Agents of tea gardens have sometimes a word to say for or against the establishment or maintenance of a shop in a particular locality, and in one instance some members of the Brahmo Somaj, a Bengalee sect having a few members here and there in this Province, objected to the site of a shop. Such representations seem to have always received consideration here, and Mr. Fitzpatrick would always insist on their receiving the very fullest attention; but there is no rule requiring the wishes of residents of the neighbourhood to be ascertained or no procedure prescribed for ascertaining their wishes; nor, I am to say, does the Chief Commissioner think any such rule or procedure would be desirable, as he believes that the only result of it would be that when one or two rival bidders succeeded in purchasing the lease of a shop at one of our auctions where the competition is often very virulent, his opponents would at once set about getting up a petition signed by numbers of persons really absolutely indifferent about the matter in order to compel him to change the site.

3. The proper mode, as it seems to the Chief Commissioner, of treating such a matter in dealing with a population like that of Assam is for the district officer to take up the question of the suitable location of shops himself, carefully considering any suggestions or objections which may be made by persons interested, but feeling himself bound at the same time, though no objection or suggestion may be made, to see that the site of the shop is not open to any objection. This is in fact already done to a certain extent here; but the Chief Commissioner has recently thought it well, having regard to the light which has been thrown upon the nature of the objections which may present themselves to a particular site by the inquiries made last year in Bengal, to issue special instructions for an inquiry into the subject, which will be found in paragraph 2 of his note on country spirits, dated the 16th January 1889, a copy of which is enclosed.

4. As regards local public bodies, i.e., Local Boards and Municipal Committees, there is no rule requiring them to be consulted on such matters, nor does the Chief Commissioner consider it desirable that there should be. These bodies in Assam are not, and cannot be, made representatives of the people to such an extent as would warrant anything of the kind; and there would, he thinks, moreover, be a serious danger that if they were called on to deal with such a subject, the treatment of it would practically fall into the hands of individual members of an intriguing turn, having their own objects or those of their friends or hangers-on to serve. It must be remembered—and it is fortunate both for the cause of temperance and in the interests of the revenue that it is so—that the competition for liquor licenses is here usually a matter of keen competition, and one over which much manoeuvring and much ill-will are expended, and that it is sometimes possible by forcing a licensee to change the previous site of a shop to put him to considerable difficulty and expense in getting another.

5. In reply to the question asked in the second paragraph of your letter, I am to say that there is no separate Excise Department in Assam. The excise in each district is looked after by the Deputy Commissioner, who is Magistrate of the District, under the control of the Commissioner of the Division in the Assam Valley, and of the Commissioner of Excise (the same officer who is Inspector-General of Police) in the rest of the Province. Over both the Commissioner of the Assam Valley and the Excise Commissioner, the Chief Commissioner, in this, as in all other matters, exercises a very close supervision, and he thinks he may venture to say the departmentalism has very little to do with the decision of such questions as arise.

Dated 7th June 1888.

From—H. C. WILLIAMS, Esq., Commissioner of Excise, Assam,
To—The Secretary to the Chief Commissioner of Assam.

Your note of 17th January about action taken on Bengal Excise Commission Report.

I have delayed replying to it till now, firstly, because I was out in camp at the time and had not the necessary books with me; secondly, after my return I had annual reports on hand; and thirdly, because no action could be taken except at the beginning of a financial year, as due notice must be given of any important changes made in our excise system.

Six recommendations were made by the Excise Commission as detailed in paragraph 9 of the Resolution of the Government of Bengal on the report,—*vide* page 496 of *Calcutta Gazette* of March 24th, 1886.

Shortly after this Resolution came out Mr. Ward went through it with me, and decided that it would be better to wait and see what Bengal did in the matter, and how far the alterations made there proved a success. Some time has now elapsed and certain reforms may well be introduced from the beginning of next year.

The first recommendation of the Commission was that—

- (1) Central distilleries should be re-established in all large towns at the head-quarters of districts in which there is a great demand for country spirit.

This suggestion was at once adopted in Bengal, where special means of close supervision existed, and where a large drinking population was found in a small and well-defined area, and distilleries were started at most of the head-quarters and subdivisional large towns,—*vide* paragraph 79 of Bengal Excise Report for 1885-86.

Now, in this Province, though there is a very large demand in some districts, there is no large town compared with Bengal, and certainly no large town where there is any great demand for country spirits, and I do not think there is the slightest need for the introduction of this system. There is also no special means of close supervision in existence without a considerable increase in establishment and expenditure.

The second recommendation was—

- (2) "In other towns the stills should be grouped within one enclosure outside the inhabited parts of the town, and care should be exercised in the selection of the retail shops within the town supplied by these stills."

This practice had apparently been going on for some time in Dacca and Jessore in Bengal (paragraph 80 of Bengal Report for 1885-86), but nothing more seems to have been done with regard to it; and the Lieutenant-Governor has not thought it necessary to lay down any orders on the subject. In this Province no orders are needed. Individuals at times object to the sites of shops, but the only case I know of where any sect objected to the site of an outstill was in 1885, when the Brahmo Somaj at Sylhet objected to the position of a shop, and the Deputy Commissioner was directed to move it.

The third recommendation was—

- (3) In each district a maximum aggregate capacity for all outstills should be fixed and the number of outstills and size of each still should be determined with reference to maximum aggregate.

All stills holding more than ten seers should be of metal, and should be registered and stamped by the excise authorities.

The upset price of each still should be proportionate to its capacity, and should be calculated on the basis of the duty (at a rate fixed by Government), which could be levied on its output at a given strength.

The first part of this proposal was to prevent the sudder distilleries being ruined by cheap liquor brought in from the outstills. In the Patna district it was decided to make a full experiment of these proposals, and enquiries were made about the aggregate liquid capacity, as well as the working capacity, of the stills in use. Apparently the results in Patna were a success, and the experiment was extended to ten other districts in 1887-88 (*vide* paragraph 4 of Resolution on Bengal Excise Report for 1886-87). In consequence of the figures received from officers about the liquid and working capacity of the stills, reductions in the total sanctioned amounts were made (*vide* paragraph 85 of Bengal Excise Report for 1886-87). It was also settled that the upset price should not be less than 50 per cent. of the gross monthly profits. In the licenses issued for the current year in Bengal the liquid capacity of the still has been limited; the still, if of metal, is to be marked or stamped.

In this Province, after making numerous inquiries in Sylhet and Cachar, in November and December 1887, I drew up a series of questions which were circulated with Chief Commissioner's Circular No. 8 of 22nd February 1887. Last year's replies received were, however, not satisfactory, and Deputy Commissioners were again directed in the Chief Commissioner's Resolution on the Excise Report to make further experiments, and also to make further tests of the strength of country spirit in my letter No. 535-538, dated 7th November 1887.

I am afraid, however, the information submitted is again scanty.

A supply of hydrometers has been ordered for Sylhet and Cachar, and should be out before next cold season. These are to be of glass.

The question to be decided is whether, with the present vague information we have and the utterly unreliable accounts submitted by the shopkeepers, it is worth while fixing a limit to the liquid and working capacity of the stills in a district. I am inclined to think it is not; but if the Chief Commissioner wishes, the experiment could be made in Cachar, where the absence of locally-made liquor (*i.e.*, Cachari *madh*) would render it more likely to give true results. I would recommend the introduction of the system that all stills of over ten seers working capacity be of metal and that they be stamped and registered. As there is no Excise Establishment, this duty will devolve on the Police. If approved of, I will ascertain what stamps are used in Bengal, and will get similar ones for this Province. With regard to the upset price, it is very difficult to get at the monthly profits, and I think the only upset price that can be established is the average price of the three previous years.

The fourth proposal of the Commission was—

- (4) The aggregate capacity of the fermenting vats allowed to each still should also be fixed.

The Lieutenant-Governor of Bengal considered that no general rule about this could be laid down, as his proposal was subsidiary to that for the limitation of stills; but from the Resolution on the report for 1886-87 it appears that, where outstills compete with sudder distilleries, the number and size of fermenting vats has been restricted, and in the new licenses in Bengal this restriction is inserted, so the rule has been apparently made general.

If the Chief Commissioner decides to limit the capacity of stills, the capacity of the fermenting vats must also be limited.

The fifth recommendation was—

- (5) A minimum price should be fixed for the cheapest sort of liquor according to the circumstances of each district and the prices now prevailing. The Lieutenant-Governor decided on trying this proposal, principally because it has been worked in Madras and Assam. In Madras it was abandoned, and in Assam it has only been tried under the peculiar circumstances attendant on the sale of the country spirit liquor at Shillong. The experiment was tried in Patna and apparently worked well.

I do not think that any rule of the kind is needed in this Province. As a rule, the price is not less than 8 annas a bottle, though in some places it is sold at 4 annas, and I do not think there is any chance of its going below that price. This is very different to the 4 pice, 6 pice, and 2 annas a bottle which is found in Bengal. As soon as the report came out, the Deputy Commissioner of Cachar was asked his views as to enforcing this minimum rate, and he was against it; and the Chief Commissioner then decided that nothing more need be done about it, till it was seen what the result of the experiment was in Bengal.

The sixth recommendation was—

- (6) Excise establishments should be reconstituted on a more liberal scale.

This proposal was at once adopted in Bengal. In nine districts special Excise Deputy Collectors were appointed (*vide* paragraph 87 of Bengal Report for 1885-86, and the views of the Board on the subject), and a special officer was appointed to superintend all the changes (paragraph 91 of Report for 1886-87). In Assam nothing has been done, and in fact the excise

In 1884-85.	
One Sheristadar at Rs 30 to Rs 50 per month.	
" Muharrir at Rs 20 to 30	
Four peons at Rs 6 each — Rs 24	"
1885-86.	
One Muharrir on Rs 30 per month.	
1886-87.	
Ditto on Rs 30 per month.	
1887-88.	
Ditto on Rs 30 per month.	

establishments in Sylhet were reduced, as shown in the margin; but an extra muharrir has just been sanctioned, as it was found impossible to get on with the existing staff. This is the recommendation on which many of those preceding really hang, as if an excise establishment were started the main proposals of the Commission could be carried out, but with the present agency it is almost impossible. At present the charges for excise are almost nil, against very large receipts, but I do not know whether the Chief Commissioner, under the new Provincial contract, is disposed to sanction more expenditure. To carry out the wishes of the Commission we should require a special Deputy Collector in Sylhet, Cachar, and two for the Assam Valley districts, and an Excise Sub-Inspector for each of the plains districts, with their attendant peons.

It must also be remembered that in the opinion of the Commission adulteration prevailed much more in central distilleries than in outstills, and that bad fermentation and distillation was the main cause of the country spirit being so highly tainted with noxious alcohols (page 128 of Commission's Report). As we have no central distilleries, and assuming that the remarks would be equally applicable to this Province, there would not be *prima facie* the same justification for incurring largely-increased expenditure.

It is also noteworthy that, though there have been numerous complaints about the bad effects of the country spirits in this Province, they have not been quite so numerous in the last few years; and the results of bottles supposed to contain very noxious contents, when sent to be analysed, have not been unfavourable to the sellers.

I am therefore of opinion that it is not necessary at present to undertake the greater reforms advocated by the Excise Commission, and so incur very considerable expense.

Besides the proposals enumerated above, the Commission made some minor proposals, *viz.*, about the sites of shops, the hours at which they should open and close, prohibition of sale of liquor to children, limiting sale to two bottles, &c. (pages 118, 119, of Report). With regard to their remarks about sites in Assam, if shops are not put near gardens the coolies will always make their own liquor. In Bengal, the hours for closing shops are 8 P.M. from 16th October to 15th March, and 9 P.M. from March to October, and they are opened at sunrise, while in Assam the hours are from sunrise to 9 P.M. I do not think any change needed. The prohibition of sale to children under 12 has been inserted in the Bengal licenses, and should be inserted in Assam. The proposal about two bottles limit has not been adopted in Bengal, and I see no reason for its adoption here. With regard to the question of the increase of shops deprecated by the Commission, the following shows the number sanctioned for the last five years. The increase has been very slight, considering

the large increase in coolie population, and the number of additional tea-gardens opened in Sylhet especially :—

	Number of shops.
1882-83	232
1883-84	226
1884-85	247
1885-86	247
1886-87	248

I send for the Chief Commissioner's perusal the license form at present in use in this Province and that prescribed for Bengal this year. The new additions I have marked in red ink. They are, it will be seen, very important, and some changes should be adopted from next year.

The following figures relate to the paragraphs in the new license.

I would adopt the alterations in the preamble, also those in paragraph 1, substituting "Chief Commissioner" for "Board of Revenue."

Paragraph II.—I would adopt the changes, except that of limiting the liquid capacity.

" III.—I would adopt. (a)

" VI.— Ditto.

Paragraphs VII and VIII.—I do not think are necessary, though I have no objection to the last named. (b)

Paragraph IX.—Should certainly be followed.

" XI.—Certainly not wanted.

" XII.—I would adopt.

" XIII.—Also.

" XVII.—This differs a great deal from the present form, which does not distinguish the different kinds of liquor, and divides it into gallons, quarts, and pints. As a rule, no one knows what a gallon is, and though half bottles are sold, the classification of them is not much needed. In Assam there are in most shops two or three liquors sold at different prices, though I only know the names of *hang/a* and *phul*, and it would be very valuable information if we could get out how much of each kind of liquor is sold. I would suggest that by description of liquor the licensees should be directed to fill in the different-priced liquors. We shall have great difficulty in getting column 3 filled in, and the figures will be vague.

Paragraph XVIII.—Should run as follows :—

"That he at once produce for inspection, on the demand of any excise officer above the rank of a chaprassie, or of any police officer above the rank of a constable, his license and correct accounts, and that he do not prevent any excise or police officer of whatever grade from entering his shop at any hour of the day or night."

Note by D. FITZPATRICK, Esq., Chief Commissioner of Assam, dated 16th January 1889.

1. I have now, in a note put up below, dealt with the 3rd, 4th, and 5th proposals, so far as it seems to be possible to deal with them at this moment; and I need say nothing about the first.

2. As regards the second, of course we would not allow the process of distillation to be carried on anywhere where it was found to be a nuisance; and it may be that if it is complained of anywhere as a nuisance, we shall have to adopt some such system of having the liquor made outside the town, as has been suggested. I see the Lieutenant-Governor of Bengal in his Resolution on Mr. Westmacott's report commends this matter to the consideration of the Board of Revenue, but I don't think that, in the absence of complaint, we need trouble ourselves about it.

The matter of the location of shops, however (which has got mixed up with it, owing to outstills being usually on the same premises as the shops), seems to demand attention. Mr. Westmacott's report shows that a good deal of the complaints (true or false) made in the Hooghly district derived whatever foundation, or semblance of foundation, they had from the injudicious way in which shops were placed; and I think that in order to guard against anything of the sort here, we ought to take the matter in hand without waiting for complaints to be made. The Report of the Excise Commissioner, Mr. Westmacott's report, and the Lieutenant-Governor's Resolution on the latter will show the importance of the point, and the sort of localities that are considered objectionable; and I should be glad if the Commissioner of Excise, after referring to them, would issue a circular with a view to ascertaining what abkari shops are now established on sites open to objections of the nature referred to, and what steps can be taken for having them moved.

3. The sixth proposal was one for increased establishments; and I am certainly not prepared at this moment to consider it, though we may have to do so hereafter if we adopt proposals like (3), (4) and (5).

4. I agree as to the alterations of the form of license, except that, as stated in the margin of Mr. Williams' note, I would not adopt paragraph III of the Bengal form, which it seems to me is not required, as we are not going to restrict apparatus. If this note is in time, the alterations may be made in the next licenses issued.

(a) I can't see why we should trouble him and ourselves in this way if we are not going to limit the capacity.

(b) There is the objection that it is unnecessary and useless under our system.—D. F.

No. 1-0-2-16E., dated the 4th April 1889.

From—H. J. S. COTTON, Esq., Officiating Secretary to the Government of Bengal,

To—The Secretary to the Government of India, DEPARTMENT OF FINANCE AND COMMERCE.

I am directed to acknowledge the receipt of your letter No. 994, dated the 22nd February 1889, enquiring—

- (1) whether any, and if so what, rule or procedure is prescribed in Bengal requiring the wishes of the residents to be ascertained before a shop for the sale of intoxicating liquors is licensed in any locality;
- (2) whether the rules require the opinion of local public bodies to be asked, or if it is customary to do so;
- (3) whether attention is paid to any remonstrance which the residents or local bodies may make and whether their wishes are taken into consideration; and
- (4) whether liquor-shops are opened and closed at the discretion of the officers of the Excise Department, or whether the police or magisterial authorities are consulted in the matter.

2. In reply to the first three questions raised by the Government of India, I am desired to say that no hard-and-fast procedure has been prescribed in these provinces. Local officers are guided by the following instructions which were issued by the Board of Revenue in their circular No. 666 B., dated 2nd June 1886:—

"The Board are averse to laying down a hard-and-fast rule on the subject of the selection of sites, and the Government have only insisted on greater care being exercised in the matter. The following principles may generally be observed. Each shop should be fairly accessible, as the more public is the place of vend, the better will be the supervision; local opinion should be considered, though not necessarily followed; on the other hand, sites should not, without some good reason, be chosen, near to market places, bathing ghâts and places of public resort, schools, hospitals, places of worship, factories, the interior of villages, the sides of roads leading to bathing ghâts or places of water-supply, and in some districts the sites of main roads and villages inhabited by aborigines of known drinking habits."

It was recently brought to notice by Mr. Westmacott's enquiries in the Hooghly district that the Board's orders respecting sites had been neglected in some cases, and the opportunity has again been taken to enjoin Collectors to be specially careful in selecting sites where complaints have been made, or where it is found that from any reason the sites already selected are objectionable. It has been pointed out that, as a general rule, outstills should not be in bazaars or at the entrance to bazaars; and that, though they should be easily accessible to persons requiring liquor, they should not be in such situations as to obtrude themselves on the attention of the public, or to render persons passing by subject to annoyance from those who drink at the outstills.

The Board report that remonstrances against the grant of a license or selection of a site are seldom made by residents or by local bodies, but that their wishes, when expressed, are duly considered, and are not disregarded without good reason.

In regard to municipalities, it was directed by this Government in 1884, in accordance with the recommendation of the Excise Commission, that the Municipal Commissioners should be consulted in the choice of sites; and it is now reported by the Board that due attention is paid to the views of these local authorities before opening liquor shops within municipal limits.

3. With reference to the last enquiry of your letter, I am to say that under the excise rules now in force the Collector is required to lay before the Magistrate, and where there is a cantonment, before the officer commanding the station, a list of all the shops to be licensed during the ensuing official year. The Magistrate is empowered to object to any new site on which it is proposed to open a new shop, and to any old site if the experience of the past year has suggested doubts as to the advisability of renewing the license. After the licenses are sold, the Magistrate is again consulted with regard to the character of the licensees, and may object to any person who appears to him to be unsuitable.

In Calcutta, a certificate of good character from the Commissioner of Police is required before a license can be finally granted and issued. The Excise Superintendent is also required to consult the Commissioner of Police with regard to every new site, and no such site is let by auction or otherwise unless it has been approved by both officers, subject to a reference to the Board of Revenue in case of disagreement. Before a shop is opened on a new site, notice of the intention to do so is published at the police-station and in a conspicuous place on or near the proposed site at least fifteen days before the grant of the license; and all objections urged by the inhabitants are carefully considered by the Superintendent in communication with the Commissioner of Police. There have quite recently been several instances in Calcutta in which, when the neighbouring residents have objected to the site of a shop for sufficient reasons, permission to open it has been refused by the police authorities.

4. A license which has been regularly issued can only be cancelled during the period of its currency by the Collector, under section 29, Act VII (B.C.) of 1878, if the fee or duty therein specified be not paid, if any other condition of the license is violated, or if the holder is convicted of a non-bailable offence. The police and magisterial authorities are not ordinarily consulted when a shop is closed under this procedure.

No. 124—XII-90 A., dated 9th April 1889.

From—R. SKEATON, Esq., Secretary to the Government of the North-Western Provinces and Oudh, Financial Department,

To—The Secretary to the Government of India, DEPARTMENT OF FINANCE AND COMMERCE.

I am directed to acknowledge the receipt of your letter No. 994, dated 22nd February 1889, in which you ask for information on certain points in connection with the excise arrangements for liquor shops in the North-Western Provinces and Oudh, and in reply to communicate the following remarks for the information of His Excellency the Governor General in Council.

2. No rule exists in these provinces requiring the wishes of the residents to be ascertained before a liquor shop is licensed in any locality; nor do the rules in force direct that the opinion of local public bodies on such matters is to be obtained. Rule 74, however, of the Excise Rules (Excise Manual, page 50) provides that opportunity shall be given to zemindars and neighbours of objecting to the position of such shops; and any representation made by them or by local public bodies receive, I am to say, all due consideration.

3. With regard to the enquiry made in paragraph 2 of your letter, I am to state that liquor shops are opened and closed at the discretion of the Collector of the district, who is not only the local head of the Excise Department, but is also the chief police and magisterial officer. It is customary for Collectors in such matters to consult their subordinates (Joint and Assistant Magistrates or Deputy Collectors), one of whom is, as a rule, placed in special charge of the Excise Department under the general supervision of the Collector.

No. 644, dated 30th March 1889.

From—H. C. FANSHAW, Esq., Junior Secretary to the Government of the Punjab,

To—The Secretary to the Government of India, DEPARTMENT OF FINANCE AND COMMERCE.

I am directed to acknowledge the receipt of your letter No. 994 of 22nd February last, and in reply to submit the following information with reference to the questions asked by the Government of India.

2. As regards the enquiry made in paragraph 2, I am to explain that the District Magistrate is also head of the Excise and Police Administration of each district of the Punjab, and that therefore no liquor shops are opened or closed without the knowledge and consent of the officer who is responsible for the criminal and police administration of the district.

3. As regards the enquiry made in paragraph 1 concerning the opening of new shops, which in this province must be sanctioned by the Commissioner of the Division, I am to say that by Rule 52 of the Excise Rules of the Punjab issued by the Financial Commissioner (copy enclosed) it is laid down that no shop shall be opened in a village the inhabitants of which object to its presence. No special procedure has hitherto been prescribed for the purpose of ascertaining the wishes of the people, and no doubt various officers have adopted various ways of procuring this information. The Lieutenant-Governor is, however, able to say from his own knowledge that in various places in the Province shops have not been opened because of the objections of the inhabitants, and that in some cases licenses have not been renewed for the same reason; and His Honour cannot recall any instance in which a liquor shop was opened in spite of the wishes of the residents. Sir James Lyall is prepared to make the existing rule stronger than it is at present, and to require the officer in charge of the Excise of each district (a) to give the residents of any place in which it is proposed to open new shops due opportunity of objecting if they wish to do so, and (b) to duly consider the objections which may be made; and the Financial Commissioner and Commissioner of Excise will at once be consulted as to the best way of framing such a rule.

Copy of Rule 52 of the Excise Rules of the Punjab.

Rule 52.—No shop should be allowed to be established in a conspicuous position adjoining a road, where there are few or no other habitations, or in a village the inhabitants of which object to its presence.

No. 200, dated 18th March 1889.

From—C. A. GALTON, Esq., Secretary to the Government of Madras, Revenue Department,

To—The Secretary to the Government of India, DEPARTMENT OF FINANCE AND COMMERCE.

With reference to your letter dated 22nd February 1889, No. 994, I am directed to forward the accompanying copy of the Proceedings*

* No. 783, dated 8th March 1889.

of the Board of Revenue furnishing the information asked for regarding the opening and closing of liquor shops in the Madras Presidency. I am also to forward, for information, copy of the Board's Standing Order No. 81 regarding the regulation of stills and shops in the Presidency.

Extract from the Proceedings of the Government of Madras, Revenue Department,—No. 783, dated 8th March 1889.

Read the following—

Proceedings of the Board of Revenue (Separate Revenue), dated 8th March 1889, No. 783 (Mis.), on endorsement of the Secretary to Government, Revenue Department, dated 4th March 1889, No. 1331, referring to the Board of Revenue, for report, letter from the Government of India, dated 27th February 1889, No. 994 F. and C.

RESOLUTION.—It is not the custom in the Madras Presidency to consult the wishes of the residents before a shop for the sale of intoxicating liquors licensed in any locality, nor is the opinion of local public bodies asked. In vast majority of the places where liquor shops are opened, there are no public bodies, and even in the towns where there are public bodies, those bodies are not representative, as they rarely contain even a sprinkling of number of the castes which drink intoxicants.

2. Liquor shops are now not frequently opened in new localities, the number of sanctioned shops is being rapidly reduced, and shops are licensed year after year, practically in the same localities. Remonstrances by residents are occasionally received and attention is paid to them after such inquiries as may seem necessary.

3. Liquor shops are not opened at the discretion of the Excise Department, but the Police are consulted; and as the District Magistrate, in his capacity as Collector, is also the chief licensing authority, the Magistracy are fully informed of all changes in the locality of shops.

4. Liquor shops are closed without reference to the Police or Magistracy.

BOARD'S STANDING ORDER NO. 81.

