21. The quantity of merchandise carried was 17,937,610 tons, or about 8 per cent. more than in 1887, and the freight received aggregated Rs. 12,24,52,343, being more by about 7 per cent. Of this increase, consignments of "Railway plant and rolling stock" contributed 30 per cent. in weight and 18 per cent. in receipts, and the grain traffic contributed 15 per cent. in weight and 40 per cent. in earnings, "Oil seeds" giving 11 per cent. in weight and 16 per cent. in receipts. There was also an increase in the coal and jute consignments both in the quantity carried and in the receipts.

A falling off occurred under "Metals" of 13 per cent. in weight and 19 per cent. in receipts, and under "Raw cotton" of 14 per cent. in weight and 17 per cent. in earnings, compared with 1887.

Average distance of haulage.

22. The following table shows the average distance over which a ton of goods and a passenger was carried on some of the principal Railways:

Railways (including Branches and leased Lines).	Mean mileage worked during the year 1888.	Average distance over which a ton of goods was hauled.	Average distance travelled by each passenger.
	Miles.	Miles.	Miles.
East Indian	1,706·05	202·62	66·51
Eastern Bengal	795·11	105·17	27·07
Bengal and North-Western	376·00	123·94	33·60
Oudh and Rohilkhand	692·46	117·13	44·70
North-Western	2,440·02	164·57	55·35
Rajputana-Malwa (a)	1,664·42	257·72	55·30
Bombay, Baroda and Central India ...	460·90	166·78	19·89
Great Indian Peninsula	1,501·46	247·59	44·67
Southern Mahratta	854·05	96·36	44·23
Madras	839·27	105·17	39·16
South Indian (b)	662·00	47·32	34·90
Burma	364·24	87·93	28·12

(a) Excluding the Viramgam-Mehsana-Valnagar State Railway.
(b) Excluding the Villupuram-Dharmavaram State Railway, Nellore Branch.
* Including Branches and leased Lines.
† The figures in parentheses represent the Gross earnings (including Steam-boat), per mean mile worked.

Statistics of Railways in seven classes.

23. The following table shows the Gross earnings, Working expenses, and Net earnings, and gives also figures per train-mile, excluding Steam-boat, of all Railways under the following grouping:

	Gross earnings.	Per train-mile.	Working expenses.	Per train-mile.	Net earnings.	Per train-mile.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
East Indian Railway	4,53,91,210	5·45	1,53,35,210	1·84	3,00,56,000	3·61
State Railways (Commercial)	3,58,97,826	3·21	1,78,97,067	1·61	1,80,00,759	1·60
Ditto (Military)	2,55,74,038	3·46	1,72,03,129	2·33	83,70,909	1·13
State Lines leased to Companies	73,62,300	2·40	54,38,286	1·77	19,24,014	0·63
Guaranteed Railways	7,48,43,974	4·15	3,77,21,046	2·09	3,71,22,928	2·06
Assisted Companies	36,92,439	3·24	20,82,691	1·83	16,09,748	1·41
Native States	36,98,558	3·26	20,29,954	1·83	16,68,604	1·43

In 1887 the results per train-mile were—

	Gross earnings.	Working expenses.	Net earnings.
	Rs.	Rs.	Rs.
East Indian Railway	5·36	1·72	3·64
State Railways (Commercial)	3·36	1·77	1·59
Ditto (Military)	3·39	2·44	0·95
State Lines leased to Companies	2·69	1·87	0·82
Guaranteed Railways	4·15	2·08	2·07
Assisted Companies	3·09	1·82	1·27
Native States	3·18	1·92	1·26

Number of employés.

24. The number of persons of all races employed on open lines during 1888 was 243,585, against 225,047 in 1887. The distribution is shown in the following table:

Year ending	Number of Employés.				Number of miles open.	Number of stations.
	Europeans.	East Indians.	Natives.	Total.		
31st December 1887 ...	4,684	5,077	215,286	225,047	14,065	1,988
31st December 1888 ...	4,674	5,604	233,307	243,585	14,463	2,096

The Native Staff represented 95·78 per cent. of the entire body of Railway employés. The percentage of increase in the total number employed was 8·24. The length of additional open mileage gives a percentage of 2·82, and the additional stations open a percentage of 5·43. Under the head of Europeans,

there was a decrease of 0·21 per cent.; under East Indians an increase of 10·38 per cent.; and under Natives an increase of 8·37 per cent.

Number of accidents.

25. The total number of persons killed and injured during the year 1888 was 1,334, as compared with 1,121 during 1887. The number killed was 482, as against 429. Of these, 41 were killed from causes beyond their own control, 193 from their own want of caution, 12 at level crossings, 219 while trespassing and by suicide, and 17 from miscellaneous causes.

The number of accidents to trains increased from 2,844 in 1887 to 3,252 in 1888, or by about 14⅓ per cent. The number of train accidents per 1,000 train-miles was 0·06, which is the same number as in 1887. There were two passengers killed from causes beyond their own control, being an average of one per 51 7/12 millions of passengers travelling; and 26 passengers injured, being an average of one per four millions, or an average of one casualty for 155⅓ millions of miles travelled.

RESOLUTION.—The thanks of the Government of India are due to Lieutenant-Colonel Conway-Gordon, R.E., C.I.E., Director General of Railways, for the zeal and ability with which he conducted the duties of his office throughout the year under review.

The Governments of Madras, Bombay, Bengal, the North-Western Provinces and Oudh, and the Punjab.
The Chief Commissioners of the Central Provinces, Burma, and Assam.
The Residents at Hyderabad and Mysore.
The Agents to the Governor General for Central India, Rajputana, and Baluchistan.
The Accountant General, Public Works Department.
The Director General of Railways.
The Consulting Engineers to the Government of India for Railways, Calcutta, Lucknow, and Central Division.

ORDER.—Ordered, that this Resolution be communicated, for information, to the Local Governments, Administrations, and Officers noted in the margin.

Ordered also, that this Resolution be published in the Supplement to the *Gazette of India*.

R. C. B. PEMBERTON, *Colonel, R.E.*,
Secretary to the Government of India.

GOVERNMENT OF INDIA.
PUBLIC WORKS DEPARTMENT.
RAILWAY TRAFFIC.

No. XV. OF 1889-90.

APPROXIMATE STATEMENT OF GROSS RECEIPTS AND EXPENSES OF INDIAN RAILWAYS.

N.B.—As regards the figures in column *Total Receipts from 1st April to date*, audited figures have been used as far as possible.

Latest Return received.	Railways.	Week ending 14th July, 1888. Total mean length open.	Receipts. Total.	Receipts. Per mile open.	Week ending 13th July, 1889. Total mean length open.	Receipts. Total.	Receipts. Per mile open.	Total Receipts from 1st April to 14th July, 1888. Total.	Per mile open per week.	Total Receipts from 1st April to 13th July, 1889. Total.	Per mile open per week.	Total increase in 1889-90.	Total decrease in 1889-90.

SUPPLEMENT TO

The Gazette of India.

No. 33.} SIMLA, SATURDAY, AUGUST 17, 1889.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor-General will in future be published in* PART VI. *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI. *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on Monday, August 12th, 1889.

The weather during the past week has been of the same general character as that which has prevailed since the setting in of the rains, *viz.*, a moderately strong monsoon over the Western and Central districts, a somewhat feeble monsoon over the Bay and Northern India, and a general absence of important cyclonic storms. The net result of these conditions has been a somewhat deficient rainfall throughout the district affected by the Bay monsoon and a slightly excessive rainfall elsewhere.

The chart of the 6th showed a large elongated, but shallow, depression stretching from the north-west of the Bay westward across Orissa and the Circars as far as the east of the Central Provinces, a large low pressure area over the Western desert, and a high pressure area over Malabar, Ceylon, and the south of the Bay. The winds over the greater part of the Bay, Bengal, the North-Western and Central Provinces, and the head of the Peninsula were influenced by the elongated depression noticed above and executed a feeble cyclonic circulation around it, but in all other parts of India the winds blew from the ordinary monsoon directions. The Arabian Sea monsoon current was blowing freshly, but the winds in Northern India were feeble. Between the morning of the 6th and of the 7th the depression had moved westward, and the centre at 8 A.M. on the 7th lay between Seoni and Raipur. Owing to this westerly movement of the storm centre and the consequent change in the centre of circulation of the cyclonic winds, southerly and south-westerly winds had appeared over the Bay; but this was the only important change in the wind directions. The monsoon was blowing more freshly over the Bay, and strongish squally winds were reported from the neighbourhood of the depression. By the morning of

the 8th the depression had largely filled up, but the centre had again moved somewhat to the westward and apparently lay between Seoni and Saugor. A new but very slight disturbance had appeared near Kurrachee, and a small high pressure area had been formed over the west of the North-Western Provinces and the east of the Punjab. The chart of the 9th showed that the depression over the Central Provinces had changed very little as regards position, but that it had developed somewhat in intensity, the lowest reading at the centre being 29·548″ as compared with 29·566″ on the preceding day. The local depression near Kurrachee and the local high pressure area near Roorkee had alike broken up. The wind circulation was generally similar to that of the previous day, except at the head of the Bay, where variable winds had reappeared, with indications of the formation of a new disturbance off the Orissa Coast. On the 10th the distribution of pressure was such as is characteristic of general monsoon conditions. Readings were highest in Malabar and Ceylon, and relatively high in Burma and Assam; lowest in the Western desert, and relatively low within a belt or trough of low pressure running from the Punjab and Rajputana south-eastward across the Central and North-Western Provinces as far as the Circars and the north-west of the Bay. Within this trough variable winds prevailed—to the north of it, the Bay monsoon; and to the south of it, the Arabian Sea monsoon. The only important change shown on the chart of the 11th was the slight northerly movement of the trough of low pressure. On the 12th this movement was continued, so that the trough lay further to the north than usual in August, and the monsoon current from the Bay into Northern India was a good deal interrupted.

Temperature has been on the whole high for the time of year, except in Madras and the Central Provinces, where heavy rain and much cloud has reduced the heat. In Bengal and the North-Western Provinces, where the rainfall on the contrary was light, the mean temperature exceeded the normal on every day of the week. The warmest days occurred in the early part of the week. On the 6th the mean temperature of the Punjab, Sind, and Rajputana was 3° above the normal; and on the 7th it was $3\frac{1}{2}$° in the North-Western Provinces, 4° in the Punjab, and $4\frac{1}{2}$° in Sind and Rajputana above the normal. Maxima considerably exceeding 100° were reported from nearly all stations in the Punjab and Sind in the early part of the week; but on the 9th and 10th a considerable fall occurred, and on the 12th the highest reading was 96·3° at Ludhiana and Multan.

The following table shows the excess or defect of the mean average temperatures of the different Provinces for the present and for the preceding week:

Provinces.	Difference of Mean Temperature of Last Week from Normal.	Difference of Mean Temperature of present Week from Normal.
Burmah	+ 1·5°	+ 0·6°
Bengal	+ 0·9°	+ 1·2°
North-Western Provinces	— 1·2°	+ 2·2°
Punjab	+ 0·4°	+ 1·1°
Bombay	+ 1·8°	+ 0·7°
Central Provinces and Berar	+ 1·8°	— 0·6°
Guzerat and Central India	+ 1·7°	+ 0·5°
Sind and Rajputana	+ 2·9°	+ 1·2°
Madras	— 0·2°	— 0·1°

This table shows that, relatively to the average, the present week has been slightly in Bengal and the Punjab and considerably in the North-Western Provinces warmer than the preceding week, but that elsewhere the weather has been cooler.

Rain.—As mentioned in preceding sections, strongly marked monsoon conditions have prevailed over India during the past week, and rain has fallen in all divisions of India. The rainfall has generally occurred in steady moderate falls on each day of the week and, with few exceptions, there have been no very heavy downpours. In Northern India—more particularly in Behar and the North-Western Provinces—the rainfall has been slighter than elsewhere, and the weather there has been showery with fair intervals.

The following is a brief description of the daily distribution of rainfall:

On the 6th the Punjab, Sind, and the greater part of Rajputana were without rain, and Western Bengal and the North-Western Provinces had only scattered showers. Elsewhere rain was general. On the 7th the only change was that a little more rain was reported from Rajputana. On the 8th there was a very heavy fall of rain at Mussoorie and Roorkee, and slight rain along the foot of the hills in the Punjab, as well as at Kurrachee and Hyderabad in Lower Sind. In the Central parts of the country some heavyish falls were experienced. In Western Bengal and the North-Western Provinces the weather remained fair, with a few showers, and elsewhere there was no change. On the 9th the only change was the more general rain over the Punjab and Sind. On the 10th, 11th, and 12th rain practically fell in all parts of India,—heavily at the hill stations, and moderately elsewhere.

The table at the close of the Summary shows that at twenty-nine divisions the rainfall of the week was deficient; that at twenty-one it was excessive; and that at two no comparison is possible. Roughly divided, those divisions which receive their rainfall from the Bay of Bengal current have received short rains, and those which receive their rainfall from the Arabian Sea monsoon have received excessive rain. The whole of Burma, the whole of Bengal except Orissa, and the whole of the North-Western Provinces have had deficient rainfall. The Punjab, which has been more or less influenced by both branches of the monsoon, has received more favourable rains than other parts of Northern India, four of the divisions reporting an excess and only two a deficiency. In the Hill districts the rainfall is about half the normal average amount. The Western districts of the Peninsula had more than the average rainfall; but Mysore and the Bombay Deccan had rather less than usual. The Central divisions of the country, including Khandeish, Berar, the Central Provinces, Central India, and Rajputana, all received considerably more than the normal fall during the week. Guzerat and Kattiawar participated in this excess; but in Sind the rainfall was slightly short. **In the Madras divisions the East Coast North and Hyderabad South received somewhat heavier rains than usual; but all the other divisions report a deficiency.**

The maximum falls all over Northern India are quite unimportant. Cherrapunji received only 5·7 inches of rain during the week—a striking example of the weakness of the Bay current. In the west of the Peninsula the maximum falls were larger, one or two places recording total falls of from 10 to 15 inches; but even here they are the exception. In the Central parts of the country the average of the maxima is higher, but the falls are in no way remarkable.

The final column of the table shows the state of the seasonal rainfall. In Burma and East Bengal there is a deficiency; in Assam an excess; and in the other divisions in Bengal about an average fall. The east of the North-Western Provinces and the submontane district show an excess; but the Western districts and also the whole of the Punjab report deficient rains. In the Peninsula, the Konkan and Madras (South Central) districts are in excess of the average; but the other districts in the west and centre exhibit a deficiency, while on the East Coast again there is an excess. **In the Central parts of India, including Kattiawar and Guzerat, the seasonal rainfall is above the average; but in Sind there is a considerable deficiency.**

Assistant Meteorological Reporter to the Government of India.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 10th August.*—Rainfall general; good in Ganjam, Vizagapatam, Godavari, Kistna, South Arcot, Tanjore, Nilgiris, South Canara, and Malabar. Crops generally good, but damaged by excessive rain in Vizagapatam and Godavari; affected by insects in parts of Anantapur, Coimbatore, and South Canara, and withering in parts of Tinnevelly. Prices falling in many districts. Labourers employed on last day of week,—on Rushikulya works, 2,747; Gopalpore Canal, 1,183; Ghat Roads, 1,837; drinking-water tanks and wells, 1,905; minor irrigation and other works, 1,089. Returns incomplete. Number on village relief on 3rd August, 93,561; fed in kitchens, 10,163; total, 1,03,724—of whom, 56,358 were children and 32,477 were women. Imports during week by sea and land, 834 tons. General prospects favourable and greatly improved in Ganjam.

Bombay.—*For week ending 14th August.*—Rain during week general; more wanted in parts of Surat, Khandesh, Nasik, Poona, Ahmednagar, Satara, Belgaum, and Dharwar. Young crops suffering for want of moisture in parts of Shikarpur, Ahmednagar, Satara, and Belgaum; damaged by breaches in canals in parts of Hyderabad and by grasshoppers in parts of Ahmedabad. Standing crops otherwise good, except in two talukas of Khandesh. Sowing and transplantation progressing in several districts, but retarded in some for want of sufficient rain. Preparations for late crops progressing in Sholapur. Fodder scarce in parts of Nasik, Poona, Ahmednagar, Belgaum, and Dharwar. Drinking-water scarce in parts of Upper Sind Frontier, Nasik, Ahmednagar, and Dharwar.

Bengal.—*For week ending 13th August.*—The week has been marked by deficient rainfall, and more rain is wanted in many places and specially in Burdwan and Gya. Transplanting of winter rice is proceeding vigorously where there is sufficient water and has not yet suffered for want of rain anywhere. Early rice, jute, sugarcane, and *bhadoi* crops are generally doing well. Jute is being cut and steeped. In the affected tracts of Behar, *bhadoi* crops in the low lands of Durbhanga have been injured by floods, but the extent of damage has not yet been ascertained; in Muzaffarpur the damage done by inundation is more extensive in the Sadr Station, but the outturn of *bhadoi* is expected at over ten annas there. Number of persons receiving gratuitous relief is increasing. In Chumparun the floods are subsiding rapidly and the surviving crops doing well. Persons receiving gratuitous relief number over 1,000. In Bhagulpore prospects improving, but prices still high, being 12 seers 10 chittacks of rice per rupee. 343 persons employed on two relief works here. In Maldah much damage has been done by inundations; but the price of common rice has fallen. Food stock is sufficient everywhere in the Patna and Bhagulpore divisions. Indigo is doing well. At Contai in Midnapore rice sells at Rs. 2-9-3 per maund. Prices of foodgrains are high at Puri and Khurdah; but measures are being taken to provide labour in Chilka tracts and Khurdah. Floods are also reported from Purneah, Bogra, Dacca, and Backergunge.

North-Western Provinces and Oudh.—*For week ending 14th August.*—The weather generally has been favourable for agricultural operations, and the *kharif* is thriving, though more rain is wanted in rice-producing districts. Fodder is abundant. Markets fully supplied, and prices show no great variations.

Punjab.—*For week ending 14th August.*—General rain throughout the Province. Prices rising in Rawalpindi and Shahpur and stationary elsewhere. Ploughings for *rabi* commenced in Jullundur and Sialkot. *Kharif* sowings nearly over. Crops are flourishing. Standing crops are said to be in good condition. More rain wanted in Umballa, Lahore, and Shahpur. Stock cattle

are reported healthy, but suffering from insufficiency of fodder in Hissar. Fodder sufficient, except in Hissar.

Central Provinces.—*For week ending 14th August.*—Rainfall sufficient, except in parts of Jubbulpore. Good rain in Nimar, where there has hitherto been a deficiency. *Kharif* crops thriving and prospects favourable. Fodder sufficient. Prices steady.

Burma.—*For week ending 10th August.*—Heavy and seasonable rain fell throughout Lower Burma, except in Prome. More rain is still much wanted in Prome, North Tharrawaddy, and Toungoo. In the other districts agricultural operations progress favourably and standing crops are in good condition. In Upper Burma the rainfall was fair in Mandalay, Sagaing, Minbu, Yamethin, and Pyinmana districts, and light in Myingyan; elsewhere heavy rain fell. More rain is wanted in Myingyan, Minbu, Meiktila, and Pyinmana. Agricultural operations in Upper Burma progress favourably and the crops promise well, except in districts where the want of rain is felt, and in Bhamo and Shwebo, where damage has been done by insects. The price of paddy has again risen in Rangoon, where Rs. 125 was paid for 100 baskets. There was also a rise of 4 per cent. in Prome; 10 per cent. in Henzada; 3 per cent. in Moulmein; 4 per cent. in Minbu; and 17 per cent. in Meiktila. In Sandoway prices fell 20 per cent. and elsewhere were stationary.

Assam.—*For week ending 14th August.*—Rainfall varies from 0·25 in Khasi Hills to 7·31 in Sylhet. Reaping of early and transplanting of winter rice continue. Prospects of crops generally good, except in Goalpara, Nowgong, and Garo Hills districts, where some injury has been done by floods. Weather rather wet for tea in the Surma valley.

Mysore and Coorg.—*For week ending 14th August.*—Rainfall good in parts of the Shimoga and Hassan districts of Mysore and fair elsewhere. Crops good, except in parts of Kolar and Mysore districts, where more rain is wanted. Sowing and harvesting operations still continue in parts. Prices slightly fallen in Bangalore and risen in the Mysore districts.

Heavy rain in Coorg. Season continues favourable for transplanting paddy.

Berar and Hyderabad.—*For week ending 14th August.*—Rainfall average in Berar. Cotton and *jowari* crops are in good condition. Weeding operations continue. Prices of foodgrains unchanged. Agricultural stock good. Fodder sufficient.

Good rain in Hyderabad during the week. Sowing of *abi* and weeding of *kharif* crops still in progress. Water in tanks insufficient for *abi* and *tabi* crops. Prices stationary.

Central India.—*For week ending 14th August.*—Prospects in Central India, especially in the Bhopawar Agency, are good. Prices of foodgrains in Bundelkhand are falling and prospects of outturn improved. Agricultural operations completed in Goona.

Rajputana.—*For week ending 14th August.*—Rainfall good throughout the Province; heavy in Jhallawar and Abu. Agricultural operations and standing crops satisfactory. Agricultural stock good. Pasturage or fodder sufficient. Prices falling in some places.

Nepal.—*For week ending 8th August.*—Good rain. Weather fair. Winter rice progressing. Prospect of Indian corn generally good.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

EXECUTION OF CONTRACTS.

No. 1142—43.

Extract from the Proceedings of the Government of India in the Home Department (Judicial),—under date Simla, the 16th August, 1889.

Read again—

Home Department Resolution No. 1750, dated the 2nd November 1876, on the subject of the execution of minor contracts and deeds on behalf of the Secretary of State for India in Council.

Read—

A letter from the Government of Bengal, No. P.C6, dated 11th July 1889.

RESOLUTION.

In exercise of the power conferred by the thirty-third and thirty-fourth of Victoria, Chapter fifty-nine, section two, the Governor General in Council is pleased to declare, in extension of the orders contained in the Resolution of the 2nd November 1876, that the undermentioned class of contracts referred to in the twenty-second and twenty-third of Victoria, Chapter forty-one, section two, may be executed as follows in the territories under the administration of the Lieutenant-Governor of Bengal:

Contracts for the supply of articles procured in the local markets for hospitals, lunatic asylums, &c.	By the local Medical Officers in charge of such hospitals, asylums, &c.

ORDER.—Ordered, that this Resolution be communicated to the Government of Bengal for information, and be published in the Supplement to the *Gazette of India*.

[True Extract.]

A. P. MACDONNELL,
Secretary to the Government of India.

DISCIPLINE AND MORAL TRAINING IN SCHOOLS AND COLLEGES IN INDIA.

No. $\frac{6}{371-383}$.

From the Resident at Hyderabad, No. 259G., dated the 30th June 1888.

RESOLUTION.

In the letter addressed by the Home Department to Local Governments and Administrations on 31st December 1887, their attention was drawn to the

growth of tendencies unfavourable to discipline, and favourable to irreverence, in the rising generation in India; and the Governor General in Council formulated for the consideration of Local Governments and Administrations certain suggestions with the object of counteracting these tendencies. The recommendations related both to schools and colleges. For the former it was suggested—

(1) that gymnastics and field exercises should be recognized as part of a regular course of school training, and that a system of marks and prizes for efficiency in gymnastics should be introduced;

(2) that punishments for breaches of discipline should be arranged so as to fall on the offender, and that with this aim the imposition of tasks, deprivation of privileges, a judicious use of the rod in the case of young pupils, and finally expulsion in cases of aggravated and persistent misconduct, are more suitable forms of punishment than fines;

(3) that good conduct registers should be prescribed, extracts from which should be sent to the parents and guardians of the boy at stated intervals with the definite opinion of the head master on his character and behaviour, and that prizes for good conduct should be awarded at the end of each year;

(4) that hostels and boarding houses should be established at the larger schools and colleges in large towns and cities for the accommodation of students whose families are not resident in the place where they are being educated;

(5) that selected boys from the higher classes of schools should be appointed monitors for the purpose of maintaining discipline during, and as far as possible out of, school hours;

(6) that any boy who through want of diligence and attention to study fails to rise to a certain class by the time he has reached a certain age should be required to leave the school;

(7) that inter-school rules, defining the conditions under which pupils should be allowed to pass from one school to another, should be extended to all schools aided or supported by public funds, as a condition of the continuance of such aid; and that the Senates of the Universities should be invited to use their influence to procure the adoption of this system in schools and colleges which do not receive aid from Government;

(8) that the provision of efficient training schools and colleges for teachers should be made a first charge against the educational grant; that the employment of teachers in all schools should be gradually restricted to those who have given satisfaction during a course of training; and that trained head-masters should be introduced from England for definite periods of five to seven years for selected schools; and

(9) that teaching having a direct bearing upon personal conduct should be more generally resorted to. The Government of India, while admitting that this is provided for in some aided schools by religious instruction, and that even in some State schools religious instruction can under well-recognized restrictions be granted out of school hours, considered that this was not sufficient; and it therefore, in concurrence with the Secretary of State, desired that consideration should be given to the proposal of the Education Commission that an attempt should be made to prepare a moral text-book based on the fundamental principles of natural religion.

In regard to methods for encouraging respect for authority in colleges, it was pointed out by the Government of India that an improvement in this matter in schools would naturally reproduce itself in colleges, which students would enter with habits formed and characters developed by the wholesome discipline of the schools. The Governor General in Council, however, pressed that an effort should be made to impart moral instruction in colleges, and with a view to

improving the supervision of Principals and Professors over students in colleges, suggested the adoption of the following regulations:

(*a*) that weekly meetings should be held by the Principal and the Professors to consider questions of discipline;

(*b*) that the Principal should have the power of ordering the expulsion or rustication of a student, and of fining him for disorderly conduct; and

(*c*) that every Professor should have the power of suspending a student for a limited period of time, and of fining him without reference to the Principal.

2. The Government of India has now been placed in possession of the views of Local Governments and Administrations on the foregoing suggestions. There is substantial agreement both among officials and the representatives of the native community as to the existence of the evils which have been indicated. The tendency towards irreverence and disregard of authority has no doubt gone further in some parts of India than it has in others. But most of the conditions which have favoured its growth in the parts of India where it is most prevalent are in a greater or less degree noticeable in other less forward portions of the country; and the Governor General in Council entertains no doubt that remedies are necessary in those places in which the work is at present one of prevention, as well as in those in which it is one of cure. His Excellency in Council thinks that no profit will result from any further discussion as to how far the present state of things is due to defects in the system of education, and how far to forces either independent of, or antagonistic to, that system. The evil is admitted on all hands; and the problem is to find means by which the method of public instruction may be strengthened and improved so as to combat and overcome it. Holding these views, the Governor General in Council considers it matter for congratulation that Local Governments and Administrations and the representatives of the different native communities in India have generally accepted his suggestions with cordiality, and shown, by the earnest attention which they have devoted to the subject, their determination to remove the defects which have been brought to notice

3. In proposing remedies for the evils admitted to exist, many Local Governments and Administrations have felt themselves fettered by the want of funds, and their recommendations are consequently in some cases not so far-reaching as they doubtless would have been if financial difficulties had not interfered. In the matter of expenditure on public instruction in India the Governor General in Council desires to reaffirm the policy laid down in paragraph 17 of the Home Department Resolution No. 199 of 18th June 1888, reviewing Sir Alfred Croft's Report on Education in India, and in accordance with that policy to state that the recommendations which follow, so far as they involve expenditure, should be carried into effect without imposing any additional burden on Provincial finances. Where the funds necessary for the improvements suggested cannot be provided from local sources or private benevolence, they should be obtained by an enhancement of fees or by curtailing and readjusting existing expenditure.

> The Government of India recognizes its responsibility to provide, so far as its finances permit, facilities for the education of the people. But in educational as in all other matters it is the policy of the Government of India to avoid entering into competition with private enterprise; it pioneers the way; but having shown the way, it recognizes no responsibility to do for the people what the people can, and ought to, do for themselves. When therefore local effort or private enterprise shows itself able and willing to supply the educational wants of the people in any locality, it is the policy of Government to retire from the field of direct instruction, and to help by reasonable subventions of money the operations of independent institutions. Under this policy, it is the aim of the Government also, wherever there is vitality of private effort, to restrict official action to the maintenance of a few schools in which the system of instruction and discipline shall afford a standard for the emulation of private or aided institutions in the neighbourhood. In pursuance of this policy, the expenditure from Provincial revenues on Government educational institutions should not ordinarily increase in proportion to the total expenditure, but should rather be a constantly diminishing quantity; provided that there is the assurance that the ground abandoned by the Government is occupied by local effort.

4. Proceeding to deal with the suggestions enumerated in paragraph 1, the Governor General in Council observes that in Madras much has been done under the auspices of the Physical Training Association, and measures are under consideration in that Presidency with a view to making it a condition of aid or recognition that the organization of a school satisfies certain prescribed requirements in

regard to a gymnastic course, school drill, and the maintenance of play-grounds. In Bombay a liberal grant-in-aid is to be given to the Bombay Gymnastic Society, which will provide for High schools in that city, while the question of providing for High schools elsewhere in the Presidency is being considered. The Bengal Government engages to provide play-grounds and gymnasia so far as funds admit; and the proposals of the Indian Association that Government should supply gymnastic apparatus to all Government schools, that teachers of athletic sports should be appointed, and that a general competition in athletic sports should be arranged every year in district head-quarters, are receiving consideration at the hands of the Educational authorities. In the North-Western Provinces and Oudh the question of physical education has lately been considered by a Conference of Educational officers; and His Honour the Lieutenant-Governor and Chief Commissioner engages to consider with favour any practical suggestions that may be made. In the Punjab it is intended to prescribe gymnastic courses for primary, middle, and high schools, and to permit boys to present themselves annually for examination in gymnastics, and to receive certificates if successful. Cricket and athletic tournaments, open to Government and aided schools and unaided schools subject to Government inspection, are to be promoted. In the Central Provinces all secondary and many of the primary schools have gymnastic apparatus, and the boys are drilled at all secondary schools. In Burma physical exercise is so congenial to the tastes of the people, that special encouragement is not necessary to stimulate the boys to take part in athletics. In Assam gymnastic apparatus has been provided at most of the High schools; and it is further intended, if funds will admit, to appoint three teachers of gymnastics to visit the High schools in rotation, and to give a capitation allowance for proficiency. In the Hyderabad Assigned Districts gymnasia and teachers of gymnastics have been provided in many schools. The information thus summarized gives satisfactory proof that the Local Governments and Administrations appreciate the value of physical exercises, and are ready and willing to encourage them; and it is believed that much can be done in this direction without incurring any large expenditure. As a corollary to the action already undertaken, or about to be undertaken, to promote physical education, a system of marks and prizes, which no doubt will be largely supplied by private liberality, for proficiency in gymnastics and athletic sports, should be everywhere introduced where gymnasia and playgrounds have been attached to the schools; and the Governor General in Council trusts that Local Governments and Administrations will on suitable opportunities endeavour to make arrangements to carry this suggestion into effect.

5. In indicating its views on the punishment of breaches of school discipline in paragraph 14 of the letter of 31st December 1887, the Governor General in Council left this question to the judgment and discretion of Local Governments and Administrations. At the same time he drew prominent attention to the suitability of corporal punishment as a punishment for boys who have not reached an age when such punishment becomes inappropriate, and where local sentiment is not very pronounced against it. It appears from the replies now received that corporal punishment is generally recognized as suitable in cases of aggravated misconduct. The prevailing opinion also is strongly against the abolition of the system of fining, which is defended as being helpful towards securing punctual attendance. His Excellency in Council accepts the general opinion on both points, and desires that effect should be given to it. Without desiring that a code of offences and punishments should be drawn up to which every breach of discipline should be directly reducible, His Excellency in Council considers that punishments in schools and colleges should take such forms as loss of position in the class, impositions, exclusion from lessons, suspension from attendance, money fines, corporal punishment, and, as a final resource, expulsion. It will be for the various Local Governments and Administrations acting through their Educational Departments to lay down for the guidance of masters such rules as may be considered desirable to enforce a discreet use of the different forms of punishment.

6. The suggestion for the maintenance of good conduct registers has been generally well received. The Bengal, North-Western Provinces and Oudh, and Central Provinces Governments agree to the introduction of such

registers in the manner proposed in the Home Department circular letter. In Bombay the experiment is to be tried under selected head-masters. In Burma registers are to be opened in all Government schools; in time they may be prescribed in aided schools, but in this Province it seems premature to insist on this at present. In Assam a start has already been made in keeping good conduct registers, in giving prizes for good conduct, and in making every boy appear periodically before the head-master; and the system is to be further extended. In the Punjab the authorities are opposed to opening good conduct registers, and to giving prizes for good conduct; but they propose to attain the objects in view by directing that certificates are to be given for good conduct, and that serious cases of bad conduct are to be reported to the parent or guardian of the offender. The Government of Madras is adverse to the system on the ground that the moral defects of students and of schoolboys are not such as can be marked by registers of conduct, and deprecates the suggestion that attention should be given to good conduct registers in selecting candidates for the public service on the ground that it would be cruel and unjust to place on permanent record the faults committed in early youth. While admitting that there is force in the last objection, the Governor General in Council considers that it may be met by head-masters refusing extracts of the earlier entries in the registers which would produce an unfair impression of the pupil's real character, or adding such remarks as would prevent their having this effect. Generally speaking, extracts from these registers of conduct, although not conclusive as to a boy's conduct except during school hours, will obviously afford more useful information to employers to whom he offers his services than the certificates of character now generally given; and from this point of view they will probably not be without their use to Government officers in selecting candidates for the public service. His Excellency in Council therefore trusts that the Governments of Madras and the Punjab will follow the example of other Provinces by introducing a system of good conduct registers.

7. The advantages of well-conducted boarding houses attached to the higher schools and colleges for students who do not live with relations or friends, at which the example and personal influence of their teachers can be brought to bear upon the students out of school hours, are generally recognized. The obstacle which has generally prevented the extension of the system is the expense which it involves. The Madras Government would be glad to see the experiment tried by private agency, but considers its success too doubtful to justify the expenditure on it of public funds. In Bombay provision will be made at the few Government colleges that exist for the enforcement of stricter discipline and for the residence at or near the college of the Principal or a Professor. The further extension of the residential system will be left to private liberality. The establishment of hostels is an essential part of the educational policy of the Governments of Bengal and Assam, where funds are available; and the public has occasionally contributed towards such foundations. In the North-Western Provinces and Oudh every district school and college has a boarding house attached to it, and they are all full. Sir Auckland Colvin is not in favour of the extension of the system to schools at the head-quarters of tahsils, because he is not satisfied that they would be properly supervised. In the Punjab the boarding house system is very widely extended; and the Lieutenant-Governor contemplates authorizing local bodies to require that out-students attending a school to which a boarding house is attached should live in it provided there is accommodation, unless they are living with relatives or friends of their parents or guardians and are considered by the head-master to be under healthy influences. In the Central Provinces local bodies will be requested to improve or enlarge existing boarding houses where the accommodation is bad or insufficient. In Berar several boarding houses with accommodation for resident masters have been established, and it is proposed to increase their number. The Governor General in Council recognizes the willingness of Local Governments and Administrations to do what is required in the provision of boarding houses. The State already bears a disproportionate share of the expenditure on high education; and the obligation of providing boarding houses where they do not exist is one which Local Governments and Administrations

are naturally loth to accept. It is an appropriate object for private liberality, which should be encouraged to regard it as worthy of its benefactions.

8. It was admitted in the Home Department letter of 31st December 1887 that the monitorial system cannot be as effectual an aid to discipline in India, where schools are mostly day schools, as it is in England. At the same time His Excellency in Council believes that the adoption of rules, such as the Elphinstone High School Rules referred to in paragraph 17 of the letter, will be found productive of advantage. The essence of these rules is the independent power of punishment given to Prefects, which is thus referred to by Mr. Jacob, who introduced the system into the Elphinstone High School:

"It is the delegation of this disciplinary power to the Prefects that emphat-
"ically marks the trust reposed in them, and brings them, to look upon the
"reputation and prosperity of the school as partly committed to their keeping.
"If you withhold this power, and require the Prefects not to preserve discipline
"but merely to report breaches of it to the masters, you reduce the Prefects to
"the position of mere tale-bearers. Self-government becomes government by
"espionage, and with a decided tendency to develop nothing but ignoble traits
"of character in those who are allowed to play no higher part in it than that
"of menials."

In Bombay the Elphinstone Rules are to be circulated, and an attempt made to introduce the system in High schools generally. In Bengal the monitorial system will be tried in hostels and subsequently extended, if successful. In the North-Western Provinces and Oudh and in Assam it will be tried in selected schools. In the Punjab, the Central Provinces, and Berar the system is recognized already, especially in the Punjab: it is to be extended in the Central Provinces and Berar. On the whole, the Government of India is satisfied with the manner in which Local Governments and Administrations have accepted its suggestion on this matter. Time will show whether the system is well-suited to Indian boys, and with the improvement of the quality of teachers it will be possible to extend it generally, if it is found to succeed in the better schools.

9. On the proposal to enforce the exclusion from school of boys who do not reach a certain class by a certain age the general opinion is, that a rigid application of a rule of this nature would involve the risk of injury to classes of society whose backwardness requires encouragement. The Governor General in Council recognizes the force of this argument; and as he thinks that there is not the same objection to big and small boys being associated together at day schools as there is at boarding schools, His Excellency in Council is content to leave the matter to Local Governments and Administrations, on the understanding that the recommendation in paragraph 18 of the letter of 31st December 1887 will not be lost sight of.

10. The question of inter-school rules is one of great importance in the interests of discipline, and rules on the subject are already in force in nearly every Province. The points which it is essential to secure are, that, without the consent of the Educational authorities, a boy shall not be taken into a school who has been dismissed from another school for misconduct; that failure to pay his school fees in his former school shall debar a boy from admission to another school, except under similar consent of the Educational authorities; and that, if received into another school, a boy shall not be placed in a higher class than the class he was in before leaving the other school, except at the beginning of a new term. The rules on the last point should only be applicable to schools of the same grade: those on the first and second points would be generally applicable to schools of all grades.

The rules in the Madras and Bombay Presidencies are too exclusively directed towards the second of these objects. Those in Bengal and the North-Western Provinces and Oudh seem to give more or less effect to the three essentials; but the point of dismissal for misconduct might be brought into greater prominence even in these Provinces. In the Punjab rules have been prepared which apply to all Government and aided schools; but it is not proposed to ask the University to co-operate on the ground that the number of unaided schools and colleges in the Province is very small. In the Central Provinces there are no inter-school rules at present, and it is proposed to introduce simple rules

to apply to schools in the same town. This limitation, however, seems calculated to diminish the effect of the rules, and should be reconsidered by the Chief Commissioner. The rules in Burma apply to all Government schools and aided schools of the advanced kind. They are defective in that they contain no reference to conduct. Revised rules are being issued in Assam, which, if acted upon by the managers of unaided schools, will go far to meet the objects which the Government of India has in view.

The Governor General in Council considers that it is desirable to remodel the rules of other Provinces on the basis of the rules in force in Bengal and the North-Western Provinces and Oudh (which are printed as an Appendix to this Resolution). The Education Department can enforce such rules in all Government colleges and schools, and their adoption can be made a condition of a grant-in-aid from Government; but it is equally essential that they should be adopted in unaided institutions. The only effectual way of securing this is to invite the co-operation of the University; as has been done in the North-Western Provinces. When the Provincial rules have been revised and determined, the Universities should be invited to assist towards securing their adoption in unaided institutions by denying affiliation to such as do not adopt them; and the Governor General in Council earnestly trusts that, when invited, the Universities will throw the weight of their great influence into the scale of order and discipline.

11. In the opinion of the Governor General in Council the provision of efficient training schools and colleges for teachers is one of the most effective means available to Government for improving discipline and counteracting the tendency to irreverence and contempt of authority; and he has accordingly considered with special attention the opinions which the various local authorities have expressed upon this important subject.

In Madras there are at present arrangements for training in the Government and public normal schools about one-third of the teachers required for colleges and secondary schools and three-quarters of those required for primary education. The quality of the training, however, needs improvement; and this question, as well as that of extending the training system so as to provide teachers for all schools, is engaging the attention of the Madras Government. The University also holds an examination for the degree of Licentiate in teaching. The Bombay Government is ready to provide an adequate supply of training schools for primary institutions, but considers that the cost of training colleges for preparing masters for high and secondary schools would be prohibitive, and that the need for such institutions is not great. It admits, however, that teachers are now appointed to schools without any real knowledge of the art of teaching, and proposes to establish normal classes at the large high schools and to compel candidates for service in the Department to attend them. The Bengal Government, on the ground that the education of teachers is costly and that the educational grant is insufficient to adequately provide for elementary and technical education, states that there is no present prospect of funds being available for the general introduction of a system of training teachers for their profession in special institutions. His Honour the Lieutenant-Governor believes that training in the art of teaching should be given in addition to, and not as a substitute for, the education of the University; and urges that there is no want of masters trained in the usual English method at the University, and that it is on this ground and on the ground of expense undesirable to import English masters for definite periods. His Honour is prepared, should the Government of India wish it, to start one training school at a cost of about Rs. 10,000 a year for English teachers at high and middle schools, Government or aided. Sir Steuart Bayley also expresses himself in favour of a system of granting certificates in the art of teaching in preference to an extension of normal schools; the possession of such certificates to be made a condition of employment in Government and aided schools. In the North-Western Provinces and Oudh considerable attention has been devoted to the training of masters, and a normal school for teachers in primary and middle institutions is located at the head-quarters of each division. It is found, however, that present arrangements do not adequately provide for the training of masters for the higher

class of schools, and it is proposed to establish a central institution for this purpose. In the Punjab there is a central training college at Lahore for masters in secondary schools. No one can be employed in any board school, whether secondary or primary, who does not hold a teacher's certificate. The amount of grants to aided schools is to a certain extent dependent on their having certificated teachers. In the Central Provinces sufficient provision for training vernacular teachers is said to exist. The Anglo-Vernacular teachers are supplied by the colleges. The Chief Commissioner is in favour of establishing normal classes for Anglo-Vernacular masters and arranging for examination for certificates in teaching, and he has under consideration suggestions for the improvement of the normal schools at Jabalpur and Nagpur. In Burma, where education has a strong religious character, adequate arrangements for training masters for primary schools exist; and the Chief Commissioner is working out a scheme for attaching to existing schools departments for the training of middle class teachers. The supply of trained teachers for secondary schools in Assam must be procured by indenting on normal schools in Bengal when established, or by sending teachers from Assam for training in those schools. In Berar arrangements have been made for training teachers for primary schools; but the secondary schools are not numerous enough to justify a special training institution, and masters for these schools are procured from Bombay colleges and high schools.

12. The Governor General in Council desires to give emphatic expression to his view, that it is of little use to spend money on schools if the teachers are either inefficient or unable to maintain discipline or a healthy moral tone in their schools. The chief qualifications required in a schoolmaster are capacity to maintain discipline, and capacity to convey instruction. The first of these qualifications implies firmness and ability to govern, the capacity of inspiring enthusiasm in his pupils and securing their co-operation, and earnestness, sympathy, and insight into character. In the opinion of the Governor General in Council the possession of these qualities cannot be tested merely by an examination such as is suggested by the Government of Bengal. The capacity to convey instruction comes more within the range of an examiner's power to test. But this is the lower of the two sets of qualifications which go to make up the model schoolmaster; and an examination is an admittedly inferior way of ascertaining a teacher's ability to convey instruction, his ability to simplify a subject, or his skill to fix the attention and draw out the intelligence of his class. For these reasons the Governor General in Council considers it impossible to secure good instructors without such a process of selection and preparation as normal school training gives, and is unable to regard the adoption of examination in the art of teaching as an adequate substitute for good normal schools. His Excellency in Council therefore deems it essential that each Local Government should accept the responsibility of providing means for training teachers for each grade of schools—primary, middle, and high—as a first charge on the Educational grant. Should any Local Government find itself unable to provide the requisite system of training from the funds already available, it should arrange either to increase its funds from local sources or, following the recommendation of the Education Commission in paragraph 543 of its Report, to throw more largely on private enterprise the duty of providing higher education, and thereby set free the money required for training institutions. The proposal to attach normal classes to the larger High schools, though not as satisfactory as the establishment of training schools themselves, is nevertheless worthy of consideration, if it be arranged that such classes shall be attached to those High schools only which are under the care of specially selected and competent masters. As the number of good teachers educated at training institutions increases, it should gradually be made a condition that no uncertificated teacher should be appointed to a Government aided school or college; and the Universities should be invited to make the employment of certificated teachers in unaided schools and colleges a condition of affiliation. Until the supply of training institutions is fully developed, local arrangements should be made whereby provisional certificates of competency to teachers possessing certain educational qualifications may be granted after a sufficient period of probation has been passed, subject to confirmation by the Government Inspector.

13. In the opinion of the Governor General in Council the suggestion (which chiefly affects the larger Provinces) contained in paragraph 11 of the letter of 31st December 1887, that trained head-masters should be engaged from England for a definite period of five to seven years in order to introduce and establish a standard of discipline for the emulation of other schools, is deserving of careful attention. The Madras Government thinks that the teaching staff at colleges should be leavened by a larger proportion of English teachers, who have paid special attention to the art of teaching; and, at its request, the Secretary of State will be invited in selecting graduates for educational appointments in India to insist on their possessing experience in teaching. In the North-Western Provinces and Oudh the question of employing European masters for a few of the leading schools for limited periods is, the Government of India is pleased to learn, under consideration. The Governor General in Council is convinced of the valuable stimulus that the example of good teachers from England would give to schools; and he would be glad if the Bombay, Bengal, and Punjab Governments could see their way to giving the proposal their further consideration.

14. There remains the question of the extension of a system of teaching which has a direct bearing upon personal conduct, and whether an attempt to effect this extension should be made by prescribing moral text-books for schools and colleges.

Having given this important question its fullest consideration, the Government of India is satisfied that the end in view would not be attained by prescribing for use in colleges and schools a treatise on ethics or a book of didactic instruction in the rules and principles of conduct. It believes that the careful selection and training of teachers provide the most effectual method of establishing a good moral tone in a school; but it also considers that the influence of the teacher may be greatly strengthened and the interests of morality promoted by the use in schools of text-books having a direct bearing on conduct, either by means of precept or example. The Government of India understands that this view has commended itself to the Syndicate of the Calcutta University, under whose auspices Mr. Tawney, Principal of the Presidency College, has been engaged to prepare a book of selections for the use of candidates for matriculation. The instructions laid down for Mr. Tawney's guidance in preparing this book are, first, that at least three-fourths of the book shall consist of prose taken from authors of the present century; second, that at least one-half of the prose portion shall consist of extracts having a direct bearing on conduct, either by way of precept or example; and third, that a similar principle shall be as far as possible kept in view in the poetical selections. Thus, the Calcutta University has already taken steps to give effect to what, in the opinion of the Government of India, is the most practical way of introducing moral training into the highest class of Indian schools, and furnishing teachers with the opportunity of imparting instruction in morality and in the principles of natural religion to their pupils. All that remains now to be done, in Bengal at all events, is to supplement this action of the University by providing for the lower grades of schools, and for each class in those grades suitable text-books compiled on similar lines. Similar action in other Provinces is equally called for; and accordingly the Governor General in Council desires that each Local Government and Administration should take this matter at once in hand; and either by the appointment of a Committee or by employing selected individuals, who need not necessarily be officials, or by the offer of suitable prizes, effect a revision of the existing Readers in the direction indicated above, or where necessary procure for use in schools an entirely new set of books compiled on these principles. His Excellency in Council will be glad to learn from time to time the progress made in each Province in this undertaking.

15. The suggestions enumerated in paragraph 1 of this Resolution, for the improvement of discipline in colleges, have received favourable consideration by Local Governments and Administrations. In Bombay and the Central Provinces the rule as to weekly meetings of college councils will be adopted. In Bengal and the North-Western Provinces and Oudh the rule is considered unnecessary; and in the Punjab fortnightly meetings have been prescribed. The rule empowering a Principal to expel, rusticate, or fine a scholar is accepted everywhere. The rule giving power to a Professor to suspend a student for a limited time, or to fine him without reference to the Principal, is accepted by Bombay, Bengal, and the Central Provinces.

In the Punjab it is definitely restricted to students of the Professor's own class; and it is understood that this limitation is also contemplated in the three Provinces just mentioned. The Governments of Madras and the North-Western Provinces and Oudh favour the autocracy of the Principal in matters of discipline. The Government of India is content with the measure of acceptance which its suggestions as to colleges have met, and does not wish to press them further on the Governments which have not found themselves able to adopt them.

ORDER.—Ordered, that a copy of the above Resolution be forwarded to all Local Governments and Administrations for information and guidance; and to the Foreign and Public Works Departments for information and such action as may be considered necessary in regard to Educational institutions under the control of those Departments.

Ordered also, that the Resolution be published in the Supplement to the *Gazette of India*.

[True Extract.]

A. P. MACDONNELL,

Secretary to the Government of India.

APPENDIX.

Inter-School Rules in force in Bengal and the North-Western Provinces and Oudh.

Bengal.—I.—A boy, before he is admitted to a high school, shall be required to produce a certificate from the head-master of the last school in which he was reading. Whenever possible, a parent or guardian should accompany the boy; in other cases he should provide the boy with a letter of application.

II.—The certificate shall run as follows:

"CERTIFIED that ——— was in the ——— class of the ——— school and leaves with a character. All sums due by him to this school have been paid."

III.—The certificate is to be given upon the day in which it is asked for, and it is not the business of the head-master to inquire why the boy wishes to leave his school.

IV.—A boy coming for admission shall not be placed in a higher class than that in which he was in the school he has left (no class lower than the fifth being considered): thus, a boy of the fifth class of one school may not be admitted into the fourth class of another school, but a boy of the sixth class may be admitted into the fifth class without an infringement of this rule.

N.B.—To promote a newly-admitted boy, except it be after the regular annual examination of the school, is a breach of this rule. By the "regular annual examination" is to be understood the examination held towards the close of the school-year, when the Entrance test-examination is generally held.

V.—The fact of a boy appearing for admission without having undergone the annual examination of his old school must be regarded, unless the reverse is certified to by his former head-master, as sufficient evidence of his not having been fit for promotion; he should therefore be admitted into the class in which he had been reading in the other school.

VI.—Every case in which a boy is dismissed or expelled should be notified at once to the Inspector of Schools.

VII.—If a boy's name be struck off for non-payment of dues, he shall not receive a certificate until all sums due to the school have been paid.

VIII.—If a boy leaves the school after having failed at the examination of his class, a note to that effect shall be entered in the certificate granted to him by the head-master.

IX.—All questions arising between one head-master and another respecting the enforcement of these rules shall be referred to the Inspector of Schools with all convenient speed.

X.—If a boy be found producing a false certificate, or making a false statement as to his attendance at any school, he shall be expelled or, at the discretion of the Inspector, be publicly degraded for that year to the class below that in which he is.

XI.—Wilful transgression of any of the foregoing rules will render a school liable to forfeit the right to send up candidates for junior scholarships.

North-Western Provinces and Oudh.—The rules in force are to the following effect:

That a boy on admission to a secondary English School, Government or aided, shall, except for some sufficient reason to the contrary, remain at the same school till the end of the school year, and that, if obliged to leave within that time, he shall receive a certificate showing what stage of education he has attained, and what character he bore; that if he leaves at the end of the school year, the master shall give him a written certificate showing whether he has passed or failed at the final examination; that the grant of any certificate shall be made conditional on his having paid all sums due by him to the school he is leaving, and that he shall not be admitted to another school except on the production of one of the above certificates. He will not be placed in a higher class in his new, unless he has passed the final examination at his previous school, and will not receive promotion within three months of his admission.

„ IV.—Classification of Treasuries according to encashment of Notes.
„ V.—Statistics of Treasury and other Balances on December 31st, 1888.

Other Statements.

No. VI.—Issues and Receipts of Home Notes.
„ VII.—Issues and Receipts of Coin.
„ VIII.—Value of Notes in circulation from 1862.
„ IX.—Details of ditto ditto 1877.

OFFICERS IN CHARGE.

2. Mr. E. Gay was Head Commissioner up to 10th October and again from 29th October to 31st March 1889. Mr. C. R. Kiernander was in charge

from 11th to 21st October 1888, and Mr. E. T. Atkinson acted from 22nd to 29th October 1888. The other circle offices were in charge of the officers mentioned below:—

Madras . . { Mr. H. F. Clogstoun, from 1st to 10th April 1888.
„ W. Donald, from 11th to 13th April 1888.
„ E. W. Kellner „ 14th April to 3rd December 1888.
„ T. W. Rawlins „ 4th December 1888 to 31st March 1889.

Bombay . . { Mr. A. C. Tupp, from 1st April to 14th May 1888.
„ S. Jacob „ 15th May to 31st March 1889.

Rangoon . . { Mr. T. H. Biggs, from 1st April 1888 to 18th January 1889, and again from 31st January to 31st March 1889.
„ F. J. Atkinson, from 19th to 30th January 1889.

ACCOUNTS AND AUDIT.

3. The monthly audit of the accounts has been duly reported for each office to the Comptroller General, and special audits have also been made of Rangoon and Allahabad for the year 1888 by the Deputy Auditors General, and Madras for 1886-87 and 1887-88; also Calicut for October 1887 to September 1888 by an Assistant Accountant General.

CIRCULATION.

4. The following figures show the state of the net circulation:—

	Gross Circulation.	Retired by other Offices.	Net Circulation.
1st April 1888 . .	16,78,60,015	36,16,220	16,42,43,795
31st March 1889 . .	15,99,96,270	26,18,135	15,73,78,135

As explained in previous reports, a note is in "Gross Circulation," when it is not yet returned to the original office of issue; but if it has meantime been paid off by another office of issue, and is held by it pending return to the original office of issue, then it has ceased to be in "Net Circulation," though it is still part of the "Gross Circulation."

5. The details of the net circulation of March 1889 are as follows:—

	Number of Notes for Rupees.								Total.	
	5	10	20	50	100	500	1,000	10,000	Pieces.	Value.

Total for 31st March 1888 . . .	450,727	2,671,031	275,045	194,803	372,933	35,915	41,818	2,297	4,044,569	16,42,43,795
Total for 31st March 1887 . . .	464,635	2,385,881	262,169	175,084	327,418	31,386	36,054	1,410	3,684,037	13,87,68,365

6. It will be observed that there is a decrease in the net circulation during the year of more than 68 lakhs, as explained hereafter in paragraph 11, but it was still higher than in March 1887.

7. The average value of each note in circulation on the last day of the year, compared with the past two years, was—

	1886-87.	1887-88.	1888-89.		1886-87.	1887-88.	1888-89.
Calcutta Circle .	29	30	30	Kurrachee Circle .	87	88	62
Allahabad „ .	68	93	74	Madras „ .	68	61	55
Lahore „ .	65	62	69	Calicut „ .	35	27	39
Bombay „ .	36	44	42	Rangoon „ .	74	86	61

8. The chief variations are in the Allahabad, Kurrachee and Calicut Sub-Circles, and arise mainly from the Banks holding more or less ten thousand-rupee notes, probably for reserve or remittance.

9. The variations in the net circulation of each circle are shown in the following table, omitting 000—

Last day of	Calcutta.	Allahabad.	Lahore.	Bombay.	Kurrachee.	Madras.	Calicut.	Rangoon.	Total.

Average .	557	607	643	376	481	451	142	169	175	258	297	257	1,333	1,554	1,527

11. This table shows a small decrease in the circulation of all circles taken togther, a fluctuation not remarkable when it is considered that a very much larger expansion occurred in the previous year, and that in March 1889 there was a great scarcity of money, the Bank rate of interest being 11 per cent. as against 7 per cent. the previous year, and this drain of the commercial centres to supply the trade demand up country where silver is more used than notes, naturally diminished the circulation of notes. The figures for the past four years have been 1,395, 1,333, 1,554, 1,527. In particular circles there is an increase of 36 in Calcutta and a decrease of 30 in Bombay. Among the smaller circles the only noticeable difference is a decrease of 21 at Rangoon, probably caused by the facilities given by Government bills at low rates for the removal of surplus funds to India in the intervals of trade in Burma. The continued decrease in the circulation of ₹5 notes in the Calcutta Circle calls for notice. As in the case of ₹20 notes a few years ago, the cause seems to be the alarm

excited by some forgeries which were sufficiently well executed to deceive careless or illiterate persons, or to pass in the hurry of business if carelessly examined.

12. The following figures show (in lakhs and thousands) the gross circulation in the Presidency Circles of notes not exceeding R100 each :—

Last day of	1887-88.			1888-89.		
	Calcutta.	Bombay.	Madras.	Calcutta.	Bombay.	Madras.
	R	*R*	*R*	*R*	*R*	*R*
April	3,18,21	2,02,69	1,12,89	3,38,85	2,25,20	1,36,17
May	3,09,13	2,08,56	1,12,46	3,28,10	2,26,22	1,28,47
June	3,03,64	2,05,11	1,10,05	3,18,09	2,16,88	1,23,63
July	3,05,65	2,05,10	1,08,52	3,18,40	2,20,66	1,21,85
August	3,08,04	2,08,84	1,10,10	3,23,78	2,17,44	1,19,60
September	3,30,96	2,12,26	1,10,98	3,37,66	2,20,22	1,19,13
October	3,21,92	2,19,27	1,17,91	3,51,14	2,22,70	1,23,67
November	3,32,56	2,19,82	1,24,81	3,58,54	2,17,83	1,28,90
December	3,43,43	2,23,37	1,38,39	3,56,69	2,21,44	1,38,92
January	3,53,46	2,20,08	1,41,61	3,63,26	2,08,14	1,36,91
February	3,52,45	2,18,99	1,38,97	3,65,15	2,08,78	1,36,76
March	3,52,57	2,27,38	1,38,75	3,64,93	2,14,35	1,32,48

These figures show that the notes of lower denominations maintain on the whole great steadiness in their circulation.

ANALYSIS OF CIRCULATION.

13. The process of verifying the outstanding balance of the circulation with that obtained from the Issue Registers has been carried on satisfactorily. In Madras and in all the smaller and newer circles, the work is practically completed; in Bombay Mr. Groves, Assistant Accountant General, has, with great industry and care, completed the examination of all but the R10 notes; in Calcutta the system of arranging the cancelled notes pursued for many years makes the examination now attempted peculiarly laborious, and this added to the enormous number of entries involved (nearly 47 millions) makes the correction of every clerical error a hopeless task; accordingly, while the accuracy of every posting during the later years has been rigidly tested, it has not been thought worth while to go over the work of the earlier years, as the question is not one of money or account, but merely of accuracy in recording the history of individual notes.

RESERVE.

14. The value held against the net circulation upon 31st March 1889 was as follows:—

	R	*a.*	*p.*	*R*	*a.*	*p.*
Silver Coin—						
At Calcutta	1,46,98,211	7	8			
„ Allahabad	80,06,660	0	0			
„ Lahore	84,52,055	0	0			
„ Bombay	2,77,17,380	1	3			
„ Kurrachee	29,11,150	0	0			
„ Madras	1,61,25,785	0	0			
„ Calicut	6,01,405	0	0			
„ Rangoon	45,69,625	0	0			
				8,30,82,271	8	11

	R	*a.*	*p.*	*R*	*a.*	*p.*
Small Silver Coin—						
At Bombay	2,50,000	0	0			
„ Kurrachee	44,800	0	0			
„ Madras	6,30,000	0	0			
				9,24,800	0	0
Silver Bullion—						
At Calcutta	33,59,804	6	9			
„ Bombay	1,01,91,230	0	0			
				1,35,51,034	6	9
Invested in Government Securities				5,98,20,029	0	4
Total agreeing with the Net Circulation				15,73,78,135	0	0

15. The half-yearly verifications of the currency balances were held for all Circles and Sub-Circles on the 30th September 1888 and on 31st March 1889, and the balances of the last working day of each half-year were verified in accordance with the orders issued on the subject.

Investments.

16. During the year Government ordered that any stock notes which the holders might tender for payment in cash, should be converted into 4 per cent. loan and be taken over by this Department; to meet this purchase securities to the extent of R5,00,000 were sold, but the stock notes paid off were R3,30,000 only, the difference of R1,70,000 will therefore be re-invested by purchase in the open market in 1889, and the opportunity taken to bring up the amount invested, as closely as possible, to six crores, the limit fixed by law. The balance is now held as follows:—

	R
In the 4 per cent. loan of 1842-43	5,88,07,300
„ „ „ „ 1865	30,44,400
„ 4½ „ „ 1879	5,00,000
	6,23,51,700

Taking the whole investment, the average rate is equal to 95·90 for 4 per cents., and par for 4½ per cents.

17. Its book-value, *i.e.*, the actual price at which it was purchased, has been reduced, until the re-investment just mentioned is made, from R5,99,92,500, at which it was taken last year, to R5,98,20,029-0-4, thus—

	4%			4½%
	R	*a.*	*p.*	*R*
Nominal Value, 31st March 1889	6,18,51,700	0	0	5,00,000
Book Value „ „ „	5,93,20,029	0	4	5,00,000

Profits of Circulation.

18. The interest realised on the above-stated nominal value for the year was—

	R	*a.*	*p.*
On 4% paper	24,35,849	6	0
„ 4½% „	22,500	0	0
Total	24,58,349	6	0

Issue and Receipt of Notes.

19. The following are the gross statistics of the year, the details by circles being shown in Statement VI :—

	₹	₹
Gross circulation, 1st April 1888		16,78,60,015
ISSUES—		
a. Over the counter	77,09,71,680	
b. At Agencies	86,08,400	
c. In remittance transactions	12,43,22,205	
		90,39,02,285
		1,07,17,62,300
RECEIPTS—		
d. Over the counter	66,43,07,460	
e. At Agencies	21,55,600	
f. From currency circles	6,44,58,610	
g. In remittance transactions	18,08,44,360	
		91,17,66,030
Balance, being gross circulation, March 31st, 1889 (*vide* para. 4)		15,99,96,270

EXPLANATION.

a and *d*.—These are the ordinary issues and receipts in exchange for other notes or for coin.

b and *e*.—These are exchange transactions with Treasuries, as the Agencies do not deal directly with the public, but only enable the Treasuries to do so to a greater extent than would otherwise be the case.

f.—This figure represents notes cashed at other currency circles from March 16th, 1888, to March 15th, 1889, and returned during the year under report to the circles to which they belong.

c and *g*.—These remittances are for the most part payments and receipts of one currency office, in consideration of receipts or payments at another.

COMPARISON.	Issues. ₹	Receipts. ₹
1888-89	90,39,02,285	91,17,66,030
1887-88	83,20,40,665	80,55,80,115
1886-87	74,12,56,165	74,47,96,640
1885-86	76,10,25,730	76,55,44,465

20. The aggregate gross issues and receipts of the several denominations of notes at both offices of Issue and Agencies during the year were as follows :—

	NUMBER OF NOTES FOR RUPEES								TOTAL.	
	5	10	20	50	100	500	1,000	10,000	Number.	Value.

28. The following shows the operation of the cutting clauses of the Coinage Act during 1888 :—

Statement showing the number of coins cut and broken under the Coinage Act in Treasuries throughout India during the Calendar year 1888.

NAME OF PROVINCE.	Number of Treasuries in which coins were cut.	Believed to have lost by reasonable wear more than 2 per cent. in weight.				Believed to be counterfeit.				Believed to have been reduced in weight otherwise than by reasonable wear.				Considered unfit for further circulation by reason of obliteration of device or for other cause.

29. The usual statements are attached of whole rupees coined and issued from the Indian Mints during the years 1835 to 1888, and the proportions of each of those annual issues found on examination in every District Treasury of a bag of rupees of the coin ordinarily current in the districts. The difficulty in drawing any detailed conclusions from these statements has been pointed out in previous reports, but they show the very gradual disappearance of old coin from circulation and the equally gradual spread of new coin to take its place.

30. The circumstances of the India Treasuries are exceptional as explained in former reports; but leaving these Treasuries out of consideration, the

figures continue to show that, as might be expected, the percentage of the coin of the later years held in Madras, the Punjab, and in the North-Western Provinces and Oudh is largely below the percentage of the same coin held in Bengal and Bombay, which are nearer to the Mints; while the percentage held in Bengal is largely below that in Bombay, into which Presidency the great bulk of the silver is imported. No new rupees were sent by Government to Burma last year.

Statement of Whole Rupees coined and issued from the Indian Mints, from 1835 to 1888.

	Coined in Calcutta.	Coined in Madras.	Coined in Bombay.	Total coined.

Agencies.

35. The following are the transactions at the Agencies :—

	Number of Agencies.	Issues of Notes.	Receipts of Notes.
Agencies of the Calcutta Circle	17	17,500	2,95,500*
„ Lahore „	5	68,23,000	5,31,000
„ Bombay „	2	6,67,000	7,13,100
„ Madras „	2	6,73,000	5,96,000
„ Rangoon „	1	4,27,900	20,000
	27	86,08,400	21,55,600

* In addition to this Backergunge received ₹30,000 worth notes from the Treasury for an opposite payment from Reserve Treasury to Currency at Calcutta.

36. The Agencies enumerated in the above figures are the following :—

Calcutta Circle.		Lahore Circle.	Madras Circle.	Rangoon Circle.
1. Backergunge.	10. Monghyr.	1. Rawal-Pindi.	1. Cocanada.	1. Mandalay.
2. Cachar.	11. Patna.	2. Amballa.	2. Vizagapatam.	
3. Chumparun.	12. Purneah.	3. Peshawar.		
4. Chittagong.	13. Rungpore.	4. Simla.		
5. Dacca.	14. Rajshahye.	5. Multan.	Bombay Circle.	
6. Gya.	15. Shahabad.		1. Nagpore.	
7. Moorshedabad.	16. Shillong.		2. Akola.*	
8. Mymensingh.	17. Sylhet.			
9. Mozafferpore.				

* The Akola Agency has been closed since the end of 1888.

CLAIMS ON LOST NOTES.

37. The following is the statement of lost and mutilated notes paid during the year on bond of indemnity :—

Nature of Loss.		Number of Notes for Rupees								Total.	
		5	10	20	50	100	500	1,000	10,000	Number.	Value.
Half Notes	Lost by Post	27	200	73	90	167	7	2	...	566	30,295
	Lost accidentally	17	124	94	53	132	10	8	...	438	32,055

1886-87		56	275	64	116	277	31	27	...	846	80,310

FRAUD AND FORGERY.

38. It is seldom that a year passes without fraudulent claims to payment of notes, of which the whole or part is alleged to be lost by the claimant. During the past year a case occurred in Calcutta, which is noticeable both from the position of the claimant and from the numerous points decided by the High Court in its judgment on the case. A man forwarded two half-notes for R20 each, with a circumstantial story that he had recently lost the corresponding halves, and he furnished written declarations from two of his friends that they had seen the whole notes in his possession and confirming his claim in detail. On enquiry it appeared that these halves alleged to have been recently lost had really been deposited in the Currency Office for the last seventeen years, their value having been paid to the real owner who had lost the halves now produced.

39. The intention was so evidently fraudulent that I directed the prosecution of the persons concerned. All were defended by Counsel and every point urged in their favour, but two of the accused were convicted. The judgment dealt fully with the legal points raised, and has been very useful in suggesting some additional precautions in dealing with these cases. I have circulated copies of the judgment to all Currency Circles.

40. The following forgeries of notes came to light in the year under review, and they were all of the Calcutta Circle except one of the Bombay Circle :—

Of 5-rupee notes, fifty-five pieces.
„ 10 „ „ fifty-nine pieces.
„ 20 „ „ three pieces.

41. The note of the Bombay Circle was for R10 of the series $\frac{P}{51}$. It was received at the railway station and no trace of the utterer was obtainable. The forgeries of notes of the Calcutta Circle consisted entirely of the denominations of R5 and 10, owing, no doubt, to the practice of not keeping any record of the numbers of notes of these denominations making it difficult to trace out the history of such notes, the result being that only one conviction was obtained.

42. The five-rupee notes belong to the same set as those which have been uttered since 1883-84, of the $\frac{R}{77}$ series. Of such notes, fifty-five were presented: twenty-five at Benares, two at Lahore, and four at Bombay; and the total presented from 1883-84 now amounts to one hundred and fifty-one. The only conviction was of two men in January 1888 as mentioned in the last report.

43. The ten-rupee notes were of the series $\frac{R}{77}$ and $\frac{R}{85}$, and belonged to a new set of forgeries, of which fifty-nine notes were presented, *viz.*, eleven at Calcutta, five at Bombay, three at Kurrachee, and forty at various places in the Punjab. A man named Tania Hajam was sentenced, in November 1888, to six years' imprisonment for the issue of the former, and another man named Mohindronath Chatterjee was convicted of issuing the latter, and was sentenced, in July 1888, to six years' imprisonment.

REMITTANCES OF SILVER.

44. The following is the detail of silver remittances :—

	₹	
Allahabad to Calcutta	28,29,210	(R8,29,210 of this was shroff-marked coin.)
Lahore to Calcutta	26,71,100	(Whole of this amount was shroff-marked and uncurrent coin.)
Bombay to Calcutta	2,02,00,000	
Bombay to Allahabad	25,00,000	
Bombay to Madras	1,10,00,000	
Bombay to Kurrachee	31,18,000	
Kurrachee to Bombay	8,000	

TREASURY STATISTICS.

45. The transactions in notes at the several Treasuries in India during 1886-87, 1887-88, and 1888-89 have been as follows :—

	1886-87.	1887-88.	1888-89.
	₹	₹	₹
Receipts from the public in payment of Government dues	9,03,04,820	9,87,00,135	10,84,77,135
Receipts from the public in exchange for silver	3,05,22,080	3,04,07,155	2,77,18,515
Receipts from the public for other notes	25,05,895	26,43,280	27,75,875
Total Receipts	12,33,32,795	13,17,50,570	13,89,71,525
Issues to the public in payment of Government dues	3,81,90,680	3,94,35,720	4,60,75,250
Issues to the public in exchange for silver	3,08,04,965	3,22,23,720	3,31,94,190
Issues to the public for other notes	25,05,895	26,43,280	27,75,875
Total Issues	7,15,01,540	7,43,02,720	8,20,45,315

46. The total Treasury transactions in notes during the last three years have been as follows (in lakhs of Rupees) :—

	1886-87.	1887-88.	1888-89.
	₹	₹	₹
Government of India	319	278	369
Central Provinces	34	40	43
Burma	29	24	21
Assam	59	60	58
Bengal	540	563	539
North-Western Provinces and Oudh	172	181	212
Punjab	247	279	333
Madras	258	291	325
Bombay	279	333	299
Hyderabad	11	11	11
	1,948	2,060	2,210

47. Statement IV classifies the treasuries of the Government of India as follows:—

	1886-87.	1887-88.	1888-89.
Where notes were cashed throughout the year to the extent of the public demand	163	148	150
Where notes were ordinarily cashable, but not always	28	43	40
Where notes were not usually cashable	39	46	46
TOTAL	230	237	236

48. Statement V shows the proportion of treasury and bank balances which in each province was held in the form of Currency Notes, and, as stated before, the holdings of the Reserve Treasuries greatly affect the comparisons in this statement.

49. Including Reserve Treasuries, the percentage of balances held in notes was:—

	1887.	1888.
Calcutta Circle	39	33
Bombay „	40	29
Madras „	18	25

But if Reserve Treasuries were omitted, the figures would be—

	1887. Balance in		1888. Balance in		Percentage of Notes.	
	Notes.	Cash.	Notes.	Cash.	1887.	1888.
Calcutta Circle	36,26	104,11	30,52	82,56	29	25
Bombay „	15,87	62,59	12,91	65,60	16	20
Madras „	15,23	92,06	14,98	73,99	17	14

RECEIPTS AND EXPENDITURE.

50. The receipts and expenditure of the department are shown in detail in Statement No. III. The final disbursements of 1887-88 were less by R8,225-5-9 as compared with the approximate figures given in last year's report as per details given at foot of the above statement. The expenditure in 1888-89 was less than in the former year by R35,469, owing, mainly, to a smaller quantity of note forms having been received from England.

General Remarks.

51. Several changes in the method of procedure in the Currency Offices have been introduced during the course of the year, and under the able superintendence of Mr. Kiernander, whose wide experience of the offices in all parts of India was most useful, a Currency Office Code, with a set of standard forms, has been issued and brought into operation with a view to ensure uniformity of practice in all the offices, and to prevent frauds of the kind mentioned in paragraph 39 of the last report in connection with lost and imperfect notes and other valuables. Mr. Groves has also done good service in examining the Issue Registers at Bombay as mentioned in paragraph 13.

STATEMENTS.

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

REVIEW OF THE REPORTS ON THE ADMINISTRATION OF THE JAILS IN THE SEVERAL PROVINCES OF BRITISH INDIA FOR THE YEAR 1888.

No. $\frac{5}{556-567}$.

Extract from the Proceedings of the Government of India in the Home Department (Jails),—under date Simla, the 23rd August, 1889.

Read again—

The Reports on the Administration of the Jails in the several Provinces of British India for the year 1887; the orders of the Local Governments and Administrations thereon; and Home Department Resolution No. 326, dated the 5th September 1888, and accompaniments.

Read also—

The Reports on the Administration of the Jails of the several Provinces of British India for the year 1888, with the orders of the Local Governments and Administrations thereon.

RESOLUTION.

Name of Province.	Date of receipt by the Government of India of the Reports for—	
	1887.	1888.
Madras	18th June 1888 ...	20th July 1889.
Bombay	5th " " ...	24th June "
Bengal	22nd " " ...	10th " "
North-Western Provinces and Oudh.	3rd August " ...	18th July "
Punjab	20th July " ...	19th " "
Central Provinces ...	10th " " ...	4th " "
Lower Burma ...	4th " " ...	4th June "
Assam	11th June " ...	22nd May "
Coorg	7th " " ...	1st June "
Hyderabad	15th " " ...	20th " "

The provincial reports on the administration of jails are due on June 1st. The dates of the receipt of the reports for the calendar year 1888, with the reviews of the Local Governments and Administrations, are noted in the margin.

2. An inquiry into the state of the jails in all the larger Provinces in India has recently been completed by a Committee composed of Drs. Walker and Lethbridge in accordance with the orders contained in Home Department Resolution No. 458, dated 9th October 1888. The report of this Committee has been received and examined and with the comments of the Government of India will shortly be in the hands of Local Governments and Administrations. The Committee's enquiry, and the careful examination to which their report has been subjected by the Government of India, make it unnecessary to examine the jail administration during 1888 as minutely as might otherwise be desirable.

3. Excluding Upper Burma, the jail administration in which will be considered separately, there were, in 1888, 737 jails and lock-ups in British India, the number of central jails having been increased by one and that of district jails reduced by two in the year under review.

The year 1888 opened with a jail population of 75,922 as compared with 76,738 in 1887. The admissions of male prisoners, which had risen in 1887 from 345,727 to 352,702, showed a further rise to 364,883, the increase being distributed over all the larger Provinces except the Punjab. The total jail population was 459,953 (438,264 males and 21,689 females) as compared with 448,741 (426,686 males and 22,055 females) in 1887. The number of prisoners discharged, which was 372,819 in 1887, was 377,718 in 1888, and the number in jail on 31st December last was 82,235 (79,543 males and 2,692 females), as compared with 75,922 (73,381 males and 2,541 females) on the 31st December 1887. The daily average number of prisoners was 79,200 in 1888 against 70,879 in 1887.

4. Statement II, which relates entirely to convicts, shows that the year 1888 opened with 69,468 convicts in the jails as compared with 70,594 at the beginning of 1887. The number of male convicts confined in 1888 was 146,552 as compared with 145,179 in 1887, but the number of females declined from 9,407 in the latter to 9,060 in the former year. The aggregate number of convicts in confinement was thus 225,080 in 1888 and 225,180 in 1887. In 1888, 2,817 males and 63 females were transferred to work out their sentences of transportation beyond the seas, as compared with 1,848 and 114 respectively in 1887. The number of convicts released on appeal was 10,313 in 1887 and 10,205 in 1888: the number released on expiry of sentence rose from 107,660 in 1887 to 128,198 in 1888; and the number released under the remission rules from 7,675 to 8,265. The number released by order of Government, which, in 1887, owing to the releases at the Jubilee, amounted to 26,150, fell in 1888 to 423; 69 convicts, as compared with 55 in 1887, were transferred from jails to lunatic asylums: 105 escaped as compared with 76; 396 were executed as compared with 299; and 2,444 died in jail as compared with 2,353. There thus remained in jail 75,765 convicts (73,324 males and 2,441 females) on 31st December 1888 as compared with 69,468 (67,200 males and 2,268 females) on 31st December 1887. The daily average of convicts was 64,189 in 1887 and 72,554 in 1888.

5. The proportion of the members of the different religions admitted into jail to the total jail admission is thus compared with the proportion borne by them respectively to the total population in India :—

	Ratio per mille of each class of convicts admitted to			
	Total convict population.		Total free population of each class.	
	1887.	1888.	1887.	1888.
Christians	14·4	12·2	1·9	1·6
Muhammadans	274·0	270·8	0·9	0·9
Hindus and Sikhs	617·3	631·9	0·6	0·6
Buddhists and Jains	70·7	68·9	2·8	2·7
All other classes	22·7	16·2	0·6	0·4

6. Turning to the age of the convicts admitted into jail the comparison between the four divisions in the past two years is as follows :—

	Number of convicts admitted.	
	1887.	1888.
Under 16 years	2,117	1,978
16 to 40 „	124,772	126,442
40 to 60 „	25,065	24,681
Above 60 „	2,675	2,542

The different occupations of the male convicts admitted into jail were as follows :—

	1887.	1888.
Persons employed under Government or Municipal or other Local Authorities	4,330	4,390
Professional persons	5,127	5,544
Persons in service or performing personal offices ...	10,902	12,938
Persons engaged in agriculture or with animals ...	79,795	78,595
Persons engaged in commerce and trade	7,620	7,300
Persons engaged in mechanical arts, manufactures and engineering operations, &c.	5,359	5,920
Miscellaneous persons not classed otherwise ...	32,084	31,890

The condition of the female convicts is shown in the following figures :—

	1887.	1888.
Married	5,676	5,576
Unmarried ...	488	475
Widows	2,675	2,500
Prostitutes ...	573	515

7. The following statement compares the character of the sentences of the convicts admitted in 1887 and 1888 respectively :—

	1887.	1888.
Not exceeding 1 month ...	56,562	56,674
Between 1 and 3 months ...	31,818	31,700
Between 3 and 6 months ...	26,578	26,925
Between 6 months and 1 year	18,162	18,678
Between 1 and 2 years ...	11,494	11,534
Between 2 and 5 years ...	5,826	6,084
Between 5 and 10 years ...	1,702	1,680
Exceeding 10 years ...	74	43
Transportation for life ...	1,062	942
Transportation for a term ...	926	790
Sentenced to death ...	425	593

Of the 155,643 convicts sentenced last year, 133,977 were thus sentenced to less than a year's imprisonment, a fact which may on the whole be taken as indicating that the great bulk of crime in India is not of a very serious character.

The variations in the preceding figures call for no comment except the decrease in the number of sentences of transportation, and the increase in the number of death sentences. The former result is accounted for by the fact that, owing to the country having become quieter, 659 convicts were admitted into the jails in Lower Burma under sentences of transportation in 1888 as compared with 889 in 1887. In 1888 there were in Bombay 56 sentences of death against 27 in 1887, in the North-Western Provinces and Oudh 133 against 86, in the Central Provinces 59 against 22, and in Lower Burma 102 against 56.

19,926 convicts were admitted in 1888, who were ascertained to have been previously convicted, as compared with 19,266 in 1887. The ratio per cent. of those known to have been previously convicted to the number of convicts admitted rose from 12·4 to 12·8.

8. The employment of convicts in jail is dealt with in Statement VI. The average number sentenced to labour was 69,156 in the year under review (working days alone being taken into account) as compared with 60,820 in the previous year. Of this number there were on the average 2,512 on the sick list, and 3,416 convalescent or infirm; the balance available for labour being 63,227 as compared with 56,082 in 1887.

These 63,227 convicts were thus employed —

On unremunerative labour	1,786
As prison officers	3,087
As prison servants	6,921
On gardening	4,346
In preparing articles for consumption in jails	8,532
On jail repairs	3,208
On jail buildings	4,753
On manufactures	28,610
Under the Public Works Department	1,766
Under municipalities, &c.	1,166

9. The number and character of offences committed by convicts in the year under review and the previous year are thus compared :—

	1887.	1888.
Criminal offences	279	254
Smoking or being in possession of forbidden articles	9,385	9,115
Offences relating to work	42,980	40,842
Other offences against prison discipline ...	25,754	25,145
TOTAL ...	78,398	75,356

In Bengal the number of offences declined from 35,824 to 29,064: in the North-Western Provinces and Oudh from 6,185 to 5,330: and in the Central Provinces from 3,567 to 2,701. In Lower Burma the number of offences rose from 8,331 to 12,938, and in the Punjab from 15,209 to 16,511. The ratio of punishments to the daily average of convicts was 103·8 in 1888 compared with 122·1 in 1887. It varied from 234·7 in Bengal, to 25·9 in the neighbouring provinces of the North-Western Provinces and Oudh. The figures for Bengal shew a very great reduction from those for the last and preceding years. The vexed question of the recording and punishment of offences against jail discipline has been investigated by the Jail Committee. A considerable variety in practice was discovered, leading in some places to a large record of offences, in others to an undue reduction in the reported numbers. It is to be hoped that the facts now brought to light will enable the various Local Governments to remedy the defects on this point which have been so frequently noticed by the Government of India.

The number of cases in which corporal punishment was awarded showed a satisfactory decline from 2,430 to 1,891. The percentage of prisoners whipped to the total number of male prisoners was only ·7, and the proportion per cent. of whippings to total punishments only 2·5. These figures, as well as the total number of whippings administered, are lower than any recorded in previous years,

and they testify to the attention paid to the orders of the Government of India on the subject. Solitary confinement by itself was imposed in 6,385 cases in 1888 as against 5,160 in 1887, reduced diet by itself in 6,297 cases as compared with 6,874, and these two punishments were combined in 9,493 cases as compared with 5,877.

10. The number of convicts released during the year, who came under the operations of the mark system, was 8,280 as compared with 7,696 in 1887. In that year 22 failed to gain any release, but this number was in 1888 reduced to 15. The system continues to work satisfactorily. Suggestions for the improvement of the rules have been made by the Jail Committee, and are being forwarded for consideration of Local Governments and Administrations. The daily average of convicts under instruction was 3,501 in 1888 as compared with 3,112 in 1887, and 5,228 who had been under instruction in jail were released as compared with 5,193 in 1887. Of these only 753 were able to read and write well, 2,415 could read and write a little, and 2,060 were unable to read or write at all. These results are not encouraging, and the Governor General in Council is disposed to think that little advantage is gained from the system of instruction at present pursued in jails. The subject is being dealt with in connection with the report of the Jail Committee.

11. The gross expenditure on jails in 1888 aggregated Rs. 49,23,996 (62-2-9 per head) against Rs. 45,84,778 (64-9-10 per head) in 1887.

The chief items of expenditure are thus compared for the two years :—

	1887.		1888.	
	Total cost.	Cost per head of average strength.	Total cost.	Cost per head of average strength.
	Rs.	Rs. A. P.	Rs.	Rs. A. P.
Rations ...	17,10,698	24 6 5	19,21,554	24 6 10
Establishments ...	18,54,877	26 2 3	18,64,905	23 8 9
Police guards ...	3,06,082	4 5 0	2,71,191	3 6 9
Hospital charges...	1,32,235	1 13 9	1,42,179	1 12 8
Clothing ...	1,79,271	2 8 10	2,48,449	3 2 6
Contingencies ...	3,82,166	5 6 2	4,54,901	5 11 10

There was a satisfactory decline in the cost of rations in Madras from Rs. 2,83,914 (39-8-9 a head) in 1887 to Rs. 2,28,244 (30-2-9 a head) in 1888, owing to the introduction of a better system of purchasing supplies for jails. In the Punjab the cost per head fell from Rs. 25-4-8 to Rs. 24-5-4. In Lower Burma the expenditure under this head rose from Rs. 2,16,486 (28-2-10 a head) to Rs. 2,94,870 (33-12-1). In Bombay the rise was from Rs. 25-2-1 a head to Rs. 27-11-10, in Bengal from Rs. 20-5-0 to Rs. 21-10-11, in the North-Western Provinces and Oudh from Rs. 18-0-0 to Rs. 18-7-7. In the latter provinces the figure for jails was Rs. 17-12-0, but the charge in the Magistrates' lock-ups (Rs. 20-12-11 per head), where there are not the same facilities for economy, raised the average to Rs. 18-7-7. The high price of the necessaries of life is stated as the principal cause for these rises. The more general adoption of the storage system, as recommended by the Government of India in paragraph 21 of Home Department Resolution of the 5th September 1888, and now endorsed by the Jail Committee, will, the Governor General in Council trusts, result in considerable economy under this head; and His Excellency in Council considers it highly important that this system should be given a fair trial. In the North-Western Provinces

and Oudh alone, a saving of Rs. 17,683 was effected by storing grain instead of purchasing it at the market rate monthly, and there were 14 jails in those Provinces in which the experiment has not yet been tried. It is reported that the loss from damp was very slight indeed; and it is evident that the adoption of the system generally affords an opportunity of effecting very material economies.

The aggregate cost of establishments has slightly increased; but owing to the larger number of prisoners in jail the average cost per head is Rs. 23-8-9 as compared with Rs. 26-2-3 in 1887. The Jail Committee has made some very important proposals on the revision of establishments, and it is unnecessary to discuss the expenditure on this head in the past year. The aggregate hospital charges are slightly in excess of those in 1887, but the expenditure on them per head both of average strength and sick is lower than in that year. The cost of clothing rose from Rs. 1,79,271 (2-8-10 a head) to Rs. 2,48,449 (3-2-6 a head). In each of the larger Provinces there was a large increase in the aggregate, partly due to an increase in the number of convicts. In Madras some of the increase was nominal, owing to the inclusion in the accounts for 1888 of expenditure incurred in 1887. In Bengal there was an increase from Rs. 44,272 (3-10-9 a head) to Rs. 58,364 (4-4-5 a head), and the increase of the cost per head is not explained; in the North-Western Provinces and Oudh from Rs. 40,302 (2-1-0 a head) to Rs. 54,648 (2-7-7 a head), owing to the renewal of old clothing; and in the Punjab from Rs. 26,604 (2-5-0 a head) to Rs. 51,726 (3-15-9 a head). The rise in the Punjab is explained to be due in a great measure to economy having been carried as far as it could safely be carried in the previous 3 years, by using up the stock of old clothing.

There was a large increase in the aggregate amount of contingent expenditure, and the cost per head of average strength rose from Rs. 5-6-2 to Rs. 5-11-10. In Madras the expenditure rose from Rs. 69,084 to Rs. 82,107, mainly owing to the transfer of charges, which under the old system were included under Rations, to the head Contingencies. In Bengal the charge rose from Rs. 96,855 (7-14-6 a head) to Rs. 1,28,592 (9-5-10 a head). The rise is attributed to an increase in the transfer charges, partly caused by the reduction of 14 district jails to the status of intermediate jails, and to an increase of Rs. 11,537 in municipal taxes. The amount of expenditure affords a strong contrast to the charge in the North-Western Provinces and Oudh, namely, Rs. 37,421 (1-10-11 a head). In the Punjab the aggregate cost rose from Rs. 41,994 to Rs. 47,173, but the cost per head remained the same as before. In Lower Burma the charges rose from Rs. 60,152 to Rs. 77,533, of which the greater part was incurred in transferring convicts to India and the Andamans.

12. To calculate the net cost of maintaining the convicts the cash earnings must be deducted from the total cost. The cash earnings in 1888 were only Rs. 12-12-4 per head of average strength as compared with Rs. 14-4-2 per head in 1887. This result is, in the opinion of the Government of India, very disappointing and there has been a steady decline in the earnings since 1885. In that year 24,944 convicts were on the average employed on manufactures, and the earnings were Rs. 12,92,318: in 1886 the number rose to 25,903, while the earnings fell to Rs. 11,51,206: in 1887 there were again more convicts (25,116) employed on manufactures than in 1885, and the earnings were again less, *viz.*, Rs. 10,11,891. In the year under report the number of convicts employed was higher (28,610), and the amount of earnings lower (Rs. 10,11,783), than in any of the preceding 4 years. The inspection reports of the Jail Committee show that in some provinces the principles for regulating employment of prisoners in Jails, which the Secretary of State and the Government of India have laid down, have not been properly acted up to, and that legitimate opportunities of employing prisoners in productive labour are either neglected or not fully turned to account. This subject will require further consideration by Local Governments and Administrations in connection with the Committee's report.

In the Madras Presidency the earnings rose from Rs. 20,380 to Rs. 57,263, but the average earnings per head of average strength was only Rs. 7-3-7. In the North-Western Provinces and Oudh the total earnings fell from Rs. 1,74,145 to Rs. 1,53,479, and the earnings per head from Rs. 8-13-4 to 6-14-7. In Bengal the fall was from Rs. 2,99,870 (24-7-7 per head) to Rs. 2,66,898 (19-6-11 per head), and in the Punjab from Rs. 1,30,549 (11-3-7 per head) to Rs. 1,09,748 (8-6-6 per head). In Lower Burma the earnings rose from Rs. 2,00,848 (26-0-5) to Rs. 2,39,845 (27-6-3), a specially satisfactory result in view of the fact that the earnings in 1886 were only Rs. 1,84,653. After deducting the cash earnings from the gross cost of maintaining the prisoners, the net cost of the jails in India in 1888 was Rs. 39,12,212 (49-6-5 per head), as compared with Rs. 35,72,886 (50-5-8 per head) in 1887. The average cost per head declined very sensibly, from Rs. 88-8-5 to Rs. 73-1-5 a head in Madras, and, with the reforms now in progress in the jail administration of that Presidency, a still further reduction may be expected. In Bombay, the North-Western Provinces and Oudh, the Central Provinces, Coorg and the Hyderabad Assigned Districts, the cost per prisoner declined to a less extent. It increased in Bengal and the Punjab, in each case to a considerable degree, and also in Bombay, Lower Burma and Assam.

13. From the sanitary point of view the year was not altogether satisfactory. The number of prisoners admitted into hospital, which had been 67,065 in 1887, rose to 79,356 in 1888, and the daily average sick from 2,252 in the former to 2,612 in the latter year. The ratio of admissions into hospital per head of average strength, which was 946 in 1887, was 1,003 in 1888, and that of daily average sick 33 as compared with 31. The proportion of admissions into hospital declined in Bengal and the Central Provinces. It rose in every other Province, and especially in the Punjab and Lower Burma. The ratio of admissions into hospital was lowest in Bombay. The results of weighments of discharged prisoners were also slightly less favourable than in 1887. In the year under review 79,213 prisoners added to their weight in jail, while 38,810 lost weight: the corresponding figures in 1887 were 79,102 and 37,702.

But, though the general health statistics were not so good as in 1887, the ratio of deaths was proportionately smaller than in that year. The number of deaths from fever was 211 against 224 in 1887, those from bowel complaints 777 against 790, and those from cholera 368 against 325. The increase in mortality from the last mentioned disease occurred in Bengal, where there were 132 deaths as compared with 21. The total number of deaths in 1888 was 2,617 as compared with 2,523 in 1887, and the ratio per mille

of average strength 33·1 as compared with 35·6. This is the lowest figure since 1884. The ratio varied from 12·7 in the Hyderabad Assigned Districts, and 22·9 in Bombay, to 44·7 in Bengal and 44·8 in Lower Burma. It improved in the Punjab (from 44·5 to 30·7), in the Central Provinces (from 68·4 to 41·2), in Lower Burma (from 58·7 to 44·8), in Assam (28·0 to 26·9), in Coorg (63·4 to 41·5)and in Hyderabad Assigned Districts (from 26·6 to 12·7). The death rate increased in Madras (23·0 to 25·5), Bengal (32·7 to 44·7), and the North-Western Provinces and Oudh (27·6 to 28·3).

ORDER.—Ordered, that a copy of the above Resolution be forwarded to all Local Governments and Administrations for information and guidance and to the Department of Finance and Commerce for information.

Ordered also, that the Resolution be published in the Supplement to the *Gazette of India*.

(True Extract.)

C. J. LYALL,

Offg. Secretary to the Government of India.

Statements appended to Home Department Resolution No. $\frac{5}{556-567}$, dated the 23rd August, 1889.

No.

GENERAL SUMMARY SHOWING the DISTRIBUTION of the PRISONERS of all CLASSES *1887*

1	2			3			4			5		
Name of Province.	Places of confinement.			Prisoners in jail at the commencement of the year.			Prisoners received during the year.			Total.

* The figures are for 1887, the number for 1888 not having been shown in the report.
(a) Includes the Madras Penitentiary.
(b) Includes the European Prison, Ootacamund, and the Debtors' Prison, Madras.
(c) Includes one extra-mural labour gang; the Common Jail, Bombay, and the House of Correction, Bombay.
(d) Six of these are also District Jails.
(e) Includes the European Prison, Calcutta.

* The Jails in Madras, Bengal and Burma are guarded by warder-guards.

† These figures will not agree with the daily average number shown in column 8 of Statement No. 1 as the average number of prisoners in the Disang mukh Jail was calculated by the actual number of days it remained open during the year.

(a) Including the cost of under trial prisoners in lock-ups.

(b) Excluding the cost of under trial prisoners in lock-ups which is not shown separately in the Provincial Report.

(c) Including the cost of under trial prisoners in lock-ups.

(d) For Central and District Jails only. The cost of sub-Jails is not shown in the report.

(e) Exclusive of under trial and Civil debtors.

No.

TEXT-BOOK ON DOMESTIC ECONOMY AND SANITARY SCIENCE FOR THE USE OF THE SENIOR CLASSES OF ENGLISH AND ANGLO-VERNACULAR SCHOOLS IN INDIA.

No. 388—390.

Extract from the Proceedings of the Government of India in the Home Department (Education),—under date Simla, the 23rd August 1889.

Read again—

Home Department Notification No. 341, dated the 17th September 1888, offering a reward of Rs. 1,000 for the best text-book on Domestic Economy and Sanitary Science for the use of the Senior Classes of English and Anglo-Vernacular Schools in India.

RESOLUTION.

With reference to Home Department Notification cited in the preamble, offering a reward for a text-book on Domestic Economy and Sanitary Science, the Governor General in Council is pleased to appoint a Committee, consisting of the Principal, Medical College, Lahore, Surgeon-Major A. Stephen, Sanitary Commissioner, Punjab, and Honorary Surgeon Rahim Khan, Khan Bahadur, Lecturer on Materia Medica and Medicine, Lahore Medical College (the Senior Commissioned Officer acting as President), to examine and report on the works which are submitted by competitors.

2. The works submitted will be forwarded to the President immediately after 1st September 1889. After examining them the President will circulate them to each of the members for examination. When all the essays have thus been examined, the Committee will assemble at one place and after comparing their respective notes will finally decide as to which, if any, of the works is, in their opinion, entitled to the prize offered.

ORDER.—Ordered, that copies of this Resolution, together with copies of Home Department Notification No. 341, dated the 17th September 1888, be forwarded to the Punjab Government for communication to the Principal, Medical College, Lahore, and Drs. Stephen and Rahim Khan, Khan Bahadur, for information and guidance; and to the Surgeon-General with the Government of India for information.

Ordered also, that a copy of this Resolution be published in the Supplement to the *Gazette of India*.

(True Extract.)

C. J. LYALL,

Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on Monday, August 19th, 1889.

During the past week the Bay of Bengal monsoon has been much stronger than for some time past. In consequence constant and rather heavy rain has prevailed over Northern India. About the middle of the week a well marked storm was formed over the head of the Bay, and travelling west-north-westward, occasioned heavy falls of rain on the southern side of the Gangetic plain.

The Chart of the 13th showed the normal distribution of pressure and the ordinary circulation of the winds. In Upper India there were numerous calms, but all along the West Coast and over the Peninsula and the central parts of the country a fairly strong monsoon was blowing. Over the Bay the monsoon was still weak, and the direction of the winds was complicated by the presence of a small depression off the Orissa Coast. On the 14th similar conditions were reported, except that over the north and east of the Bay the winds were more regular and stronger than on the previous day. The observations of the 15th showed that the barometer had generally fallen in the north and risen in the south, hence gradients had become very steep over India. Large low pressure areas were shown—one over Sind and the Western Punjab, the other over Bengal and the North-Western Provinces,—and the barometric difference between Cochin and Rawalpindi and between Cochin and Saugor Island amounted to five-tenths and four-tenths of an inch respectively. Strongish monsoon winds were experienced almost everywhere, the velocity at Bombay being 20 miles per hour. The Chart of the 16th showed that a small depression had formed over Lower Bengal and the north of the Bay. The barometer had fallen in its neighbourhood and the gradient between that region and the south of the Peninsula had increased; but in North-Western India there had been a brisk increase of pressure, and the barometric difference between the Punjab and Malabar had decreased. The monsoon from the Arabian Sea however continued strong. In the north of the Bay there was a cyclonic circulation around the storm. By the morning of the 17th the storm had developed somewhat; gradients were very steep over the Bay and a strong monsoon was blowing. In Western and Central India there was no important change. The Chart of the 18th showed that the storm had passed inland on a west-north-west course and that the centre lay to the south of Benares. The storm maintained the same intensity that it had over Lower Bengal. Strong winds prevailed on both sides of India and over the central parts of the country, but in Upper India the force was low. On the 19th the storm, still maintaining the same intensity, had advanced to Jhansi. A well marked cyclonic circulation of the winds prevailed around the storm centre and strong monsoon winds elsewhere.

Temperature.—During the first three days of the week the mean temperature of the whole of India was above the average, but on the 16th a

more or less general decrease of temperature set in, and the weather generally continued to become cooler during the remainder of the week. The coolest day was the 19th, when the average mean temperature exhibited a deficiency of 4° in the Central Provinces, Central India and Guzerat, of 2° in the Punjab, and of over 4° in the North-Western Provinces. Though the final results for the whole of India exhibit a deficiency, certain Provinces exhibit a variation in the reverse direction; thus Sind, Rajputana, and Bombay had only one day and Madras, Bengal and Burma only two days on which the average mean temperature was below the normal. The results for the different Provinces show a slight excess in Sind, Rajputana, Bombay, Bengal and Burma, and a moderate deficiency in Guzerat, Central India, the Central Provinces, the Punjab and the North-Western Provinces. The maxima have been largely below the average in Upper and Central India throughout the week.

The following table shows the excess or defect of the mean average temperature of the different Provinces for the present and for the preceding week:

Provinces.	Difference of Mean Temperature of Last Week from Normal.	Difference of Mean Temperature of present Week from Normal.
Burmah	+ 0·6°	+ 0·4°
Bengal	+ 1·2°	+ 0·6°
North-Western Provinces	+ 2·2°	— 0·3°
Punjab	+ 1·1°	— 1·4°
Bombay	+ 0·7°	+ 0·3°

This table shows that, relatively to the average, the temperature of the present week has been considerably lower than that of last week in all Provinces, except Madras.

Rain.—The rainfall of Northern India has been on the whole more favourable than it was last week. Not only has the Bay monsoon been stronger than of late, but the travelling cyclone, which passed west-north-westward up the south of the Gangetic plain between the 17th and 19th, occasioned heavy falls of rain in its neighbourhood. The Arabian Sea monsoon has also exceeded the normal strength, and the regions influenced by this current have received steady constant rainfall.

The following is a brief description of the daily distribution of rain:

On the 13th there was no rain reported from the west of the Punjab, Lower Sind, the Circars Coast, or South Madras, but in all other parts of the Indian region moderate general rain had fallen, with some rather heavy amounts over and near the North-West Himalaya. On the 14th rain continued absent from the Western Punjab, from Sind, and from South-East Madras, but heavy rain had fallen in Ganjam and moderate general rain elsewhere. On the 15th and 16th this distribution continued unchanged. On the 17th rain had ceased in the Bombay Deccan, Khandeish, and Central India, while it had become much heavier over the north of the Bay. In other respects there was no change.

On the 18th and 19th heavy rain was reported from Arakan and fairly heavy rain from the neighbourhood of the depression which was travelling west-north-westward into Upper India.

The rainfall table at the close of the Summary shows that thirty-seven divisions received more than the average amount of rain during the week, and only thirteen less than the normal amount. Of these thirteen divisions, the majority exhibit a comparatively unimportant deficiency, such, for instance, as the deficiency of half an inch in Lower Burma, of a quarter of an inch in Chota Nagpur, the hill districts of the Punjab, Coorg, and Khandeish; but in some cases the deficiency of rain is more important. In Central Bengal only half the normal amount has fallen, in Mysore only 0·08 inch instead of 1·39 inch, and in Madras only 0·06 inch instead 0·51 inch. In Western Rajputana there has been no rain during the week. The divisions where the largest falls relatively to the average have been received are Tenasserim and Arakan, the North-Western Provinces and Oudh, Malabar, the Konkan, and the central parts of the country. Within these divisions the rainfall of the week has been from two to three times the average amount.

This generally large average fall does not appear to have been accompanied, as a general rule, by exceptionally heavy falls, but seems rather to have been the result of uniformly distributed moderate rainfall. In Tenasserim however the total rainfall varies between 15 and 20 inches and in Arakan between 16 and 19 inches, and Cherrapunji has received 18 inches. All over the plains of Bengal and the North-Western Provinces there is nothing remarkable in the maximum falls, but at some sub-divisional stations in the submontane divisions the amounts are large—thus Bhugutpur (Cooch Behar) received 11 inches; Kurseong (Jalpaiguri), 9 inches; Mirganj (Bareilly), 11 inches; Dehra Dun, 11 inches; and Naini Tal, 11 inches. In the Punjab the heaviest fall reported is 12¾ inches at Kangra, followed by 7¾ inches at Pathankote. In the South-West Coast districts the maximum falls vary between 7 and 10 inches, but in the Konkan and the Bombay Deccan the falls are larger, the maximum in the Ratnagiri district being 18 inches, in the Colaba and Kolhapur districts 17 inches, and in the Thana district 12 inches. In the Central parts of the country the principal maxima vary between 7 and 10 inches, but one station in Bhopal received 14½ inches. In Madras there were no heavy falls.

The final column of the table, which gives the state of the seasonal rainfall, shows a very satisfactory condition. The only divisions exhibiting a large deficiency (more than 10 per cent. of the normal rainfall) are the Burmese divisions, East Bengal, Deltaic Bengal, Punjab (Central), Mysore, Bombay Deccan, Khandeish, and Sind. In all the other divisions the rainfall nearly equals or exceeds the normal.

Simla, *22nd August, 1889.*

W. L. DALLAS,
Assistant Meteorological Reporter to the Government of India.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 17th August.*—Rainfall general; good in Ganjam, Vizagapatam, Kistna, Kurnool, Nilgiris, South Canara, and Malabar. Crops generally good, but withering in parts of Chingleput, Coimbatore, and Tinnevelly, and damaged by worms or insects in parts of Salem and South Canara. Prices generally falling or stationary. Labourers employed on last day of week,—on Rushikulya works, 2,835; Gopalpore Canal, 1,146; Ghat Roads, 2,902; drinking-water tanks and wells, 1,844; minor irrigation and other works, 5,544. Number on village relief on 10th August, 66,285; fed in kitchens, 11,632; total, 77,917—of whom, 49,285 were children. Imports during week by sea and land, 956 tons. General prospects favourable and greatly improved in Ganjam.

Bombay.—*For week ending 21st August.*—Rain during week general; total fall insufficient throughout Nasik and in parts of Ahmedabad, Surat, Khandesh, Poona, Ahmednagar, Satara, Bijapur, Belgaum, and Dharwar. Young crops withering for want of moisture in parts of Nasik, Poona, Ahmednagar, and Satara; damaged by floods in parts of Karachi, and by breaches in canals in parts of Hyderabad; standing crops otherwise good, except in two talukas of Khandesh. Sowing and transplantation continue in several districts, but retarded in parts of Nasik, Poona, and Ahmednagar. Preparation for late crops progressing in Hyderabad. Fodder scarce in parts of Poona, Ahmednagar, Belgaum, and Dharwar. Drinking-water scarce in parts of Ahmednagar and Dharwar. Prices rising in one taluka of Nasik.

Bengal.—*For week ending 20th August.*—Rainfall during the week has been general, but rather too light in many districts. Transplanting of late rice is proceeding, but is backward for want of sufficient rain in places in Western Bengal, South Behar, Chota Nagpur, and the Balasore district. Early rice and jute harvests are progressing in the central, northern, and eastern districts. Jute is said to be a magnificent crop in Rungpore, nearly a full average crop in Mymensingh and Tipperah, and about ¾ of an average crop in Pubna and Dinagepore. In Rungpore the crops have been greatly destroyed by inundations on the Brahmaputra *churs*; some loss of crops by floods is also reported from Bogra and Pubna and from a few places in Eastern Bengal. In Behar the *bhadoi* crops are doing well, except on the inundated tracts. In Muzaffarpur the prospects of crops in the Sadr subdivision are uncertain owing to floods, and gratuitous relief is being given. In Chumparun advances are being made to the cultivators whose crops have been destroyed by floods. In this district 1,587 persons are daily receiving charitable relief, partly at Government and partly at private expense. 310 persons are employed on two relief works in the north of Bhagalpur. Food-stocks are sufficient throughout the affected area in the Patna and Bhagalpur divisions. Price of common rice at Madhubani and Motihari 10½ seers per rupee and at Sitamarhi 8¼ seers.

North-Western Provinces and Oudh.—*For week ending 21st August.*—Seasonable weather continues, and prospects are everywhere good. The earlier millets are being harvested in places, and ploughing for *rabi* sowings is in progress. Markets are well supplied. Prices are generally easier.

Punjab.—*For week ending 21st August.*—Rain in all districts, except Sialkot, Mooltan, and Peshawar. Prices almost stationary throughout the Province, except in Rawalpindi and Shahpur, where they are rising. Sowing

of *kharif* crops nearly over. Weeding commenced in some districts. Ploughing for *rabi* commenced. Crops are in need of rain in Umballa. Prospects of standing crops good. Stock cattle are reported healthy. Fodder sufficient throughout the Province.

Central Provinces.—*For week ending 21st August.*—Weather seasonable. Good rain in all districts, except northern portion of Jubbulpore. *Kharif* crops continue to thrive, and prospects very favourable. Fodder sufficient. Prices steady.

Burma.—*For week ending 17th August.*—The rainfall throughout Lower Burma was seasonable. The crop prospect is generally good, an improvement being specially noticed in Tharrawaddy and Prome. In Upper Burma heavy rain fell in Kathe and the Upper Chindwin districts, and moderate rain in Bhamo, Kyaukse, Minbu, Meiktila, Yamethin, and Pyinmana; in the other districts little or no rain fell; rain is still wanted in Myingyan, Minbu, Meiktila, and Yamethin. Ploughing and sowing are progressing favourably. Standing crops generally promise well, especially cotton in Myingyan and Meiktila; but paddy is suffering in the districts, where rain is most wanted, while the crop has been damaged by insects to a serious extent in Bhamo and in a less degree in Shwebo. The price of paddy has risen 8 per cent. in Tharrawaddy; 5 per cent. in Thongwa; 5 per cent. in Sagaing; 10 per cent. in Pakokku; and 5 per cent. in Magwe. The price of paddy has fallen 6 per cent. in Rangoon; elsewhere no marked fluctuations are noticeable.

Assam.—*For week ending 21st August.*—Weather warm. Rainfall varies from 0·55 in Khasi Hills to 6·88 in Goalpara. Reaping of early and transplanting of late rice continues. Tea blight prevalent in Cachar. Prospects of other crops good.

Mysore and Coorg.—*For week ending 21st August.*—Rainfall good in parts of Shimoga district of Mysore, and slight elsewhere. Standing crops generally good, but more rain needed in parts of the Kolar, Tumkur, and Shimoga districts. Paddy harvested in parts. Outturn fair. Prices fallen in the Mysore district.

Heavy rain in Coorg during the week. Prospects continue good. Prices stationary.

Berar and Hyderabad.—*For week ending 21st August.*—Average rainfall good. Weeding of *jowari* and cotton continues. Fodder sufficient. Agricultural stock in good condition. No change in the price of food-grains.

In Hyderabad the rainfall during week was 3·68 inches. Weeding of *kharif* crops continues. Tanks received water, but not sufficient for *abi* and *tabi* crops. No scarcity of fodder for cattle. Prices stationary.

Central India.—*For week ending 21st August.*—Condition in Central India much the same as during last week. Agricultural operations are completed in Gwalior. Prices of food-grains steady in Bundelkhand and low in Western Malwa. Crops damaged by excessive rain and high wind in the Goona Agency.

Rajputana.—*For week ending 21st August.*—Rainfall good throughout the Province. Agricultural operations and standing crops satisfactory. Agricultural stock good. Pasturage or fodder sufficient. Prices steady generally. Cotton crops doing well in Marwar and Jeypore.

Nepal.—*For week ending 15th August.*—Good rain. Weather fair. Winter rice progressing. Prospects of Indian corn generally good. Reaping commenced.

E. C. BUCK,
Secretary to the Government of India.

(*a*) Included with the Indian Midland Railway.
(*b*) Includes the Katni-Umaria Branch.
(*c*) Includes the Sanctoria Coal Section of the Bengal-Nágpur Railway.
(*d*) Includes the Bellary-Kistna State Railway.
(*e*) Includes the Sindia and Bhopal-Itarsi State Railways.
(*f*) Includes the Amritsar-Pathánkot and Rájpura-Bhatinda State Railways.
(*g*) Traffic stopped on account of breach of line.
(*h*) Total receipts from 1st April to 30th June, 1888.
(*i*) Includes the Dhond-Manmád, Khámgaon, Amráoti, and Bhopal-Itarsi State Railways.
(*j*) Includes the Dhond-Manmád, Khámgaon, and Amráoti State Railways.
(*k*) Includes the Patri Branch.
(*l*) Return not received.
(*m*) Total receipts from 1st April to 21st July, 1888.
(*n*) Total receipts from 1st April to 20th July, 1889.

M. C. BRACKENBURY, *Major, R.E.,*
Under Secretary.

SIMLA, *22nd August, 1889.*

STATEMENT OF FINANCIAL STATISTICS OF STATE RAILWAYS FOR THE YEAR 1888.

Railways.	I. Length of line open to traffic on 31st December 1888.	II. Mean length of line open during 1888.	III. Length of line under construction on 31st December 1888.	IV. Length of line under survey on 31st December 1888.	V. Total Capital expenditure on open lines up to 31st December 1888.	VI. Total Capital Outlay to end of 1888. a. On works including actual payments for land.	b. On stores in stock.	c. On other suspense accounts.	d. Total of a, b & c.	e. *Deduct* Receipts on Capital account.	f. Total Capital outlay.	VII. Traffic Earnings brought to account in 1888.	VIII. Working Expenses for 1888.	IX. Net Receipts for 1888.	X. Indirect Charges for 1888. a. Interest on Capital outlay.	b. Abatement of land revenue capitalized.	c. Leave and pension allowances.	d. Total of a, b & c.	XI. Net charge to the State for 1888.	XII. Net receipts from commencement of operations to end of 1888.	XIII. Indirect charges from commencement of operations to end of 1888. a. Interest on Capital outlay.	b. Abatement of land revenue capitalized.	c. Leave and pension allowances.	d. Indirect establishment charges.	e. Total of a, b, c, & d.	XIV. Net charge to the State from commencement of operations to end of 1888.

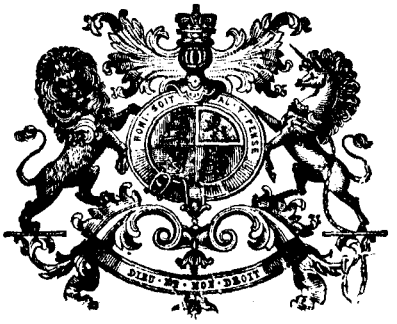
* In addition to this amount Rs. 16,05,769 was incurred on account of land for the Railway while in the hands of the Company and charged to General Revenues.

† Converted at the contract rates of exchange.



‡ Although for convenience classed among State Railways, this line is the property of the Bengal Central Railway Company, Limited.

§ This line is the joint property of the British Government and the Bhopal State. The British Government has contributed 12½ lakhs towards construction; the balance being found by the Bhopal State. The net earnings are divided between the British Government and the Bhopal State in the proportion of 13 : 44.

(a) Working expenses include share of surplus profits paid to the Bombay, Baroda and Central India Railway Company, during 1888 Rs. 4,99,908, to end of 1888 Rs. 19,04,046.
(b) Includes Rs. 11,88,73,361 being Capital outlay incurred by the late Sind, Punjab and Delhi Railway Company on final heads of account up to 31st December 1885.
(c) Excludes outlay on Bolan temporary line charged to the Military Department, amounting to Rs. 34,54,457.
(d) Includes 58·81 miles of line temporarily closed.
(e) Excludes the Bolan High level line which is to supersede the metre gauge line between Hirok and Kotal (10 miles).
(f) Excludes the net receipts accruing to the Mysore State to 30th June 1886, amounting to Rs. 7,53,828.
(g) Excludes charges affecting the Mysore State to 30th June 1886, amounting to Rs. 12,61,970.
(h) Excludes £7,50,000 amount paid up and withdrawn by Company under the old contract, prior to 1st July 1885. The expenditure is, however, included in Column V.
(i) Loss to the State under the terms of the new contract. The amount does not include interest advanced to the Company under the old contract.
(k) Working expenses include contribution to Provident Fund, during 1888 Rs. 4,392, to end of 1888 Rs. 16,684.
(l) Includes Rs. 1,65,48,193 expended by Government on the Bellary-Kistna Railway up to 31st December 1888.
(m) Represents indirect charges of the Bellary-Kistna Railway prior to the transfer of the line to the Southern Mahratta Railway.
(n) Working expenses include contribution to Provident Fund, during 1888 Rs. 475, to end of 1888 Rs. 2,486.
(p) The net charge for interest on Capital outlay since date of transfer of this line to Southern Mahratta Railway is recoverable from the Mysore Durbar.
(q) The expenditure in this column does not take to account a sum of Rs. 7,27,731 borne by Government on account of land charges, prior to 1st July 1885, on which the capitalized value of land revenue lost to the State amounted to Rs. 4,511.
(r Includes annuity charges.

Allahabad,
The 18th July 1889.

J. Cameron,
Offg. Registrar, N.-W. P. and Oudh, P. W. D., I. B.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

WEATHER SUMMARY FOR JULY 1889.

General Weather conditions of the month.—The south-west monsoon current is usually fully established before the end of the month of June, and generally prevails with great steadiness during the whole of July. It is hence a month of frequent, and in some districts of almost constant, rainfall and of comparative uniformity of temperature and great humidity over the greater part of the country. The only area in which the rainfall is small in amount and hot weather conditions continue to prevail are Sind, North-West Rajputana, and the West Punjab.

The distribution of rainfall during the month depends largely upon the relative strengths of the two branches of the monsoon current. The Bombay branch advances usually in an easterly direction across the Peninsula, and in a north-easterly direction across Central India and Rajputana towards the Punjab. The Bay of Bengal branch of the current, which is at the head of the Bay of less volume and extent than the Bombay branch when it enters India, is deflected westwards up the Gangetic Valley and is strongest near the hills. Between the two areas in which these currents exclusively prevail is a long trough-like belt of country which forms a kind of debatable ground in which there is much interaction between the currents. This is one of the most conspicuous features of the meteorology of the month. In this belt pressure is somewhat lower than it is either to north or south, so that it forms a trough of low pressure which usually stretches from Upper Sind to Chutia Nagpur or Orissa. In it winds are, as might be expected, very variable, and the small cyclonic storms of the month, which form in the Bay almost invariably advance along this trough. The position of the trough will evidently depend upon the relative strengths of the two branches of the monsoon current. When the Bombay current is strong and the Bengal current weak (as has been the case during the past month), it will evidently be (as it were) thrust further north and occupy a position much nearer the hills than usual. The average position of the trough of low pressure is hence important as an indicator of the relative strengths of the two branches of the monsoon current.

Another very important feature of the meteorology of the month is the small cyclonic storms which form either in the Bay of Bengal or Bengal at brief intervals during the month. They usually advance in a west-north-west or west direction along the trough of low pressure. As they draw away the aqueous vapour from other districts and discharge it as rain over the districts they traverse, they tend to make the rainfall distribution of the month more irregular than it would otherwise be in Northern India. On the other hand, the general indraught causes a strong advance of humid winds for some days across the Bengal Coast. Hence they are always followed by more or less general rain over a large part of Northern India.

Barometric depressions and cyclonic storms of the month.—These were on the whole feebler and less frequent than is usual in July. There were in all three important depressions—the first land-formed, and the remaining two generated near the head of the Bay.

(1) *Land-formed storm of the 1st to 6th July.*—This was formed in Central Bengal on the evening of the 1st, and covered the Sonthal Pergunnahs and neighbouring districts on the morning of the 2nd. It marched westwards across Chutia Nagpur on the 3rd, the northern districts of the Central Provinces on the 4th, and through South Rajputana and Central India on the 5th, and filled up during the day. It gave a moderately heavy burst of rain to the districts through which it passed. For example, Hazaribagh received 3·74 inches on the 3rd and Jubbulpore 7·45 inches on the 4th.

(2) *Depression and cyclonic storm of 13th to 22nd July.*—A small depression began to form in the north-west angle of the Bay on the 12th. It remained almost unchanged in position and without developing further until the 17th. The barometer began to rise on the evening of the 17th, and the depression appeared to be filling up and moving westward on the 18th, on which day a very shallow depression extended from the Orissa Coast across the Central Provinces to Jubbulpore and Saugor. On the evening of the 18th the barometer fell rather rapidly in the north-west angle of the Bay, and a small but deepish depression lay between False Point and Saugor Island on the morning of the 19th. The storm centre crossed the coast early on the morning of the 20th between Saugor Island and Balasore, and passed rapidly across Chutia Nagpur during the day. The depression covered South Behar and the eastern districts of the North-Western Provinces on the 21st. It advanced very slowly to the north-west during the day, and filled up on the 22nd in the eastern districts of the North-Western Provinces. This storm gave a heavy burst of rain to Bengal, Chutia Nagpur, Behar, and the eastern districts of the North-Western Provinces. 9·55 inches were registered at Motihari on the 26th for the preceding twenty-four hours, and 9 inches at Pupri in the Muzaffarpur district on the 25th, and falls of 5 inches and upwards were registered at a large number of stations during the storm.

Depression of the 27th to the 30th July.—This was a very shallow depression, which apparently formed at the head of the Bay on the 26th and drifted slowly across Chutia Nagpur and the north-eastern districts of the Central Provinces on the 28th and 29th. On the morning of the 30th it was in the eastern districts of the North-Western Provinces, and was then a diffused disturbance of slight importance. It filled up during the next twenty-four hours. This storm gave a moderate burst of rain to Orissa, Chutia Nagpur, and South Behar, and was immediately followed by very heavy rain in North Bengal on the 29th and 30th.

Pressure.—The chief barometric movements of the month occurred in connection with the storms described above. The following table gives the chief oscillations of the range of pressure or barometric differences between Southern and Upper India during the month, which are related to fluctuations in the general strength of the monsoon current blowing into India at this time:

Date.	Highest Pressure in Southern India or Ceylon.	Lowest Pressure in Upper India.	Range of Pressure or Total Gradient over India.
2nd	29·85	29·40	·45
4th	29·84	29·55	·29
7th	29·82	29·36	·46
12th	29·83	29·54	·29
19th	29·81	29·28	·53
22nd	29·81	29·43	·38
24th	29·83	29·24	·59
29th	29·80	29·50	·30

These figures show that the variations in the total gradient are almost entirely due to the oscillatory pressure changes in Upper India.

The mean pressure of the month for the whole of India was almost identical with the normal, differing only by +·004″.

The following table gives the barometric anomalies or local pressure variations in different parts of the country and those of the month of June for comparison:

Provinces.	Barometric Anomaly.	
	Month of June 1889.	Month of July 1889.
Burmah	+·011	+·004
Bengal	+·008	+·017
Assam	+·019	+·019
Behar and Chutia Nagpur	+·006	+·019
North-West Provinces	+·003	+·015
Punjab	—·016	—·004
Sind and Rajputana	—·013	+·005
Central India	—·001	+·012
Central Provinces	—·004	+·005
Bombay	—·001	—·025
Madras	—·002	—·026

This table shows that the same general relation held in July between the anomalies in Northern and Southern India as in the preceding month. The most important change is the large increase in the negative anomalies of Bombay and Madras, directly related to the heavy rain in the Carnatic.

Temperature.—The temperature conditions were, as usual in July, mainly determined by the distribution of rainfall. The hottest parts of India were Upper Sind and the West Punjab and the southern districts of Madras, including Madura, Trichinopoly, and Tinnevelly. The fourth week of the month was the hottest in both these areas. The following gives the highest temperatures recorded during the month at stations in these areas:

Jacobabad	116·1°	on the 24th.
Multan	112·3°	„ 6th.
Dera Ismail Khan	112·5°	„ 16th.
Madura	103·5°	„ 22nd.
Trichinopoly	102·1°	„ 10th and 22nd.

The variation of the mean temperature from the normal from week to week and for the whole month is shown for different districts in the different divisions:

Province.	Difference of Mean Temperature from Normal for Week ending July				Difference of Mean Temperature from the Normal for the Month.
	8th	15th	22nd	29th	
Burmah	+1·2	+2·9	+1·6	+0·7	+1·6
Bengal	—0·2	+1·5	+2·1	—0·1	+0·8
North-Western Provinces	—0·8	—0·2	+1·8	+0·3	+0·4
Punjab	—0·5	—3·6	+0·7	+3·1	—0·1
Bombay	+1·0	+0·1	—0·1	+1·3	+0·6
Central Provinces and Berar	+1·4	+2·1	+1·5	+2·2	+1·9
Guzerat and Central India	—0·7	+0·6	+2·3	+1·4	+1·0
Sind and Rajputana	—1·1	+1·7	+3·4	+1·9	+1·6
Madras	+0·1	—0·4	—0·6	—0·1	—0·2

This table shows that the mean temperature of the month was considerably above the average in the Central Provinces and Berar (1·9°), Sind, Rajputana, and

Burma (1·6°), in which districts the rainfall was below the normal. The variations in other districts were small.

Rain.—The month has been characterised by a smaller number of storms than usual and by the prevalence of a steady and strong monsoon, more especially on the West Coast. Hence the rainfall of the past month was more uniformly distributed than usual. During the first week of the month the rainfall was scattered in North-Western India and Madras, but was general in all other districts, and occurred almost daily in all districts. In the second week rain fell very steadily in Western and Central India due to the Bombay current. It also fell generally in Northern India until the 11th, when it was confined to Bengal and the North-Western Provinces. On the 14th it ceased almost entirely in Northern India and a partial break followed until the 20th, when a storm which had formed in the north-west angle of the Bay crossed the Coast and carried heavy general rain with it over Northern India.

During the last week of the month heavy rain fell over the whole of Northern India, except the Punjab. It was especially heavy in Bengal. On the other hand, the Bombay current fell off in strength and the rainfall diminished greatly in amount in Rajputana, Central India, the Central Provinces, as well as Western India and the Deccan. The rainfall of this period was unusually heavy in the hill districts, and more especially at Mussoorie and Naini Tal.

In consequence of the favourable conditions, the rainfall of the month was above the average over the greater part of India. The excess was generally moderate in amount. It was above the average over the whole of Northern India, including the Punjab, North-Western Provinces, Behar, North Bengal, Assam, and Orissa. The only area in which the excess was large was North Bengal, and this was chiefly due to the heavy rainfall of the fourth week of the month. There was a moderate deficiency in Lower Bengal, averaging 25 per cent. of the normal.

The Western Coast districts and the Deccan and Carnatic have received normal or abundant rainfall. Mysore, Bellary, and the Carnatic obtained more than double the normal amount. There was a moderate excess in the Konkan and a large excess of nearly 30 per cent. in Guzerat.

The rainfall of the month was in moderate deficiency in Sind, Cutch, Berar, and Khandeish, and largely in defect in the southern districts of the Central Provinces and in Rajputana and Central India. In these areas the deficiency ranged from 30 to 40 per cent. It was also about 20 per cent. below the average in Lower Burmah.

Some heavy rainfalls were received during the storms described above, but as a rule excessive rainfalls have been quite the exception and have occurred much less frequently than is usual in July. In this respect the monsoon has had the same character as in the preceding month.

Strength of the monsoon currents.—So far as this can be judged by the strength of the winds at the coast stations, it would appear that both currents were above their normal strength. This is shown for the Bengal current by the following data;

Branch of Current.	Coast Stations.	Actual Average Daily Velocity, July 1889.	Normal Daily Velocity, July.	Variation in Wind Velocity, July 1889, from Normal.	Variations expressed as a percentage.
		Miles per day.	Miles per day.	Miles per day.	
Bay of Bengal	Akyab	120	105	+15	14 per cent. excess.
	Chittagong	132	162	—30	19 per cent. defect.
	Saugor Island	408	406	+2	5 per cent. excess.
	False Point	303	280	+23	8 per cent. excess.
	Gopalpore	348	300	+48	16 per cent. excess.

The following table gives complete data, and shows the actual average rainfall and the normal rainfall of the month of the twenty-one districts into which the country is divided, so far as it is indicated by the telegraphic reports of a few stations in each district:

Districts.	Number of Stations.	Normal Average Rainfall in June.	Actual Average Rainfall in June 1889.	Difference from the Average in June 1889.
Punjab, West	7	5·32	7·96	+ 2·64

SIMLA, *26th August, 1889.*

JOHN ELIOT,
Meteorological Reporter to the Government of India.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on Monday, August 26th, 1889.

The weather over the Peninsula during the past week has been of the normal monsoon character; but Northern and Central India have been under the influence of two slowly travelling vortices, and the weather there has varied between very wet during the presence of the depressions to fair and showery when the disturbances were filling up. The depression in the early days of the week was the same as that noticed at the conclusion of the previous summary. This disturbance filled up on the 21st, and on the 22nd a new one was shown over Bengal. The second disturbance, which during its whole existence was very slight, drifted slowly westward, and on the 26th the centre was near Saugor. The Bay monsoon has been much interrupted during the week and on several days has been largely deflected from its normal direction.

The Chart of the 20th showed that the storm, which during the preceding week had advanced west-north-westward from the Bay, had its centre near Jhansi, where there was an abnormal depression of the barometer of nearly $\frac{1}{6}$ of an inch. A well marked cyclonic circulation existed around the storm centre, and the winds were rather strong and squally. In Bengal the winds were variable, with a cyclonic tendency, while elsewhere the normal monsoon circulation prevailed. On the 21st the storm near Jhansi had almost filled up, while the tendency towards the formation of a depression over Bengal had increased. The winds were westerly at the head of the Bay, and light and variable in Bengal. The cyclonic circulation near Jhansi had almost disappeared, and the directions generally were fairly normal. On the 22nd a distinct but very feeble disturbance overlay Bengal, and there were still slight signs of a depression over Rajputana. Gradients were moderately steep, and a strong monsoon from the Arabian Sea was blowing across the West Coasts and passing over the Peninsula and into the central parts of the country. In Bengal and up the north side of the Gangetic plain the wind was easterly. The Chart of the 23rd showed that the depression over Bengal had enlarged and moved slightly westward or west-south-westward. Readings were uniform over Northern India, but over the Peninsula and the central parts of the country moderate gradients still existed, and the monsoon winds on the West Coast and across the Peninsula were strong. On the morning of the 24th a moderate to brisk rise of the barometer was reported from the foot of the hills in Bengal and the North-Western Provinces, and the Bengal depression had moved southward and lay over Orissa and the east of the Central Provinces. Gradients were rather steep on its southern and western sides, and a well marked cyclonic circulation existed around the depression. The winds were light in the northern quadrants and rather strong in the southern. The monsoon had fallen a little lighter on the Western Coast, but was still above the normal strength. In the Punjab calms and variable airs prevailed. On the 25th there was very little change. Uniform pressures with light easterly winds prevailed over Northern India; the depression with its cyclonic circulation of winds over Orissa and the west of the Central Provinces; and fairly steep gradients and a

strongish monsoon over the West Coast. The Chart of the 26th showed that the depression had suddenly advanced westward, and the centre at 8 A.M. lay near Saugor. The circulation around the depression was feeble and irregular and was complicated by the presence of a very small independent disturbance over the north-west corner of the Bay. The wind was northerly at Saugor Island and Balasore, but with this exception the regular monsoon circulation prevailed throughout India. On the West Coast the force of the wind had still further decreased.

Temperature.—The net result for the week of the daily variations of temperature from the normal exhibits very small departures in all Provinces. Bengal, the North-Western Provinces, the Punjab, and Bombay show an excess of about $\frac{1}{2}^\circ$ each, while the other Provinces show a deficiency ranging from 1·1° in the Central Provinces to only 0·2° in Madras. In Bombay the weather was warmer than usual practically throughout the week, and in the Central Provinces, Central India, Guzerat, Sind, and Rajputana it was, on the contrary, colder than usual throughout. In the other Provinces the temperature was on the whole low during the first three and high during the remaining four days. The maxima—more particularly over the central parts of the country and the Punjab—have been remarkably low during the week, the deficiency on some days ranging from 7° to 10°. The night temperatures, on the contrary, have been on the whole higher than usual—a sign of great general cloudiness of the sky.

The following table shows the excess or defect of the mean average temperature of the different Provinces for the present and for the preceding week:

PROVINCES.	Difference of Mean Temperature of Last Week from Normal.	Difference of Mean Temperature of present Week from Normal.
Burmah	+ 0·4°	— 0·8°
Bengal	+ 0·6°	+ 0·5°
North-Western Provinces	— 0·3°	+ 0·3°
Punjab	— 1·4°	+ 0·6°
Bombay	+ 0·3°	+ 0·6°
Central Provinces and Berar	— 1·9°	— 1·1°
Guzerat and Central India	— 1·2°	— 0·9°
Sind and Rajputana	+ 0·5°	— 0·9°
Madras	0	— 0·2°

This table shows that, beyond an increase of temperature in the Punjab, there has been very little change relatively to the average.

Rain.—As noted above, the Bay monsoon has again been much interrupted and deflected, and as a consequence the heavy rainfall of last week over Northern India has not been maintained, notwithstanding the influence of the two depressions noticed earlier in this summary. The Arabian Sea monsoon has continued to exceed the normal strength, and the regions under the influence of this current, including the greater part of the Punjab, have received ample rain.