Regulation of Stills and Shops.—The advertisements notifying sale of the arrack farms in rented districts provide that stills shall not be opened except at places determined by the Collector, and that a list of them may be obtained from him. Orders will be issued by the Board as to the number of farms to be managed on the Amani system, or as to any other limit which it may be thought desirable to impose on the number of stills in sufficient time before the date fixed for the auction sales to enable the Collector to have a list prepared. The places should then be determined by the Collector and a list drawn up before the auction, for the information of intending bidders. Lists should also be prepared in all districts showing the arrack and toddy shops already sanctioned.

2. The Collector is competent, subject to the orders of the Board, to permit transfers of shops from one locality to another, to sanction new shops, and, on grounds of police administration, good order or expediency, to direct shops to be closed; but it is desirable that as far as possible the list produced at the time of sale should be adhered to. The rival claims of arrack and toddy renters and the wants of the people should be duly weighed in each case before changes in the locality or number of shops are sanctioned.

3. The number of stills and shops should be kept down as far as is compatible with not encouraging illicit manufacture and sale.

3A. It is competent to the Collector, under section 6, Act III of 1864, to require abkari contractors to open and maintain shops for the sale of arrack and toddy in such numbers as he may deem necessary in any locality within the limits of their farms; and failure to comply with any requisition of this nature, subject to the orders of the Board of Revenue, will be held to be a breach of the renter's agreements.

4. The opinion of the District Superintendent of Police should be obtained prior to the determination of sites.

No. 2020, dated 14th March 1889.

From—J. NUGENT, Esq., Chief Secretary to the Government of Bombay,

To—The Secretary to the Government of India, DEPARTMENT OF FINANCE AND COMMERCE.

I am directed to acknowledge the receipt of your letter No. 994, dated the 22nd ultimo and in reply to forward herewith, for submission to the Government of India, a copy of a report*

* No. 1085, dated 1st March 1889.

from the Commissioner of Customs, Salt, Opium, and Abkari, describing the procedure observed in this Presidency in respect of the grant of licenses for the sale of intoxicating liquors and furnishing the information asked for on the other points noted in your letter.

No. 1085, dated 1st March 1889.

Report by A. C. TREVOR, Esq., Acting Commissioner of Customs, Salt, Opium, and Abkari.

No formal rule or procedure has been prescribed in this Presidency requiring the wishes of residents to be ascertained or local public bodies to be consulted before a shop for the sale of intoxicating liquors is opened in any locality.

2. The duty of carrying out the provisions of the Abkari Act is entrusted to the Collectors, subject to the control and direction of Commissioner. The first consideration of any applica-

tion for a new liquor shop rests, therefore, with the Collectors, who may, after enquiry, refuse the applications, but cannot grant it without the sanction of the Commissioner. The Commissioner exercises his discretion in regard to refusing to allow any new shops to be opened even when the district authorities recommend them.

3. In the mofussil, the Collectors are themselves the District Magistrates and their orders or recommendations are made after such enquiry, carried out personally or through their Revenue, Magisterial and Police subordinates, as they consider necessary to determine whether the shop is really required and generally unobjectionable; occasionally the advice of the Superintendent of Police is taken, and it is quite certain that no Collector would recommend the opening of a shop to which there were objections from a Magisterial or Police point of view.

4. In the Town and Island of Bombay all liquor shops receive separate licenses from the Commissioner of Police, and in cases where a Police license is withheld an Abkari license cannot be granted.

5. The procedure with regard to the closing of old shops is the same as that above described, except that the Commissioner's sanction is unnecessary. The Collector's order is, however, subject to appeal.

6. I am not aware that it is the practice formally to invite the opinion of residents or of local public bodies before recommending the opening or closing of a shop. But any genuine expression of public feeling would naturally receive full consideration; and I believe no complaints have been made either to this office or to Government that the reasonable representations of any persons likely to be affected have been disregarded. As a rule, they are not sufficiently interested to make any, uninvited; and if invited, would simply become the tools of wire-pullers on each side. There are few abkari contractors who would find much difficulty in getting up a petition, if they thought it would do any good, for the opening of a shop wherever they wanted it; and they generally have rivals or enemies who would have as little difficulty in getting up a counter demonstration.

No. 52 (Revenue), dated 16th May 1889.

From—Her Majesty's Secretary of State for India,
To—The Government of India.

In continuation of my despatch No. 28 (Revenue), dated 19th April 1888, I enclose a copy of a report of a debate in the House of Commons, which took place on the 30th ultimo on the Excise administration of the Government of India. You will observe that a Resolution condemning that system in general terms and calling for its immediate reform was carried by a majority of 113 to 103.

2. I desire to call Your Excellency's attention particularly to the speech of Sir John Gorst, Under-Secretary of State for India, which represents my views upon the subject under discussion.

3. The Resolution, you will perceive, does not discriminate between the different systems of Abkari administration prevailing in the several provinces of India, nor between the variation in the carrying out of those systems which circumstances render necessary in different districts of the same province; nor is any alternative policy laid down by the House of Commons in this Resolution for the guidance of the Government of India in the very difficult task of regulating the consumption of intoxicating liquors by the various populations of India. Her Majesty's Government, however, gathered from the Debate which took place, and the speeches by which this Resolution was recommended to the adoption of the House of Commons, that the principles enunciated in my despatches of the 19th April 1888 and the 14th March 1889 met with the entire approval of all parties in the House of Commons. These principles were—

- (1) that any extension of the habit of drinking among Indian populations is to be discouraged;
- (2) that the tax on spirits should be as high as may be possible without giving rise to illicit methods of making and selling liquor;
- (3) that, subject to these considerations, a maximum revenue should be raised from a minimum consumption of intoxicating liquors.

4. I understand that these principles have been frankly assented to by the Government of India and by all the Provincial Governments, and are indeed those to which those Governments have long endeavoured to make their Abkari administration conform.

5. I fully appreciate the opinions expressed by Your Excellency with regard to this matter in the recent discussion of the Budget as reported in the *Gazette of India* of the 30th day of March last, and I have every confidence that Your Excellency, in view of the opinion expressed by the House of Commons and in accordance with your own views, will proceed with as little delay as possible to carry into effect the measures which you already have under consideration

for the more effectual control and discouragement of the liquor traffic according to the various circumstances of the populations under your Government.

6. It was asserted in the debate that, however sound the views and intentions of the Government of India and of the Provincial Governments might be, those intentions were not carried in all cases into practical effect by some of the executive officers of the Abkari Department. As an illustration of this, the passages transcribed in the margin from the Report on the

Report on the Excise Administration of the North-Western Provinces and Oudh for the year ending September 1886.

Page 7. "In some districts where the number of shops was below the Government standard, attempts were made to increase them, but not with conspicuous success."

Page 13. "Elawah.—Efforts are being made to bring the number of shops up to the prescribed standard. Besides the 57 shops now opened, licenses were granted for others, but they were withdrawn when it was found that no liquor was sold at those shops."

"Etah.—At the last settlement efforts were again made to induce the abkars to open new shops, but, as last year, to no purpose: no one would bid even a nominal price for them."

"Muttra.—Licenses were taken out for 37 shops, but 6 had to be withdrawn."

Excise Administration of the North-Western Provinces and Oudh for 1885-86 were cited to show that attempts were sometimes made to force intoxicating liquor upon unwilling consumers contrary to the principles laid down.

7. A perusal of the whole of this report would show that such expressions as those quoted in the margin misrepresent the policy of the Local Administration; they are, moreover, peculiarly liable to misconstruction, and, when separated from the rest of the report, appear to be entirely contrary to the policy of Government. I have no doubt that if these passages had been supposed by Your Excellency's Government to bear the meaning that has been placed upon them, they would not have been allowed to pass unnoticed.

8. While, therefore, I am unable to see in the Resolution of the House of Commons any reason for departing from the principles of Abkari administration which I have pressed upon Your Excellency in the despatches above mentioned, Your Excellency may with advantage make use of the Resolution for the purpose of inculcating on the several Provincial Governments increased vigilance in watching the practice of their executive officers in order to secure a conformity in all districts of the Indian Empire to the abkari policy which has been adopted, and, in the case of those provinces in which a reform of the Abkari administration is in progress, for the purpose of expediting the completion without delay of each reform.

No. 209, dated 6th July 1889.

From—The Government of India,
To—The Secretary of State for India.

We have the honour to acknowledge the receipt of Your Lordship's despatch No. 52 (Revenue), dated the 16th May 1889, regarding a Resolution recently adopted by the House of Commons condemning in general terms the Excise administration of the Government of India, and calling for its immediate reform.

2. We forward herewith, for Your Lordship's information, copies of letters* which we have already addressed to the several Local Governments and Administrations on the subject, and we shall send a further reply to Your Lordship's despatch hereafter.

* See enclosures of despatch to the Secretary of State, No. 29, dated 4th February 4th 1890.

No. 67 (Revenue), dated 18th July 1889.

From—The Secretary of State for India,
To—The Government of India.

I have considered in Council Your Excellency's letter (No. 157, dated 25th May 1889), with enclosures, concerning the outstill system of excise in Bengal, and concerning the advisability of introducing some form of local option in granting or continuing licenses for liquor shops. Since your present letter was sent, Your Excellency will have received my despatch, dated the 16th May, forwarding a copy of a report of debate in the House of Commons on the 30th April, and expressing my confidence that your Government would, in accordance with the policy which you have already adopted, proceed, with as little delay as possible, to carry into effect measures for the more effectual control and discouragement of the liquor traffic.

2. In regard to the outstill system in Bengal, I find that in March 1886 it was decided by the Bengal Government, after reviewing the report of the Excise Commission, to re-establish

lish the central distillery system in all towns and to regulate more effectually the working of the outstill system. I gather, however, that, up to a recent date, the central distillery system had been re-introduced into the Howrah and Hooghly districts only, and that it was still doubtful whether the working and yield of outstills could effectively be regulated. Meanwhile, a Bengal officer, specially versed in excise matters, has reported that in all districts of Bombay the central distillery system can be effectively worked, and that it could be applied equally well to most Bengal districts. I hope that the rate of reform in Bengal will be materially accelerated, and that the ratio of excise revenue raised under the outstill system will be reduced from 61* per cent. to some such ratio as that which obtains in Madras and the North-Western Provinces at any rate, if not to that obtaining in

* See enclosure to Government of India letter No. 55 of 1889.

Bombay. I consider that the outstill system should not be allowed to continue, save perhaps in sparsely peopled and comparatively wide tracts outside the populous districts of the Bengal plains.

8. In regard to the adoption of any system of absolute local option in licensing shops, I agree with the view taken by Your Excellency's Government. I consider, however, that the Punjab rule to which your letter refers might be recommended, if not for general adoption, at least to the consideration of all the Provincial Governments, in order that local and municipal opinion, when ascertained or expressed, might be allowed due weight in deciding the number and position of liquor licenses to be issued or continued in any tract or town.

No. 323, dated 15th October 1889.

From—The Government of India,
To—The Secretary of State for India.

We have the honour to acknowledge receipt of Your Lordship's despatch No. 67 (Revenue), dated the 18th July 1889, communicating remarks regarding the outstill system in Bengal, and the advisability of introducing some form of local option in granting licenses for liquor shops.

2. We desire, in the first place, to correct a serious misapprehension as to the extent to which the Bengal Government has already given effect to the recommendations of the Excise Commission. In paragraph 2 of the despatch it is said—

It was decided by the Bengal Government, after reviewing the report of the Excise Commission, to re-establish the central distillery system in all towns, and to regulate more effectually the working of the outstill system. I gather, however, that up to a recent date the central distillery system had been re-introduced into the Howrah and Hooghly districts only.

In paragraph 105 of the Report of the Excise Commission, it was recommended that the central distillery system should be re-introduced into the twelve towns named in the margin; and it was added—

Patna, Gaya, Arrah, Chupra, Bettiah, Mozufferpore, Durrhungha, Monghyr with Jaimalpoore, Bhugulpore, Moorshedabad with Berhampore, Burdwan, and Dacca.

The question of establishing central distilleries in several other places was carefully considered by the Commission, but they decided against recommending it.

A reference to the Excise Reports of the Lower Provinces for 1885-86, paragraph 79, and 1886-87, paragraph 83, will show that by 1st April 1887 the central distillery system had been re-introduced in all the places in which the Commission recommended its introduction. It has also been since introduced in Howrah.

We also forward copy of a Resolution, dated the 10th August 1889, recorded by the Government of Bengal on Mr. Buckland's report of his enquiry into the systems of excise in Bombay and Madras. It will be seen from that Resolution that the Lieutenant-Governor has decided to adopt the system of administration which Your Lordship indicates as desirable, and has instructed the Board of Revenue and the Excise Commissioner to endeavour to replace outstills by central distilleries in all places, except where special circumstances, such as those mentioned by Your Lordship, render this inexpedient. We have forwarded a

copy of the despatch under reply to the Government of Bengal, who, it will be observed, have decided to proceed much beyond the recommendations of the Excise Commission in the direction of introducing the central distillery system.

3. With reference to paragraph 3 of the despatch, we have the honour to enclose a copy of our circular No. 3686, dated 18th July 1889, regarding the weight to be attached to local and municipal opinion in deciding the number and position of shops licensed for the sale of liquor.

No. 3686, dated 18th July 1889.

From—E. J. SIMKINSON, Esq., Officiating Secretary to the Government of India,
DEPARTMENT OF FINANCE AND COMMERCE.

To—All Local Governments and Administrations.

In my letter No. 994, dated the 22nd February 1889, Local Governments and Administrations were asked for reports showing to what extent the wishes of the residents in the neighbourhood are ascertained and considered before a shop for the sale of intoxicating liquors is licensed in any locality. I am now directed to forward copies of the replies received to that letter and of the despatch of the Government of India* with which they were forwarded to Her

Majesty's Secretary of State, and to invite special attention to paragraph 23 of the despatch, which explains the object with which the enclosed papers are circulated.

2. It will be observed that, in the opinion of the Government of India, the best method of ensuring that due regard shall be paid to local public opinion in the matter of licensing liquorshops consists in the issue of appropriate instructions to the officers to whom the excise administration of districts is entrusted. The Government of India do not consider that it would be useful at present to issue any general instructions on the subject applicable to all provinces, but desire that the several Governments may give the matter careful attention, and after consideration of the measures in force and the experience gained in other provinces, as described in the enclosures of this letter, take such steps to secure the object in view as may seem suitable. The Government of India are inclined to think that the procedure adopted in Bengal, where distinct instructions have been given to the licensing officers to ascertain and consider local opinion, and directions have been issued that where municipalities exist the Municipal Commissioners should be consulted in determining the location of shops, might be generally followed with advantage. But having regard to the varying conditions of different provinces, it has been thought desirable for the present to leave to Local Governments full discretion to decide what measures are expedient in each case.

Dated 10th August, 1889.

RESOLUTION—By the Government of Bengal, Financial Department.

Read again—

Mr. C. E. Buckland's report on the results of his enquiry into the systems of excise in Bombay and Madras. Letter to the Government of India, Department of Finance and Commerce, No. 5631.—F., dated the 5th November 1888, recommending the appointment of an Excise Commissioner in Bengal experimentally for a period of three years.

Resolution by the Government of India, Department of Finance and Commerce, No. 1880, dated the 15th April 1889, enclosing a despatch from the Secretary of State, No. 31, dated the 14th March 1889, according sanction to the appointment of an Excise Commissioner in Bengal as proposed.

Read—

A report from the Board of Revenue, dated 5th July 1899, with its enclosure, from the Excise Commissioner, submitting the Board's opinion on Mr. Buckland's suggestions.

RESOLUTION.—The Lieutenant-Governor has already recorded his high appreciation of the value of Mr. Buckland's report. Copies have been submitted to the Government of India and

the Secretary of State, and it has been widely circulated among officers interested in excise administration. It has been referred to in terms of commendation in the recent debates on Indian excise in Parliament.

2. Effect has already been given to the important recommendation, which underlies the whole of the report, for the appointment of an Excise Commissioner; and Mr. Buckland's other suggestions, which are recapitulated in the Board's letter, must necessarily, in a very large measure, await the development of the changes in policy which will be inaugurated by that officer. Mr. Westmacott forcibly represents that it will be necessary to allow him time to organise his new department and acquire precise information before entering upon fresh experiments. It is true, as the Board observe, that nothing is so likely to lead to failure as the attempt to work new systems with untried and inexperienced officers. The present year is also an unfavourable one for trying experiments owing to distress in many districts. The Lieutenant-Governor, therefore, concurs in the opinion, which is expressed both by the Excise Commissioner and the Board, as well as the majority of officers consulted, that, while it appears desirable to try the experiment of new systems in these provinces, the attempt should only be made very gradually and after the fullest consideration. But apart from the question of entirely new systems there are reforms in the existing system which require immediate consideration. Mr. Westmacott's principal object at present is to raise the duty paid on outstill liquor in the form of license fees to the rate per gallon London-proof paid on distillery liquor in each district. This is the first step, but it is not one that can be accepted as sufficient. It leaves out of sight the important question of the retention or abandonment of outstills. It is the proper procedure to adopt only where outstills have to be retained. But it must be distinctly understood by the Excise Commissioner and by all officers concerned with the administration of excise in Bengal that the policy, which has received the approval of the Secretary of State and of Government, is that the outstill system should be replaced by a central distillery system, whenever circumstances render it expedient, and, speaking generally, the only circumstances which render the change inexpedient are sparse population, difficulties of supervision, proximity to alien territory, and a liquor which will bear neither transportation nor keeping. It is not intended that outstills should be suppressed in localities where experience has shown that distilleries cannot be advantageously introduced. In such localities it remains only to improve the administration and enforce restrictions, which are, it is hoped, being adopted with beneficial effect. But the result of the discussions which have taken place during the past year in regard to excise have satisfied the Lieutenant-Governor that it is impossible to rest content with the improvement of outstill administration only. The future tendency must be, as the Under-Secretary of State lately explained in the House of Commons, to gradually abolish the outstill system in one populous district after another until central distilleries are replaced in all localities suitable for their introduction. This policy has already been given effect to in the metropolitan districts of the 24 Pargunnahs and Howrah, together with the Serampore subdivision of the Hooghly District, by the inclusion of this tract within the sudder distillery area from the 1st of April last.

3. Mr. Buckland is strongly of opinion that new systems adopted from Bombay or Madras should be tried experimentally in selected districts of Bengal, and the Lieutenant-Governor trusts to Mr. Westmacott to turn his attention as soon as he conveniently can to the possibility of introducing these experiments, in regard to which Mr. Buckland's report will be found to give much useful assistance. The remarks of the Government of India, contained in the 13th paragraph of the despatch to the Secretary of State, No. 55, dated 19th February 1889, on this subject, call for the careful attention of the Excise Commissioner. It is pointed out that the only immediate alternative to the outstill system is the ordinary sudder distillery, which is simply a guarded enclosure containing a number of native stills. As the spirit made in the native method is far from being of a high class, and in some districts, especially where *muhwa* is the material employed, will not bear transport and rapidly deteriorates, it becomes necessary to maintain a large number of distilleries in places where the sudder distillery system is in force. On the other hand, the introduction of European apparatus and methods in Madras and Bombay has resulted in the production of country spirit of a class which will endure transport over long distances, and which does not deteriorate when kept. The despatch of the Government of India continues:—

Moreover, the preventive establishments in those provinces are efficient, and it has consequently been found possible to concentrate the manufacture with the result that the number of central distilleries is in striking contrast with the number in Northern India. Thus in Bengal the number of central distilleries in 1869 was 267, and in 1878, the year preceding the revival of the outstill system, 211; in the Punjab there are at present 65, while in Madras in 1887-88 two-thirds of the whole province was supplied from only 19. The difficulties attending the establishment of an effective preventive agency are perhaps not likely to be as successfully overcome in Bengal as they appear to have been in the two Southern Presidencies. But it should certainly be kept in view that the only satisfactory solution of the difficulties attending the central distillery system, if the decision to suppress outstills is taken, seems to lie in the adoption of either the Madras or Bombay method, and in the introduction of a radical change into the customary processes of local manufacture. The Bengal Excise Commission, however, advised in 1884 against the adoption of European methods of production in Bengal, and their views receive some confirmation from the fact that one of the two distilleries established on this footing has been closed, and that the trade is languishing. But looking to the satisfactory results achieved elsewhere, it seems to us that the question is deserving of further consideration, which it will doubtless receive at the hands of the Bengal Government in connection with the report submitted by Mr. Buckland on the Bombay and Madras systems.

Having regard to these observations, the Lieutenant-Governor thinks that Mr. Westmacott should study this aspect of the case with a view to submitting an early report to Gov-

ernment on this subject. It is understood to be the case that the whole of Ganjam is now supplied with liquor from the central distillery at Aska, and it is possible that Mr. Minchin may be willing to submit proposals for supplying the neighbouring province of Orissa in a similar manner. Whether any such proposals could be accepted by this Government is a matter which can only be considered after full enquiry, but the point is one on which the Excise Commissioner might place himself in communication with Mr. Minchin and the local officers. Possibly, for the reasons quoted by the Board from Mr. Boxwell's report, the districts of Durbhunga and Mozufferpore might prove a good field for a similar experiment in Behar, and the Excise Commissioner might, with advantage, confer with the large European and Native firms. Agents of the Shajehanpore Rum Manufactory, with a view of ascertaining the terms and conditions under which it might be possible to introduce the systems of Southern India experimentally into these provinces. The Lieutenant-Governor is informed that the consumption of the Shajehanpore rum in Calcutta has considerably increased since the date of the despatch of the Government of India already quoted. There are large Native firms in Calcutta who may be able to give much useful information on the question. Generally speaking, it appears to the Lieutenant-Governor that schemes in the direction indicated should be considered, as soon as Mr. Westmacott feels himself sufficiently relieved from the initial pressure of a new office to turn his attention to this.

4. The suggestion made in paragraph 68 of Mr. Buckland's report, that there should be one licensee for a number of shops who should distil at one central place and supply the other shops, has, it appears, been favourably reported on by several officers, and, in the Lieutenant-Governor's opinion, there is much to commend it. It may apparently be made to approximate to the system which prevails over the greater part of Madras, known as the free-supply system. The Lieutenant-Governor understands that Mr. Westmacott has already been successful in some instances in amalgamating several shops under one license on terms favourable to Government, and the establishment of one central still within this local circle would appear to follow from this as an easy transition. It is well pointed out by the Collector of Bhagulpore that this system "would perhaps be a useful buffer to put in what is now called an inner circle, between the outstills, which must, I think, continue to serve jungly tracts and a sudder distillery area." The Lieutenant-Governor would be glad if the Excise Commissioner would give his special attention to this suggestion and bring it into force experimentally in those districts where the local officers are willing to try it.

5. Mr. Buckland's conclusion that excise establishments must be strengthened has been fully accepted by Government, and large increases have already been sanctioned during the current year. The permission of the Secretary of State has recently been obtained to the appointment of several additional Excise Deputy Collectors. Mr. Westmacott urges, and the Board concur in his opinion, that the old *abkari-darogahs* and men of that class should be entirely removed from the department. This is a matter upon which a separate report should be submitted, and the Lieutenant-Governor can only say at present that, while he believes generally that the suggestion is a good one, he will only be able to give effect to it with due regard, on the one hand, to the just claims of individuals, and, on the other, to financial considerations.

6. Mr. Buckland's remark that the rate of still-head duty should be constantly raised is undoubtedly a correct proposition; but it is pointed out with equal truth that, so long as the outstill system prevails in the province, it will not be desirable to raise the rate until the still duty has been first raised to the level of the present distillery duty. The raising of the still-head duty should always be borne in mind as an ultimate aim, but not the most pressing reform at present.

7. The Lieutenant-Governor observes that both the Board and Mr. Westmacott entirely agree with Mr. Buckland's conclusion that the Bengal system of raising revenue from *tari* should be re-examined with special reference to the light which has been thrown on the subject by the report on the Bombay and Madras systems. Important suggestions have been made on this subject by Mr. Oldham, the Collector of Burdwan. The Lieutenant-Governor has no doubt that Mr. Westmacott will keep it under his consideration. It is not of the first importance in order of time.

8. Mr. Buckland has expressed an opinion that the number of shops may properly be increased to some extent. Upon this point the Lieutenant-Governor is not prepared to deny that if the central distillery system were universally established, or if liquor were, as a rule, distilled only at a few central sites, it might be advisable to increase the number of places of sale of country spirits in Madras during 1887-88 was 21,380 against 2,647 in Bombay and 4,280 in Bengal. In spite of these figures, Madras has been pointed to as the best-administered excise province in India. But so long as the outstill system remains in force over the greater portion of these provinces, the proposal is not to be thought of. The Board sufficiently express the views of Government when they observe that, whatever may be argued as to the advisability of largely reducing the number of outstill shops, no increase in their number can be contemplated, as the result of such a step would be to counteract the efforts now being made to raise the price of outstill liquor.

9. The Lieutenant-Governor does not think that there is any necessity in Bengal at present for imposing maximum prices of liquor. The avowed object of Government is to

discourage consumption by keeping up prices, stopping only short of rates which would encourage illicit practices. Under other circumstances, however, when there is a monopoly over a large tract such as prevails in portions of Madras, and would prevail in these provinces if the Madras system in this respect were introduced, it is easy to see that maximum prices might be necessary to protect consumers, who would otherwise be driven to illicit distillation. In regard to minimum prices, there is the widest difference of opinion. Mr. Buckland considers any such provision quite inoperative. The Board and Excise Commissioner, on the other hand, are of opinion that the fixing of minimum prices is necessary wherever there are outstills, and believe that it is efficacious in preventing outstill holders from flooding the country with cheap liquor, as they could do if no minimum prices were fixed. The experiment of fixing minimum prices in Bengal is still under trial and no further orders on the subject appear called for at present.