The following is a brief description of the daily distribution of rain:

On the 20th rain was falling in all parts of the Indian region, except the Bombay Deccan, Guzerat, the western desert, and the east of the North-Western Provinces. The amounts were not large, except in Arakan and in the immediate neighbourhood of the depression. On the 21st the Central Provinces

were also without rain. On the 22nd the Deccan, Guzerat, and the Western desert were the only dry regions. A few large falls were reported, but as a rule the rainfall had been moderate and of uniform amount. On the 23rd rain ceased over the greater part of the Punjab and the west of the North-Western Provinces, but there was no other change. On the 24th the weather was fair over by far the greater part of Northern India, the only rain reported there being a few showers over and near the hills. Elsewhere rain was general. Similar conditions prevailed on the 25th, but on the 26th rain suddenly extended north-westward and ran up the foot of the hills as far as Peshawar.

The rainfall table at the close of the summary shows that twenty-eight divisions have received more than the average amount and that twenty-two have received less. Burma has received excessive rain, more particularly in Tenasserim and Arakan, where the week's fall is between two and three times the average. In Bengal and Assam on the contrary, with the exception of Orissa and Chota Nagpur, the week's rainfall has been deficient—largely so in Bengal North and rather largely so generally. The North-Western Provinces and Oudh, with the single exception of the western district, has participated in this deficiency; but the Punjab, where the influence of the Arabian Sea current is felt, has had slightly excessive rain in all places, except the hill districts. The West Coast districts have received considerably more than the average amount; but inland in Mysore, the Deccan, and Khandeish the rainfall has been defective. The Central Provinces and Berar have had more than usual; but in Guzerat, Kathiawar, and Sind the rainfall has been largely deficient. Central India and Rajputana, like the Central Provinces, have had ample rain; and in Madras, with the exception of the extreme north and extreme south, the rainfall has also slightly exceeded the normal.

The maximum falls in Burma have been large. In Tenasserim all the stations record between 15 and 16 inches; in Deltaic Burma falls between 13 and 15 inches are reported, and at Kyaukpyu in Upper Burma 19¾ inches has been received. In Arakan the amounts are equally large, Maungdaw (Akyab) having received 16 inches and Sandaway 24¾ inches during the week. Entering Bengal the falls instantly decrease, and at Cherrapunji (Assam, Surma) the total amount during the week was only 7 inches. In the North-Western Provinces the heaviest amount was 9½ inches at Dehra Dun; and in the Punjab 9¾ inches at Kangra. In the West Coast districts the falls were in no way remarkable, but in the central parts of the country some large amounts were registered. Jubbulpore received 9½ inches, Mungeli (Bilaspur) 10½ inches, Kurwai (Bhopal) 19½ inches, and Kerowli 10 inches. In Madras there were several falls of over 3 inches.

The concluding column of the table giving the state of the seasonal rainfall shows that no practical change has occurred during the past week, notwithstanding the shortness of the fall in Bengal and the North-Western Provinces, &c.

SIMLA, *29th August, 1889.*

W. L. DALLAS,
Assistant Meteorological Reporter to the Government of India.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 24th August.*—Rainfall general; good in most districts. Crops generally good, but withering in parts of Anantapur, Coimbatore, and Nilgiris, and suffering from want of rain or water in parts of Bellary, Trichinopoly, and Tinnevelly. Prices generally falling or stationary. Labourers employed on last day of week,—on Rushikulya works, 3,796; Gopalpore Canal, 677; Ghat Roads, 3,380; other minor works, 2,734. Number on village relief on 17th August, 54,947, including 33,859 children; fed in kitchens, 10,498, including 7,093 children. Imports during week by sea and land, 586 tons. General prospects favourable and continue to improve in Ganjam.

Bombay.—*For week ending 28th August.*—Rain during week general; more rain needed throughout Nasik and in parts of Surat, Khandesh, Poona, Ahmednagar, Sholapur, Satara, Bijapur, Belgaum, and Dharwar. Young crops damaged by floods in parts of Karachi; by wind, rain, and breaches in canals in parts of Hyderabad; and by grasshoppers in parts of Ahmedabad; also suffering for want of rain in parts of Poona, Ahmednagar, Bijapur, Belgaum, and Dharwar. Standing crops otherwise good, except in two talukas of Khandesh. *Rabi* sowing retarded for want of sufficient rain in parts of Poona, Bijapur, and Dharwar. Preparations for late crops progressing in parts of Hyderabad, Sholapur, and Kathiawar. Fodder scarce in parts of Nasik, Poona, Ahmednagar, Satara, Belgaum, and Dharwar. Drinking-water scarce in parts of Ahmednagar and Dharwar. Prices rising in one taluka of Nasik.

Bengal.—*For week ending 27th August.*—Good and general rain during the week, except in parts of Behar and North Bengal, where very light and local showers are reported. Transplanting of winter rice is being proceeded with, but more rain is still wanted in places in Western Bengal and Behar. In Balasore the rainfall is still very deficient in the Sadr sub-division, where the prospects of the crops are said to be unsatisfactory. Early rice and jute harvests are progressing. These crops have suffered from floods in Rajshahye, Rungpore, Bogra, Pubna, Dacca, and Fureedpore. In Behar the *bhadoi* crops are promising, except in the inundated places. Prospects of both *bhadoi* and rice crops in the distressed tracts in the Durbhanga and Muzaffarpur districts are good. Much distress prevails owing to floods in the Sadr sub-division of the Muzaffarpur district, and relief is being given there in the shape of charity and loans. In Chumparun advances are being made to the cultivators whose crops have been destroyed by floods. In this district the number of persons daily receiving gratuitous relief at both Government and private expense averages over 1,500. In the north of Bhagalpur 341 persons are employed on two relief works. Foodstocks are sufficient, and prices are almost stationary throughout the affected area in the Patna division.

North-Western Provinces and Oudh.—*For week ending 28th August.*—The weather continues favourable, and the *kharif* crops are doing well. Some damage caused to crops on low-lying land by floods in Benares and Ballia. Ploughing for the *rabi* has commenced. Markets are well supplied and prices generally are steady, but a fall is reported from several districts.

Punjab.—*For week ending 28th August.*—Rain in all districts, except Peshawar and Sialkot. Prices stationary, except in Rawalpindi and Shahpur where they are rising, and in Delhi where they are falling. *Kharif* sowings nearly over. Weeding commenced in Jullundur. Crops in good condition and improved by recent rain. Prospects also good. Stock cattle are reported healthy. Fodder sufficient throughout the Province.

Central Provinces.—*For week ending 28th August.*—Agricultural operations retarded in Saugor by excessive rain. The rainfall continues deficient in the northern portion of Jubbulpore, but elsewhere a break would be beneficial. The rice crops are suffering to some extent from insects in the Raipur and Bilaspur districts. Crops are thriving, and prospects generally are very favourable. Prices steady.

Burma.—*For week ending 24th August.*—Heavy rainfall throughout Lower Burma, and the crops, though backward in places, promise well generally. There has been a considerable improvement in Tounghoo and Prome. In Bassein, owing to the embankment having burst, the greater part of the crop in one circle has been destroyed, and in Tharrawaddy also some damage has resulted from floods. In Upper Burma there was a fair rainfall in Bhamo, Kathe, Ruby Mines, Shwebo, Yeu, Upper Chindwin, Myingyan, Yamethin, and Pyinmana districts; elsewhere the rainfall was light or there was none at all. Agricultural operations generally are progressing favourably, but more rain is wanted in Sagaing, Myingyan, Minbu, Meiktila, and Yamethin districts. Except in these districts and in Bhamo, where damage has been caused by insects, the crop prospect is fair. Fluctuations in the prices of foodgrains are slight.

Assam.—*For week ending 29th August.*—Heavy rain in Nowgong; elsewhere the fall has been scanty. Harvesting of summer and transplanting of winter rice continues. Tea blight still continues in Cachar and in Lakhimpur. The weather has been cold and damp for tea.

Mysore and Coorg.—*For week ending 28th August.*—Rainfall good in the Bangalore and Shimoga districts of Mysore and fair elsewhere. Standing crops good all round, excepting parts of Hissar, where rain is needed. No material change in prices.

Good rain in Coorg. Season favourable. Crops doing well.

Berar and Hyderabad.—*For week ending 28th August.*—Average rainfall fair. Cotton and *jowari* in good condition. Weeding continues. Agricultural stock good. Prices of foodgrains stationary. Fodder sufficient, except in Chikhli and Mehkar talukas, Buldana district.

Rainfall during week at Hyderabad, 1·45; total since 1st January, 20·36. Weeding of *kharif* and *rabi* crops continues. Water in tanks and wells still insufficient. Prices stationary.

Central India.—*For week ending 28th August.*—Rain throughout Central India during the week. A break would be beneficial in Western Malwa, Bhopawar, Goona, and Neemuch, where crops are being damaged from excessive rain. Condition of crops and pasturage improved in Bundelkhand. No other changes of importance.

Rajputana.—*For week ending 28th August.*—Heavy rain in Abu, Kotah, Harowti, and Kerowlee; slight in Sirohi, Kherwara, and Meywar; moderate elsewhere. Agricultural operations and standing crops satisfactory. Agricultural stock good. Pasturage or fodder sufficient. Prices steady generally.

Nepal.—*For week ending 22nd August.*—Seasonable rain. Autumn rice in ear; will ripen shortly. Prospects good.

E. C. BUCK,
Secretary to the Government of India.

(1) (2) (3) (4) (5) The difference of 2 acres in Umballa, 31 acres in Karnál, 6 acres in Rohtak, 5 acres in Delhi and 5 acres in Hissar Districts between the figures for Kharíf 1888, shown in this Statement and in half-yearly return for that crop, is due to additions subsequently made after submission of the half-yearly return.

(6) This is the area for which Jind will pay annually R1,05,500 under the agreement, since the distributaries have been handed over to the State.

(7) The difference of 2,192 acres between the area shown in the half-yearly statement for Kharíf 1888 and that shown in this statement is due to the fact that in the former the area of Chánga Mánga Plantation was shown approximately and now the actual area as reported by the Forest Department is shown—

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on Monday, September 2nd, 1889.

The most important changes which have occurred over India during the past week are the gradual but steady fall in the force and extent of the Arabian Sea monsoon and the disappearance of the steepish barometric gradient between Southern and Northern India, which has hitherto been a prominent feature in the pressure distribution. The Bay of Bengal monsoon has to a certain extent followed the same course as that of the Arabian Sea, but the change to weaker force did not occur till quite the close of the week, and hence, while the region influenced by the Arabian Sea current has had almost everywhere deficient rain, that part of India which derives its rainfall from the Bengal side has had exceptionally wet weather.

The Chart of the 27th showed that the depression which at the close of the previous week was moving westward across the country had contracted considerably in size, and that the centre lay between Raipur and Sutna. Gradients without being steep were favourable to the full extension of the monsoon currents, and the normal monsoon circulation, of winds of about the average strength, prevailed throughout the greater part of India, though there were feeble cyclonic movements around the centre of depression. By the morning of the 28th the depression had to a large extent filled up, but the relative distribution of pressure had changed very little. There were however already signs of an approach to great uniformity of pressure over the Peninsula, and the winds over Western India were falling lighter. The distribution of pressure, as shown by the Chart of the 29th, was peculiar and abnormal. A well marked depression lay over the Western Punjab and relatively low readings over the Gangetic plain. To the southward, but in the immediate neighbourhood, of these low pressure areas gradients were steep or moderately so and a fresh westerly current of wind prevailed, but still further to the southward, over the Peninsula, pressure was becoming very uniform and the Bombay monsoon was falling off. Over the Bay a strong monsoon current was blowing. The Chart of the 30th exhibited no important change, except that the winds in the west and centre of the Peninsula were drawing towards north. The Bay monsoon continued strong and steady. On the 31st the pressure distribution was still more abnormal. The low pressure areas over the Western Punjab and Upper Sind and over the Gangetic plain were rather better defined than on the 30th and the gradients on their southern borders were steeper. At the same time a slight anti-cyclone or high pressure area had been developed over the west of the Peninsula and readings were very uniform over Western, Central, and Southern India. The wind had become strongly north-westerly along the West Coast and over the Deccan. A fresh south-westerly and westerly current prevailed within the region covered by the steep gradients noticed above and a moderately strong monsoon was blowing over the head of the Bay, but in Upper India the wind was variable and light. On the 1st a small local depression was shown in the neighbourhood of Allahabad and the barometer was falling over the whole of Northern India. The area of high and uniform pressures over the Peninsula was less strongly

marked than on the 1st and moderate gradients appeared to be spreading southward again. The wind however remained north-westerly and light over the west and centre of the Peninsula. A cyclonic circulation was shown around the depression near Allahabad, and elsewhere the directions were fairly normal. On the 2nd there was no important change, but the Allahabad depression had almost disappeared and the monsoon over the Bay had fallen lighter.

Temperature.—The net result for the week of the daily variations of temperature from the normal again exhibits small departures in most Provinces. In Guzerat and Central India the weekly variation is *nil* and in Burma, Bengal, the Central Provinces, Sind, Rajputana, and Madras does not exceed ½°. The largest variations are reported from Bombay and the Punjab, the former having been warmer, the latter cooler, than usual. In Bombay every day of the week was warmer than the normal and in the Punjab every day was cooler, but in the other Provinces the variations were less regular: thus—

No. of days below Normal.	Province.	No. of days above Normal.
0	Bombay	7
2	Sind and Rajputana	5
2	Madras	5
4	Bengal	3
5	Guzerat and Central India	2
5	North-Western Provinces	2
6	Central Provinces	1
6	Burmah	1
7	Punjab	0
37		26

This shows that on the whole the weather has been cooler than usual over India; and the following table shows the amount of the excess or defect of the mean average temperature of the different Provinces for the present and for the preceding week:

PROVINCES.	Difference of Mean Temperature of Last Week from Normal.	Difference of Mean Temperature of present Week from Normal.
Burmah	— 0·8°	— 0·6°
Bengal	+ 0·5°	— 0·1°
North-Western Provinces	+ 0·3°	— 0·7°
Punjab	+ 0·6°	— 1·4°
Bombay	+ 0·6°	+ 1·2°
Central Provinces and Berar	— 1·1°	— 0·3°
Guzerat and Central India	— 0·9°	0
Sind and Rajputana	— 0·9°	+ 0·2°
Madras	— 0·2°	+ 0·5°

Briefly, this shows that, compared with the average, the temperature has risen in the Bombay Presidency, Rajputana, the central parts of the country, and Madras, and fallen in Northern India.

Rain.—The conditions affecting rainfall over India have been nearly the reverse of those prevailing last week, the Bay of Bengal monsoon current having been the stronger and the Arabian Sea current the weaker during the past seven days. Hence the distribution of rainfall has also been reversed, Northern India reporting excessive and Southern and Central India deficient rains. In the North-Western Provinces another cause, in addition to that produced by the strength of the Bay monsoon, of heavy rainfall was the small depression which appeared near Allahabad on the 1st and which was accompanied by some heavy falls of rain in its neighbourhood.

The following is a brief description of the daily distribution of rainfall:

On the 27th rain was shown to have fallen in all parts of India except Sind, the Bombay Deccan, and the extreme south-east of the Peninsula. The amounts were generally moderate, the largest being 2 inches at Ranikhet. On the 28th the only region that was wholly without rain was Sind and the Southern Punjab, and the amounts were somewhat larger than on the previous day. On the 29th rain ceased again in the Deccan, but otherwise there was no change; and on the 30th no rain was reported from the north-west of the Punjab. The Chart of the 31st showed that rain had ceased over the greater part of the Peninsula and of North-Western India. The break continued in the north-west on the 1st, but rain had recommenced over the Peninsula. On the 2nd a break in the rains was reported from nearly the whole of Western, Central, and North-Western India.

The concluding table shows that, as was the case last week, twenty-eight divisions have received more than the average amount of rain and twenty-two have received less. As pointed out above however, the respective distribution of these divisions of heavy and light rainfall is to a large extent the reverse of that prevailing last week. Burma, with the exception of Lower Burma, where there is a slight deficiency, has received ample rain, and the whole of Bengal, with the exception of Orissa, has received more than the normal amount. The North-Western Provinces record heavy rain except in the western division, where it is short. In the east and in Oudh the excess has been very large. In the Punjab the hill and submontane districts have again received slightly deficient rainfall, but the other districts received more. The inland districts in the south of the Peninsula report excessive rain, but the coast districts all along the West Coast, as well as nearly all the central districts, report a deficiency. In Madras four districts have received less and three more than the normal.

The maximum falls in Burma have been by no means so large as those reported last week, while in Bengal and Assam, on the contrary, they are larger. Cherrapunji has received 39 inches; Rajmahal (Sonthal Pergunnahs), 10¼ inches; Cooch Behar, 13½ inches; and Alipore (Jalpaiguri), 14 inches. In Behar the heaviest fall was 10¼ inches at Bahera in Durbhanga, while in Oudh the heaviest falls were 12½ inches at Pertabgarh and 13 inches in Fyzabad. Large falls were reported throughout the North-Western Provinces, the largest being 15¼ inches at Akbarpur (Cawnpore); but in the Punjab the only fall of importance was 9½ inches at Panipat. All over the Peninsula and the central parts of the country the maximum falls call for no remark, the only one of importance being 14 inches at Shugalpore in Bhopal.

The concluding column of the table shows that the seasonal rains are appreciably short only in the following places:—Lower and Central Burma, East Bengal, Punjab hill districts, Mysore, the Bombay Deccan, Khandeish, Sind, and Rajputana West. In all other parts of the Indian region the seasonal rainfall equals or nearly equals the normal average.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 30th August.*—Rainfall general and good in most districts. Crops generally good, but withering in parts of Bellary, Anantapur, South Arcot, and Coimbatore. More rain wanted in parts of these districts and Cuddapah, Trichinopoly, and Tinnevelly. Crops damaged by insects in Anantapur, Tinnevelly, and Salem. Prices rising in ten districts, falling in seven, and stationary in the rest. Labourers employed on last day of week,—on Rushikulya works, 4,174; Gopalpur Canal, 1,330; Ghat Roads, 3,942; other minor works, 2,017. Number on village relief on 24th August, 52,559, including 31,057 children; fed in kitchens, 11,023, including 7,726 children. Imports during week by sea and land, 655 tons. General prospects favourable everywhere. Season very favourable in Ganjam.

Bombay.—*For week ending 4th September.*—Rain during week general; total fall insufficient in parts of Surat, Khandesh, Nasik, Poona, Ahmednagar, Sholapur, Satara, Bijapur, Belgaum, and Dharwar. Young crops damaged by floods in parts of Karachi, by blight in parts of Upper Sind Frontier, by grasshoppers in parts of Ahmedabad, and by excessive rain in parts of Kaira; also withering for want of moisture in parts of Nasik, Poona, Ahmednagar, Satara, Belgaum, and Dharwar. Standing crops otherwise good, except in two talukas of Khandesh. Sowing retarded for want of sufficient rain in parts of Poona, Bijapur, and Belgaum. Preparations for late crops progressing in Karachi and Hyderabad. Fodder scarce in parts of Nasik, Poona, Ahmednagar, Satara, Belgaum, and Dharwar. Drinking-water scarce in parts of Upper Sind Frontier, Nasik, Ahmednagar, and Dharwar. Prices rising in two talukas of Nasik.

Bengal.—*For week ending 3rd September.*—Ordinary monsoon weather has been prevalent throughout the week, and there has been general rain over the whole Province. The rain was rather heavy in parts of North and East Bengal and Behar. Transplanting of winter rice is being rapidly completed, but more rain is still wanted in places in Western Bengal, South Bhagalpur, the Sonthal Pergunnahs, the Sadr sub-division of Balasore, and the Palamow sub-division of Lohardagga. Early rice and jute harvests are in progress. Outturn of early rice reported to be full average in Backergunge; not much short of average in Rajshahye and Jalpaiguri; and only 9 annas in Pubna and Dacca. In Pubna the quality of jute is said to have been impaired by excessive water. In Behar and Chota Nagpur the *bhadoi* crops are promising, except on the inundated tracts. In Behar some of these crops have begun to be harvested. Food-stocks are reported sufficient in all the affected areas of the Province. In Muzaffarpur the floods are subsiding, but applications for gratuitous relief are increasing. In Chumparun agricultural loans are being distributed, and 1,900 people are in receipt of Government and private charity. Charitable relief is also being given to 177 persons in the Contai sub-division of Midnapur, where the affected area is about 110 square miles. In the north of Bhagalpur the attendance on two relief works has increased from 341 to 402.

North-Western Provinces and Oudh.—*For week ending 4th September.*—The rainfall has been generally heavy throughout the Provinces. Crops have suffered in several places from excessive rain and from overflow of rivers. Prospects are however favourable. Harvesting operations have commenced in a few districts. Markets are well supplied, and prices are on the whole steady.

Punjab.—*For week ending 4th September.*—Rain has fallen in all districts, except Mooltan and Peshawar. Prices are falling in Delhi, Mooltan, and Shahpur; rising in Rawalpindi; and stationary elsewhere. Sowings of *kharif* crops almost completed. Ploughings for *rabi* in progress. Prospects of *rabi*

crops are generally good and promising. Stock cattle are reported healthy. Pasturage or fodder sufficient throughout the Province.

Central Provinces.—*For week ending 4th September.*—*Kharif* crops suffered to some extent in Saugor from excessive moisture; but there is now a seasonable break in the weather all over the Provinces, and the prospects of the crops are very favourable. The ground is being prepared for *rabi* sowings. Prices continue steady.

Burma.—*For week ending 31st August.*—In Lower Burma the rainfall was heavy in most districts. Some paddy has been destroyed by floods in Bassein and a little in Thongwa; otherwise the crops promise well, though backward in Tharrawaddy and Prome. In Upper Burma there was fair rainfall in Bhamo, Ruby Mines, Sagaing, Kyaukse, Upper Chindwin, Myingyan, and Pyinmana. In the other districts the rainfall was slight, or there was none. Rain is wanted in parts of Shwebo, Pokokku, Meiktila, and Yamethin; except in these districts and in Bhamo, the crops generally promise well. The prices of paddy rose 5 per cent. in Thongwa, 14 per cent. in Shwebo, and fell 10 per cent. in Tharrawaddy and 9 per cent. in Prome. There were no other fluctuations of consequence.

Assam.—*For week ending 4th September.*—Weather seasonable. Rainfall excessive in Nowgong, and moderate elsewhere. Reaping of early and transplanting of winter rice continue. Tea doing well; blight is prevalent in Cachar.

Mysore and Coorg.—*For week ending 4th September.*—Rainfall good throughout the State of Mysore, except in parts of Tumkur, where rain is needed. Standing crops in good condition. No material change in prices.

Good rain in Coorg. South-west monsoon has closed. Prospects good.

Berar and Hyderabad.—*For week ending 4th September.*—Average rainfall fair in Berar. Weeding continues. *Kharif* in good condition. Preparation of fields for *rabi* commenced. Cattle healthy. Fodder sufficient. Prices unchanged.

Fair rain during the week in Hyderabad. *Kharif* crops prospering. Weeding of *abi* crops continues. Water in tanks not yet sufficient for *tabi* crops. Prices stationary.

Central India.—*For week ending 4th September.*—Rain throughout Central India during the week. Prospects of crops and pasturage in Goona improved. No change in Neemuch and Bhopal. Bhopawar reports crops slightly damaged by rain. Locusts have appeared in parts of Jhabua and Burwani in Bhopawar. Prices of foodgrains high in Western Malwa and slightly fallen in Bhopawar.

Rajputana.—*For week ending 4th September.*—Heavy rain in Kerowlee, slight in Meywar and Sirohi, and moderate elsewhere. Agricultural operations satisfactory. Hope of good harvests. Damage reported by locusts in Marwar; by insects in Meywar; and by heavy rain in Jhallawar, Harowtee, and Kerowlee. Agricultural stock good. Pasturage or fodder sufficient. Prices steady.

Nepal.—*For week ending 29th August.*—Seasonable rain. Prospects of crops good.

E. C. BUCK,
Secretary to the Government of India.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor-General will in future be published in* PART VI. *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI. *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on Monday, September 9th, 1889.

In the previous summary the gradual steady fall in the force and extent of the Arabian Sea monsoon current was noticed, and the commencement of a similar change in the case of the Bengal current was reported. These conditions have continued during the past week, throughout which period the Arabian Sea branch of the monsoon has been practically absent and the Bengal current feeble, intermittent, and variable.

The Chart of the 3rd of September showed an area of very low pressure over the Indus Valley and of relatively low pressure over the Gangetic plain, with high pressures over the Andaman Sea and Lower Burma and relatively high pressures over the south of the Peninsula. Moderate gradients existed over Sind, Guzerat, and Rajputana, and a moderately strong westerly current of air blew across those districts and into the central parts of the country. Elsewhere the winds were light and generally variable—more particularly on the West Coast. On the 4th the general distribution was unaltered, but the low pressure area over the Indus Valley had largely filled up. Readings were very uniform over the Peninsula, and calms and northerly breezes prevailed there. The Chart of the 5th showed a redevelopment of the low pressure over the extreme north-west and to a considerable extent a reproduction of the pressure distribution which prevailed on the 3rd. A general westerly current of air, light or moderate in force, swept across Northern and Central India, while northerly to north-westerly breezes and calms were reported from the Peninsula. South-westerly winds were blowing across the Bengal Coast, and an imperfect cyclonic circulation prevailed in Lower Burma. On the 6th the barometer was falling generally, but the change was fairly uniform and the distribution not materially altered. The westerly winds over Northern India had fallen

off in strength, but there was little other change. The chart of the 7th showed that pressure continued to decrease generally. A small shallow disturbance, with a cyclonic circulation of the winds, had passed into West Bengal from the Bay, and a well defined low pressure area was shown over the north-west of the Punjab, but the most prominent feature of the distribution was an elongated anti-cyclone lying over the centre of the Peninsula, extending from Malegaon to Cochin. A slight extension of easterly winds into the eastern districts of the North-Western Provinces was shown and also a further decrease in the westerly winds over Northern India, but otherwise there was very little change. By the morning of the 8th the small depression over South-West Bengal had disappeared, but the chart showed little other change. The chart of the 9th also showed very little alteration in pressure, but the winds had become moderate in force and normal in direction at the head of the Bay. Calms and variable winds prevailed in Northern India and light northerly to north-westerly winds over the Peninsula.

Temperature.—The generally cool weather, which prevailed over India during the week ending September 2nd, continued during the first two days of the week under review, but with the decreasing rainfall temperature rose, and the general temperature during the remaining five days of the week was above the normal average. The net results for the week exhibit an excess of temperature in the Provinces of Burma, the North-Western Provinces, the Punjab, Bombay, and the Central Provinces, and a deficiency in Bengal, Guzerat, Central India, Sind, Rajputana, and Madras. The excess in Bombay equals nearly 2°, in the Punjab 1½°, and in the Central Provinces 1°, while the deficiencies on the contrary were almost everywhere small. The warmest day was the 8th, when the only Provinces reporting a deficient temperature were Bengal and Guzerat and Central India; the coolest day was the 3rd, when the only places reporting any excess were Bombay and the Central Provinces.

During the week the maxima in the Indus Valley have steadily exceeded 100°, on one occasion by as much as 5°, and during the latter half of the week these high maxima have extended over the greater part of the Punjab also. The following table shows the amount of the excess or defect of the mean average temperature of the different Provinces for the present and for the preceding week:

PROVINCES.	Difference of Mean Temperature of Last Week from Normal.	Difference of Mean Temperature of present Week from Normal.
Burmah	— 0·6	+ 0·7
Bengal	— 0·1	— 0·6
North-Western Provinces	— 0·7	+ 0·1
Punjab	— 1·4	+ 1·6
Bombay	+ 1·2	+ 1·9
Central Provinces and Berar	— 0·3	+ 1·0
Guzerat and Central India	0	— 0·1
Sind and Rajputana	+ 0·2	— 0·3
Madras	+ 0·5	— 0·4

This table shows that, compared with the average, the weather has been warmer in all Provinces, except Sind and Rajputana, Bengal and Madras.

Rain.—A weak and irregular monsoon on the Bay of Bengal side and an almost entire absence of monsoon winds on the western side of India, together with a freedom from travelling cyclonic storms, have combined to give very short rainfall to almost all parts of India. The average pressure difference between Southern and Northern India during September is ordinarily about 2½-tenths of an inch, while during the past week the difference reached only two-tenths as a rule, and on the 9th was not much more than one-tenth. Small barometric differences such as these at this season are always accompanied with weak monsoon winds, which in their turn are accompanied with deficient rainfall.

The following is a brief description of the daily distribution of rainfall:

On the 3rd rain was falling all round the Bay of Bengal, as well as over the greater part of Assam and Bengal and as far west as the east of North-Western Provinces. Showers were also reported from the inland parts of the Peninsula, from one or two places on the West Coast, and at one or two in the North-West

Himalaya. Elsewhere the weather was fair. On the 4th a similar distribution prevailed. On the 5th the rainfall showed a further falling off. Slight showers only were reported, except in Bengal, where the amounts were heavier. The chart of the 6th showed slight rainfall at the hill stations in the north-west, over the south and east of the Peninsula, and over Lower Bengal, and fine weather elsewhere. On the morning of the 7th there was no change in the break in the rains, except in Bengal, where, due to a small local depression, there had been some extension of the rainfall area. On the 8th rain had increased somewhat over the central parts of the country, but there was no other change; and on the 9th slight general rain was reported from the Deccan, the Central stations, Bengal, the east of the North-Western Provinces, Assam, and Burma.

The table at the close of the summary shows that thirty-eight of the divisions into which India is divided for rainfall purposes have received deficient rainfall and only twelve have received more than the average. Three divisions in the Punjab, *viz.*, the North-West, West, and Submontane, have received no rain whatever, and the amounts reported from all parts of the Punjab, Rajputana, Sind, Guzerat, and Kathiawar have been very small. The amount of the deficiency in other parts of India varies largely, some divisions having very nearly the normal amount of rainfall, while others in the vicinity have received only trifling falls.

The whole of Burma has had deficient rain; so also has the whole of Bengal and Assam, with the exception of Deltaic Bengal and the valley of the Brahmaputra, where there has been a moderate or slight excess. In Upper India Oudh North has received a very trifling excess, but all the other divisions have received deficient rain—in some cases very largely so. Malabar and the Konkan Coasts have received less than half an inch of rain each during the week, but inland, within the divisions of Madras (South Central), Mysore, and the Deccan, the rainfall has been heavier than usual. Khandeish, Berar, and the Central Provinces have had very deficient rainfall, and in the whole of Rajputana, Guzerat, Kathiawar, and Sind the rain has also been short. On the other hand the whole of Madras, with the exception of the East Coast South, has had heavy rain.

The record of maximum falls exhibits very few instances of large amounts. In some parts of Behar and the North-Western Provinces there are some local falls ranging between 5 and 12 inches, but they are the exception, and in the Punjab the falls are very light. In the west and south of the Peninsula the maximum falls range between 3 and 5 inches, while in the central parts of the country they are still smaller, but on the eastern side of the Peninsula there are several heavy amounts reported.

The concluding column of the table shows an extension of the area over which the seasonal rainfall is short. The following are the divisions where the rainfall is deficient by more than 10 per cent.: Lower and Central Burma, Eastern Bengal, Punjab, Central, Submontane, and hill districts, the Konkan, the Bombay Deccan, Khandeish, Sind, and Rajputana West. In all other parts of the Indian region the seasonal fall equals or nearly equals the normal average.

PROVINCE.	DIVISION.	Rainfall Data for Week ending September 9th, 1889.			Rainfall Data from May 13th to September 9th, 1889.		
		Average Actual Rainfall of Division.	Average Normal Rainfall of Division.	Excess or Defect, in inches.	Average Actual Rainfall of Season to date.	Average Normal Rainfall, May 13th to September 9th.	Excess or Defect of (Seasonal) Rainfall expressed as a percentage.

Simla, *12th September, 1889.*

W. L. DALLAS,
Assistant Meteorological Reporter to the Government of India.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 7th September.*—Rainfall general; good in all districts, except Madras, South Arcot, and Tanjore. Crops generally good, but withering in parts of South Arcot, suffering from want of rain in Trichinopoly and Tinnevelly, and damaged by excessive rain in parts of Anantapur. Prices generally falling or stationary. Labourers employed on last day of week,—on Rushikulya works, 3,699; Gopalpur Canal, 1,373; Ghât Roads, 3,710; minor works, 3,644. Number on village relief on 31st August, 46,032, including 28,246 children; fed in kitchens, 10,402, including 7,513 children. Imports into Ganjam during week by sea and land, 394 tons. General prospects favourable.

Bombay.—*For week ending 11th September.*—Good rain over the greater part of the Deccan and Southern Mahratta Country and crop prospects improved by it; slight in Guzerat, Kathiawar, Konkan, Khandesh, and Nasik. Total fall still insufficient in parts of Ahmedabad, Broach, Surat, Khandesh, Nasik, Thana, Ratnagiri, Poona, Ahmednagar, Satara, Belgaum, Dharwar, Kanara, and Baroda. Standing crops damaged by rats, insects, and locusts in parts of Karachi; by locusts in parts of Shikarpur and Hyderabad; by insects and locusts in parts of Upper Sind Frontier; and by grasshoppers in parts of Ahmedabad and Panch Mahals; also withering for want of moisture in two talukas of Surat and Poona, one of Ahmednagar, and parts of Nasik. Standing crops otherwise good. Preparation for late crops progressing in parts of Karachi, Hyderabad, Sholapur, Bijapur, and Kathiawar. Fodder scarce in parts of Nasik, Poona, Ahmednagar, Satara, and Belgaum. Drinking water scarce in parts of Upper Sind Frontier, Nasik, Ahmednagar, and Satara. Prices rising in two talukas of Nasik.

Bengal.—*For week ending 10th September.*—Fairly general rain has fallen over the whole Province during the week, but there is now a partial break in the rains. Transplanting is nearly finished and the prospects of the winter rice are generally favourable, except in places in Western Bengal, in the south-west of the Sonthal Pergunnahs, and in the Sadr subdivision of Balasore, where the rainfall is still scanty. Autumn rice and jute harvests in some districts are expected to give fair results, while in others the outturn is estimated to be below the average. In Moorshedabad much damage has been caused to the autumn rice by floods, and in the east of Bogra the damage is also considerable. The *bhadoi* crops are being harvested and promise well, except in the inundated parts of Behar, where they have been almost wholly destroyed. Foodstocks continue to be sufficient in the affected tracts. At Motihari the price of common rice has fallen from 10½ to 12 seers a rupee; at Madhubani it is 10⅛ seers; and at Sitamarhi from 8⅔ to 9 3/10 seers. In Chumparun and Muzaffarpur agricultural loans are being given and the persons in receipt of charitable relief are increasing. The number of persons employed on relief works are 365 in Bhagalpur and about 1,500 in the Sonthal Pergunnahs.

North-Western Provinces and Oudh.—*For week ending 11th September.*—There has been light rain during the week, except in the eastern districts, where floods have occurred. Crops are doing well. Harvesting operations in progress and ploughing for *rabi* has begun in some places. Markets are well supplied. Prices are generally stationary, but in a few districts show a tendency to fall.

Punjab.—*For week ending 11th September.*—Rainfall light; showers in Khushab tahsil, Shahpur district, only. Prices falling in Delhi, Mooltan, and Shahpur; rising in Rawalpindi; and stationary elsewhere. Sowings of *kharif*

crops completed. Ploughings for *rabi* commenced in certain districts. Rain wanted in Sialkot. Prospects of standing crops good and promising. Rice crop in Umballa suffering for want of rain. Fodder sufficient throughout the Province.

Central Provinces.—*For week ending 11th September.*—Weather seasonable. The rainfall has been slightly deficient in parts of Jubbulpore and Seoni, but the prospects of the *kharif* crops continue favourable. Land being prepared for winter sowings. Prices steady.

Burma.—*For week ending 7th September.*—In Lower Burma the rainfall was generally light and in Thayetmyo and Tavoy has not been sufficient, and in Thongwa late planted paddy has suffered from want of heavy rain; elsewhere the crop prospect is good. In Upper Burma there was fair rainfall in Mandalay and Pyinmana, but elsewhere but little fell or there was none at all. Rain is much wanted in Shwebo, Sagain, Lower Chindwin, Pakokku, Meiktila, and Yamethin districts; elsewhere the crop prospect is fair. The price of paddy has risen 9 per cent. in Thongwa, 4 per cent. in Thayetmyo and Magwe; but elsewhere there is little or no change.

Assam.—*For week ending 11th September.*—Weather showery; nights unusually cool. Harvesting of early and transplanting of late rice still continue. Tea blight severe in Cachar. Prospects of tea and other crops good, except in Nowgong, where floods have done damage.

Mysore and Coorg.—*For week ending 11th September.*—Good rain has fallen throughout the State of Mysore. Standing crops in good condition, except in the Shikarpur taluk of the Shimoga district. Prices slightly fallen in Shimoga.

Good rain in Coorg. Standing crops doing well.

Berar and Hyderabad.—*For week ending 11th September.*—Average rainfall good in Berar. Weeding continues. Crops healthy. Fodder sufficient. Prices of food-grains stationary.

Rainfall during week 2·53 inches at Hyderabad; total since 1st January 24·46. Weeding of *kharif* crops concluded and weeding of *rabi* crops in progress. Water in tanks not yet sufficient for *rabi* crops. Prices stationary.

Central India.—*For week ending 11th September.*—During the week no rain fell in Gwalior, Bhopawar, or Neemuch. Crop prospects improved in Bhopawar and Bhopal; unchanged elsewhere. Locusts still exist in parts of Barwani. Prices of food-grains high in Goona, falling in Neemuch, steady elsewhere.

Rajputana.—*For week ending 11th September.*—Moderate rain in Bikaneer; slight in Ajmere and Abu. No rain elsewhere. Standing crops good. Harvest prospects favourable. Locusts reported in districts of Sirohi. Agricultural stock good. Pasturage or fodder sufficient. Prices steady generally.

Nepal.—*For week ending 5th September.*—Good rain fell during the week. Early rice is being harvested. Prospects good.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

Printed and published for the GOVERNMENT OF INDIA *at the* GOVERNMENT CENTRAL PRESS, *Simla.*

SUPPLEMENT TO

The Gazette of India.

No. 38.} CALCUTTA, SATURDAY, SEPTEMBER 21, 1889.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in* PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on Monday, September 16th, 1889.

The abnormal conditions which were reported last week have continued and intensified during the week under review. The mail steamer which crossed from Aden during the week experienced light south-westerly winds over the western half of the Arabian Sea and light north-easterly winds and fine weather over the eastern half. This shows that the Arabian Sea monsoon was very feeble and did not extend as far as the Coast of India. Hence, instead of the normal westerly and west-north-westerly winds which ordinarily prevail on the West Coast of the Peninsula at this season, variable breezes, generally from the northward and north-eastward, were reported, and the monsoon current was practically non-existent. Towards the close of the week there was some tendency towards change, a low pressure area passing up the Coast and drawing the wind to the southward as it did so. On the Bengal side the winds approximated more closely to the normal monsoon directions than they did on the Bombay side; but after the 13th the wind over the head of the Bay "backed" towards east, and the circulation over the Bay became cyclonic. These conditions have resulted in a more or less general break in the rains, for though showers have occurred in most parts of India except at some north-western stations, the rainfall has generally been slight and intermittent and not such as is associated with monsoon conditions.

The Chart of the 10th showed that a general barometric fall was in progress. Pressure was below the average over the Peninsula, above over the Central Provinces, and about the normal elsewhere. Readings were very uniform over the Peninsula, and gradients were generally slight for the time of year. Southerly winds prevailed over the Bay and easterly winds up the Gangetic plain, but elsewhere the directions were very abnormal. On the 11th pressure was still falling, but the changes were small and the general distribution was unchanged. The southerly wind at the head of the Bay was slightly stronger, but the easterly current over the Gangetic plain was less marked and the wind directions elsewhere were unaltered. Northerly winds still held on the West Coast. On the morning of the 12th there was very little change beyond an increasing deficiency of pressure on the West Coast and an increasing weakness of the monsoon currents all over India. The Chart of the 13th showed great uniformity of pressure and very light and variable winds. The distribution was more like that which at times prevails about the middle of October than that which is ordinarily experienced early in September. The winds around the Bay exhibited an indraught towards the centre of the Bay. The distribution of pressure on the 14th was very remarkable. There was a large deficiency of pressure over the West Coast and adjacent parts of the Arabian Sea, and at the same time there was apparently a large low pressure area over the Bay. The wind had shifted to the eastward over the head of the Bay and was light and variable elsewhere. The Chart of the 15th showed that the area of deficient pressure over the West Coast was working its way northward up the Coast and

that the depression over the Bay was developing slightly. The winds were very variable except along the foot of the hills, where they were steadily south-easterly. By the morning of the 16th the West Coast depression had advanced still further northward and the winds in that neighbourhood had become more normal in direction. Over the Bay there had occurred a considerable development of the depression, and a fairly well marked cyclonic circulation of the winds prevailed. The winds both around the Bay and elsewhere were very light in force, and numerous calms were reported from the inland stations.

Temperature.—The abnormal heat which set in last week with the decreasing rainfall has continued during the week under review and in several Provinces has intensified. Burma, the Punjab, Bombay, the Central Provinces, Sind, and Rajputana had excessive temperature on every day of the week, and in most other Provinces the majority of days were hotter than the average; but in Bengal, owing to the more constant rainfall, all days but one were cooler than the normal. The net results for the week exhibit an excess of temperature in all Provinces except Bengal. The greatest excess is in Bombay, 3°, followed by 2° in the Punjab and the Central Provinces. Maxima exceeding 100° were daily registered in nearly all parts of the Punjab as well as in Upper Sind. The following table shows the amount of the excess or defect of the mean average temperature of the different Provinces for the present and for the preceding week:

PROVINCES.	Difference of Mean Temperature of Last Week from Normal.	Difference of Mean Temperature of Present Week from Normal.
Burmah	+ 0·7°	+ 1·6°
Bengal	— 0·6°	— 0·5°
North-Western Provinces	+ 0·1°	+ 0·2°
Punjab	+ 1·6°	+ 2·0°
Bombay	+ 1·9°	+ 2·9°
Central Provinces and Berar	+ 1·0°	+ 1·9°
Guzerat and Central India	— 0·1°	+ 1·7°
Sind and Rajputana	— 0·3°	+ 1·3°
Madras	— 0·4°	+ 0·1°

Rain.—The conditions affecting rainfall have during the present week been practically the same as those prevailing last week. An unsteady and intermittent monsoon has prevailed on the Bengal side and given rain practically only to Burma, Assam, and Lower Bengal. On the western side of India the monsoon current was non-existent during the greater part of the week and only appeared as a feeble burst of south-west winds quite at the close. Consequently any rain which has fallen in the west of the Peninsula has generally occurred in thundershowers of short duration. Showers have also occurred over Central and Northern India, but there has been no continued rain.

The following is a brief description of the daily distribution of rain.

On the 10th fairly heavy rain was reported from Karwar and from Bengal, Behar, and as far west as Lucknow, while showers had fallen over the west and centre of the Peninsula and the Central and North-Western Provinces. On the 11th showers were reported from the west of the Peninsula, the Central Provinces, Behar, and along the foot of the Himalayas, but had more or less ceased in Bengal. There were no large amounts. On the 12th the general distribution was similar to that of the preceding day, but the showers had ceased in the west of the Peninsula and increased in Bengal. The Chart of the 13th showed that

several heavy falls had occurred in Bengal, but elsewhere any rainfall was very light and scattered. On the 14th scattered showers, generally of small amount, were reported from all parts of the Indian region except the Circars and North-Western India. A similar distribution prevailed on the 15th. The Chart of the 16th showed that showers had fallen over most of the Coast districts, but at very few of the inland stations.

The table at the close of the summary exhibits very clearly the general deficiency of rain during the week. At thirty-six of the rainfall districts the amount received has been short of the average and at only fourteen has it been in excess. Two divisions in the Punjab, as well as Sind and Rajputana, were entirely without rain, and Orissa, the North-Western Provinces (West), and the Punjab (South and North-West), received only insignificant amounts.

The greater part of Burma has again received deficient rainfall, the only exception being Lower Burma, with an excess of 0·18 inch. In Bengal and Assam the distribution has been irregular. The Brahmaputra Valley, Central Bengal, and Behar have all received more than the normal amount, while Eastern Bengal, the Surma Valley, North Bengal, Orissa, and Chota Nagpur have had deficient rains. With the single exception of Oudh North, the whole of the North-Western Provinces and the Punjab have had deficient rain and in some districts none at all. The West Coast of the Peninsula, with the exception of the Konkan owing to the constant showers, has received excessive rain, and this excess has extended inland over the Deccan, Khandeish, and Berar. Guzerat, Kathiawar, and Sind, like North-Western India, have had very little rain, and in Rajputana there has been none. The Central Provinces and Central India exhibit a large deficiency, and the same is true of the east of the Peninsula. In the extreme south there have been some heavy falls and a considerable excess.

The maximum falls call for very little comment. Cherrapunji received only $1\frac{3}{4}$ inches during the week, and though some largish amounts are reported from North Bengal and Behar, the falls in general over Burma, Bengal, and Assam are unimportant. In Upper India the amounts were all small. In Western India, Alipi was the only place which received more than 10 inches.

The final column of the table shows that the area over which the seasonal rainfall is deficient is increasing. The following are the divisions where the rainfall since the middle of May is deficient by more than 10 per cent.:—Lower and Central Burma, Eastern Bengal, Deltaic Bengal, North-West Provinces (West), Punjab, Central, Submontane and Hill districts, Khandeish, Sind and Rajputana West. The divisions of Deltaic Bengal and the North-Western Provinces (West) have come into the deficient list since last week. In all other parts of the Indian region the seasonal fall equals or nearly equals the average.

Simla, *19th September, 1889.*

W. L. DALLAS,
Assistant Meteorological Reporter to the Government of India.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 14th September.*—Rainfall good in all districts, except Nellore. Crops generally good, but withering in parts of South Arcot and Chingleput, and slightly damaged by excessive rain in Nilgiris. Prices rising in eight districts, falling in twelve, and stationary in others. Labourers employed on last day of week,—on Rushikulya works, 4,244; Gopalpur Canal, 1,436; Ghat Roads, 4,895; other minor works, 5,427. Number on village relief on 7th September, 46,983, including 28,772 children; fed in kitchens, 11,187, including 8,015 children. Imports into Ganjam during week by sea and land 800 tons. General prospects favourable.

Bombay.—*For week ending 18th September.*—Rain during week good throughout Deccan and Southern Mahratta Country and beneficial to crops; moderate or slight in other districts; more wanted in parts of Panch Mahals, Kaira, Broach, Surat, Khandesh, Nasik, Thana, Kolaba, Kathiawar, and Baroda. Standing crops damaged by rats, crabs, turtles, and locusts in parts of Karachi; by locusts in parts of Shikarpur; by rats, insects, locusts, drought, and blight in parts of Hyderabad; by blight and locusts in parts of Upper Sind Frontier; and by insects in parts of Kathiawar. Crops otherwise good, except in one taluka of Surat and two of Khandesh. Reaping of early crops commenced in Hyderabad. Fodder scarce in parts of Karachi, Poona, and Ahmednagar. Drinking water scarce in Upper Sind Frontier.

Bengal.—*For week ending 17th September.*—General and heavy rain fell during the week in North Bengal, Behar, and Chota Nagpur. In Orissa rain was almost entirely absent, while in East and South-West Bengal it was very light and partial: some heavy local showers are however reported from Beerbhoom, Bankoora, Moorshedabad, and Mymensingh. A break in the rains seems to be now prevalent in the whole Province. Transplanting of winter rice is almost finished but somewhat retarded for want of sufficient rain in places. In Western Bengal and in the Sadr subdivision of Balasore early jute, rice, and other autumn harvests are proceeding well. In Moorshedabad not much damage to crops has been reported, as more than 12 annas of the autumn rice was reaped before the floods; but there will be some suffering among cattle for want of fodder. In Jessore and Rajshahye some damage has been done by floods. In Rungpore the damage is not serious. Foodstocks continue to be sufficient, and prices are falling in the affected districts. In Muzaffarpur the number of persons in receipt of charity is increasing. In Chumparun relief is being given, but the distress is said to be diminishing. In Bhagulpore the relief works are closed.

North-Western Provinces and Oudh.—*For week ending 18th September.*—Weather generally seasonable. Rainfall heaviest in the eastern and lightest in the central districts. More rain wanted in Jhansi and Meerut. Crop prospects are everywhere favourable. Rice being harvested, yield good. Markets are well stocked, and prices fairly steady.

Punjab.—*For week ending 18th September.*—No rain, except a slight fall in the Lahore and Rawal Pindi districts. Prices rising in Rawal Pindi, falling in Shahpur, and stationary elsewhere. Ploughings for and sowings of *rabi* crops are in progress. Rain wanted in Hissar, Ferozepur, and Sialkot; it is also wanted for *kharif* crops in Umballa and Lahore. Prospects of standing crops are generally good, but only average in Peshawar owing to scarcity of water in the Bara. Crops are slightly damaged by locusts in Mooltan. Rice is suffering for want of rain in Umballa. Fodder is reported sufficient throughout the Province.

Central Provinces.—*For week ending 18th September.*—Weather generally clear with occasional heavy showers. *Kharif* crop in good condition. *Rabi* sowings commencing. Prices inclined to fall.

Burma.—*For week ending 14th September.*—In Lower Burma the rainfall for the week was light in Akyab, Hanthawaddy, Tharrawaddy, Bassein, Thayetmyo, Toungoo, and Mergui, fair in the remaining districts, and heavy in Thongwa. More rain is wanted in Tharrawaddy, where the crops are backward. In Thayetmyo and in Toungoo the crop prospect is on the whole good. In Bassein some damage took place owing to breaches of bund. In Upper Burma rain is much wanted in the following districts:—Mandalay, Shwebo, Myingyan, parts of Pakokku, Minbu (the Mon Valley), and Yamethin; in other districts the crop prospect is good. The price of paddy has risen slightly in Prome and Toungoo, and fallen slightly in Pegu, Henzada, Tavoy, and Mergui; elsewhere in Lower Burma there is no change. In Upper Burma the price has slightly risen in Yeu and fallen in Shwebo and Pakokku; in other districts there are no fluctuations. The food-supply is sufficient throughout the Province.

Assam.—*For week ending 18th September.*—Rainfall light; more rain wanted in Sylhet. Early rice is still being harvested and winter rice transplanted. Crops generally are doing well. Tea is suffering from blight in Cachar, and some damage has been done to crops in Sibsagar by insects.

Mysore and Coorg.—*For week ending 18th September.*—Rainfall good throughout the State of Mysore. Standing crops generally good, but more rain is needed for wet crop in Shikarpur in the Shimoga district. Sowing operations still continue in parts. No material change in prices.

Good rain in Coorg. Season favourable for standing crops. Prices slightly fallen.

Berar and Hyderabad.—*For week ending 18th September.*—Average rainfall 2·66 inches in Berar. Crops in good condition. Weeding continues. Prices of food-grains high in Akola and low in Amraoti district. Pasturage sufficient.

Rainfall during week at Hyderabad, 2·4; total since 1st January, 26·50. Weeding of *kharif* and *rabi* crops completed. Tanks received sufficient water. Fodder for cattle plentiful. Prices stationary.

Central India.—*For week ending 18th September.*—Rainfall slight but general, except in Goona. Crops generally good; no further damage from locusts in Bhopawar. Prices still high in Goona.

Rajputana.—*For week ending 18th September.*—Slight rain in Abu, Kherwara, and Bickaneer. Standing crops damaged by locusts in parts of Sirohi and Marwar. Agricultural stock good. Pasturage or fodder sufficient. Prices steady generally.

Nepal.—*For week ending 12th September.*—Good rain. Weather cool and rainy. Prospects very good

E. C. BUCK,
Secretary to the Government of India.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor-General will in future be published in* PART VI. *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI. *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on Monday, September 23rd, 1889.

Strongly marked contrasts of weather have prevailed over India during the past week. The mail steamer which crossed from Aden during the week experienced light westerly winds and sultry weather from Aden to Socotra and a light monsoon and heavy swell but no wind from Socotra to near Bombay. Near Bombay the weather was showery, with west-south-west winds and a westerly swell. From this it appears that for the present the Arabian Sea monsoon shows no sign of increasing strength, and the winds along the West Coast of India have been light and variable. The weather has not however on that account been dry. Showers, often of very considerable amount, have fallen almost daily over the Peninsula. On the opposite side of India, *viz.*, over the east of the Peninsula, the Bay, Burma, Bengal, Assam, and to a limited extent the Central and North-West Provinces, the weather has been rough, squally and unsettled. The depression which was forming over the Bay at the time of the conclusion of the previous summary developed into a storm of very considerable intensity. The centre crossed the Coast between Vizagapatam and Gopalpore and advanced into the Central Provinces. It then moved northward and struck the Himalayas to the north of Gorakhpur. All over the area affected by this storm the weather has been squally and unsettled, with general and in places heavy rain. The weather in North-Western India has been in strong contrast to that prevailing over Eastern and Southern India. The winds have been light, the weather fine, and the temperature high.

On the morning of the 17th a well marked low pressure area prevailed over the centre and north of the Bay and extended westward across the Circars and Orissa as far as the east of the Central Provinces. Within this large area of low pressure and probably in lat. 18° 30′ and long. 89° a storm centre existed. Pressure was highest in the south-east of the Bay and moderate gradients existed

in that quarter, but elsewhere readings were very uniform. A cyclonic circulation of the winds prevailed around the Bay, with a strong indraught from the southward. Except around the Bay, the winds were generally light and variable. By the morning of the 18th the cyclonic storm in the Bay had approached the Coast between Vizagapatam and Gopalpore, and the barometer in that neighbourhood was two-tenths below the normal average. Cyclonic winds prevailed over the whole of the Bay, Bengal, the Central Provinces, Hyderabad and Southern India, of which those near the storm centre were strong. The centre crossed the Coast some time in the afternoon of the 18th and at 8 A.M. on the 19th lay a little to the west of Gopalpore. The depression proved to be a deep one, and the barometer at the centre before crossing the Coast probably fell to 29·00″. The cyclonic circulation around the storm extended over a very large part of India, and the winds were very strong over Ganjam and the centre and south of the Bay. Pressure remained highest in the south-east of the Bay, but was at the same time relatively high in the north-west of the Punjab. During the twenty-four hours succeeding 8 A.M. on the 19th the storm travelled very slowly, and the Chart of the 20th showed the centre a little to the south of Raipur. The storm was apparently slowly filling up, but its effect on the winds was still extensive, the cyclonic circulation around the centre still extending over the greater part of the country. Over the head of the Bay and in the neighbourhood of the cyclone the wind was blowing strongly. The Chart of the 21st showed that pressure had increased everywhere. The cyclonic storm had filled up to some extent and was commencing a northerly movement. The circulation of the winds around the centre had undergone very little change. At 8 A.M. on the 22nd the centre of disturbance lay immediately to the south of Gorakhpur, the storm having moved quickly northward during the previous twenty-four hours. The winds were cyclonic in the neighbourhood of the storm centre, but the large cyclonic circulation which had previously obtained had to a large extent broken up. The wind force was still high at the head of the Bay. By the morning of the 23rd the disturbance had disappeared and pressure, with some irregularities, decreased from a high pressure area in the south of the Bay to a low pressure area in Sind, the difference being 0·3″. The winds were still strong at the head of the Bay, but the cyclonic movements had practically disappeared.

Temperature has undergone large variations during the week. At first, when the rainfall was generally light and scattered, the heat was above the average almost everywhere, but with the advent of the storm on the 19th a fall of temperature commenced in Burma, Bengal and Madras, which subsequently extended to the greater part of India except the west and north-west. The Punjab, Bombay, the Central Provinces, Central India, Sind and Rajputana were hotter than usual on every day of the week, but in the other Provinces there were considerable variations from day to day, and in Madras and Bengal only on two days in the week was the weather warmer than usual. The net results for the week exhibit an excess of 3½° in Sind and Rajputana, of 3° in Guzerat and Central India, and of 2° in Bombay and the Central Provinces, while Madras, Bengal and Burma show a slight defect and the Punjab and North-Western Provinces a slight excess. Maxima exceeding 100° were reported from several stations in North-Western India throughout the week, the highest reading being 108·7° at Hyderabad (Sind) on the 21st.

The following table shows the amount of the excess or defect of the mean average temperature of the different Provinces for the present and for the preceding week:

PROVINCES.	Difference of Mean Temperature of Last Week from Normal.	Difference of Mean Temperature of Present Week from Normal.
Burmah	+ 1·6°	— 0·1°
Bengal	— 0·5°	— 0·9°
North-Western Provinces	+ 0·2°	+ 0·2°
Punjab	+ 2·0°	+ 1·0°
Bombay	+ 2·9°	+ 2·0°
Central Provinces and Berar	+ 1·9°	+ 2·2°
Guzerat and Central India	+ 1·7°	+ 2·9°
Sind and Rajputana	+ 1·3°	+ 3·5°
Madras	+ 0·1°	— 0·7°

Rain.—The conditions affecting the rainfall of the week have been detailed above. Briefly, the rain was due over the Peninsula to constant showers, and over the Bay, Burma, Bengal and the east of the Central and North-West Provinces to a travelling storm of considerable intensity. North-Western India, being beyond the sphere of the storm and unaffected by the feeble monsoons prevailing, had fine dry weather throughout.

The following is a brief description of the daily distribution of rainfall:

On the 17th rain had fallen generally over the Peninsula, around the Bay and in Upper Burma and Assam, and a few showers had occurred in Lower Bengal and along the foot of the Himalayas. The heaviest falls were reported from Lower Bengal and the Bombay Deccan. On the 18th rain was fairly general except in the central parts of the country and the north-west. The heaviest amounts were now reported from the Circars. On the 19th rain was confined to the Peninsula, the Bay, Burma, Assam and Lower Bengal, and there was none over Central or North-Western India. Similar conditions prevailed on the 20th except that rain had commenced at some central stations. On the 21st rain ceased in the east, centre and west (north of Goa) of the Peninsula. On the 22nd excessively heavy rain fell in the east of the North-Western Provinces and general rain over Bengal and the Central Provinces. In the Peninsula the rainfall was confined to the west and south, and on the 23rd rain was falling except in North-Western and Central India.

The table at the close of the summary shows that at thirty of the rainfall districts the amount received during the week has been in excess and at twenty in defect of the average. Sind is the only district which has received no rain whatever during the week, but at several other districts in the north-west and centre of India the week's fall has been small and unimportant.

The whole of Burma, except the Tenasserim division, has received more than the average amount of rain. So also has the whole of Bengal and Assam, the east of the North-Western Provinces, Oudh and the submontane district of the North-West Provinces. The east and centre of the Central Provinces have also received more than the usual amount of rain. The whole of this region was influenced by the cyclonic storm noticed above, and the general excess of rain which has occurred over these districts is more or less connected with the action and course of this storm. Over the whole of north-western and central parts of India outside the sphere of action of the storm, *viz.*, the west and centre of the North-Western Provinces, the whole of the Punjab, Rajputana, the west of the Central Provinces, Guzerat and Sind, the rainfall of the week was largely deficient or, in the case of Sind, altogether wanting. The monsoon on the West Coast was as explained above exceedingly feeble; but there appears to have been a certain amount of indraught across the Peninsula, as the whole of the West Coast districts, the Bombay Deccan, Hyderabad South and some Madras districts received heavier rain than usual. Whatever current there was did not however extend northward, so that Berar and Khandesh received a deficient amount.

The returns of maximum falls show that the heaviest rainfall tended towards East and North Bengal, Behar and the submontane districts of the North-Western Provinces. Cherrapunji received 27 inches, one station in Tipperah 13 inches, one station in Rungpore 11 inches, one station in Durbhunga 15½ inches, and one station in Gorakhpur 13½ inches. In North-Western India there were no heavy falls. In Malabar and Madras South Central some falls of about 15 inches were measured, while in North Kanara Kumpta received 17 inches and in Kolhapur Banda received 11½ inches. In the central parts of the country the maximum falls are unimportant. The heaviest fall in any part of India is 22¼ inches, which occurred at Ankapalli in the Vizagapatam district.

The concluding column of the table shows the state of the seasonal rainfall. The following are the divisions in which the total rainfall since the middle of May is when compared with the average deficient by more than 10 per cent.:—Lower and Central Burma, Eastern Bengal, North-Western Provinces (West), Punjab, Central, Submontane, Hill and north-west divisions, Khandesh, Guzerat, Sind and Rajputana (West). Deltaic Bengal has hence disappeared from the deficient list since last week, while Guzerat and the north-west of the Punjab have on the contrary come into it. In all other parts of India the seasonal fall is satisfactory.

PROVINCE.	DIVISION.	Rainfall Data for Week ending September 23rd, 1889.			Rainfall Data from May 13th to September 23rd, 1889.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 21st September.*—Rainfall general; slight in Nellore and Salem. Crops generally good, but damaged by excessive rain in parts of the Nilgiris; withering from want of rain or water in parts of Chingleput and South Arcot. Prices rising in four districts, stationary in six, and falling in others. Labourers employed last day of week,—on Rushikulya works, 3,604; Gopalpur Canal, 1,099; Ghat Roads, 4,003; other minor works, 7,022. On village relief on 14th September, 42,518, including 25,649 children; fed in kitchens, 11,158, including 8,010 children. Imports into Ganjam during week by sea and land 589 tons. General prospects favourable.

Bombay.—*For week ending 25th September.*—Rain during week throughout Presidency Proper and standing crops benefited by it; total fall still insufficient in parts of Guzerat, Khandesh, Thana and Colaba. Standing crops damaged by locusts, crabs and rats in parts of Karachi; and by locusts in parts of Shikarpur, Hyderabad, Upper Sind Frontier and Ahmedabad; crops otherwise good. Reaping of early and sowing of late crops progressing in several districts. Probable outturn of early crops in Baroda from 14 to 16 annas. Fodder scarce in parts of Poona and Dharwar.

Bengal.—*For week ending 24th September.*—Rainfall has been general and in the northern and eastern districts fairly heavy. Prospects of winter rice are generally favourable, but have suffered from floods in places in Central and Northern Bengal and from drought in parts of Burdwan, Hooghly and Balasore. In Moorshedabad the damage from floods in the low lands of the Lalbagh subdivision is considerable. Harvesting of early rice and jute is still proceeding and the outturn is reported to be fair in several districts. The *bhadoi* harvest in Behar and Chota Nagpur is yielding a good outturn except in the flooded tracts in Behar. Foodstocks are sufficient. In the affected districts in Chumparun and Muzaffarpur loans and gratuitous relief are still being given. In Midnapur the number of persons receiving charity is sixty. In the Sonthal Pergunnahs relief works are closed.

North-Western Provinces and Oudh.—*For week ending 25th September.*—Heavy rain in some of the eastern districts has done injury to the standing crops and somewhat retarded ploughing for the *rabi*; elsewhere the rainfall has been light. Rice and the earlier *kharif* crops are being harvested, and *rabi* ploughing and sowing has commenced. Prospects generally are good. Markets are well supplied, and in most districts prices are stationary.

Punjab.—*For week ending 25th September.*—Rainfall slight in Jullundur, Ferozepore, Lahore, Rawalpindi, and Shahpur districts. Prices rising in Rawalpindi, falling in Shahpur, and stationary elsewhere. Harvesting of *kharif* crops commenced in certain districts. Ploughing for *rabi* in progress. More rain wanted in most districts. *Kharif* crops are reported to be in good condition except in Hissar and Umballa, where they are withering for want of rain. Outturn of cotton is good in Peshawar. Crops are slightly damaged by locusts in Leiah tahsil, Dera Ismail Khan district. Fodder sufficient throughout the Province.

Central Provinces.—*For week ending 25th September.*—Weather generally clear with occasional showers. Rainfall sufficient except in Sihora and Murwára tahsils of the Jubbulpore district. Prospects of the *kharif* crops continue very favourable. Land being prepared for *rabi* sowings, and sowings of *til* commencing in places. Prices generally steady and falling in some districts.

Burma.—*For week ending 21st September.*—The rainfall in all districts of Lower Burma was fairly heavy, with the exception of Prome and Tharrawaddy, where the fall was light. The crop prospect is generally good in Lower Burma. More rain is wanted in Mandalay, Shwebo, in part of the Myinmu subdivision of Sagaing, Minbu and Yamethin. The crop prospect is fair. The price of paddy in Lower Burma has fallen slightly in Prome, Moulmein and Tounghoo, and risen slightly in Henzada and Thayetmyo. In other districts the price remains unchanged in Upper Burma. The price has fallen from Rs. 95 to Rs. 65 per 100 baskets in Mandalay; in all other districts there are no fluctuations. The foodsupply is sufficient throughout the Province.

Assam.—*For week ending 25th September.*—Rainfall varies from 0·90 inches in Darrang to 20·17 inches in Garo Hills, where damage has been done to crops. Reaping of early rice and transplanting of winter rice almost finished. Weather cold and wet for tea. Blight less prevalent in Cachar.

Mysore and Coorg.—*For week ending 25th September.*—Rain has fallen more or less throughout the State of Mysore. More rain is wanted for wet crops in Shikarpur of the Shimoga district. In parts of the Tumkur and Kadur districts dry crops somewhat damaged by excessive rain, otherwise crops are in good condition and prospects are favourable. Prices slightly fallen in Bangalore and Shimoga districts.

Rainfall 8·26 inches in Coorg. Transplanting of rice completed except in parts of Kiggatnad taluk. Standing crops promise well.

Berar and Hyderabad.—*For week ending 25th September.*—Average rainfall 1·60 inches in Berar. Standing crops healthy. Weeding continues. Prices of food-grains stationary. Pasturage sufficient.

Rainfall at Hyderabad during week, 2·53; total since 1st January, 29·03. *Kharif* and *abi* crops thriving. Prices stationary.

Central India.—*For week ending 25th September.*—Crops generally good throughout the Agency, but slightly damaged by excessive rain in parts of Neemuch. Prices high in Goona, falling in Bundelkhand and parts of Bhopawar.

Rajputana.—*For week ending 25th September.*—Slight rain in Marwar, Kherwara and Meywar. Standing crops slightly damaged by locusts in Marwar, Kishengarh and Ulwar. Rain much needed in Meywar, Bhurtpur, Ulwar and Harowtee. Agricultural stock good. Pasturage drying and fodder dear in Marwar. Prices steady generally.

Nepal.—*For week ending 19th September.*—Rain in showers and infrequent. Harvesting of early rice in progress. Prospects favourable.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

ACCOUNT.

Railway.

GUARANTEED RAILWAYS.

SYNOPSIS OF TRANSACTIONS FOR AND TO END OF THE YEAR 1888.

No. 406 A.R., dated Simla, the 16th September 1889.

RESOLUTION—By the Government of India, Public Works Department.

Read again—

Public Works Department Resolution No. 621A.R., dated 5th October 1888.

Read also the following:

Note by LIEUTENANT-COLONEL A. G. BEGBIE, R.E., Officiating Accountant General, Public Works Department, No. 891R., dated 23rd August 1889.

I beg to lay before the Government of India the usual Synopsis of transactions of Guaranteed Railways for and to end of the year 1888.

2. The subscribed Capital on 31st December 1888 of the several Railway Companies bears interest as shown below:

Railway.	Capital bearing interest at 3½%	3¾%	4%	4½%	4¾%	5%	Premium on Stock.	Discount on Stock.	Total Capital raised.
	£	£	£	£	£	£	£	£	£
Madras	...	297,800	102,200	500,000	999,960	8,757,670	12,014	...	10,669,644
South Indian	...	970,000	...	425,000	151,044	3,057,908	62,453	3,000	4,663,405
Bombay, Baroda and Central India...	100,000	888,500	...	...	...	7,550,300	32,270	14,000	8,557,070
Great Indian Peninsula	1261,000	1,847,300	2,701,450	...	...	20,000,000	297,305	233,391	24,876,664
Oudh and Rohilkhund	...	3,030,300	384,700	...	...	4,000,000	15,922	47,611	7,383,311
(1) Total to end of 1888 ...	364,000	7,033,900	3,188,350	925,000	1,151,004	43,365,878	419,964	298,002	56,150,094
(2) Ditto ditto 1887 ...	100,000	6,969,300	5,402,150	925,000	1,153,504	43,363,503	419,839	298,002	58,035,294
(3) Ditto ditto 1886 ...	...	5,191,800	5,439,650	925,000	1,166,864	43,350,911	200,553	64,384	56,210,294

(5) Ditto ditto 1884 ...	...	4,325,750	4,911,950	926,000	1,179,619	43,338,789	200,702	46,134	54,844,594
(1) Compared with (2) Increase ...	264,000	64,600	...	...	...	2,375	125	...	...
(1) Compared with (2) Decrease ...	...	...	2,213,800	...	2,500	...	...	...	1,885,200

3. The following table shows the growth of the Capital account of the Guaranteed Railways during the last five years, the net increase to the aggregate subscribed Capital during that period being £2,777,429:

Total capital subscribed. Year.	Amount.	Increase.	Decrease.	Remarks.
	£	£	£	
To end of 1884	54,844,594	1,471,929	...	
„ 1885	56,295,094	1,450,500	...	
„ 1886	56,210,294	...	84,800	
„ 1887	58,035,294	1,825,000	...	
„ 1888	56,150,094	...	1,885,200	
		4,747,429	1,970,000	
Net increase ...	...	2,777,429		

Capital Outlay.

4. The aggregate outlay finally charged off to "Construction" has stood at the end of each of the last five years as follows:

	£	Increase. £
To end of 1884	53,240,053	1,114,018
„ 1885	54,516,361	1,276,308
„ 1886	55,517,215	1,000,854
„ 1887	55,920,875	403,660
„ 1888	56,455,146	534,271
Increase in five years		4,359,111

5. The expenditure charged to "Construction," on the open lines of railway, during and to end of the year, gives the following cost per mile:

Railway.	Construction expenditure per open mile. During 1888.	To end of 1888.	Remarks.
	Rs.	Rs.	
Madras	1,565·98	1,34,724·34	
South Indian	834·76	69,838·54	Metre gauge.
Bombay, Baroda and Central India	885·21	2,07,553·15	
Great Indian Peninsula	2,514·49	2,07,605·55	
Oudh and Rohilkhund	419·11	1,20,342·46	
Average outlay excluding South Indian	1,606·72	1,72,003·26	
Ditto including ditto	1,477·49	1,54,960·30	

Capital locked up in stores.

6. The subjoined table shows the fluctuations in the value of stores in stock during the past five years. The figures in antique represent increases of stock:—

Railway.	Reduction in stock. 1884.	1885.	1886.	1887.	1888.	Total reduction in five years.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Madras	68,943	4,59,341	3,09,528	6,76,372	17,704	1,43,786
South Indian	94,461	4,83,853	3,54,488	5,54,202	5,57,460	12,35,491
Bombay, Baroda and Central India	1,86,482	2,78,348	6,48,977	4,31,054	5,90,250	4,64,193
Great Indian Peninsula ...	3,40,888	20,24,643	13,61,804	8,76,659	9,50,188	15,18,196
Oudh and Rohilkhund ...	6,62,439	8,34,135	20,24,415	34,2·9	1,87,131	24,27,782
TOTAL ...	2,98,473	24,11,752	40,93,186	6,01,984	17,313	20,02,558

7. The increase in the amount of Capital locked up in stores during the year under review on the South Indian Railway is attributed to the receipt of

Permanent Way materials for renewals, and that on the Bombay, Baroda and Central India Railway is said to be due to the late arrival of Permanent Way material and coal from England.

8. On 31st December 1888, the value of the stores in stock on Guaranteed Railways exceeded the limits provisionally assigned for Capital to be locked up in stores to the following extent:

Railway.	Limit assigned.	Stock in hand.	Excess.
	Rs. Lakhs.	Rs. Lakhs.	Rs. Lakhs.
Madras	22½	24½	2
South Indian	not fixed	(a) 34¼	...
Bombay, Baroda and Central India	21½	37½	16
Great Indian Peninsula	63	60¾	—2¼
Oudh and Rohilkhund	12½	26¾	14¼
TOTAL ...	119½	149½	30

(a) Not included in the total.

Revenue Account.

9. Excluding the East Indian, Eastern Bengal, and Sindh, Punjab and Delhi Railways which have now become State lines, the gross earnings, working expenses, and net earnings of all the Guaranteed Railways during the last five years have been as under:

Year.	Gross earnings.	Working expenses.	Net earnings.
	Rs.	Rs.	Rs.
1884	6,24,57,699	3,26,82,475	2,97,75,224
1885	6,73,27,871	3,51,47,654	3,21,80,217
1886	7,21,55,223	3,56,28,831	3,65,26,392
1887	7,20,41,944	3,61,22,174	3,59,19,770
1888	7,48,29,283	3,77,21,047	3,71,08,236

	Rs.	Rs.
10. For the year 1888 the net earnings amounted to ...		3,71,08,236
Deduct—		
Interest charged on overdrawn Capital ...	31,439	
Moiety of Surplus Profits due to Shareholders ...	55,95,126	
Contributions to Provident Fund	2,14,483	
		58,41,048
The net receipts by Government due to its connection with the Guaranteed Railways may be stated at		3,12,67,188

11. The results of the working of the Guaranteed Railways for the year 1888, based on the contract rates of exchange, is shown in the following table,

as also the percentage of Interest and Net Profits on the Capital received. The figures in antique represent gain:

Railway.	Net earnings after deducting payments on account of moiety of Surplus Profits and contribution to the Provident Fund and interest on overdrawn Capital.	Guaranteed interest.	Loss to State. Amount.	Loss to State. Per open mile.	Loss to State. Per cent. of guaranteed interest.	Per cent. of interest paid on total Capital received.	Per cent. of Net Earnings realised during 1888 on Capital received.

12. The result of working the Guaranteed Railways during 1888 may be considered satisfactory. The annual result in the last five years has been turned from a loss of Rs. 24,95,280 in 1884, to a gain of Rs. 23,89,095‡ in 1888.

13. The actual loss to the State during the last five years due to its connection with the Guaranteed Railways, if the payments in England on account of guaranteed interest are converted at the average rates of exchange for the different years, is shown in the following statements:

Year.	Net earnings —*vide* para. 11.	Guaranteed Interest at contract rates.	Loss to State based on preceding column.	Guaranteed Interest at the average rate of the year.	Loss to State based on preceding column.	Loss involved in full in exchange, being difference between columns 4 and 2.

(a) { Works in addition 7·85 miles of Pondicherry Line opened for Traffic, 16th December 1879.
{ Works in addition (22·27 miles of the Villupuram Darmavaram Railway, Nellore Branch, opened for traffic, 15th September 1887).
(b) Ditto 22·12 miles of the Pairi Salt Railway.
(c) Ditto 215·50 miles of the Dhond and Manmad, Khamgaon-Amraoti, and Bhopal Railways.
(d) Excludes 9·84 miles of the Benares Branch leased to the Oudh and Rohilkhund Railway.
(e) Debentures to the extent of £1,885,000 were discharged from funds advanced by the Secretary of State.
(f) This excludes interest to ended December 1888, amounting to £10,074 on debt appropriated to the discharge of debentures to the extent of £1,885,000, which fell due during the year. It has been decided to treat this payment as a State Railway charge.
(g) The real loss is understated by the sum of £10,073 referred to in note (f).

E. J. SINKINSON,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

RAILWAY TRAFFIC.

GENERAL RULES FOR WORKING INDIAN RAILWAYS.

No. 512 R. T., dated Simla, the 23rd September, 1889.

RESOLUTION—By the Government of India, Public Works Department.

Read again—

Section 8 of Act IV (the Indian Railway Act) of 1879.

Public Works Department Notification No. 299, dated 13th September 1880 (publishing the General Rules for all Railways in India) and Public Works Department Circular No. 17 Railway, dated 21st August 1880.

Public Works Department Resolution No. 504 R.T., dated 21st May 1886.

Read also—

Letter from the Consulting Engineer to the Government of India for Railways, Central Division, No. 2019 T., dated 29th August 1889.

OBSERVATIONS.—In accordance with the provisions of Section 8 of the Indian Railway Act IV of 1879, the Agent and Chief Engineer of the Indian Midland Railway has applied that Rules 342 and 343 of the General Rules for Indian Railways, which have been made applicable to the Indian Midland Railway under the Resolution read above, should be modified so as to read as follows:—

"No. 342.—No engine or train shall be moved from any station until the Driver has in his possession a "Line Clear," "Caution Message," or other permission written on the authorized form showing that he can proceed to the next station. The Driver is to receive this written permission from no other person than the Guard of his own train, or from the Station Master, or from one of the Station staff duly authorised for such duty; but on all occasions when the Guard does not personally deliver the permission to the Driver, it must be countersigned by the Guard before delivery to the Driver. The Driver must also receive from the Guard the usual starting signal before moving.

When a train is arranged to run through a station without stopping, the written permission to proceed to the next station may be handed to the Driver direct by the Station Master or other authorised person of the Station staff, and a duplicate of it handed to the Guard in the same manner.

"No. 343.—The Station Master, or other authorised person of the Station staff, is to hand the written permission to the Guard, who must satisfy himself that it is properly filled up and dated, with the time added, and is signed in full and in ink, and that it applies to the particular train or engine for which it is given and received, before handing it to the Driver. The Driver must also satisfy himself on these points before starting.

This written permission is never to be given to the Driver until the train is to start; and when waiting to pass another train, it must not be given to the Driver until the whole of such other train has come in and is clear of the points.

When a train is not timed to stop at a station, and the written permission is handed both to the Driver and Guard of the train, the Station Master will be held wholly responsible that it applies to the particular train or engine for which it is given, and that it is properly filled up and dated, with the time added, and is signed in full and in ink."

RESOLUTION.—The Governor General in Council is pleased, under Section 8 of the said Act, to sanction the application to the Indian Midland Railway of Rules 342 and 343 of the General Rules for Indian Railways modified as shown above.

ORDER.—Ordered, that Rules 342 and 343 of the General Rules for Indian Railways, modified as shown above, be notified to the Railway servants and the public by a copy of this Resolution being kept open to inspection, free of charge, together with a copy of the General Rules and of Public Works Department Resolution No. 504 R.T., dated 21st May 1886, in the Office of the Station Master of every station on the said Railway.

Ordered also, that this Resolution be communicated to the Consulting Engineer to the Government of India for Railways, Central Division, for information and guidance; and that it be published in the *Gazette of India*.

R. C. B. PEMBERTON, *Colonel, R.E.*,
Secretary.

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

The Governor-General in Council directs the publication of the following papers for general information:

NOTE ON THE PROGRESS MADE IN THE SETTLEMENT OF UPPER BURMA FROM APRIL 1887 TO AUGUST 1889.

No. 1759 (Public), dated Simla, the 4th October, 1889.

From—C. J. LYALL, Esq., C.I.E., Officiating Secretary to the Government of India, Home Department,

To—The Chief Commissioner of Burma.

I am directed to acknowledge the receipt of your Secretary's letter No. 41—274, dated the 3rd ultimo, with which you forward a Note on the progress made in the pacification of Upper Burma from April 1887 to August 1889.

2. In reply I am to say that the Governor-General in Council is of opinion that the record of progress which the Note contains is in a high degree creditable to Sir Charles Crosthwaite's administration of the Province. His Excellency in Council desires to take this opportunity of publicly expressing his appreciation of the ability, energy, and consideration which the Chief Commissioner has brought to bear on one of the most difficult tasks which have fallen to the lot of any administrator in India in recent years, and his approbation of the unwearied attention which the Chief Commissioner has devoted to every branch of the administration. His Excellency in Council feels assured that now that the return of the peaceful inhabitants of the country to their daily pursuits has been rendered possible by the suppression or surrender of almost all the principal leaders of organized crime, the revenues of Upper Burma will rapidly develop, and has in particular noticed with much satisfaction the measures which the Chief Commissioner has in contemplation for some reduction of the most serious burden on the revenues of the Province, *viz.*, the cost of the Military police. While however the Governor-General in Council would welcome any measure of economy which could be carried out without affecting the efficiency of the administration, he is content to leave to you the determination of the time and measure of the reduction that should be effected in the police, and has no wish to press upon you any curtailment of the forces available for the maintenance of order which might result in the recrudescence of those forms of crime which have now been so successfully suppressed.

No. 41—274-N., dated Rangoon, the 3rd September, 1889.

From—H. THIRKELL WHITE, Esq., C.S., Officiating Chief Secretary to the Chief Commissioner, Burma,

To—The Secretary to the Government of India, Home Department.

I am directed to submit for the information of the Government of India a Note on the progress made in the Settlement of Upper Burma from April 1887 to August 1889.

NOTE.

At the beginning of the year 1887, though much had been done to break the power of the most important opponents of the British Government in Upper Burma, and though the foundations of order had been laid, District Officers had not yet found time to seriously undertake the task of organizing the civil administration of their districts. The work of the first year of the occupation was to a great extent the work of the soldier, the task of dealing with leaders who, nominally at least, aimed at overthrowing the new Government. It is not too much to say that although much remains to be done before the administration of Upper Burma can bear strict comparison with that of settled provinces in India, the last two years and a half have witnessed good progress made. It may certainly be said that disorder and lawlessness have been put down, and that the power of the Government is firmly established and fully

acknowledged. To describe rapidly but precisely the progress of this work is the object of this Note.

2. The town of Mandalay, which contains nearly 200,000 inhabitants and is the centre of any political intrigue or discontent that may exist, has been undisturbed by any serious outbreak since April 1886. Since the beginning of 1887 it has been as free from serious crime as any town in India. A Municipality has been established; and the Committee, which comprises representatives of all classes of the community, takes much intelligent interest in the affairs of the town. Many good roads have been made, the principal quarters are well lighted, and a very large number of substantial masonry houses have been erected within the last two years, and building is still going on. In April 1887 the condition of the district was less satisfactory than that of the town. The south-eastern parts of the district were troubled by the Setkya Pretender, who was reported in August 1887 to have a permanent following of 200 men and to be able to call out about 300 when required. Nga To and Nga Yaing held the islands of the Irrawaddy and were harboured and supported by the villages near the river bank. Nga Zeya held the tract of country known as Yegyi-Kyabin to the north and north-east of the district. Among many minor leaders may be mentioned Nga Pan Gaing, Nga Lan, Nga Thein, Nga Tha Aung, Nga Tha Maung, Nga Aung Min, and Nga Nu. The whole district outside the walls of Mandalay was more or less under the influence of these leaders, who levied contributions on the villages in the tracts which they dominated. By steady perseverence, and without demanding more than occasional assistance from the troops, the district has been freed from all these leaders. Since the 1st April 1887 three have been killed, seven have been captured, and twenty-five have surrendered. The Setkya Pretender, driven out of the Mandalay district into Kyauksè and thence into the Shan States within the present year, has been captured, tried, and executed. Nga Yaing's gang has been dispersed and he himself recently captured in Shwebo and executed. Nga Zeya, at one time the most formidable of all, has been driven out of the district and forced to take refuge on the borders of Taungbaing and Momeik. Nga To, the last of the leaders who gave serious trouble in the Mandalay district, was hotly pursued during the early months of the current year and every member of his gang either killed, captured, or compelled to surrender. Nga To himself, without a single follower and with his influence thoroughly broken, is now a fugitive and has disappeared. At the present time there is in the Mandalay district not a single dacoit leader and not a single organized band of dacoits. The only probable source of trouble is Nga Kyaw Zaw, one of the Setkya Pretender's leaders, who still lingers on the borders of the Pyinulwin subdivision and the Kyauksè district. The number of violent crimes during the current year has not been greater than in an ordinary district in Lower Burma, and such crimes as are committed have been the work of local criminals, not of regularly organized bands of dacoits. Survey operations have been undertaken in the district and regular methods of administration everywhere introduced. In the open season thousands of pack-bullocks and footmen carrying loads come down from the Shan States and from China. The Municipal returns show that the trade by the Thibaw route has doubled. In 1887-88 13,300 pack-bullocks, with merchandise valued at Rs. 4,56,518, entered Mandalay. In 1888-89 the number of laden bullocks was 27,170, and the value of the goods Rs. 7,30,279. It may safely be asserted that the town and district of Mandalay have seldom been so secure and peaceful as at present. On 1st July 1889 the Deputy Commissioner wrote:

"I have quite recently visited a large portion of the Pyinulwin subdivision and of the Madaya and Kutywa townships, and nowhere did I see any distress. The villagers appeared to me to be remarkably happy and contented, and they commented frequently on the abnormal freedom from dacoity and cattle-lifting which they were enjoying.

"There was no appearance of discontent. On the contrary, the people were most loyal in their manner and seemed to be in good health and spirits."

3. The Shwebo district has always been noted for the turbulent character of its inhabitants. In this district the progress made has been almost as marked as in Mandalay. In the beginning of 1887 Nga Yaing and Nga To were still powerful in the south of the district; Nga Kyauk Lôn was giving trouble in the north; and Nga Thôn and Nga Aga, with a band of about 30 men, disturbed the central part of the district from Male to the borders of Ye-u on the

west. Of these Nga Yaing, who troubled the district from 1886 to the middle of 1889, has recently been arrested by a local Burmese official; Nga To, as already explained, has disappeared. Kyauk Lôn, Aga, and Nga Thôn have still to be accounted for. They haunt the forests in the northern part of the district, but have recently committed no serious crimes. The southern part of the district is perfectly quiet; the people are everywhere disposed to take part with the Government against the dacoits. The condition of the Shwebo district is in striking contrast with its condition a year or two ago, when violent crimes were of common occurrence. During the past three months violent crimes have been less frequent in Shwebo than in many districts in Lower Burma. Mr. Morison, Deputy Commissioner of Shwebo, wrote on 30th June 1889:

"The exodus from Upper Burma which commenced in 1882 continued until the end of 1887, but I am glad to be able to report that it has now ceased from this district, and numbers of families are now returning from Lower Burma—a fact which in itself would prove the untruth of the assertion of widespread discontent. It will however take many years for the country to regain the prosperity which it enjoyed during the reign of King Mindôn Min.

"Dacoity has now almost entirely ceased in this district, and villages which were removed to other sites are being permitted to return. Trade is reviving and cultivation is everywhere being pushed on to the full capacity of the stock of plough-cattle."

4. The greater part of the Katha district which lies to the north of Shwebo is and has been undisturbed. The proximity of the State of Wuntho under Native administration is however a permanent source of trouble, especially in the Kawlin subdivision. While the people of Wuntho are allowed to possess arms practically without restraint, it has been difficult to insist on the complete disarmament of the adjoining subdivision of Kawlin. In consequence of this, dacoity by organized bands has not been entirely stamped out. Moreover, gangs from Wuntho occasionally raid in our territory. It is impossible to remedy this evil all at once. It is not neglected, and the Sawbwa will in time learn the advantage of assisting the Government to maintain order. The attitude of the Wuntho Sawbwa has not been entirely satisfactory; but he has not been openly unfriendly, and recently he has co-operated with the officers of the Katha district in dealing with dacoit gangs on his borders, and is reported to have punished some local officials who were in the habit of harbouring dacoits. The rest of the district, as has already been said, is quiet. The Deputy Commissioner has recently succeeded in establishing friendly relations with the Kachins on the north of the district. During the past open season a Survey party carried a reconnaissance for the Mu Valley Railway right through the State of Wuntho and were assisted by the local officials under the Sawbwa's orders.

5. In the Bhamo district the results attained have been most important. In 1887 the Mogaung subdivision had been visited; but it was practically beyond the limits of our control. The Kachin tribes of Mogaung, who, under the influence of the *ex*-Myoôk Maung Po Saw and his lieutenant Nga Ti, gave much trouble in the spring of 1888, have now been severely punished by a mixed force of troops and police, which operated in the hills from February to May in the current year. The result has been that about a hundred Kachin villages have tendered their submission and are now on friendly terms with the local officers. The rebel leaders above mentioned have disappeared. The road to the jade mines is open and protected by a military police post at Kamaing, which commands the principal route. Travellers can now proceed from Mogaung to the jade mines and back without fear of molestation by the Kachin tribes. In the part of the district nearer to the town of Bhamo equally good results have been attained. The Pônkan Kachins, who defied our authority successfully in 1886, and who during the past open season raided within a few miles of Bhamo itself, have been punished and compelled to make terms. This was accomplished almost without opposition. A military force under General Wolseley occupied the principal village of the tribe and remained there long enough to make it evident that the Government intended to compel complete submission. The Kachins complied with the terms imposed on them, which included the restoration of captives, the payment of a moderate indemnity, and the surrender of a number of guns. The results of the past two years in the Bhamo district include the settlement of the Mogaung subdivision and the establishment of police posts there; the adjustment of our relations with the Kachin tribes, most of whom may now be regarded as friendly; and the opening out of the route to the jade mines. The Kachins nearer Bhamo have also been taught

that they cannot raid with impunity, and it is probable that raids will not now be of frequent occurrence.

6. The remaining district of the Northern division, the Ruby Mines district, lies on the borders of the dependent States of Thibaw, Mainglôn, Taungbaing, and Momeik. Such elements of disorder as still exist in this district are the result of the imperfect administration of these States. From the beginning of 1887, after the occupation of the district by General Stewart's force till the end of 1888, this district was undisturbed. Towards the end of 1888 reports were current that the town of Momeik, the capital of the State of that name, was threatened by a large gathering of dacoits or rebels under Saw Yan Naing, a grandson of Mindôn Min, whose headquarters was at Binbong or Manpun,* some three days' march to the north-east of Momeik. In consequence of these reports a small detachment of troops was stationed at Momeik; and after an unfortunate encounter in which, owing to insufficient information, a handful of troops suffered a reverse, a considerable body of dacoits which had advanced towards Momeik was attacked and defeated with heavy loss. These disturbances however affected the rest of Momeik and the Ruby Mines district, the garrison of which had been weakened by the withdrawal of part of a Gurkha regiment for the Chin expedition. Twinngè is an important village of 300 houses on the bank of the Irrawaddy, at that time included in the State of Momeik; it was attacked and burnt by a gang under Nga Maung of Twinngè, one of the lieutenants of Kan Hlaing, the claimant to the Sawbwaship of Momeik. Another man of the same name, known as Nga Maung of Mainglôn, formerly Myoza of that State, and other minor dacoits from the same neighbourhood threatened the district and caused a feeling of insecurity to be felt. On the Taungbaing border, Nga Zeya, the noted dacoit leader who had been driven out of the Mandalay district, was reported to have a considerable following. Some dacoities were committed in the district, and travellers on the road from Thabeikkyin to the Ruby Mines were attacked. A general feeling of insecurity prevailed; and the state of the district was less satisfactory in the early months of 1889 than it had been for the past two years. In order to deal effectually with the dacoit gangs which were reported to be in or on the borders of the district, the military garrison was strengthened and the command of all the troops and police was placed in the hand of Colonel Cochrane of the Hampshire Regiment. Under his orders an attack was made on Saw Yan Naing's stronghold at Binbong and his gathering was dispersed. At the same time steps were taken to strike at the root of the evil by improving the administration of the neighbouring States. The Sawbwa of Thibaw was induced to reform his administration in Mainglôn, a more competent ruler was established in Momeik, and the Sawbwa of Taungbaing was enjoined to look to his borders. In view of the great importance of keeping order in the Ruby Mines district, the civil police has been reorganized and strengthened and an extra company, which will consist of Gurkhas, will be added to the military police battalion. The military garrison will also be strengthened by the substitution of Gurkha for Madras troops. At present, except for a small gang which commits petty robberies on travellers, the district is quiet.

7. The districts in the Central division of Upper Burma are Sagaing, Lower Chindwin, Upper Chindwin, Kyauksé, and Ye-u. Writing on the 1st June 1889, the Commissioner of this division says:

"During a recent tour, extending from the 20th March to the 27th May, I have travelled through all the districts of this division; have visited nearly all the townships and many villages in four of these districts. * * * *

"The crops have been good and cultivation is extending. I saw evidence of this everywhere. * * * * * * *

"In nearly all the townships of the division visited during my recent tour I saw evidences of comfort and in parts of affluence. 'Pwès,' 'ahlus,' and other festivities were going on in all quarters, even where least to be expected. The only exception to this condition was in a part of the Ava subdivision, where cattle-disease has lately been literally raging and smallpox has been very prevalent. In some of the Ava villages these two afflictions had retarded cultivation. But these are epidemic, and although very serious indeed, they did not seem to have left the same mark on the people as they would have done in Lower Burma."

8. In the beginning of 1887 Sagaing and Ava, which were then separate districts, were practically held by dacoit bands, who levied contributions on the

* Binbong and Manpun are not, as had been supposed, the same. They are about 10 miles apart in the hills north-east of Momeik. Both places have been named at various times as the headquarters of Saw Yan Naing.

villages and kept the country side in terror. The most important leader in Sagaing, Hla U, was killed by his own followers early in 1887; but his lieutenants, among whom the chief were Nyo U, Nyo Pu, and Min O, remained and, notwithstanding that numerous bodies of troops were employed to pursue the gangs, gathered strength as the year advanced. On the Ava side Shwe Yan and Bo Tôk, with large gatherings, committed many dacoities and successfully defied the local officials. The pacification of the Sagaing district (including the Ava district, which had been incorporated with it) was systematically undertaken early in 1888 by Colonel (now Brigadier-General) W. P. Symons, assisted by various civil officers. It was found impossible to make any way by the methods hitherto employed. The troops never saw the dacoits, who continued to levy taxes from the villagers and to murder village officials and others suspected of aiding the Government. The Village Regulation was made use of, villages which fed the gangs were removed or fined, and the relatives of the dacoits who furnished them with supplies and with information and were the chief instruments in assassinating the friends of the Government were removed until the dacoits surrendered or were captured. A great change for the better soon followed these measures. The operations were steadily continued, and by the beginning of the current year all parts of the Sagaing district were in perfect order. Up to the present time twenty-six leaders, among whom were Nyo U, Nyo Pu, Shwe Yan, and Bo Tôk, have been killed; twenty-six, including Nga Sawbwa and Min O, captured; and seven have surrendered. Many followers of these leaders have also surrendered, the rank-and-file having been allowed to return to their homes on furnishing security for their good behaviour. The whole of the district has been thoroughly disarmed. Both Sagaing and Ava are now as peaceful as an ordinary Lower Burma district; the people live undisturbed in their villages and cultivate their fields; and, according to the statements of the people themselves, the district is more free from crime than it has ever been before. The dacoit leaders who remain at large are of no importance and have given no trouble.

9. The Ye-u district borders on the Upper and Lower Chindwin districts, Shwebo, and Katha, while on the north it touches the territory of Wuntho. It is in many parts covered by extensive forests which afford shelter to dacoits and in which it is difficult for troops or police to operate. Since April 1887 eight dacoit leaders have been killed and only four, of whom the most important is Yan Gyi Aung, remain at large. The greater part of the district is in good order. But the northern township is still troubled by dacoits from the adjacent territory of Wuntho.

10. The Lower Chindwin district is in excellent order. In October 1887 a rising occurred in Pagyi, the south-western part of the district bordering on the Yaw country. This was suppressed after one encounter with the dacoits, in which two British officers were killed, and the country was for the time restored to order. The elements of mischief were however not entirely removed. The country is exceedingly malarious, and it was not thought right to maintain police posts in the Shitywagyaung tract, which is the part of the Western Pagyi township adjacent to Yaw where the disturbances occurred. Towards the end of 1888 another attempt was made to excite a rising in this tract, but the ringleader, a pseudo-prince, was arrested, tried, and executed. Military police were sent to Shitywagyaung, and the dacoits and disaffected persons moved westward towards Gangaw and caused serious disorder in the Yaw country. The rising was not promptly and effectually dealt with by the troops at Gangaw and the adjacent posts, and reinforcements had to be sent. The Yaw country was then settled without much difficulty, the great majority of the persons who had taken part in the rising being allowed to return to their homes. But some of the Pagyi dacoits, under the leadership of a noted local dacoit called Saga, driven back towards the Lower Chindwin district, continued to give trouble. A military police post was therefore established in the Shitywagyaung country and a special officer was deputed to bring this tract into order. The result has been entirely satisfactory. Under the direction of the Commissioner of the Central Division, Mr. Smeaton, the operations have resulted in the death of Bo Saga, who was recently killed by a party headed by the loyal and zealous Myoôk of Western

Pagyi, Maung Po O,* and many of the members of Saga's gang have surrendered. The result is that the whole of the Lower Chindwin district is quiet. Since April 1887 fifty dacoit leaders have been killed and captured or have surrendered in this district, and only five remain who are included in the list of dacoit leaders reported as still at large in Sagaing and Ye-u.

11. The Upper Chindwin district includes a vast extent of territory, part of which is still practically unknown. It extends to the borders of Manipur on the north-west and to the Mogaung country on the north and east. Except for slight disturbances in Mingin, caused by the gang of Saga above mentioned, the whole of the district has been little troubled by ordinary dacoity. Raids on the State of Kale, which adjoins the Upper Chindwin district, and on the Kubo valley, which forms part of it, were committed in 1887-88 by Chins of the Tashôn, Siyin, and Kanhaw tribes. The two last named tribes were severely punished during the open season of 1888-89, and preparations for an expedition on an extensive scale for the subjugation of the Tashôns and other tribes to the south are now being made. On the east of the Chindwin river a dacoit leader named Naga Le still holds out. He was attacked two or three months ago and his camp destroyed. Since then he has not been heard of. But till he is captured or killed the peace of the district will not be secure. During the coming open season it is proposed to explore the country between the Chindwin river and the jade mines of Mogaung; and advantage will be taken of the opportunity to establish friendly relations with the Kachin Chiefs in this part of the country.

12. The Kyauksè district, the remaining district of the Central Division, was in 1886 one of the most disturbed parts of Upper Burma. In 1887 and 1888 it was disturbed by a pretender known as the Setkya Mintha, against whom operations had to be undertaken in October last. The result was that the Mintha was driven out of the district into the Shan hills to the east. There he was captured and handed over by the loyal Sawbwa of Yat Sauk; he was tried and executed. Another noted leader, Myat Hmôn, who had surrendered and afterwards absconded in 1887, again surrendered with his followers towards the end of 1888, and is now living quietly in his own village. The only dacoit leader of any note still at large in Kyauksè is Kyaw Zaw, one of the Setkya Pretender's lieutenants, who still haunts the difficult and wild hills to the north-east on the borders of Kyauksè and Mandalay, but does little mischief. It will be necessary to dispose of him. Subject to this, which is scarcely an exception, the Kyauksè district is perfectly quiet. It has recently been found possible to effect a considerable reduction in the military police force of the district—a sure indication of tranquillity.

13. The Myingyan district, which includes the country between Ava and Magwe and between the Irrawaddy river and the Eastern Division, was disturbed during 1887 and 1888. Two notorious dacoit leaders named Yan Nyun and Bo Cho, with their bands, infested the western part of the district and committed atrocious crimes. In the early part of the current year special measures were taken to reduce this part of the district to order. The result was that the gangs of Bo Cho and Yan Nyun were entirely broken up and dispersed. Most of the members of these gangs were permitted to surrender and are now living quietly in their villages. Bo Cho and Yan Nyun have not been captured; but they have no following and are not now actively mischievous. There will be however no security against new outbreaks until they are taken. The district, which includes the very difficult country in the vicinity of Popa hill, is now quiet. Many of the villages which had been temporarily moved have been allowed to return to their former sites, and the state of this part of the country is becoming satisfactory. The result of the past two-and-a-half years' work in the Myingyan district has been the death in action of 17 dacoit leaders, the capture of 16 others, and the surrender of 18 besides. There are still 14 leaders unaccounted for, but they are no longer at the head of gangs of dacoits.

14. The Pakôkku district includes the Yaw country, to which reference has already been made. The rising in the neighbourhood of Gangaw in December last having been suppressed, that part of the district is in good order. The rest

* Maung Po O, who has recently been decorated by His Excellency the Viceroy, is an Upper Burman, a nephew of the Kinwun Mingyi, one of the Chief Ministers of Mindôn Min.

of the district was disturbed by local gangs during the greater part of the years 1887 and 1888. None of these gangs were formidable in point of numbers; but they committed many local dacoities. Of late the people have evinced a most praiseworthy spirit in affording information and in resisting attacks by dacoits. The result is that the whole district is in excellent order and that serious crime is practically extinct. Only three leaders, who have of late given no trouble, remain undisposed of.

15. The result of the work done in the last two years in the Minbu district may be regarded with pleasure. Ever since the annexation of Upper Burma this district had been in a most disturbed state. Bo Swé, Ôktama, Ôktaya, Byaing Gyi, Tha Do, and Tha Tu were among the best known leaders: for many months they held almost the whole of the district. The well-directed and sustained efforts of the Deputy Commissioner, Mr. Hartnoll, and of his Assistants, Mr. Collins and Mr. Hertz, have resulted in the complete pacification of this important district. Bo Swè was killed in the Thayetmyo district towards the end of 1887: the credit of this is due to the Military Officers working the Thayetmyo district. Every other leader of note in the Minbu district has now been either killed or captured or has surrendered. Ôktama was at the head of a large organization and at one time numbered his followers by hundreds. In 1886 he attacked and burnt Sagu, and later on besieged Salin with a large force. Gradually his power was broken, and finally, within the last few weeks, he was captured by a Burmese Myoôk. At the time of his capture he was in hiding, with only one follower. A few days before Ôktaya, Ôktama's principal lieutenant, and Byaing Gyi, another leader who had given much trouble, had been captured, the latter being given up by his own men. The list of dacoit leaders killed, captured, or surrendered since April 1887 in the Minbu district includes the names of 106 persons. This takes no account of the individual members of the various gangs, hundreds of whom have been permitted to surrender. The Deputy Commissioner reckons that there are left eight leaders on the borders of the Minbu and Thayetmyo districts. None of these are of any importance.

16. The Magwe district is the only part of Upper Burma which is still disturbed otherwise than by outlaws, who have been driven to the hills, or by raiders from Native States. In this district, owing to the inefficiency of the staff and the inferior quality of the military police who were recruited in Bombay, dacoit bands have been allowed to gather strength and to remain unpunished. Till recently, dacoities on a large scale were of almost daily occurrence. Special measures, of which the result is already apparent, have recently been taken to restore order in Magwe. There is every reason to expect that within the next few months the Magwe district will be as orderly as other parts of the province. General Symons reports that the situation is changing daily for the better, and that numbers of men are surrendering. The Chief Commissioner marched through the district in July, in company with General Symons.

17. In the Eastern Division excellent work has been done in every district. On the 8th June 1889 the Commissioner wrote:

"The extraordinary increase in the thathameda collections of 1888-89 as compared with those of 1887-88 is, I think, a marked indication of the improved state of affairs. The figures of the two years are as follows:

District.	1887-88.	1888-89.
	Rs.	*Rs.*
Pyinmana	49,028	67,680
Yamèthin	1,60,372	2,11,780
Meiktila	1,99,507	2,64,600
TOTAL	4,08,907	5,44,060

"The increase in the collections under this head, which are based on the number of households in each village, is no doubt due in some measure to the return to their villages

of a large number of people who in the previous year had either fled from the dacoits or were themselves members of dacoit or rebel bands. There are now no large dacoit gangs in any part of the division. English officers ride all over the Yamèthin and Meiktila districts unarmed and without escort of any kind, while in most parts of the Pyinmana district also an escort is unnecessary."

In the early months of 1887 Meiktila was much disturbed by large gangs of dacoits on the north and west. These were for the most part disposed of in May 1887. During the last two years and a half eleven dacoit leaders have been killed, six have been captured, and nine have surrendered. There are now no dacoit gangs or leaders in the Meiktila district. The Deputy Commissioner writes:

"Every one is hard at work ploughing, and we have just had most excellent rains. In short, the Meiktila district has almost recovered from the ravages of 1886; the people are happy and contented, but are of course unhappy at having lost so many bullocks this year from disease. If only the crops are good this year, the district will be in perfect order in 1890."

The Yamèthin district is also perfectly quiet, and the strength of the military police force has been reduced. The Deputy Commissioner reports:

"Speaking from an acquaintance of nearly two years with the district, I can say with knowledge that the condition of the people is improving in every way. In the first place, violent crime has decreased in such a way that it may be almost said not to exist, which means that the element of fear and insecurity has been correspondingly reduced. Again, the thathameda revenue, though regularly increasing very largely in amount, was collected with a rapidity which astonished us and which shows that no difficulty was experienced in paying it. People who had fled during the disturbances to the Shan States and to other districts are returning to their old homes; the value of landed property for purposes of sale or mortgage is rising largely, showing that a feeling of security prevails."

The Chief Commissioner visited this district lately, and was informed by the Commissioner and Deputy Commissioner that they could give up four or five companies of military police without risk.

The Pyinmana district, which was for a long time one of the most disturbed districts in Upper Burma, is now in good order. Since April 1887 sixteen prominent leaders have surrendered and ten have been killed or captured. Only three leaders of any note remain at large, and none of these is now in the Pyinmana district. In this district the Bombay Burma Trading Corporation are carrying on extensive work in the forests. They have recently returned to Rangoon one-hundred muskets which they had obtained for the protection of their employés, the orderly state of the district rendering the retention of these weapons no longer necessary. On the 5th June last the Deputy Commissioner wrote:

"The gangs of dacoits which have not yet been disposed of are few in number, receive no fresh accession of strength, and are of no political significance. They are mainly composed of men who under the Burmese régime were known as bad characters, or who have placed themselves outside the pale of mercy by their own misdeeds. The sympathy at first extended to them by the population at large is fast disappearing, and public feeling is being rapidly enlisted on the side of law and order, as is shown by the frequent information received from the people themselves as to the doings of dacoits, which have led to important arrests of late, and by the fact that captured dacoits admit that they have to commit dacoity to save themselves from starvation, because they can no longer depend on villagers giving them the food they require. To such straits have dacoits been reduced by the indifference and in some cases the active opposition of their quondam friends, that they have preferred in some cases quite lately to surrender unconditionally, with their arms, to leading the miserable life they now do. I have five such cases under trial. The attitude of the country towards officials and Europeans generally is tested by the fact that though officers of all ranks ride through the wildest parts of this wild district with an escort of not more than two mounted orderlies, they are never in any way interfered with. The Bombay Burma Corporation Assistants often travel alone and sometimes unarmed on forest duty in outlying tracts with perfect safety. I do not wish in any way to minimize the difficulties which still exist and which must be overcome before this district is brought into perfect order. My only object in stating the above facts is to show that headway is being made against crime and criminals, and that the majority of the population is siding with, and to a certain extent assisting, us in our struggle against disorder. Possibly the district may be again disturbed. If so, it will be the result of outside influences and not from an uprising of internal elements of disorder."

18. It is hoped that the facts stated in the preceding paragraphs will be held to show that progress has been made during the past two or three years in the pacification of Upper Burma. The districts of Mandalay, Sagaing,

the Lower and Upper Chindwin, Kyauksè, Myingyan, Pakôkku, Minbu, Meiktila, Yamèthin, and Pyinmana are in excellent order: there is not more crime in them than in an ordinary Lower Burma district. The same remarks apply to a great part of the Shwebo, Ye-u, and Katha districts. The Bhamo district, essentially a hill and frontier district, is untroubled. The only noted dacoit leaders who remain have been driven out of the plain country and have sought refuge in the hills among the wild tribes which inhabit the fringe of the upper province. The statement which has been made that Upper Burma is becoming depopulated is not only false but entirely the reverse of the truth. In most districts people who had left their homes and gone to Lower Burma in the time of disturbance are now returning to their former districts in large numbers.

19. Frontier affairs have also been efficiently dealt with. Before the arrival of British troops at Nyaungywe in 1887 the whole of the States were in a condition of anarchy. Desolating wars were being waged between the rulers of the several States and the country was rapidly falling to ruin. Now profound tranquillity rules throughout the whole of the Shan country; and the Chiefs are not only at peace, but on terms of friendship, with each other. The attitude of all the Shan Sawbwas, including the Chief of the important State of Theinni, is most satisfactory; and order is maintained without difficulty by the mere presence of six companies of military police. In Eastern Karenni a satisfactory settlement has been made, and the Chief who wantonly attacked territory under British protection has been deposed to make room for a ruler who is actively loyal and anxious to stand well with the British Government. Mention has already been made of the measures taken to reduce to order the wild Kachins of the Bhamo district. These measures were entirely successful, and there is every reason to expect that friendly relations with these tribes will now be maintained. Active operations were undertaken against the Chins who inhabit the hills between Bengal and Arakan and Upper Burma. These operations will be continued during the coming cold season.

20. Of the material progress of the country the revenue returns afford satisfactory indications. The revenue collected in Upper Burma during the past three years was as follows:

	Rs.
1886-87	22,24,980
1887-88	50,16,360
1888-89	73,45,435

The figures for 1888-89 do not include Public Works or Railway receipts. The actual receipts exceeded the estimate by Rs. 4,85,435. The land revenue collections have increased from Rs. 16,71,730 in 1886-87 to Rs. 37,87,730 in 1887-88 and to Rs. 43,65,375 in 1888-89. There has been also an increase under the heads of Stamps and Excise. The estimated revenue for the current year is Rs. 76,74,000. One of the best tests of the state of the country is the amount of the thathameda, which is a tax on households, not on individuals. In two districts, Katha and Pyinmana, the only districts from which the figures are available, the number of households has increased from 9,624 to 10,677 and from 5,769 to 6,782 respectively. In Bhamo the thathameda collections increased from Rs. 48,890 in 1887-88 to Rs. 54,275 in the past year. In Katha the increase was from Rs. 83,470 to Rs. 1,06,385. The figures of thathameda for the Eastern Division, as given by the Financial Commissioner, are as follows:

	1887-88. Rs.	1888-89. Rs.
Meiktila	1,99 508	2,73,336
Yamèthin	2,15,312	2,18,188
Pyinmana	37,465	74,950
TOTAL	4,52,285	5,66,474

21. The recently published report on the inland trade of the province for the past year shows that there has been on the whole a large increase in the volume of the trade between Upper and Lower Burma. The following table shows the trade between Upper and Lower Burma during the past five years:

Routes.	Years.	Exports to Lower Burma.	Imports from Lower Burma.	Total.
		Rs.	*Rs.*	*Rs.*
River Routes.				
Irrawaddy	1884-85	1,70,87,169	1,99,36,690	3,70,23,859
	1885-86	1,24,69,382	1,53,66,706	2,78,36,088
	1886-87	1,21,51,429	2,06,10,160	3,27,61,589
	1887-88	1,34,96,388	3,27,45,145	4,62,41,533
	1888-89	1,78,69,581	2,75,03,370	4,53,72,951
Sittang	1884-85	17,07,371	2,76,667	19,84,038
	1885-86	25,06,865	1,85,675	26,92,540
	1886-87	7,35,209	1,36,314	8,71,523
	1887-88	10,10,180	84,072	10,94,252
	1888-89	24,97,639	...	24,97,639
Land Routes.				
Kyaukpyu	1884-85	33,361	43,219	76,580
	1885-86	16,238	16,546	32,784
	1886-87	24,326	19,014	43,340
	1887-88	33,866	25,973	59,839
	1888-89	37,234	24,455	61,689
Thayetmyo	1884-85	8,06,272	96,902	9,03,174
	1885-86	3,32,700	44,281	3,76,981
	1886-87	6,07,766	28,423	6,36,189
	1887-88	8,97,556	42,349	9,39,905
	1888-89	6,78,977	54,623	7,33,600
Toungoo	1884-85	6,05,157	3,60,760	9,65,917
	1885-86	1,96,638	4,66,711	6,63,349
	1886-87	58,521	1,62,613	2,21,134
	1887-88	1,10,320	21,725	1,38,045
	1888-89	3,27,074	26,31,092	29,58,166

The total value of the exports from Upper Burma into Lower Burma was Rs. 2,14,10,505 in 1888-89 as compared with Rs. 1,55,54,310 in the preceding year; of imports into Upper Burma, Rs. 3,02,13,540 as compared with Rs. 3,29,19,264 in 1887-88. The total value of the trade by the Irrawaddy river was less than in the previous year, aggregating Rs. 4,53,72,951 against Rs. 4,62,41,533. There was however a large increase under the head of exports to Lower Burma, the difference in favour of the past year being Rs. 43,73,193. In the value of imports from Lower Burma by the Irrawaddy route there was a decrease of Rs. 52,41,775. The increase in the case of exports occurred under the head of cattle, fruits, oils, silk goods, unrefined sugar, jade, letpet (pickled tea), and timber. Imports of piece-goods were less than in 1887-88 owing to the markets being overstocked by large imports in the previous year. The largest decrease (Rs. 24,00,000) occurred under the head of cleaned rice. This is a satisfactory sign as showing that the food-supply of the upper districts had become more nearly equal to the consumption. The trade by land routes increased from Rs. 11,37,789 in 1887-88 to Rs. 37,53,455 in the past year. Commenting on the inland trade of the quarter ending on the 31st December 1888. one of the local newspapers* remarked as follows:

"The report on the inland trade of Burma for the quarter ending the 31st December last shows signs of steady progress. There is a decline of about three lakhs, it is true, in

* *Rangoon Gazette*, dated 23rd March 1889.

the exports from Lower to Upper Burma; but as two lakhs of this are due to the exports of paddy and rice having been reduced to about 12½ lakhs of rupees worth in the third quarter of 1888-89 against about 14½ lakhs worth in the corresponding quarter of the preceding year, this decline is satisfactory. It is altogether an unusual and unsatisfactory condition of things that Upper Burma, with its scanty and poor population, should be in any way dependent on an imported supply of food; and a decrease in the imports of paddy and rice to the extent of two lakhs of rupees a quarter may show that, although parts of the country are still disturbed, throughout a considerable portion of the settled tracts the people are taking more to agriculture, and in the course of a few years more Upper Burma should be in a position to export a large quantity of surplus grain instead of having to import considerable supplies of food, because cultivation is neglected and the people are wholly given over to dacoity and lawlessness, as has been the case far too much during the past decade."

22. The completion without difficulty of the railway between Toungoo and Mandalay may be mentioned among the works of great importance accomplished during the past three years. The line has now been open without interruption for nearly six months. The following are the figures of the gross earnings of the line since March 1889:

	Rs.
March	1,44,789
April	1,29,859
May	1,56,484
June	1,22,616
July	1,16,955

Preparations have been made for the construction of a railway from Sagaing to Mogaung along the valley of the Mu river, which will be taken in hand as soon as the season permits. It is probable also that a reconnaissance will be made for the purpose of fixing on a line for a railway through the Shan States to China.

23. It may be as well to note that the action of the Government has not been confined to the suppression of disorder. Besides the large sums spent on the railway and on military works, the following sums have been spent in the civil department of public works:

Upper Burma.		Civil Buildings.	Communications.	Irrigation.	Total.
Original Works.		*Rs.*	*Rs.*	*Rs.*	*Rs.*
Official year	1887-88	8,84,621	16,60,634	35,300	25,80,555
	1888-89	11,76,433	12,48,775	81,808	25,07,016
April 1889		18,774	69,858	4	88,636
May 1889		44,369	1,01,249	5,133	1,50,751
Total Works		21,24,197	30,80,516	1,22,245	53,26,958

A further sum of Rs. 3,83,021 was spent on miscellaneous public improvements and a sum of Rs. 5,12,544 on repairs, making in all a total of Rs. 62,23,437 expended on civil works.

Much has been done to open up communications. A cart-road is open from Mandalay to Maymyo, 42 miles, on the Shan plateau. The cart-road to the Ruby Mines, 64 miles, is nearly complete. The cart-road to Fort Stedman and the Southern Shan States, from the Meiktila road railway station *viâ* Hlaingdet, has made good progress. The hitherto completely landlocked country of the Yaw is being opened up both from the Irrawaddy and the Chindwin. Shwebo has been connected with the river. These are some of the works that

have been done. In almost every district proper court-houses have been provided and good jails or lock-ups have been built. The military police battalions have been everywhere comfortably sheltered and provided with hospitals.

24. The system of making agricultural advances has been extended to Upper Burma with good results. The people are beginning to see that the Government takes an interest in their welfare, and they have shown their gratitude by punctually fulfilling their obligations. In 1888-89 the following advances have been given for the purchase of seed and plough-cattle:

	Rs.
Pyinmana	37,000
Pakôkku	10,000
Minbu	7,000
Magwe	26,000
Shwebo	20,000
Ruby Mines	500
Sagaing	20,000
Northern Shan States	5,000
TOTAL	1,25,500

In some districts the cattle have suffered from disease. But plenty of cattle are procurable by those who have money. Cattle suffered principally from smallpox and from rinderpest. The contagion is believed to have been brought from the Shan States, and was communicated to the village cattle owing to their mixing with the infected cattle in the village grazing-grounds. Ample security was given for all advances, which shows that the people of Upper Burma are not destitute, notwithstanding the losses which they must have sustained at the hands of dacoits and insurgents.

By order of the Chief Commissioner,

H. THIRKELL WHITE,
Officiating Chief Secretary.

The 20th August, 1889.

C. J. LYALL,
Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

WEATHER SUMMARY FOR AUGUST 1889.

General Weather conditions of the month.—The conditions of August are very similar to those of July. The monsoon currents usually prevail with great steadiness and extend over the greater part of the country. It is hence a month of frequent and in some districts of almost constant precipitation and of comparatively uniform temperature and high humidity. It is also usually the month of the greatest extension of the monsoon currents, and hence that in which Upper India obtains the largest amount of rain. Temperature hence falls to some extent in Sind and the West Punjab, which are in this, as in the three preceding months, the hottest districts of India. Pressure also tends to rise permanently in Upper India with the decrease of temperature, and before the end of the month the first indications of increasing weakness of the monsoon current are usually shown.

One of the most important features of the month is the position of the trough of low pressure in Northern India, the character of which was stated in last month's report. During the month of August last it generally occupied a somewhat more southerly position than usual, stretching across from Orissa to the Central Provinces and thence to Upper Sind.

A second important feature of the month is the small cyclonic storms which form at the head of the Bay and advance landwards. They always give more or less general rain, but its distribution depends largely upon the amount of concentration of the storm. If the depressions be shallow and extensive, the rainfall is generally moderate in amount and widely spread. If on the other they are deep and concentrated depressions they give heavy or excessive rainfall to narrow belts of country at the expense of neighbouring districts, and are hence frequently a cause of several local floods and inundations.

The Bombay current has been stronger and steadier than usual during the month. Winds of force 9 (hard gale) have been reported from the centre of the Arabian Sea. The Bengal current (as measured by the strength of the winds) has on the other hand been feeble and more largely diverted to Burmah than usual. The storms of the month have been due to shallower and more extensive depressions than usual, and hence have given widely spread and moderate rain. In consequence of the pressure conditions these storms advanced in every case to the Central Provinces and thence to Central India, and hence those areas received frequent and abundant rain. There was no prolonged general break in the rains such as sometimes occurs in August. The month has hence been more or less favourable over the whole of India and the rainfall generally abundant and well distributed.

Barometric depressions and cyclonic storms of the month.—There were three depressions during the month, but they were shallower and more diffused than usually occur in the month of August.

(1) ***Shallow depression of the 4th to the 11th August.***—The first indications of the formation of this depression were shown by the observations of the morning of the 4th, when the winds were shifting round to north-east on the Orissa and Bengal Coasts. The depression concentrated slightly during the day, and on the morning of the 5th a well marked moderate cyclonic circulation was established in the north-west angle of the Bay and adjacent coast districts. The centre crossed the Balasore Coast on the night of the 5th and moved westwards across Orissa into the Central Provinces on the 6th. The disturbance on the morning of the 7th covered the whole of the Central Provinces and part of Central India, the centre being a little to the east of Seoni. It now began to move slowly to the north-north-west, but was, as it had hitherto been, a shallow and

extensive depression. The centre was between Seoni and Saugor on the morning of the 8th and near Saugor on the 9th. It was then commencing to break up as the air motion was becoming irregular over the area of depression. The centre was midway between Saugor and Jhansi at 8 A.M. of the 10th. It filled up during the day after an existence of a week. This disturbance gave moderate rain to Bengal and Orissa during its earlier stages and a prolonged heavy burst of rain to the Central Provinces and eastern districts of Central India whilst it was advancing slowly northwards from Nagpur and Seoni to Jhansi. It recurved from west to north in the Central Provinces. It was throughout a shallow but somewhat extensive disturbance, and hence gave moderate and diffused rainfall over a large area rather than heavy concentrated rainfull over a narrow belt of country.

(2) *Shallow depression of 13th to the 20th of August.*—Almost immediately after the breaking up of the previous feeble storm the winds on the Bengal and Orissa Coasts shifted in the manner usually indicative of the commencement of the formation of a cyclonic storm in the north-west angle of the Bay. The indications of the storm were feeble from the 13th to the 15th, but on the morning of the 16th a shallow depression and moderate cyclonic circulation was established in the north-west angle of the Bay and adjacent coast districts. The centre crossed the coast near Saugor Island on the evening of the 16th, when it was advancing in a north-westerly direction. On the morning of the 17th the centre was a little to the south of Burdwan. The weather was now and during the next forty-eight hours stormy with heavy westerly gales over the whole of the north of the Bay. The centre moved more westerly than previously on the 17th and on the morning of the 18th was south of Benares. At that time the depression covered Behar, Chutia Nagpur, and the eastern districts of the North-Western Provinces. The centre advanced in a westerly direction during the next twenty-four hours and was a little to the north of Jhansi at 8 A M. of the 19th. The depression had intensified to some extent, and during the previous day the cyclonic circulation was more vigorous than it had been since it crossed the Bengal Coast. Strong westerly winds blew across Central India and the Central Provinces and gave general rain to these areas at this time, whilst the easterly winds from the Bay of Bengal fell off in strength. The depression hence was almost stationary during the next twenty-four hours, the centre being a little to the north of Jhansi at 8 A.M. of the 20th. There were indications of the formation of a shallow depression at this time in Bengal and the humid winds from the Bay had hence ceased to feed into the depression. The winds from the Arabian Sea fell off rapidly during the day, and the depression hence filled up with unusual quickness on the evening of the 20th. Its existence extended over a period of eight days. It was a slightly more concentrated storm than the previous and gave a general burst of rain to Bengal, Orissa, Behar, the Central Provinces, and Central India.

(3) *Land formed depression of 21st to 28th August.*—As already noted, there was a tendency to the formation of a shallow depression in Bengal shown by the barometer and wind observations of the 20th. A very shallow depression covered that area on the morning of the 21st. It moved very slowly to the west-south-west during the next three days, but showed no signs of concentration. It then advanced westwards into the Central Provinces on the 26th and filled up in that area on the 28th. It was hence throughout a very shallow and diffused depression of comparatively little importance. It gave moderate rain over a large area, including Bengal, Behar, the Central Provinces, and eastern districts of the North-Western Provinces.

Pressure.—The chief barometric movements occurred in connection with the feeble cyclonic storms described above. As they were shallower than usual, the pressure changes were somewhat less marked than is generally the case in August. The following table gives the larger oscillations of the barometric differences between Southern and Upper India during the month. They indicate roughly the variations in the general strength of the monsoon currents (more especially the Bombay current) blowing into India during the month:

Date.	Highest Pressure in Southern India or Ceylon.	Lowest Pressure in Upper India.	Range of Pressure or total gradient over In
1st	29·78″	29·52″	·26″
4th	29·80″	29·38″	·42″
12th	29·85″	29·56″	·29″
18th	29·87″	29·37″	·50″
27th	29·82″	29·52″	·30″
29th	29·86″	29·51″	·35″
31st	29·89″	29·59″	·30″

The average range of pressure over India in the month of August is slightly less than a third of an inch, and the average for the past month was slightly greater, and was associated with a strong monsoon current from the Arabian Sea.

The mean pressure of the month of the whole of India was ·018″ in defect.

The following table gives the barometric anomalies or local pressure variations in different parts of the country and those of June and July for comparison:

Province.	Barometric Anomaly.		
	June 1889.	July 1889.	August 1889.
Burmah	+ ·011	+ ·004	+ ·008
Bengal	+ ·008	+ ·017	— ·014
Assam	+ ·019	+ ·019	+ ·002
Behar and Chutia Nagpur	+ ·006	+ ·019	— ·007
North-Western Provinces	+ .003	+ ·015	+ ·005
Punjab	— ·016	— ·004	+ ·019
Sind and Rajputana	— ·013	+ ·005	+ ·005
Central India	— ·001	+ ·012	— ·001
Central Provinces	— ·004	+ ·005	— ·048
Bombay	— ·001	— ·025	+ ·002
Madras	— ·002	— ·026	+ ·012

The preceding table shows that the pressure relations changed considerably during the month of August. The most important features were the great deficiency in the Central Provinces and Berar and the excess in Upper India. The deficiency was absolutely greatest at the following stations:

Stations.	Deficiency.
Seoni	·074
Hoshangabad	·072
Jubbulpore	·064
Nagpur	·055

The excess in Upper India was greatest at Peshawar (·033″).

Temperature.—The temperature conditions of the month do not call for much remark. The month was one of fairly steady rainfall over by far the greater part of the country, and the variations of the temperature from the normal were hence generally small in amount. The variation of the mean

temperature from the normal from week to week and for the whole month is shown for different districts in the following table:

Province.	Difference of Mean Temperature from Normal for Week ending August				Difference of Mean Temperature from the Normal for the Month.
	5th.	12th.	19th.	26th.	
Burmah	+1·5	+0·6	+0·4	—0·8	+0·2
Bengal	+0·9	+1·2	+0·6	+0·5	+0·7
North-Western Provinces .	—1·2	+2·2	—0·3	+0·3	+0·1
Punjab	+0·4	+1·1	—1·4	+0·6	+0·1
Bombay . . .	+1·8	+0·7	+0·3	+0·6	+0·7
Central Provinces and Berar.	+1·8	—0·6	—1·9	—1·1	—0·9
Guzerat and Central India .	+1·7	+0·5	—1·2	—0·9	—0·1
Sind and Rajputana . .	+2·9	+1·2	+0·5	—0·9	+0·8
Madras	—0·2	—0·1	0	—0·2	0

The variation of the average temperature of the month from the normal was hence less than 1° in all districts.

The hottest part of India during the month included Upper Sind and the West Punjab.

The following were the highest temperatures registered in that area during the month:

Jacobabad	112·2°	on the 8th.
Multan	111·2°	„ „
Dera Ismail Khan	108·5°	„ 7th.
Peshawar	108·5°	„ 6th.
Lahore	105·6°	„ 5th.

Rainfall.—As already noted, there were fewer cyclonic storms than usual during the month. The three which occurred were much shallower and more extensive and diffused depressions than usual. Hence the rainfall of the month was on the whole very uniformly distributed. The Arabian Sea current blew with unusual steadiness during the month, whilst the Bengal current was below its normal force.

During the first week of the month the rainfall was normal or slightly in excess over the whole of India, with the exception of Sind, Rajputana and the Punjab, in which the rainfall was unusually scanty. The hottest temperatures of the month were recorded in Upper India at the end of this dry period. In the second week of the month larger amounts of rain were generally recorded. The Central Provinces and Central India received abundant rain from the storm which passed through them. The Punjab and Rajputana obtained moderate rain during the latter part of the week, chiefly from the Bombay current. In other districts the rainfall was generally slightly in excess.

The storm of the third week of the month gave rise for some time to strong winds of indraught from the Arabian Sea and Bay of Bengal, and hence general and favourable rain fell over nearly the whole country. The Central Provinces, Central India, and East Rajputana received the most abundant rain from the storm. Frequent showers fell in the Punjab, but the total amounts were generally below the average.

During the last week of the month the rainfall was larger than hitherto in Northern India, whilst smaller amounts fell in Southern and Central India. The districts of most abundant rainfall during the week were the North-Western Provinces and the eastern districts of Rajputana and Central India.

The rainfall of the month has hence on the whole been favourably distributed. It was in excess over nearly the whole of the interior and in moderate defect in the coast districts, where deficiency is least prejudicial. There was a moderate excess in Lower Burmah averaging 4·6 inches, and a deficiency ranging from 3·6 inches to 4·9 inches in Bengal, Assam and Chutia Nagpur. In Behar the rainfall of the month was very slightly below the normal. It was in excess over the whole of the North-Western Provinces (with some local exceptions), the Punjab, Rajputana, Central India, Berar, and the Central Provinces. The southern half of the Central Provinces received 7·14 inches, or 58 per cent. more than its normal amount. The rainfall of the month was deficient in the West Coast districts of Guzerat and the Konkan, and also in Hyderabad, but nowhere does the deficiency appear to have been large in amount except perhaps locally in some parts of the North Bombay Deccan. Over the whole of Southern India, including Malabar, Mysore and the Carnatic, there was a moderate excess.

The following table gives complete data, and shows the actual average rainfall and the normal rainfall of the month of the twenty-one districts into which the country is divided, so far as it is indicated by the telegraphic reports of a few stations in each district:

Districts.	Number of Stations.	Normal Average Rainfall in August.	Actual Average Rainfall in August 1889.	Difference from the Average in August 1889.
Punjab, West	7	5·94	6·40	+ 0·46
„ East	4	9·42	10·81	+ 1·39
North-Western Provinces, Trans-Gangetic .	8	13·95	18·69	+ 4·74
[illegible]	[illegible]	[illegible]	[illegible]	— 2·17
[illegible]	[illegible]	[illegible]	[illegible]	— 0·79
North Bengal	3	18·99	14·11	— 4·88
Assam—Cachar	3	16·02	12·21	— 3·81
Lower Bengal and Chutia Nagpur . .	8	14·30	10·67	— 3·63

JOHN ELIOT,

Meteorological Reporter to the Government of India.

SIMLA, *27th September, 1889.*

E. C. BUCK,

Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on Monday, September 30th, 1889.

The meteorological changes of the past week have exhibited a steady advance towards cold weather conditions, the rainfall area has contracted and the fine settled conditions which in the preceding week were confined to North-Western India spread eastward and southward so as by the end of the week to include nearly the whole of the Indian region except Burmah and Assam. The Commander of the Mail Steamer which crossed the Arabian Sea during the week experienced light to moderate westerly to southerly winds and fine weather during the passage. Hence it may fairly be concluded that so far as the greater part of the Indian region is concerned the monsoon season of 1889 is ended, and that the period of calms and light variable breezes which annually precedes the appearance of the north-east monsoon is apparently setting in. In the extreme south there is still a certain amount of monsoon current which at the close of the week swept across Ceylon and the Bay and gave general rain to Burmah, South-East Bengal and Assam, but this was the only region where anything approaching monsoon conditions prevailed. A very feeble low pressure area was established over the Bay, Burmah and Lower Bengal on the 25th, and for a time conditions were favourable to the formation of a considerable depression, but the barometer rose on the 26th and the depression slowly moved northward into Bengal, where it filled up.