10. It seems unnecessary for the Lieutenant-Governor to follow the Board and Excise Commissioner in their comments on the remaining conclusions arrived at by Mr. Buckland in his report. The views expressed by the Board and Mr. Westmacott are substantially in accord with Mr. Buckland's conclusions and with the opinions which have already been placed on record by Government on other occasions. The principles enumerated are identical with those which have been recently re-affirmed by the Secretary of State in his despatch No. 52, dated 16th May 1889, as the principles on which the excise administration in India should be based, as follows:—

- (1) that any extension of the habit of drinking among Indian populations is to be discouraged;
- (2) that the tax on spirits should be as high as may be possible without giving rise to illicit methods of making and selling liquor;
- (3) that, subject to these considerations, a maximum revenue should be raised from a minimum consumption of intoxicating liquors.

Towards the enforcement of these principles the report of Mr. Buckland will always be accepted as a valuable contribution; by the information it conveys it will be established as a work of permanent reference; and by the modification and improvement of the existing excise systems which it suggests, it will materially aid in the more effectual control and discouragement of the liquor traffic in these provinces.

No. 340, dated 22nd October 1889.

From—The Government of India,

To—The Secretary of State for India.

In paragraph 18 of our despatch No. 55, dated the 19th February 1889, we alluded to the experimental introduction into the Thana and Kolaba districts of the Bombay Presidency of an excise system which dispensed with the guarantee of a minimum revenue—a condition usually attached to the grant of monopolies in Bombay.

2. We now forward a copy of the papers noted in the accompanying schedule containing the report of the Government of Bombay on the results of this experiment and our comments thereon. These papers illustrate the difficulty of raising the excise duties on country spirit in India to rates approximating to the tariff rate leviable on imported foreign spirit.

Schedule Papers.

1. From the Government of Bombay, No. 5213, dated the 20th July 1889, and enclosures.
2. To the Government of Bombay, No. 5151, dated the 7th October 1889.

No. 5213, dated 20th July, 1889.

From—J. DEO. ATKINS, Esq., Acting Under-Secretary to the Government of Bombay,
Revenue Department.

To—The Secretary to the Government of India, DEPARTMENT OF FINANCE AND COMMERCE.

In compliance with the request contained in paragraph 2 of Mr. Deputy Secretary Finlay's letter No. 2766, dated 4th ultimo, I am directed to forward, for the information of the Government of India, the accompanying copy of the report, No. 2405, dated 9th May last, received from the Commissioner of Customs, Salt, Opium, and Abkari, on the

working of the new abkari system introduced experimentally in the Thana and Kolaba districts, together with copies of the Resolutions noted in the margin* passed by this Government, and of a memorandum, No. 5023 (Confidential),† dated 15th July 1889, showing the instructions issued on the subject to the Collectors of those districts and the Commissioner of Customs, Salt, Opium, and Abkari.

No. 2405, dated 9th May, 1889.

From—A. C. TREVOR, Esq., Acting Commissioner of Customs, Salt, Opium, and Abkari, Bombay.
To—The Chief Secretary to the Government of Bombay, Revenue Department.

As promised in paragraph 32 of this office No. 7697 of the 29th December last, I have General Administration Report of the Abkari the honour to submit the following special report on the working of the new abkari arrangements in Thana and Kolaba brought down to the latest dates for which information is available.

I.—INTRODUCTORY.

2. The arrangements in question date generally from 1st January 1888, and affect the management both of the raw toddy supply and of the country spirit farms. So far as the latter are concerned, they underwent important modifications from 1st August 1888.

3. The changes made in January 1888 are described in paragraphs 16, 20, 24, 32, and 34 of the Abkari Administration Report, but it will be convenient to summarise here for ready reference the history of the discussion and purport of the orders under which they were carried out, and the circumstances under which they were eventually reduced to their present form.

4. Under former arrangements, no still-head duty was levied in Thana and Colaba on toddy spirit; and, in order to establish some degree of equilibrium between toddy spirit and mowra spirit, the tree-tax had been raised to a rate which in some places was found to bear too heavily on the classes interested in the production and consumption of raw toddy. Even so, the incidence of excise taxation on toddy spirit was unduly light as compared with that on mowra spirit. Complaints had also been received that where the farmers had the monopoly of raw toddy as well as of spirit, the demand for toddy was starved in order to foster the demand for spirit.

5. By Government Resolution No. 3898, dated 28th June 1887, it was directed that—

- (a) all rates on trees above R10 should be reduced to that rate;
- (b) the duty on toddy spirit should be equalised with that on mowra spirit, *viz.*, R2 for spirit of 25° under-proof and R1 for spirit of 80° under-proof, the drawback being maintained at R1;
- (c) the public toddy distillery system should be introduced in such of the coast talukas, and distilleries should be established at such places as the Commissioner may decide on;
- (d) the farmers' license should be one for exclusive sale, but not for exclusive manufacture; and farmers in these districts should be allowed to distil toddy, but only in the public distilleries assigned to their talukas;
- (e) the farms should be sold for three years, and tenders might be accepted for single talukas, for groups of talukas, or for the whole district. The conditions of sale should include a maximum price of R3-8-0 for mowra and R3-14-0 for toddy spirit, and the Commissioner might empower the Collectors to check the production of spirit during the last four months of the farm;
- (f) the spirit farmers should be debarred from holding licenses for the sale of raw toddy.

6. By a subsequent Resolution, No. 6127 of the 10th September 1887, passed on a memorandum by Mr. Moore describing the minimum guaranteed revenue system with reference to the charge that it tends to stimulate consumption, Government decided that a new system should be tried experimentally in the Thana and Kolaba districts on the principle that a maximum profit should be obtained out of actual sale, *whatever that may be*, granting the farm to the bidder who is prepared to pay the highest percentage on every gallon sold, in addition to the still-head duty, which would be the upset price.

7. Mr. Moore, in his No. 5219 of the 19th idem, pointed out that the proposed system would offer no inducement to the farmer to manage his farm efficiently and honestly, and inflict no penalty on inefficiency and dishonesty. To meet this objection, he suggested that—

- 1st.—The nominal value of each farm should be fixed by the Department beforehand on the basis of the average consumption of liquor in past years.
- 2nd.—The value of the farm so fixed should form the basis on which the amount to be recovered or remitted on account of the percentage surcharge, which the farmer has agreed to pay in addition to the sanctioned duty, should be determined in accordance with the following stipulations, *viz.*:

- (a) The farmer shall pay duty at the sanctioned rate only on every gallon of liquor issued for sale; but if the aggregate payment so made falls short of the nominal value of the farm, he shall also pay the stipulated percentage, or so much of it as may be required to make up the nominal value of the farm.
- (b) If the aggregate of the duty and percentage payments falls short of the nominal value of the farm, and the Collector is of opinion that the deficiency has been due to negligent or inefficient management of the farm by the farmer, the Collector may impose on the farmer and recover from him a penalty of such amount as the Collector may direct, not exceeding one-half of the difference between the payments made or due by the farmer, and the nominal value of the farm.
- (c) If the aggregate payment made on account of duty at the sanctioned rate exceeds the nominal value of the farm, the farmer shall also pay the stipulated percentage on the amount of the excess.

8. Government, in their further Resolution No. 6801 of the 6th October 1887, declined to adopt this suggestion, and called for further report on certain points connected with the fresh toddy arrangements. This report was submitted under No. 6000 of the 29th October 1887, and Government thereon passed a Resolution, No. 7997 of the 22nd November—

- (1) intimating that previous orders were not intended to affect the special low still-head duty rates in Umbargaon, and that the drawback rate of R1 was to apply in the case of the toddy spirit in Umbargaon, where the still-head duty was R1-8-0, as well as elsewhere;
- (2) sanctioning the Commissioner's proposals for the establishment of public toddy distilleries for the Mahim and Dahann talukas and the Umbargaon Petha in Thann and the Panvel and Alibag talukas in Kolaba, and as to the number of spirit shops to be maintained, and the continuance of the practice of selling toddy and mowra spirit in the same shop, and the sale of the spirit farms to nineteen months instead of three years as previously ordered;
- (3) and directing that, as regards raw toddy,—
 - (a) the system of fixing a maximum selling price shall be abolished, provided, however, that Government retains to itself the right of reintroducing it at once, if found necessary, for the protection of consumers;
 - (b) shop licenses for the sale of raw toddy may be issued at a fixed rate of R10, but where there are several applicants, all or several of whom are equally eligible, the licenses should be sold by auction;
 - (c) tree-foot licenses for sale may be given at the same fixed rate for any number of trees not less than ten;
 - (d) the rules and regulations made for shop licenses are to apply to tree-foot booths, and all surplus toddy will have to be sold to licensed shopkeepers or distillers only;
 - (e) the number of tree-foot booths shall be limited at the discretion of the Collector, or increased subject to the orders of the Commissioner;
 - (f) for domestic consumption licenses may be granted for tapping up to five coconut or brab trees, and ten date trees, but with the stipulation that all surplus toddy shall be sold to licensed shopkeepers or distillers only.

9. The licenses for the sale and extraction of toddy under the old arrangements had been sold from the 1st August 1887 for five months only in view of impending changes, and on receipt of the orders last quoted were given under the new terms for the seven months from 1st January to 31st July, remaining out of the revenue year. From the 1st August last fresh licenses on the same terms have been issued for the year now current.

10. When the spirit farms were sold from the 1st January 1888, it was found that the terms obtainable for seven months were as good as for nineteen; and as the new arrangements were experimental, Mr. Moore decided, as stated in his telegram of the 3rd January 1888, to the address of the Private Secretary, to give them for the shorter period only. The percentages accepted were as under:—

Thana District.		Kolaba District.	
Salsette	46½	Panvel	42½
Bassein	35	Alibag Bagait	25
Mahim	31½	" Kharapat and rest of the	24
Dahann	31	district	
Umbargaon Petha	31		
The six inland talukas	29		
Jawhar State	3		

11. Immediately after the farms were sold, an article appeared in the *Bombay Gazette* pointing out that the percentages above noted were in some cases more than the farmers could honestly afford to pay. A report on the subject was submitted under this office No. 693 of the 31st January 1888, in which it was shown that, so far as the sales then concluded were concerned, this was not the case. Attention, however, having thus been drawn to the question of the cost of spirit and the amount of additional charge it could bear without absorbing the whole margin of profit provided by the maximum selling prices

referred to above, paragraph 5 (f), enquiries were made which, as will be seen presently, bore fruit when the farms were re-sold.

12. In watching the working of the new system, another point also attracted attention, viz., that in consequence of the fact that the percentage was chargeable on the still-head duty realisations, and that the still-head duty on toddy spirit after allowing for drawback was only half the rate realised on mowra spirit, the farmers had to pay only half as much by way of percentage on toddy as on mowra spirit. The result was that the sale of toddy spirit was being pushed in preference to mowra spirit, and the revenue suffered by the loss of the difference in percentage. Mr. Moore, in a demi-official, dated the 20th May, brought this point among others to notice, and Government thereon directed that in re-selling the farms the basis of competition should be a rate of so much per gallon instead of so much per cent.; that the period for which they were to be re-sold should be limited to one year; and that tenderers were to be allowed to tender at separate rates per gallon for toddy and mowra spirit.

13. Tenders were invited accordingly in June last, when it was found that some of the rates offered were so high, when considered by the light of the enquiries referred to above, paragraph 11, as to raise a doubt whether, if they were accepted, the farms could possibly be managed honestly. The matter was represented personally by Mr. Moore to His Excellency the Governor, with the result that the stipulation as to sale within a fixed maximum price was placed in abeyance, the right of re-imposing a maximum, if necessary, being reserved.

14. Another difficulty arose in attempting to give effect to the orders of Government that tenderers should be allowed to offer different rates for toddy spirit and mowra spirit. It was found that so long as both descriptions of spirits were included in the same farm, and the farmers held the power of pressing or restricting the sale of one or the other at their pleasure, it was practically impossible to decide which of any two tenders offering different rates was the most advantageous to Government. The result would obviously depend on the relative proportion of each kind of spirit sold, only one thing being certain, viz., that whichever tender was accepted, the proportion of that kind of spirit which yielded the best return to the farmer, and probably therefore the worst to Government, would be as high as it could be made. There was no time for an official reference, and under the circumstances Mr. Moore, with the approval of the Honourable Mr. Richey, informed the tenderers that they should specify a single rate per gallon of 25° under-proof, which would apply to mowra and toddy spirit alike, spirit of 60° under-proof being taken at half the same rate. The rates finally accepted were as under:—

vide this office No. 4785 of the 11th July 1888.

15. This brings us to the footing on which matters at present stand, and I now proceed to deal with the results of the various changes described, first in their financial aspect, and then in regard to—

- (1) the modifications made in the arrangements for the production and sale of fresh toddy;
- (2) the extension of the public toddy distillery system and the imposition of a still-head duty on toddy;
- (3) the supersession of the minimum guarantee, first by the percentage and then by the fixed-license fee system, and the abolition of the maximum selling price from the 1st August last.

II.—FINANCIAL.

16. The financial results up to the end of 1887-88, which included seven months under the new arrangements in their first stage of development, have already been described in paragraphs 83 to 92 of the Administration Report for that year. In the following table they are brought down to the end of March last, so as to include eight months of the current year during which the further changes in the conditions of the spirit farms made from 1st August last were in force. An estimate for the remaining four months is added, and the results thus arrived at are compared with the corresponding figures for 1886-86, 1886-87, and 1887-88.

17. The figures of receipts from raw toddy and country spirit respectively have been arrived at in the manner described in paragraph 84 of the Administration Report, which for facility of reference is reproduced below:—

"The figures under items 2 and 6—Tree-tax on toddy for distillation, and on raw toddy—are obtained in the case of Thana by deducting from the total tree-tax realisations the amount allowed

to count towards the minimum revenue guaranteed by the spirit farmers under the arrangements described in paragraph 16 of the report, so long as they were in force—that is, up to 31st December 1887,—and for the second portion of the year 1887-88 by deducting from the total tree-tax realisations the drawback on account of tree-tax already paid which is allowed in assessing the still-head duty on toddy spirit. In Kolaba, where the raw toddy monopoly was included in the spirit farms, the division has been made up to 31st December 1887 by dividing the tree-tax paid by the farmers in the proportion borne by the quantity of toddy admitted into the distilleries to the quantity placed on sale at their shops according to the farm accounts, and for the remaining period in the manner already described for Thana.

18. The estimate for the remaining four months of 1889 is based in the case of still-head duty and still license fees on the average of the preceding eight months. In the case of the fees for shop and tree-foot booth licenses, which are taken out for the whole year and paid for at once, generally in the earlier part of the year, it has been assumed that little more remains to be collected. In the case of tree-tax—as coconut, brab, and berlimad trees are usually tapped early in the year—credit is taken in the estimate, so far as those trees are considered, only for the instalments unpaid up to the end of March. For date trees, which are tapped in considerable numbers in the latter part of the revenue year, the estimate includes unpaid instalments on trees already taken up, and full rates on a number of trees corresponding to the number taken up in the last four months of 1887-88. It will be understood, however, that the estimate is liable to be deranged by fluctuations, which it is impossible to foresee, and that the comparison with 1887-88 and previous years is affected by many disturbing elements which add greatly to the difficulty of pronouncing positively as yet how far the results are to be regarded as favourable or otherwise:—

Total Toddy revenue	27,661	21,091	3,356	12,155	15,509	34,493	1,992	35,986	14,000	49,986
Total Country Liquor revenue	3,05,877	3,33,614	89,934	2,30,899	3,20,630	1,31,260	88,323	2,21,191	1,06,000	3,27,191

19. From the table it will be seen that in Thana the spirit revenue, which amounted under the old system to 6½ lakhs in 1885-86 and 6 lakhs 94 thousand in 1886-87, and had fallen to about 5 lakhs 95 thousand in 1887-88, has undergone a further serious decline since August last, the actual demand for the eight months ending 31st March last being 3 lakhs 38 thousand, and the anticipated receipts for the whole year 4 lakhs 94 thousand only, or about one lakh less than last year and two lakhs less than 1886-87. The still-head duty receipts on mowra and toddy together are expected to come to little more than half those on mowra spirit alone in 1886-87. As was to be expected under the circumstances noticed above, paragraph 12, the decline in the receipts from toddy spirit under the new contracts given on the rate-per-gallon system from August last is very marked, the total receipts for the year being only about one-third of those for the five months of 1887-88 during which the first contracts under the percentage system were in force. The receipts from the special rate per gallon on mowra and toddy spirit together are to the still-head duty, roughly speaking, as 7 to 9.

20. In toddy revenue, on the other hand, there promises to be a considerable increase, the actuals for the eight months commencing 1st August last being 1 lakh 60 thousand against 1 lakh 16 thousand for the whole year 1887-88, and about the same in 1886-87. The tree-tax receipts, in spite of reduced rates in several of the most important talukas, promise to be more than half as much again as in 1886-87, and the shop and booth license fees have nearly trebled.

21. The gain in toddy revenue is, however, very far from sufficient to make good the loss in spirit revenue. If the estimate is correct, the total receipts for the year now current are likely to fall short of those for 1887-88 by about 15 thousand, and of those for 1886-87 by about a lakh and 15 thousand rupees.

22. In Kolaba the results are more favourable. The spirit revenue according to the estimate will be nearly equal to that realised in 1885-86, though it is considerably less than in 1886-87 and 1887-88, and the toddy revenue has more than doubled as compared with 1885-86. The total estimated receipts for the year come to 3 lakhs 27 thousand against 3 lakhs 20 thousand in 1887-88 and 3 lakhs 33 thousand in 1886-87, when, as was noticed in paragraph 89 of the Administration Report, the sum bid for the principal spirit farm, that of Panvel, was extravagantly high.

23. It is noteworthy that the still-head duty receipts from toddy spirit have not in Kolaba been reduced by the change in system from the 1st August last, noticed above, paragraph 12. This result, however, is probably due to the fact that, owing to the delay in establishing distilleries, they were lower in 1887-88 than they would otherwise have been, and that within the last two or three months a considerable quantity of toddy spirit has been made at the Revdanda distillery in Alibag for the Bombay market. The results are no doubt affected also, both here and in Thana, by the suspension of the maximum selling price from August last, which enabled the farmers to charge remunerative prices for toddy spirit, and the extent to which the consumers of that description of spirit were willing and able to pay the higher price for the sake of indulging their preference.

III.—RAW TODDY ARRANGEMENTS.

24. With regard to the arrangements for the supply and sale of fresh toddy, it may be said generally that, except in the Bassein taluka, and to some extent also in Salsette, where illicit toddy distillation is reported to be rife, the raw toddy being obtained from the tree-foot booth licensees, no complaints have been received as to their working. Their financial results, as we have already seen, are satisfactory. Of the extent to which they have operated to fulfil their intended object of increasing the facilities for obtaining fresh toddy, and meeting the complaint that the licensees were unable in some places to sell it pure and undiluted except at a loss, some judgment may be formed from the following comparison of the number of licenses given, trees tapped, and probable quantities of toddy placed on sale and used fresh during the past seven months of the current year as compared with 1886-87, the last year under the old system. The figures of 1887-88 are useless for comparison in consequence of the disturbance caused by the change of system and the opportunities for exchange of trees which occurred in January 1888.

25. First, as to licenses. I give below the number of each kind granted in 1886-87 and 1888-89, also of those granted under the old and new arrangements respectively in 1887-88, which are interesting as showing how the changes were at first received. In considering the figures, it must be remembered that up to December 1887 the right of sale of toddy was included in Panvel and Alibag Bagait in the country spirit farm, and that elsewhere there was no distinction between the domestic consumption and the tree-

foot licenses. The holder of a tree-foot license could not tap more than ten trees and paid of fee, but had the right of sale.

TOTAL	100	16	400	44	2	16	15	31	53	327	448	689	685	9	20	87	2,006	1,800	3,806

26. The first effect of the introduction of the new rates in January 1888 into the Thana district was a run, except in Umbargaon and Dahanu, on the new domestic consumption and tree-foot booth licenses, more especially the former, the result being that during the second portion of 1887-88 there were nearly as many domestic consumption licenses alone as there had been old tree-foot licenses in 1886-87, and 652 tree-foot licenses of the new kind besides, while the number of shop licenses fell from 443 to 189.

27. During the current year most of the domestic consumption, and, except in the case of Kalyan, Karjat, and Jawhar, nearly all the tree-foot booth licenses have been given up in the inland taluks, while in Mahim, Bassein, and Salsette there has been a further increase, most marked in Mahim, in the number of domestic consumption, and in Bassein and Salsette of the tree-foot booth licenses. Over the whole district the number of shops has risen to 203 and of tree-foot booths to 715, while the domestic consumption licenses have fallen to 413 as compared with the period from January to July 1888. The increase here noted in the number of shops occurs chiefly in Dahanu and the inland talukas.

28. As compared with 1886-87, Dahanu, Umbargaon, and the inland talukas appear to be worse off than before in regard to facilities for obtaining fresh toddy. The increase in the total number of licenses as shown in the margin is more than absorbed in the three talukas of Mahim, Bassein, and Salsette. In two of these talukas, Bassein and Salsette, the increase in the number

of licenses taken out is no doubt connected with the decrease in the rates of tree-tax, and there is unfortunately reason to believe, as noticed above, that the people have taken advantage of the facilities thus afforded to defraud the spirit revenue. There may, of course, be a few more licenses issued during the remaining four months of the year, particularly in Umbargaon, where date trees are plentiful; but it is hardly likely that they will be in such numbers as to affect materially the general result above indicated.

29. In Kolaba tree-foot licenses have been freely taken out since August 1888 in Panvel and Alibag Bagait, and a considerable number of shops have also been opened. These, it will be remembered, are the two localities in which the tree-tax has been reduced in that district, and in which under the old arrangements the sale of toddy was included in the spirit monopoly, so that there are no figures for 1886-87 with which to make a comparison. Everywhere else, except in Roha, the number of shops, tree-foot booths, and domestic consumption licenses together taken out for 1888-89 is smaller than the number of tree-foot booth and shop licenses together under the old arrangements, the decrease being most marked in Pen, where there are 1 tree-foot and 5 shop licenses against 22 tree-foot and 6 shop licenses in 188-887, and the

Sudhagad Mahal, where the number has sunk from 26 to 7. The new domestic consumption licenses seem to have found little favour as compared with the old tree-foot and domestic consumption license combined for which no fee was charged, and except that there is no complaint of illicit toddy distillation in Kolaba, the general result is similar in character to that above noticed in Thana.

30. Turning to a comparison of the number of trees tapped, the following table shows the number of each kind tapped altogether, for supply of toddy for distillation, as well as for fresh toddy, in the years 1886-87 and 1887-88 and the first seven months of 1888-89:—

32. Deducting the quantities of raw toddy admitted into the distilleries in 1886-87 and 1888-89 respectively, including an allowance for the remaining five months of the latter year based on the average admissions for the first seven months, which come to 41,250 gallons for Thana and 12,940 for Kolaba, we get the following estimate of the quantity of raw toddy supplied in each taluka during the current year as compared with the last year under the old arrangement:—

Talukas.	1886-87.	1888-89.	Increase.	Decrease.

33. It would thus appear that, in spite of the decreased facilities for distribution noticed above, paragraph 25, the quantity of raw toddy made available was largely increased, relatively

speaking, in all the inland talukas of Thana except Vada. I say relatively for the reason that the total quantity even thus increased is, except in Kalyan, altogether insignificant as compared with the population. In Umbargaon there is a substantial as well as a relative increase, and in Dahanu also the quantity is larger by some 20 per cent. Jawhar was supplied with about 16,000 gallons from its own trees against *nil* in 1886-87.

34. Of the three talukas of Mahim, Bassein, and Salsette, in which a large increase in the number of licenses has taken place, it will be observed that in Mahim this increase has not been accompanied by a corresponding increase in the number of trees tapped and the quantity of toddy extracted. Many of the trees tapped in 1886-87 were for distillation, of which there has been practically none in 1888-89, and this circumstance, coupled with the fact that of the total number of 378 licenses taken out this year in Mahim as against 111 in 1886-87, no less than 235 were for domestic consumption only, under which not more than 5 cooa or brab or 10 date trees can be tapped, sufficiently accounts for the marked decrease in the number of trees tapped in spite of the increase in the number of licenses. The smaller numbers which were tapped still give a larger number of trees in Mahim, as elsewhere, for each booth and shop, and the net result is that the quantity of fresh toddy made available seems to be about the same as in 1886-87.

35. In both Bassein and Salsette the increase in the quantity of toddy made available is very large, having been nearly trebled in Bassein and more than doubled in Salsette. The reduction in the tree-tax rates and the facilities offered for practically unrestricted sale at the tree-foot for a fixed fee of R10, instead of a sliding fee of R20 for every 25 trees tapped, have made the taking out of a tree-foot booth license a lucrative business in these talukas, where trees growing close enough together to satisfy the requirements of the tree-foot booth conditions are to be found in abundance. The result corresponds with the large number of tree-foot booth licenses taken out, as shown in the table below, paragraph 25.

36. But it is obvious that the extraction of juice under these licenses in quantities more than sufficient to meet the demand for raw toddy is not a practice to be encouraged, at any rate in the absence of a corresponding demand for the surplus for *licit* conversion into spirit. As will be noticed further on, the separation of the right of manufacture from the right of sale and other recent changes have so far had the effect of almost killing the *licit* business in toddy spirit. The temptation under these circumstances to use the surplus toddy for illicit distillation must be very strong, and it is the more dangerous for the reason that the process leaves no refuse, and is so simple that it can be carried on in the distiller's house with his domestic utensils, and all traces of it can be cleared away in a few minutes while the Excise officers are kept waiting outside. It is thus most difficult to detect and suppress, and most likely to spread where the practice once takes root. Mr. Todd mentioned to me some little time back its prevalence in Bassein and Salsette as something new, and the Inspectors of those districts, both experienced men, are strongly convinced that it goes on largely.

37. In the nature of things, it is impossible to give any definite information as to the extent to which it is carried on. The Bassein Inspector, Mr. Sibbald, says, however, that there is little or no mowra used in that taluka; that he has caught several cases of illicit tapping with traces of distillation in the neighbourhood; that most of the tree-foot booths have been taken up by a syndicate which held the spirit farm last year; that stale toddy is sold at 3 pies a bottle and bought for distillation; that the tree-foot license-holders distil themselves; that at one village, where he made a camp, the sales of spirit at the local shop, which had previously been about a bottle a day, sprang up at once to the value of R2,000 or R3,000 in four days, the increase being partly due to the occurrence of weddings, but much more, as he is convinced, to the temporary stop put by his presence to illicit distillation; that on the same occasion the villagers commenced to send toddy to the Bassein distillery at the rate of 100 gallons a day, whereas the admissions previously had been *nil*; and that he has caught some sixty cases since October last as compared with ten or twelve previously.

38. The Salsette Inspector, Mr. Ardagh, declares his belief that the people of Vesava and Aksi distil all their surplus toddy, though he does not think much is bought or sold for the purpose, and he has detected between thirty and forty cases of illicit distillation—mowra and toddy together—since August last.

39. Speaking generally, it is to be feared that a very large proportion, probably as much as half, of the extra toddy made available in these talukas is used to defraud the spirit revenue instead of for the purpose for which it was intended.

40. In Kolaba the opening of shops and tree-foot booths, independently of the spirit farmers in Panvel and Alibag Bagait, has been accompanied by a very large increase in the quantity of toddy available; and as the farmers were supposed to starve the demand, and there are no reports of toddy distillation, the result may be regarded as satisfactory. In the inland divisions there is an increase in three and a decrease in three. The total consumption is unimportant, and the changes introduced make no very marked difference.

41. As stated above, paragraph 8 (3) (a), the tree-foot booth and shop licensees are at present at liberty to retail toddy at any price they please, although Government have reserved the power to re-impose the condition as to the maximum price at any time during the currency of the licenses. I have not yet received any complaints as to the quality of the toddy sold or high prices charged, and have not therefore exercised the power referred to. Under the old system the maximum prices were 6 pies a bottle of 8 drams at the booths and 8 pies a bottle at the shops. The booth and shop keepers are now reported to be charging on an average 9 pies a bottle, the advance being at the rate of 12.5 per cent.

42. In the following table I have attempted to exhibit the effect of the reduction in the tree-tax rates in Bassein, Salsette, Alibag Bagait, and Panvel, and of the fixed fee for tree-foot booths and auction prices for shops throughout both Collectorates, on the profits to be made by the licensees. The rent of the trees, cost of tapping, and other charges remain as before. The table exhibits the average increase or decrease in the Government demand in respect of trees tapped under each description of license. The increase in the selling-price noted in the last paragraph may be taken as preventing the possibility of loss from any increase and as adding to the profit of any decrease in that demand, and also as showing that whoever may have benefited by any reduction which has been made, it is not the customers at the shops or booths. The statement shows that the incidence of the Government demand on trees tapped for shops has increased in Mahim, Bassein, Shahapur, and Karjat, and decreased elsewhere:—

43. Two points remain to be noticed before leaving this branch of the subject. The first is the extent to which the increase in the supply of toddy above noticed may be taken as accounting for and counterbalancing the decrease which, as will appear further on, has occurred in the licit spirit consumption. This is a matter as to which it is most difficult to furnish any reliable estimate. Much of the toddy may be consumed by persons who would not drink spirits in any case, and much by others in addition to the daily dram. Strength for strength, however, it may be taken roughly that a bottle of toddy is equal to a dram of 25° under-proof spirit. The total additional quantity of toddy made available as shown above, paragraph 32, was in round numbers 641,000 gallons in Thana and 154,000 gallons in Kolaba. From the surplus in Thana a considerable deduction must be made, say two lakhs, for toddy consumed in illicit distillation (*vide* paragraph 39). The balance of 441,000 gallons in Thana would be equivalent to 55,000 gallons of spirit, and the surplus in Kolaba to about 19,000 gallons.

44. The other point is the necessity or otherwise for any changes in the fresh toddy arrangements for the next year. I have in my letters to the Collectors of Ratoagiri and Kanara, submitted to Government with this office No. 2105 of the 25th ultimo, made suggestions for the extension of the Thana and Kolaba rules to those districts, with certain modifications of detail, which I think are improvements, and which, if they are tried and found to work well there, it may be desirable to adopt hereafter in Thana and Kolaba. But, except so far as the impetus which they have given to illicit toddy distillation is concerned, they may be said to have worked well in their present form, and I am reluctant to recommend any unnecessary changes in districts where matters are in such a critical condition without some experience of the results which may be expected to follow.

45. I think therefore that for the present matters should be left as they are in Thana and Kolaba, except in respect of the measures immediately necessary to check illicit toddy distillation. In regard to this point much may be done, I think, by the Collector in the judicious exercise of the discretion vested in him in the matter of granting tree-foot licenses. A great deal too may have been given in Bassein and Salsette, and he will be asked, if my recommendations are approved, to restrict their number carefully to what are required for the supply of each village in future, and to grant licenses in excess of that, number only on production of satisfactory evidence that the licensee has arranged for the disposal of the surplus by licit distillation. I think also that to prevent any curtailment in the number of licenses allowed from leading, as it might otherwise do, to such an increase in the number of trees taken up under each license as would defeat the object in view, the number to be tapped under a tree-foot license should be limited to 15. This is more than the average number actually tapped at present under a single license in any taluka, except Bassein, where the present average is 17.

IV.—PUBLIC TODDY DISTILLERIES AND STILL-HEAD DUTY ON TODDY.

46. I now come to the extension of the public toddy distillery system and its effect in conjunction with the new still-head duty, on the supply and consumption of toddy spirit.

47. Public toddy distilleries were established in the Bassein and Salsette talukas in 1886-87 with the object of meeting the complaint that the monopoly of manufacture granted to the farmers deprived the Bhandaris of their hereditary occupation, and to break down the monopoly of the Bombay distillers in the Bombay market. In January 1888 steps were taken, as already noticed, to extend the system to the remaining talukas in which the sale of toddy spirit is permitted, and the licensee of the private distillery at Bhandup was allowed to distil toddy for the supply of the Mahim farm from February to June 1-88.

48. Previously to January 1888 toddy spirit had been sold in spite of the high rate of tree-tax then prevailing in some parts of the district within maximum prices lower by 8 annas a gallon of 25° under-proof than those fixed for mowra spirit. From January 1888 a still-head duty nominally of the same rate, Rs 2 per gallon 25° under-proof, as that applied to mowra spirit was imposed on toddy spirit, and the maximum selling-price was at the same time raised to 6 annas a gallon of 25° under-proof more than mowra spirit to compensate for the higher cost of the spirit *ex duty*, and to enable the two kinds to compete as much as possible on their own merits. The fulfilment of this intention being found incompatible with the maintenance of the percentage system, under which the farmer paid twice as high a percentage on mowra as on toddy spirit, while the maximum selling-prices remained unaltered, the plan of paying a fixed rate per gallon, whether of toddy or mowra spirit, was substituted from 1st August, and the maximum selling-prices being suspended from the same date, the two descriptions of spirit were left to compete on terms of practically absolute equality.

49. The subjoined statement shows the quantity of toddy spirit turned out of the various distilleries, public and private, during the years 1885-86, 1886-87, and the first five months

of the year 1887-88 under the old arrangements, and during the twelve months ending 31st December 1888 under those just described :—

Talukas.		1885-86.		1886-87.		1887-88, five months (old system).		1888, twelve months (new system).			Remarks.	
		25° under- proof.	60° under- proof.	25° under- proof.	60° under- proof.	25° under- proof.	60° under- proof.	Name of distillery.	25° under- proof.	60° under- proof.

Total		67	34,456	2,163	39,104	140	3,688		377	3,191		

50. It should be explained with reference to this statement that no toddy was distilled in the Umbargaon Petha in the years 1885-86 and 1886-87 or in the first five months of the year 1887-88, the quantity entered under the year 1886-87 being supplied from the Dahanu distillery, and that all work in the Nargol distillery has been stopped since August 1888 for want of toddy for distillation, the whole quantity in the taluka being consumed in the raw state.

51. The conclusion to which the figures point is that toddy spirit has no chance against mowra in the local markets under the new conditions. The increase noticeable in the outturn of the Panvel distillery under the new arrangement is the effect of the temporary advantage given to it under the percentage system during the five months from January to July 1888, and the same cause makes the falling off less apparent elsewhere than it will be where twelve months' figures under the fixed gallon rate system are available. The local farmers either prefer to sell their mowra rather than deal with the Bhandari distillers, or else they cannot find sale for toddy spirit at paying rates.

52. So far as the object of giving employment to the Bhandaris is concerned, the public distillery system has hitherto practically been a failure. The applications for distilling licenses have been too few to be worth considering. The Dahanu, Mahim, and Panvel taluka distilleries are only working one still each, Vesava under Salsette two, Revdanda in Alibag Bagnit two and Bassein four. I am informed, however, that a third still has recently been established at Revdanda, and that, as has been noticed above, paragraph 23, some business in exports to Bombay is springing up.

53. On the other hand, the still license fees charged at the rate of Rs 1 per gallon on the capacity of the still, though their incidence is heavy, being at the rate of 10 pies per liquid gallon of spirit turned out, are quite insufficient to cover working expenses. The total amount realised during the twelve months ending 31st December last was Rs 2,888. The pay of the sanctioned establishment for the same period would come to Rs 22,680. The actual cost allowing for the fact that anticipating the work would not be heavy, Mr. Moore put on no more hands than were absolutely necessary, and not counting hands who, though borne on the distillery establishments, have, under the circumstances noted below, paragraph 64, been employed in suppressing illicit distillation, has come to Rs 13,780, exclusive of expenditure on the buildings, &c.

54. It is just possible, though not very probable, that the business in toddy spirit may revive if measures be taken for reducing selling rates which for the last eight months have been too high for the capacity of the consumers. I would wait therefore till the result of those recommended under the next head, if they be adopted, is known. If by the end of next year no improvement has been effected, it will be necessary, I think, to consider whether most, if not all, of the toddy distilleries should not be dispensed with. In connection with this subject, I would invite reference to the appended copy of a report, No. 4044 of the 30th November last, by the Collector of Kolaba on the working of the Revdanda distillery.

V.—SPIRIT FARM ARRANGEMENTS.

55. It remains to consider the general effect of the changes experimentally introduced in January and August 1888 in the conditions of the country-spirit farms. This, I am afraid, can hardly be considered satisfactory even in Kolaba. In Thana it has been simply disastrous.

56. Attention has been drawn above to the large decline in the spirit revenue both in Thana and Kolaba. In Kolaba this decline has been altogether and in Thana partly made up by the increase in the fresh toddy revenue. But, except to the small extent to which, as noted in paragraph 43, it may be regarded as caused by the substitution of fresh toddy for spirit, the decline under the one head is altogether independent of the improvement under the other, and represents so much sheer loss of revenue. Had it been possible to suppose that this loss was the result of any commensurate reduction in the actual consumption of spirits, there would have been nothing to regret. But I am afraid there is no room for doubt but that in Thana the only difference is that illicit liquor is consumed instead of licit, and that the demoralising practices which had with difficulty, and after a continued and costly struggle, lasting through nearly ten years, been nearly suppressed, have in as many months, and in spite of strenuous efforts, become as rife as ever, and that the same is true to a very great extent of Kolaba also.

57. The effect of the new arrangements upon the licit consumption is shown in detail in the statements of monthly sales of each description of liquor in each taluka, which are appended to this report. For convenience of examination and comparison, I subjoin an abstract in which the average monthly consumption for each taluka from January 1885 up to March 1889 is shown reduced to gallons 25° under-proof, the averages being struck for three periods January to March, April to July, and August to December, so as to correspond with the currency of the farms under the minimum guarantee, the percentage, and the fixed gallon rate systems respectively, and the broken period from January to March last, which is included in order to bring the figures up to the latest possible date:—

	April to July	43,341	41,710	39,551	43,230	...
	August to December	59,454	42,185	64,891	30,922	...
	TOTAL	1,39,575	1,24,684	1,50,629	1,18,550	...

58. In considering these figures, it must be borne in mind that the averages for the different periods specified are affected by a variety of local and special circumstances. Those from April to July for instance, and in the year 1887, from August to December, are swelled in many cases by forced sales made to clear off accumulated stocks at the end of the farms under the minimum guarantee system. On the other hand, in inland talukas, such as Jawhar, Shahapur, Murbad, Karjat, &c., where mowra trees are plentiful, they are reduced by the increased prevalence of illicit distillation which follows the collection of the mowra flowers. From January to March an increase may be looked for on account of the Holi festivities. From August to December sales are normally at their lowest, that being the cultivating season, when the people have little time or cash to spend in drinking. In 1886 the figures of the Thana district for this period are further affected by the temperance movement, which was then at its height in that district; while in Panvel and Pen, where the movement culminated about the beginning of 1887, the averages for January to March 1887 show an unexpected increase, probably due to efforts made by the farmer to break down the combination by distributing large quantities of spirit gratis.

59. Making every allowance for fluctuations of this kind, it will seen that the abolition of the minimum guarantee and the introduction of the percentage system from January 1888 was followed almost everywhere by a tremendous drop; that the decline was more marked in the second than in the first of the two periods, January to March and April to July, into which the currency of that system is divided; that the abolition from the 1st August 1888 of the fixed minimum selling-prices, and the re-letting of the farms at gallon rates, representing a larger addition to the still-head duty than the percentages accepted under the last farm, resulted at once in another drop during the period between August and December. During the three months from January to March there has been a slight recovery, but this is due partly to the Holi and, probably to a greater extent, to the effect of the circular issued by Mr. Todd, which formed the subject of this office No. 1855 of the 10th April 1889, and which is stated by all the Inspectors to whom I have spoken on the subject to have had a marked effect in checking importation of mowra for illicit distillation. I fear, however, that it can hardly be expected that this effect will continue when it becomes known how limited the powers of the Department really are in dealing with possession of mowra under the Abkari Act.

60. The net result is a decline in the total consumption reduced to gallons 25° under-proof of 118,781 gallons, 129,979 gallons, and 175,066 gallons during 1888 as compared with 1885, 1886, and 1887 in Thana, and of 21,025, 6,134, and 32,079 in Kolaba. The corresponding percentages are—

As compared with			
	1885.	1886.	1887.
In Thana	38.9%	41%	43%
In Kolaba	15%	4.9%	14.2%

As compared with the average of 1885 to 1887, the decrease is 141,275 gallons or 43.1 per cent. in Thana, and 19,746 gallons or 14.2 per cent. in Kolaba.

61. For proof that this decline has been made up for much more than altogether in Thana, and to a great extent in Kolaba, by illicit distillation, we need look no further than the fact that the imports of mowra flower by rail and sea into Thana and Kolaba in 1888 exceeded those of 1887 by an amount sufficient to produce spirit more than enough to make up the whole deficient quantity in Thana, and nearly enough to make it up in Kolaba; and this without counting imports by road, of which I have been unable to procure statistics, though the quantity is reported to be considerable, nor the local produce of the inland talukas. Large quantities of the locally-produced mowra used to be brought to the Uran distilleries. Since January 1888 these imports have altogether ceased.

62. The imports by sea and rail into the Thana district, exclusive of importations for Uran and Bhandup, amounted from January to December 1888 to 48,904 maunds against 10,365 in 1887, the excess being 38,539 maunds. In Kolaba the imports by sea were 2,000 maunds against nil. It was established by the evidence recorded by the Mowra Committee that in Thana and Kolaba mowra flower is not used as food either by the people or for cattle, and that the only purpose to which it is put is the manufacture of spirit. According to paragraph 25 of the Report of the Bombay Abkari Commission, about 11 Bengal maunds of mowra are required to manufacture 52 gallons of spirit 25° under-proof. At this rate the excess quantity imported into Thana by rail and sea only would suffice to produce 182,184

gallons of spirit, or over 7,000 gallons more than the deficiency in the licit consumption in 1888 as compared with 1887.

63. In the same way, the 2,000 maunds imported into Kolaba by sea would account for nearly 10,000 gallons, or more than half the quantity required to make up the licit consumption in 1887. Besides this, I am informed that considerable quantities of illicitly-manufactured spirit found its way into Pen from Karjat and Kalyan, and that a little was also taken across the harbour from Bombay into the Alibag taluka. If the increased consumption of fresh toddy referred to above, paragraph 43, be taken into account, the total actual consumption, licit and illicit, of which we can form an estimate, has increased in 1888, as compared with 1887, by about 18,000 and in Thana by about 36,000 gallons. There is no doubt but that in Thana at any rate the real increase must be much more; and much as any arrangements likely to encourage the growth of licit consumption are to be deprecated, it needs hardly to be said that the evils attendant on illicit growth are infinitely worse.

64. To cope with the anticipated and ascertained increase in illicit practices, the following special arrangements have been made from time to time to strengthen the already exceptionally strong establishments in Thana and Kolaba:—

In Thana.

- (1) A special force of one Head Constable and four Constables was sanctioned by Mr. Moore in May 1888 out of the reserve placed at his disposal by Government Resolution No. 7721 of 1st November 1886, and has been employed, first, in watching the mowra stores, and latterly in patrolling in Umbargaon, where the importations of mowra were exceptionally large. The sanction has recently been renewed by myself for another six months.
- (2) On its being found, as noted above, paragraph 50, that the distillery at Nargol could not be kept working, the Inspector in charge, Mr. Maidment, with the whole of the establishment, was placed on special duty in suppressing illicit distillation in Umbargaon.
- (3) The Dahanu distillery establishment was also employed in July and August 1888 on preventive work during temporary suspension of manufacture.
- (4) The following extra men were taken on at the request and cost of the farmers, and invested with powers under the Act:—

1 Sub-Inspector on R20	From January to March 1888.
2 Sub-Inspectors on R20 each	From January 1888 to July 1888.
1 Constable on R8	
1 Sub-Inspector on R15	From February 1888 to July 1888.
6 Constables on R8 each	
1 Chief Constable on R50 + R10 horse allowance	
1 Head Constable on R20	April to June 1888.
4 Constables on R8 each	
1 Head Constable on R12	For one year from May 1888.
4 Constables at R8 each	
1 Head Constable on R15	May to July 1888.
2 Constables on R8 each	
3 Sub-Inspectors on R20 each	
1 Chief Constable on R50 + R10 horse allowance	From August 1888 to July 1889.
1 Head Constable on R20	
13 Constables on R8 each	
1 Sub-Inspector on R20	From October 1888 to July 1889.
1 Constable on R8	
6 Constables at R8 each	From October 1888 to July 1889.
1 Sub-Inspector on R15	From March 1889 to July 1889.

In Kolaba.

- (1) A special party of one Head Constable and eight Constables was sanctioned by Government Resolution, No. 2480 of the 23rd April 1888-89, for duty in Panvel.
- (2) The charge of the Panvel Inspector, consisting of Panvel, Uran, Pen, and Sudhagad, being found to be too heavy, the ranges were redistributed, and advantage was taken of the sanction for the Uran distillery to appoint an Inspector of proved detective ability to take separate charge of the Panvel taluka.
- (3) Part of the Alibag taluka was placed under the special preventive charge of the Revdanda Distillery Inspector, whose time was not fully occupied by his distillery duties.
- (4) The tindals of the two special abkari boats on the Apte and Revdanda creeks were invested, at the instance of the Collector, with powers under section 37 of the Abkari Act.

65. Messrs. Todd, Vidal, and Kennedy in Thana and Mr. Sinclair recently in Kolaba have taken a strong personal interest in the working of the preventive arrangements, and that the staff under them has not been idle is sufficiently shown by the number of seizures made.

66. In 1886-87 there were 234 cases of illicit distillation in Thana and 17 in Kolaba.

In 1887-88 there were 378 cases of the same kind in Thana and 14 in Kolaba.

During the first seven months of the current year 1888-89, there have already been 304 cases in Thana and 10 in Kolaba.

67. The difference would have been greater, but that, as the Inspectors in Thana are almost unanimous in admitting, their efforts to stamp out the recent access of illicit distillation have so far proved ineffectual. The only result has been that the operators have grown more careful, and that whereas at first they used to distil in their own houses and compounds, where a seizure of the materials or implements led generally to a conviction, they now carry on the business in the fields and jungles with a sharp look-out all round. Thus it happens that when the Abkari officers appear on the scene, they find traces of the still, &c., but nothing to give any clue to the identity of the offender; the work is becoming more difficult day by day, and the cases brought into Court are not a tithe of those which are known to occur. The attention of the Collectors has recently been invited to the instructions given in Government Resolution No. 1155 of the 7th January 1884, in regard to the institution of patrols, the establishment of punitive police posts when smuggling is rife, and the enforcement of the responsibility of the village officers, and it is possible that something may be done by increased stringency. But the Abkari officers whom I have consulted are generally of opinion that there are only two ways of putting down illicit distillation again within a reasonable time, *viz.*, by reducing the price of licit liquor, or by bringing possession of mowra flowers under effective control.

68. The latter remedy, except to the very restricted degree indicated in the correspondence of Mr. Todd's circular, is, I fear, beyond the range of practical politics at present. With regard to the former, Mr. Todd, while he regards it as a great advantage to have got rid of the forced sales of cheap spirit which were the blot on the old system, has expressed the opinion that, unless we can punish dealers for keeping mowra flowers for sale, knowing it to be bought only for distillation, the plan of having no maximum selling-price for spirit will be unworkable. Mr. Sinclair, who also regards the new system as an improvement in some respects, informs me that he has come to the conclusion that with bevra (spirit of 25° under-proof dearer than 8 annas a bottle) smuggling cannot be altogether prevented in Panvel. My own opinion is that a reduction is necessary, and if it can be made sufficiently substantial will soon prove effectual. Illicit liquor, though it costs only some 9 pies a bottle, is sold generally, where it is sold at all, for about 4 annas. It is of very uncertain strength, and generally of inferior quality. Except at a few places, there is as yet no great trade in it, the people mostly making only what they want for themselves, or getting their servants to do so. They prefer licit liquor, and it appears to be the general opinion that if they could get it for about 4 annas a bottle 60° under-proof, 8 annas 25° under-proof, or even a little more, they would now be glad to buy at that price rather than be at the serious risk and trouble of distilling for themselves.

69. This is a little cheaper than the maximum prices fixed for 25° and 60° under-proof mowra spirit respectively up to the 1st August last, and usually charged in the earlier months of the farms, but considerably more than the reduced prices at which stocks were generally sold off in the later months under the minimum guarantee system. Since the abolition of the maximum, the nominal prices charged by the farmers have ranged from 11 to 12½ annas and from 5½ to 6½ annas per bottle of 25° and 60° under-proof respectively. Where the Kasar system prevails, the actual prices are still higher, the arrangement between the farmer and the shopkeeper under that system being that the latter, instead of receiving any wages or commission, pays the farmer the full nominal price for the spirit supplied to the shop, and from 2 annas to a rupee a gallon over defrays all charges, and makes his profit as he can out of his customers by diluting the liquor, giving short measure, and other devices. This practice is of course, illegal, but it is, according to the Abkari Inspectors, notoriously universal in some talukas, among them Mahim, Bassein, and Salsette, and most difficult to check, as when proceedings are taken the farmers and shopkeepers combine to deny it, sometimes even producing receipts and accounts showing the payment of wages, while the customers who suffer, though they are ready enough to complain in a general way, always back out when they are asked to support specific charges.

70. The result is that a full bottle of 60° under-proof mowra spirit in many places costs as much as 8 annas, that is, twice as much as formerly, and I am afraid that no effective reduction is possible consistently with the terms of the present farms or the maintenance of the present system of competition for them.

71. Clause 19 of the present licenses provides for the re-imposition of a maximum price when it becomes necessary to do so, and I have recently directed the Collectors of Thana and Kolaba to exercise the power thus reserved, and, when the selling rates exceed the sum needed, to leave a reasonable margin of profit on the estimated cost of the liquor, to call upon the farmers to reduce them. But, as will be seen from the subjoined table, giving the estimate of cost furnished to the Collectors for guidance, with the lowest possible maxima selling-prices based on them as compared with the maxima fixed under the old system, and with the nominal prices which the farmers have actually been charging under the new, the reduction possible is in most cases too small to be effective. Where it is substantial, it is possible that the farmers having no strong pecuniary interest in keeping up sale will find means to evade it; and if the farms be given out again on the same system, there is every probability that the position may be worse next year.