On the 24th pressure was high on the Malabar Coast, low in Sind, and low within a large area which enclosed Bengal, the North-Western Provinces, the Circars and the north of the Bay. The winds varied largely in direction. There was a fairly steady westerly and south-westerly current across the Sind and Guzerat Coasts into Rajputana, a north-westerly current in the Central Provinces, and a south-easterly and easterly current along the foot of the hills. Elsewhere the directions were very variable. On the 25th a well marked but shallow depression overlay the Bay, Burmah and Bengal. The barometric depression was however apparently very slight, and beyond north-easterly winds in Bengal there was very little trace of cyclonic movement. Light easterly and south-easterly winds prevailed along the foot of the hills and north-westerly to westerly winds over the central parts of the country and the Gangetic plain, but elsewhere the directions were very variable. On the 26th the barometer was rising generally, but owing to the comparatively slight increase over the Bay, the depression in that region was somewhat more strongly marked than on the previous day, more particularly to the southward, where gradients were moderately steep and where probably a moderately strong monsoon current was blowing. Cyclonic movements around the Bay were more marked than on the preceding day, there being a general indraught from the shores towards the centre of the Bay. A north-westerly and westerly current is blowing down the Gangetic plain and variable breezes over the Peninsula. The Chart of the 27th showed that the depression had moved quickly northward and lay over Bengal and that it had become very much smaller. The cyclonic movements over the Bay had consequently disappeared and westerly and west-north-westerly winds prevailed over Northern India, south-easterly and easterly winds in Burmah, and calms and variable winds in the Peninsula and at the central stations. Gradients were still moderately steep in the south, and a fairly strong monsoon current prevailed at Colombo and across the south of the Bay. On the 28th the general features of the pressure distribution were the same, readings decreasing from a high pressure area overlying the Malabar Coast and the south of the Bay to a low pressure area over Bengal. Over the Peninsula calms and variable breezes still prevailed, but over the greater part of India there was a fairly general westerly or west-north-westerly current,

and over Burmah winds from south-west to south-east. In Ceylon and across the south of the Bay a fairly strong monsoon current still prevailed. On the 29th pressure fell over North-Western India, while it rose slowly over the Peninsula. In consequence barometric gradients became steeper generally and much of the variability which had previously characterised the wind directions disappeared, and a fairly general westerly or west-north-westerly current prevailed over a large part of India. In Burmah the wind was south-westerly and south-easterly. On the 30th the barometer had risen briskly over Northern India and slightly in the south. Hence the gradient had decreased and the wind, more particularly over the Peninsula and the central parts of the country, become again variable. In Northern India the wind was west-south-westerly and in Burmah southerly and south-westerly.

Temperature.—Most of the variations of temperature from the mean during the past week have been due to the varying amount of rain received in the different Provinces compared with the average, but the relative coolness of the Punjab and North-Western Provinces is due to other causes. The day temperatures over the region including the North-Western Provinces, the north of Rajputana, the Punjab, Upper Sind, and Baluchistan have on nearly all days exceeded the normal average, but the night temperatures, owing probably to extreme dryness of the air permitting excessive radiation, have been largely below the average, and hence the mean of the day and night observations over this region exhibits a deficiency. In the other Provinces, as stated above, the variations of temperature coincide roughly with the variations of rainfall. Thus in Burmah the earlier days, when rain was slight, were warmer and the latter days, when rain was heavy, were cooler than usual. In Bengal, where rain ceased on the 24th, one day was cooler and six warmer than the average. Bombay and Sind showed the same proportion, and the Central Provinces and Central India were warmer than the average throughout. Madras, where there was a good deal of rain, was cooler than usual. The warmest day was the 26th, when only two Provinces, *viz.*, the Punjab and Madras, reported any deficiency of heat. Maxima exceeding 100° were recorded in several parts of North-Western India throughout the week, the highest reading being 105·4° at Jacobabad on the 24th.

The following table shows the amount of excess or defect of the mean average temperature of the different Provinces for the present and for the preceding week:

PROVINCES.	Difference of Mean Temperature of Last Week from Normal.	Difference of Mean Temperature of Present Week from Normal.
Burmah	— 0·1°	— 1·0°
Bengal	— 0·9°	+ 1·0°
North-Western Provinces	+ 0·2°	— 0·7°
Punjab	+ 1·0°	— 0·8°
Bombay	+ 2·0°	+ 0·9°
Central Provinces	+ 2·2°	+ 2·1°
Guzerat and Central India	+ 2·9°	+ 1·6°
Sind and Rajputana	+ 3·5°	+ 0·6°
Madras	— 0·7°	— 0·9°

This table shows that except in Bengal the weather has on the whole, and relatively to the average, been cooler during the present than during the past week.

Rain.—As mentioned above, the amount and extent of rainfall have both decreased during the past week. The rainbearing monsoon current has practically ceased except in the extreme south, and there have been no travelling cyclones such as occasionally carry heavy rain over a large tract of country. Hence conditions have been generally unfavourable to rainfall and the most part of the rain shown in the concluding table is due to showers.

The following is a brief description of the daily distribution of rainfall:

On the 24th a few slight showers were reported from parts of the Punjab and general rain from Lower Bengal, Assam, Lower Burmah and the whole of the

Peninsula south of Vizagapatam on the one side and Ratnagiri on the other. On the South-West Coast the amounts were large. On the 25th rain had ceased in the north-west and almost ceased in Bengal, but in Burmah and the Peninsula general rain continued. A similar distribution prevailed on the 26th, 27th, 28th, and 29th, the amount of rain over the Peninsula steadily becoming less, though the extent of the rainfall area remained little altered. On the 30th rain practically ceased over the Peninsula. It continued to fall in Burmah, and a patch of rain also occurred over the Central Provinces.

The concluding table shows that the rainfall of the week was in excess at only sixteen of the rainfall districts and in defect at thirty-two districts, while in two there was no variation from the average. Sind and Chutia Nagpur have received no rainfall whatever. In the former division none is expected and the defect is unimportant, but in Chutia Nagpur the normal fall is about 1½ inch. In the Punjab the average rainfall throughout the whole Province is less than $\frac{1}{10}$ of an inch, and in some districts in that Province the deficiency is large. In the North-Western Provinces and Rajputana the rainfall has been almost equally scanty both absolutely and relatively to the average. In contrast with these scanty rainfalls are the rainfalls of Tenasserim, Arakan and the west of the Peninsula, where the amount of rain received during the week has been from two to three times the normal.

The whole of Burmah and the Surma Valley of Assam have received excessive rain, the excess in Tenasserim and Arakan being large and in Cachar and Lower Burmah small. The whole of Northern India, comprising Bengal, the North-Western Provinces, the Punjab and Rajputana, has on the contrary received a short supply, the deficiency ranging from only a few hundredths in parts of the Punjab to as much as 3 inches in North Bengal. The rainfall of the west of the Peninsula comprising the divisions of Malabar, Coorg, Mysore, the Konkan and the Bombay Deccan, as well as northward over Khandeish and the west of the Central Provinces, has been everywhere in excess of the average. The heaviest fall relatively to the average was in the Konkan, where the amount was three times the average. In the central parts of the country including Berar, the greater part of the Central Provinces, Central India, Kathiawar and Guzerat the rainfall was more or less short; but as the amount ordinarily received over the greater part of this district is not large at this season, the deficiency is probably unimportant. Over the east of the Peninsula the rainfall in relation to the average varies a good deal, excessive falls being reported from Jeypore (Madras), Hyderabad, and the centre and south of the East Coast, and defective falls from the Circars and Central and South Madras.

The returns of maximum falls now show very few large amounts. In Tenasserim one station received 21 and another 18 inches of rain during the week, but these amounts were exceptional, and in other parts of Burmah there were no heavy amounts recorded. Cherrapunji received only 4½ inches and in most of the other districts in Bengal and Assam the falls were proportionately low; but in some parts of Behar amounts varying between 3 and 9 inches were reported. In the North-Western Provinces, the Punjab, Rajputana, Sind and Guzerat there were hardly any stations the total rainfall of which exceeded 1 inch; but in the central parts of the North-Western Provinces there was a local patch of rain where the week's amounts varied between 2 and 6 inches. In the West Coast districts there were several instances of heavy falls, the largest being 15 inches at Karwar and 10½ inches at Cannanore. In the central parts of the country the falls were fairly large, and in Madras they varied between 2 and 7 inches.

The state of the seasonal rainfall is shown in the concluding column of the table. The following are the divisions in which the total rainfall since the middle of May is deficient by amounts exceeding 10 per cent.:—Lower and Central Burmah, East and Deltaic Bengal, the west of the North-Western Provinces, the Central, Submontane, Hill and north-west districts of the Punjab, Khandeish, Guzerat, Sind and Rajputana West. Of these the only addition since last week is Deltaic Bengal.

Simla, *3rd October, 1889.*

W. L. DALLAS,
Assistant Meteorological Reporter to the Government of India.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 28th September.*—Rainfall fair and general; slight in Madras, Tinnevelly and Coimbatore. Crops generally good, but dry crops suffering from excessive rain in parts of Kistna, Bellary and Anantapur; damaged by floods in Kurnool, and withering from want of rain or water in parts of Chingleput and South Arcot. Prices rising in five districts, falling in eleven, and stationary in others. Labourers employed on last day of week on Rushikulya works, 3,618; Gopalpore Canal, 744; Ghat Roads, 3,971; other minor works, 6,376. Number on village relief on 21st September, 38,222, including 23,090 children; fed in kitchens, 10,628, including 7,645 children. Imports into Ganjam during week by sea and land, 686 tons. General prospects favourable.

Bombay.—*For week ending 2nd October.*—Rain during week good and beneficial to crops and fodder throughout the Deccan, Southern Mahratta Country, and Ratnagiri; moderate or slight in other districts of the Presidency Proper. More rain needed in one taluka of Khandesh and parts of Guzerat, Nasik, Thana and Colaba. Standing crops damaged by locusts almost throughout Sind and in parts of Ahmedabad, Khandesh and Baroda. Cotton blighted in parts of Hyderabad, and *bajri* damaged by excessive rain in one taluka of Poona. Crops otherwise good except in one taluka of Khandesh. Sowing of late crops retarded by excessive rain in parts of Ahmednagar and Dharwar; progressing in other districts. Fodder scarce in parts of Dharwar.

Bengal.—*For week ending 1st October.*—Practically no rainfall during the week except in the eastern districts and Darjeeling. The break has been beneficial in the northern districts, where heavy rain fell in the previous week; but more rain is wanted in some of the western districts and in Balasore and Singhbhum. Winter rice is generally promising except in parts of Burdwan, Hughli and Balasore where the rainfall has been scanty, and in places in Central and Northern Bengal where some damage has been done by floods. The floods in Murshidabad, Nadiya, and Jessore are subsiding rapidly. Harvesting of early rice, jute and other autumn crops is nearly over, and cultivation for *rabi* crops has begun. Sugarcane is generally in fair condition. Scarcity of fodder reported in some places in Dacca and in the east of Bogra. Sufficient foodstocks in the affected tracts. In Chumparun and Muzaffarpur loans and charitable reliefs are being given, but in the latter district the demand for charity is decreasing. In Midnapur 349 persons received charity during the past week.

North-Western Provinces and Oudh.—*For week ending 2nd October.*—The weather has been bright and seasonable. More rain is wanted in some places. *Kharif* harvesting continues; a good outturn expected. Ploughing for and sowing of the *rabi* are in progress. Markets are well supplied, and prices remain steady or show a tendency to fall.

Punjab.—*For week ending 2nd October.*—Slight rain has fallen in Ferozepore and Rawalpindi districts. Prices unsettled in Sialkot, rising in Rawalpindi, and stationary elsewhere. Harvesting of *kharif* crops commenced in certain districts; ploughings for *rabi* sowings commenced. Rain much wanted throughout the Province. Standing crops are reported to be generally good. *Kharif* outturn below average in Umballa. Locust swarms were frequent lately in Mooltan, but did no great damage. Fodder is sufficient everywhere.

Central Provinces.—*For week ending 2nd October.*—Weather cloudy and close, with occasional heavy showers in a few districts; more rain would be beneficial in Jubbulpore and Bilaspur, but the prospects of the *kharif* crops are generally very good. Ground being ploughed for *rabi* sowings. Linseed sowing commencing in Chhattisgarh. Prices steady.

Burma.—*For week ending 28th September.*—There has been a fair fall of rain throughout Lower Burma, and agricultural prospects are good in all districts. In Upper Burma more rain is wanted in Shwebo; in other districts the fall is reported to have been sufficient and the crop prospect is fair. In Lower Burma the price of paddy has fallen slightly in Akyab, Thongwa, Thayetmyo, Amherst and Mergui, and risen slightly in Tharrawaddy and Henzada; in other districts the price is unchanged. In Upper Burma the price has risen slightly in Shwebo; in the other districts there are no fluctuations. The foodsupply is sufficient throughout the Province.

Assam.—*For week ending 2nd October.*—Weather seasonable. Rainfall light. Reaping of early and transplanting of late rice nearly over. Tea and other crops generally doing well.

Mysore and Coorg.—*For week ending 2nd October.*—Rain in the Civil and Military Station of Bangalore 5·38 inches. Rainfall good throughout the State. Condition of crops and prospects good. No material change in prices.

Rainfall 2·73 inches in Coorg. *Ragi* crops damaged by unseasonable rains; other crops in good condition.

Berar and Hyderabad.—*For week ending 2nd October.*—Average rainfall 1·10 inch in Berar. Weather warm and cloudy. Crops in good condition. Fodder sufficient. Prices of foodgrains stationary. Cattle free from disease.

Rainfall in Hyderabad during the week 3·4 inches. Total since 1st January 32·7 inches. *Abi* crops prospering. Harvesting of some *kharif* crops commenced. Prices stationary.

Central India.—*For week ending 2nd October.*—Rain slight and partial; more wanted in Bundelkhand, elsewhere sufficient. Crops generally good. Prices falling in Goona and parts of Bhopawar; steady elsewhere.

Rajputana.—*For week ending 2nd October.*—Slight rain in a few places. Standing crops slightly damaged by locusts in Meywar, Jeypore, and Marwar. Rain much needed in Kerowlee, Harowtee, Ulwar, and Sirohi. Agricultural stock good. Pasturage sufficient. Fodder dear in Marwar. Prices steady generally.

Nepal.—*For week ending 26th September.*—Unusually heavy rainfall during two days. No damage however to the ripening crops. Prospects remain very good.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on Monday, October 7th, 1889.

Fine clear weather has continued over North-Western India throughout the whole week and over the Peninsula, Central India and the Central Provinces from the 1st to the 3rd of October, after which date frequent and general showers occurred. The mail steamer *Coromandel* experienced light variable winds and fine weather from Aden to Long. 61° E., and thence to Long. 71° light to moderate north-east breezes and fine weather. From Long. 71° E. to Bombay fresh north-west winds and heavy rain were reported. This report shows that the north-east winds of the cold weather have commenced over the centre of the Arabian Sea, and that the south-west monsoon except in the extreme south has completely given way. In the Bay of Bengal, though it cannot be said that the north-easterly winds of the cold weather have appeared during the week, there are yet indications of that recurving of the monsoon current which gives the north-east monsoon to the Coromandel Coast and which is accompanied by the appearance of north-easterly breezes over Assam, Bengal and the north of the Bay. In Ceylon there have been south-westerly winds and rain throughout the week, showing that in the extreme south of the Indian region the moist current of the south-west monsoon is still maintained. There have been one or two efforts at depression formation over the Bay during the week, but the necessary energy was apparently wanting and the disturbances never developed beyond the most feeble depressions, and the cyclonic circulations accompanying them were weak and irregular.

On the 1st pressure was very uniform throughout the whole of India, but moderate gradients existed over the Bay and a high-pressure area was shown over the Gulf of Martaban. Calms or very variable breezes were reported from most districts, but a strongish southerly current was blowing over Lower Burma and up the valley of the Irrawaddy. On the 2nd the chart showed that the barometer had risen over the greater part of India, while it had fallen over Burma. In consequence the gradients over the Bay and Burma had disappeared and pressure was generally uniform. The winds were again light and variable. On the 3rd the tendency towards complete uniformity had advanced, and beyond a very slight and unimportant deficiency along the west coast of the Bay readings were very uniform everywhere. By the morning of the 4th this slight deficiency over the west of the Bay had developed into a well defined but shallow depression, and the barometer was falling briskly at the Madras stations and slightly elsewhere. Winds were practically unchanged. They were very irregular in direction around the Bay, and there was no indication of the establishment of cyclonic conditions which are ordinarily antecedent to the appearance of the north-east monsoon on the Madras Coast. On the morning of the 5th the barometer was rising over the Bay, while it was steady or falling elsewhere. In consequence the depression over the Bay had to a large extent filled up, and readings were again very uniform throughout the Indian region. Light and variable breezes were the prevalent feature of the air circulattion except

around the Bay, where there was a certain amount of indraught towards the centre of the Bay. A small shallow depression was shown on the West Coast near Karwar. The chart of the 6th showed that the depression on the West Coast had developed somewhat and passed northward to the neighbourhood of Bombay. The weather was consequently unsettled on the Konkan Coast and a cyclonic circulation of fresh winds prevailed around a centre near Bombay. Elsewhere conditions were practically unchanged, uniform pressures and light variable breezes prevailing generally. On the 7th owing to a brisk fall of the barometer off the Madras Coast, a fresh depression was developed over the west of the Bay, and there were feeble and irregular cyclonic circulations over different parts of the Bay. The depression which has been shown near Bombay on the 6th had continued to advance northward, and its northern limits on the 7th extended into Kathiawar. Strongish south-easterly winds were blowing at Bombay, and the north-westerly winds and heavy rain reported off Bombay were doubtless attributable to this disturbance.

Temperature.—The characteristics of temperature have been approximately the same as those of the past two weeks, *viz.*, high day and low night temperatures. This characteristic has been more marked in North-Western India than elsewhere, but has been more or less observable in all parts of India except the Central Provinces, &c., and Burma, where owing to excessive rain the day temperatures have also been low. Maxima exceeding 100° were reported continuously during the week from the south and west of the Punjab and from Upper Sind.

The following table shows the amount of excess or defect of the mean average temperature of the different Provinces for the present and for the preceding week:

PROVINCES.	Difference of Mean Temperature of Last Week from Normal.	Difference of Mean Temperature of Present Week from Normal.
Burma	— 1·0°	— 0·8°
Bengal	+ 1·0°	+ 1·0°
North-Western Provinces	— 0·7°	+ 0·6°
Punjab	— 0·8°	— 0·6°
Bombay	+ 0·9°	— 0·1°
Central Provinces	+ 2·1°	+ 0·6°
Guzerat and Central India	+ 1·6°	+ 1·3°
Sind and Rajputana	+ 0·6°	— 0·4°
Madras	— 0·9°	— 0·4°

This table shows that over the greater part of the country the mean temperature relatively to the average is little changed. The weather is 1° cooler in Bombay, Sind and Rajputana and 1½° cooler in the Central Provinces in this week than last; but elsewhere there is little alteration. The variations from the average are small, being less than 1°, except in Bengal and the Central Provinces.

Rain.—The relative distribution of rainfall during the present has been approximately the same as that reported last week except that there has been more rain over the Central Provinces, Guzerat and Kathiawar and less over North-Western India. The feeble depressions which have appeared over the Bay have occasioned more or less rain in their neighbourhood and the small storm which crossed Bombay gave fairly heavy rain to the Konkan and

neighbouring districts, but otherwise nearly all the rain which has fallen has been due to local showers.

The following is a brief description of the daily distribution of rainfall:

On the 1st there were a few scattered showers on the West Coast, in Khandeish and the Central Provinces, and heavyish rain in Burma. On the 2nd the distribution of rain was the same, but the amount had fallen off in Burma. The chart of the 3rd showed that the rainfall area had extended, general though slight rain being reported from the west coast of the Bay, South India, the Central Provinces and Central India, as well as from several parts of Bengal. On the 4th a similar distribution prevailed, but the falls were heavier both on the East and West Coasts of the Peninsula. On the 5th, 6th and 7th there was very little change, rain falling generally over the Peninsula, the Central Provinces, Burma and Bengal.

The table at the close of the summary shows an excess of rain at eighteen of the rainfall divisions and a deficiency at thirty-one. With the exception of a few drops in the centre and west of the North-Western Provinces, there has been no rain whatever over the whole of Northern India from Behar north-westward to the Indus. In most of the more western divisions of this region the ordinary fall during this week is very small and the absence of rain is hence unimportant, but in the eastern divisions the average fall is larger and the want of rain will probably be felt. The excess in Guzerat, Kathiawar and the Konkan is relatively considerable, but in the other divisions reporting heavy rain the excess is small.

In Burma two divisions, *viz.*, Lower and Central Burma, report heavy, and two, *viz.*, Tenasserim and Arakan, light rainfall. In Bengal and Assam every division shows short rain, and from Behar north-westward to the Indus, excluding the centre and west of the North-Western Provinces and including the west of Rajputana and Sind, there has been no rainfall whatever throughout the week. The West Coast districts as well as Khandeish, Berar and the west and centre of the Central Provinces have received more than the average amount of rain, and this excess has spread north-westward into Guzerat and Kathiawar. The east of Central India has also received heavy rainfall for the season, but the west of Central India as well as the whole of Rajputana has been practically without rain. The northern and southern parts of the Madras Presidency have had excessive rain, but the south of the Nizam's divisions and also the central divisions of Madras have all had a deficient supply of rain.

The state of the seasonal rainfall is shown by the last column of the table. The following divisions exhibit a deficiency exceeding 10% on the total rainfall which has been received since the 15th of May last:—Central Burma, East Bengal, Deltaic Bengal, the west of the North-Western Provinces, the central, submontane, hill, and north-western districts of the Punjab, Sind and Rajputana West. All these divisions were included in the deficiency list at the time of the last report, so that as Lower Burma, Khandeish and Guzerat have dropped out, the present report shows a slight improvement on its predecessor.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 5th October.*—Rainfall general; good in most districts and slight in Nellore and Madras. Crops generally good, but affected by excessive rain or moisture in parts of Kistna, Bellary, Anantapur and Nilgiris; withering from want of rain in parts of South Arcot. Prices generally falling or stationary. Labourers employed last day of week,—Rushikulya works, 3,774; Gopalpore Canal, 730; Ghat Roads, 2,779; other minor works, 6,317. Number on village relief on 28th September, 28,266, including 17,122 children; fed in kitchens, 7,173, including 5,314 children. Imports into Ganjam during week by sea and land, 293 tons. General prospects favourable.

Bombay.—*For week ending 9th October.*—Rain during week generally sufficient; in parts excessive and injurious to crops. Standing crops generally good, but damaged by locusts and other insects in parts of Sind. Harvesting and sowing operations progressing. Fodder sufficient and agricultural stock healthy.

Bengal.—*For week ending 8th October.*—Rainfall has been general in Orissa, and showers are also recorded from some other districts, chiefly in Central and Eastern Bengal. Winter rice is generally in good condition, but requires more rain in the districts of the Burdwan and Chota Nagpur divisions, in some of the Cachar districts and in Balasore. In Burdwan, Hooghly and Balasore the rainfall has been deficient and the winter rice will be a short crop in consequence. Autumn harvests are nearly finished, and cultivation for the *rabi* crops is in progress. Sugarcane is generally recorded to be fair. Food-stocks are plentiful, and prices are steadily falling in the affected tracts in North Behar. In Chumparun the demand for gratuitous relief is on the decrease.

North-Western Provinces and Oudh.—*For week ending 9th October.*—Weather continues seasonable, but rain is still wanted in a few districts. The *kharif* crops are being harvested, and *rabi* sowings are in active progress. Prospects good. Supplies everywhere ample, but prices are rising in some districts owing to the demand for seed.

Punjab.—*For week ending 9th October.*—No rain. Prices are stationary in all districts except Rawalpindi, where they are rising. Harvesting of *kharif* crops commenced in Umballa and Dera Ismail Khan. Ploughing for *rabi* in progress. Rain much wanted for *rabi* sowings throughout the Province and also for *kharif* in Sialkot and Lahore. Condition of crops generally good except in Hissar, where they are withering. Prospects of standing crops are said to be generally fair. Outturn of cotton good in Peshawar. Fodder sufficient throughout the Province.

Central Provinces.—*For week ending 9th October.*—Weather hot and cloudy with occasional showers. Prospects of *kharif* crops generally continue very good. Outturn of *rabi* somewhat short in Jubbulpore owing to deficient rainfall; some more rain also required in eastern districts. Rice is being cut in Sambalpore, and the crop is a full one. Sowings of *rabi* crops commencing under favourable conditions. Prices steady.

Burma.—*For week ending 5th October.*—Sufficient rain fell throughout Lower Burma, and the crop prospect is generally good. Rain fell in all parts of Upper Burma, and the crop prospect is generally improving, but a little more rain is wanted in Meiktila. The price of paddy has risen 6 per cent. in Tharrawaddy, and fallen 7 per cent. in Akyab and 5 per cent. in Sagaing. No other changes are reported.

Assam.—*For week ending 9th October.*—Weather and rainfall seasonable. Prospects of rice and tea good. Sowing of pulses progressing.

Mysore and Coorg.—*For week ending 9th October.*—Rain has fallen more or less throughout the State of Mysore. Crops good. Sowing completed in parts. Outturn of harvest fair. Prices slightly risen in the Bangalore district.

Rainfall 1·54 inches in Coorg during the week. Picking of cardamom crop has commenced.

Berar and Hyderabad.—*For week ending 9th October.*—Average rainfall in Berar 1·70 inches. *Kharif* in good condition. Prices steady. Cattle healthy. Weeding continues. Preparation of fields for *rabi* in progress.

Rainfall in Hyderabad during the week 1·21 inches. *Abi* crops prospering. Water in tanks sufficient. Reaping of *kharif* crops in progress, but much retarded owing to continuous rainfall, which, though beneficial to *abi* crops, is doing damage to *kharif* crops. Prices stationary.

Central India.—*For week ending 9th October.*—Rain generally sufficient throughout Agency except in Gwalior. Probable outturn good generally. Prices falling in Goona and in parts of Bhopawar, and rising in Neemuch.

Rajputana.—*For week ending 9th October.*—Slight rain in some places. Standing crops slightly damaged by locusts in Marwar, Meywar and Jeypore. Rain much needed in some districts. Agricultural stock good. Pasturage sufficient. Fodder dear in Marwar. Prices steady generally.

Nepal.—*For week ending 3rd October.*—No rain. Night dews and morning mists commenced. Prospects very good.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

RAILWAY TRAFFIC.

No. XXIV. OF 1889-90.

APPROXIMATE STATEMENT OF GROSS RECEIPTS AND EXPENSES OF INDIAN RAILWAYS.

N.B.—As regards the figures in column *Total Receipts from 1st April to date*, audited figures have been used as far as possible.

Latest Return received.	Railways.	Week ending 15th September 1888. Total mean length open.	Receipts. Total.	Per mile open.	Week ending 14th September 1889. Total mean length open.	Receipts. Total. GOVERNMENT OF INDIA.

HOME DEPARTMENT.

The following Resolution is published for general information:

PROCEDURE TO BE FOLLOWED IN THE TREATMENT OF CASES OF INDEBTEDNESS OF GOVERNMENT OFFICIALS.

No. $\frac{29}{1770-92}$.

Extract from the Proceedings of the Government of India in the Home Department (Public),—under date Simla, the 8th October, 1889.

Read again—

Home Department Resolution No. 2-77 to 102 (Public), dated 19th January, 1884.

RESOLUTION.

In the Resolution of January 1884 cited in the preamble the Governor General in Council invited the attention of all Local Governments and Heads of Departments to the imperative duty which devolves on them of taking severe notice of the conduct of clerks and other employés who allow themselves to fall into embarrassed circumstances, and it was pointed out that Assistants in Government offices should clearly understand that, if they voluntarily contract debts or obligations which they are unable to meet, they render themselves liable to summary dismissal.

2. His Excellency in Council has reason to fear that the tenor of these orders has not always been properly understood, and desires to supplement them by more definite instructions as to what constitutes such a state of indebtedness as to render it undesirable that a person should be retained in the public service. The Governor General in Council accordingly directs that where half the salary of a Government official is constantly being attached for debt, or has been continuously under attachment for more than two years, or is attached for a sum which, under ordinary circumstances, it will require more than two years to repay, a full schedule of the officer's debts should be obtained by the head of the office and the case dealt with in the same way as if the debtor had taken advantage of the insolvency court. In such cases it should be specially ascertained—

(1) what is the proportion of the debts to the salary and the extent to which they detract from the debtor's efficiency as a public servant;

(2) whether the debtor's position is irretrievable;

(3) whether it is desirable under the circumstances to retain him—

(*a*) in the particular post he occupies, or

(*b*) in any position under Government.

A

It will be for Local Governments and the different Departments under the Government of India to issue subsidiary directions to officers subordinate to them as to the authority to which the schedule of debts and the report on it should be submitted for orders.

ORDER.—Ordered, that this Resolution be communicated to the Local Governments (except Madras) and Administrations; to all the Departments of the Government of India and to the Heads* of offices under the Home Department.

* Superintendent of Port Blair and the Nicobars.
Sanitary Commissioner with the Government of India.
Surgeon-General with the Government of India.
Secretary, Board of Examiners.
Registrar, Calcutta University.
Bishop's Chaplain.
Registrar, High Court (with usual covering letter).

(True Extract.)

C. J. LYALL,

Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on Monday, October 14th, 1889.

There has been no change in the general meteorological conditions. The fine weather which prevailed over nearly the whole of Northern India and the unsettled showery weather which prevailed over Bengal and the Peninsula have alike continued uninterruptedly during the week under review. In the Bay of Bengal the change to cold weather conditions has been carried out during the week, and the north-east monsoon has burst on the Coromandel Coast early and with somewhat more than the usual vigour. During the greater part of the period under review pressure has been very uniform, and the weather undisturbed; but towards the close of the week a well marked depression formed over the Bay, and established a fairly complete cyclonic circulation over the greater part of the Bay.

On the 8th pressure was very uniform all over India, though slightly higher in Assam and lower in Madras than elsewhere. The winds were very light and very variable in direction, and over North-Western India calms were reported in the majority of cases. On the 9th the uniformity of pressure and the variability of the winds continued, and the general weather conditions were such as are ordinarily experienced during October when the transition is effected from the rains to the cold weather. On the 10th the only change of importance was the brisk fall of the barometer which occurred in the Punjab and resulted in the production of a well marked depression. The winds showed an irregular circulation around this low pressure area, but elsewhere the directions remained irregular and variable. The Chart of the 11th showed a further development of the Punjab depression, and a more complete cyclonic circulation of the winds in North-Western India. Elsewhere uniform pressures and variable winds continued. On the evening of the 11th the Punjab depression apparently moved northward into the hills, as slightly unsettled and thundery weather was experienced there, and the next morning the barometer was rising all over Northern India, and no trace of the depression remained. On the morning of 12th a shallow low pressure area lay off the West Coast of the Peninsula, but otherwise readings were very uniform. On the 13th the barometer began to fall over the Bay and a depression to form there. At the same time the wind drew into north on the Circars Coast and into north-west from Madras to Negapatam, showing an initial cyclonic circulation around the Bay. The lowest recorded readings of the barometer were however still reported from the West Coast. In Northern and Central India the barometer was very uniform, the winds light and the weather fine. On the 14th the depression over the Bay had undergone very considerable development, the barometer had fallen briskly off the Coromandel Coast, and a small centre of depression was advancing towards the coast between Madras and Nellore. Strongish cyclonic winds prevailed over the south-west of the Bay, and the weather there and over the Peninsula generally was unsettled. Over Northern India and the north of the Peninsula steady fine weather and light variable winds prevailed.

Temperature.—The remarkably low night temperatures, which have prevailed during the past few weeks over the greater part of Northern and Central India, have been equally noticeable during the present week, the relative coolness, indeed, showing signs of increasing. At Quetta on the 14th the minimum was 6° below the normal, at Multan 8°, at Lahore and Sirsa 10°, at Meerut Sambhar, Ajmere and Rajkot 7°, and at Deesa 9°; these differences being on the whole larger than those of the preceding days. At the close of the week in the Punjab the day temperatures also fell below the normal, and the general deficiency over that Province became nearly 4°. This early coolness over North-Western India is the more remarkable, as there does not appear from the reports to have been any early snow in the mountains.

The following table shows the amount of excess or defect of the mean average temperature of the different Provinces for the present and for the preceding week :

PROVINCES.	Difference of Mean Temperature of Last Week from Normal.	Difference of Mean Temperature of Present Week from Normal.
Burma	— 0·8°	+ 0·9°
Bengal	+ 1·0°	+ 0·9°
North-Western Provinces	+ 0·6°	+ 0·7°
Punjab	— 0·6°	— 1·5°
Bombay	— 0·1°	+ 0·9°
Central Provinces	+ 0·6°	+ 0·9°
Guzerat and Central India	+ 1·3°	+ 0·8°
Sind and Rajputana	— 0·4°	— 1·0°
Madras	— 0·4°	+ 0·2°

This table shows that relatively to the average there has been very little change of temperature, except in the Punjab and Bombay, where there has been a fall and rise of about 1° respectively.

Rain.—There has been no rain whatever in Upper India, and in the Central Provinces after a few showers the rains seem also to have ceased. In Bengal on the contrary the weather has been showery throughout the week, and in the Peninsula most unsettled and unusually rainy weather has accompanied the low pressures which have prevailed over that part of the Indian region.

The following is a brief description of the daily distribution of rainfall :

On the 8th scattered showers were reported from Lower Bengal, the coast districts of the Peninsula, Mysore and the Central Provinces. The amounts were, however, in nearly all cases light, and the other parts of the Indian region were rainless. On the 9th a similar distribution prevailed, but the extent and amount of the rainfall had alike increased. On the 10th the rainfall had again decreased in extent, and had entirely ceased over the Central Provinces. In East Bengal some local heavy falls were reported. On the 11th rain was reported from the greater part of Bengal, from the West Coast of the Bay and from several stations in the inland and West Coast districts of the Peninsula. On the 12th there was no change, but on the 13th the rainfall ceased over the north of the Bay and became concentrated over the south of the Peninsula. On the 14th every station to the south of Lat. 16° reported rain, the amounts being large in some places.

The table at the close of the summary shows that the week's rainfall has been on the whole deficient. In normal years only one division, *viz.*, Sind, has no rain whatever during the week just passed, while in the present case there are no less than eleven divisions reporting no rain. In many of these divisions, no doubt, the rainfall is normally very slight, and the absence of it is a matter of little consequence, but in others the normal rainfall is quite appreciable and the want of it may not improbably be felt. The 3rd column of the table shows that at thirty of the rainfall divisions the amount is short and that at nineteen it is in excess of the normal. The regions where the rain is short are roughly Burma, Upper India from Behar to the Indus, the Central parts of the country and Rajputana. In Burma all the districts have received deficient rain and Cachar and Eastern and Deltaic Bengal have participated in this defect, but Central and North Bengal, the Brahmaputra valley, Orissa and Chutia Nagpur have all received heavy rain. From Chutia Nagpur north-westward up the Gangetic plain to the Indus there has been practically no rain. The West Coast districts, including Berar, the Deccan, Guzerat and Kathiawar, have all received more than the normal rainfall—in some cases largely so; but over the Central Provinces and the east of the Peninsula the variations in the rainfall are irregular. Rajputana and Central India like the region to the northward have received little or no rain.

The maximum falls are in no way remarkable over the greater part of India, but some places on the West Coast of the Peninsula, in parts of Madras and in East Bengal have received large amounts, thus:

Netrokona in Mymensingh reports 10½ inches; Cottayam in Travancore 10¼ inches; Muddibehal in Bijapur 8 inches; Sompet in Ganjam 10½ inches; and Palmanavi in North Arcot 7 inches.

The concluding column of the table shows the result of the past rains. Over the greater part of the country the fall has been fairly good, but in the following divisions the seasonal rainfall has been more than 10 % deficient:—Central Burma, East and Deltaic Bengal, the west of the North-Western Provinces, the centre, submontane, hill, and north-western districts of the Punjab Khandeish, Sind and Rajputana.

PROVINCE.	DIVISION.	Rainfall Data for Week ending October 14th, 1889.			Rainfall Data from May 13th to October 14th, 1889.		
		Average Actual Rainfall of Division.	Average Normal Rainfall of Division.	Excess or Defect, in inches.	Average Actual Rainfall of Season to date.	Average Normal Rainfall, May 13th to October 14th.	Excess or Defect of (Seasonal) Rainfall expressed as a percentage.

Simla, *17th October, 1889.*

W. L. DALLAS,
Assistant Meteorological Reporter to the Government of India.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 12th October.*—Rainfall during week general and good in all districts. Crops generally good, but withering from want of rain or water in parts of Nellore, Chingleput and South Arcot and suffering from excessive rain in parts of Anantapur, Bellary and Nilgiris. Prices generally stationary. Labourers employed last day of week,—on Rushikulya works, 2,016; Gopalpore Canal, 472; Ghat Roads, 1,987; other minor works, 6,834. Number on village relief, 20,560, including 12,430 children; fed in kitchens, 5,275, including 3,913 children. Imports into Ganjam during week by sea and land, 350 tons. General prospects good.

Bombay.—*For week ending 16th October.*—Rain during week almost general throughout the Presidency Proper, injuring crops in parts; total fall generally sufficient. Crops damaged by locusts in parts of Sind; elsewhere good. Harvesting and sowing operations in full progress. Fodder prospects good and agricultural stock generally healthy.

Bengal.—*For week ending 15th October.*—Good general rain has fallen in Orissa and Chota Nagpur, and local showers, in most cases light, are reported from almost all other districts. Prospects of the winter rice crop are generally favourable, but more rain is still required, chiefly for the highlands in the western districts of Bengal and in some of the Behar districts. Autumn harvests are now practically over, and the outturn is generally fair. Cultivation of *rabi* crops is in progress and sowings have begun. Sugarcane is in fair condition. Prices of rice are still high and almost stationary throughout the Province. In the affected tracts in Behar prices have fallen, and food-stocks are sufficient.

North-Western Provinces and Oudh.—*For week ending 16th October.*—Though more rain would be beneficial in Jhansi, Meerut and Saharanpur, the weather has been very favourable for the harvesting of the *kharif* and ploughing for and sowing of *rabi* which were in full progress during the week. The outturn where reported promises well. Markets are well supplied. Prices fluctuating.

Punjab.—*For week ending 16th October.*—No rain. Prices stationary in all districts, except Delhi and Amballa where they are rising. Harvesting of *kharif* crops commenced in certain districts. Ploughings for and sowings of *rabi* in progress. Rain wanted for *rabi* sowings in all districts and also for *kharif* in Ferozepur and Lahore. Crops are reported to be in good condition, except in Hissar where they are withering. Prospects of standing crops fair, only rice crop is suffering for want of rain in some districts. Fodder sufficient throughout the Province.

Central Provinces.—*For week ending 16th October.*—Weather clear with light rain in places, and good showers in eastern districts. Rice being cut and is yielding good outturns; other standing crops in excellent condition. *Rabi* sowings commenced. Prices generally steady and falling in places.

Burma.—*For week ending 12th October.*—Heavy rain fell in the Pegu, Prome, Henzada, Shwegyin and Toungoo districts, and light showers elsewhere in Lower Burma. The crop prospect in Lower Burma continues good. Heavy rain fell in Magwe and Yamethin districts, in other districts in Upper Burma there was light rain except in Mandalay where none fell. Prospects of crops in Upper Burma good generally. The price of paddy has fallen 10 per cent. in Sandoway; 8 per cent. in Henzada; 4 per cent. in Thayetmyo; 10 per cent. in Moulmein; 5 per cent. in Tavoy and 6 per cent. in Lower Chindwin. Prices rose 5 per cent. in Shwegyin and were stationary elsewhere.

Assam.—*For week ending 16th October.*—Rainfall light. Land being prepared for mustard and pulses. Winter rice and tea doing well.

Mysore and Coorg.—*For week ending 16th October.*—Rain in Civil and Military Station 3·12 inches. Rainfall good in Bangalore, Kolar, Tumkur and Mysore districts. Crops good except in parts of the Bangalore district where excessive rain has fallen. Dry crops being harvested in parts. Prospects favourable. No material change in prices.

Rainfall 5 inches in Coorg. Standing crop in good condition. Picking of cardamoms commenced.

Berar and Hyderabad.—*For week ending 16th October.*—Average rainfall ·39 inch in Berar. *Kharif* is in good condition. Sowing of *rabi* crops commenced. Fodder sufficient except in Chikhli, Buldana district. Agricultural stock is in good condition. Prices unchanged.

Rainfall during the week in Hyderabad ·87 inch. Total since 1st January 34·15 inches. *Abi* crop benefited; *kharif* crops damaged; and *rabi* sowings delayed by rainfall of week. Water in tanks sufficient for *abi* and *tabi* crops. Prices stationary.

Central India.—*For week ending 16th October.*—No rain fell during the week. Crop prospects continue generally good. Prices rising in Goona.

Rajputana.—*For week ending 16th October.*—Rainfall slight in Pertabgarh, moderate in Shahpura, elsewhere *nil.* *Rabi* sowings in progress. Standing crops being harvested. Agricultural stock good. Fodder dear in Marwar and failing in Dholepur. Prices rising in Jhallawar, Kerowlee and Dholepur. Opium and cotton promising in Jeypur, but injured for want of rain in Dholepur.

Nepal.—*For week ending 10th October.*—No rain. Clear sky. Prospects very good.

J. MUIR-MACKENZIE,
Offg. Secretary to the Government of India.

(a) Includes the Dildárnagar-Gházipur State Railway.
(b) Included with East Indian Railway.
(c) Included with Indian Midland Railway.
(d) Includes the Katni-Umaria Branch.
(e) Includes the Sanctoria Coal Section of the Bengal-Nágpur Railway.
(f) Includes the Bellary-Kistna State Railway.
(g) Includes the Sindia and Bhopal-Itársi State Railways.
(h) Includes the Amritsar-Pathánkot and Rájpura-Bhatinda State Railways.
(i) Return not received.
(j) Total receipts from 1st April to 15th September 1888.
(k) Total receipts from 1st April to 14th September 1889.
(l) Includes the Toungoo-Mandalay extension.
(m) Includes the Dhond-Manmád, Khámgaon, Amráoti, and Bhopal-Itársi State Railways.
(n) Includes the Dhond-Manmád, Khámgaon, and Amráoti State Railways.
(o) Includes the Patri Branch.

SIMLA, *17th October, 1889.*

M. C. BRACKENBURY, *Major, R.E.,*
Under-Secretary.

Printed and published for the GOVERNMENT OF INDIA *at the* GOVERNMENT CENTRAL PRESS, *Simla.*

SUPPLEMENT TO

The Gazette of India.

No. 43.} CALCUTTA, SATURDAY, OCTOBER 26, 1889.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in* PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

(*Statistical Branch*).

E. J. SINKINSON,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

SCHOOL FOR MODERN ORIENTAL STUDIES ESTABLISHED BY THE IMPERIAL INSTITUTE OF THE UNITED KINGDOM, THE COLONIES AND INDIA IN UNION WITH UNIVERSITY COLLEGE AND KING'S COLLEGE, LONDON.

INDIA OFFICE,
London, 22nd August 1889.

Public (Educational).
No. 89.

His Excellency the Most Honourable the Governor General of India in Council.

MY LORD MARQUIS,—I transmit, for the information of Your Excellency in Council, copy of a letter from the Imperial Institute, regarding a School for Modern Oriental Studies established by the Governing Body of that Institute.

2nd July 1889.

2. Copies of the printed statement of particulars referred to in Sir F. A. Abel's letter are also forwarded.

I have the honour to be,

MY LORD MARQUIS,

Your Lordship's most obedient, humble Servant,

CROSS.

No. $\frac{531}{14}$, dated 1, Adam Street, Adelphi, W.C., 2nd July 1889.

From—SIR F. A. ABEL, Esq., Secretary of the Imperial Institute of the United Kingdom, the Colonies and India,

To—The Under-Secretary of State for India, India Office.

I have received the instructions of His Royal Highness the President of the Institute to request that you will be so good as to bring to the notice of the Secretary of State for India in Council the accompanying statement of particulars respecting a "School for Modern Oriental Studies" which has been established by the Governing Body of the Imperial Institute, in co-operation with the Councils of University College and King's College, London, with the object of supplying the requirements of those seeking official employment, and of officials holding appointments, in connection with which a practical knowledge of one or other of the Modern Oriental Languages is indispensable or desirable:

It has been represented to the Governing Body of the Institute that the tuition and facilities to be afforded by this School, which it is intended should correspond in character to those provided by important State Modern Oriental Schools in Germany, France, and Austro-Hungary, will be, in many directions, of great assistance and value, not only to those seeking employment or holding appointments in the Indian Civil Service, but also to natives.

The languages to be dealt with in the School comprise, in Division I. Sanscrit, Bengali, Hindi, Hindustani, Tamil, Telugu, Punjabi, Pali, Marathi, Gujarati, Arabic and Persian; and, in Division II. Colloquial Arabic, Chinese, Burmese, Modern Greek, Colloquial Persian, Japanese, Russian, Turkish, Malay, and Swaheli.

I am instructed to express a hope that Lord Cross may deem it desirable to cause measures to be taken for officially directing the attention of the Government of India to the existence of the new school of Modern Oriental Studies, and to afford it such official recognition as may be in his power to bestow.

School for Modern Oriental Studies established by the Imperial Institute of the United Kingdom, the Colonies and India in union with University College and King's College, London.

The commercial and official Classes in the United Kingdom, whose pursuits entail either temporary residence in, or visits to, Oriental Countries and communion or correspondence with the natives of those Countries, have long experienced the want of facilities which might be afforded by a sufficiently comprehensive public Institution, where a practical and colloquial acquaintance with the more important Modern Oriental Languages might be acquired.

In France, Germany and Austria-Hungary, there exist Institutions of magnitude and importance, for affording instruction in the spoken and written Oriental dialects and in matters relating to the history, commerce and political economy of the Countries in which those languages are spoken.

In France, the School of Living Oriental Languages, which was founded nearly 100 years ago, receives from the State the free use of a large building and a grant of over £6,000 per annum; gratuitous instruction is there given in the chief Modern Oriental Languages, and a commercial section has recently been added to it by the Minister of Public Instruction.

The Imperial Oriental Academy of Vienna has long been of world-wide celebrity and has greatly contributed to the extension of commerce in Austria-Hungary, whilst in Berlin, the Imperial German School of Living Oriental Languages, established a year ago upon a very important footing, has already received considerable development. This school is supported by an annual subvention of £3,600, and the tuition there is entirely gratuitous.

Although the scope of action of the Imperial Institute, as defined by its Charter, does not embrace the exercise of actual educational functions, its Governing Body has considered that the creation and development of an organisation for providing, in the United Kingdom, the important aid to the Official and Commercial sections of the community which is furnished to Continental Nations by such establishments as above named, might prove a work of considerable utility.

There have existed at University College and at King's College, since their foundation, Professorships of certain Oriental Languages; the Indian School of University College on the one hand, and the Oriental section of King's College on the other, have accomplished useful work in the preparation of candidates for the Indian Civil Service and other Government Departments, by affording facilities for the study of some of the Eastern Languages.

The Committee of the Institute, having met with a cordial response from the Councils of the two Colleges, to a proposal to consolidate the work of this nature now being performed there, and to bring it into harmonious working with a scheme for affording practical instruction in other important Oriental Languages, now desire to direct attention to the results of a careful consideration of the whole subject by a Special Committee, appointed by them for that purpose, which includes representatives of the Councils of University and King's Colleges, and of which the following are the Members:

SIR FREDERICK ABEL, C.B., D.C.L., D.Sc., F.R.S. (*Chairman*).

COL. SIR EDWARD BRADFORD, K.C.S.I.

SIR FRANCIS DILLON BELL, K.C.M.G., C.B.

COL. SIR CHARLES WILSON, R.E., K.C.B., K.C.M.G.

SIR THOMAS WADE, G.C.M.G., K.C.B.

MAJ.-GENL. SIR FREDERIC GOLDSMID, K.C.S.I., C.B.

SIR PHILIP MAGNUS.

MAJOR C. M. WATSON, R.E., C.M.G.

SIR GEORGE YOUNG, Bart., LL.D.
PROFESSOR HENRY MORLEY, LL.D. — Nominated by the Council of University College.

THE REV. HENRY WACE, D.D.
PROFESSOR R. K. DOUGLAS — Nominated by the Council of King's College.

Arrangements have been completed by this Committee and approved of by the Governing Bodies of the Imperial Institute and of the two Colleges, for the organisation of a School in London, designed both for giving instruction in Modern Oriental Languages and also for the pursuit of studies relating to the history, literature, commercial and physical geography, political economy and the natural and industrial resources of the Countries and Districts in which the various languages are used.

It is in contemplation to arrange for the delivery of Special Lectures or courses of Lectures from time to time, in connection with the School, by Experts or Specialists, in any of the foregoing subjects:

This School will be carried on under the immediate direction of the Committee above specified.

The classes which the "School of Modern Oriental Studies" comprises, are divided under two Heads:

DIVISION I. includes classes for all Oriental Languages especially required by Students qualifying for examinations for the Indian Civil Service, the instruction being of the same character as that provided for some time past at University College and at King's College.

These classes will, from the commencement of the AUTUMN TERM of 1889, be continued at University College and will be conducted under regulations common to the other classes which combine with them to constitute the General School.

This division includes instruction in Sanscrit, Bengali, Hindi, Hindustani, Tamil, Telugu, Punjabi, Pali, Marathi, Gujarati, Arabic and Persian.

DIVISION II. consists mainly of classes for Modern Oriental Languages other than the Indian Languages.

The courses of tuition will be of a practical rather than of an academic character; they will have particular reference to commercial and official requirements and to the facilitation of colloquial intercourse with natives of Oriental Countries.

It is in contemplation, so soon as the number of Students warrants the expenditure, to secure the services of native readers and teachers of conversation in connection with the classes of this Division.

The Languages to be taught in Division II. comprise Colloquial Arabic, Modern Greek, Colloquial Persian, Russian, Turkish, Chinese, Burmese, Japanese, Malay and Swaheli.

The classes under this Division will be conducted at King's College, where arrangements will also be made for the establishment of evening classes.

The names of Instructors and the places where various classes will be held are given below:

There will be three terms, of about ten weeks, in each year, as follows:

AUTUMN TERM—commencing about the beginning of October.

SPRING TERM—commencing about the middle of January.

SUMMER TERM—commencing early in May.

The School will open with the Autumn Term of 1889.

A fee of THREE GUINEAS per term will have to be paid in advance by each Student for each Language taken up for instruction. This payment will entitle the Student to the use, within the colleges, of text books, dictionaries, and works of reference required in connection with the particular Language taught, and to the use of all the facilities which it is proposed to secure in the development of the School.

Accommodation will be provided to enable Students to pursue their studies at hours when the classes are not held.

The Libraries of both Colleges will be opened to Students in any of the classes of the School, during the usual hours of study.

Intending Students should communicate with the ORGANISING SECRETARY at the Offices of the IMPERIAL INSTITUTE, 1, ADAM STREET, ADELPHI, LONDON, W.C., where the registration of Students will take place, and where all information regarding the School will be supplied.

F. A. ABEL,

Secretary of the Imperial Institute.

June 1889.

C. J. LYALL,

Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Correspondence relating to the loss of the *S.S. Vaitarna* off the Bombay Coast in November 1888.

No. 272-S., dated Simla, the 19th June 1889.

From—The Meteorological Reporter to the Government of India,

To—The Secretary to the Government of India, Revenue and Agricultural Department.

I have the honour to submit the following reply to the various charges which have been made against the Meteorological Department in connection with the loss of the *Vaitarna,* in accordance with the request contained in your No. $\frac{82}{3\cdot21}$-M., dated Simla, the 6th May 1889.

2. The following appear to be the whole of the points and issues which require consideration and answer. The Court of Enquiry calls the attention of the Government to the following defects:

(*a*) The want of a proper system of meteorological observations on the Coast of India.

(*b*) The want of a proper system of exhibiting storm-warning signals on the Coast of India.

It also records the opinion—

(*c*) That if a proper storm-warning system had been in force with communication to most of the northern ports, intimation could have been conveyed in time to have enabled the *Vaitarna* to avoid the cyclone.

In addition to these three points, the following are suggested by the evidence and subsequent discussion on the evidence:

(*d*) Whether the Simla Office with the system then in force gave as full warning and information to merchants and shippers in Bombay of the storm in question as could reasonably have been expected.

(*e*) Whether the Bombay storm-warning system then in operation was defective and unsatisfactory, and also to whom the blame for this state of affairs should be assigned.

3. My reply may be summed up as follows:

(*a*) That there is a fairly complete and satisfactory system of observations along the Coast of India, but the Kattiawar Coast is imperfectly represented.

(*b*) That there is a proper and satisfactory system for warning at least three-fourths of the Coast of India, but that the Bombay system was at the time of the *Vaitarna* disaster defective. The India Meteorological Department was, however, at the time endeavouring to remedy the defect.

(*c*) That if a proper and complete system for warning the Bombay (including the Kattiawar) Coast had been in force at the time, it almost certainly would not have enabled the *Vaitarna* to weather the storm, as she was too lightly built to encounter a cyclonic storm and was navigating a portion of the Coast where there is no shelter, and the Captain was apparently more or less ignorant of the laws of storms. It is, moreover, doubtful whether any system of storm signals would be of much use to vessels of the *Vaitarna* build navigating the Kattiawar Coast.

(*d*) The Simla Office gave as full warning of the position and character of the storm to the West Coast ports by means of signal and telegrams as could reasonably be expected, more especially when the

circumstances under which the Simla Office was performing that duty at that time are taken into consideration.

(*e*) Neither the Bombay authorities nor Mr. Chambers ever called the attention of the Meteorological Department or the Government of India to the defects of the Bombay meteorological and storm-warning services so far as the Kattiawar Coast is concerned, and hence they are in part, if not chiefly, responsible for the continuance of the defect.

4. As a full explanation is desired, I will deal with each of these five points *seriatim*, and finally give a full statement of the action taken by the Simla Office to warn the West Coast ports during the progress of the storm, in order to give as complete a reply as possible to the fourth and most important issue. Before doing so I have to point out that the enquiry of the Court appears to me to have been imperfectly conducted and that the actual wording of its conclusions goes far beyond the scope of this enquiry. It neither summoned Mr. Hutchinson, Meteorological Reporter for Western India, nor Mr. Dallas, Assistant Meteorological Reporter to the Government of India, who hoisted the signals during the storm and was present in Bombay at the time and ready to give evidence; and bases the whole of its conclusions on the meteorological aspect of the enquiry upon the evidence of a single witness, who in no way represented the Meteorological Department. The enquiry was hence one-sided, and in my opinion failed to point out the more striking and most easily remedied defects of the Bombay storm-signal service.

I may also point out that the Government of Bombay concurs in the opinion of the Court that if a proper storm-warning system had been in force with communication to most of the northern ports, intimation could have been conveyed in time to have enabled the *Vaitarna* to avoid the cyclone, and bases its concurrence on statements which, to say the least, do not represent facts. The Bombay Government says that it appears from a report submitted by Mr. Hutchinson, Meteorological Reporter for Western India, that merchants and shippers were not informed at the time the vessel left Bombay of the existence of a cyclonic storm on the Kattiawar Coast. The facts are that the storm signals were flying at Bombay when the *Vaitarna* left that port (intimating to merchants, shippers, port authorities, &c., that there was a cyclonic storm in the Arabian Sea at some distance from the Bombay Coast), and that there was also at that time no cyclonic storm in existence on or off the Kattiawar Coast.

5. In reply to the first issue [(*a*) paragraph 2] it is sufficient to point out that there was at the time the Court sat a very fairly complete and well-organized system of meteorological observation over the whole of India, coast and inland. Mr. Chambers' sole suggestion in this respect, *vide* page 9 of report of the Court, is to establish an Observatory at Verawal, in addition to the 162 already in existence. So far as I can judge, this is the sole evidence for the recommendation of the Court. It might properly have pointed out the local deficiency in Kattiawar. Instead of that it condemned the whole system without making any enquiry into its character and extent.

6. With respect to the second criticism of the Court of Enquiry [(*b*) paragraph 2], it is presumed that the Court did not intend deliberately to ignore the fact that the Meteorological Department has, under instructions from the Government of India, devoted much time and labour during the last three years to the perfecting of the Bengal storm-warning system and the introduction of a satisfactory system suited to local requirements for warning the Burma and Madras ports. What the Court apparently intended to say was that the Bombay system, as in force at the time of the *Vaitarna* disaster, was defective or not a proper system, by which it perhaps meant that it was not based on correct principles. For this, as I shall show presently, I cannot assume any responsibility.

The opinion of the Court is worded in such a manner that I am unable to infer with certainty what it really means, but assume it is what I have stated above. A warning system had been in operation for the Bombay ports since 1880 administered by Mr. Chambers. The Simla Office took over this work in August 1888, and barely two months' working of the system convinced me

that it was defective and unsatisfactory, and that I ought to take early steps to place it on a proper footing. With this object in view I went to Kurrachee in November and discussed the matter with the Port Officer on the 8th of November, the day on which the storm approached the Kattiawar Coast, and on which the *Vaitarna* probably went down. I sent Mr. Dallas to Bombay early in December, partly with the object of learning from the Port Officer and other authorities their opinions and wishes with respect to an improved storm-signal service. Mr. Dallas was engaged in this work at the very time that the Court sat. One of the strangest features of this enquiry (and which seems to me to call for explanation) is that Mr. Dallas, who has had many years' experience of working a storm-signal service in England as well as in India, and who actually gave the orders for hoisting the signals on the West Coast during the *Vaitarna* storm and was known to be present in Bombay at the time of the enquiry with the object of improving the local meteorological service, was not called by the Government Solicitor for examination before the Court. The Court might have given the most valuable assistance to the Meteorological Department if it had enquired fully into the working of the Bombay storm-warning system, pointed out its defects and suggested necessary or desirable improvements, and it would thus have strengthened the hands of the Meteorological Department in carrying out the improvements it was actually trying to effect at the time.

In connection with this, I wish to protest against the theory that the Imperial Meteorological Department should ascertain and provide for all local requirements independently of any action of the Local Government or local authorities. My own opinion is that, while the Meteorological Department should endeavour to ascertain and carry out any improvements necessary to make its work more effective, it should as a practical Department rely for the direction of its improvements mainly upon the expressed wants of local authorities and the public. In other words, it should, for example, give the Government or public the information it requires and is prepared to use, and not the information that the Department thinks it ought to require. A recommendation for the improvement of the local meteorological service made by a competent local authority would frequently enable the Meteorological Department to ask for and obtain the necessary means to enable it to remedy the defects pointed out by that authority.

The responsibilities of a storm warning Department are, I may point out, so great that its natural tendency is to endeavour to extend the field of observation upon which it bases its action. By properly selected extension the work of storm warning becomes easier and more certain, and the responsibility and anxiety inherent to the work is diminished. It is hence evident that any extension of the system of observations for storm-warning purposes established in India depends really upon the willingness of the Government of India or local authorities to provide the funds necessary for the cost of such extensions.

The Meteorological Department has, for example, frequently pointed out that the Bay of Bengal storm-warning work could be much more effectively performed and that earlier and more certain warning of storms could be given if Port Blair and the Eastern Channel Light Vessel at the entrance to the Hooghly were connected telegraphically with the mainland. Neither the Government of India nor the local authorities are willing to provide the funds. It would be equally easy for me to suggest that the extension of a proper storm-warning system to the Kattiawar Coast requires that telegraph lines should be laid down connecting Dwarka and Cutch Mandvi with the nearest telegraph offices, but suggestions of this kind are impracticable and valueless unless at the same time a feasible method of providing the funds necessary for carrying out the suggestions be indicated.

These remarks will perhaps indicate the difficult position in which the Department is placed in such matters and also show that the intelligent expression of local bodies, *e.g.*, Local Governments, Chambers of Commerce, &c., might be a safer and better guide to useful and realisable extensions of the practical work of the Department than its own wishes and suggestions.

I have already stated the action I took in the year 1887 to place the Bombay storm-warning system on a proper footing. The Government of India is hence in a position to decide whether my action in visiting Bombay in 1887 (one result of which was Mr. Chambers' letter published in the Appendix) and my action in

November and December 1888 in visiting Kurrachee and sending Mr. Dallas to Bombay are sufficient proofs or not that I was doing as much as might reasonably be expected from me as Head of the Department to improve the local storm-warning system in accordance with local wants and requirements. As part of the same subject, the Government of India will perhaps also take into its consideration the fact that neither the whole-time Bombay Reporter nor any one else pointed out to me during the whole of this period in any official communication the deficiency in the Bombay meteorological or storm-warning system, so far as Kattiawar was concerned.

7. The statement of the Court that if a proper storm-warning system had been in force, with communication to most of the northern ports, intimation could have been conveyed in time to have enabled the *Vaitarna* to avoid the cyclone, is apparently based solely on a remark of Mr. Chambers, that it would have been possible with a proper storm-signal system to have warned the Kattiawar Coast on the 8th November. The 8th covers a period of twenty-four hours, and the important point in such a matter is the hour of that day and not the day when the signals could have been hoisted. The Court apparently asked no question on this most important point, and the vague statement of a single witness was utilized by at least one Bombay newspaper, in order to make a serious charge against the Department and the Government of India, *viz.*, of being virtually the cause of the loss of the *Vaitarna*. This is the most important issue raised by the report of the Court of Enquiry.

So far as I can reasonably judge from my experience of storm-warning work, if there had been an Observatory at Verawal and another at Dwarka or Mandvi and storm-signal arrangements in complete working order at the Kattiawar ports, it would have been possible to have hoisted warning signals at the Kattiawar ports intimating the existence of a disturbance at some distance to the south-west of the Kattiawar Coast about noon of the 8th, and to have hoisted danger signals intimating the early advance of a cyclonic storm about 4 or 6 P.M. of the same day. The *Vaitarna* left Cutch Mandvi at 8 A.M. and passed Dwarka at noon. Hence under a practically perfect system the Captain might have received general intimation of stormy weather about noon or about the time he began to advance along the West Kattiawar Coast. Mr. Moir, Manager of the line to which the *Vaitarna* belongs, thus describes that Coast: "There is no harbour between Mandvi and Bombay *into which the Vaitarna could have run*. They are all open roadsteads: Mandvi itself is an open roadstead." Hence it is certain, if this evidence be accepted, that even if the Kattiawar ports had been warned at noon of the 8th, the *Vaitarna* would still have been obliged to have remained out in the open sea, and in the absence of definite instructions to the Captain in which direction to run to avoid the storm (such as are not given by any existing storm-warning system), he would almost certainly have proceeded in the same course as he did and with the same result. For in such matters the knowledge and judgment of the Captain counts for a good deal and cannot be entirely superseded by the general warning of a distant signal. That this inference is almost certainly correct is proved by the fact that the Court concluded from the action of the Captain (and probably rightly, although this is not the opinion of Sir Henry Morland) that he was unable to utilize the indications of his barometer and the changes in wind, force, and direction so as to ascertain roughly the bearing of the storm centre and its line of march, and hence decide on the proper course to adopt to avoid the storm. In fact, he simply ran into the advancing storm, and his vessel was overwhelmed by the heavy seas.

The establishment of a proper system such as the Court apparently contemplated would require not merely the establishment of two Observatories—one at Verawal and the other at Dwarka or Cutch Mandvi—and the maintenance of storm-signal stations at Verawal, Porbandar, Dwarka and Cutch Mandvi (which would involve a comparatively small expenditure), but also the laying down of at least 150 miles of telegraphic lines to connect Dwarka and Cutch Mandvi; and I am informed by the Telegraph Department that they would not pay and that there is no probability of their construction for many years to come.

8. With respect to the fourth issue [(*d*) paragraph 2], *viz.*, the action of the Simla Office, I have gone carefully through the history of the storm and

also considered the action which Mr. Dallas took (I was absent from Simla at the time as already stated) to warn the Bombay Coast of the storm, and have come to the conclusion that he acted with judgment and great care. I need not repeat the circumstances under which the working of the Bombay storm-signal service was transferred to Simla nor the difficulties under which it had to be carried out, as they have been already fully stated in previous correspondence on the subject.

Mr. Dallas's action is given in detail in paragraphs 10 and 11 in connection with the brief account of the storm.

9. My action in proceeding to Kurrachee in November is sufficient proof that I felt the Bombay warning system was defective at that time. As statements have been made imputing the delay in the removal of this defect to the India Meteorological Department ignoring the representations of Mr. Chambers, it is necessary for me to point out where, in my opinion, blame should really lie.

So far as I can ascertain from the records of my office, Mr. Chambers never pointed out to Mr. Blanford the absence of observatories or storm-warning stations on the Kattiawar Coast or submitted proposals for their establishment. Shortly after I took over charge from Mr. Blanford (in May 1887) I learnt that the Bombay storm-signal service was not in as efficient and satisfactory state as I thought it ought to be, considering the great importance of Bombay as a seaport on an open coast of a sea exposed to fierce tropical cyclones. At the first opportunity, that is, in October 1887, I went to Bombay and saw Mr. Chambers, discussed with him the unsatisfactory condition of the Bombay storm-warning system, and asked him to submit a scheme for placing it on a satisfactory footing. As the reduction of his appointment was then under consideration, I urged him to study economy as well as efficiency in drawing up his scheme. I enclose a copy of the letter embodying his scheme which he sent to me in November 1887 and of a chart accompanying it (*vide* Appendix A). It shows that Mr. Chambers made absolutely no suggestion at that time for establishing observatories or storm-signal stations on the Kattiawar Coast. There is also no indication in this letter that he at that time recognized the existence of the defects he subsequently pointed out to the Court of Enquiry in December 1888.

He then had several years' experience of the work of warning the Bombay Coast; and yet at that stage when called upon by me, as Head of the Department, in consequence of his own representations of the defective state of the Bombay warning system, to submit a satisfactory scheme which I could recommend to the Government of India, he failed to make any suggestion such as that which he made to the Court and upon which it bases its conclusions that the Meteorological Department had failed to provide a proper storm-warning system for the Bombay Coast. It is one of the most striking cases of a man being wise after the event, that has come within my experience. It is also not a little strange that the Court did not ask Mr. Chambers whether he had ever submitted definite proposals to the Government of India for the establishment of observatories and storm-signal stations on the Kattiawar Coast.

No further correspondence ensued on the subject, and hence this letter represents Mr. Chambers' views from the date of its submission until he ceased to be Reporter on 1st August 1888; that is, when the Simla Office took over charge of the Bombay storm-signal work. Hence Mr. Chambers failed, so long as he was Reporter, to point out the defects of the system so far as the Kattiawar Coast was concerned; and the Simla Office was obliged to take it over with all its defects for which I was in no way responsible, but which I began to try to remedy as soon as I was in a position to do it.

I am, however, not prepared to urge that Government should in its present financial condition spend the large amount required to lay down 150 miles of unproductive telegraph lines in order to protect as far as possible the Kattiawar Coast. It has no ports in which vessels can take shelter during storms, and traffic is suspended for nearly six months of the year (that is, during the whole of the south-west monsoon). Such disasters as the *Vaitarna* can be much more simply and directly avoided by the adoption of Sir Henry

Morland's suggestion that the Government should only permit vessels of suitable build and strength to navigate that part of the Coast and carry passengers. The chief advantage of the extension proposed would be to warn and protect the port towns, but not the shipping off the Coast. Although therefore I do not urge the extension as absolutely necessary, I recommend it strongly to the consideration of the Government of India and the local authorities, as it would undoubtedly enable the Kattiawar Coast to be adequately warned in stormy weather.

10. I have written a history of the storm for publication in the cyclone Memoirs. A careful consideration of the whole of the available data of the storm shows that the account given by Mr. Chambers and accepted by the Court is imperfect:

1st—In stating that the cyclonic storm which crossed the Peninsula passed out as a cyclonic storm into the Arabian Sea.

2nd—In suggesting that the cyclonic storm advanced in a definite course over the Arabian Sea during the interval from the 2nd to the 6th.

The real facts, so far as I can judge from the data, were—

1st—The cyclonic storm broke up as a definite storm in the Peninsula, and on approaching the West Ghâts resolved into a series of eddies which were partially transmitted westwards, the final result being an extension of an area of disturbed weather previously existing in the Arabian Sea.

2nd—In this area of disturbed weather a small cyclonic storm was very slowly generated or developed between the 4th and the 7th, during which period it was, as usually happens in the initial stage of cyclonic storms, nearly stationary.

3rd—This storm was of very small extent and of moderate intensity and began to move rapidly on the evening of the 7th to the north-north-east.

These facts are very important for the reason that the indications of squally weather or of an incipient cyclone at distant observing stations are more or less vague and uncertain. Sir Henry Morland, in his able letter, points out clearly the character of the barometric indications—"The barometric indications we have been able to obtain are not such as would have afforded much warning or have led an ordinary ship-master to anticipate the worst kind of weather," and again "there was nothing in the meteorological observations available or which could have been taken on the Continent of India to have justified a prognostication that the cyclone had recurved and would strike the Coast of Kattiawar."

11. The difficulty which Mr. Dallas had in dealing with the facts was as follows:

The Coast observations for some days showed the existence of disturbed weather off the West Coast; but these indications were vague and not sufficient to indicate even with approximate accuracy the nature of the disturbance. In the daily Reports of the period Mr. Dallas described the disturbance as the continuation of the cyclonic storm which crossed the Peninsula. In a memorandum which he drew up when in Bombay, and which was forwarded to the President of the Court, but was not read or accepted as evidence, Mr. Dallas, on the strength of the additional information received up to that date, modified his opinion so far as to suggest that the storm in the Arabian Sea was a secondary or subsidiary storm, a resultant of the primary, but not the direct continuation of it. The indications of the second or subsidiary cyclonic storm only became definite on the morning of the 8th when the storm was approaching the Kattiawar Coast. At that time unfortunately the storm, which was of small extent, was approaching a part of the Coast where there are no observatories. Whoever may be to blame for this, it was certainly not Mr. Dallas.

The first observations which he received showing the character of the disturbance were those sent from Surat and Rajkote on the morning of the 9th, and he then hoisted the signals at the signal stations on the Gulf of Cambay.

The following table shows fully the action Mr. Dallas took in warning the West Coast during the disturbance:

Hoisted.	Lowered.	Stations warned.	Telegraphic Orders.*	
Date on which order issued.	Date.		To hoist the signal.	To lower the signal.
1st November 1888.	4th November 1888.	Karwar ... Port Officer ...	Severe cyclonic storm crossing Peninsula from Madras. South-westerly strong winds or gales probable. Hoist signal.	Please lower signals. Lower signal; cyclone passed northward.
		Kumta ... Customs Manager.		
	3rd November 1888.	Cochin ... Port Officer.		
		Calicut ... "		
		Mangalore ... "		
3rd November 1888.	5th November 1888.	Bombay Castle, Port Officer ...	Shallow cyclonic storm drifting up West Coast and moderate south-east and east gales likely. Hoist signal.	Please lower signal.
		Alibagh ... Head Accountant, Huzur Treasury.		Please lower signal.
		Ratnagiri ... Sirkarkun in charge of Custom House.		
	4th November 1888.	Vengorla ... Ditto.		
		New Goa ... Director, Meteorological Observatory.		
		Marmagao ... Chief Engineer and Agent, W. I. P. R.		
9th November 1888.	10th November 1888.	Kurrachee ... Master Attendant ...	Moderate cyclonic storm advancing north-east ward across Kattiawar. Hoist danger signal.	Lower signal; cyclone passed inland.
		Bhavnagar ... State Engineer.		
		Daman ... Governor.		

* All telegrams sent urgent.

12. In judging of the action of Mr. Dallas, it is most important to act on the principle recognised by Sir Henry Morland in his statement that the evidence placed before the Court of the course and development of the storm was all obtained after its occurrence or was the result of inferences drawn from what did occur. We should place ourselves in his position at the time and having only the information he then had and not to allow any certain knowledge of subsequent facts to bias our judgment. There should also be further taken into consideration, in this special case, the very unsatisfactory character of the Bombay signal service at that time, and the imperfect acquaintance of the Simla Office with the conditions of the West Coast and of the storms of the Arabian Sea (due to the fact that there has been little previous systematic investigation of these storms). It is an open question whether it was desirable to hoist the storm signals at all on the Bombay Coast during the stormy weather of the first week of November 1888 in the Arabian Sea. Mr. Dallas believed at the time it would probably not give strong winds to the ports themselves, although it almost certainly would in the open sea off these ports. He had, however, only the alternative of hoisting no signal at all or of hoisting the only signal the system in force permitted. He adopted the more prudent course (that which, strange to say, the Department is now blamed for not having done) and gave notice to the shippers, merchants and port authorities at Bombay of the existence of this storm by hoisting the storm signals on the 3rd and keeping them up until noon of the 5th. The weather telegrams which were sent daily from Simla at that time and published in the Bombay papers also informed the public of the existence and general character of the storm. The following is a copy of the weather telegrams published in the *Times of India*, on Monday morning, the 5th:

Extracts from the "Times of India," *Monday, November 5th, 1888.*

THE WEATHER.

(By telegraph.)

Simla, November 3rd.

"The cyclonic storm noticed during the past few days is travelling northward along the West Coast. It has filled up a good deal, but is still well defined, and will probably give gales and rough weather to the Konkan Coast, with rain

there and perhaps in the interior. Further low pressures are developing over the Bay. The wind is cyclonic and strong to a gale on the mid-West Coast. Easterly winds prevail at the central stations; variable elsewhere. Rain has fallen all over the Peninsula; heavily on the East Coast and Ceylon. The weather is fine in Northern and Central India and very unsettled in the south."

Simla, November 4th.

"The pressure has fallen a little at Bombay and in Sind and the cyclonic storm has advanced northward to the neighbourhood of Bombay. The pressure has increased elsewhere and is high in Assam. The wind is generally easterly. It blows freshly at some western stations, and a gale is reported from Sholapur. Rain has fallen in Orissa and over the Peninsula; the largest amounts are at Masulipatam and Secunderabad."

Mr. Dallas hence fully warned the Bombay merchants, local authorities, and the public generally of the existence of this storm; and if the *Vaitarna* disaster had not occurred, the probabilities are his action would have been severely criticized by the Bombay press, &c., for unnecessarily alarming the Bombay public and interrupting the trade and work of the port.

Hence after a full consideration of Mr. Dallas's action from a proper and reasonable standpoint, I am strongly of opinion that he acted throughout with judgment and utilized fully all the means at his disposal to warn the Bombay Coast ports of the storm.

It would have been more satisfactory if the Court had examined Mr. Dallas and come to this conclusion. The full explanation I have given will, I venture to hope, prove to the satisfaction of the Government of India that Mr. Dallas not only endeavoured to perform a very onerous duty to the best of his ability under peculiarly difficult conditions, but that, taking into consideration the means at his disposal, he warned the Bombay Coast ports properly and adequately during the *Vaitarna* storm.

13. These remarks are, I trust, sufficient to enable the Government of India to take any action it considers necessary in connection with the enquiry and to deal with the important question, should it ever arise, who was chiefly blamable for the imperfection of the Bombay storm-warning system at the time of the *Vaitarna* disaster.

14. In conclusion, I may state that the Simla Meteorological Office, partly at the instance of the Government of India and partly on its own knowledge of the defects of the Bombay meteorological system, was doing its utmost to remedy the defects before the *Vaitarna* disaster occurred.

The chief defects were—

(*a*) The want of a proper local daily weather report.
(*b*) The defective character of the Bombay storm-signal service.
(*c*) The defective representation of Kattiawar in our meteorological system.

It is sufficient to point out the action of the Department to remedy these defects—

1st—A local daily weather report and chart based on weather telegrams from 41 stations is now published and issued daily to the Bombay public and that practically at no additional cost to the State. This result, I may add, is mainly due to the action and liberality of the Bombay Chamber of Commerce.

2nd—The India Meteorological Reporter commenced to endeavour to remedy the second defect last November and has submitted the complete details of a storm-warning system, the principles of which have been fully approved by the Bombay local authorities and which is now under consideration of the Government of India for adoption.

3rd—The India Meteorological Department, as soon as the third defect was brought to its notice, took practical measures to remedy it so far as it could by making or suggesting arrangements for the establishment of an Observatory at Verawal and storm-signal stations at Verawal and Porbandar. It is not possible to remedy this defect satisfactorily until telegraphic communication has been opened to Dwarka or Mandvi.

No. $\frac{139 \text{ Met}}{3-35}$, dated Simla, the 22nd August 1889.

From—SIR E. C. BUCK, KT., Secretary to the Government of India, Revenue and Agricultural Department,

To—The Chief Secretary to the Government of Bombay.

With reference to your letter No. 1469 of the 13th April last, submitting a copy of the Proceedings of the Court of Enquiry on the loss of the steamship *Vaitarna,* I am directed to forward, for the information of His Excellency the Governor in Council, a copy of a report which has been furnished by the Meteorological Reporter to the Government of India, and to communicate the following remarks on the subject.

2. From your letter it is gathered that the Government of Bombay (*a*) is of opinion that the merchants and shippers were not informed at the time the *Vaitarna* left Bombay of the existence of a cyclone on the Kattiawar Coast; (*b*) concurs with the Court of Enquiry in thinking that, if a proper storm-warning system had been in force, intimation could have been conveyed in time to have enabled the *Vaitarna* to avoid the cyclone. With regard to the first point, I am to draw attention to Mr. Eliot's statements that on the 5th November, the date on which the *Vaitarna* left the harbour, the storm-signals were flying at Bombay, and that on that date no cyclone was in existence on the Kattiawar Coast. The signals were subsequently taken down, as the storm had dispersed or gone out to sea. On the second point, I am to observe that it is a well known fact that the coasts of Bengal, Madras, and Burma are provided with an elaborate and fairly worked storm-warning system. The Government of India, therefore, presumes that the Court of Enquiry, in calling attention to the want of a proper system of Meteorological observations and signals, meant to confine its condemnation to the state of things on the Western Coast, and more particularly to the absence of storm-warning stations in Kattiawar. The Government of India is prepared to express its concurrence with the Court and the Government of Bombay to this extent, that there were at the time of the enquiry some imperfections in the system of Western India. But it appears to the Government of India that the utmost that could have been done, if there had been most complete communication with the ports on that coast, would have been to fly the general danger-signal at or shortly after noon of the 8th November, that is, probably after the *Vaitarna* left Dwarka, at which place, according to the report of the Court of Enquiry, "the sea was smooth, and there was no indication of a storm." The next port of call was Porbandar, and before he reached there the Captain of the *Vaitarna* must have become fully aware of all that a mere danger-signal could have told him. His Excellency the Governor General in Council is not, therefore, prepared to assent to the conclusion that, under any existing system of storm-signalling, intimation could have been conveyed in time to have enabled the *Vaitarna* to avoid the cyclone. Inland signal-stations could not have helped the Department, and it was not until the afternoon of the 8th November that data existed for even the formation of an opinion that a cyclone was approaching from the south-south-west.

3. His Excellency in Council trusts that the Government of Bombay will be satisfied by Mr. Eliot's report that the Meteorological Department, in the measures which it initiated in 1887 and 1888, took all reasonable precautions not only for the maintenance, but even for the improvement, of the storm-warning system as handed over by the Local Reporter. Any practical suggestions for its further improvement will always be welcomed, and in this connection I am to invite attention to paragraph 14 (2) of Mr. Eliot's letter, and to my letter No. $\frac{110}{3-24}$ M. of the 18th June last, with the latter of which was forwarded, for the approval of the Government of Bombay, a detailed scheme for the improved storm-warning signal service of the West Coast of India, and to say the Government of India still awaits a reply to this letter. With regard to clause (3), paragraph 14 of Mr. Eliot's letter, I am also to invite attention to my letter No. $\frac{117}{3-39}$, dated the 1st ultimo, regarding the proposed establishment of an Observatory at Verawal on the Kattiawar Coast.

4. The Government of India will be glad to learn whether His Excellency in Council has taken or proposes to take any measures for the better instruction

of shipmasters in the law of storms, and the regulation of journeys along an unprotected coast by vessels of the light build of the *Vaitarna*.

No. 3778-A., dated Bombay Castle, the 11th September 1889.

From—J. NUGENT, Esq., C.S., Chief Secretary to the Government of Bombay,

To—The Secretary to the Government of India, Revenue and Agricultural Department.

I am directed to acknowledge the receipt of your letter No. 139-3-35 Met., dated 22nd ultimo, and in reply to state that the Government of India have correctly presumed that the Court of Enquiry on the loss of the steamship *Vaitarna* in calling attention to the want of a proper system of meteorological observations and signals meant to confine its condemnation to the state of things on the Western Coast, and more particularly to the absence of storm-warning stations in Kattiawar. Neither the Court of Enquiry nor the Bombay Government had anything to say as regards the storm-warning system in force in Bengal, Madras, and Burma.

2. As regards the remarks made in paragraph 3 of your letter, I am desired to invite the attention of the Government of India to my letter No. 3376, dated 20th ultimo, in which it was stated that this Government approved the arrangements proposed by the Meteorological Reporter to the Government of India for improving the storm-warning system on the West Coast, and with reference to paragraph 3 thereof to state that the officers at Verawal and Porbandar, to whom the storm-warning telegrams should be sent, are the "Vahivatdar Verawal," and the "Port Superintendent, Porbandar." The arrangements regarding the delivery of such telegrams at Dwarka are still under consideration. I am also to state that this Government have no objection to the establishment of an Observatory at Verawal, and that the State of Junagad, to which the Port of Verawal belongs, has agreed to provide the buildings required for the Observatory and to maintain them in proper order.

3. Adverting to paragraph 4 of your letter under reply, I am to invite attention to paragraphs 2 and 3 of my letter No. 3214, dated the 9th ultimo, to the Government of India in the Department of Finance and Commerce, in which information on the points raised in your letter has been supplied.

By order,

J. MUIR-MACKENZIE,
Offg. Secretary to the Government of India.

Review of the working of the Indian Companies Act, VI of 1882, during the year 1888-89.

No. 5522, dated Simla, the 25th October, 1889.

RESOLUTION—By the Government of India, Department of Finance and Commerce.

Read the following communications submitting the Reports of Registrars of Joint Stock Companies on the working of the Indian Companies Act, VI of 1882, during the official year 1888-89:

From the Government of Madras, No. 1217, dated the 16th July 1889.

From the Government of Bombay, No. 4817, dated the 5th July 1889.

From the Government of Bengal, Nos. $\frac{J}{4}$-2 and $\frac{J}{4}$-4, dated the 18th June and 13th August 1889.

From the Government of the North-Western Provinces and Oudh, No. $\frac{356}{VII.-117-B.}$, dated the 29th May 1889.

From the Government of the Punjab, No. 7, dated the 14th May 1889.

From the Chief Commissioner, Central Provinces, No. $\frac{4229}{214}$, dated the 17th July 1889.

From the Chief Commissioner, Burma, No. $\frac{318}{6-C.}$, dated the 10th May 1889.

From the Chief Commissioner, Assam, No. 5396, dated the 7th September 1889.

From the Secretary for Berar to the Resident at Hyderabad, No. 282-G., dated the 18th July 1889.

From the Resident in Mysore, Nos. $\frac{3110}{535}$ and $\frac{2391}{535}$, dated respectively the 11th September and the 18th July 1889.

RESOLUTION.—At the close of 1887-88 there were 910 joint stock companies in existence in India, registered under the Indian Companies Act. They possessed a total nominal capital of 3,025½ lakhs, the actual (paid-up) capital being nearly 2,233 lakhs. During the year 1888-89, the capital of 32 of these companies was increased nominally by about 45¾ lakhs, the actual figures, however, not being reported in most cases; while 112, with a paid-up capital of about 11 lakhs, so far as reported, ceased to work.

The number of companies registered in 1888-89 was 97, with a nominal capital of 178 lakhs; but their paid-up capital cannot be completely stated, the amount of such capital not having been reported in several cases up to the end of the year. The net result at the close of 1888-89 was a total of 895 companies possessing a nominal capital aggregating 3,134 lakhs, and an actual capital, so far as reported, of 2,299¾ lakhs.

2. The following table shews the number of companies and the amount of paid-up capital in each of the provinces in the last two years:

PROVINCE.	NUMBER OF COMPANIES.		PAID-UP CAPITAL.		INCREASE OR DECREASE PER CENT. IN 1888-89.		Provincial proportion of paid-up capital to all paid-up capital in 1888-89.
	1887-88.	1888-89.	1887-88.	1888-89.	Number of Companies.	Capital.	
			Rs.	Rs.			Per cent.
Bengal	227	234	9,85,97,905	9,77,87,068	+ 3	— 1	42·5
Bombay	204	223	9,20,82,917	9,87,43,382	+ 9	+ 7	43
Madras	317	266	1,63,99,644	1,67,90,358	— 16	+ 2	7·3
North-Western Provinces and Oudh	52	54	82,11,928	85,55,419	+ 4	+ 4	3·7
Punjab	22	22	32,32,914	35,04,166	*Nil*	+ 8	1·5
Burma	12	11	12,41,955	11,77,110	— 8	— 5	·5
Central Provinces	3	3	8,72,595	8,77,790	*Nil*	+ ·6	·4
Assam	3	3	*	*	*Nil*	...	...
Mysore	70	78	26,22,067	25,29,784	+ 11	— 4	1·1
Hyderabad Assigned Districts ...	...	1	...	10,000	...	...	...
TOTAL ...	910	895	22,32,61,925	22,99,75,077	— 2	+ 3	100

* Not reported.

3. The following table shews the division of the aggregate capital among the principal classes of joint-stock enterprise:

Companies.		Number.	Nominal capital.	Paid-up capital.
			Rs.	Rs.
Banking, Loan, and Insurance	Banking and loan	314	5,16,75,295	3,27,37,866

Breweries		3	17,00,000	12,00,000
Others		14	87,11,000	82,70,609
	Grand Total	895	31,33,98,450	22,99,75,077

The largest part—1,023 lakhs paid-up—of the aggregate capital is invested in mills and presses chiefly for working or pressing cotton, jute, wool, and silk. The greater number of these are registered in Bombay, that Presidency representing under this head a paid-up capital of 721 lakhs, or over two-thirds of the whole, most of it invested in cotton mills and presses. The sum of 199 lakhs represents the paid-up capital invested in mills and presses registered in Bengal, their working being mainly limited to jute.

In tea, coffee, and other plantations 363 lakhs of paid-up capital are invested, of which 344 lakhs are held in Bengal, most of the tea companies being registered in Calcutta.

The paid-up capital invested in banking or loan companies amounts to 349 lakhs, of which 180 lakhs are in companies registered in Bengal and 96 lakhs in Madras.

Trading companies have a paid-up capital of 354 lakhs, of which 93 lakhs are invested in coasting and river steamer companies, and about 70 lakhs in railways and tramways. Of these 70 lakhs the bulk is invested in the Bombay tramways (30 lakhs), the Darjeeling-Himálayan Railway (17½ lakhs), the Tarkessar Railway (16½ lakhs), the Deoghur Railway (2¾ lakhs).

Of the 79 lakhs invested in mining and quarrying companies, 59 lakhs are in companies registered in Bengal, 52 lakhs being invested in that province in coal mining companies.

4. Comparing the paid-up capital of the last two years, the figures below are of some interest. The figures are rupees, 000's omitted:

	Paid up in—	
	1887-88.	1888-89.
Banking and loan	324,63	327,37
Merchants and traders	173,24	181,67
Mills for cotton, jute, wool, silk, and hemp	794,81	858,58
Cotton and jute presses	121,50	126,41
Tea	354,36	352,91
Mining and quarrying	100,95	79,34
Navigation	89,45	92,61
Railways and tramways	68,89	69,58

The only considerable increase in capital—about 8 per cent—was assigned to mills, mainly cotton mills.

5. The following table shews the number of companies under each category during the last five years:

Companies.		1884-85.	1885-86.	1886-87.	1887-88.	1888-89.	Increase or decrease per cent in 1888-89 compared with 1884-85.

Others		23	16	13	13	14	— 39
	Grand Total	694	805	888	910	895	+ 29

6. The following table shews, so far as reported, the total number of joint stock companies at work in India with their nominal and paid-up capital at the end of each of the last nine years:

YEARS.	Companies at work.	Nominal capital.	Paid-up capital.	Increase of paid-up capital.
		Rs.	Rs.	Rs.
1880-81	475	19,74,10,150	14,86,66,364	.....
1881-82	500	21,29,73,730	15,45,80,041	59,13,677= 4 %
1882-83	547	22,17,01,800	17,01,50,044	1,55,79,003=10 ,,
1883-84	649	26,67,34,384	18,75,06,107	1,73,47,063=10 ,,
1884-85	696	27,88,76,908	20,63,58,444	1,88,52,337=10 ,,
1885-86	805	28,54,34,367	21,00,25,677	36,67,233= 2 ,,
1886-87	888	29,13,61,646	21,38,04,422	37,78,745= 2 ,,
1887-88	910	30,25,42,842	22,32,61,935	94,57,503= 4 ,,
1888-89	895	31,33,98,450	22,99,75,077	67,13,152= 3 ,,

The increase during the year was 67 lakhs, being at the rate of 3 per cent. The average annual rate of increase during the eight years has been 5 per cent. In the last four years the increase has been slow.

7. The statistics of companies limited by guarantee have apparently been defectively reported. The figures, so far as they go, shew that there were 79 such companies at the close of 1887-88, almost all in the Madras Presidency, being mostly small benefit societies of a speculative and not infrequently fraudulent character. A great number of these companies was started in 1885-86 in Madras, collapsing after a year or two. Thirty ceased to work in 1888-89. Four new companies being added, there were 53 such companies at the close of the year.

8. The fees realised and the expenditure in each province last year were:

PROVINCE.	Fees.	Expenditure.
	Rs. A. P.	Rs. A. P.
Bengal	6,354 12 0	617 6 4
Bombay	10,681 0 0	1,052 5 0

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on Monday, October 21st, 1889.

The rainfall of the summer monsoon is as a rule concluded all over the Indian region by about the 15th of October, while the rainfall of the winter monsoon on the Coromandel Coast commences at about the same time. Hence the middle of October forms a convenient division for the purposes of rainfall registration, and, while the last summary showed the final results of the summer monsoon, the present summary shows the first effects of the winter monsoon. In normal years the weather of the present week is characterised by more or less heavy showers over Burmah, Assam and Bengal, by very slight showers in Upper India, the Gangetic plain, the Central Provinces, Central India and the north of the Peninsula, and by moderately heavy rain in the Carnatic and South India. The records of the present week show that this normal distribution has been largely departed from owing mainly to the action of the cyclonic storm, the formation of which over the Bay was noticed last week. This storm not only occasioned increased energy and rainfall in the north-east monsoon current blowing on the East Coast of the Peninsula, but induced a strong south-west current on the opposite coast, and occasioned very heavy rain there and also in Berar and the west of the Central Provinces.

The chart of the 15th showed relatively high pressures over the north-west of the Punjab and the Assam Valley, low pressures over the Peninsula with two minima,—one off the Coromandel and one off the Malabar Coast. Irregular and partial cyclonic circulations of the wind prevailed in the neighbourhood of both disturbances, but the depression of the barometer within the low pressure areas was in moderate only, and the winds were by no means strong. The weather was exceedingly fine all over Northern India, the Central Provinces, Central India and the north of the Peninsula. The chart of the 16th showed that the Madras depression had crossed the Coast during the preceding night and was advancing in a west-north-west direction towards the South Bombay Deccan. The storm had increased somewhat in intensity, and the somewhat irregular cyclonic circulation of the winds had increased in force, and a moderate gale was reported from Cocanada. The weather was hence unsettled over the Peninsula, while it remained exceedingly fine elsewhere. By the morning of the 17th the storm lay a few miles to the south-eastward of Belgaum. The depression had continued to develop, and the lowest pressures reported were about 0·1 inch lower than those of the preceding day. The general conditions of the weather were unchanged, unsettled stormy weather prevailing over the Peninsula and exceedingly fine weather all over Northern India. The chart of the 18th showed that the storm had hardly moved its position. The centre had apparently passed over Bellary, and the wind was south-south-west at that station instead of north as on the preceding day. The storm was apparently recurving and advancing northward along the east of the Ghâts towards Berar. A cyclonic circulation of fairly strong winds prevailed, and the weather remained very unsettled all over the Peninsula. Very fine weather continued in the north. By the 19th the storm was beginning to fill up. It had advanced very slowly in a north-north-east direction, and the centre lay near Sholapur. There was no other change of importance. The chart of the 20th showed that the process of filling up continued, and that the depression was now very slight. The centre apparently lay to the south-east of Nagpur, so that it had continued to move north-eastward and the unsettled weather had spread into the Central Provinces. There was no change over Northern India. On the 21st the depression was unchanged in character, but the centre had apparently moved slightly eastward. The weather was unchanged.

Temperature.—A remarkable depression of temperature has prevailed during the past week. In the Peninsula and the central parts of the country this depression has been very largely due to the excessive rainfall, but in Northern India it has apparently been attributable to an abnormal wave of cold which has advanced over Upper India, seemingly from the north-westward. At first this

abnormal coolness was more noticeable in the night than in the day temperatures: thus, at Quetta on the night of the 16th the minimum temperature was 10½° lower than usual and at Hyderabad, Jacobabad, Dera Ismail Khan, Rawalpindi and Roorkee was more than 7° in defect. This large deficiency in the night temperatures continued and spread over the whole of Northern India, and at the same time the maxima became affected in a slighter but similar manner.

The net result of these two causes was that the returns for the week as given in the table below showed a general deficiency in all Provinces, except Burmah and the Central Provinces, where there was an excess of about half degree:

PROVINCES.	Difference of Mean Temperature of Last Week from Normal.	Difference of Mean Temperature of Present Week from Normal.
Burmah	+ 0·9°	+ 0·5°
Bengal	+ 0·9°	— 0·2°
North-Western Provinces	+ 0·7°	— 2·6°
Punjab	— 1·5°	— 4·7°
Bombay	+ 0·9°	— 0·5°
Central Provinces	+ 0·9°	+ 0·3°
Guzerat and Central India	+ 0·8°	— 1·3°
Sind and Rajputana	— 1·0°	— 4·2°
Madras	+ 0·2°	— 0·7°

This table shows a steady fall of temperature compared with the average throughout the country, the decrease being greatest 3·2° over Upper India. At many stations the minimum readings recorded were lower than any recorded in any previous October. At Quetta the thermometer fell below the freezing point on nearly every morning during the week.

Rain.—There has again been no rain over Upper India. In the Central Provinces showers recommenced during the week, and in all other parts of India there has been general, and over the Peninsula heavy, rainfall. A large part of this rainfall has been due to the barometric depression which passed into India from the Bay, but in Burmah and Bengal it has been attributable to fairly general showers.

The following is a brief description of the daily distribution:—On the 15th there was general rain over the Peninsula to the south of a line joining Vizagapatam to Ratnagiri; there were also local showers in the north-west angle of the Bay and in parts of Burmah. Elsewhere the weather was fine and dry. The heaviest falls were at West Coast stations. On the 16th the distribution was the same, except that there was some slight northward extension of the rainfall area. The chart of the 17th showed no change, but on the 18th the rainfall area was extending further northward into Berar, while the falls in South-West Bengal, Orissa and the Circars had become much heavier. On the 19th rain had spread into the Central Provinces, but had fallen off in the south of the Peninsula. On the 20th the rain had fallen lighter generally and had altogether ceased over a large part of the south and west of the Peninsula. In the Circars, Orissa, Lower Bengal and the Central Provinces it still continued, and in Burmah general showers were reported. On the 21st there was no change.

The concluding table shows that no rain whatever fell during the week in the Assam Valley, North Bengal, Behar, the greater part of the North-Western Provinces, the Punjab, Rajputana, Sind and Kattiawar. In twenty-seven divisions the week's fall was short of the normal and in nineteen was in excess. In Sind and Kattiawar rain neither fell nor was expected during the week. The greatest excess was 8 inches in Coorg, followed by 5½ inches in Malabar, 4 inches in the Konkan and East Coast Central and 3½ inches in East Coast North and the Bombay Deccan. The greatest excess relatively to the average was however in the Central Provinces (west), where the normal rainfall was only 0·25 inch, and the amount received 2·41 inches, or nearly ten times as much.

The returns of maximum falls exhibit several exceptionally large amounts considering the time of year: thus, Vayitri in Calicut received 23 inches; Karkal in south Kanara, 16½ inches; Gudapur in the Nilgiris, 10½ inches; Verojendrapet in Coorg, 11 inches; and Kumpta in North Kanara, 15 inches; on the eastern side of the Peninsula Yellamanchili in Vizagapatam received 12 inches; Narsapur in Godavery, 13⅓ inches; Repalli in Kistna, 12¾ inches; Ongoli in Nellore, 10½ inches; and Ponnery in Chingleput, 13¾ inches.

These falls, but more especially those on the western side of the Peninsula, are exceptionally heavy for the season.

Simla, *25th October*, 1889.

W. L. DALLAS,
Assistant Meteorological Reporter to the Government of India.

J. MUIR-MACKENZIE,
Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 19th October.*—Rainfall good throughout the Presidency. Crops generally good, but suffering from excessive rain in parts of Ganjam, Godavari, Kistna, Bellary, Anantapur and Kurnool, and withering from want of rain in parts of Chingleput and South Arcot. *Ragi* and castor damaged by insects in parts of Trichinopoly. Prices generally falling or stationary. Labourers employed last day of week,—Rushikulya works, 3,378; Gopalpore Canal, 449; Ghat Roads, 1,434; other minor works, 4,935. Number on village relief on 12th October, 14,540, including 8,646 children; fed in kitchens, 4,735, including 3,544 children. Imports into Ganjam during week by sea and land 441 tons. General prospects good.

Bombay.—*For week ending 23rd October.*—Heavy rain during the week throughout Deccan and Carnatic, in parts injuring crops and retarding agricultural operations; prospects otherwise generally good. Harvesting and sowing operations progressing. Fodder sufficient and agricultural stock generally healthy.

Bengal.—*For week ending 22nd October.*—General and rather heavy rain has fallen in Orissa, and partial showers are reported from other parts of the Province. More rain is still wanted in several districts for winter rice, especially on high lands. Cultivation of *rabi* or cold weather crops is in progress, but is in want of rain in some districts. Sugarcane is generally a promising crop. The price of rice is cheaper than at this time last year in Chota Nagpur and Orissa, but is still much dearer in the districts of Bengal and Behar. In the affected tracts in Durbhanga, Muzaffarpur and Chumparun prices are said to be steadily falling, and food-stocks are sufficient. There is also an adequate supply of food in the affected area in Midnapur, where all relief operations have been closed. In Durbhanga labourers are finding work in the fields.

North-Western Provinces and Oudh.—*For week ending 23rd October.*—Weather generally fine, except in eastern districts, where it has been cloudy. Harvesting of *kharif* nearly completed; the outturn promises well. *Rabi* sowings in progress. Supplies ample, but prices are still fluctuating.

Punjab.—*For week ending 23rd October.*—No rain. Prices stationary in all districts, except Delhi and Rawalpindi, where they are rising. Harvesting of *kharif* crops commenced. Ploughings for, and sowings of, *rabi* in progress. Rain much wanted in all districts for *rabi* sowings and also for *kharif* crops in Ferozepur and Lahore. Crops are reported to be in good condition, except in Hissar and Peshawar, where they are said to be below the average. Crop on *barani* land has suffered much in Muktsar and Fazilka for want of rain. Fodder is sufficient throughout the Province. Poppy sowings commenced in Shahpur.

Central Provinces.—*For week ending 23rd October.*—Rain has fallen in Seoni, Wardha, Nagpur and Sambalpur. In Seoni, Nagpur and Balaghat the rain has been injurious to standing crops and to the *rabi* sowings. In Wardha, where the fall of rain has been particularly heavy, the cotton and linseed crops have been damaged. *Rabi* sowings are in progress in the Chhattisgarh district. Rice is being reaped, and if not damaged by rain, good prospects are anticipated. Prices steady.

Burma.—*For week ending 19th October.*—Heavy rain fell in Thongwa, Henzada and Shwegyin. The fall was light in Prome and Thayetmyo; elsewhere it was normal. In the northern portion of Tharrawaddy more rain is needed, and rain is wanted in Thayetmyo. The crop prospect in Lower Burma continues good. In Upper Burma rain is wanted in Shwebo and parts of Minbu.

In Pyinmana there was a heavy fall, and elsewhere it was light. The crop prospect in Upper Burma is generally good. There was a fall in the price of paddy in Prome, Thongwa and Amherst; in other districts prices remained unchanged. In Upper Burma there was a rise in the price at Shwebo, and in the other districts there were no fluctuations. The food-supply is sufficient throughout the Province.

Assam.—*For week ending 23rd October.*—Weather seasonable. Mustard and pulses being sown. Tea and other standing crops doing well.

Mysore and Coorg.—*For week ending 23rd October.*—Rainfall good throughout the State of Mysore. Standing crops in good condition. Harvesting operations continue. Prospects of season favourable. Prices slightly risen in Shimoga, Kadur and Chitaldroog districts.

Rainfall 5·27 inches in Coorg. Standing crops good.

Berar and Hyderabad.—*For week ending 23rd October.*—Average rainfall in Berar 2·8 inches. Picking of cotton commenced. *Jowari* in good condition. Locusts appeared in Amraoti taluka, but no damage done. Fodder sufficient, except in Chikli. Prices declining. *Rabi* sowing in progress.

Rainfall during week in Hyderabad 2·52 inches; total since 1st January 36·67 inches. Harvesting of *kharif* crops finished in some places and continues in others. Prices stationary.

Central India.—*For week ending 23rd October.*—Slight rain fell in Baghelkhand. Prices rising in Baghelkhand and Neemuch; stationary at Goona.

Rajputana.—*For week ending 23rd October.*—No rain. Agricultural operations satisfactory. *Rabi* crops being sown. **Agricultural stock good.** Pasturage or fodder sufficient, except in Marwar. Prices steady generally.

Nepal.—*For week ending 17th October.*—Weather seasonable. Harvesting of paddy is in progress; outturn very favourable.

J. MUIR-MACKENZIE,
Offg. Secretary to the Government of India.

REVENUE AND AGRICULTURAL DEPARTMENT.

WEATHER SUMMARY FOR SEPTEMBER 1889.

The principal meteorological features of the month of September in normal years are the retreat of the south-west monsoon from Upper and Central India and the appearance of more or less severe cyclones over the Bay of Bengal. The date of the occurrence of the former phenomenon apparently depends largely on the general strength of the monsoon during the whole period of its prevalence, but of the rules which regulate the occurrence of cyclones much less is known. The withdrawal from Central and Upper India of the moist currents from the Bombay and from the Bengal side of India occur fairly simultaneously, and is followed by fine dry weather in that region, but Bengal and Burmah continue to receive moderate general rain from the Bay current and the Konkan, Malabar, the Deccan and Southern India from the Arabian Sea current. As mentioned above, the cyclonic storms of this period are frequently of considerable severity, and give heavy and general rainfall. Their course is as a rule west-north-west from the Orissa Coast across the central parts of the country, and they are frequently remarkable for long vitality.

The present September has been remarkable for the exceptionally early cessation of the rains over a considerable portion of India. Over the whole of North-Western India (*i.e.*, the whole of the region lying to the north-west of a line joining Rajkot and Lucknow) there has been practically no rain of importance throughout the month. This has apparently arisen from two causes—the first being the excessive weakness of the Bombay current, the second the feeding of the Bay current into the various depressions, which have formed over and travelled near the Bay of Bengal. Conditions on the West Coast of the Peninsula have been very exceptional. In the ordinary course of events there should be a fairly strong south-westerly and westerly wind crossing the West Coast at this season, and rain should be general and fairly frequent. Instead of this the records of the past month have shown for the greater part of the period variable or east to north breezes of light or moderate strength, and on several days there has been a partial or complete absence of rain all along the West Coast. During the occurrence of the depressions described below, these abnormal conditions were of course modified, and an inrush of moist monsoon winds towards the depression occasioned heavy and general rain on the West Coast; but with the disappearance of the disturbances the wind returned to its abnormal directions and the rain more or less ceased.

After a short disturbed period quite at the commencement of the month the weather became settled. Very small pressure differences were accompanied with light and variable winds, and, though rain was reported from most stations (except those in the north-west), it occurred generally in passing showers, and the general weather was fair. On the 16th however conditions became unsettled over the Bay, and a brisk fall of the barometer was accompanied with the formation of a depression. An unsettled period which lasted until the 23rd then set in, during which the weather was stormy and the rainfall heavy. After the 24th or 25th the rainfall again fell off gradually, and by the end of the month the weather was again fine over the greater part of the country.

Barometric depressions and cyclonic storms of the month.—Three depressions were formed during the month, of these one was of very considerable importance, but the other two were small and short lived.

Depression of 1st to 3rd September.—At the close of August a shallow low pressure area lay over Behar and the North-Western Provinces, into which the wind from surrounding districts fed and around which rain was falling. On the 1st September a shallow but well defined disturbance formed within this low pressure area, and a cyclonic circulation of the winds was established. Moderately heavy rain fell within the storm area. The reports of the

2nd showed that the storm was filling up, but that heavy rain had occurred in its neighbourhood, the following being some of the principal amounts reported:

Benares	4½	inches on the 2nd.
Jaunpur	6½	" " " 1st.
Allahabad	6½	" " " 1st and 2nd.
Sultanpur	6½	" " " " " "
Pertabgarh	9½	" " " " " "
Rai Bareilly	5¾	" " " " " "

On the morning of the 3rd the barometer was rising quickly and the depression had almost disappeared.

Large depression of the 16th to 22nd September.—Very uniform pressures were reported over the Bay and the surrounding coasts on the morning of the 15th—a condition which in the middle of September was almost certainly antecedent to the formation of a storm. On the 16th a depression was clearly traceable in the Bay and there was a general indraught of air towards the centre. The chart of the 17th showed that the depression had developed and that the centre of depression was in Lat. 18°30′ and Long. 88°30′, where the barometer was probably falling briskly. A cyclonic circulation of moderate intensity had been formed around the Bay. On the 18th the centre of the storm was close to the coast between the stations of Gopalpore and Vizagapatam, where the barometer had fallen very rapidly. Strong cyclonic winds prevailed around and over the Bay. The storm crossed the coast in the afternoon, and moderate gales prevailed around it. The barometer at the centre probably fell below 29·0″ and the storm was altogether of considerable intensity. By the morning of the 19th it had passed about 100 miles inland on a west-north-west course. Strong winds were feeding into it; and the rainfall around was very heavy. On the 20th the storm was to the south of Raipur and still maintained the same intensity. The chart of the 21st showed that the storm was filling up, and that it was passing northward towards the North-Western Provinces. A strong cyclonic circulation was still maintained around it and fairly heavy rain continued. By the morning of the 22nd the disturbance had reached the foot of the Hills in the neighbourhood of Gorakhpur and by the following morning it had broken up. It continued to give very heavy rain up to the time of its disappearance. The following returns show approximately the amount of the depression of the barometer below the normal during the course of the storm, but as the actual centre was on no occasion actually over one of the meteorological stations at the hour of observation, the result is only a rough approximation:

On the 17th	Gopalpore	—·051″
	Vizagapatam	—·048″
" 18th	Gopalpore	—·193″
	Vizagapatam	—·217″
" 19th	Gopalpore	—·235″
	Vizagapatam	—·226″
" 20th	Raipur	—·254″
" 21st	Seoni	—·151″
" 22nd	Gorakhpur	—·208″

Heavy rainfall was more or less confined to a comparatively narrow band in the direct path of the storm. Ankapalli received about 20 inches and Vizagapatam about 10 inches on the 18th and 19th. The Central Provinces (east and south) received between 4 and 6 inches on the 20th and 21st and the Gorakhpur, Basti and Azamgarh districts of the North-Western Provinces received between 6 and 13 inches of rain between the 22nd and 23rd.

Shallow depression of 25th to 28th September.—On the 25th a large shallow area of low pressure was formed over the Bay, Burmah and South Bengal, and appearances on this day favoured the production of another considerable depression. The reports of the 26th showed, however, that the barometer was rising all round the Bay, so that the disturbance never developed but drifted slowly northward into Bengal, and broke up on the 27th or 28th. No rain of any consequence fell with this depression.

Pressure has been remarkably high over the greater part of Northern and Central India. Notwithstanding the influence of the depressions noticed above, and which was almost entirely confined to Northern India, the results at the close of the month show that over the whole of Northern India, excepting the north-west of the Punjab, Sind and Guzerat, but including the Circars, the north of the

Bay and Burmah the mean barometer was above the normal, while over the Peninsula on the contrary and more particularly on the Malabar Coast it was largely in defect.

The following table gives the barometric anomalies or local pressure variations in different parts of the country for September with those for June, July and August for comparison:

Province.	Barometric Anomaly.			
	June 1889.	July 1889.	August 1889.	September 1889.
Burmah	+·011	+·004	+·008	+·006
Bengal	+·008	+·017	—·014	+·013
Assam	+·019	+·019	+·002	+·007
Behar and Chutia Nagpur	+·006	+·019	—·007	+·008
North-Western Provinces	+·003	+·015	+·005	+·011
Punjab	—·016	—·004	+·019	+·003
Sind and Rajputana	—·013	+·005	+·005	+·001
Central India	—·001	+·012	—·091	+·011
Central Provinces	—·004	+·005	—·048	+·015
Bombay	—·001	—·025	+·002	—·035
Madras	—·002	—·026	+·012	—·017

The principal features of the above table are the change in pressure over the Central parts of the country, the steadiness of the excess in Upper India and the considerable deficiency in the south and west of the Peninsula.

Temperature.—The most remarkable point about the temperature conditions of the month is the large diurnal range of temperature which has been reported over Northern India. With the early clearing of the sky nocturnal radiation apparently set in with unusual energy, and the night temperatures, more particularly towards the close of the month, were most unusually low. The variation of the mean temperature for each week and for the month from the mean is given in the following table:

Province.	Difference of Mean Temperature from Normal for Week ending September				Difference of mean temperature from the Normal for the month.
	9th	16th	23rd	30th	
Burmah	+0·7	+1·6	—0·1	—1·0	+0·2
Bengal	—0·6	—0·5	—0·9	+1·0	—0·4
North-Western Provinces	+0·1	+0·2	+0·2	—0·7	—0·1
Punjab	+1·6	+2·0	+1·0	—0·8	+0·8
Bombay	+1·9	+2·9	+2·0	+0·9	+1·5
Central Provinces and Berar	+1·0	+1·9	+2·2	+2·1	+1·6
Guzerat and Central India	—0·1	+1·7	+2·9	+1·6	+1·3
Sind and Rajputana	—0·3	+1·3	+3·5	+0·6	+1·2
Madras	—0·4	+0·1	—0·7	—0·9	—0·2

Rainfall.—The distribution, &c., of rain during the past month has been largely described in the earlier portions of this summary. Briefly, the returns show that the rains ceased early and were consequently light over nearly the whole of Northern and Central India, the exceptions being the Trans-Gangetic portions of the North-Western Provinces, Behar, North Bengal and Assam. Of these the first three regions were under the influence of the two depressions noticed above, and the excess of rainfall is due to this cause. The Indian Peninsula, with the exception of the Konkan, had generally heavy rain, the excess ranging from about ½ inch in the Carnatic to nearly 9 inches in Malabar. In Ceylon the rainfall was even heavier, the returns from Colombo showing that at that station the month's fall was more than five times the normal amount. In Burmah the fall almost exactly equalled the average.

The following table gives complete data, and shows the actual average rainfall and the normal rainfall of the month of the twenty-one districts into which the country is divided, so far as it is indicated by the telegraphic reports of a few stations in each district:

Districts.	Number of Stations.	Normal Average Rainfall in September.	Actual Average Rainfall in September 1889.	Difference from the Average in September 1889.
Punjab, West	7	2·44	0·58	— 1·86
„ East	4	3·92	0·71	— 3·21
North-Western Provinces, Trans-Gangetic	8	7·07	7·60	+ 0·53

J. W. P. MUIR-MACKENZIE,
Officiating Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on Monday, October 28th, 1889.

The weather over the greater part of India has been finer and more settled than is ordinarily the case even at this fine season of the year. Western and Central India has been the seat of a slight anticyclone or high pressure area, while the whole of North-Western India has experienced steady and uniform pressures, so that the slight showers which not uncommonly occur about this time—more particularly in the mountain and submontane regions—have been absent this year. In strong contrast to these fine conditions has been the weather prevailing over and around the head of the Bay of Bengal, where a storm of considerable intensity has given strong squally winds and exceptionally heavy rain. This storm took a somewhat unusual course for this time of year and passed into East Bengal. This unusual course had a very important influence on the weather occasioning heavy rain around the head of the Bay, where it is ordinarily fine, and occasioning fine weather on the Coromandel Coast, where it is ordinarily rainy, at this season. In most years the moist south-west winds which prevail over the south, south-east and east of the Bay during the latter half of October curve to the westward over the centre of the Bay, and blowing on to the Coromandel Coast as north-east winds occasion the heavy rains which are characteristic of that coast at this time. In the present year, instead of recurving, these winds have fed into the depression at the head of the Bay, while north-westerly winds with a land origin have prevailed over Madras and brought fine dry weather.

The chart of the 22nd showed a large area of low pressure overlying East and South Bengal, Orissa, the Circars and the head of the Bay into which there was a steady indraught of wind from all directions. Moderately steep gradients for northerly winds prevailed over the central parts of India and of the Peninsula and winds from between north and west prevailed there, while both in North-West India and on the West Coast variable airs and calms predominated. On the morning of the 23rd the barometer was falling quickly over the head of the Bay, and the definition of the storm had increased very considerably and a small storm centre apparently lay in Long. 88° and Lat. 20°. The winds were cyclonic at the head of the Bay, but very feeble. Elsewhere conditions were unchanged. The chart of the 24th showed that pressure had increased at all stations. The storm at the head of the Bay was smaller than on the preceding day, and no further development had taken place. Winds remained cyclonic at the head of the Bay and there was a distinct tendency to increase in force. The normal north-westerly to westerly current of air prevailed down the Gangetic plain, and elsewhere the winds were westerly or variable. Between the 24th and 25th the storm developed a good deal. This was owing to a general rise of pressure in surrounding regions, while the barometer remained almost steady at the centre of depression. In consequence gradients increased considerably around the centre, the cyclonic circulation of the winds extended to nearly all parts of the Bay, and the force of the winds rose quickly in the north. Hitherto the storm centre had been steady off the Orissa Coast, but after 8 A.M. on the 25th it began to move north-eastward and by the morning of the 26th it had passed to the east of Saugor Island, and had apparently travelled inland over the Sunderbuns. Very strong winds prevailed at the Sandheads. The chart of the 27th showed that the storm had travelled east-north-eastward and that the centre lay near Burrisal, where the barometer marked 29·60″. Strong cyclonic winds prevailed all around the centre. Light variable or westerly winds prevailed in other parts of India with fine weather. By the morning of the 28th the storm had almost broken up. The cyclonic circulation had become feeble and irregular, and the north-westerly to westerly winds of the Gangetic plain, with their accompanying fine weather, were extending into Bengal.

Temperature.—The remarkable depression of temperature which has prevailed over the greater part of India during the past two weeks has been continued during the week under review, but there are now signs that the lowest point of the oscillation has been reached and that temperature, relatively to the average, will now begin to rise. One interesting feature of this period of depression has been the remarkable lowness of the night temperatures on the plains in comparison with those on the hills. On several occasions the minimum temperature recorded at the plains stations in the Punjab, and west of the North-Western Provinces has been several degrees lower than the temperature recorded at the same time at the hill stations of Murree and Simla.

The following table shows the variations of the mean temperature of the present and of the past week from the normal average:

PROVINCES.	Difference of Mean Temperature of Last Week from Normal.	Difference of Mean Temperature of Present Week from Normal.
Burmah	+ 0·5°	— 0·6°
Bengal	— 0·2°	+ 1·6°
North-Western Provinces	— 2·6°	— 1·1°
Punjab	— 4·7°	— 3·1°
Bombay	— 0·5°	— 4·3°
Central Provinces	+ 0·3°	— 4·3°
Guzerat and Central India	— 1·3°	— 5·4°
Sind and Rajputana	— 4·2°	— 5·1°
Madras	— 0·7°	— 1·1°

This table shows that, except in Bengal, every Province throughout India has experienced a considerable depression of temperature during the week. It will be noticed that in the Punjab and North-Western Provinces the depression is less than it was last week, and that in the other Provinces it is greater, showing that the cold wave is apparently travelling southward.

Rain.—There has again been little or no rain over the greater part of India. In the immediate neighbourhood of the cyclonic storm described above the fall has been heavy, but rain did not extend to any great distance on either side of the track of the storm centre and was hence confined to a limited extent of country.

The following is a brief description of the daily distribution:—On the 22nd the weather over India being still in an unsettled state, owing to the breaking up of the depression noticed in the preceding summary, showers were reported from many parts of the country—more particularly from Bengal, the east of the North-Western Provinces, the Central Provinces, the south of the Peninsula and Burmah. The amounts were considerable in several places, especially in Lower Burmah. On the 23rd a few scattered showers were reported from Behar, one or two central stations and from the Malabar Coast; with these exceptions rain was confined to the Bay area and was not heavy. On the 24th, 25th and 26th there was no rain, except around the upper part of the Bay and in Assam and Upper Burmah. On the 27th and 28th there was heavy rain in Bengal and some showers in Assam, but no rain in any other part of India.

The table at the close of the summary shows that in seventeen rainfall divisions no rain whatever was received during the week, and that in seven other divisions the average rainfall for the week was less than one-tenth of an inch. In twelve of these twenty-four divisions the normal rainfall is either *nil* or less than one-tenth of an inch, but that this number should be doubled in the week under review is an indication of the exceptionally fine weather at present prevailing. Fifteen divisions report an excess and thirty a deficiency of rainfall during the week. The greatest excess is in Burmah and Eastern and Deltaic Bengal, where the cyclonic storm noticed above occasioned several large falls. Of these the principal are—$7\frac{3}{4}$ inches at Maungdaw (Akyab); 11 inches at Kushak (Tipperah); 12 inches at Perozepur (Backergunge); 8 inches at Munsheegunge (Dacca); $9\frac{1}{2}$ inches at Bagerhat (Khoolna); $7\frac{1}{2}$ inches at Madaripur (Faridpur); $11\frac{1}{4}$ inches at Basirhat (24-Pergunnahs); and $12\frac{1}{4}$ inches at Gope (Pooree).

In the south of the Peninsula and in the Central Provinces there were a few heavy showers on the first day of the week, but after the 22nd there was practically no rain, except in North-Eastern India.

SIMLA, *1st November, 1889.*

W. L. DALLAS,
Assistant Meteorological Reporter to the Government of India.

J. MUIR-MACKENZIE,
Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 26th October.*—No rain in Anantapur, Madras, Trichinopoly, Madura, Tinnevelly and Travancore; good in the four northern districts and South Canara; and slight elsewhere. Crops generally good, but suffering from excessive rain in Kistna, Bellary and Anantapur; withering from want of rain in South Arcot and Chingleput; and injured by insects in parts of Ganjam. Prices generally falling or stationary. Labourers employed last day of week,—on Rushikulya works, 3,158; Gopalpore Canal, 803; Ghat Roads, 2,398; other minor works, 3,226. Number on village relief on 19th October, 7,330, including 4,476 children; fed in kitchens, 3,393, including 2,429 children. Imports into Ganjam during week by sea and land 553 tons. General prospects favourable.

Bombay.—*For week ending 30th October.*—Slight rain during the week in parts. Cotton in Guzerat and Kathiawar, and other standing crops generally good. Harvesting and sowing operations in full progress. Fodder generally sufficient and agricultural stock good.

Bengal.—*For week ending 29th October.*—Fairly heavy rain has been almost general in Orissa, South-West Bengal and East Bengal, and local showers have fallen in North Bengal. The rain has done considerable good to the winter rice crop which is doing well. Prospects of the *rabi* cultivation are also improved and sowings are in active progress. In Behar, where no rain has fallen, it is wanted in some places for the rice on high lands and for the *rabi* crops. Reports of the sugarcane crop are generally satisfactory. Prices of rice are still almost stationary throughout the Province, with a tendency to fall in some districts. In the affected districts of Behar food-stocks continue to be sufficient and prices are falling; and from Durbhanga it is reported that there is plenty of work for labourers in the fields. In Muzaffarpur the daily average number of persons on relief works during the fortnight ending 15th instant was 2,765, mostly employed on the Sitamarhi Extension of the Tirhoot Railway; the daily average number in receipt of charitable relief during the same fortnight was 6,634 in Muzaffarpur and 344 in Chumparun against 10,429 and 730 respectively during the preceding fortnight.

North-Western Provinces and Oudh.—*For week ending 29th October.*—Weather seasonable. *Kharif* being harvested. *Rabi* sowings in progress. Supplies ample. Prices stationary. Prospects good.

Punjab. *For week ending 30th October.*—No rain. Prices rising in Delhi, Umballa and Rawalpindi; stationary elsewhere. Harvesting of *kharif* and sowing of *rabi* in progress. Rain much needed for *rabi* sowings throughout the Province. Crops are said to be in good condition, though average in some districts. Pasturage or fodder sufficient throughout the Province.

Central Provinces.—*For week ending 30th October.*—Weather clear and cold, with slight rain in a few districts in the beginning of the week. The recent rain has done slight damage to *jowari* and cotton and somewhat retarded wheat sowings, but the injury is inconsiderable. Prospects continue good. Prices steady or falling.

Burma.—*For week ending 26th October.*—There was a considerable fall of rain in Lower Burma and the crop prospect is good. Rain fell in Mandalay, Ruby Mines district, Ye-u, Sagaing and to a small extent in most other districts

of Upper Burma. The crop prospect is not bright in Shwebo owing to want of rain, and more rain is now required in Minbu, Meiktila and Yamethin; in the other districts in Upper Burma the crop prospect is good. The price of paddy has fallen 10 per cent. in Pegu and Henzada, 9 per cent. in Amherst, 15 per cent. in Bhamo, 13 per cent. in Katha, 20 per cent. in the Ruby Mines and 11 per cent. in Pyinmana. Elsewhere prices are stationary or the fluctuations are but small.

Assam.—*For week ending 30th October.*—Rain in most districts. Sowing of mustard and pulses continues. State and prospects of crops generally good.

Mysore and Coorg.—*For week ending 30th October.*—Rainfall good in Shimoga and Kadur districts, and fair in other parts of the State of Mysore. Standing crops in good condition. Harvesting operations continue. Prospects of season favourable. Prices slightly fallen in the Bangalore district.

No rain in Coorg during the week. Dry crops reaped in eastern taluks. Season favourable for standing crops.

Berar and Hyderabad.—*For week ending 30th October.*—Average rainfall ·91 inches. *Jowari* in good condition. Picking of cotton commenced. *Rabi* sowing in progress. Prices declining. Cattle healthy. Fodder sufficient, except in Chikli.

Rainfall in Hyderabad during the week ·48 inches; total since 1st January 37·15 inches. Harvesting of *kharif* crops continues. Crops have suffered to some extent by excessive rainfall. *Abi* crops thriving. Preparations for sowing of *rabi* crops commenced. Prices stationary.

Central India.—*For week ending 30th October.*—Partial rain fell in Baghelkhand and none elsewhere. Rainfall is reported as insufficient from Gwalior and Bundelkhand, though crops have not suffered. Prices are falling in Neemuch and Jhabua, and are steady elsewhere.

Rajputana.—*For week ending 30th October.*—*Kharif* crops being harvested. *Rabi* sowings in progress. Total rainfall insufficient in Dholepur. Agricultural stock good. Fodder dear in Marwar and falling in Dholepur. Prices rising in Kerowlee and are steady elsewhere.

Nepal.—*For week ending 24th October.*—No rain. Weather clear. Foggy mornings. Prospects very satisfactory.

J. MUIR-MACKENZIE,

Offg. Secretary to the Government of India.

SUPPLEMENT TO

The Gazette of India.

No. 45.] CALCUTTA, SATURDAY, NOVEMBER 9, 1889.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in* PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be inserted in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 2nd November.*—No rain in Ganjam, Cuddapah, Bellary, Anantapur, Kurnool, North Arcot, Trichinopoly, Tinnevelly, and Salem; very slight elsewhere. Crops generally good, but affected by excessive rain in parts of Godavari, Kistna, Bellary, and Anantapur; paddy blighted in parts of Ganjam, Cuddapah, South Arcot, and by insects in Ganjam; crops withering from want of water in parts of Chingleput; require rain in South Arcot, North Arcot, Tanjore, Trichinopoly, Tinnevelly, Coimbatore, and Salem. Price of gingelly falling or stationary. Labourers employed on last day of week on Rushikulya works, 4,848, Gopalpore Canal, 977, Ghat roads, 3,038, other minor relief works, 1,908. Number on village relief on 26th October, 511, including 299 children, fed in kitchens 2,031, including 1,467 children. Imports into Ganjam during week by sea and land 165 tons. General prospects favourable.

Bombay.—*For week ending 6th November.*—Slight rain during week in two districts. Early and late crops generally good, except where damaged by rats and locusts in parts of Sind. Prospects of cotton in Guzerat and Kathiawar favourable. Harvesting and sowing operations progressing generally. Fodder supply and agricultural stock good.

Bengal.—*For week ending 5th November.*—No rain; fine weather prevalent throughout the week. Winter rice is generally a promising crop, but in a few districts the average outturn will be rather short on account of deficient rainfall, and in places in Behar there will be some loss on the high lands owing to the failure of the *hathiya* or closing rains. All cold weather crops, including poppy and tobacco, are being sown, and sowings are germinating well. In Mozufferpore the poppy sowings are suffering from want of moisture. In Raj-

shahye ganja is being cultivated, and the weather is favourable. Sugarcane is reported to be a good crop in almost all districts. Prices of rice are almost stationary, but a slight decline has been reported from some districts. In Behar the scarcity is said to be practically at an end. In the affected districts, harvest prospects are satisfactory, ample labour is obtainable everywhere in the fields, markets are fully supplied with food, and prices are falling. Relief works and gratuitous relief are almost all closed. During the fortnight ending 31st October the daily average number of persons relieved gratuitously was 1,944 in Mozufferpore and 199 in Champarun, against 6,634 and 344 respectively, in the preceding fortnight. In Mozufferpore the daily average number on relief works during the same fortnight was 2,700, against 2,765 in the preceding fortnight.

North-Western Provinces and Oudh.—*For week ending 6th November.*—Favourable weather continues. The *kharif* harvest is nearly over, and the sowing of the *rabi* is progressing satisfactorily. Markets are well supplied, and prices are generally steady.

Punjab.—*For the week ending 6th November.*—No rain. Prices rising in Delhi, Umballa, and Rawalpindi, stationary elsewhere; harvesting of *kharif* going on; sowings of *rabi* in progress; rain much needed; prospects of the outturn of *kharif* crop is average except in Amritsar, where it is reported fair; fodder sufficient and ample throughout the province.

Central Provinces.—*For the week ending 6th November.*—Weather clear and cool; *juari*, rice, and other *kharif* crops are being harvested, and outturns are good; cotton is being picked; full average outturn expected; sowings of *rabi* crops continue; prospects favourable; prices steady.

Burma.—*For week ending 2nd November.*—Rain in all districts in Lower Burma, and the crop prospect there is generally good. In Upper Burma the rainfall was fair in Kyaukse, Meiktila, and Yamethin; elsewhere there was little or none. The rice crop has failed in parts of Shwebo, and will be below average in Minbu and Yamethin, in which districts the rainfall has been insufficient; elsewhere crops promise well. The price of paddy has fallen 14 per cent. in Tharrawaddy, 5 per cent. in Thongwa, 12 per cent. in Thayetmyo, 11 per cent. in Toungoo and Bhamo, 5 per cent. in Shwebo, 10 per cent. in Lower Chindwin, 7 per cent. in Pakokku; prices have risen in Akyab, and elsewhere are stationary

Assam.—*For week ending 6th November.*—No rain. Weather seasonable. Sowing of mustard continues. Cotton being gathered in Garo Hills. Tea and winter rice crop doing well.

Mysore and Coorg.—*For week ending 6th November.*—Crops good, except in parts of Bangalore district, where more rain is needed. Sowing operations almost completed. Outturn of crops harvested generally favourable. No material change in prices.

No rain in Coorg. Season favourable.

Berar and Hyderabad.—*For week ending 6th November.*—No rain during week at Hyderabad. Harvesting of *kharif* crops continues. *Abi* crops prospering. Sowing of *rabi* commenced though retarded in some places by recent rainfall. Prices stationary.

In Berar the weather is cool. Picking of cotton commenced. *Kharif* in good condition. *Rabi* sowing continues. Fodder sufficient except in Chickli. Prices falling. Reaping of rice commenced in Bassim district.

Central India.—*For week ending 6th November.*—No rain during week. Crop outturn generally good, but below average in Goona. Condition of agricultural stock and pasturage generally good, but stock indifferent in Bundelkhand. Sowing of crops completed in Gwalior, and in progress elsewhere. Sowing of opium commenced in Western Malwa, Bhopawar, and Neemuch. Condition of opium in Goona good. Prices steady throughout the Agency.

Rajputana.—*For week ending 6th November.*—*Rabi* sowings in progress. Agricultural operations satisfactory. Agricultural stock good. Pasturage or fodder generally sufficient. Prices steady generally.

Nepal.—(Report not received.)

SUPPLEMENT TO

The Gazette of India.

No. 46.} CALCUTTA, SATURDAY, NOVEMBER 16, 1889.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in* PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on Monday, November 4th, 1889.

It will be remembered that during the previous week a well-defined and not inconsiderable storm had formed over the Bay and that rainy, unsettled, weather had prevailed around the head of the Bay and over a large part of Bengal. With the disappearance of this depression, which took place at the close of the preceding week, there occurred a sudden and extensive extension of the fine weather which had previously prevailed over North-Western and Central India, and which during the present week has spread to almost all parts of the Indian region. As was the case last week the rain-bearing north-easterly current, which usually prevails in the Madras Presidency at this season, has again been absent. Its absence last week was satisfactorily explained by the presence of the depression over the Bay, into which the moist southerly winds, which cross the Equator, fell instead of recurving over the centre of the Bay and blowing on to the Coromandel Coast. During the present week, though the observations have given evidence of the presence of a slight low pressure area near the Burmese coast and over the Andaman sea, there has been no evidence of any such depression as that which interrupted the current last week, so that perhaps the reason of the absence of rain in the Madras Presidency may be the absolute weakness of the southerly winds crossing the Equator. Whatever may be the solution of the question it is undoubted that the deficiency is becoming serious.