* In these cases the maxima are lower than those fixed under the old system given in column 9, less than which the licensee cannot be compelled to charge.

72. In paragraph 32 of the Administration Report for 1887-88 I wrote in regard to the percentage system that the weak point was that the percentage being fixed by competition was always likely to be too high; that when that happened it would become the interest of the farmer to curtail his transactions under the contract as much as possible, and either to deal in illicit liquor himself, or, if he be too honest for that, to leave the public to supply themselves as best as they can; that his co-operation in the suppression of illicit distillation would thus be lost, even if he does not himself practise or encourage it; and that the success of the system would depend too much on sheer repression.

73. The further enquiries which I have since made lead me to believe that, though in Kolaba the farmers are inert, they have in some parts of Thana at least done their best to aid our establishments in putting down illicit distillation, and that they have nowhere actually been concerned as yet in illicit distillation themselves. The temptation is less than I at first understood, one effect of the Kassar system being that whatever happens the farmer cannot lose, and may well content himself with pocketing such profit as comes in his way without endangering it by resorting to more directly illicit practices. But in other respects the experience of the current year has confirmed my remarks, which apply with even greater force to the modified arrangements introduced from 1st August than to the percentage system with reference to which they were made. Under these arrangements Government remains responsible for the enforcement of still-head duty rates and selling prices, the power of fixing which is handed over to practically irresponsible competitors. However necessary it may be to make a reduction, the power of doing so is wanting, and both as a matter of principle and in view of the results which have followed, it seems to me imperative that the position should be reconsidered.

74. I have, however, some difficulty in suggesting any scheme for adoption. It is obviously undesirable to revert to the minimum guaranteed revenue system in its original form, at any rate after it has once been discarded, and experiments are dangerous. One condition, however, appears to me to be essential, viz., that Government should retain in its own hands the power of fixing the still-head duty and selling-price, the field of competition being so defined as not to encroach upon that power; and there is another with which it would, in my opinion, be extremely unsafe to dispense permanently, viz., that the farmer should be pecuniarily responsible that the licit consumption shall not fall below the ascertained level of the natural demand.

75. These requirements might, I think, be satisfied by adopting the plan of a moderate fixed guarantee, based upon a sufficiently wide average of the recorded sales of previous years, and giving the farms to the candidate who makes the best approved offer for the monopoly subject to the guarantee. In considering the offers, it would be necessary to make an estimate of the margin left on a consumption equivalent to the guarantee after deducting the still-head duty, cost, and working expenses from the fixed selling-price, and to exclude carefully all offers too high, as judged by that estimate, to admit of the honest working of the farm at a reasonable profit. Under such an arrangement the farmer would be bound for his own protection to co-operate actively in the suppression of illicit practices. On the one hand he should never, as he sometimes is under the minimum guarantee system in its original form, be obliged to stimulate sales beyond their natural level in order to avoid loss; while, on the other, the larger profit to be made on sales in excess of the guarantee would tend to assure to Government its share in any natural increase in the demand, and the data for such revision of the fixed guarantee as may from time to time be required to keep pace with the increase.

76. This system would, I think, be preferable to the scheme put forward in Mr. Moore's No. 5249 of the 19th September 1887, and described above, paragraph 7, both as being simpler and interfering less with the natural working of the law of supply and demand, and because it would, in my opinion, be unwise and unsafe to attempt to check natural expansion by curtailing the farmer's profits on sales in excess of the fixed guarantee.

77. Should Government be pleased to approve of the proposals above made, detailed recommendations as to the amount of the fixed guarantee, the maximum selling rates to be imposed, and the alterations to be made in the forms of spirit licenses will be submitted for sanction.

Early orders are solicited, as some time will be required for the preparation and issue of the necessary notices to tenderers, and for the examination and settlement of questions which may arise on receipt of the tenders before the farms for 1890-91 can be disposed of.

No. 4044, dated 30th November 1888.

From—J. H. TODD, Esq., Acting Collector of Kolaba,

To—The Commissioner of Customs, Salt, Opium, and Abkari, Bombay.

With reference to correspondence ending with your No. 3958, dated 8th June last, on the subject of the continuance of the public distillery at Revdanda, I have the honour to report that the distillery at Revdanda has not been given a fair trial, and, until it proves a decided failure, I do not think it should be closed.

2. At present two distillery licenses have been given out there; and although the country-spirit farmer of the taluka does not help them by purchasing their liquor at reasonable prices, yet they are working well with the Bombay contractors. In addition to this, the farmer of

Bagait Alibag has been called upon to maintain certain quantities of toddy spirit in his depot and shops, and presumably in a short time he will be obliged either to purchase toddy spirit from the existing distillers, or himself to take out a fresh distillery license. Thus there is every prospect of the distillery there flourishing. Under these circumstances, I do not think it desirable to close the distillery at present.

3. I would, however, respectfully suggest that the present abkari system is to a certain extent detrimental to the prosperity of the distillery. The selling-prices of toddy spirit at present are higher than those of mowra spirit, and consequently the farmer has to be compelled to maintain toddy spirit in his shops as it is difficult to find customers for it. If, however, the price of toddy spirit was equalised to, if not made less than, that of mowra spirit, customers for it would naturally be found, and no measures would be necessary to induce the farmer to keep a stock. In that event I think the distillery would work exceedingly well. There is a sufficient number of tapable trees in its vicinity to get an ample supply of toddy for distillation. The raising of the selling-prices and the duty on spirit this year will not, I fear, increase the Government revenue, as the sales have on that account diminished in proportion, and the suggestion therefore may be considered for adoption next year.

Extract from the Proceedings of the Government of Bombay, Revenue Department,—No. 4032, dated 3rd June 1889.

Read the following:—

Letter from the Commissioner of Customs, Salt, Opium, and Abkari, No. 2405, dated 9th May 1889, submitting a special report on the working of the new abkari arrangements in the Thana and Kolaba Collectorates.

RESOLUTION.—It appears from the Commissioner of Abkari's letter No. 2405, dated the 9th May 1889, that the licit sales of country spirit in the Thana and Kolaba districts fell from 512,203 gallons 25° under-proof in 1887 to 345,058 gallons in 1888, and that in the first three months of 1889 a further drop occurred, the sales during that period having amounted to 69,744 gallons only against sales of 110,583 gallons in the corresponding period of 1888. It is evident also that the illicit distillation of both mowra and toddy spirit prevails to an enormous extent in both districts under the existing conditions of spirit-farm management, and that the chief cause that has operated to bring about this lamentable result is the raising of the retail selling-prices of country spirit to rates that the main body of consumers cannot afford to pay. It is essential that all practicable measures to check this growing evil should be taken without delay. The first and obvious step to be taken is to reduce the retail selling-prices of country spirit that have risen to rates ranging from 50 to 100 per cent. above those prevailing in 1886-87. Mr. Trevor reports that the current farm licenses contain stipulations empowering the Commissioner of Abkari to fix maxima selling-prices. The power thus vested in the Commissioner should be exercised at once, and he should be directed to take the requisite measures with the least possible delay to reduce selling-prices to the rates obtaining in 1886-87. The rates of still-head duty levied on spirit of both kinds must, of course, be reduced at the same time in order to enable the farmers to sell at reduced rates without loss to themselves. It seems to the Governor in Council extraordinary that, with this obvious remedy in his hands, the Commissioner should have allowed illicit practices that are demoralising the population of the Thana and Kolaba districts to grow to the extent reported in his letter. He should also be directed to enforce most strictly the rules regulating the transport of raw toddy in the coast talukas, and to submit proposals for reducing the quantities that may be transported without permit, if necessary, as well as to adopt with vigour all the measures found successful in 1883 in checking the illicit distillation of mowra spirit that then prevailed in the inland talukas of Thana and the Panvel taluka of Kolaba, and was eventually suppressed.

2. The subjects treated in the Commissioner's letter under reference will be dealt with fully later on.

Extract from the Proceedings of the Government of Bombay, Revenue Department,—No. 4866, dated 8th July 1889.

Read the following:—

Letter from the Commissioner of Customs, Salt, Opium, and Abkari, No. 2405, dated 9th May 1889, submitting a special report on the working of the new abkari arrangements in the Thana and Kolaba districts.

RESOLUTION.—The acknowledgments of Government are due to Mr. Trevor for the lucid exposition he has given of the facts of the case, and for his able treatment of a difficult and involved subject.

2. In continuation of the orders conveyed in Government Resolution No. 4032, dated 3rd June 1889, the Governor in Council is pleased to direct that the arrangements described below shall be enforced in the districts of Thana and Kolaba in the year beginning on 1st August next.

I.—COUNTRY SPIRIT.

3. The maximum retail selling-prices of mowra spirit 25° under-proof strength should be fixed at 8 annas per bottle of 8 drams, and of mowra spirit of 60° under-proof strength at 4 annas per bottle, i.e., at Rs 3 and Rs 1.8 per gallon.

The margin for farmers' costs and profit should be fixed at Rs 1.8 per gallon of 25° under-proof, and the still-head duty rates for mowra spirit should be fixed at Rs 1.8 per gallon 25° under-proof, and 12 annas per gallon 60° under-proof.

The same still-head duty rates should be imposed on toddy spirit as on mowra spirit in accordance with the previous orders of Government, but it will be necessary to fix the maximum retail selling-prices of toddy spirit at 6 annas per gallon 25° under-proof and 3 annas per gallon 60° under-proof above those allowed for mowra spirit in pursuance of the principles laid down in paragraph 5 of the Government Resolution on the Bombay Abkari Commission's Report. The drawback allowance on account of duty paid in the shape of tree-tax may be continued for the ensuing year at the existing rate—Rs 1 per gallon of 25° under-proof. This rate is probably too high, and will be reconsidered hereafter.

4. The only alteration required in the conditions of the farm licenses is that, following the system sanctioned for the opium farms in Government Resolution No. 4857 of to-day's date, the minimum revenues to be guaranteed by the farmers should be fixed by the Commissioner on his estimate of what the actual demand for licit liquor at the retail prices fixed is likely to be during next year. After the minimum revenues to be guaranteed have been fixed, the terms of the farms should be published, and persons wishing to take them should be invited to send in their names to the Commissioner, who will proceed to select the best men he can from among the candidates.

5. From the 1st August next the practice obtaining at all other distilleries should be extended to the public toddy distilleries in Thana and Kolaba and the distillers using those distilleries should be required to pay the cost of the Government establishments necessary to work them.

The licensed toddy spirit distillers in the Thana and Kolaba districts should be allowed to remove to Bombay any balance of stock they may have in hand on August 1st next on payment of the rate of duty prescribed for Bombay if they do not desire to maintain their distilleries under the conditions now prescribed. The public should also be informed that Government are prepared to receive favourably any applications that may be made for the establishment of private toddy distilleries in the Thana and Kolaba districts on the terms and conditions prescribed for the Bhandup distillery and other private distilleries in other parts of the presidency, and that conditions have been inserted in the spirit-farm licenses sanctioned for the Thana and Kolaba Districts enabling the farmers to obtain supplies of toddy spirit from any licensed toddy distillery, and to sell it by retail within maximum rates exceeding by 6 annas per gallon 25° under-proof and by 3 annas per gallon 60° under-proof the maximum retail rates allowed for mowra spirit.

II.—RAW TODDY AND TAPPING LICENSES.

6. The arrangements now in force with respect to the issue of tapping licenses are set forth below:

- (a) Tapping licenses are issued to tree-owners for 5 coconut or brab trees or for 10 date trees in each case for the extraction of toddy for domestic consumption only, with the stipulation that all surplus toddy shall be sold to licensed toddy shopkeepers or to licensed toddy-distillers, if any, of the taluka or mahal concerned, and to no one else.
- (b) Tapping licenses for not less than 10 trees are issued to approved applicants, who, in consideration of the payment of a fee of Rs 10, are allowed to sell the produce of the trees which they are respectively licensed to tap at tree-foot booths established at places appointed by the Collector. They may sell toddy to the public or to the licensed toddy-distillers, if any, of the taluka or mahal concerned.
- (c) Tapping licenses are issued, without any limit as to number of trees, to applicants who are entitled to sell toddy to licensed shopkeepers and licensed toddy-distillers of the taluka or mahal concerned, but not to the public or to tree-foot booth-keepers.
- (d) Licenses for sale of toddy at shops are issued on payment of a fee of Rs 10 per license, or, where there are several applicants for the same shop, all or several of whom are equally eligible, the licenses are sold by auction. Licensed shopkeepers may buy toddy from tappers of classes (a) and (c) above, but not from those of class (b). They may sell toddy to the public or to licensed distillers, if any, of the taluka or mahal concerned, but not to a tree-foot booth-keeper, or to another toddy shop-keeper.
- (e) The rules and regulations made, or which may be made, for shop licenses apply to tree-foot booths also.
- (f) No maximum selling-price for raw toddy is fixed, and the licensees are at liberty to retail the juice at any price they please; but Government retains to itself the right of regulating the maximum selling-price at any time during the currency of the licenses if found necessary for the protection of consumers.

The Governor in Council is now pleased to direct the introduction of the following alterations in the system as above described :—

- (1) The concession allowed to tappers for domestic consumption and for the supply of tree-foot booths, permitting them to sell toddy to licensed shopkeepers and distillers, should be entirely withdrawn. They should be allowed to tap only for the supply of their own wants. In this there is no real hardship: a tapper may reasonably be required to take on himself the risk and consequences of tapping too many trees and drawing more toddy than he can find sale for: any surplus toddy drawn and left on his hands can be utilised for the manufacture of vinegar on the tapper's own premises.
- (2) The number of trees licensed to be tapped for domestic consumption should be limited to 1 cocoanut or brab tree or 2 date trees for each adult member of the tapper's family, subject to a limit (as at present) of 5 cocoanut or brab or 10 date trees. The trees thus licensed to be tapped should be trees growing in one and the same survey number unless the Collector or Assistant or Deputy Collector in charge of the subdivision relaxes this latter proviso.
- (3) Tapping licenses may be issued to tree-owners and to the actual occupants of lands on which toddy-producing trees are grown, who, in consideration of the payment of a fee of R10 for each booth, shall be allowed to sell for consumption in the raw state only the produce of the trees which they are respectively licensed to tap at tree-foot booths established at places appointed by the Collector. The Collector shall have full discretion to limit, and is required to limit, the tapping of trees under these licenses to the number required according to his own estimate, to supply fully the licit demand for toddy for consumption in the raw state of each locality concerned. The licensees shall be permitted to employ persons approved by the Collector to tap their trees and to manage the business of their booths. The trees thus licensed to be tapped should be trees growing in one and the same survey number, unless the Collector or Assistant or Deputy Collector in charge of the subdivision relaxes this latter proviso.
- (4) No tree-foot booth licensee and no toddy shop-keeper should sell more toddy to one person in one day than the quantity allowed for the time being to be transported without permit. This rule is required in order to bring the toddy business carried on at booths and shops into conformity with the transport rules.
- (5) Licenses to tap for the supply of licensed toddy shops and licensed distilleries to be issued only on the application of the shopkeepers or distilleries concerned. Rule (c) now in force should be expunged. Licensed shopkeepers and distillers should be required to make each his own arrangements for his toddy supply.
- (6) In granting tapping licenses of all kinds, the Collector must exercise a careful discretion with respect to local wants, and must not permit in any case more trees to be tapped in any locality than the number necessary to supply the existing licit demand of the locality. The Commissioner should carefully supervise the Collector's proceedings in this matter.
- (7) Before any tapping license is granted, the applicant must satisfy the Collector that he is the actual owner of, or has acquired a right from the owner to tap, the trees for the tapping of which he seeks permission.
- (8) Maximum selling-prices should be fixed for the retail sale of toddy at toddy shops and at tree-foot booths.

7. It was the intention of Government in lowering the tree-tax rates in the talukas south of Mahim, and in increasing the facilities for tree-tapping, to make available to the people—to consumers generally—a full supply of good and cheap toddy. The concessions made by Government to effect this purpose have not produced the results it was desired to obtain, and great part of the freer toddy supply made available and intended by Government for the benefit of consumers of raw toddy has been diverted to illicit uses. Nor have the intentions of Government been realised in lowering the tree-tax in order to cheapen toddy, as toddy has been selling at dearer rates in all the talukas since the tree-tax was reduced.

The Governor in Council considers that the maximum price of toddy should, save in Dahann and Umbargaon, where it should be 6 pies and 4 pies, be fixed at 8 pies and 6 pies per bottle.

8. No change need be made in the rate of license fees levied for the sale of toddy at shops or in the practice of selling by auction toddy-shop and tree-foot booth licenses whenever several applications are made for permission to open shops or booths in the same locality.

No. 5151, dated 7th October 1889.

From—F. J. SINKINSON, Esq., Secretary to the Government of India.

DEPARTMENT OF FINANCE AND COMMERCE,

To—The Secretary to the Government of Bombay, Revenue Department.

I am directed to acknowledge receipt of your letter No. 5213, dated 20th July 1889, forwarding papers describing the working and results of the excise

system introduced experimentally in the Thana and Kolaba districts from 1st January 1888, and the changes of system ordered with effect from 1st August 1889.

2. The principal feature in the experiment which was tried in those districts for nineteen months was the maintenance of the practice of granting a monopoly for the supply of country spirits in a district, or portion of a district, accompanied by the removal of the condition under which the farmer is required to guarantee a minimum revenue. This change was introduced in order to meet the objection that the practice of requiring the monopolists to guarantee a minimum revenue had not the effect of acting as a powerful incentive to increase consumption. Other minor changes were simultaneously made. Spirit distilled from toddy, unlike other spirit, had previously not been subject to still-head duty, a tree-tax on trees tapped for distillation being substituted. To equalise the incidence of taxation on toddy and other spirit, the tree-tax had been raised to a high rate. As part of the arrangements introduced from 1st August 1888, still-head duty was levied on toddy spirit at the same rates as on other spirit, subject to a drawback on account of the tree-tax paid for the toddy drawn for distillation; the rates of the tree-tax were also lowered; and the regulations regarding the sale of fresh toddy were altered.

3. The substitute for the guarantee of a minimum revenue took the form of the levy of an extra duty, at first a percentage on the duty, and subsequently a specified sum per gallon. The amount of this extra duty was determined by public tender, as in the case of the guaranteed minimum under the ordinary system, and the monopoly was given to the highest tenderer. During the experiment, the fixing of maximum retail selling-prices—a condition which it has been found expedient to attach to a monopoly partly in the interest of the consumers, and partly to prevent the farmer from securing to himself an undue share of the total price as compared with the share which the Government receives in the shape of duty—was held in abeyance in some cases.

4. The results of this experiment are described in the papers forwarded with your letter. The tenders for extra duty were so high as to enhance the total duty by about 70 per cent., and to raise the duty in most of the talukas to a rate higher than that levied in any other part of the presidency. The selling-prices of spirit necessarily followed this increase in the duty, and the retail prices are reported as having risen by between 50 and 100 per cent.

5. The result of this large rise in price was to cause a strong stimulus to illicit distillation, the prevention of which was the more difficult because the monopolist was no longer influenced by the motive, created by the guarantee of a minimum revenue, to co-operate in suppressing illicit practices and to refrain from them himself. The revenue from country spirit largely declined in both districts, though the consumption is shown to have greatly increased; and it is reported that "there is no room for doubt that in Thana the only difference is that illicit liquor is consumed instead of licit, and that the demoralising practices, which had, with difficulty, and after a continued and costly struggle, lasting through nearly ten years, been nearly suppressed, have, in as many months, and in spite of strenuous efforts, become as rife as ever; and that the same is true to a very great extent of Kolaba also." It thus appears that the modification of the system which was introduced with the object of diminishing consumption diminished licit consumption only, while it resulted in more than proportionately increased illicit consumption.

6. The Governor in Council has in these circumstances determined not to persevere with an experiment of which the results have been so unsatisfactory, and has ordered a change of system to be introduced from 1st August 1889. From that date the payment of extra duty over and above the ordinary fixed still-head duty is to cease, and the farmer is to be required to guarantee a minimum revenue: the amount of the guarantee, however, will not, as heretofore, be fixed by tenders, but will be settled by the Commissioner on his estimate of what the actual demand for licit liquor is likely to be. The Commissioner is to select the best man he can from the persons who offer to guarantee the minimum so fixed, and to grant the monopoly to him.

7. These orders have the approval of the Governor-General in Council. He considers that the system by which the amount of the minimum guarantee is fixed by the Commissioner and not left to be determined by competition is an

improvement in the conditions under which the guaranteed minimum system has hitherto been administered. It engages the co-operation of the monopolist in the prevention of illicit practices, and secures his own abstention from them; and it removes the risk of the guarantee being fixed so high as to offer an inducement to encourage consumption in excess of the natural demand. It will be desirable to fix the minimum at a moderate amount rather below that which the ordinary consumption would yield. I am to suggest that His Excellency the Governor in Council should be moved to consider whether it would not be desirable to extend to other districts also this mode of fixing the amount of revenue to be guaranteed.

8. The Governor-General in Council finds in these papers a confirmation of the soundness of the contention that illicit production can only be checked by strong preventive measures, and, in the words of our despatch of 25th June 1887, that "the ability of the Excise Department to prevent illicit distillation is the only limit which is imposed in practice to increase in the rate of taxation." In Bombay it is abundantly clear that, even where the amount to which the rate of taxation is raised falls appreciably short of the tariff rate, the prevention of illicit practices becomes impossible. The history of the Thana and Kolaba experiment affords a practical illustration of the difficulties which must be encountered when attempts are made to raise the rate of duty above that which prevails at present.

9. There is one matter regarding which I am directed to call for a further report, namely, the alleged rise in the price of raw toddy. In paragraph 41 of the Commissioner's report it is stated that the retail price of raw toddy prior to August 1888 was 6 pies a bottle at the tree-foot and 8 pies a bottle at the shops, and that in May 1889 it had risen everywhere to 9 pies a bottle. As one of the changes made in August 1888 was a considerable lowering of the tree-tax, this result is the reverse of what was to be anticipated. The report shows that there has been a large increase in the supply of raw toddy, and the rise in price must, therefore, be due to one or other of two causes—either (a) to an increased demand for fresh toddy to be consumed as such, caused by drinkers of spirit having been driven by the high price of spirit to drink fresh toddy instead of spirit; or (b) to an increased demand for toddy to be used for the purposes of illicit distillation. The papers do not contain full information on this point, though it seems probable that the latter was the true cause. I am to request the favour of an expression of the view of His Excellency the Governor in Council on this matter and the submission of a report, after such further enquiry as may be necessary, stating whether the rise in price is beyond doubt, and, if so, explaining the causes which have led to this result.

No. 113 (Revenue), dated 21st November 1889.

From—The Secretary of State for India,
To—The Government of India.

I have received Your Excellency's letter No. 323 (Finance and Commerce), dated the 15th October last, reporting and forwarding papers concerning the changes introduced or ordered in the Bengal excise system.

2. I observe that the Lieutenant-Governor has directed that the outstill system of excise shall be replaced by a central distillery system throughout Bengal, save in exceptional cases where sparse population, difficulties of supervision, proximity to foreign territory and the character of the local liquor may render the change inexpedient. Steps are being taken to strengthen the excise staff, and to make supervision possible. At the same time, the Excise Commissioner is arranging to control outstills, and to enhance the duty on, and the price of, outstill liquor in the exceptional tracts where that system may, for the present, be retained. I observe also that the Bengal Government, the Board and many of the local Revenue officers are in favour of most of the excise reforms advocated in Mr. C. E. Buckland's interesting and suggestive report upon the Bombay and Madras excise systems.

3. I approve the orders which have been issued by the Lieutenant-Governor; and I agree in his view that no general increase in the number of licensed liquor-shops is desirable or

should be encouraged. The changes that have been ordered can hardly be effected at once over the whole of Bengal. But I am confident that, under the direction of Your Excellency's Government, the Lieutenant-Governor and his Revenue officers will do what may be possible to secure the early introduction of an excise system calculated to secure the objects summarised in the final paragraph of the Bengal Government orders.

4. At paragraph 3 of my despatch No. 67, dated the 18th July last, I intimated my acceptance of the views of your Government on the subject of consulting local public opinion in the matter of licensing liquor-shops. I request that the writers of provincial excise reports may be instructed, in future, to state briefly, year by year, how far and with what result action may have been taken under your circular letter No. 3686, dated 18th July 1889, on the subject of a modified local option in excise affairs.

GOVERNMENT OF INDIA.
FINANCE AND COMMERCE DEPARTMENT.

ANNUAL REPORT ON THE POST OFFICE OF INDIA FOR THE YEAR 1888-89.

No. 993, dated Calcutta, the 27th February 1890.

RESOLUTION—By the Government of India, Finance and Commerce Department.

Read—

The Annual Report on the Post Office of India for the year 1888-89.

RESOLUTION.—The report on the operations of the Indian Post Office is, as it has been for many years past, a record of progress and expansion.

2. The principal changes made during the year were (1) the reduction in the rate of letter postage between India and Australia from six annas to five annas the half ounce; (2) the removal of the restriction compelling prepayment of letters between India and Ceylon; (3) a reduction in the rate on parcels between India and Great Britain, by which 8d. or six annas are charged on each pound after the first pound.