The chart of the 29th showed a large area of uniform and relatively high readings overlying the greater part of the country with slightly lower readings along the foot of the hills and over the Bay of Bengal. The range of pressure throughout the Indian region was only one-eighth of an inch and accompanying this uniformity of pressure were light and rather variable winds. On the whole, however, except on the east coast of the Peninsula, the directions were fairly normal. On the 30th the distribution was approximately the same, but the range was smaller. Hence the winds were even lighter than on the preceding day. The chart of the 31st showed that the barometer had fallen both in the west and north of the Punjab and in Burma, so that while a slight high pressure area prevailed over the central parts of India and of the Peninsula, low pressures were reported from the Punjab and a distinct depression from Burma. Winds were cyclonic in Burma and abnormally westerly on the east coast of the Peninsula, while elsewhere they were fairly normal in direction. On the morning

of the 1st the chart showed that the depression over Burma had intensified and increased somewhat, and that the barometer was still falling there. The barometer was also falling over the Peninsula, and relatively low pressures were reported from both coasts. In Northern India, on the contrary, the barometer had risen, and the range of pressure was greater than on previous days. Northerly winds prevailed over Burma, and light variable winds and calms in Upper India; elsewhere the directions were unchanged. On the 2nd the barometer was still falling in Burma and over the Indian Peninsula, while it had risen briskly in Northern India. A large high pressure area lay over the whole of North-Western and Central India, and the difference between the reading at Hoshangabad and that at Diamond Island was 0·2″. Light variable airs or calms prevailed within the high pressure area noticed above, while elsewhere the directions were generally between north-west and north-east. The chart of the 3rd showed that the barometer had continued to rise in North-Western India while it had fallen or remained almost steady elsewhere. In consequence the high pressure area in the north-west had become much more strongly defined, and the pressure difference between Sind and Lower Burma amounted to 0·25″. The winds showed very little change and the circulation over the greater part of the country was almost normal, though on the east coast of the Peninsula there was much more westing than usual. On the 4th, owing to a slight to moderate barometric rise in all parts of the Indian region except the north-west, pressure became much more uniform again, and the winds on the west side of the Bay showed a tendency to shift towards the normal north to north-east direction.

Temperature.—The remarkable depression of temperature, which has prevailed over India for several weeks, has continued during the week under review, but the lowest point of the oscillation was reached last week, and the present deficiencies are less than those previously reported. In some cases, indeed, a slight excess has replaced a deficiency. As the general depression of temperature disappeared, the remarkable relation between the minimum temperatures on the hills and neighbouring plains also disappeared, so that during the greater part of the past week the minima on the hills have been the lowest recorded.

The following table shows the variations of the mean temperature of the present and of the past week from the normal average:—

Provinces.	Difference of mean temperature of last week from normal.	Difference of mean temperature of present week from normal.
	°	°
Burma	−0·6	−0·7
Bengal	+1·6	−0·5
North-Western Provinces	−1·1	+0·8
Punjab	−3·1	+1·3
Bombay	−4·3	−2·5
Central Provinces	−4·3	−2·6
Guzerat and Central India	−5·4	−1·5
Sind and Rajputana	−5·1	−0·7
Madras	−1·1	+0·2

Rain.—The rainfall of the past week has been exceedingly small. Over a very large part of India no rain whatever has fallen, and only in Burma has there been any general rain or any excess over the normal average.

The daily distribution of rainfall was briefly as follows:—On the 29th showers fell in Assam, on the Arrakan coast and at Rangoon, but in no other part of the Indian region. On the 30th scattered showers were again the only rainfalls recorded, and occurred in the Upper Assam Valley and at Rajahmundry and Nellore. On the 31st rain was reported from Moulmein, Thyetmyo, and Madras, the amounts in all cases being less than one-tenth of an inch. On the 1st there was moderate general rain in Burma, and showers at Nellore, Wellington, and Trevandrum. On the 2nd the distribution was the same. On the 3rd rain ceased in Burma, except at Diamond Island, but fell fairly generally in the south of the Peninsula, while a slight local fall was reported from Murree. On the 4th the record was the same except that there was no rain at Murree.

The table at the close of the summary shows that the past week has been one of exceptionally light rainfall. In normal years eight of the rainfall divisions are ordinarily rainless at this time, but during the past week no less than thirty-four divisions report no rain whatever, while six report amounts of less than $\frac{1}{10}$ of an

inch. The only divisions where there has been any excess are the Burmese, where the normal average has been largely exceeded. The Madras divisions show large deficiencies and the seasonal rainfall in that part of the country is considerably behind the normal.

Province.	Division.	Rainfall data for week ending 4th November 1889.			Rainfall data from October 15th to 4th November 1889.		
		Average actual rainfall of Division.	Average normal rainfall of Division.	Excess or defect in inches.	Average actual rainfall of season to date.	Average normal rainfall, October 15th to 4th November.	Excess or defect of (seasonal) rainfall expressed as a percentage.

CALCUTTA, *11th November, 1889.*

W. L. DALLAS,
Assistant Meteorological Reporter to the Government of India.

J. W. P. MUIR-MACKENZIE,
Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 9th November.*—No rain in Vizagapatam, Bellary, Anantapur, Kurnool, North Arcot and Salem; moderate in Madura and Tinnevelly, and very slight elsewhere. Standing crops generally good, but withering from want of rain in Chingleput, North Arcot and South Arcot. Rain urgently wanted in these districts, and in Madura, Tinnevelly, Trichinopoly, Coimbatore, Salem and parts of Tanjore. Crops damaged by locusts in Kistna, and by previous excessive rains in parts of Bellary. Paddy and cholum blighted in parts of Cuddapah, and paddy in South Arcot. Prices generally falling or stationary, but all risen in town of Madras owing to failure of monsoon up to date. Labourers employed on last day of week on Rushikulya works, 5,387; Gopalpore Canal, 1,391; Ghat Roads, 1,543; other minor relief works, 1,094; State relief closed. General prospects fair.

Bombay.—*For week ending 13th November.*—Standing crops slightly injured by locusts in parts of Sind and Guzerat, otherwise generally healthy. Cotton prospects in Guzerat and Kathiawar good. Harvesting and sowing operations progressing. Agricultural stock generally good.

Bengal.—*For week ending 12th November.*—No rain during the week except light showers at Narail and Jessore on the 5th and 6th instant. Agricultural prospects continue generally favourable. *Aman* or winter rice is maturing, and harvesting has begun on high lands. *Rabi* or cold-weather sowings are coming up well. Prospects of poppy cultivation are good, except in the Hajipore Sub-division of Mozufferpore, where the sowings are backward for want of moisture. *Ganja* cultivation in the Rajshahye District is well forward. Sugarcane is generally a good crop. Cotton is being gathered in the hill tracts of Chittagong and Tipperah, and is a fair crop. Rice is cheaper than at this time last year in most districts of Behar, but in the rest of the province the rates continue high and almost steady in spite of the good prospects of the coming harvest. In Balasore, Durbhunga and Chumparun rice is selling at comparatively low rates, the quotations for the 31st October being 21 seers, 19 seers and 18 seers per rupee, respectively. Distress in the Patna Division was reported last week to be practically at an end, and no further report has been received this week.

North-Western Provinces and Oudh.—*For week ending 13th November.*—The weather continues seasonable, and agricultural operations are everywhere being actively conducted. A flight of locusts passed over the Banda and Jhansi districts on the 8th and is said to have done some injury to the crops in the latter district. Supplies are ample and prices easy.

Punjab.—*For week ending 13th November.*—Slight rain at Peshawar. Prices unsettled in Delhi, rising in Amballa and Rawalpindi, stationary elsewhere. Harvesting still in progress. Sowing of *rabi* still proceeding on. Rain much needed throughout the province for the completion of *rabi* sowings. The *kharif* crop is expected to prove an average one. Fodder sufficient and ample throughout the province.

Central Provinces.—*For week ending 13th November.*—Weather clear and cold. Harvesting of *kharif* crops in progress; outturn good. Wheat and other young *rabi* crops in good condition. Cotton-picking continues; outturn full average. Prices steady.

Burma.—*For week ending 9th November.*—In all districts in Lower Burma, with the exception of the northern circles in Tharrawaddy and in parts of the Prome district, the rainfall has been about normal. In Upper Burma more is

wanted in Meiktila and Yamethin and in parts of Minbu. The crop prospect is good throughout Lower Burma. In Upper Burma, on the whole, the crop prospect is good. In Lower Burma a fall in the price of paddy is shown in the Akyab, Prome and Moulmein districts, and there is a slight rise noticeable in Henzada and Mergui; in the other districts, there are no fluctuations. In Upper Burma there is a fall in the price of paddy in Shwebo, the Lower Chindwin and Mergui, elsewhere prices remain stationary. The food-supply is sufficient throughout the province.

Assam.—*For week ending 13th November.*—Slight rain in the Garo Hills. Sowing of mustard in progress. Cold weather paddy promising. Prospects of tea and other crops good.

Mysore and Coorg.—*For week ending 13th November.*—Standing crops in good condition except in parts of the Bangalore and Kolar districts, where lately sown crops need more rain. Harvesting continues and outturn fair. Prospects generally favourable. Prices slightly risen in the Bangalore district.

No rain in Coorg. Season favourable for standing crops.

Berar and Hyderabad.—*For week ending 13th November.*—In Berar the weather is cool. *Jowari* and *tur* in good condition. Picking of cotton continues. *Rabi* sowing completed. Prices declining. Fodder sufficient except in Chikli.

No rain at Hyderabad during week. Harvesting of *kharif* crops concluded. Sowing of *rabi* continues. *Abi* crops thriving. Prices stationary.

Central India.—*For week ending 13th November.*—No material changes in weather and condition of crops in Central India since last report.

Rajputana.—*For week ending 13th November.*—Agricultural operations satisfactory. Crops damaged by locusts in Bundi and parts of Bhurtpore. Agricultural stock good. Fodder dear in Marwar and failing in Dholepore. Prices rising in Alwar, steady elsewhere.

Nepal.—*For week ending 7th November.*—No rain. Weather clear and cold. Paddy harvesting completed.

J. W. P. MUIR-MACKENZIE,
for *Secretary to the Government of India.*

SUPPLEMENT TO

The Gazette of India.

No. 47.} CALCUTTA, SATURDAY, NOVEMBER 23, 1889.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in* PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending 8 a.m. on Monday, November 11th, 1889.

The fine settled weather which characterised last week has continued during the week under review. An abnormally small amount of rain has fallen, and the barometric conditions and winds have maintained a steadiness which is unusual even at this season of the year. Northerly and north-westerly winds have prevailed over the Madras Presidency, instead of the northerly to north-easterly winds, which are ordinarily characteristic of this season in this region. The difference in the place of origin of these two currents accounts for the difference in the weather of the present season from that ordinarily experienced.

On the 5th a high pressure area extended in a south-easterly direction from the Indus Valley as far as Berar, while the area of lowest pressure overlay the Andaman sea and the south-east of the Bay. The weather over the greater part of India was under the influence of the anticyclonic area, and was very fine with north-westerly and westerly winds down the Gangetic plain, north-easterly winds over the Central Provinces, and easterly winds over the west coast of the Peninsula. Over and around the Bay, on the contrary, the weather was feebly cyclonic, so that easterly winds prevailed in Burma and northerly to north north-westerly winds on the west side of the Bay with a somewhat cloudy sky and unsettled conditions. On the 6th there was no practical change, except that both the high pressure and low pressure areas had contracted, and the barometric difference over the Indian region became very slight. The winds and weather were the same as on the preceding day, only the cloud was rather less over the Bay area. On the 7th the chart showed that the barometer was falling briskly in the north-west and the high pressure area had moved southward. At the same time a small and shallow depression had appeared over Burma, and the barometric differences were

a trifle greater than on the 6th. The wind showed a cyclonic circulation in Burma, but otherwise there was no change in the main wind currents. The chart of the 8th showed that the Burma depression had passed southward and that the centre lay over the Gulf of Martaban. The cyclonic circulation in this region had consequently undergone a slight change, but the wind directions elsewhere were practically unaltered. On the 9th a brisk barometric rise had occurred over North-Western India, and the high pressure area had spread north-westward to the Punjab and the Indus Valley. Barometric differences were slightly greater, but otherwise the general distribution of pressure and directions of the wind were the same as those prevailing on the 5th. On the 10th owing to the continued barometric rise in the north-west and the more or less general fall elsewhere, barometric differences became moderately large for the season, and strongish winds were reported over Northern India. The relative distribution of pressure was not, however, altered, and a general anticyclonic circulation of the wind prevailed over the greater part of India. On the 11th pressure was giving way in the Indus Valley, and the high pressure area again showed a tendency to centre over the Central Provinces and Central India. In other respects there was no change.

Temperature.—The past week, like its predecessors for some time, has been cool in almost all parts of India. In the Punjab, Bombay, the Central Provinces, Guzerat, Sind and Rajputana, the mean temperature for every day was below the normal average. In the other Provinces, *viz.*, Burma, Bengal, the North-Western Provinces and Madras, greater irregularities are shown, but with the exceptions of Burma where there is no departure from the average, and Bengal where there is an excess of about half a degree, the net results at the close of the week for these Provinces also exhibit a defect.

The following Table shows the amount of excess or defect of the mean average temperature of the different Provinces for the present and for the preceding week :—

Provinces.	Difference of mean temperature of last week from normal.	Difference of mean temperature of present week from normal.
	°	°
Burma	—0·7	0
Bengal	—0·5	+0·6
North-Western Provinces	+0·8	—1·2
Punjab	+1·3	—2·1
Bombay	—2·5	—2·1
Central Provinces	—2·6	—3·8
Guzerat and Central India	—1·5	—2·5
Sind and Rajputana	—0·7	—3·5
Madras	+0·2	—0·7

The night temperatures over the central parts of the country and the Peninsula have been remarkably low.

Rain.—There is very little to record in the matter of rainfall. The great majority of the rainfall districts have received no rain whatever during the past week. The only districts reporting any excess are Tenasserim and Central Burma, and the only districts reporting any rainfall at all are Tenasserim, Lower, Central and Upper Burma, Assam (Surma), Deltaic Bengal, Malabar, the East Coast Central and South, and Madras South. The slight fall reported from Hyderabad South is very doubtful. It is only in the south of the Peninsula that any considerable amount of rain is usually expected during the week under review, and it is probably only in this region that the want of rain is of serious importance. Within this region the most important deficiencies of the north-east monsoon rainfall from 15th October to date are 14 inches at Negapatam, 11 inches at Madras, 8 inches at Wellington, 7 inches at Madura, and about 6 inches at Salem.

Province.	Division.	Rainfall data for week ending 11th November 1889. Average actual rainfall of Division.	Average normal rainfall of Division.	Excess or defect in inches.	Rainfall data from October 15th to 11th November 1889. Average actual rainfall of season to date.	Average normal rainfall, October 15th to 11th November.	Excess or defect of (seasonal) rainfall expressed as a percentage.

CALCUTTA,
The 21st November, 1889.

M. C. BRACKENBURY, *Major, R.E.*,
Under-Secretary.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—(No report received.)

Bombay.—*For week ending 20th November.*—Prospects of cotton and other crops good, except in parts where damaged by locusts or disease. Harvesting and sowing operations in full progress. Fodder and water-supply generally sufficient and agricultural stock healthy.

Bengal.—*For week ending 19th November.*—Rainfall during the week has been general and rather heavy in Bengal and Orissa, while showers have fallen in Behar and Chota Nagpore. Weather is still unsettled and further rain is likely to fall. The heavy rain has done some harm to the rice harvest and also to some of the young *rabi* crops. In Behar, however, the rain has benefited the *rabi* sowings, which are nearly complete. Poppy cultivation is progressing satisfactorily except in Monghyr and the Hajipore Sub-Division of Mozufferpore, where the sowings are backward for want of rain. Tobacco is being transplanted and doing well, and the transplanting of *ganja* in the Rajshahye district is finished. Sugarcane has benefited by the week's rainfall, and is doing well. Betul-nut in Tipperah and Noakholly is estimated to be a 14-anna crop. Prices of rice are falling steadily in the Behar districts generally, while in almost all other districts of the province no marked fluctuations are reported.

North-Western Provinces and Oudh.—*For week ending 20th November.*—The weather has been more or less cloudy over the eastern districts, with light rain here and there. Agricultural prospects generally continue fair. A flight of locusts passed over portions of the Agra and Banda districts, but did very little injury to the crops; they also appeared in three parganas of the Jhansi district, the extent of the injury done is not yet known. Markets are amply supplied. Prices easy.

Punjab.—*For week ending 20th November.*—No rain. Prices unsettled in Delhi and Multan, rising in Ambala and Rawalpindi, stationary elsewhere. Harvesting of *kharif* crops nearly over. Sowings of *rabi* going on slowly for want of rain, which is much needed throughout the Province. Outturn expected to be an average one. Fodder sufficient in all districts.

Central Provinces.—*For week ending 20th November.*—Weather cool and somewhat cloudy at end of week, with slight rain in Bilaspore. *Kharif* crops being harvested, outturn good. *Rabi* sowings still continue, and crops where sown are in good condition. Cotton being picked, outturn is good. Prices steady.

Burma.—(No report received.)

Assam.—*For week ending 20th November.*—Weather damp; slight rain in all districts. Reaping of early rice commenced. Sowing of mustard continues. Prospects of tea and other crops good.

Mysore and Coorg.—(No report received.)

Berar and Hyderabad.—*For week ending 20th November.*—Weather clear and cold in Berar. *Jowari* nearly ripe. Cotton second picking continues. *Rabi* sowing completed. Pasturage sufficient except in Chikli. Prices stationary.

No rain during week at Hyderabad. Sowing of *rabi* crops continues, *Abi* crops thriving. Prices: wheat 11¾, coarse rice 9⅝, white *juar* 18½, yellow *juar* 21, and *tur* 16 seers per current sicca rupee.

Central India.—*For week ending 20th November.*—The following changes reported since last report: Prices of food-grains low in West Malwa, and falling in Dhar, Barwani and Neemuch and in Goona Agency.

Rajputana.—*For week ending 20th November.*—Agricultural operations satisfactory. Standing crops damaged by locusts in Bundi, Kerowli and Dholepore. Agricultural stock good except in Bundi. Pasturage or fodder sufficient except in Marwar and Dholepore. Prices rising in Kerowli and steady elsewhere.

Nepal.—*For week ending 14th November.*—No rain. Weather fine. Wheat is being sown in the valley.

E. C. BUCK,
Secretary to the Government of India.

Printed and published for the GOVERNMENT OF INDIA, *at the Office of the* SUPERINTENDENT OF GOVERNMENT PRINTING, INDIA, *No. 8, Hastings Street, Calcutta.*

SUPPLEMENT TO

The Gazette of India.

No. 48.} CALCUTTA, SATURDAY, NOVEMBER 30, 1889.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in* PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on Monday, November 18th, 1889.

During the week under review there has occurred a marked change in the weather over the eastern half of India. This change has been caused by a somewhat considerable depression which has moved erratically about the Bay and by two or three small subsidiary disturbances which were apparently formed over the head of the Bay and passed into Bengal, giving much heavy rain to that Province and the east of the North-Western Provinces. The effects of these disturbances, both major and minor, were confined more or less to the Bay area, though rain also fell in Travancore and the east of the North-Western Provinces. The weather in other parts of India remained fine and dry.

The chart of the 12th showed a large area of high pressure overlying North-Western and Central India, the Central Provinces and the Deccan, and a large low pressure area over the Andaman sea and the south-east of the Bay. The wind directions were normal except over the western side of the Bay, where the abnormal westing, which has been recently noticed, continued. The weather was very fine except in Burma where there was some cloud. On the 13th the barometer was rising in North-Western India and in Burma, and was falling elsewhere. The low pressure area which had formerly existed over the south-east of the Bay had apparently commenced a westerly advance—hence the fall in the Peninsula and the rise in Burma. A strong easterly wind blew at Diamond Island, but elsewhere there was little change. There had occurred an increase of dampness and of cloud round the Bay, but the weather generally remained very fine. The

chart of the 14th showed very distinctly the existence of a low pressure area over the centre of the Bay, while the winds in Bengal and Orissa pointed to the presence of small subsidiary depressions over those Provinces. The strong easterly wind at Diamond Island continued and cyclonic breezes were reported all round the Bay. Elsewhere the wind directions were generally unaltered and the weather fine. By the morning of the 15th the low pressure area over the Bay had developed into a well-marked disturbance the centre of which lay apparently at some distance to the east of Negapatam. The wind was cyclonic and the weather unsettled over the south of the Bay. In addition to this main depression, small local storms were shown in the north of the Bay or over Bengal, and the weather was equally unsettled in this region also. Elsewhere the sky was clear or nearly so. On the 16th conditions over the Bay were unchanged and the weather was very unsettled in the south and east of the Peninsula, as well as over Orissa, Bengal, Behar and Assam. The chart of the 17th showed that the storm had intensified and the weather over the south of the Peninsula and Ceylon was very unsettled with strong cyclonic winds and a very rough sea. In Bengal and over the head of the Bay, on the contrary, the weather had improved and pressure became more steady. The chart of the 18th showed that the storm had begun to move northward and that the centre lay to the eastward and a little to the north of Madras. The storm was still intensifying and was now a considerable disturbance. The weather consequently remained very unsettled all over the south of the Peninsula, while the northward movement of the disturbance had renewed the unsettled conditions over Bengal. Throughout the whole period the weather in North-Western and Central India, the Central Provinces, the Konkan and the Deccan has called for no remark, the skies having been steadily clear with a high barometer and light winds.

Temperature.—The changes in temperature during the week have been very interesting. At first there was a large depression of temperature, but the amount gradually decreased till on the 15th it disappeared and was replaced by an excess which lasted till the 17th, when in its turn it gave way to a fresh but slight depression. These changes were probably due to the storm over the Bay. At first when the air was dry and radiation rapid, the amount of heat radiated during the night was not counterbalanced by the amount received during the day, and the mean temperature was low, but when a large amount of water vapour was carried into the upper atmosphere by the depression, the nightly radiation was checked, and the mean temperature rose.

The following table shows the variations of the mean temperature of the present and of the past weeks from the normal average :—

Provinces.	Difference of mean temperature of last week from normal.	Difference of mean temperature of present week from normal.
	°	°
Burma	0	—0·8
Bengal	+0·6	+2·8
North-Western Provinces	—1·2	+2·3
Punjab	—2·1	—0·8
Bombay	—2·1	—2·2
Central Provinces	—3·8	—1·5
Guzerat and Central India	—2·5	—2·3
Sind and Rajputana	—3·5	—1·6
Madras	—0·7	+1·3

This table shows a rise of temperature relatively to the average in all Provinces except Bombay and Madras.

Rain.—There is a large increase in the amount of rain reported this week as compared with that reported for some weeks past. The fall has, however been confined to the region affected by the storms over the Bay, the weather in all parts of the country outside that region having been as dry as during the preceding weeks.

The following is a brief description of the daily distribution :—On the 12th, slight showers were reported from Lower Burma and from Madura, and on the 13th there was no rain out of Lower Burma. On the 14th showers were received around the head of the Bay and at Sibsagar and Kindat, but none elsewhere. On the 15th a rapid extension of the rainfall area was shown, rain having continued to fall over Lower Bengal and Assam, as well as along the whole of the west coast of the Bay and over the south of the Peninsula. On the 16th the rainfall had both increased and extended, and on the 17th several heavy falls were reported from the south of the Peninsula though the amounts had decreased in Bengal. On the 18th general rain was falling in the south and east of the Peninsula and in Bengal, but the falls were generally light.

The table at the close of the summary shows that in twenty-one divisions no rainfall at all was received during the week, but that in the other divisions, where rainfall was recorded, the amount received was generally in excess of the average. This was more particularly the case in Bengal and Assam where the normal rainfall of the week was many times exceeded. The returns show a moderate deficiency in Burma and a large excess in Bengal and Assam. The east and submontane districts of the North-Western Provinces and Oudh, North, had a slight excess, but with these districts rain ceased and none fell over North-Western India. In the south-west coast districts rain was reported though in somewhat deficient amounts, but on the Konkan coast and inland over the Deccan and Khandeish there was no rain at all. In the central parts of the country, including the Central Provinces, Central India and Rajputana, there was no rain except in the extreme east of the Central Provinces, and Guzerat, Kattiawar and Sind were wholly without rain. In Madras the rainfall of the week was on the whole favourable, though there was rather a large deficiency in the east coast (central) district.

The list of maximum falls exhibit some rather large amounts for the time of year in Lower Bengal and Orissa. One station in Deltaic Bengal received 10, another $8\frac{3}{4}$, and a third 7 inches during the week, while in Central Bengal Pubna received 8 and two other stations $6\frac{3}{4}$ inches during the week. In Orissa the maximum rainfalls were about 4 inches. On the west coast of the Peninsula the largest fall was 6 inches at Alleppy. In Madras the largest falls were all reported from the south of the east coast, and varied between $5\frac{1}{2}$ and 6 inches.

W. L. DALLAS,
Assistant Meteorological Reporter to the Government of India.

CALCUTTA, *21st November, 1889.*

J. W. P. MUIR-MACKENZIE,
Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 16th November.*—No rain in Cuddapah, Anantapur, South Canara, moderate in Ganjam, Madras and Tinnevelly, very slight elsewhere. Standing crops generally good, but withering from want of rain in Chingleput, North Arcot, South Arcot, Tinnevelly and Salem. Rain wanted in these districts and parts of Tanjore, Madura and Coimbatore, but has fallen since the close of the week in those districts where the need was greatest. Crops blighted in parts of Cuddapah and South Arcot, and oilseeds affected by worms in Bellary. Prices generally stationary or falling. Labourers employed on minor relief works 1,200. General prospects fair. Crops reviving after recent rains.

Madras.—*For week ending 23rd November.*—Rainfall excessive in Ganjam, good in most districts, slight in Kistna, Salem and South Canara. More rain wanted in North Arcot, Chingleput, Tanjore, Trichinopoly, Madura, Tinnevelly, Coimbatore and Salem. Standing crops generally good, but withering in parts of North Arcot, Chingleput, South Arcot, Tinnevelly and Salem. Some crops blighted in parts of Godaveri, Cuddapah and South Arcot, damaged by storm and floods in Ganjam, and by recent heavy rains and locusts in Bellary. Prices rising in nine districts, falling or stationary in others. 552 labourers employed on minor relief works in Ganjam. General prospects fair.

Bombay.—*For week ending 27th November.*—Slight rain over Karnatik. Late crops in parts of the Deccan and Karnatik require more rain. Standing crops generally good except where damaged by locusts in Sind. Cotton prospects favourable, except in parts of Broach. Harvesting and sowing operations progressing generally. Fodder generally sufficient and agricultural stock good.

Bengal.—*For week ending 26th November.*—The weather continued unsettled and rainy up to 22nd, since which date it has become fine all over the Province. There was a storm in Orissa on the 20th. The recent heavy rain in Orissa, South-west and East Bengal, and parts of Chota Nagpur has done some damage both to the rice and the *rabi* crops. In Behar the rainfall was moderate, and the *rabi* and poppy sowings benefited by it. Sugarcane is generally doing well. Prices of rice are said to be falling in many districts owing to the appearance of the new crop in the market. During the past week, however, the price rose in some districts on account of the rains.

North-Western Provinces and Oudh.—*For week ending 27th November.*—The weather and agricultural prospects generally are normal. Supplies ample and prices easy. Locusts are reported in parts of the Jhansi, Cawnpore and Bareilly districts, but the extent of the damage caused by them is not known.

Punjab.—*For week ending 27th November.*—No rain. Prices unsettled in Delhi, rising in Umballa and Rawalpindi, falling in Shahpur, stationary elsewhere. Harvesting of *kharif* crops nearly over; sowings of *rabi* crops still going on. Rain urgently wanted in all districts. Outturn of *kharif* crops is expected to be an average one. Fodder is reported sufficient throughout the Province.

Central Provinces.—*For week ending 27th November.*—Light rain in Sambalpur; elsewhere clear and cold. Young *rabi* crops in thriving condition. Cotton, rice, *juari* and other *kharif* crops are yielding good outturns. Prices steady.

Burma.—*For week ending 16th November.*—Rain fell in most districts in Lower Burma where the crop prospect is good. Rain fell in the Upper Chindwin, Myingyan, Magwé, Meiktila, Yamethin and Pyinmana districts of Upper Burma. Crops promise well generally, but in parts of Shwebo, Minbu, Meiktila and Yamethin the outturn will be poor. The price of paddy has fallen 10 per cent. in Prome, 5 per cent. in Bassein, but has risen 6 per cent. in Tharrawady and 11 per cent. in Pyinmana; elsewhere prices are stationary.

Burma.—*For week ending 23rd November.*—Rain fell in Akyab, Sandoway and Bassein in Lower Burma and in every district in Upper Burma, with the exception of Sagaing, Kyaukse, Minbu, Magwé, Yamethin and Pyinmana. In parts of Prome crops are suffering for want of late rains; elsewhere in Lower Burma the prospect is good. More rain is wanted in Minbu and Meiktila; elsewhere in Upper Burma the crop prospect is satisfactory. The price of paddy has fallen in Thongwa and Henzada, but in other districts remains stationary. In Upper Burma the prices show no fluctuations. The food-supply is sufficient throughout the Province.

Assam.—*For week ending 27th November.*—Weather seasonable. Slight rain fell in most districts, and did some damage in Shylet and Cachar. Sowing of mustard and reaping of late rice continue. Tea and other crops generally doing well.

Mysore and Coorg.—*For week ending 20th November.*—Crops good, except in parts of Bangalore and Kolar districts, where more rain is wanted. Harvesting of sugarcane and transplanting of paddy continues in parts; outturn generally favourable. No material change in prices.

Slight rain in Coorg. Prospects of standing crops good.

Mysore and Coorg.—*For week ending 27th November.*—Rainfall slight in civil and military station and Bangalore district. More rain required for crops in Bangalore and Kolar districts. Elsewhere they are reported to be in good condition; outturn of harvest favourable. Prices slightly risen in Kolar and Kadur districts.

Slight rain in Coorg. Prospects good.

Berar and Hyderabad.—*For week ending 27th November.*—In Berar weather clear and cold. *Jowari* ripe and will soon be cut. Wheat, gram, linseed and *tur* in good condition. Second picking of cotton continues. Pasturage sufficient. Prices stationary.

Slight rain in Hyderabad. Total since 1st January 13·70. Rainfall of week has injured to some extent the *abi* crops which are being harvested. *Rabi* sowings continue. Prices stationary.

Central India.—*For week ending 27th November.*—Prices of food-grains have risen slightly in Alirajpur in Bhopawar, but continue low in Barwani and elsewhere in Agency. Condition of crops good except in Sirsi. No other material changes since last report.

Rajputana.—*For week ending 27th November.*—Agricultural operations satisfactory. Standing crops good. Slight damage by locusts in Kotah. Agricultural stock good. Fodder dear in Marwar, elsewhere sufficient. Cotton below average in Ulwar. Prices generally steady.

Nepal.—*For week ending 21st November.*—No rain. Weather seasonable. Winter crops progressing.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

PUBLIC.

No. 2229, dated Calcutta the 29th November, 1889.

THE following statement, which compares the mortality among human beings and cattle in the different provinces of British India in the years 1887 and 1888 from injuries received from wild animals and venomous snakes, and also the results of measures taken to exterminate wild animals and venomous snakes, is published for general information.

Statement showing the results of the measures adopted in British India with the view of exterminating wild animals and venomous snakes during 1888.

1		2								3								4																5			6
		Number of persons killed by								Number of cattle killed by								Number of animals and snakes destroyed and amount of reward paid for their destruction. No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Summary for October 1889.

The month of October usually witnesses the completion of the south-west monsoon withdrawal which is commenced in the preceding month. Under normal conditions moist monsoon winds are still felt in Bengal, &c., at the beginning of October, but about the middle of the month dry winds from north-west and north-east, which have already commenced in Upper India, spread over Bengal and the head of the Bay, and occasion the south-west monsoon current to curve to the westward and finally to the south-westward over the centre of the Bay. This current then reaches the Coromandel coast as a north-easterly wind after a long journey over the Bay. During this journey its already large supply of moisture has been augmented by evaporation from the Bay, and hence the very heavy rain which usually accompanies its first appearance on the Madras coast. The recurving of the monsoon current and the extension of dry north-westerly winds from Upper India to Bengal are accompanied by a considerable change of weather. In the first place, cold weather conditions extend quickly over the whole of Northern India; in the second, the low pressure area, and consequently the area of probable disturbance over the Bay, is moved southward, and the trajectory of the storms is changed from west-north-west across the Orissa coast to west across the Peninsula. In the third place, the Carnatic becomes the seat of heavy and continued rainfall.

The western side of the Peninsula experiences perhaps less change of weather than other parts of the Indian region, as the wind remains westerly and rain falls moderately frequently.

During the month just passed this regularity of change has been less marked than is normally the case. At first conditions were apparently progressing satisfactorily. The low pressure area moved southward down the Bay, and about the 14th a well-marked depression which was seemingly determining the

commencement of the north-east monsoon was reported from the Madras coast, The vitality and course (subsequently given) of this storm were, however, in a high degree inimical to the development of the particular conditions with which are associated a satisfactory north-east monsoon and good rains on the Coromandel coast, and the second half of October which ordinarily sees almost daily rainfall in the Carnatic was marked this year by an almost complete absence of rain from all Madras coast stations south of Masulipatam.

Pressure.—The barometric abnormals of the month showed that pressure was below the normal average over a large area, which included roughly Oudh, the east of the North-West and Central Provinces, the Eastern Deccan, the Circars, the west and north of the Bay, the whole of the Province of Bengal, Assam and part of Arrakan. Over the whole of this region there was a deficiency of pressure, the point of greatest depression lying over the north-west of the Bay and off the Orissa coast. On all sides of the area of deficient pressure the barometer exceeded the normal, the greatest excess being reported from the stations of Jacobabad, Ratnagiri, Cochin, Colombo and Moulmein.

Temperature.—The temperature conditions during a large part of the past month have been very unusual. The first indication of the abnormal lowness which has prevailed was, if the Quetta observations be correct, given in Baluchistan, where both the day and night temperatures showed an unusual coolness, quite at the commencement of the month. Subsequently very low night temperatures were reported from Upper and Central India, but the day temperatures were unaffected until about the 13th, when both the maximum and minimum temperatures fell below the normal average. The remarkable depression of temperature which subsequently set in lasted over nearly the whole of India until almost the close of the month, and during its continuance lower night temperatures were recorded at several stations than any previously registered in October. The following table shows the variation of the mean temperature for each week and for the month from the normal mean:—

Province.	Difference of mean temperature from normal for week ending October				Difference of mean temperature from the normal for the month.

Barometric depressions and cyclonic storms of the month.—There were four depressions during the month, of which only that formed over the Bay between the 13th and 15th of October and which subsequently passed over the Peninsula and Central Provinces, was of any importance.

1. Shallow depression of the 3rd to the 6th October.—A very shallow depression formed over the north-west of the Bay on the 3rd, when rain was falling at Saugor Island and at the Orissa and Circars coast stations. The disturbance subsequently moved southward and developed somewhat, and the rainfall became heavier on the Orissa and North Madras coast districts, but the disturbance was unaccompanied by any definite cyclonic movements of the winds. On the 5th the disturbance had become much smaller, and on the 6th it had practically disappeared.

2. Small depression of the 5th to 7th October.—The chart of the 5th showed a small shallow depression near Karwar. This depression subsequently passed northward along the Bombay coast, reaching Bombay on the 6th and probably Kattiawar on the 8th. It occasioned unsettled weather on the North Konkan coast and a strong south-east wind.

3. Important depression of 13th to 22nd of October.—On the 13th there was a slight tendency to the formation of a depression in the Bay of Bengal off the Coromandel coast. On the 14th the storm had developed a good deal, and the centre lay off the coast between Madras and Nellore. During the 24 hours succeeding 8 A. M. on the 14th the depression apparently underwent no change either in position or character, but during the 15th the centre crossed the coast, and by 8 A. M. on the 16th was advancing west-north-westward towards the Bellary and Cuddapah districts. The storm already showed signs of intensifying and the pressure at Madras was $\frac{1}{8}$ of an inch below the normal. By 8 A. M. on the 17th the storm centre had reached the neighbourhood of Belgaum, where the barometer read nearly .3″ below the normal average. Strongish cyclonic winds prevailed over the Peninsula, and near the storm centre the force of the wind was high and rising. During the next 24 hours, *viz.*, from 8 A. M. 17th to 8 A. M. 18th, the storm centre moved very slowly northward passing over Belgaum, but travelling only to a slight distance to the north-westward of that station. Cyclonic winds consequently still circulated around this centre, the force being strong to a gale. The chart of the 19th showed that the storm had begun to fill up, and that it had moved north-eastward to the neighbourhood of Sholapur. Strong cyclonic winds continued over the Peninsula. The next day's chart showed that the storm had continued to advance in a north-easterly or east north-easterly direction, and had continued to fill up. By the morning of the 21st the centre was near Raipur, and by the morning of the 22nd the storm had either filled up or become merged in a fresh depression which then covered the north of the Bay.

The disturbance, the course of which has just been traced, was an exceedingly influential one, and one which directly or indirectly has exercised an important influence on the weather. Its primary effect was to produce conditions favourable to rainfall on the Madras coast, but its subsequent course was such as to produce dry south-westerly and westerly winds over the Carnatic, so that instead of the normal rains fine weather was experienced.

(4) Small depression of the 22nd to the 27th October.—On the 22nd a large shallow area of deficient pressure was shewn over the head of the Bay, the Circars, Orissa, and Arrakan. By the morning of the 23rd, the depression had increased, and a squally cyclonic circulation prevailed at the head of the Bay. During the next 24 hours there was very little change, but by 8 A.M. on the 25th the storm had become slightly deeper and had commenced an easterly movement across the head of the Bay. The chart of the 26th showed very little change, but by the 27th, the centre of the storm had reached South-East Bengal, and a squally cyclonic circulation of the winds prevailed. The storm subsequently broke up in East Bengal and Assam.

Rainfall.—The above remarks show that the Bay area, the Peninsula, the Central Provinces, and Bengal, were affected by fairly numerous depressions of fair intensity, but that North-Western India lay beyond the scope of their action. The rainfall of the month agrees with this distribution of atmospheric disturbance, North-Western India and the Gangetic plain, including the Punjab, the North-Western Provinces, Behar, Rajputana, Sind, and Cutch, reporting little or no rain, while all the other provinces show good or excessive rains.

During the first week of the month the rainfall was excessive over the west coast districts, over a large part of the Central Provinces, and in the north of Madras, but was deficient over the greater part of India. In North-Western India there was no rain. The second week of the month showed very similar conditions. The storm of the third week hardly altered the relative distribution of rainfall, but intensified the excess over the Peninsula, and the central parts of

the country. The following table shows some of the amounts which were received over the peninsula during the progress of this storm :—

Station.	District.	Amount, inches.
Vayitri	Calicut	23
Karkal	South Kanara	16½
Gudapur	Nilgris	10½
Verogendrapet	Coorg	11
Kumpta	North Kanara	15
Yellamanchili	Vizagapatam	12
Narsapur	Godavery	13½
Repalli	Kistna	12¾
Ongoli	Nellore	10½
Ponnery	Chingleput	13¾

In the fourth week the area over which the weather was exceptionally fine increased, and the only regions showing any important excess were Burma, Bengal and the Central Provinces. In the two former regions this excess was occasioned by the storm which formed over the head of the Bay and passed into East Bengal, and the largest amounts received were as follows :—

Station.	District.	Amount.
Maungdaw	Akyab	7¾
Kushak	Tipperah	11
Perozepore	Backergunj	12
Munshigunj	Dacca	8
Bagirhat	Khoolna	9½
Madaripur	Faridpur	7½
Bashirhat	24-Pergunnahs	11¼
Gope	Pooree	12¼

The following table gives complete data, and shows the actual average rainfall and the normal rainfall of the month of the 21 districts into which the country is divided, so far as it is indicated by the telegraphic reports of a few stations in each district.

Districts.	Number of Stations.	Normal Average Rainfall in October.	Actual Average Rainfall in October 1889.	Difference from the Average in October 1889.

W. L. DALLAS,
for *Meteorological Reporter to the Govt. of India.*

SIMLA;
The 25th November 1889.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending 8 a.m. on Monday, November 25th, 1889.

Very unsettled and abnormal weather has prevailed over the eastern half of the Indian region during the week under review. The cyclonic storm, which was noticed off the Madras coast at the close of the previous week, advanced slowly up the Bay, hugging the west coast, during the present week. A cyclonic circulation of strongish winds prevailed around it. The winds to the southward of the centre blowing across India were dry, and hence the weather over the Carnatic, though cloudy, was fair, but those to the northward of the centre coming from a sea area, reached the coast heavily laden with moisture and gave torrential rains to large tracts of country. After the dispersion of the depression the weather throughout the Bay area and over the south of the Peninsula remained for a day or two in a showery and slightly unsettled state, but pressure eventually assumed the distribution it had prior to the appearance of the storm described above and fair to fine weather prevailed throughout the Indian region.

The chart of the 19th showed that the storm, the centre of which on the 18th lay off the coast between Madras and Nellore, had advanced slowly on a north-north-east course, and that the centre of disturbance lay to the east of Vizagapatam, where the barometer marked 29·596″ and showed a deficiency, compared with the normal average, of three and a half tenths of an inch. The highest pressure reported (excluding Ajmere, where the pressure is doubtful) on this day was 30·030″ at Jeypore, so that there existed a difference of 0·434″ over India, which is unusually large at this season. Strong cyclonic winds prevailed around the storm area, and the winds over the greater part of the Indian region were more or less affected by the disturbance. A slight northerly gale was reported from Gopalpore and fresh winds from Saugor Island, Raipur, Bombay, and Colombo. By the morning of the 20th, the storm centre lay midway between Vizagapatam and Gopalpore, and apparently just off the coast. The lowest reading reported on this day was slightly higher than the lowest on the preceding day, but the general intensity of the disturbance was unaltered. A severe easterly gale had prevailed at Gopalpore, where the velocity during the afternoon and night of the 19th had averaged 60 to 66 miles per hour. Strong cyclonic winds prevailed all round the Bay, and gales were reported from some central stations. On the morning of the 21st there was still a good deal of irregular cyclonic circulation around the head of the Bay and a shallow low pressure area over the Bay, but the storm had to a great extent broken up and the winds had fallen much lighter. The chart of the 22nd showed that the barometer was rising in nearly all parts of the Indian region. The rise was apparently greater over the Bay than elsewhere, so that the barometric gradient had decreased and the wind, except at one or two stations, had fallen light. Around the Bay an irregular cyclonic movement still continued. On the morning of the 23rd the barometer was still rising almost everywhere, and pressure continued to advance in the direction of general uniformity. Steady north-easterly winds prevailed over the Central Provinces and on the west coast of the Peninsula, but elsewhere the directions were very variable and numerous calms were reported from Northern India. The charts of the 24th and 25th showed small barometric changes and very settled conditions. Pressure was lowest over the Bay and highest over North-Western India, but the difference was small and the winds were light. There was an abnormal amount of westing in the wind directions along the west coast of the Bay, but elsewhere the directions were fairly normal.

Temperature.—In Bengal, the North-Western Provinces, the Central Provinces, and Madras, the weather has been abnormally warm throughout the week. In the other Provinces the first three or four days of the week were cool, the amount of the coolness gradually decreasing, till after the middle of the week the deficiency of temperature disappeared, and was replaced by a slight excess.

The following table shows the variations of the mean temperature of the present and of the past week from the normal average :—

Provinces.	Difference of mean temperature of last week from normal.	Difference of mean temperature of present week from normal.
	°	°
Burma	−0·8	−0·3
Bengal	+2·8	+2·7
North-Western Provinces	+2·3	+2·3
Punjab	−0·8	−0·7
Bombay	−2·2	−1·2
Central Provinces	−1·5	+1·4
Guzerat and Central India	−2·3	−0·6
Sind and Rajputana	−1·6	−0·6
Madras	+1·3	+1·4

This table shows that the mean temperature compared with the normal of the time of year is rising except in Bengal and the North-Western Provinces, where it is stationary. The greatest excess over the normal is in Bengal, where the cloudy state of the sky has prevented free radiation and produced high night temperatures.

Rain.—As mentioned above, the Bay area has been the seat of unsettled weather, and the Bay and its neighbourhood, except Burma and the Carnatic, have received more than their normal amount of rain. The greatest excess is reported from the North Circars and Orissa, where the easterly gales, prevailing to the northward of the storm which travelled up the Bay, brought up abnormally heavy rain. In Orissa the rainfall of the week exceeded forty-fourfold the small amount which is normally received during this week.

The daily distribution of rainfall was as follows:—On the 19th rain had fallen generally in Ceylon and the south of the Peninsula; one or two local showers had occurred on the east side of the Peninsula and general showers had fallen in Bengal. On the 20th rain had ceased in the south of the Peninsula, but slight showers had occurred on the Circars coast, very heavy rain over Orissa and Ganjam and moderately heavy rain over the head of the Bay. Slight showers were again reported from a few places in Bengal. On the 21st heavyish rain was falling in Orissa and at some places in Lower Bengal, but elsewhere any rainfall was light and scattered. The chart of the 22nd showed that the only heavy rain had occurred at Diamond Island, but that showers had fallen in Upper Burma, Assam, Lower Bengal, and at several stations in the east and south of the Peninsula. By the morning of the 23rd rain had ceased to the north of the Bay, but scattered showers had fallen at several places in the Peninsula. The rainfall of the 24th and 25th was very slight and scattered.

The table at the close of the summary shows that the regions of excessive rainfall are, Arrakan, Cachar, Eastern and Lower Bengal, Orissa, Chota Nagpur, the Circars, Madras Central, and Hyderabad South, and to a limited extent Malabar. In all other parts of the Indian region the rainfall of the week has been deficient and over the whole of the Gangetic plain, Upper India, Sind, Central India, the Central Provinces, and the Konkan, there has been no rain. The east of the Central Provinces participated in the heavy rainfall of the east of the Peninsula and Malabar had a small local excess of half a tenth of an inch.

In the Carnatic the rainfall continues largely deficient, the east coast central division has received little more than ¼, the east coast south division little more than ⅓, and Madras south division little more than ⅓ of the normal amount.

In Burma the only rainfall was in Arrakan and the Upper Provinces.

The maximum falls reported in Bengal, Orissa and the Circars are interesting. The largest are in Orissa and Ganjam, where Sompet received 20½ inches, Pooree 13 inches, Cuttack 8 inches, Banki 5 inches, and Balasore 3⅝ inches during the week. Next after these are the falls in Eastern and Deltaic Bengal of which the most important are:—3 inches at Jessore and between 2 and 2½ inches at Bhola (Backergunj), Munshigunj (Dacca), and Contai (Midnapur). Heavyish rainfall connected with this disturbance apparently extended westward as far as the Sambalpur division of the Central Provinces, where Raigarh received 1½ inch.

SIMLA, *28th November, 1889.*

W. L. DALLAS,
Assistant Meteorological Reporter to the Government of India.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 30th November.*—No rain in Ganjam, Madras, and Trichinopoly, moderate in Vizagapatam and Nilgiris; slight elsewhere. Rain greatly wanted in Nellore, Chingleput, North Arcot, South Arcot, Tanjore, Trichinopoly, Madura, Tinnevelly, Coimbatore and Salem where standing crops are withering. Crops generally good in other districts. Paddy affected by disease in parts of Godavery, Cuddapah, South Arcot, and Tinnevelly. Prices generally rising or stationary. 229 labourers employed on minor relief works in Ganjam. Prospects generally favourable except in Chingleput and North Arcot where failure of crops is apprehended over considerable areas unless early rain falls.

Bombay.—*For week ending 4th December.*—Slight rain in parts of Karnatak; more needed for late crops in several districts. Standing crops in a few places damaged by locusts or disease, otherwise generally good. Cotton prospects favourable except in parts of Broach. Harvesting and sowing operations generally progressing. Opium sowing commenced in Baroda. Fodder generally sufficient and agricultural stock healthy.

Bengal.—*For week ending 3rd December.*—No rain during the week. The fine weather was favourable to all crops. Not much damage is said to have been done to the crops by the recent heavy rain. In Orissa, where there was a storm and the rainfall was exceptionally heavy, the loss of the rice crop is estimated at from two to four annas, and, in Cuttack, that of the *rabi* crops at about eight annas. The *rabi* crops are being re-sown in some districts. Harvesting of rice is proceeding, and a fair average outturn is expected in most districts. The *rabi* and poppy crops throughout Behar are favourably reported of. Tobacco is a promising crop, as also *ganja* in the Rajshahye district. Sugarcane is doing well. Prices of rice are steadily falling in the Behar districts generally, and a slight decline is also reported from some other districts.

North-Western Provinces and Oudh.—*For week ending 4th December.*—Cold dry weather with occasional clouds. Agricultural prospects generally favourable. Poppy sowings progressing. *Rabi* being irrigated. Locusts are again reported in pargana Jhansi and they have appeared also in four parganas of Cawnpore and one of the Banda District. Markets are well supplied and except in Benares, where a smart rise is reported, prices are steady.

Punjab.—*For week ending 4th December.*—No rain. Prices rising in Rawalpindi, falling in Multan, stationary elsewhere. Harvesting of *kharif* crops nearly over. Cotton being picked and sugarcane pressed in Sialkot. *Rabi* sowings still going on. Rain badly wanted for *rabi* sowings in all districts. Prospects of standing crops are average. Outturn of *kharif* is reported below average in Amballa. Fodder sufficient throughout the province.

Central Provinces.—*For week ending 4th December.*—Weather clear and cold. *Kharif* harvestings continue, outturn good. Wheat and other *rabi* crops in good condition, but a little rain is now required for them in some places. Prices steady.

Burma.—*For week ending 30th November.*—There was a little rain in Rangoon and Tavoy but nowhere else in Lower Burma. A little rain fell in several districts in Upper Burma. In Lower Burma the crop prospect is good. The crop will be short in three districts in Upper Burma, elsewhere the prospect is generally good. The price of paddy has fallen in eight districts, in one prices have risen considerably, elsewhere no change is reported.

Assam.—*For week ending 4th December.*—Weather seasonable. Harvesting of winter paddy continues. Sowing of mustard nearly finished. Prospects of tea good.

Mysore and Coorg.—*For week ending December.*—Slight rain reported in parts of the Mysore State. Crops good except in parts of the Bangalore and Kolar districts where more rain is still wanted. Harvesting continues in parts. Prospects generally favourable. Prices slightly fallen in the Kadur district.

Standing crops doing well in Coorg. Prices stationary.

Berar and Hyderabad.—*For week ending 4th December.*—In Berar the weather is clear and cold. Picking of cotton continues. *Jowari* ripening and will soon be cut. *Kabi* in good condition. Cutting of sesamum commenced in some places. Prices almost stationary. Fodder sufficient.

No rain during week at Hyderabad. Crops thriving. Sowing of *rabi* crops continues Outturn of *kharif* crops estimated at twelve annas in some places and in others at eight annas in the rupee. Prices stationary.

Central India.—*For week ending 4th December.*—No change in condition of crops and weather since last week's report.

Rajputana.—*For week ending 4th December.*—Agricultural operations satisfactory. Standing crops generally good except in Dholepur. Agricultural stock good. Pasturage and fodder sufficient generally; dear in Marwar and failing in Dholepur. Prices steady generally.

Nepal.—*For week ending 28th November.*—No rain. Weather cold and partly cloudy during two days in this week. Potato progressing.

E. C. BUCK,

Secretary to the Government of India.

SUPPLEMENT TO

The Gazette of India.

No. 50.} CALCUTTA, SATURDAY, DECEMBER 14, 1889.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in* PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

DEPARTMENT OF FINANCE AND COMMERCE.

REPORT ON THE OPERATIONS OF THE SAVINGS BANKS IN INDIA FOR THE YEAR 1888-89.

No. 6308, dated Calcutta, the 13th December 1889.

ORDER—By the Government of India, Department of Finance and Commerce.

Read—

Report by the Comptroller and Auditor General, on the operations of the Savings Banks in India for the year 1888-89, and annexed statements.

Ordered that the report and the statements be published in the *Gazette of India* for general information.

E. LAWRENCE,
Under-Secretary to the Government of India.

No. 117, dated Calcutta, the 4th December 1889.

From—E. GAY, Esq., Comptroller and Auditor General,
To—The Secretary to the Government of India, Department of Finance and Commerce.

I have the honour to submit my report on the working of the Savings Banks in India for the year 1888-89. With the exception of a few which have been established exclusively for the benefit of certain special classes of Government employés, such as Railway non-pensionable servants, Civil Engineers and non-commissioned officers and privates of British Regiments, these Banks are open to the public, and, judging from the yearly increase in the number of depositors, seem to be steadily gaining in popularity. As before Bombay shows a larger number of depositors and average deposit balance than any other province.

2. I annex the usual statements, marked I to VII, containing the accounts and statistics for the year. It will be seen that on the 31st March 1889 there were 6,237 Savings Banks in India maintained by Government, consisting of

383,471 accounts which earned interest from Government to the amount of ₹26,14,830, and owned balances at their credit aggregating ₹7,62,58,967 exclusive of Government securities of the value of ₹4,81,400 held in custody by Government on behalf of depositors. There has thus been an increase this year of 85 in the number of Banks and 51,295 in the number of depositors as compared with 1887-88. During the year under review the receipts and withdrawals and interest exceeded those of last year by ₹66,61,650, ₹59,61,570, and ₹3.76,221 respectively.

3. The tranactions of the several classes of Banks are shewn in the following table:—

Description of Banks.	Number of Banks.	Number of Depositors.	Interest earned.	Bank Balances.	Nominal value of Government Promissory Notes held for depositors.
			₹	₹	₹
Presidency, Calcutta .	1	10,931	1,01,349	26,98,378	30,000
Ditto, Madras .	1	3,295	25,525	7,21,167	9,500
Ditto, Bombay .	1	25,230	2,97,176	81,86,940	19,400
Railway . . .	12	14,372	95,491	32,94,805	18,000
Civil Engineers' . .	1	500	36,963	10,78,619	.....
Military . . .	165	18,142	70,430	13,53,779	.....
Post Office . . .	6,056	311,001	19,87,896	5,89,25,279	4,04,500
Total .	6,237	383,471	26,14,830	7,62,58,967	4,81,400

4. The subjoined statement compares the figures for the year under report with those of last year for each class of Bank. The improvement in the Post Office Banks is greater even than last year, but as, since the 1st April, the yearly as well as the total limits of deposits have been ordered to be reduced, a check to this increase may in future be expected, and in the six months already elapsed has actually occurred. The increase in the Railway and Civil Engineers' Provident Institutions is normal as explained in the last report. The Presidency Banks, Calcutta and Madras, show a falling-off owing to depositors having shewn a preference for the Presidency Post Office Banks, but the Presidency Bank, Bombay, which shewed a considerable reduction in 1887-88, has greatly increased this year, notwithstanding that the balance in the Post Office Bank in Bombay has also increased by four lakhs. The fluctuations in the Military Banks are, as usual, dependent on the movement of troops.

Names of Banks.	Number of Banks.		Number of Accounts.		Bank Balances.		Government Promissory Notes.		Average of depositors' balances.	
	Increase.	Decrease.	Increase.	Decrease.	Increase.	Decrease.	Increase.	Decrease.	Increase.	Decrease.
					₹	₹	₹	₹	₹	₹
Presidency, Calcutta .	...	...	50	...	...	60,149	13,400	...	...	7
Ditto Madras	...	...	...	166	...	65,150	8,500	...	9	...

Total .	90	5	51,622	327	97,40,955	2,45,303	27,800	2,200	505	16

5. The investments by depositors in Government Promissory Notes continue to rise as indicated in Statement VI, and from Statement VII, which gives particulars by Provinces of Presidency and Post Office Savings Banks combined, it will be observed that the general growth of depositors' balances is spread over all the Provinces.

6. My ledgers relating to the Railway and Civil Engineers' Provident Institutions have been agreed with the accounts kept by the Accountant General, Public Works Department, and the Examiners of the Accounts of the several State Railways, but the Finance and Revenue Accounts are not finally closed and the figures supplied by those officers are subject to revision.

Statement I.

Number of Working Banks and of the Depositors therein on 31st March 1888-89.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on Monday, December 2nd, 1889.

The weather of the past week has been remarkable for its exceeding quietness throughout the whole of the Indian region. The geographical positions of the areas of high and low pressure have been maintained unaltered throughout the week, so that, though, owing to variations in the intensity of the barometric changes in different parts of the country, the relations existing between the areas of high and low pressure have undergone modifications, the general weather, winds, &c., over India have remained comparatively unaffected.

The chart of the 26th showed an area of high pressure overlying Central India, the west of the Central Provinces, Berar and Khandesh. From this region pressure decreased in all directions, was relatively low in the Indus Valley and along the foot of the Himalayas and lowest over the Andaman Sea. Calm and variable winds prevailed over the Punjab, westerly winds down the Gangetic Plain, northerly and north-north-westerly winds over Bengal and the east of the Peninsula, north-easterly winds on the west coast, calms in the Central Provinces, and variable breezes in Burma. The force was generally light or moderate. On the following day the general distribution of pressure was the same except that the barometer had risen along the Himalaya range and the low-pressure area had disappeared from that region. Calms had extended over Northern India, but otherwise the winds showed little change. On the 28th the chart still showed the same distribution of pressure and the same circulation of the winds. On the 29th the chart showed that the high-pressure area had undergone considerable extension, and that it covered nearly the whole of North-Western and Central India as well as the greater part of the Peninsula. Owing to this extension of the high-pressure area gradients had increased somewhat over the Bay and the wind had shifted to the northward over Burma. Between the morning of the 29th and that of the 30th pressure increased over North-Western India and fell elsewhere, so that at 8 A.M. on the 30th a difference of over $\frac{3}{10}$ of an inch existed in the pressures of the Punjab and of Burma. With this increase in the barometric differences the calms which had previously prevailed over the Gangetic Plain disappeared and a steady westerly or west-north-westerly current set in. Elsewhere the wind circulation was generally unchanged. On the following day the barometer was falling almost everywhere, but the change was fairly uniform, and the general distribution of pressure and circulation of the winds were the same as those reported on the preceding day. On the 2nd the chart showed that the barometer had fallen over the western half of the Indian region and risen over

the eastern half: hence there had occurred a slight decrease in the barometric gradient. This, however, was the only important change.

Temperature.—The past week has on the whole been warm over Northern and Central India and Burma and cool over the Peninsula. The excess for the week ranged from only 0°·1 in Burma to 1° 8 in Guzerat and Central India, while the deficiency ranged from 0°·4 in Madras to 1°·5 in Bombay. The warmest day relatively to the average was the 26th when every Province in India recorded an excess of temperature.

The following table shows the excess or defect of the mean average temperatures of the different Provinces for the present and for the preceding week :—

Provinces.	Difference of mean temperature of last week from normal.	Difference of mean temperature of present week from normal.
	°	°
Burma	—0·3	+0·1
Bengal	+2·7	+1·0
North-Western Provinces	+2·3	+1·4
Punjab	—0·7	+0·4
Bombay	—1·2	—1·5
Central Provinces and Berar	+1·4	+1·1
Guzerat and Central India	—0·6	+1·8
Sind and Rajputana	—0·6	+1·2
Madras	+1·4	—0·4

This table shows that, except in Bengal, the North-West Provinces and the Peninsula, the weather of the past week has been relatively warmer than that of its predecessor.

Rain.—The rainfall, except in Tenasserim and Lower Burma, has been lighter than usual in all parts of the Indian region, and over a very large part of the country no rain whatever has fallen during week. The normal rainfall of the week is of course ordinarily very light, except in the Carnatic. This is shown by the rainfall of Tenasserim and Lower Burma, where, as noted above, there has been a slight excess, and where the average rainfall only equals $\frac{1}{4}$ of an inch. Still in ordinary years there are only three of the rainfall districts which do not receive any rain during the week, while in the present year there are no fewer than 37 districts which have not received a drop of rain.

The charts show that slight showers were reported from Travancore on the 26th and 27th November, from Burma on the 27th, 28th, 29th, 30th November and December 1st and 2nd, and from Assam on the 26th, 27th, 29th and 30th November. Showers also occurred in the North Canara and Belgaum districts on one day. On the East Coast the rainfall was confined to the Kistna, Tanjore, Madura, and Tinnevelly districts. The seasonal deficiency in the Carnatic ranges from 66 per cent. in Madras South, to 32 per cent. in the East coast central. To the north of the Kistna district there is an excess.

Province.	Division.	Rainfall data for week ending 2nd December 1889. Average actual rainfall of Division.	Average normal rainfall of Division.	Excess or defect in inches.	Rainfall data from 1st October to 2nd December 1889. Average actual rainfall of season to date.	Average normal rainfall, 1st October to 2nd December.	Excess or defect of (seasonal) rainfall expressed as a percentage.

W. L. DALLAS,
Assistant Meteorological Reporter to the Government of India.

SIMLA, *5th December, 1889.*

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 7th December.*—Rainfall very slight in Vizagapatam and Tinnevelly; none elsewhere. Dry crops perishing from failure of north-east monsoon over considerable areas in Chingleput, North Arcot and South Arcot, and over limited areas in Tanjore, Madras, Tinnevelly, Coimbatore and Salem; wet crops under rain-fed tanks also perishing in some tracts; crops elsewhere good. Prices risen largely in Tanjore, Trichinopoly, Madura and Tinnevelly, slightly in other districts. Prospects in all districts named largely dependent on early fall of rain.

Bombay.—*For week ending 11th December.*—Late crops in parts of the Deccan and Karnatak require rain. Cotton and other standing crops good. Harvesting and sowing operations progressing. Opium sowing continues in Baroda. Fodder generally sufficient and agricultural stock good.

Bengal.—*For week ending 10th December.*—No rain during the week. General agricultural prospects are favourable. Rice harvest is progressing. In many districts the outturn is estimated to be 16 annas or nearly 16 annas. In Hooghly it is about 10 annas for the whole district, and in parts of Burdwan it is poor. *Rabi* crops are doing well, and are generally satisfactory, except in Orissa where the loss by the recent storm and heavy rain has been considerable. Sugarcane is reported on well except in Pubna and Furreedpore where it will be a short crop. Poppy promises to be an excellent crop in Behar and Hazareebagh. Tobacco prospects are good, and *ganja* is a promising crop in the Rajshaye district. Prices of common rice continue to fall in almost all the Behar districts. In some districts of Bengal Proper and in Balasore a rise in the price has been reported. In Chota Nagpore prices have been stationary.

North-Western Provinces and Oudh.—*For week ending 11th December.*—Clear cold weather prevails, and the *rabi* crops generally are doing well. Rain much wanted in unirrigated tracts. Poppy sowings in Partabgarh are reported to have failed in many villages and the fields are being resown. Locusts have appeared in one pargana of the Rae Bareli district and in the sadr tahsil of Fatehgarh. Food stocks are ample and prices steady.

Punjab.—*For week ending 11th December.*—Slight rain has fallen in Rawalpindi and Peshawar. Prices stationary in all districts except Delhi and Rawalpindi where they are rising. Harvesting of *kharif* crops nearly over. Sowings of *rabi* still in progress. Prospects of standing crops on well-irrigated lands good; but they are generally unfavourable on other soils for want of rain which is urgently needed. Fodder sufficient throughout the province.

Central Provinces.—*For week ending 11th December.*—Weather clear and cold. Young *rabi* crops in excellent condition. Cotton, *jowari* and rice being harvested and are yielding good outturn. Prices generally steady.

Burma.—*For week ending 9th December.*—Slight rain fell in the following districts of Lower Burma:—Pegu, Moulmein, Amherst, Tavoy and Mergui; in Upper Burma there was no rain. The rainfall has been a little short in Meiktila. The crop prospects in both Upper and Lower Burma are good, and the food supply is sufficient throughout the province. In Lower Burma the price of paddy has fallen in Thayetmyo and risen slightly in Tharrawaddy and Bassein, in other districts prices show no fluctuations. In Upper Burma a fall is notice-

able in the Ruby Mines and Sagaing districts, and a slight rise in Katha Pakoku and Magwe.

Assam.—*For week ending 11th December.*—Weather cold. Reaping of cold weather rice continues. Tea and other crops doing well.

Mysore and Coorg.—*For week ending 11th December.*—Crops generally good. Prospects favourable, but more rain is required for lately sown crops in the Kolar district. Outturn of harvests fair. Prices slightly risen in the Bangalore and Mysore districts.

Picking of coffee crops commenced in Coorg. Rice harvest begun.

Berar and Hyderabad.—*For week ending 11th December.*—In Berar the weather is clear and cold. Cutting of *jowari* commenced in some places. Picking of cotton continues. *Rabi* in good condition. Prices almost stationary. Fodder sufficient.

No rain during week at Hyderabad. Harvesting of *abi* crops continues. *Rabi* crops thriving. Prices stationary.

Central India.—*For week ending 11th December.*—The following changes have occurred since last report. Condition of agricultural stock indifferent in Bhopal and prices steady. Condition of standing crops in Bhopawar Agency very good and outturn expected equal to average. Prices have fallen in Manpur and are steady in other parts of the Agency.

Rajputana.—*For week ending 11th December.*—Agricultural operations satisfactory. Standing crops generally good, but slightly damaged by locusts in Marwar. Agricultural stock good. Pasturage or fodder dear in Marwar, sufficient elsewhere. Prices rising in Jhallawar, steady elsewhere.

Nepal.—*For week ending 5th December.*—No rain, weather cold; mornings foggy. Agricultural operations satisfactory.

E. C. BUCK,
Secretary to the Government of India.

HOME DEPARTMENT.

RULES FOR THE GUIDANCE OF INDIAN GOVERNMENT SCHOLARS IN ENGLAND.

No. 122 (Public), dated India Office, London, the 7th November 1889.

From—The Right Honourable VISCOUNT CROSS, G.C.B., Her Majesty's Secretary of State for India,

To—His Excellency the Most Honourable the Governor General of India in Council.

IN continuation of my Despatch No. 45, dated the 24th of March 1887, I enclose, for the information of Your Excellency in Council, a copy of the Rules for the guidance of Indian Scholars while in this country, as recently revised by me.

2. I request that these revised Rules may be substituted for the Rules forwarded with the Despatch above mentioned.

Rules for Indian Government Scholars in England.

1. Every scholar shall, on reaching England, at once present himself at the India Office, and report his arrival in writing.

2. Every scholar shall, without any unnecessary delay, inform the Secretary of State to which University he intends to proceed, and shall at once take steps to enter himself at the College he has selected.

3. Every scholar shall, within four weeks of reaching England, submit for the approval of the Secretary of State a statement showing the general course of study he proposes to follow; and the course approved shall not be changed without the sanction of the Secretary of State.

A

4. Every scholar shall, at the end of each University term, submit to the Secretary of State a certificate from the proper College or University authority, showing that his residence, conduct, and progress in study have been satisfactory during the term.

5. Every scholar shall at all times obey such instructions as he may receive from the Secretary of State.

6. Subject to a due compliance with the above conditions, the allowance, at the rate of 200*l.* a year for three years, will be paid quarterly, in advance, by the India Office, commencing from the date of the scholar's reporting his arrival in England.

7. Every scholar will forfeit his scholarship who, not being disabled by illness or prevented by any other cause which the Secretary of State may consider sufficient, fails to complete a residence of three years in England, or who is guilty of misconduct or disregard of the orders of the Secretary of State. If a scholarship be forfeited, the scholar will lose his claim to a free return passage to India, and will further become liable to refund the cost of his free passage to England.

8. The scholars will be under the special supervision and charge of the Political Aide-de-Camp to the Secretary of State, through whom the necessary orders will be given, and to whom all reports and other communications respecting them should be sent.

C. J. LYALL,
Offg Secy. to the Govt. of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending 8 a.m. on Monday, December 9th, 1889.

Exceptionally fine settled weather has prevailed throughout the Indian region during the week under review. With the single exception of the 5th, when a slight and temporary modification occurred, the distribution of pressure and the general direction of the various wind currents have continued uninterruptedly the same throughout the week. In consequence the weather has also been settled, and with one or two local exceptions there has been no rain throughout the whole country.

The chart of the 3rd showed a large high pressure area overlying North-Western India and a low pressure area over the Andaman Sea. The difference of pressure was not large, readings ranging from 30·077″ at Jeypore to 29·868″ at Diamond Island. The winds were feebly cyclonic over Sind and Guzerat and the neighbouring portions of the Arabian Sea. Elsewhere the directions were generally normal, except over the Bay, where they were unusually northerly and north-westerly. Many calms were reported from North-Eastern India. The only changes of importance on the 4th were the brisk barometric fall at Jacobabad and Dera Ismail Khan and the shift of wind south-east at some stations in the Punjab. These changes pointed to the existence of a low pressure area over the Indus Valley.

In other respects the distribution of pressure, the winds, and the weather were unchanged. The observations of the 5th showed that a shallow depression had crossed the Punjab, and that the centre lay between Lahore and Sirsa. Slight cyclonic movements were shown by the winds in the Punjab, but the influence of the depression was restricted to that Province, and conditions elsewhere were unaltered. By the morning of the 6th the depression had disappeared and pressure decreased steadily from a maximum in the Indus Valley to a minimum over the Andaman Sea. The wind directions remained fairly normal except for the unusual amount of westing in the winds over the west of the Bay. On the 7th the low pressure area, which has previously been located over the Andaman Sea, commenced a movement in a south-westerly direction. This was accompanied by a fall of the barometer at Colombo and a rise elsewhere. This was the only important change on this day. On the 8th pressure began to give way over the whole of the Indian region; but as the fall was fairly uniform the relative distribution remained unaltered, and the wind circulation was unchanged. On the 9th pressure was still falling, but the decrease continued general and fairly uniform, and hence there was no alteration in the relative distribution.

Temperature.—During the past week a steady rise of the general temperature over India occurred till the 5th when it reached its maximum. From that date a steady fall set in and lasted till the close of the week. The mean temperature was above the normal average during the whole week in the Central Provinces and Madras, and for five out of the seven days in all other provinces except Bombay, Sind, and Rajputana, where the majority of days were cooler than the average. A sudden fall of temperature occurred over Baluchistan on the 5th, and this fall subsequently spread into Sind and Rajputana. The following table shows the variations of the mean temperature of the present and of the past weeks from the normal average :—

Provinces.	Difference of mean temperature of last week from normal.	Difference of mean temperature of present week from normal.
	°	°
Burma	+0·1	+0·7
Bengal	+1·0	+0·6
North-Western Provinces	+1·4	+1·5
Punjab	+0·4	+0·8
Bombay	—1·5	—0·3
Central Provinces	+1·1	+2·9
Guzerat and Central India	+1·8	+1·6
Sind and Rajputana	+1·2	—1·3
Madras	—0·4	+1·2

This table shows that the general temperature exceeded the average in all regions except Bombay, Sind, and Rajputana, and that in all provinces except Sind and Rajputana and Bengal the mean temperature relatively to the average was higher than in the previous week.

Rain.—The past week has been practically rainless throughout the whole of the Indian region. The highest average fall was in Tenasserim, where it slightly exceeded one-tenth of an inch. In forty-two divisions no rain whatever fell during the week, and in three others the average fall of the division was only 0·01 inch. As will be seen from the second column of the accompanying table, the average rainfall over the greater part of India during the week under review is exceedingly slight, but in Malabar, the East Coast, North, Central and South, and Madras South, the average is between half an inch and an inch, and in some of these divisions, where the deficient fall of the present week exceeds deficient falls in several preceding weeks the want of rain is very serious.

What little rain fell during this week, occurred on the following dates:—

In Tenasserim	on the 3rd and	4th.
„ Lower Burma	„ 5th „	6th.
„ Assam	„ 6th „	7th.
„ North-West Punjab	„ 5th „	6th.
„ Malabar	„ 6th „	8th.
„ Sind	„ 3rd.	
„ South Madras	„ 9th.	

The heaviest falls during the week were 1 inch at Quilon, 0·5 inch at Tinnevelly, and 0·4 inch at Murree. The rainfall in the North-West Punjab was very slight and confined to the montane and submontane districts close to the North-West frontier.

The concluding column of the table shows that practically no rain whatever has fallen over the whole of the Punjab and Rajputana, and the greater part of the North-Western Provinces, Sind, Guzerat, and Kattiawar, since the 15th of October up to the present date, and that over the south of the Peninsula, the seasonal rainfall is from 35 to 65 per cent. short of the normal average.

Province.	Division.	Rainfall data for week ending 9th December 1889.			Rainfall data from October 15th to December 9th 1889.		
		Average actual rainfall of Division.	Average normal rainfall of Division.	Excess or defect in inches.	Average actual rainfall of season to date.	Average normal rainfall, October 15th to 9th December.	Excess or defect of (seasonal) rainfall, expressed as a percentage.

SIMLA, *13th December, 1889.*

W. L. DALLAS,
Assistant Meteorological Reporter to the Government of India.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 14th December.*—Rainfall very slight in Tanjore, Madura and Tinnevelly, and none elsewhere. Crops perishing from continued failure of rains in Chingleput, North Arcot, South Arcot, Tanjore, and parts of Madura, Tinnevelly, Salem, and Trichinopoly; elsewhere generally good. Prospects in all districts named not improved: rain urgently wanted. Prices continue to rise, especially in the Southern Districts and Nellore. Since receipt of above reports, good rain has been falling from 17th at Madras and adjacent districts, over 2 inches reported from Trichinopoly, and 2 to 4 inches at four stations in South Arcot.

Bombay.—*For week ending 18th December.*—Rain generally wanted in the Deccan and Karnatak. Standing crops in parts diseased or suffering for want of moisture, otherwise good. Cotton prospects generally favourable. Opium sowing in Baroda, and harvesting and sowing operations generally progressing. Fodder sufficient, and agricultural stock healthy.

Bengal.—*For week ending 17th December.*—Weather has been cold and dry. No rain. Rice harvest is in full progress, and is expected to yield a good crop in most districts. In some quarters, however, the outturn is reported to be somewhat below the average, and in Burdwan it is only 8 annas, in Hooghly 10 annas, and in Bankoora 11 annas. *Rabi* crops are generally in good condition and promising, except in Orissa where they have suffered considerable loss from the late storm and heavy rain. Poppy prospects are favourable except in the Hajipore sub-division of Mozufferpore, where the later sowings are more or less a failure for want of moisture. Tobacco is a promising crop. Sugarcane is reported to be a good crop in many districts, but in Pubna it is deficient. Price of rice is said to have fallen in many districts owing to the appearance of the new crop in the market.

North-West Provinces and Oudh.—*For week ending 18th December.*—The weather continues seasonable, and the *rabi* crops generally are thriving, but rain is wanted. Markets are well supplied and prices stationary.

Punjab.—*For week ending 18th December.*—No rain. Prices stationary in all districts, except Rawalpindi, where they are rising. Havesting of *kharif* crops over; sowings of *rabi* going on slowly for want of rain. Prospects of standing crops good, but rain is badly wanted throughout the Province. Fodder sufficient, except in Sialkot. Poppy sowings commenced in Jullundur.

Central Provinces.—*For week ending 18th December.*—Weather cold and slightly cloudy at times. Harvesting of *kharif* crops continues. Outturn good. Young *rabi* crops in good condition, but some rain is now required for wheat and gram. Prices steady or falling.

Burma.—*For week ending 14th December.*—No rain fell anywhere in the Province. The price of paddy has fallen in Prome, Shwegyin, and Toungoo, and risen in the Lower Chindwin owing to exhaustion of local supplies; elsewhere the price remains stationary. The crop prospect remains unchanged.

Assam.—*For week ending 18th December.*—Weather seasonable. No rain. Harvesting of winter rice continues. Tea season closing. Outturn of winter potatoes in Khasi Hills reported bad.

Mysore and Coorg.—*For week ending 18th December.*—Crops in good condition in Mysore, except in parts of Bangalore district, where more rain want-

ed. Prospects generally favourable. Prices risen in Bangalore and Kolar districts slightly.

Rice harvest in progress in Coorg.

Berar and Hyderabad.—*For week ending 18th December.*—In Berar the weather is clear and cold. Picking of cotton continues; cutting and in some places threshing of *jowari* commenced. *Rabi* in good condition. Fodder sufficient. Prices stationary.

No rain during week at Hyderabad. Harvesting of *abi* crops continues; *rabi* crops thriving. Prices stationary.

Central India.—*For week ending 18th December.*—Condition of agricultural stock in Bundelkhand improved. Crops damaged by locusts in Sirsi, in Goona Agency. With these exceptions conditions remain unchanged.

Rajputana.—*For week ending 18th December.*—Agricultural operations satisfactory. Standing crops generally good, but somewhat damaged by locusts in parts of Marwar. Agricultural stock good. Pasturage or fodder sufficient, except in Marwar. Prices steady generally.

Nepal.—*For week ending 12th December.*—No rain. Weather very cold and partly cloudy. Sowing of wheat still in progress.

E. C. BUCK,
Secretary to the Government of India.

RESOLUTION—By the Government of India, Public Works Department.

Read—

Letter from the Director-General of Telegraphs, No. 164 I. E., dated the 19th November 1889, and its enclosure, the Report for 1888-89.

OBSERVATIONS.—The Capital Account of the Indo-European Telegraph Department was decreased by sales of stores, &c., by Rs. 40,230 during the year 1888-89. The Capital Account stood at Rs. 1,12,41,365 at the end of the year.

2. The receipts for the last four years have been—

	Rs.
1885-86	10,19,284
1886-87	10,08,795
1887-88	10,35,235
1888-89	11,44,600

The figures now given for 1887-88 differ slightly from those given in the previous year's report; the difference is due to the fact that the figures have been revised on the basis of the Administrative Accounts.

The increase in revenue is mainly due to the fact that traffic was diverted to the Indo-European route in consequence of a break in the Eastern Company's cables, which occurred for 32 days from 11th August to the 11th September 1888. This prolonged break threw a severe strain on the staff of both the Persian and Persian Gulf Sections of the Indo-European Department.

3. The working expenses of the year were Rs. 9,53,223, and the net revenue was Rs. 1,91,377. In the previous year, the Department worked at a profit of Rs. 1,98,381.

4. The working expenses of the last four years have been as follows :—

Year.	Repairs.		Cable Steamer.	Miscellaneous.	Establishment.	Tools and Plant.	Administrative charges.	Total.
	Ordinary.	Extraordinary.						
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
1885-86 . . .	1,28,024	7,63,693	1,82,686	19,765	5,29,243	46,663	...	16,20,074
1886-87 . . .	1,75,888	778	1,09,914	14,487	5,30,488	33,944	...	8,65,529
1887-88 . . .	1,21,538	...	1,13,660	36,299	5,18,855	44,944	1,550	8,36,856
1888-89 . . .	2,29,925	...	1,08,487	13,859	5,28,818	33,560	38,574	9,53,223

The increase in the expenditure of the year under review was mainly due to extensive repairs and renewals of the cables which had been laid in 1864. These had been previously repaired, here and there, in short lengths, so that the cables consisted of many short lengths of new cables connected by old pieces. This rendered repairs difficult and expensive, as the pieces of new cable had to be raised when old lengths required repair, and this strained and otherwise injured the new pieces. It was therefore decided to lift and thoroughly repair the 1864 cables throughout, at a cost of Rs. 7,03,000, to be distributed over three or four years. During last year, 201 knots of cable were expended in renewals and repairs.

5. The traffic transmitted during the year was considerably in excess of that of 1887-88. State messages were practically the same, but commercial and private messages increased by about 30 per cent., and press messages were more by 50 per cent. than those of the previous year. The average length of messages was about the same as last year—12·5 words per message.

6. There was no total interruption on the Persian Gulf Section, *i.e.*, no simultaneous break of cables and of land line at the same time, during the year, and although there was a long interruption on the Gwadur-Karachi cable in August and September 1888, the traffic was passed by the other lines; so that throughout the year there was no break on the Persian Gulf Section between Karachi and Bushire which affected communication with Europe. On the Persian Section the interruptions, owing to the severity of the winter, were rather in excess of those of the previous year, and the period of total interruption, mainly due to a great snowstorm at Shiraz, amounted to 50 hours 46 minutes.

7. The average speed of transmission of the three routes between England and Calcutta has been—

	Vid. Teheran.	*Vid.* Turkey.	*Vid.* Suez.
	H. M.	H. M.	H. M.
1888-89	2 24	19 28	3 2
1887-88	1 11	16 11	2 42
1886-87	1 31	13 23	2 31

The decrease in speed in the Teheran route was due to the break on the Eastern Company's cable in August and September 1888, and to the fact that, for part of that time, only one circuit was available on the Indo-European route.

8. The Indo-European Telegraph Department has been under the charge of the Director General of Telegraphs, Colonel Mallock, during, practically, the whole year. During the cold weather of 1888-89 he visited Persia and personally inspected the lines and stations, with the object of proposing measures for consolidating the amalgamation of the Indo-European and the Indian Telegraph Departments. The thanks of Government are due to him for his administration of this branch of his Department.

ORDER.—Ordered, that a copy of this Resolution be forwarded to the Director General of Telegraphs for information and guidance.

Also that copies of the Report and Resolution be forwarded to the Department of Finance and Commerce and the Home Department for information.

Also to the Government of Bombay for information.

Ordered further, that the Report and the Resolution be forwarded to the Secretary of State for the information of Her Majesty's Government, and published in the *Gazette of India*.

R. C. B. PEMBERTON, *Colonel, R.E.*,
Secretary to the Govt. of India.

ADMINISTRATION REPORT

OF

THE INDO-EUROPEAN TELEGRAPH DEPARTMENT

FOR

1888-89.

CAPITAL AND REVENUE ACCOUNT.*

Capital.—The Capital of the Department was reduced by R40,230 and stood, on the 31st March 1889, at R1,12,41,365 compared with R1,12,81,595 at the end of the previous year. The decrease is made up with the debits and credits under the following heads :—

Works.
Tools and Plant.
Stores.
Suspense Heads.
Public Works Department Charges.

Further particulars are shown in Appendix A.

2. *Revenue. Working Expenses.*—A summary of the receipts and expenditure of the year 1888-89 is given in Appendix B. The expenditure in 1888-89 was R9,53,223 against R8,36,856 in the previous year, showing an increase of R1,16,367. Of this increase, R97,275 is accounted for by the following figures, extracted from the Finance Accounts, as explanatory of the chief differences :—

	1887-88.	1888-89.	Increase.	Decrease.
	R	R.	R	R
Repairs and renewals of cables	40,852	1,49,829	1,08,977	...
Repairs and renewals of Land lines . . .	29,275	40,787	11,512	...
Advertising charges in England . . .	13,012	11,854	...	1,158
Director-in-Chief and London Office . . .	43,048	16,042	...	27,006
Director General's Tour in Persia and Turkish Arabia.	...	2,280	2,280	...
Clerks in Director General's Office . . .	...	643	643	...
Special appointment of Deputy Examiner to revise accounts.	...	2,109	2,109	...
Travelling and house allowances of special accounts establishment.	...	1,595	1,595	...
Subsidies to Beluch Chiefs	16,134	19,904	3,770	...
Signalling clerks	94,533	97,162	2,629	...
Repairs of *Patrick Stewart*	6,883	12,521	5,638	...
Coals	34,555	23,882	...	10,673
Line repairs in Persia	27,276	24,235	...	3,041
TOTAL .	...	...	1,39,153	41,878

3. *Receipts.*—The Receipts amounted to R11,44,600, of which R11,30,310 were derived from message revenue. Compared with the receipts of the previous year, these items show increases of R1,09,363 and R1,50,548 respectively. The increase under the head of message revenue is due to two causes. The receipts of 1887-88 were unusually low owing to the break-down of the cables rented by the Indo-European Company from the German Union Company and the British Post Office, between Emden and Lowestoft, which was noticed in last

* A summary of the Capital and Revenue Account for the last five years is given in Appendix CC.

year's report; while they were greatly increased in 1888-89 by extra traffic passing over the Indo-European route, owing to the break in the Eastern Company's cable in August and September 1888. On the other hand, the receipts from Local and Terminal messages were less than the receipts from the same source in 1887-88, on account of the termination of the work of the Afghan Boundary Commission, which raised the receipts of 1887-88 to an abnormally high level. These local receipts have now become normal.

4. *Net Revenue.*—If the payment of ₹1,80,270 on account of the deferred annuity to the shareholders of the late Red Sea Telegraph Company be taken into account, the net revenue was only ₹11,107, but if this sum be excluded, and charges appertaining to the Indo-European Telegraph Department alone be considered, there was a credit balance of ₹1,91,377 representing a profit of 1·72 per cent. on the capital of the Department. In considering the interest earned on the total capital sunk, it should be borne in mind that the capital of the Indo-European Telegraph Department has been appreciated by the charges of the Political Department and the Bombay Marine, incurred on first opening of the route, charges not usually debited to the capital of ordinary Telegraph Administrations. It also bears the burden of ₹1,69,169 on account of the Turkish line, most of which sum is due to the Indian Government having paid the salaries, &c., of the Engineers employed in making the lines from Fáo to Baghdad and Khanikin.

5. *Royalties and Subsidies.*—Again in the Revenue account, before the receipts of the line between Teheran and Bushire are credited to this Department, a sum of ₹48,000 royalty to the Shah of Persia is first deducted and half the balance given as a subsidy to the Indo-European Telegraph Company. There are then further subsidies of krans 30,000 or ₹12,000 to be paid to the Shah of Persia on account of the lines in Persian-Beluchistan and ₹28,280 to the chiefs in Beluchistan, all of which are taxes for the establishment of communication between England and India through foreign territories. Such taxes, not applicable to the Indian Telegraph Department, the whole of which is within British territory, render it impossible for the Indo-European Telegraph Department to pay a percentage on capital at all approaching that paid by the former, from the capital account of which all excess valuation was written off some years ago.

6. *Joint Purse.*—In addition to the subsidy to the Indo-European Company and the royalties paid to Persia and Beluchistan, the Department has for some years been a loser by the Joint Purse Agreement, made in 1878, with the Indo-European and Eastern Telegraph Companies, as is shown by the following table:—

Year.	Paid in	Drawn out.	Excess paid in	Excess drawn out.
	£	£	£	£
1878-79	42,309	62,264	...	19,955
1879-80	52,488	68,877	...	16,389
1880-81	57,235	76,122	...	18,887
1881-82	67,108	74,528	...	7,420
1882-83	110,728	84,861	25,867	...
1883-84	81,408	76,547	4,861	...
1884-85	85,376	76,610	8,766	...
1885-86	107,317	85,824	21,493	...
1886-87	80,980	75,206	5,774	...
1887-88	71,808	73,976	...	2,168
1888-89	91,355	77,136	14,219	...
Total	848,112	831,951	80,980	64,819

7. *Division of Traffic.*—The standard proportions, on which the division of the joint purse receipts is made, are based on the following percentages:—

On Indian Traffic	*Viâ* Suez	60·39%
	Viâ Indo-European Route	39·61%
On Trans-Indian Traffic	*Viâ* Suez	80·53%
	Viâ Indo-European Route	19·47%

The percentages of traffic actually carried have been—

Year.	On Indian Traffic.		On Trans-Indian Traffic.	
	Vid Suez.	*Vid* Indo-European Route.	*Vid* Suez.	*Vid* Indo-European Route.
In 1878-79	71·31%	28·69%	95·26%	4·74%
„ 1879-80	67·91%	32·09%	94·10%	5·90%
„ 1880-81	69·01%	30·99%	92·50%	7·50%
„ 1881-82	64·63%	35·37%	81·26%	18·74%
„ 1882-83	48·34%	51·66%	59·26%	40·74%
„ 1883-84	55·96%	44·04%	83·52%	16·48%
„ 1884-85	53·02%	46·98%	84·44%	15·56%
„ 1885-86	52·14%	47·86%	75·91%	25·09%
„ 1886-87	55·46%	44·54%	85·32%	14·68%
„ 1887-88	60·93%	39·07%	86·48%	13·52%
„ 1888-89	51·69%	48·31%	77·04%	22·96%

The division of receipts, since 1878-79, is shown in Appendix C.

Interruptions.

8. *Total Interruptions.*—The Eastern Company's cables were interrupted for 32 days from the 11th August to the 11th September 1888, which caused the whole traffic to be diverted by the Indo-European route. The traffic thus diverted amounted to 29,033 messages, which passed through Karachi at an average of 907 a day. For the heavy work thrown on the staff of both the Persian and Persian Gulf Sections, the Government of India sanctioned to the signallers concerned a bonus of ₹3,573-9-4 as a reward for the extra work performed by them.

9. The Indo-European Company's line was totally interrupted for periods aggregating 44 days during the year, the longest interruptions being one on the North Sea cables, which commenced in February 1888 and was restored on the 5th April 1888, two on the Reuter cable, one commencing on the 30th November 1887 and ending on the 18th April 1888, another commencing on the 20th December and ending on the 23rd December 1888, and three during February and March 1889 on the Kertch-Suchum section, lasting 7 days 5 hours 20 minutes, 1 day 21 hours 15 minutes, and 1 day 18 hours 40 minutes respectively. With reference to these three interruptions Mr. Andrews, the Managing Director, supplies an interesting account of the exertions of the staff in restoring communication under the most trying circumstances. The Company bas duplicated cables across the Straits of Kerch so as to avoid total interruption to communications by this route; but the winter in South Russia had been unusually severe, and when the ice broke up, it was driven down the rivers and from the Sea of Azoff, through the Straits of Kertch with such force, that it broke both the Company's cables weighing ten tons to the mile, and also the Russian Government cable. Owing to the extensive nature of the damage done, the ice and storms, the work of repairing was one of extreme difficulty; but in spite of all, communication was restored through one cable by the 22nd March 1889, the other two not being finally repaired till the 18th April following. During this interruption the Company, through the indulgence of the Russian Government, was allowed the partial use of the land line which passes round the Sea of Azoff *vid* Rostow to Wladikawkas and Tiflis.

10. On the Turkish Route, the interruptions between Western Europe and India aggregated 51 days 17 hours 22 minutes, of which 50 days 2 hours 49 minutes were due to interruptions between Constantinople and Fáo. The duration of interruptions on this route for the previous three years compared with those of 1888-89 are—

	D.	H.	M.
1885-86	129	9	1
1886-87	109	9	9
1887-88	59	20	59
1888-89	51	17	22

This improvement in the condition of the lines is to be attributed to the great efforts made by the Turkish Administration to improve the line from Constantinople to Aleppo, from which the Baghdad line branches at Diarbekir. The section from Diarbekir to Mosul is still on wooden posts and it is not anticipated that it will be much improved for the next seven or eight years. From Mosul to Fáo the line is in good condition.

11. *Partial Interruptions not stopping Traffic.*—For purposes of the Joint Purse Agreement, an interruption is only taken into account if the traffic is totally interrupted for 24 hours. Consequently a break on one of the three wires between Teheran and Bushire* or on one of the two cables or on the land lines between Jask and Karachi is considered a partial interruption.

12. On the Persian Gulf Section, the India rubber cable between Jask and Bushire was interrupted for 58 days on account of breaks, repairs and renewals, and the cable between Jask and Karachi for 71 days which, happening during the monsoon, repairs were not possible till the sea subsided; there was also a short interruption in the Bushire-Fáo cable, lasting 21 hours, during repairs.

13. On the Mekran Coast lines, there were 14 partial interruptions aggregating 14 days 8 hours and 40 minutes in duration, caused by breaks of the wire, and one of five hours' duration caused by a storm. There was however throughout the year no interruption on the Persian Gulf Section which affected communication with Europe.

14. The partial interruptions in Persia aggregated 631 hours in duration, of which 120 hours were due to wilful damage and 71 hours to camels, while the balance was due to snowstorms and atmospheric causes.

TRAFFIC.

15. The Service Regulations and tariffs of the Berlin revision of the International Telegraph Convention of 1885 remained in force throughout the year. The rates between the Gulf and India were, however, increased by one anna per rupee from the 1st July 1888. In Appendices D and G will be found particulars of the traffic and net value of the receipts for the year, and the following table gives a comparative statement of the traffic for three years:—

YEAR.	Messages.	Words.
1886-87	90,733	1,364,192
1887-88	82,540	1,266,849
1888-89	114,991	1,642,079†

16. The fluctuations are accounted for as follows:—

In 1886-87, the Persian Gulf transit rates were reduced, and low press rates introduced, from July 1886. In 1887-88, the Indo-European Company's lines were interrupted in February and March 1888, and in 1888-89, the Suez route was interrupted for 32 days, which accounts for the increase in the number of messages during last year. Allowing, however, for the increase from this cause, the receipts of 1888-89 would still exceed ten lacs of rupees.

17. The paid telegrams and words [illegible] by the Department for the last three years may be classified as below:—

YEAR.	STATE.		COMMERCIAL AND PRIVATE.		[illegible] AT REDUCED RATES.	
	Telegrams.	Words.	Telegrams.	Words.	Telegrams.	Words.
1886-87	2,916	118,352	84,462	1,124,074	1,355	121,566
1887-88	2,514	90,238	78,850	1,050,757	1,079	52,572
					777	73,282
1888-89	2,957	93,093	109,524	1,364,945†	2,384	105,587
					†126	78,454

* Although there are only two international wires, the Persian Government always in cases of necessity gives up the use of its wire.

† Special Press messages to London, for *The Times*.

18. A satisfactory increase is noticeable both in the commercial and private and press messages, while the number of State telegrams remains about the same.

19. The average length of commercial and private messages was 12·5 words, which is about the same as in the previous year. There were also 533 Government and Press messages, valued at ₹12,507, sent free of charge for Her Britannic Majesty's Ambassador at Teheran, who supplies His Imperial Majesty the Shah with copies.

20. The following table gives the percentage of traffic which has passed over the Teheran and Turkish routes respectively for the last three years:—

	Vid Teheran.	*Vid* Turkey.
1886-87	95·47	4·53
1887-88	93·74	6·26
1888-89	94·28	5·72

21. *Speed of Transmission.*—The average speed of transmission from the United Kingdom to Calcutta for the last three years by the three routes was—

	Vid Teheran. H. M.	*Vid* Turkey. H. M.	*Vid* Suez. H. M.
1886-87	1 31	13 23	2 31
1887 88	1 11	16 11	2 42
1888-89	2 24	19 28	3 02

22. The slower average rate during 1888-89 by the Teheran route is due to the extra traffic being thrown on that route, during the break of the Eastern Company's cable during August and September, and to only one circuit being available by the Indo-European route for more than half the time. If the averages of these two months are excluded, the rate becomes 1 hour 14 minutes, or practically the same as last year.

23. Detailed particulars of the rates of transmission are shown in Appendices E and F, between Karachi and Teheran and between the United Kingdom and Karachi. The slow rate of transmission, compared with last year, is due to only one circuit being available at times. Every effort is made to keep up the speed of working, but as the accuracy of transmission is a vital point, it sometimes happens that speed must be sacrificed to obtain accuracy.

24. The speed *vid* Turkey continues unsatisfactory and is mainly due to inefficient watching at night.

25. *Check of Errors.*—The total number of words examined for errors was approximately 1,020,703, which resulted in showing that the accuracy of transmission was 99·548 per cent. between Karachi and Teheran. The percentage of errors on the Persian section was 0·182, and on the Persian Gulf section 0·270. Owing to the press of work during the months of August and September, due to the interruption of the Suez route, the messages of those months were not examined.

26. *Rectifying Messages and Public Complaints.*—The total number of complaints of errors, delays and non-delivery of messages, received for investigation and transfer to the other Administrations concerned, was 84. Of these, 54 came from Europe and 30 from India and the far East. In addition to these, there were 30 references on miscellaneous subjects, which brings the gross total up to 114. Of this number, the Indo-European Department was answerable for only 1 delay, 6 errors and 9 non-deliveries, making a total of 15, out of the gross [illegible]

PERSIAN GULF TELEGRAPHS.

CABLES.

27. A long interruption on the Gwadur-Karachi Cable, which was simultaneous with the break on the Eastern Company's Cable in August and September 1888, caused an investigation to be made into the general state of the cables which had been laid in 1864. It was found that, in consequence of frequent repairs and renewals of short sections, the cables then consisted of innumerable short lengths of new cable interspersed with the old, and it transpired that, whenever a section of old cable had to be repaired, some portions of new cable were raised and strained in the operation. With the experience in view of the second Bushire-Gwadur Cable, which for want of timely large renewals had to be abandoned and a

new cable laid in 1885, at a cost of ₹7,67,000 for 519 knots, it was thought better to take advantage of the cable machinery at Manora and the cable establishment, when not required at sea, to make new pieces or put new guards on old core in fairly long lengths, with the view of thoroughly repairing one cable from Bushire to Karachi by renewals of lengths of over 50, instead of under 5, knots at a time. To provide for this scheme, an estimate amounting to ₹7,03,000 for renewing 740 knots within 3½ years was sanctioned by the Government of India in October 1888.

28. Energetic measures were at once made to carry out this scheme, and including what had been laid from the termination of the monsoon in August, 220 knots of new or new-guarded cable were laid down by the end of the last voyage of the repairing season, which, although the new cable had been made by the end of March, was not concluded until the 24th May.

Electrical Condition of the Cables.

29. *Fâo-Bushire Section.*—A partial fault not interfering with working existed on this section which was removed in January 1889. Another small fault with so high a resistance that it cannot be accurately localised still exists; but as it does not interfere with working, no attempt will be made to repair it, till the cable steamer next visits Fáo for other purposes.

30. *Bushire-Jask Section : New cable.*—This cable was laid in 1885. A minute fault showed itself in December 1885 and has hitherto not been localised. As a cable is invariably damaged each time it is lifted, it is not intended to remove this fault until its position is known exactly. Meanwhile the fault does not affect the working of the cable.

31. *Bushire-Jask Section : Old cable.*—A slight fault was discovered in January 1889. It does not interfere with working and will be removed when the cable ship next visits Bushire.

32. *Jask-Manora Cable.*—The guards of this are so much decayed that it is most difficult to lift it for repairs. Of the new cable which is to be made the greater part will be expended in this section.

33. *Bushire-Jask Gutta Percha Cable of 1864.*—This cable was originally 507 knots long. To the end of 1887-88, 220 knots had been recovered, and during the year under review another 75 knots were brought up.* It is very much to be regretted that owing to false economy, attempts were not made to pick up the whole of this cable in 1885. Had this been done, in all probability, more core would have been saved for re-making into new cable.

34. *Harbour Cables.*—Owing to the extension of the railway betwen the Camp and Kiamari, it was necessary to remove Cable Boxes Nos. 2 and 4 and entrench the cables in the same locality. As further railway extensions are contemplated, it is probable that the route of the Harbour Cables between the Karachi Telegraph Office and the Custom House will have to be changed. The Harbour Cables worked without fault or interruption during the year.

Faults and Interruptions.

35. On the 1st April 1888, there were 4 faults awaiting repair on the cables, and 10 new faults made their appearance during the year. Of these 14 faults, 11 have been removed, and the other 3 will be removed when their positions can be exactly localised. One circuit between Karachi and Bushire was available throughout the year, and the second circuit for 307 days, the India rubber Cable between Jask and Bushire being interrupted for 58 days on account of breaks, renewals and repairs. The cable between Karachi and Jask was interrupted for 71 days, owing to a break off Manora, which could not be repaired owing to high seas and a swell till after the cessation of the South-West Monsoon. During this time the two land lies worked well. It is, however, noteworthy that no total interruption occurred on the Persian Gulf Section affecting communication with Europe. The Bushire-Fáo Cable was interrupted for 21 hours for repairs.

Appendix H gives full particulars of faults, renewals and repairs.

* During the last voyage of the season which terminated in May 1889, 50 knots more, making in all 345 out of the 507, have been recovered. There is no hope of being able to lift any more.

Expenditure of Cable and Cable in Stock.

36. The total expenditure of cable during the year was 201·231 knots, and the amount of cable in stock on the 1st April 1889 was 58·91 knots. Particulars are given in Appendix I.

37. *Repairs and Renewals.*—During 11 repairs and 5 renewals (see Appendix J) 202 knots of cable were disturbed, of which—

28·7 per cent. was too weak to lift.
31 per cent. was core which could be used again.
39 per cent. was fit for relaying after repair.
1·3 per cent. was in short pieces and only fit for sale for fencing purposes.

Cable Factory.

38. The following is a summary of the work done in the Cable Factory during the past year :—

	1888-89. Knots.	1887-88. Knots.
Cable manufactured—		
With No. 3 guards, nil		
With No. 7 guards, 32 knots		
With No. 9 guards, 73·13 „	105·13	49·32
Cable repaired and retaped—		
Gutta Percha core, 33·86 knots		
India Rubber core, 29·75 „	63·61	49·89
Stripped for core	137·30	63·62
Short pieces of cable repaired and kept for sale	...	7·95
Making total passed through Factory	306·04	170·78

Cable Steamer "Patrick Stewart."

39. The results of the transfer of the charge of the ship to the Telegraph Department and of her Commander and First Officer being skilled in sub-marine Telegraph cable work continue most satisfactory. A statement of the work done by this steamer is given in Appendix K.

Mekran Coast Lines.

40. The lengths of these lines at the close of the official year were as follows :—

	Miles of line.	Miles of wire.
Karachi to Sonmeanee Branch	48·75	97·50
Sonmeanee Branch	3·00	2·00
Sonmeanee Branch to Ormara	165·75	331·50
Ormara to Pusnee Branch	88·90	177·00
Pusnee Branch	3·25	3·25
Pusnee Branch to Gwadur	76·50	153·0
Gwadur to Charbar	116·00	232·0
Charbar to Jask	[illegible]	403·00
	[illegible]	1399·25

41. *Maintenance and Repairs.*—The principal improvements during the year consisted of replacing 396 insulators of miscellaneous pattern, on what is known as the right wire, with an equal number of fluid insulators. These have answered well on the left wire, which is fitted throughout with this description of insulator.

Also, four wires of the double line at the Ormara Station have been renewed with hardened copper wire for 2½ miles, on two sets of parallel wooden supports.

42. *Interruptions.*—There was only one interruption affecting both wires, which was caused by a storm and lasted five hours. There were also 14 partial interruptions not affecting communication. These were, with two exceptions,

due to the wire breaking, through corrosion. This wire has now been removed. The following are the details:—

Section.	No. of interruptions.	Duration.		
		D.	H.	M.
Karachi to Ormara	2	2	1	55
Ormara to Gwadur	3	0	14	30
Gwadur to Charbar	1	0	4	0
Charbar to Jask	8	11	12	15
	14	14	8	40

This record compares very favourably with that of the previous year.

PERSIAN SECTION.

43. *Line Maintenance.*—In December 1888, one of the wires between Bushire and Konar Takhteh was reinsulated for a distance of 40 miles with Johnson and Phillip's fluid insulators, thus rendering a second wire across the *Maschteelah* or salt marsh of Bushire efficient. Various improvements in the alignment have also been made during the year, principally in the neighbourhood of Ispahan, where nearly six miles of line were altered.

44. *Wilful Damage.*—Thirty-eight acts of wilful damage to the lines were recorded for the year, in compensation for which a sum of krans 2,901 was paid by the Persian Government. Of this sum, krans 970 were recovered from the Local Governors of Districts without the aid of Her Britannic Majesty's Legation at Teheran.

The wilful damage account is now closed on the 31st January of each year, in order that the necessary returns may be prepared and the bills be made out for presentation by Her Majesty's Legation on the 13th March, the date on which the "Jask Royalty" becomes due to the Persian Government, from which sum the sums due for damage are deducted.

45. *Interruptions.*—Owing to the severity of the winter of 1888-89, the duration of interruptions has been somewhat greater. The following table is a comparative synopsis of interruptions for three years:—

	1 wire.		2 wires.		3 wires.	
	H.	M.	H.	M.	H.	M.
1886-87	636	56	129	1	59	23
1887-88	342	32	50	32	8	55
1888-89	603	39	27	44	50	46

The principal causes of interruptions are snowstorms, camels, birds and wilful damage. Those attributable to the last cause, lasted 117 hours, 1½ hours and ½ hour, on one, two, and three wires respectively.

46. *Traffic.*—Traffic was interrupted for 4 hours in October, 8 hours in November, 40 minutes in December 1888, and 46 hours in January 1889. This last was on the occasion of a heavy snowstorm which broke the wires on both sides of Shiraz.

47. Appendix M shows the rate of transmission of messages over the Persian section, and Appendix L is a return of the number of messages and the number of paid words transmitted during the year. The increase of traffic shown by the latter return is due to the break in the Eastern Company's cables and accounts for the longer time taken in transmission, as evidenced in Appendix M.

48. During the interruption of the cables, an average of 820 messages or about 9,324 words passed daily through Teheran, the maximum on any one day being 1,300 messages. To meet this heavy demand, the second international wire was worked day and night from the 26th August to the 16th September, and to provide for this the Persian Telegraph authorities lent their wire for testing and control purposes.

49. *Persian Authorities.*—Friendly relations have been maintained with the Persian Government, the local authorities and with the inhabitants.

At the special request of His Imperial Majesty the Shah, temporary offices were opened for his use at Aliabad and Kôm, during his expedition to Kôm, in April 1888. For this service His Imperial Majesty the Shah conveyed his thanks to the Department through his Prime Minister, His Excellency the Amin-i-Sultan.

In March 1889, His Royal Highness the Ehtesham-ed-Dowleh, a cousin of the Shah, who has recently been promoted to the dignity of Muhtamed-ed-Dowleh, was appointed to the Governorship of Fars. Since his assumption of office, that province, in which there were formerly frequent outbreaks, has been kept in a state of tranquillity, and the present Governor invariably shows that he is favourably disposed towards the staff of the Indo-European Telegraph Department who have to thank him for his friendliness shewn in many ways.

A line, 60 miles in length, was made by Inspector R. McGowan for His Royal Highness the Zil-es-Sultan, K.C.S.I., Governor of Ispahan, from his palace in Ispahan to Kalleh Nazir in the District of Feridan, for which service His Royal Highness expressed his gratitude in the warmest terms. From July to November 1888, the services of Inspector W. Stagno Navarro were lent, at his request, to His Excellency the Mukber-ed-Dowleh, C.I.E., Minister for the Persian Telegraphs, for repairing the Persian line from Shahrud to Astrabad, at a time when, on account of disturbances on the frontier, the re-establishment of telegraphic communication was of great importance to the Persian Government. His Excellency was most grateful for the aid thus rendered him in the emergency.

In February 1889, an application was made by His Excellency the Persian Minister of Telegraphs for stores for constructing a line ordered by His Imperial Majesty the Shah, from Burudjird to Mohammerah, for communication with the River Karun, with the object of facilitating the opening up of the navigation of that river for international commerce. These stores were supplied from India and delivered at Fallahi on the 22nd May 1889. They are to be paid for by a deduction from moneys due on account of message receipts, royalty, &c.

MESHED LINE.

50. *Maintenance and Repairs.*—About 1,450 poles and 840 insulators have been renewed on this line during the year. On the section Kishlak to Abdulabad, 35 miles in length, no less than 250 poles were renewed.

Juniper wood, which gives better insulation and is less liable to be attacked by white ants, is now being used for poles wherever the cost of carriage is not prohibitive. This wood, however, is only obtainable in the mountainous districts north of Semnan, Damghan and Shahrud.

51. *Wilful Damage.*—There were only 34 hours' interruption due to this cause.

52. *Interruptions.*—The duration of the interruptions during the year aggregated 1,102 hours, of which no less than 324 hours was due to the insanity of the Persian clerk stationed at Nishapur, the aberration of whose mind was not suspected to be the cause. A total of 504 hours' interruption is attributable to the inattention of clerks and to damage caused by camels, and 34 hours to mischief.

53. *Expenditure.*—A sum of krans 1772·25 was paid by His Excellency the Mukber-ed-Dowleh on behalf of the Persian Government for the maintenance expenses of this line in addition to the locally made insulators supplied by him. A further sum of krans 12,086 was also received for the payment of the Gholamans or Linemen.

The accounts show a probable saving of krans 620·45 or R244 on the Budget Grant of krans 51,009 (R20,000) for this line.

SIMLA;
The 13th November 1889.

Statement of work done by the Telegraph Cable Steamer "Patrick Stewart" during the year 1888-89.

Date. From	Date. To	Particulars.
1888.	1888.	
April 1	April 1	At mooring in Karachi harbour.
„ 2	„ 5	Left for Bombay, arriving there on the 5th.
„ 6	...	In Bombay harbour and dock, undergoing repairs, &c.
May 4	May 7	Left for Karachi, arriving 7th.
„ 8	„ 16	At moorings in Karachi harbour, preparing ship for sea.
„ 17	„ 17	Left Karachi to repair fault in Karachi-Gwadur Section about 9 miles off Manora, but unable to carry out the repairs owing to heavy sea, returned to Karachi.
„ 18	„ 20	At moorings in Karachi harbour.
„ 21	June 21	Left Karachi for all stations, repaired two faults in Jask-Bushire India-rubber cable, also picked up old Gutta-percha in same section, and returned to Karachi.
June 22	Aug. 14	At moorings in Karachi harbour.
Aug. 15	Sept. 12	Left Karachi, repaired four faults in the Jask-Bushire Section. On downward voyage repaired the cable on the beach at Gwadur.
Sept. 13	„ 22	At moorings in Karachi harbour.
„ 23	„ 26	Left Karachi, repaired the fault in Karachi-Gwadur Section off Manora, and returned to Karachi.
„ 27	„ 30	At moorings in Karachi harbour.
Oct. 1	Oct. 4	Left for Bombay, arriving there on 4th.
„ 5	„ 12	In Bombay harbour and dock, cleaning, painting, &c.
„ 12	„ 15	Left for Karachi, arriving on 15th.
„ 16	„ 24	At moorings in Karachi harbour.
Oct. 25	Nov. 19	Left Karachi, repaired two faults in Jask-Bushire Section India-rubber cable, picked up old cable, and returned to Karachi.
Nov. 20	„ 22	At moorings in Karachi harbour.
„ 23	„ 24	Left and repaired cable outside of Karachi harbour and returned to Karachi.
„ 25	Dec. 11	At moorings in Karachi harbour.
	1889.	
Dec. 12	Jan. 22	Left for all stations with reliefs and stores, repaired cable in Gwadur west bay, one fault in the India-rubber Jask-Bushire Section, and one in Bushire-Fao Section, and arrived at Busreh.
1889.		
Jan. 23	Feb. 8	Left Busreh, repaired fault in the India-rubber cable; picked up old Gutta-percha cable and arrived at Karachi after calling at Fao, Bushire, Jask, Charbar, Gwadur and Ormara.
1889.	1889.	
Feb. 9	Feb 22	At moorings in Karachi harbour.
„ 23	March 4	Left Karachi and repaired one fault in Karachi-Gwadur cable and one in Gwadur-Jask cable and returned to Karachi after calling at Gwadur and Ormara.
March 5	„ 11	At moorings in Karachi harbour.
„ 12	„ 15	Left for Bombay, arriving there 15th.
„ 16	„ 31	In Bombay harbour and dock for painting and repairs.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Summary for November 1889.

The month of November forms, though less emphatically so than October, one of the autumn transition months during which conditions change from those of the south-west monsoon period to those of the north-east monsoon period. In Northern and Central India the weather is normally fine with a briskly decreasing temperature, while over Bengal and the north of the Bay light north-easterly winds and fine weather alternate with cloudy periods, as the weather in the south of the Bay is disturbed or settled. On the Coromandel Coast the humid north-east winds of the cold weather monsoon ordinarily give heavy rain, while on the western side of the Peninsula, on the contrary, the north-easterly winds are dry and the weather is generally fine. The liability to severe cyclonic storms in the Bay which is so characteristic of the month of October is almost as strongly marked in the early part of November. These storms ordinarily originate over the centre of the Bay and march almost due westward (with very slight northing).

It was explained in the Summary of last month that the south-westerly winds of the south-west monsoon continue to blow during October at the entrance to the Bay and that these humid winds gradually curve round over the centre of the Bay and advance on the Coromandel Coast as north-easterly winds. They there occasion steady rainfall during the second half of October. One of the most important features of the weather of October last was the almost complete failure of this current and this rainfall. The conditions which occasioned this failure were apparently equally operative during the past month of November as a very considerable failure of the Carnatic rainfall is reported, and the winds along the Coromandel Coast, except when disturbed by the cyclonic storm to be afterwards described, were almost continuously north-westerly. The chart of barometric abnormals shows that a peculiar distribution of pressure accompanied this irregularity. At all stations to the west of the meridian of 80° (with the exception of part of the Punjab and the North-West Provinces) the mean barometer was abnormally high, and at all stations to the eastward of the meridian of 80° it was abnormally low. The greatest excess of pressure was on the west coast, the greatest defect over the Circars, the head of the Bay and part of Bengal. Hence the ordinary barometric gradient was considerably modified and there was no flow of air from the north and centre of the Bay towards the south of the Peninsula. Another irregularity which has been exhibited this month is also probably associated with the abnormally high pressures existing over Western India. As stated above, the storms which are formed over the Bay during this month ordinarily march in an almost due westerly direction. It is, however, unusual for a cyclonic storm to advance directly towards an area of excessive pressure, and it is hence, in all probability, to the existence of abnormally high pressures on the west coast that the very exceptional trajectory of the storm of the 15th to 21st November was due.

Pressure.—The returns for the whole of India for the whole month show that, compared with the normal, pressure was low for the time of year by an amount equal to 0·037 inch. The meridian of 80° divides the Indian region into two parts, all stations to the west of that line (except parts of the Punjab and North Western Provinces) reporting excessive pressures and all stations to the east reporting defective pressures.

Temperature.—The very cool weather which characterised the greater part of October was maintained, though in a modified degree, during the month under review. In Bombay and the Central Provinces indeed the coolness was even greater than in October, but in all other provinces the deficiency, where it existed, was less than in the preceding month, and in the North-Western Provinces and Madras was changed into an excess. The following table shows the

variation of the mean temperature for each week and for the month from the normal mean :—

Province.	Difference of mean temperature from normal for week ending November					Difference of mean temperature from the normal for the month.
	4th.	11th.	18th.	25th.	2nd December.	
Burma	—0·7	0	—0·8	—0·3	+0·1	0
Bengal	—0·5	+0·6	+2·8	+2·7	+1·0	+1·8
North-Western Provinces	+0·8	—1·2	+2·3	+2·3	+1·4	+1·5
Punjab	+1·3	—2·1	—0·8	—0·7	+0·4	—0·2
Bombay	—2·5	—2·1	—2·2	—1·2	—1·5	—2·0
Central Provinces and Berar	—2·6	—3·8	—1·5	+1·4	+1·1	—1·0
Guzerat and Central India	—1·5	—2·5	—2·3	—0·6	+1·8	—0·9
Sind and Rajputana	—0·7	—3·5	—1·6	—0·6	+1·2	—1·0
Madras	+0·2	—0·7	+1·3	+1·4	—0·4	+0·4

One interesting feature of the temperature of the month has been the frequent occurrence of much lower night temperatures at the plains than at the hill stations. So frequently has this occurred that the mean minimum temperature of the month was 7·2° higher at Murree than at Rawalpindi and 3·8° higher at Simla than at Lahore. This phenomenon only occurs during clear weather and under anticyclonic conditions; so soon as cyclonic conditions obtain and the air become damp and even very slightly clouded the ordinary temperature relations are re-established. Over the greater part of India the past month has been one of exceptionally large range of temperature, the day readings generally exceeding and the night temperatures falling short of the normal.

Barometric depressions and cyclonic storms of the month.—There was only one important cyclonic storm during the month. A series of small depressions were, however, apparently formed over Lower Burma and that neighbourhood which after occasioning some rain round the Gulf of Martaban disappeared, and a second series of small storms appeared over Bengal.

Important depression of the 13th to 20th November.—There are certain reasons for supposing that this rather remarkable storm was formed over the Andaman Sea and the east of the Bay. On the 11th, the observations showed a very distinct depression overlying Lower Burma and the neighbouring seas. The winds at the stations in Lower Burma fed into this depression and rain was falling at Diamond Island, Moulmein and Tavoy. On the following day the chart showed that the wind had veered and the barometer risen—changes which would agree with the supposed west-south-west advance of the depression. On the 13th, the barometer was still rising in Burma, while it had fallen over the south-west corner of the Bay, where a depression was shown. On the 14th, the barometer was still rising in Burma and falling in Madras and the depression over the Bay was spreading out. On the morning of the 15th, the barometer was apparently steady over the south of the Bay, while it had risen all over the surrounding land area. Hence the depression over the Bay had increased considerably in definiteness and become a well marked storm. At this period the future movement of the storm was very doubtful, as the only barometric falls reported were very slight decrements at Colombo and Salem, so that what indications there were were in favour of a westerly movement. On the 16th, the observations showed very little change in the storm, but the barometer was falling over the greater part of the Indian region. The greatest fall was at Negapatam, while at Cuttack and False Point the barometer was actually rising, so that the evidence, though very slight, was still in favour of the normal westerly movement. On the 17th the barometer was falling every where, most at Cuddalore and Coimbatore, and the cyclonic storm had become an important depression occasioning strongish cyclonic winds all over the south of the Bay. The lowest barometers were at Cuddalore and Negapatam. Heavy rain was falling along the Coromandel Coast. Between the morning of the 17th and that of the 18th the storm suddenly moved northward and the centre on the latter date lay off Nellore. The disturbance had still further developed and strong cyclonic winds prevailed over the greater part of the Bay. Heavy rain was falling from Vizagapatam south to Madras. The reports of the 19th showed that the storm had continued to move up the Bay and to develop, and

on that day the centre lay off Vizagapatam. Very heavy rain was falling in Ganjam. After 8 A. M. on the 19th the advance of the storm was very slow, and according to the information received in Simla the centre on the morning of the following day lay off the Circars Coast between Vizagapatam and Gopalpore. A severe easterly gale had prevailed at the latter station and very heavy rain continued to fall in Ganjam and Orissa. The lowest barometric reading reported (Vizagapatam 29·614 inch) was 0·018 inch higher than the lowest on the previous day, so that presumably the depression had already begun to fill up. On the 21st the lowest barometer in the upper part of the Bay (29·752 inches) was reported from False Point and the wind, both at that station and Gopalpore, was from the northwestward, so that it appeared as though the centre, while filling up quickly, had passed on to the head of the Bay, but from the Bay of Bengal Chart, the information for which was probably more complete than that for the India report, it appears that the storm passed inland over Orissa as early as between 3 and 5 A. M. on the morning of the 20th when the barometer read about 29·48 inches at Gopalpore and broke up completely in the Orissa hills.

This was the only well defined storm during the month, but it is evident from the varying winds, the unsettled weather and the unsteady barometer in Bengal between the 14th and 19th that that Province was visited by several small local depressions at that time. It has been pointed out above that on the 14th the large depression over the south of the Bay had begun to approach the Madras side of the Bay. This left the east side of the Bay open to an advance, induced by the cyclonic circulation of moist southerly and south-westerly winds from Equatorial regions, and these winds probably travelled right up the Bay and into Bengal where they deposited their moisture and gave rise to the local storms in the lower atmosphere.

Rainfall.—The rainfall of the past month has been almost wholly associated with the disturbances mentioned above, that in Madras and the Circars falling during the existence of the large storm of the 13th to the 20th of November, that in Bengal being associated with the local disturbances noticed above.

During the first few days of the month fairly general, though slight, showers occurred in the south of the Indian Peninsula and in Lower Burma. These showers gradually decreased, ceasing altogether in the Peninsula on the 10th, but continuing in Burma. On the 14th rain began around the head of the Bay and in Assam and on the 15th extended southward all over the Carnatic, at the same time becoming heavier in Bengal. On the 16th a similar distribution of rainfall continued, the amounts being still larger in Bengal than elsewhere, but on the 17th rain fell off in Bengal while it extended and became heavier in the south of the Peninsula. As the storm advanced northward up the Bay the area of heaviest rainfall advanced with it, being reported from Vizagapatam on the 18th, from Gopalpore on the 19th and 20th, and from Orissa on the 21st.

The weekly returns of rainfall show that during the week ending on the 18th, *i.e.*, when the heavy rainfall was occurring in Bengal and the cyclonic storm was mainly affecting the Carnatic coast, one station in Deltaic Bengal received 10, a second 8¾ and a third 7 inches of rain; while in Central Bengal, Pubna received 8 and two other stations 6¾ inches. During the same period the maximum falls were about 4 inches in Orissa and between 5½ and 6 inches in Madras. In the following week, however, when the cyclonic storm was passing along the Circars and Orissa coasts larger amounts were reported. Sompet received 20½ inches; Puri 13 inches; Cuttack 8 inches; Banki 5 inches; and Balasore 3½ inches. The rainfall in Eastern and Deltaic Bengal was still heavy, but was lighter than in the preceding week and much lighter than that in Orissa and Ganjam.

During the period of disturbed weather, which succeeded the breaking up of the depressions, showers fell around the Bay, but the amount and extent of the rainfall gradually decreased, so that by the 30th, the only falls reported were at Rangoon and Tavoy and a local shower at Sibsagar.

The whole of North-Western India, the Gangetic plain, Central India, the Central Provinces and the north and centre of the Peninsula were wholly or practically without rain. The final results of the month's rainfall as shown in the concluding table are a general deficiency, except in Behar, Assam, Lower Bengal, and Orissa and the Circars. The greatest excess was in Lower Bengal where about six times the normal amount fell followed by Orissa and the Circars, where twice the average fell. In the south of the Peninsula, *viz.*, Malabar, Mysore and the Carnatic, there was a large deficiency.

The following table gives complete data, and shows the actual average rainfall and the normal rainfall of the month of the twenty-one districts into which the country is divided, so far as it is indicated by the telegraphic reports of a few stations in each district :—

Districts.	Number of Stations.	Normal average rainfall in November.	Actual average rainfall in November 1889.	Difference from the average in November 1889.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on Monday, December 16th, 1889.

The weather reports of the past seven days show that the exceptionally settled weather, which has now prevailed over India for a considerable period, has continued. The barometer has been steadily high over North-Western and Central India and steadily low over the south of the Bay. The winds, which have prevailed, have been mainly anti-cyclonic, radiating out from the high pressure area and have consequently been dry so that the rainfall has been practically nil throughout the whole of India. Over the south of the Bay conditions have probably been unsettled, but the unsettled area has been so far south that its effects have not been felt in any part of India, though the variations in the wind direction at Colombo and the rain which has fallen there, show that immediately to the south cyclonic conditions have prevailed.

The chart of the 10th showed that the high pressure area overlay Central India where the barometer marked over 30·06″. From this region pressure decreased slowly in a south-easterly direction and was lowest over the Andaman Sea and the south of the Bay. In the Punjab and Upper Sind the barometer had fallen rapidly and irregular cyclonic winds prevailed in this region. In

parts of India anti-cyclonic winds were reported radiating out from the high pressure area in Central India. In parts of Lower Burma, however, the wind was easterly and at Colombo north-easterly. The chart of the following day showed that the relatively low pressures, reported from the west of the Punjab and Upper Sind had disappeared and readings were as high there as in Central India. There was no important change in the winds. On the 12th the barometer was rising everywhere, but the amount of increase was fairly uniform, and the relative distribution was unaltered. The wind directions were unchanged. On the 13th the barometer was falling except in Bombay and the Deccan. The fall was greatest in the North-West and the high pressure area in that neighbourhood had disappeared. Readings now decreased from 30·10″ and above, over Central India and the Deccan, to 29·90″ and below, to the east of Ceylon. Calms and light variable breezes prevailed in the North-West as well as within the high pressure area noticed above, but elsewhere the wind currents were unaltered. The chart of the following day showed no change of importance, but on the 15th there had occurred a considerable extension of the high pressure area which covered the Punjab, Rajputana, the North-Western Provinces, Behar, the Central Provinces and the Deccan. The only important feature in the winds was the strengthening of the current at Diamond Island. On the 16th there was little or no change in the position, &c., of the high pressure area, but the barometer had fallen over the Bay and the gradient had increased somewhat. The wind had continued to strengthen at Diamond Island and was rising on the Madras Coast hence it appeared probable that a disturbance was forming over the Bay.

Temperature.—Taken as a whole, the temperature of the air over India during the past week has been low. The greatest general deficiency was on the 14th after which date the amount of the depression decreased, and at the close of the week was very slight indeed. The Punjab was, relatively to the average, the warmest province, the mean temperature of five out of the seven days exceeding the average; in Burma three days, in Sind and Rajputana two days, and in the North-Western Provinces, Central India and Madras one day were warmer than the normal. In the remaining Provinces the week was relatively cool throughout.

The following table shows the variations of the mean temperature of the present and of the past weeks from the normal average :—

Provinces.	Difference of mean temperature of last week from normal.	Difference of mean temperature of present week from normal.
	°	°
Burma	+0·7	—0·2
Bengal	+0·6	—1·1
North-Western Provinces	+1·5	—1·0
Punjab	+0·8	+0·5
Bombay	—0·3	—2·1
Central Provinces	+2·9	—1·7
Guzerat and Central India	+1·6	—1·1
Sind and Rajputana	—1·3	—0·2
Madras	+1·2	—1·6

This table shows a considerable fall of temperature relatively to the average in nearly all provinces. In Sind and Rajputana, however, there has been a slight rise and in the Punjab the fall is trifling.

Rain.—As mentioned above the week has been practically rainless throughout the whole of India. The two Assamese divisions report slight showers, and a few drops of rain fell at Tavoy on the 15th, but with these exceptions there has been no rain in any part of the country.

The second columns of the concluding table shows that except, in the south of the Peninsula, the normal rainfall of the week is very light, but that, except in Tenasserim and the east of the North-Western Provinces, showers are ordinarily experienced in all parts of the country.

The final column of the table shows the large seasonal deficiency which exists in North-Western India and the south of the Peninsula.

Province.	Division.	Rainfall data for week ending 16th December 1889. Average actual rainfall of Division.	Average normal rainfall of Division.	Excess or defect in inches.	Rainfall data from 15th October to 16th December 1889. Average actual rainfall of season to date.	Average normal rainfall, 15th October to 16th December.	Excess or defect of (seasonal) rainfall expressed as a percentage.

W. L. DALLAS,
Assistant Meteorological Reporter to the Government of India.

SIMLA, *19th December, 1889.*

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 21st December.*—No rain in the northern districts of Bellary, Anantapur, and Kurnool; moderate in Coimbatore, South Canara and Malabar; good elsewhere. Crops greatly benefited and improving after the recent rains, but more rain is still wanted in Nellore and many of the southern districts. Paddy blighted in parts of Cuddapah, South Arcot and South Canara. Prices falling in Ganjam, Nellore, Madras, Chingleput, Trichinopoly, Madura, Tinnevelly and Salem, rising or stationary elsewhere. General prospects much improved.

Bombay.—*For week ending 24th December.*—Standing crops need rain in parts of the Deccan and Karnatak, otherwise generally good. Cotton prospects favourable, except in parts of Broach. Opium sowing in Baroda and harvesting and sowing operations generally progressing. Fodder generally sufficient and agricultural stock healthy.

Bengal.—*For week ending 24th December.*—No rain fell during the week. The winter rice crop is being cut and gathered. In most districts an average or nearly an average, and in some more than an average, crop will be obtained. In parts of Western and Central Bengal, the Sudder Sub-Division of Balasore, and the Palamow Sub-Division of Lohardugga, the outturn will be short. *Rabi* crops are generally reported on well, but in Behar a shower of rain now would do much good. Poppy is doing well, and the weather is very favourable for the cultivation. Sugarcane good, except in Pubna, Dacca and Furreedpore. Tobacco a promising crop, as also *ganja* in the Rajshahye district. The appearance of new rice in the market has had the effect of lowering prices in Bengal, Behar and Chota Nagpore generally. In Balasore and Cuttack the price of common rice was steady during the week.

North-Western Provinces and Oudh.—*For week ending 25th December.*—Weather clear and cold. *Rabi* crops generally thriving. Rain much wanted in unirrigated areas. Food stocks ample. Prices fairly easy.

Punjab.—*For week ending 25th December.*—No rain. Prices rising in Rawalpindi and Shahpur and stationary elsewhere. Sowing of *rabi* crops nearly completed; rain is much needed for further sowings and for the standing crops. Prospects of standing crops good for the present. Fodder sufficient throughout the Province. Poppy sowing in progress in Jullundur.

Central Provinces.—*For week ending 25th December.*—Weather cool and slightly cloudy at times. *Kharif* crops being harvested, outturn good. *Rabi* crops in good condition. A little rain would be beneficial to wheat and gram, especially in the Narbada District. Prices steady.

Burma.—*For week ending 21st December.*—The crop prospect throughout Lower Burma is good. In Upper Burma crops for the most part promise well. The price of paddy has fallen in Bassein, Tavoy, Katha and Yamethin, but it has risen in Bhamo; elsewhere prices are stationary.

Assam.—*For week ending 25th December.*—Weather seasonable. Harvesting of cold weather rice continues. Prospects of tea and other crops good.

Mysore and Coorg.—*For week ending 25th December.*—Slight rain in the Civil and Military Station and in the Bangalore and Hassan districts. Crops generally in good condition; outturn fair. Prospects favourable, but more rain required in the Bangalore district. No material change in prices.

Rainfall ·97 inch in Coorg. Coffee picking and rice harvest in progress.

Berar and Hyderabad.—*For week ending 25th December.*—In Berar the weather is clear and cold. *Jowari* reaping and cotton picking still continues. *Rabi* crops good. Cattle healthy. Fodder sufficient. Prices almost stationary.

No rain in Hyderabad during week. Harvesting of *abi* crops concluded. *Rabi* crops thriving. Prices stationary.

Central India.—*For week ending 25th December.*—Condition of crops in Bhopal fair. Rain wanted to improve them. Agricultural stock indifferent. No other material changes during week.

Rajputana.—*For week ending 25th December.*—Agricultural operations satisfactory. Standing crops good but somewhat damaged by locusts in a few districts of Marwar. Cotton cultivation injured by cold in Kerowli. Agricultural stock generally good. Pasturage or fodder generally sufficient but dear in Marwar. Prices steady generally.

Nepal.—*For week ending 19th December.*—No rain. Weather cold; mornings foggy. Winter crops thriving.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.