3. The following table exhibits the progress made by the Department during the year:—

	1887-88.	1888-89.	Increase.
Number of Post Offices	7,263	7,533	270
" letter boxes	9,704	10,067	363
" letters and post-cards issued for delivery	238,692,376	254,491,320	15,798,944
" newspapers	21,832,775	22,096,378	263,603
" parcels	1,621,418	1,797,705	176,287
" packets	6,739,658	8,102,035	1,362,377

4. Of the articles issued for delivery (money orders included), 97·17 per cent. were actually delivered, which is a creditable record considering the variety of languages, the imperfection of addresses, and the agency employed in delivery.

5. The money order business of the Post Office has reached a high level. The number and value of the money orders was—

	Number.	Value.
1887-88	5,512,395	11,84,43,573
1888-89	6,136,790	12,99,06,864
Increase	624,395	1,14,63,291

6. The Savings Banks business also has made further rapid progress:—

	1887-88.	1888-89.
Number of Banks	5,966	6,056
Number of accounts at the close of year	261,157	311,001
Value of deposits	5,04,88,357	5,88,64,681

Much the largest proportion of the deposits is in Bombay, amounting to nearly a third of the aggregate for all India and being about double those of Bengal.

7. The following statement shews the revenue and expenditure of the Post Office in the last three years:—

	1886-87.	1887-88.	1888-89.
Revenue	1,15,43,070	1,21,41,962	1,28,15,399
Expenditure	1,35,02,920	1,37,52,151	1,34,24,524
Deficit	19,59,850	16,10,189	6,09,125

Making the same adjustments as in previous years the results are:—

Deficit according to statement XI of the Report (purely postal transactions including exchange)	19,59,850	16,10,189	6,09,125
Add—			
Indirect Expenditure	6,52,417	8,24,929	7,53,041
	26,12,267	24,35,118	13,62,166
Deduct—			
District post charges	11,09,172	11,09,819	11,24,591
Resulting Deficit	15,03,095	13,25,299	2,37,575

8. The Governor General in Council acknowledges with pleasure the services of—

Sir F. R. Hogg, the late Director General,
Mr. A. U. Fanshawe, who now controls the Department,
Mr. Farrer, Postmaster General of Madras,
Mr. Hynes, Deputy Postmaster General of Burma,
and the other officers mentioned in paragraph 57 of Mr. Fanshawe's report.

ORDERED, that copy of the foregoing Resolution be communicated to the Director General of the Post Office and that the Resolution and Report be published in the *Gazette of India*.

E. J. SINKINSON,
Secretary to the Govt. of India.

ANNUAL REPORT

ON

THE POST OFFICE OF INDIA

FOR THE YEAR

1888-89.

No. 9226, dated the 18th January 1890.

From—A. U. FANSHAWE, Esq., *Director General of the Post Office of India,*

To—The Secretary to the Government of India, Department of Finance and Commerce.

I have the honour to submit the Annual Report on the Post Office of India for the official year 1888-89.

2. The year was not marked by any important changes or special incidents so far as the Inland post is concerned. Substantial progress was made in the development of postal communications in Upper Burma, and in the postal administration generally of that province, and there was a general increase throughout the country in every branch of the business of the Post Office. The Revenue money order system made great progress in the Lower Provinces, and its introduction into the Madras Presidency was the subject of a special enquiry, which led to orders being issued after the close of the year, that the system should be given a trial. The popularity of the value-payable system has again made an advance, and measures were concerted during the year to put a stop to the abuse of the system in the posting of books and other articles to persons who had never ordered them. The field post offices with the Sikkim expedition, which were opened in 1887-88, had to be maintained during the year, and the Department was called upon in September 1888 to organize field offices for the Hazara expedition. Post Office work attracts but little attention except when complaints have to be made, but the special sorting arrangements for the Hazara Field Force, and the management of the field post offices and communications were carried out by the officers entrusted with the duty with much care, intelligence and thoroughness, and there was an almost entire absence of complaints.

3. The chief events of the year under the head of the Foreign Post may be stated as follows: The letter postage from India to Australia was reduced, with effect from the 1st November 1888, from 6 annas to 5 annas for the half ounce, owing to a reduction in the charges made for the sea transit by the British Post Office. The rates of postage between India and Ceylon were reduced to ordinary inland rates in 1887-88, but at the request of the Ceylon Post Office the prepayment of postage was made compulsory in all cases. This restriction was removed during the year under report, and prepayment is now optional. The arrangements referred to last year for a direct exchange of mails between Burma and Chiangmai in Siam came into force in May of the year under report, and the exchange is governed by ordinary union rules. Postal matters on the East Coast of Africa demanded some attention. A French post office was established at Zanzibar in addition to the British Indian post office there, and a German postal agency was established at Lamu which had formerly only received cor-

responsiveness through the Indian office at Zanzibar. As regards parcels, a reduction in the rates in force between India and the British Post Office was brought into force from the 1st January 1889. Previously the charge had been 1s. or 8 annas a pound throughout; but it was arranged that this charge should only be retained for the first pound, and that the charge for each subsequent pound should be reduced to 8d. or 6 annas. Arrangements were also made for exchanging parcels between Aden and Germany by means of the German steamers running fortnightly between that place and Bremen.

Working of
the P. and
O. Contract.

4. The year under review was the first complete year's experience of the new contract with the Peninsular and Oriental Company, which came into force with February 1888. According to the terms of this contract the mails are due in Bombay on Monday of each week, and during the year they actually arrived on the previous Saturday on six occasions, on the previous Sunday on twenty-three occasions, and on Monday on twenty-one occasions; while in two instances they did not reach Bombay until Tuesday. The delay in the first of these cases was caused by the detention of the *S. S. Rome* in the Suez Canal, and in the second, by an accident to the Australian steamer which was carrying the Indian mails from Brindisi to Aden. The average time occupied by the mails between London and Bombay was 16 days and 12 hours homewards, and 16 days 2 hours outwards. The Peninsular and Oriental Company took advantage of the powers reserved to them by the contract to convey the Indian mails between Brindisi and Aden by their Australian mail steamers on alternate weeks, two special steamers being retained for a local service between Aden and Bombay on those weeks. An experiment was consequently made of sorting the mails entirely between Bombay and Aden on alternate weeks which began with June 1888, and it was found that with double establishment and the provision of proper accommodation this was quite feasible even in the monsoon. The work was necessarily trying to the mail officers who deserve credit for having carried it through so successfully.

Charge of
the Post
Office.

5. The administration of the Department was in the hands of Sir F. R. Hogg, K.C.I.E., for the greater part of the year, and I officiated as Director General, during his absence on leave, from the 27th August 1888 to the 26th November 1888.

Section I.—Post Offices, Letter-boxes, and Village Postmen.

Post Office
receptacles
and rural
delivery.

6. Appendix I, of which an abstract is given in the margin, contains comparative statistics for the last two years of the number of post offices and letter-boxes open to the public, and of the number of postmen engaged on rural delivery.

The total number of post offices has increased by 270, and the new offices belong almost entirely to the class of offices entrusted to the charge of village schoolmasters and other persons who are not paid servants of the Department. The great majority of these offices were opened in the Madras Presidency. The total number of letter-boxes for the use of the public has increased by 363, the increase being fairly distributed over all parts of the country, with the exception of the North-Western Provinces and Central India. On the other hand, there has been in appearance a very large decrease in the number of village postmen, but this is entirely due to a change in classification. It was decided during the year under report that such village postmen as return every day to the post offices to which they are attached should, in future, be shown as regular postmen of those offices, and not as rural messengers. There was a very large number of these postmen—more than a thousand—in Bengal, including Eastern Bengal and Behar, and the result of the change has been a large diminution, on the whole, of the former number of village postmen. So far as the actual rural

	Number at the close of 1887-88.	Number at the close of 1888-89.	Increase.	Decrease.
Post Offices	7,263	7,533	270	...
Letter-boxes	9,704	10,067	363	...
Village Postmen	4,725	3,297	...	1,428

delivery of the country is concerned, the staff of village postmen has been increased by 221 men, of whom the greater proportion were employed in Madras.

Section II.—Postal Lines.

7. Appendix II contains statistics according to postal circles regarding the length of the lines over which mails are carried by the various agencies used by the Post Office for their conveyance. There has been an increase under every head, with the exception of steamer

	Total Mileage in 1887-88.	Total Mileage in 1888-89.	Increase.	Decrease.
Railway	14,043	15,073	1,030	...
Mail Cart	3,963	3,976	13	...
Runners	36,471	36,539	68	...
Steamer	12,483	12,438	...	45
TOTAL	66,960	68,026	1,111	45

services, as will be seen from the marginal abstract. The increase in the railway mileage was due to the opening of new sections in various parts of the country, and to the utilization for the carriage of mails of 260 miles of railway not previously used for this purpose. The most important of the new sections of railway were the Gwalior to Bhopal extension of the Indian Midland Railway, the Toungoo to Mandalay extension of the Burma State Railway, the Rajnandgaon to Bilaspur section of the Nagpur-Bengal Railway, the Harihar to Birur extension of the Southern Mahratta Railway towards Mysore, the Jetalsar to Verawal section in Kathiawar, and the Banda to Manikpur section of the Indian Midland Railway. This large increase in railway mileage led to a corresponding decrease in the mileage under other heads, but a number of new mail cart and horse services were established, the latter principally in Burma, and new runner's lines are constantly being opened, so that, on the whole, an increase is shown under both these heads. The decrease under the head of steamer services is chiefly due to the discontinuance of the Port Blair and Nancowry service with the abandonment of Camorta as a penal settlement.

Section III.—Correspondence and Parcels.

8. The estimated number of articles of all kinds, including parcels, that were issued for delivery during the year, was 18 millions in excess of the number issued during the previous year. Statistics, according to postal circles, will be found in Appendix III, and a summary of the general results is given in the margin. On the total figures there was

YEAR.	Letters, including Post-cards.	Newspapers.	Parcels.	Book and Pattern Packets.	TOTAL.
	No.	No.	No.	No.	No.
1887-88	238,692,376	21,832,775	1,621,418	6,739,658	268,886,227
1888-89	254,491,320	22,696,378	1,797,705	8,102,035	287,087,438
Increase	15,798,944	863,603	176,287	1,362,377	18,201,211
Percentage of Increase.	6.62	3.96	10.87	20.21	6.77

an increase in every part of the Empire with the exception of Central India and Burma. With regard to the first-named circle, the decrease is due to the closing of certain Imperial post offices and to the completion of the Indian Midland Railway. With regard to Burma, the explanation is to be found in the fact that the garrison was reduced during the year under report, and that the figures for 1887-88 were admittedly exceptional. The increase in the number of newspapers is nearly 4 per cent., as compared with an increase of 1 per cent. only last year. The number of newspapers carried by the post has doubled during the last eight years since the postage was reduced in 1881 to a quarter of an anna for a weight not exceeding 3 tolas. For several years after 1881 there was a very high rate of increase which has not been maintained of late, and last year it looked as if an actual decrease was to be expected. During the year

under report, however, the increase was nearly a million, and the total number of newspapers issued for delivery was 22½ millions. As regards parcels, the year's figures are very satisfactory. The value-payable parcel business goes on increasing, and to this alone has been due the fact that the parcel traffic of the Post Office has not fallen off of late years; but during the year the ordinary parcel traffic has increased by nearly 10 per cent., and now stands higher than it ever did before. Book and pattern packets still maintain their ascendancy as the most rapidly increasing form of postal business, and the chief increase occurred, as in former years, under the head of value-payable unregistered book packets.

Post-cards, paid, unpaid and registered letters.

9. In the table in the preceding paragraph post-cards and letters of all kinds are shown under one heading, and separate figures are given in the table in the margin. Nearly 86 million post-cards were issued for delivery during the year, an increase of 10 millions, or 13½ per cent. over the numbers of the previous year, and they now represent a third of the entire number of communications passing through the post. The number of letters on which postage is prepaid continues to increase, notwithstanding the competition of the post-card, and the percentage of increase is higher than it has been for several years past. There has been a decrease of nearly 1½ per cent. in the number of unpaid letters, as compared with an increase last year of nearly 2 per cent. The total number of letters on which postage is not prepaid has never permanently fallen below 28 millions, and the figures for the year now under report, 27½ millions, may, therefore, be considered satisfactory. The proportion of such letters to letters on which postage is prepaid is much lower in Madras and Bombay than elsewhere, while it is highest in Behar, Oudh, and Burma. In the last-named province unpaid letters are still more than half as numerous as paid letters. The registration work of the Post Office goes on steadily increasing, and the percentage of increase has risen from 5·71 last year to 7·40 for the year under report. In the United Kingdom the number of letters registered during the year ending with March 1889 was 11 millions out of a total number of 1,558,100,000 letters; whereas in India the number registered during the same period was 5½ millions out of a total number of 168,576,733 letters, showing that the system is much more largely used in India, in proportion to the amount of correspondence sent by post, than in the United Kingdom. The advantages of registration appear to be most fully realized in the Madras Presidency where a million letters were registered during the year. The registration fee was reduced from 4 annas to 2 annas in 1881, and the number of letters has now just become double the number before the reduction of the fee.

YEAR.	Post-cards.	Letters, paid.	Letters, unpaid.	Letters, registered.	TOTAL.
	No.	No.	No.	No.	No.
1887-88.	75,855,590	129,853,689	28,098,537	4,884,560	238,692,376
1888-89.	85,914,587	135,646,541	27,684,024	5,246,168	254,491,320

Percentage of Decrease.	...	...	1·48	...	...

tions passing through the post. The number of letters on which postage is prepaid continues to increase, notwithstanding the competition of the post-card, and the percentage of increase is higher than it has been for several years past. There has been a decrease of nearly 1½ per cent. in the number of unpaid letters, as compared with an increase last year of nearly 2 per cent. The total number of letters on which postage is not prepaid has never permanently fallen below 28 millions, and the figures for the year now under report, 27½ millions, may, therefore, be considered satisfactory. The proportion of such letters to letters on which postage is prepaid is much lower in Madras and Bombay than elsewhere, while it is highest in Behar, Oudh, and Burma. In the last-named province unpaid letters are still more than half as numerous as paid letters. The registration work of the Post Office goes on steadily increasing, and the percentage of increase has risen from 5·71 last year to 7·40 for the year under report. In the United Kingdom the number of letters registered during the year ending with March 1889 was 11 millions out of a total number of 1,558,100,000 letters; whereas in India the number registered during the same period was 5½ millions out of a total number of 168,576,733 letters, showing that the system is much more largely used in India, in proportion to the amount of correspondence sent by post, than in the United Kingdom. The advantages of registration appear to be most fully realized in the Madras Presidency where a million letters were registered during the year. The registration fee was reduced from 4 annas to 2 annas in 1881, and the number of letters has now just become double the number before the reduction of the fee.

Foreign correspondence.

10. The figures in Appendix III include the foreign correspondence received in India for delivery, and a special table is given at the end of this paragraph showing separately the amount of correspondence in both directions between India and the United Kingdom, and between India and foreign countries. It will be seen that there is no material difference in the number of letters and post-cards sent from India to the United Kingdom during the last two years, though there has been an increase during the year under report in the number of newspapers and books as compared with the results of

1887-88. On the other hand, the number of letters received from the United Kingdom has increased, and there has also been a marked increase in the number of books and other packets received from the United Kingdom. Last year there was a falling off under this head, and the present figures are practically a return to the figures of 1886-87. The information as regards the correspondence with foreign countries is taken, as explained in a note to the table, from statistics recorded triennially, and the figures for the present year are, therefore, the same as those shown last year, the last statistics having been recorded in November 1887.

CLASS.	ESTIMATED AGGREGATE NUMBER.		PERCENTAGE OF		REMARKS.

11. The parcels received in India from the United Kingdom and abroad are Foreign Parcels.

also included in the total number of parcels issued for delivery, as shown in Appendix III. The growth of the foreign parcel traffic in both directions since 1873-74 will be seen from the marginal figures, and a summary of the total transactions for the last two years is given in the table at the end of this paragraph. The parcel post with the British Post Office maintains its popularity, though the actual increase in the number of parcels exchanged was not so great as during the preceding year. There were 57,768 parcels sent out to India, and 44,969 sent home during the year as compared with 53,623 and 43,555 in 1887-88. The limit of weight for parcels exchanged with the British Post Office is 11lb, and the average weight of the parcels actually sent is still low though it shows a tendency to increase. A reduction in the parcel rates was introduced, as already stated in paragraph 3, from the 1st January 1889, but the effect of this change is not likely to be very marked, and in any case would not be discernible in the returns of the year under review. The parcel exchange through the agency of the Peninsular and Oriental Company with the United Kingdom shows a slight falling-off. From the side of India it is only used for sending parcels of a weight exceeding 11lb, all others being sent to the British Post Office, and the average weight of the parcels from India was nearly 17lb. From the United Kingdom, however, insured parcels and parcels on which postage was not prepaid were still being sent during the year without reference to weight through the Peninsular and Oriental agency, but the greater number of the 43,493 parcels shown to have been received in India

Year.	Number of parcels.
1873-74	21,923
1874-75	25,563
1875-76	35,819

* Net revenue is calculated after deduction of customs duty and sums due to the Peninsular and Oriental Company and London Post Office.

Delivery work of the year.

12. The figures given in paragraph 8 of this report show that 287,087,438 articles were issued for delivery during the year. These figures are only approximate, being calculated on the results of an actual enumeration made for a week at a time twice during the year, and represent the delivery of what are properly termed the mails. The delivery of money orders, however, is an important branch of the delivery work; the number of money orders was nearly as large as that of book and packet patterns in the preceding year; and these figures have also to be included in the total delivery work of the year. The actual work will then stand as below:—

Sent out for delivery (including 6,173,241 money orders)	293,260,679
Received back undelivered	8,311,672
Balance actually delivered	284,949,007
Sent to Dead Letter Offices	3,048,667
	287,997,674

These figures show that the proportion of articles delivered to the whole number sent out for delivery was 97·17 per cent. which is higher than usual.

Returned Letters, &c.

13. There are eleven Dead Letter Offices in India, and the total number of letters, post-cards, newspapers, packets and parcels received by them during the year was 4,043,912 as compared with 3,780,074 received by them last year—an increase of two lakhs and a half. The distribution of these articles among the different Dead Letter Offices, and the way in which they were disposed of is shown in detail in Appendix IV, of which a summary is given at the end of this paragraph. From this it will be seen that 337,623 articles were successfully disposed of by being re-issued to corrected addresses, while 1,678,681 were returned to the senders, and 718,170 were found to be unreturnable. The number of articles delivered to the persons for whom they were intended by means of the Dead Letter Office agency is large, but this constitutes an important branch of the work of an Indian Dead Letter Office. Owing to the many different languages in use in the country, and the habit which still prevails in some parts of writing long involved addresses, numerous letters have to be sent to the local Dead Letter Offices in order that the addresses may be deciphered. Last year the total number of articles sent to the Dead Letter Offices was less

than in the preceding year, and during the year now under report the Madras Dead Letter Office received fewer articles than in 1887-88. But though there has not been an actual decrease on the whole, the work of our Dead Letter Offices is becoming easier with the constantly increasing use of post-cards and embossed envelopes. The former, however, seldom bear the address of the sender and therefore help to swell the number of unreturnable articles.

	NUMBER.		PERCENTAGE.	
	1887-88.	1888-89.	1887-88.	1888-89.
Total number of articles received in Dead Letter Offices	3,780,074	4,043,912

Articles undisposible	707,362	718,170	27'25	26'26

14. The use of insecure wrappers for newspapers and book-packets has been made the subject of special remark in the reports of the last two years, and in March 1888 a postal notice calling attention to the matter was widely circulated. The returns for the present year show that this has been attended with good results. The number of newspapers and book-packets which reached the Bombay Dead Letter Office with no coverings or wrappers was nearly 1,000 less than the number received in a similar condition during 1887-88. It may be noticed, in this connection, that a well-known firm of Indian Agents quotes the notice in its hand-book, and the Post Master General, Bombay, reports that a German Missionary informed him during the year that in the past he had frequently been disappointed about receiving newspapers and books from Schwerin, and had therefore translated the notice and had it published in one of the newspapers of that town, apparently with success so far as his own experience went. The number of articles which reach the Dead Letter Offices with no addresses at all is still large. Not less than 3,327 letters with perfectly blank faces were received in the Bombay Dead Letter Office, and rather more in the Bengal Dead Letter Office, while 5,500 newspapers and book-packets with no addresses were also received by the latter office. Details are not forthcoming from the other Dead Letter Offices.

Insecure manner of closing newspapers, &c.

15. No signal instances of carelessness on the part of the public have come to notice during the year, but, as usual, a good deal of valuable property has been found in the letters and parcels that have had to be opened in the Dead Letter Offices. Cheques, currency notes, bills of exchange of the value of Rs. 7,966 were taken out of such articles in the Bengal Dead Letter Office, and similar property of the value of Rs. 21,827 in the Madras Dead Letter Office, while in the Bombay Dead Letter Office, as the appended extract will show, property of very much greater value had to be dealt with:—

Valuables found in returned letters, &c.

"The total value of securities found in the articles opened by the Bombay Dead Letter Office during the year amounted to Rs. 1,96,605-12-1 as compared with property of

Sale of
Postage
Stamps, &c.

**Sales of
special
envelopes.**

17. Some few years ago special square envelopes, with embossed stamps of the value of $\frac{1}{2}$ anna and 1 anna were obtained from Messrs. De La Rue & Co. to meet what was represented to be a demand on the part of certain classes of the public for a larger and better kind of embossed envelopes. These envelopes are sold for a price rather in excess of the denominated value of the stamp, and as yet there has been no great demand for them. Last year the sales of both classes of envelopes fell off, and it was pointed out that this was probably due to the fact that in 1886, when the envelopes were first offered to the public, unnecessarily large stocks were obtained by post masters and stamp-vendors, but the returns for the present year again show a decrease, though only a small one in the case of the sales of the 1-anna envelope. The special registration envelopes of two sizes, which were also introduced in 1886, have also failed as yet to obtain the popularity which they deserve. There was an increase of 41,000 in the sales of the smaller class of envelope, but the total sales were only 254,401, while the number of letters registered during the year was in excess of five millions. The registration work is greater in Madras than elsewhere, and the registration envelopes command a sale in that Presidency which they have not secured in other parts of India. More than a third of the total sales of the year of the small registration envelope were made in Madras. There is reason, however, for believing that the existence of these special envelopes is not generally known, and special steps have been taken of late to bring them to the notice of the public.

Section IV.—District Post.

Scope and
management
of District
Post.

18. There has been no change during the year in the conditions governing the District Post. The funds are derived, as shown in the statement on page 12, from a cess or from grants from Provincial Revenue, while in the case of Coorg, included in the Madras Circle, a grant is received from Imperial Revenue. It may be added that in Assam the grants are now made by the District Boards of that Province. In Bengal, including Behar and Eastern Bengal, the income is obtained from a zemindari dāk cess, and has to be spent, in accordance with the terms of the Act under which it is levied, on postal establishments required for police purposes only. The original object of the District Post was generally to provide communications between the head-quarters of districts and revenue and police stations in the interior; but except in Bengal the funds have been largely spent for many years past on rural delivery and opening up backward districts, and this has been recognised as one of the legitimate purposes for which they should be used. The question whether this application of a provincial grant should still be continued, was under consideration in Madras during the year, and the Madras Government wish that the original object of the District Post should now be primarily looked to, though for the present the yearly grant is not to be materially reduced. It will probably be necessary before long to revise the whole relations of the Post Office with the District Post. The actual management of the working of the District Post was in the hands of the heads of postal circles under the control of local Governments, though some small sums are still administered by district officers. It may be mentioned that the Revenue Money Order system was made applicable to the zemindari dāk cess in Bengal with effect from the 1st April 1888, and during the year a considerable part of the cess was paid by these money orders, either as part of land revenue remittances or separately.

General
results of
year.

19. The statement on page 12 shows for the last two years the income and expenditure of the District Post, with details regarding post offices, postmen, letter-boxes and postal lines, and the work done in the way of receipt and delivery of articles, including money orders, by the District Post organization. The total income is shown as Rs 10,11,097 and the total expenditure as Rs 10,45,368, but in some cases cesses were not realized in full during the year, and practically the expenditure is limited to the income. There was an increase of 21 in the number of District Post offices, an increase of 40 in the numbers of postmen and village postmen—which occurred mainly in the North-Western Provinces, and an increase of 833 miles in the length of District Post lines. The latter increase was due to the inclusion in the Burma figures of certain local steamer lines, the most important of which are between Rangoon and Bassein and Bassein and Henzada, which are subsidized from District Post Funds and were incorrectly entered as Imperial lines in the Burma Report last year. The number of letter-boxes is shown to have fallen off by 170, but this again is due to an incorrect return last year. The number of District Post letter-boxes in the Madras Circle was reported to be 795 in 1887-88 instead of 595, and during the present year there was actually an increase in the number of letter-boxes. There was an increase of 554,028 in the number of articles, including money orders, delivered by the District Post agency, and an increase of 670,837 in the number posted in the District Post offices or letter-boxes, while the percentage of articles returned as undeliverable rose from 4.70 to 5.12.

Rural
delivery as
judged by
District Post
returns.

20. The total number of postmen and village postmen belonging to the District Post is shown in the statement on page 12 as 2,672, and of these, 2,561 were village postmen, of whom the greater number were employed in

the Madras, Bombay, the North-Western Provinces, and the Punjab Circles. The actual delivery work done by this staff will be found in detail, according to postal circles, in Appendix VII, and this represents generally the delivery work in some of the most backward parts of the country. During the year under review the number of money orders paid by this agency was 367,553, or 57,171 in excess of the numbers paid in 1887-88, and, as in former years, the greatest part of this work was done in the North-Western Provinces and Oudh. There was an increase of 40,000 in the number of registered articles, and here, as in all questions of registration, Madras stands at the head of all the circles. There was also an increase on the whole in the number of newspapers and book packets, as compared with a decrease in the preceding year. It was pointed out in last year's report that, although there was a general decrease under this head, there had been a very marked increase in the Bombay Circle. This year there is a falling-off in the number of newspapers, &c., in that circle, the explanation of which, as given by the Post Master General, Bombay, will be found of some interest:

"The increase in the correspondence recorded would have been still larger, but for the fact that in December of the previous year, the month in which the enumeration returns were drawn up, a large number of prospectuses announcing the establishment of a Native Savings Bank were issued from Satara to all parts of the Presidency. The affair which was an attempt to extort money was soon exposed, and the prospectuses were discontinued. The number of packets consequently show a falling-off during the year under report."

(a) Includes contributions from Tributary Mahals, Chota-Nagpur, Orissa, and Khond.
(b) Includes the amount of annual subsidy for the Dehra Limal Khan and Chichawani hill cart line.
(c) These are dry season distances; during the rains these lines are increased in length.
(d) Includes contributions from Frontier Police Fund Rs. 2,928 in 1887-88 and Rs. 3,110 in 1888-89, contributions by the Maharaja of Agartala Rs. 288 in 1887-88 and Rs. 300 in 1888-89, and contributions from Chittagong Hill Tracts Rs. 89 in 1887-88 and Rs. 63 in 1888-89.

(e) Includes lines paid from the revenues of Feudatory States, 664 miles in length in 1887-88 and 578 miles in length in 1888-89.
(f) Grant made available from Bombay District Post Funds.
(g) The falling-off under this head is due to the cess having been realised during the year 1888-89 only in the three districts viz., Peshawar, Kohat, and Dera Ghazi Khan. In the other districts the Dak cess has merged into the local rate.

Section V.—Money Orders.

21. The total number of Money Order Offices at the end of the year was 8,961 as compared with 8,408 at the end of the previous year. The number of money orders actually issued was in excess of 6 millions, representing an aggregate value of 13 crores of rupees, and a commission of 16½ lakhs.

Inland money orders. General results.

Percentage of increase over the year 1887-88	11.33	9.68	10.93

The table in the margin shows the progress in this branch of business since the Post Office undertook the issue and payment of money orders in 1880, from which it will be seen that during the year under report there was an increase over the results of the previous

year of 11.33 per cent. in the number of the orders, and of nearly 11 per cent. in the amount of commission realized. It has been noticed for some years past that with the constant growth of the money order business the average value of a money order has regularly fallen, and this is again confirmed by the results of the present year. The average value is now Rs. 21-2-6 as compared with Rs. 21-7-9 in 1887-88, and with Rs. 23-1-9 three years previously. Special statistics recorded during the year show that not less than 73 per cent. of the entire number of money orders issued were for sums not exceeding Rs. 10.

22. The following statement shows the distribution of money order business according to postal circles. It will be noticed that the number of orders paid is largely in excess of the number issued in the North-Western Provinces, Behar, and Oudh, which have a large emigrant population. The Bengal Circle, as usual, stands at the head of the list, a fourth of the entire business of the year, both as regards issues and payments, having been transacted there. Of the million-and-a-half money orders issued by post offices in that circle, the General Post Office, Calcutta, and its sub-offices are responsible for 375,000 or nearly 25 per cent.; while of the million-and-a-half money orders paid in that circle, no fewer than 638,765, or 42 per cent. of the whole, were paid in Calcutta. The great disparity between the payments and the issues is due to the very large use made of the value-payable system by merchants and tradesmen in Calcutta. Of the 638,765 money orders paid by the General Post Office and its sub-offices, 466,900 or 73 per cent. were value-payable money orders:—

NOTE.—The figures relating to the Madras postal circle include transactions with the Native State of Mysore; the figures relating to the Bombay postal circle include transactions with the Portuguese Settlements of Goa and Daman; the figures relating to the Punjab postal circle include transactions with the Native States of Patiala, Nabha, Jhind, Chamba, and Faridkot; and the figures relating to the Central India postal circle include transactions with the Native State of Gwalior.

Revenue
money
orders.

23. The use of the money order system, as an authorized means of remitting revenue, made steady progress in the North-Western Provinces and Oudh and also in the Lower Provinces. In the first-named provinces the number of orders rose from 87,076 in 1887-88 to 97,458, the amount of revenue remitted in this way from R17,94,356 to R19,74,653, and the commission received by the Post Office from R24,912 to R27,000. The system was most largely used in the Gorakhpur, Basti and Azamgarh districts, and the average value of each money order was about R20. The Post Master General, North-Western Provinces, reports that he has received generally much assistance from the Collectors of districts, and a special difficulty, which had come to notice during the year, was removed by a decision of the Board of Revenue that excess payments were not to be refused, merely because they were in excess of the proper amount of revenue. In the Lower Provinces the increase was more marked as will be seen from the appended extract from the Report of the Post Master General, Bengal:—

"From the beginning of the year under report the revenue money order system was, as I stated last year, extended to the remittance of zemindari dāk-cess, as well as remittances of land revenue, road-cess, and public work-cess, to which it previously applied. From the same date also the rule which restricted the system to estates the annual land revenue of which did not exceed R50 was withdrawn, and the system was made applicable to all estates in the Lower Provinces irrespective of the amount of their annual land revenue. As a consequence the system was much more freely used by zemindars, while the average amount of each revenue money order naturally rose. In 1887-88, 51,611 revenue money orders were issued in the Lower Provinces (the three circles of Bengal, Behar, and Eastern Bengal) and the total value of the money orders was R2,44,230. In the year under report (1888-89), the total number of revenue money orders issued was 98,579, and their total value was R7,08,816. Only 1,427 money orders or 1·4 per cent. of the total number were refused and returned to the remitters, the total value of the refused orders being R6,621. It will be seen from these figures that the remittances of land revenue and cesses by revenue money orders were nearly twice as many as in the previous year, and the amount remitted was nearly three times the amount sent in 1887-88. The commission realized from revenue money orders alone was R16,835."

It was stated last year that one of the principal features of the revenue money order system in the Lower Provinces was that all payments of revenue orders by a post office to a collectorate are made by book transfer, so that there is no handling of cash by the subordinates of either office, and the risk of fraud and embezzlement is reduced to a minimum. A somewhat similar system of book transfer with respect to payments of income-tax and other miscellaneous remittances in favour of district officers and district boards was introduced from the 1st July 1888, and has also proved a success. The following is the description of the results of this system by the Post Master General, Bengal:—

"I mentioned also in my last report that the Local Government had sanctioned the remittance by money orders of income-tax and all other Government dues and sums payable to district boards, and had authorized, with effect from the 1st July 1888, the adoption of a simple system for the payment of such orders by book transfer. These remittances are made by the ordinary money order form, and as each department forwards its own receipt to the remitter, the Post Office is not required to return the money order acknowledgment. Although the system came into operation only on the 1st July 1888, it was at once made use of to a considerable extent, and during the remaining nine months of the year 32,069 official non-revenue money orders were paid in the Lower Provinces (the three circles of Bengal, Behar, and Eastern Bengal) by book transfer, the aggregate amount of the money orders being R5,27,746. Altogether during the year 126,391 money orders for land revenue and other dues of Government and district boards were paid by book transfer in the Lower Provinces, the total value of the money orders thus paid being R11,98,828."

Rent money
orders.

24. A further adaptation of the money order system to the payment of rent by tenants to land-owners has now been in force in the North-Western Provinces and Oudh for two complete years. In 1887-88, 30,165 rent money orders

were issued representing an aggregate sum of R3,55,283, and during the year now under report, 39,823 orders were issued for an aggregate amount of R5,25,217. The average value of each money order was about R13. A similar system is to be introduced in the Lower Provinces, and the Bengal Government has decided that the experiment of declaring the remittance of rent by money order to be a legal tender shall be tried in the six districts of the Burdwan Revenue division. The scheme, however, had not come into force before the close of the year under report.

25. The money order transactions with the Native States of India and with the Portuguese Settlements are shown in the statement below. On the whole, there has been an increase in the number of money orders exchanged which is chiefly due to the development of money order work with Gwalior:—

Money
order
business
with Native
States.

26. It was noticed last year that the changes in the tariff for telegraphic money orders, introduced in January 1887, had led to a marked development of business, and the statement below shows that the increase in traffic has continued during the year under report. The changes referred to were the reduction of the telegraph charge in all cases from R2 to R1, while the Post Office undertook to charge only the ordinary money order commission on money orders in excess of R10, and nothing on money orders for sums not exceeding R10. The number of telegraphic money orders issued was 58,644, representing an aggregate sum of 57 lakhs of rupees as compared with 45,417 last year, representing an aggregate sum of 41 lakhs of rupees. As was the case in 1887-88, more than half the total number of these orders were issued from Burma, and a large proportion of these were payable in the Madras Circle.

Money order
frauds.

27. There were only two cases of fraud by false personation in connection with the telegraphic money order system, and there seems therefore good reason to believe that the special attention which has been directed of late years to the necessity of making the strictest enquiries before paying such money orders has been followed by good results. The cases, however, which did occur again furnish evidence of the extreme simplicity with which well-to-do Natives of the country confide in chance acquaintances. The first of these two cases occurred at Wadhwan in Kathiawar in the Bombay Presidency, and the second at Rajbarighat in Bengal. There was a third case in which money was fraudulently obtained from the post office, but this was done by means of a forged telegram. A Military signaller attached to the Telegraph office at Ahmedabad Camp forged a telegram from Calcutta to the post master, Ahmedabad, advising payment of ₹250 to himself. Later in the day he called at the post office and obtained payment. The fraud was discovered on a reference being made by telegram to the Calcutta post office, when no letter arrived in confirmation of the telegraphic advice, and it was then found that the Telegraph office signaller had absconded. He was subsequently arrested by the Military authorities, and sentenced to nine months' rigorous imprisonment for this offence. The case of false personation at Wadhwan is described as follows by the Post Master General, Bombay :—

"A Bombay merchant named Morarji Kalianji, while staying at a lodging-house at that place, made the acquaintance of a man named Maneklal Bapuji and allowed his new acquaintance to learn particulars of his friends in Bombay. On the 25th July Morarji's brother, Damodar Kalianji, at Bombay received a telegram, purporting to be from his brother at Wadhwan, asking for ₹600, and accordingly sent a remittance by telegraphic money order the same day and also a private telegram advising the remittance. The private telegram reached Morarji at the Wadhwan Railway Station just as he was starting for Bombay, and he replied to it by telegraph from Ahmedabad, saying that no remittance had been received. In the meantime the remitter had sent another telegram, which was received by Maneklal and shown by him to the post master. He was identified by the telegraph signaller as the person who had telegraphed that day asking for the remittance and the money was paid to him. On receipt of the telegram from Ahmedabad, Damodar telegraphed to the post master at Wadhwan Camp, asking that the remittance might be cancelled, and the fraud was then discovered. The personator was arrested at Dhola, whither he had absconded on the 28th July, and the greater part of the money was recovered from him. He was convicted by the Sir Nyayadhis of the Wadhwan Native State on charges of cheating and making a false document, and was sentenced to undergo rigorous imprisonment for one year and ten months, and to pay a fine of ₹200, or in default to a term of further rigorous imprisonment for eight months. The sub-post master, Wadhwan Camp, omitted to take all the necessary precautions before making payment, and his remissness was suitably noticed."

Foreign
money
orders in
sterling.

28. Foreign money orders for the United Kingdom, for the Colonies, and for European countries and Egypt are issued in sterling, payment being made by the remitters at the rates of exchange fixed by the Post Office from time to time for this purpose. The only one of these sterling money order exchanges which as yet possesses any importance is the exchange with the United Kingdom. The number of money orders drawn in India on the United Kingdom were nearly 1,000 in excess of the number drawn last year, but the aggregate value was smaller. There was, however, a substantive increase both in the number and value of the remittances from the United Kingdom. It was pointed out last year that the sudden increase in the money order remittances from Italy was due to the fact that there were numerous British Indian subjects at Massowah, who had taken advantage of the money order system to send money to their relations in India. This has been even more remarkable during the year under report. The number of remittances has increased from 731 to

1,331, and the value from ₹11,346 to nearly ₹26,000. Comparative details are given in the table below :—

29. There has been no change as regards the money order exchanges in Indian currency, of which four are in existence, with Ceylon, the Straits Settlements, China and Japan, and Mauritius. None of them are as yet important, though the money order business between Ceylon and Southern India is steadily increasing. The transactions with Mauritius have again fallen off to a small extent, but the remittances from the Straits Settlements by emigrant coolies are increasing. The actual results of the year will be found in the table below :—

COUNTRIES OF EXCHANGE.	1887-88.				1888-89.			
	ORDERS ISSUED BY INDIA.		ORDERS PAID IN INDIA.		ORDERS ISSUED BY INDIA.		ORDERS PAID IN INDIA.

30. The usual statement of forfeited money orders is given below. The actual amount which lapsed to Government during the year was ₹10,296-3, as compared with ₹13,194-7 last year, and the total balance standing on the

register of forfeited orders at the end of the year was Rs 45,849-14, the lowest figure at which it has stood for some years :—

Balance outstanding in the Forfeited Register on the 31st March 1888.		Forfeited during the year.		TOTAL.		FORFEITED ORDERS REPAYED, RENEWED, AND LAPSED TO THE STATE DURING THE YEAR 1888-89.										Balance outstanding in the Forfeited Register on the 31st March 1889.

Aggregate money order transactions, Inland and Foreign.

31. In the preceding paragraphs the money order business of the year has been dealt with under separate heads, and the entire transactions, inland and foreign, are now shown together in the following abstract. The Foreign sterling money orders have been converted into Indian currency at the rates which prevailed when they were issued or paid :—

MONEY ORDERS, BOTH INLAND AND FOREIGN, FOR THE YEAR 1888-89.	ISSUES.			PAYMENTS.	
	Number of applications.	Value of applications.	Commission.	Number of money orders.	Value of money orders.
		R s.	R s.		R s.
Inland	6,136,790	12,99,06,864 7	16,57,761 5	6,127,028	12,95,40,627 5
Foreign transactions in sterling money at prevailing rates of exchange.	41,982	21,21,239 0	19,404 0	15,981	17,52,737 4

British Postal Orders.

32. There has again been an improvement in the sales of British postal orders, the number sold during the year being 1,622 in excess of the number sold in the preceding year. The total value of the orders sold was £11,801-10-6, exclusive of the commission or poundage of the British Post Office, while the Indian Post Office realized a sum of Rs 555-14-6 as its own small commission. The abstract of the year's sales given in the margin shows that the chief demand is for

Denominations of British Postal Orders.	Number sold during 1887-88.	Number sold during 1888-89.	Increase.
From 1s. to 1s. 6d.	690	808	118
From 2s. to 10s. 6d.	6,603	7,267	664
From 15s. to 20s.	8,597	9,437	840
TOTAL	15,890	17,512	1,622

orders of the value of 2s. and upwards, and it appears from a further examination of the figures that the most popular orders are the 20s., 10s., 15s. and 5s. orders in the order in which they

are named. As in former years the largest sales were in the Punjab where 3,422 orders representing a sum of £2,475-6-5½ were disposed of. In Bombay the number sold was 2,533 of an aggregate value of Rs 1,659-1-5½, and about 2,000 orders were sold in the North-Western Provinces and in Madras. Although there is no large demand for these orders, they, no doubt, usefully supplement the money order system. The number of money orders drawn in India on the United Kingdom was only 39,000 in round numbers, while 17,512 postal orders were used.

Section VI.—Savings Banks.

33. On the next page is given a table showing in detail, according to General results of the year, postal circles, the Savings Banks transactions of the year in comparison with those of the previous year. One head office bank was closed during the year owing to a change in the status of the office, and 91 new sub-office banks were opened, the result being an increase in the total number of banks from 5,966 to 6,056. At the beginning of the year there were 261,157 open accounts on the Post Office books, and during the year 130,144 new accounts were opened, and 80,300 accounts in all were closed. The number of active accounts, therefore, at the end of the year was 311,001. The amount deposited was Rs 433½ lakhs, the amount withdrawn Rs 369½ lakhs, and the balance in favour of depositors at the close of the year was Rs 588½ lakhs, as compared with Rs 505 lakhs at the close of 1887-88, showing an increase of Rs 83 lakhs. The interest amounted to nearly Rs 20 lakhs as compared with Rs 16½ lakhs in the preceding year. Bombay stands at the head of the postal circles for the number of accounts which rose from 58,918 in 1887-88 to 70,022, but is now closely followed by Bengal with 69,400 accounts. The highest average balances at the credit of each depositor were in Bombay, Sind, and the Punjab, and the lowest in Madras and Bengal. It may be added that apart from public and regimental accounts, 63 per cent. of the entire number of accounts were for sums less than Rs 100, and 29 per cent. for sums less than Rs 5.

a) Excluding 25,755 dead accounts.

Investment in Government securities.

36. The power of purchasing Government securities through the Post Office is now limited to *bond fide* depositors in the Post Office Savings Banks, and this rule, introduced in 1886, led last year to a falling-off in the number of investments as compared with the results of 1886-87. During the year now under report there has been an increase on last year's figures. The total sum invested was Rs 3,55,000 as compared with Rs 3,33,300 in 1887-88, and the balance in the hands of the Comptroller General at the end of the year was Rs 4,04,500, as compared with a balance of Rs 4,06,700 at the end of the preceding year. The total number of transactions was 504, of which 481 were purchases, and 23 were sales, of Government papers; and the whole of these, with the exception of 35 cases, related to sums not exceeding Rs 1,000.

Section VII.—Insurance and Value-payable System.

Insurance business.

37. The progress of the insurance business of the Post Office since it was

YEAR.	VALUE INSURED.			Insurance fees.

Percentage of increase as compared with 1887-88	3'55	1'82	2'37	8'96

NOTE.—The average value of insurance effected on each article was Rs 330½ in the case of letters, and Rs 356 in the case of parcels.

45,770 letters and parcels of an aggregate value of Rs 2,33,63,292 were insured;

but the number of transactions was largest in Madras where 50,170 letters and parcels of the aggregate value of Rs 1,68,94,911 were insured. In Bombay the greater part of the insurance work of the year was in connection with parcels, of which 37,461 were insured as compared with 8,309 letters, while in Madras the number of letters, 23,821, was nearly as large as the number of parcels, 26,349. Bengal stands second on the list with 18,139 letters and 20,938 parcels, and 41 per cent. of these letters and 71 per cent. of the parcels were insured at the post offices of Calcutta. In Burma the value of insured parcels fell off during the year by nearly 13 lakhs, which was due to the action of the Local Government in putting a stop to the improper transmission of rubies through the post with a view to evade duty.

38. There were 29 claims for compensation made during the year as compared with 28 in 1887-88 and 43 in 1886-87; and in 23 cases the liability of the department was admitted. In 15 of these 23 cases the loss occurred through fraud or neglect on the part of servants of the Post Office; in one case an insured parcel of small value was lost with other mails owing to the foundering of a mail boat between Barisal and Bhola in Bengal; and the remaining

Claims for compensation.

Loss under the insurance system.	1887-88.	1888-89.
	R a. p.	R a. p.
Loss by accident or by departmental neglect or fraud	14,002 10 0	11,974 7 0
Losses by highway robbery in British territory	...	4,244 4 0
Losses by highway robbery in Native States	11,221 0 0	...
Value of property recovered	25,223 10 4,938 7 8	16,218 11 0 5,422 4 0
Claims not preferred or not entertained	20,285 2 4	10,796 7 0
TOTAL	20,285 2 4	10,796 7 0

seven cases were due to mail robberies in British territory which will be dealt with further on. A summary of the year's results in comparison with those of the previous year is given in the margin, from which it will be seen that the amount actually paid as compensation was Rs 10,796-7 as compared with Rs 20,285-2-4, the amount similarly

paid in 1887-88. The insurance fees realized during the year amounted to Rs 1,99,928, or nearly two lakhs, and the compensation, therefore, came to 5'40 per cent. of this sum. In six cases the liability of the Post Office was denied. In two of these it was found that the articles said to have been abstracted were never really enclosed, and in two others property had been removed by dishonest agents before the parcels were posted. The other two cases were deliberate attempts to defraud the department, one of which was a very serious one. A tahsildar in the Madras Presidency posted a parcel declared to contain diamonds and rubies of the value of Rs 65,000. The parcel was refused by the person to whom it was addressed, who was a brother of the sender, on the ground that he had not been advised of the despatch to his address of such a valuable article. It was therefore returned to the sender who declined to take delivery, because he alleged that one of the seals had been defaced. The parcel was then opened in his presence at the post office at which it was originally posted, and was found to contain only copper coins. The sender claimed the value for which he had originally insured the parcel, but the results of a very careful enquiry showed that the case had been a deliberate attempt to defraud the Post Office, and the tahsildar was subsequently dismissed by the Madras Government. He has since then instituted a suit to recover the declared value of the parcel which will be defended.

Value-payable business.

39. The development of the value-payable business since the introduction of the system in 1878-79 is shown in the marginal table, and it will be seen that the characteristic progress of this branch of Post Office work has been well maintained during the year under report. The number of articles of all classes sent through the post as value-payable rose to nearly ten lakhs, an increase of nearly 29 per cent. over the results of last year, while the commission amounted to more than two lakhs showing an increase of 35½ per cent. over the realizations of the preceding year. Nearly half the business of the year was transacted in the Bengal Circle, which, so far as the value-payable system is concerned, practically means Calcutta. Out of the 999,731 articles sent as value-payable, 481,742 originated in the Bengal Circle, and out of this total, 466,909 were posted in the Calcutta General Post Office and its sub-offices. The total amount declared for realization on the entire number of articles posted under this system was 92½ lakhs, and a sum of 45½ lakhs was paid to the tradesmen of Calcutta.

Increase per cent. in 1888-89	28.84	21.90	35.37

Details regarding value-payable business.

40. In the statement in the margin details are given regarding the different classes of value-payable business. The increase in the total number of articles sent under the value-payable system was chiefly due to the increase in the number of unregistered packets which rose from 311,120 in 1887-88 to 464,796 during the year under report—an increase of 49 per cent. There was also a material increase in the number of value-payable parcels. The number, however, of registered letters and registered packets is gradually decreasing. There has been no great variation in the average value of each class of article, though with a decrease in numbers there is an increase in the value of the letters and registered packets; but the average value calculated on the whole business of the year in all classes is only ₹9-4-4. It was mentioned last year that an abuse of the value-payable system had grown up in connection with unregistered book-packets which were posted in large numbers to persons who had not ordered them. This abuse not only caused annoyance and loss to the public, but tended to discredit the whole system, and special measures were taken during the year under report to put a stop to it. It was decided, with the approval of Government, that the money order commission on unregistered packets should be paid in advance by the sender, and should not be refunded if the packet was refused, and also that all value-payable articles should be accompanied by a certificate that they were sent in execution of a <i>bond fide</i> order.						
	Number.	Value.	Commission.	Average value of each article.	Average commission on each article.	
		₹	₹	₹ s. p.	Annas.	
Value-payable parcels and Railway receipts	426,705	50,02,533	96,256	11 11 7	4

Value-payable unregistered packets	464,796	18,44,205	68,844	3 15 6	2	
TOTAL	999,731	92,67,984	2,04,015	9 4 4	3	

This latter safeguard was introduced at the suggestion of the Committee of the Trades Association, Calcutta, who were specially consulted on account of the great importance of the value-payable system to Calcutta, and special thanks are due to that body for their assistance in dealing with a question that was not without difficulties. The new procedure came into force on the close of the year under report, and its results will have to be dealt with hereafter.

Section VIII.—Miscellaneous.

41. The usual statements to show the position of what are known as the old and new security funds of the Post Office are given below. The new fund was created in 1883, and has now a balance of ₹2,75,617. The annual subscriptions from Post Office servants have been credited to this fund since its formation, but such charges as have to be met by the Security Fund are decreed entirely against the Old Fund: the balance at credit of that fund was ₹2,16,913 in 1883 and has now been reduced to ₹81,045:—

Old Fund.

Complaints
by the
public.

42. The number of complaints made by the public to the heads of the various postal circles during the year was 6,961, as compared with 8,095 last year. The decrease must be attributed, in some measure, to the exclusion from the returns of nominal complaints which prove to be merely enquiries, though this change in classification was also in force last year; but it should also be mentioned that a marked falling-off in complaints in Burma was due to the fact that there was much less cause for complaint owing to the improved administration of the Post Office in that circle. Apart from the complaints referred to in this paragraph, there are, of course, numerous petty complaints as regards delay in delivery, the missending of letters, and so on, made direct to postmasters and Post Office superintendents, but it may be taken as certain that the complaints which reach the heads of postal circles include the serious complaints of the year of all kinds. That the complaints on the whole should be so few is remarkable, when it is remembered how largely the use of the Post Office enters into the daily life of most classes of the community, and what a mass of small business transactions in the aggregate a year's report comprises. But it cannot be repeated too often that the Post Office derives the greatest assistance from complaints if only facts can be given, and during the year under report, as in former years, cases of systematic fraud on the part of servants of the Department, of neglect of duty and even of defective procedure have been brought to light by complaints. The Department is necessarily one of routine, and enquiries are apt at times to lose themselves, but the importance of making them an effectual means of fixing responsibility, so far as this can be done, is being constantly insisted on. While, however, there is a full recognition on the part of the Post Office of the advantages to be derived from well-founded complaints, it has also to be said that reckless and ill-founded complaints show no tendency to diminish. The following extract from the report of the Post Master General, Madras, brings together a number of characteristic instances of the difficulties to be faced in making enquiries which occurred in that circle during the year:—

"No. 5 in the appendix was a case in which a student of the Madras Christian College, named Rama Row, succeeded in obtaining fraudulent possession of a registered letter containing two Government Currency notes of the value of ₹100 each, which was addressed to one Bheema Row, another student of that college. Bheema Row had informed Rama Row and other fellow students that he was expecting this remittance, and it so happened that when the registered letter arrived many of the students of the college had dispersed owing to a disturbance that had taken place. Rama Row, however, was still in his place, and he told the postman who came to deliver the letter at the college that Bheema Row was living at a certain house within the delivery of another post office in the town. This was really his (Rama Row's) own address, and when the registered letter was brought there for delivery, he personated Bheema Row and obtained possession of it. He was traced to a remote station in North Mysore where he was identified by the postman who had delivered the letter to him. He was arrested and brought to Madras, tried at the High Court Sessions, found guilty, and sentenced to eighteen months' rigorous imprisonment.

"Case No. 13 in the list was a reckless charge brought by a newspaper against the Hyderabad post office in June 1888. It was stated that certain original documents of great importance in connection with the "Deccan Mining" case had been sent in a registered letter to the address of H. H. the Nizam's Minister; and it was asserted that the letter itself had been delivered, but that the enclosures had been abstracted therefrom by "some scoundrel" in the Hyderabad post office. On inquiry it was found that the letter had been duly delivered in good condition in the Minister's office, and that the acknowledgment had been returned and delivered to the sender. The entire letter had disappeared after delivery. This case illustrates the inclination that is so often observed to throw the responsibility for all losses on the Post Office.

"No. 36 was an absurd case, in which it was alleged that Government currency notes to the value of ₹9,920 had been abstracted from an ordinary parcel posted at Proddatur in the Cuddapah District and delivered in Bombay. The sender was an agent of the firm to whom the parcel was addressed, and his object was to cheat his employers; but it is not likely that they have accepted his ridiculous story, as the parcel was delivered in perfect condition.

"In case No. 55 it was alleged that two currency notes had been abstracted from a registered letter posted at Mangalore for delivery at Bhavani in the Coimbatore District. The letter was delivered in perfect condition, but on being opened was found to contain only a piece of blotting paper, and as this bore the impression of the date stamp of the office of posting, it was clear that it was in the cover when the letter was presented for registration. The conclusion therefore arrived at, in which the sender himself concurred, was that the original letter containing the currency notes had been stolen by the servant to whom it was given to be posted, he having substituted a new letter entirely—the one which actually passed through the post office."

43. The statement below shows the number of complaints received during the year regarding ordinary and insured parcels, registered and insured letters and value-payable articles of all kinds, or in other words the classes of mails which are carried by the Post Office under special safe-guards. There were 213 complaints as compared with 264 in 1887-88 regarding registered letters and ordinary parcels, in about half of which enquiry showed that no blame attached to the Post Office. The number of cases regarding insured articles was not large, and it has already been shown that some of them were deliberate attempts at fraud, and it may be fairly claimed that the complaints regarding value-payable articles are exceedingly few, regard being had to the enormous mass of transactions under that head:—

	1888-89.			TOTAL.	
	Registered letters and ordinary parcels.	Insured letters and insured parcels.	Value-payable parcel and value-payable registered articles.	1888-89.	1887-88.
I.—Cases in which enquiry showed either that no loss occurred, or that the loss had not occurred through the fault of postal officials.	105	13	17	135	167
II.—Cases in which the postal establishment was proved to be in fault, or in which there was strong ground for believing it to be so.	66	17	9	92	112
III.—Cases in which no definite conclusion was arrived at.	42	1	2	45	58
TOTAL	213	31	28	272	337

44. The offences punishable by law which were committed by servants of the Post Office during the year are shown, according to postal circles, in Appendix VIII, and a summary of the results is given in the margin.

	1887-88.	1888-89.
Number of legal convictions.	150	166
Number of cases punished departmentally.	92	67
TOTAL	242	233

The total number of offences was 233 as compared with 242 in 1887-88, and the largest number which occurred in any one circle was 34 in the North-Western Provinces. Nearly a third

of the entire number, or 75 in all, related to the money order business of the Department. The money which passed through the Post Office during the year on account of this business was 13 crores of rupees, as stated in paragraph 22 of this report, and the total loss after deducting recoveries amounted to Rs. 7,379-13-8. Of this sum, Rs. 5,925-14-1 were charged against the Post Office Security Fund, and Rs. 1,453-15-7 were still unadjusted at the end of the year. In 36 of these cases, postmen and village postmen misappropriated money, which had been entrusted to them for the payment of money orders amounting in all to Rs. 3,758-2-0. In this respect the delivery staff of the North-Western Provinces and Bengal shows worst, while in the Punjab, as last year, there was only one case of misappropriation by a postman. In 19 cases money was taken by branch postmasters, who were not regular servants of the Department, and in the remaining 20 cases clerks and postmasters of small offices were in fault. There were 13 instances of fraud in connection with the Savings Banks business involving a total loss of Rs. 4,908-5-8, of which Rs. 1,344-8-0 was recovered and Rs. 2,414 decreed against the guarantee fund, while a sum of Rs. 1,149-13-8 was pending adjustment at the end of the year. Of the Savings Banks misappropriations, seven were committed by branch postmasters, two of whom were not regular servants of the Department, and seven occurred at sub-offices and head offices. In the first seven cases the amounts embezzled were small, but there were two serious cases in Burma, two in Madras, one in Bengal, and one in the North-Western Provinces. At Meppady in Madras and at Magwe in Burma the postmasters committed suicide when their dishonesty was discovered, and in one other case an official died before a prosecution was entered upon. Apart from the cases in connection with money orders and Savings Banks, the offences generally were of a petty character.

Highway
robberies of
the mail.

45. There were 40 highway robberies of the mail during the year as compared with 23 in 1887-88, and the marginal abstract shows that every postal circle, without exception, furnished its quota. Of the total number, only 12 occurred in Native States or foreign territory, and the great increase was entirely in British territory. In Burma, only 5 robberies took place as compared with 10 last year, but Madras, Central India, and Oudh, in none of which was there a single mail robbery during 1887-88, account for 15 cases, and in the North-Western Provinces the number has risen from 1 to 6. No general explanation of this epidemic of mail robberies can be given. In Madras, mail-carriers were implicated in three instances, and there the knowledge that there was either money or articles of value in the mails no doubt led to the commission of the robbery, but in many cases there was nothing to tempt robbers in the mails and all the mail bags were not even opened in several of the robberies. In 14 cases the entire mails, in 15 the greater part of the mails, and in two others a small portion of the mails were recovered. It was only found possible to institute prosecutions in 17 cases and in 9 of these convictions were obtained. The

46. There was no serious loss of mails such as occurred in the previous year when a mail tonga was fired upon on the highway between Wadhwan and Rajkot in Kathiawar, and insured parcels of the value of Rs. 1,221 carried away. There were, however, a number of cases in which the mail robberies had been deliberately planned beforehand, and in eight instances various sums of money ranging from Rs. 100 to Rs. 515 were lost, though the greater part of this was recovered in three of the cases. The mail cart was stopped on the road be

tween Agar and Ujjain in Central India in November 1888 by a gang of robbers who had fastened a rope across the road, but fortunately there was nothing of any value in the mails. A similar case in almost every respect occurred in February 1889 on the road between Rewah and Sutna, and on this occasion also there was nothing of value in the mails, but the passengers in the mail tonga were robbed of Rs 900. In the case which is shown in the statement at the end of the preceding paragraph as having occurred in the Baroda Native State, the mail runner was found dead in a hollow by the side of the road with a blood-stained spike, with which he had been murdered, beside him. His mail bag was missing and was never recovered, and no trace was found of the murderers. In the Bhorasa case in Gwalior Territory a mail runner and the armed foot man who accompanied him were both wounded, and the latter died from the effects of his wounds. In another case which occurred on the borders of the Gwalior State the runner and guard were also wounded, but neither of them fatally. On the other hand, some of the mail robberies during the year seem to have been quite unpremeditated. On two occasions runners carrying mails for and from Fort Stedman in the Shan States, Burma, met dacoits who opened the mail wallet, but carried nothing away, and the same thing happened in the case in the Kanara District of the Bombay Presidency. Among other cases it may be mentioned that the mail cart was stopped and robbed on the road between the Karachi Cantonment and the head post office, and that a trolley carrying mails was stopped at Gyobinthu in Burma by dacoits who, however, were put to flight by the appearance of a train before they had time to break open the mail bags. In the face of armed dacoits it cannot be expected that mail-carriers should show fight, but, on the whole, they behaved exceedingly well in defending their mails. As already stated, one was killed under circumstances that are not fully known, and 26 were wounded or maltreated.

Casualties
of the year.

47. Apart from the robberies of the mail, the year was remarkable for several acts of violence, and for a number of accidents by fire and water. On the 1st April 1888 the Branch Postmaster of Ghoraghat in the Dinajpur District, Bengal, was murdered by robbers who had broken into his office. The cash balance, however, was kept at the police outpost in the village, and the robbers only succeeded in carrying away a small box containing postage stamps and cash of the value of Rs 18, which they afterwards dropped unopened on being accidentally disturbed. Unfortunately, no trace of the murderers has been found. On the night of the 27th February 1889 the Postmaster of Minhla, in the Thayetmyo District, Burma, was murdered and a sum of Rs 427-1-2 was stolen from his office. He was discovered with his throat cut on the following morning, and although there were strong suspicions against some of his servants, the police were unable to bring home the offence to any one. On the 8th July 1888 a boat of the Irrawaddy Flotilla Company was capsized at Yenungyaung in the Magwe District while in the act of landing mails. The sorter in charge of the mails escaped, but three passengers were drowned, and two mail bags lost. On the 22nd August 1888 a mail boat carrying the mails from Barisal to Bhola in the Backerganj District, Bengal, went down on the Ilsa River. Seven persons lost their lives and none of the mails were saved. On the 11th June 1888 six mail-carriers were swept away by a flood while crossing a stream between Pyingang and Kyatsakan in Burma. Two were drowned at the time, and two others died from the injuries which they received. Out of 28 mail bags only five were recovered, and one of these was picked up a month after the occurrence on the banks of the river about a hundred miles below the scene of the accident. On the 10th August 1888 a packer of the General Post Office, Calcutta, who had taken the parcel mails for Cuttack on board a steamer in the Hooghly, lost his life by the capsizing of the boat in which he was returning. On the

11th December 1888 the Irrawaddy Flotilla Company's express steamer "Yoma" caught fire while carrying the English mails from Mandalay to Prome, and was burnt to the water's edge, though the passengers and the greater part of the mails were saved. On the 8th April 1888 the village of Myohoung in the Akyab District was attacked and burnt by dacoits, and the Post Office records, cash and stamps which were kept at the police station were destroyed. On the same day the town of Kyaukse in the district of that name accidentally caught fire, and the post office with all other Government buildings was consumed. On the 2nd May 1888 the town of Myinmu in the Sagaing district was also attacked by dacoits who burnt down the post office. In addition to these no fewer than seven post offices in different parts of India were burnt down during the year, and one was blown down in a storm in the Pubna District. It may be added that two postmasters in Madras, one postmaster in Burma, and one postman in Bengal committed suicide on being detected in misappropriations of Government money.

48. The establishment of the Post Office of all grades is shown according to postal circles in

Postal Officials.	1887-88.	1888-89.
Superintendents and Inspectors of Post Offices	380	399
Postmasters, Deputy and Sub-Postmasters, including Branch Postmasters	4,915	4,858
Extraneous Agencies, such as Schoolmasters, &c.	2,376	2,739

Signallers, Clerks and other servants employed in Combined Offices	670	741
TOTAL	40,691	41,334

Staff.
Appendix IX, and an abstract of this appendix, with the omission of heads of circles, is given in the margin. The total numerical strength of the Post Office has increased by 643 during the year, and

now stands at 41,334. The main changes of the year occurred under the head of postmen and village postmen, and have been already explained, in paragraph 6 of this report, as due to a new classification.

49. The charges incurred during the year on account of printing work done for the Post Office by private presses amounted to Rs 72,954, as compared with Rs 79,703 in 1887-88, and Rs 53,797 in the preceding year. There was an increase of some Rs 3,000 in the charges incurred in Bengal, but the Railway Mail Service is the only circle which has any large dealings with private presses, and the reduction in the total charges of the year is due to the decrease in Railway Mail Service expenditure on printing. Last year, as explained in the report, there were special reasons for an unusual expenditure by that circle.

Cost of printing done by private presses.

Section IX.—Non-Postal Branches of the Post Office.

50. During the year under review, 77 new Telegraph offices were opened under the management of postmasters, and 11 offices which had previously been combined Post and Telegraph offices were closed. There was, therefore, an increase of 66 in the total number of combined offices, of which only 14 were at places where there had previously been separate Telegraph offices, so that the actual gain to the public was 52 new offices. The greatest progress in this respect was made in the Madras circle, where 20 new offices were opened, while 12 were opened in the North-West Provinces, 9 in Bombay and 7 in Bengal. In Burma 17 new offices are shown as newly opened during the year, but 15 of these were transfers of an office from one place to another. The total number of Government telegraph offices of all descriptions at the end of the year was 797, and out of this total 552 were combined offices. During the year, 137 servants of the Post Office qualified as telegraph signallers, and 85 were still

Telegraph work of the Post Office.

under training at the end of the year. In connection with the combination of Post and Telegraph offices, it may be mentioned that at five offices in Burma, at Goona in Central India, at Silghat in Assam, and at Guadar in the Persian Gulf, the Post Office work is done by a Telegraph Master.

Telegraph
traffic at
Combined
Offices.

51. The statement given below shows the traffic statistics of the year according to postal circles. The total number of messages shows an increase of nearly 18 per cent., and the total revenue an increase of 9 per cent. over the figures of the previous year, while the total realizations exceeded the expenditure by Rs. 5,30,435. By far the largest amount of traffic was obtained in the Madras circle, which has a marked superiority in the number of combined offices. The Bengal circle stands second as regards the number of offices, but the revenue realized was less than in the Punjab, the North-West Provinces, and Bombay.

Telegraph
Receiving
Offices.

52. In addition to the work done by combined Post and Telegraph offices, the Post Office also renders assistance to the Telegraph Department by booking at all other post offices (except some branch offices) any telegrams that may be tendered by the public and sending them by post to the nearest Telegraph office for onward transmission by wire. During the year under report the number of receiving offices at which telegrams were booked was nearly the same as in the previous year, being 1,659 compared with 1,670, but the number of messages rose from 32,819 in 1887-88 to 36,540, and the revenue derived from this source for the Telegraph Department increased from Rs. 30,638-2 to Rs. 31,535-2.

Post Office
carrying
agency and
passenger
service.

53. The only other Non-postal branch of Post Office work is the Government carrying agency and passenger service between Umballa and Simla in connection with the conveyance of the mails on that line. There are also branch lines of the carrying agency to the hill stations of Kasauli, Dagshai, Solon, and Subathu. There was nothing special to call for any remark in the year's results, and the service between Umballa and Kalka will shortly have to be closed with the opening of the new railway from Delhi to the latter place.

Section X.—Financial Results.

54. The receipts and charges of the year according to the regular Accounts of the Post Office are given in detail in Appendix X under two main heads, Postal Service Proper and Non-Postal Branches, and a summary of the results is shown in the statement below. Under the head of Postal Service Proper the receipts of the year were 644,532 in excess of the receipts in 1887-88; there was an increase of Rs. 1,98,753 in the amount of commission and of postage realized in cash; there was an increase of Rs. 3,02,539 in the revenue derived from the sale of ordinary postage stamps, and of Rs. 87,691 in the revenue from Service Postage Stamps. On the other hand the total charges of the year were only Rs. 23,752 in excess of the charges in 1887-1888, and the net revenue was Rs. 6,44,532 in excess of the net revenue realized in that year. The Non-Postal Branches of the Post Office are now limited to the Bullock Train and Passenger Service between Umballa and Simla, and in the accounts the deficit on the latter service is shown as a charge for conveyance of mails under the head of Mail Cart Charges, while against the Passenger Service the charges are shown as equal to the receipts.

The amount of the subsidies paid by the Post Office for steamer services in Indian waters, including the service with the Persian Gulf and between Basra and Baghdad, is also shown as a charge under the head of Non-Postal Branches, but these subsidies are paid on political, military and general considerations as well as on postal grounds, though they are debited entirely to the Post Office. So far as the departmental accounts go, the results of the year are on the whole satisfactory. There was a net revenue of 17 lakhs as compared with a net revenue of 11 lakhs only in the preceding year.

Post Office.

per and Non-Postal Service, the details of which are given in Appendix X, includes under a third head the receipts and charges given in the margin, which form a credit or debit to the Post Office in the Finance and Revenue Accounts. The total receipts for the year under all three heads amounted

to Rs. 1,28,15,399, and the total charges to Rs. 1,34,24,524. The deficit, therefore, as shown in the year's accounts, was Rs. 6,09,125 or six lakhs as compared with a deficit of 16 lakhs in 1887-88, and a deficit of 19½ lakhs in 1886-87. But the whole charges for District Post Establishments are debited to the Post Office under head III in Appendix XI, while the District Post income, with the exception of the zemindari post receipts in Bengal, is not credited as revenue, because it is derived from provincial rates, and is therefore shown under that head in the Finance and Revenue Accounts. As, however, the receipts necessarily cover the charges, the District post transactions may properly be excluded on both sides; and if this is done, the nominal deficit will be converted into a surplus of 4½ lakhs. This surplus will be increased to nearly 8 lakhs if credit be taken for an agency charge on the Savings Bank work transacted on behalf of Govern-

½ per cent. on a balance of Rs. 5,04,88,357

A charge of 8 annas on each of 2,61,157 active accounts

TOTAL	3,19,909	13

ment by the Post Office at the actual rates, as shown in the margin, allowed by Government to the Presidency Banks.

The results of the year, therefore, show that the Post Office is now working at a profit without any reference to the service which it performs for Government by carrying official correspondence at low rates. It should be added that in Upper Burma the privilege of sending Service correspondence free, which had been allowed in the two previous years, was discontinued for the year under report.

Indirect charges.

56. There are other indirect charges which are not shown in either the

	1887-88.	1888-89.
Cost of stationery supplied by the Superintendent of Stationery	R 2,28,935	R 1,76,714
Railway free service estimated	1,72,988	1,64,890
Value of services rendered to the Post Office by the Government Press	46,093	44,926
Rent of Government Buildings	3,26,938	3,42,310
Gratuities	10,664	3,477
Leave allowances paid in Great Britain	14,099	4,027
Pension (being the average of five years' capitalized at 10½ years' purchase)	2,31,078	2,47,476
Deduct—Share of Marine subsidies charged in the Finance Accounts, which should have been borne by Military, Political and other Departments	10,30,795	9,83,820
	2,05,856	2,30,779
	8,24,929	7,53,041

Departmental Accounts or in the Finance and Revenue Accounts, and which have always been excluded from a calculation of the net revenue of the year. These charges are shown in the margin as amounting to 7½ lakhs; and to ascertain the financial position of the Post Office, on the

whole, the surplus of 4½ lakhs, as shown in the preceding paragraph, must be deducted from this sum. The total results, therefore, of the year, when everything has been taken into account, and without any allowance being made on account of Savings Bank work and service correspondence, will be a deficit of 2½ lakhs.

Section XI.—Notice of Post Office Officials.

57. I have much pleasure in bringing to the notice of Government the special services during the year of Mr. Farrer, Postmaster General, Madras, and of Mr. Hynes, Deputy Postmaster General, Burma. Mr. Farrer has put new life into the whole postal administration of the Madras Presidency, and had exceptionally onerous work in connection with the arrangements for taking over the management of the Mysore posts, which were successfully carried out after the close of the year. Mr. Hynes has again done excellent service in bringing the posts in Burma into proper working order. Among the officers whose names have been mentioned by the Heads of Circles, the following deserve special mention: Mr. Van Someren who was in charge of the field post office with the Hazara Field Force, and whose work during the expedition is spoken of in the highest terms by the Postmaster General, Punjab; Mr. N. G. Wait, of the Railway Mail Service, who managed with complete success the special sorting arrangements for the same expedition; Mr. V. Kanakasabhai Pillai, Superintend-

Mention of special services.

ent of Post Offices, Madras, who carried out special enquiries regarding the introduction of the Revenue Money Order system into that Presidency; Mr. G. R. Peter, Superintendent of Post Offices, Madras, who was engaged in the investigation into the fraudulent claim for Rs. 65,000 on account of an insured parcel; and Mr. Heysham, the Postmaster of Rangoon.

SCHEDULE OF PRINCIPAL STEAM SERVICES.

By the British India Steam Navigation Company.

- (1) Weekly communication between Calcutta, Rangoon, and Moulmein.
 (2) Weekly communication between Calcutta and Rangoon via Chittagong, Akyab, Kyauk-Phyo, and Sandoway.
 (3) Weekly communication between Rangoon and Mergui via Tavoy.
 (4) Fortnightly communication between Madras and Rangoon, touching at certain intermediate ports on the north-east coast of Madras.
 (5) Weekly direct communication between Bombay and Karachi.
 (6) Weekly communication between Bombay and Karachi via the coast ports.
 (7) Weekly communication between Karachi and Busrah via the Persian Gulf ports.
 (8) Fortnightly communication between Madras and Bimlipatam via Masulipatam, Cocanada and Vizagapatam.
 (9) Weekly communication between Tuticorin and Colombo.
 (10) Weekly communication between Kyauk-Phyo, Ramree and Cheduba.

Under contract with the Post Office for ten years, from 1st May 1884, on an annual subsidy of Rs. 39,000.

Under supplementary contract with the Post Office, from 6th May 1880 to 30th April 1894, on an annual subsidy of Rs. 15,000.

Under contract for ten years, from November 1884, with the Local Administration, on a monthly subsidy of Rs. 1,500 for the first five years and Rs. 1,200 for the second period of five years, subject to other arrangements if intermediately made.

By the Asiatic Steam Navigation Company.

- (11) Four-weekly communication between Calcutta and Port Blair, with extensions to Rangoon.

Under the control of the Military Department, the consideration given being not in the form of subsidy, but of guaranteed rates for the transport of Government stores. Began to work for five years from 1st January 1888, and terminable thereafter by a notice of six months.

By the Irrawaddy Flotilla Company.

- (12) Weekly communication between Rangoon and Mandalay and intermediate ports, with a monthly extension between Bhamo and Mandalay.
 (13) Semi-weekly communication between Rangoon and Bassein, and Bassein and Henzada.

Under contract for five years from the 1st January 1886, the subsidy being Rs. 3,500 per month.

Under contract with the Local Administration for five years, from 1st July 1880, and to continue in force thereafter, unless determined by six months' notice. The monthly subsidy is Rs. 2,500 towards which the Post Office contributes Rs. 500 per mensem.

By the Euphrates and Tigris Steam Navigation Company.

- (14) Weekly communication on the river Tigris between Busrah and Bagdad.

Under contract for ten years, from the 1st May 1884, with Her Majesty's Secretary of State for India. Subsidy Rs. 6,000 per annum: steamers run in connection with line No. 7.

By Messrs. Apcar & Co., Calcutta, and Jardine, Matheson & Co., Hong-Kong.

- (15) Fortnightly communication between Calcutta and Straits and Hong-Kong, the dates of departure being regulated primarily with reference to the Calcutta opium sales.

No subsidy.

By the Peninsular and Oriental Steam Navigation Company.

- (16) Fortnightly communication between Calcutta and Colombo, touching occasionally at Madras.
 Fortnightly communication between Bombay and Colombo.

Non-contract lines maintained by the Company on its own account in connection with the China and Australian mail services. The Post Office pays by weight for the conveyance of mails sent by these non-contract steamers.

By other Agencies.

- (17) By the River Steam Navigation Company.—Daily communication between Dhubri and Dibrugarh on the Brahmaputra river.
 (18) By India General Steam Navigation Company.—Daily communication between Narainganj and Silchar.
 (19) By Shepherd and Company's Steamers.—Daily communication between Bombay and Goa.
 (20) By Bengal Central Flotilla Company.—Daily communication between Khulna and Barisal.

Under contract with the Local Administration from the 7th October 1883 to the 1st May 1893. Annual subsidy Rs. 1,00,000, towards which the Post Office contributes Rs. 30,000.

Under contract with the Local Administration, from 1st January 1887 to 31st December 1891. Annual subsidy Rs. 40,000 during the first two years, and Rs. 30,000 during the succeeding three years, towards which the Post Office contributes Rs. 10,000.

Under contract with the Local Government from 1st October 1886 to 31st May 1887. The monthly subsidy is Rs. 2,880, towards which the Post Office contributes Rs. 780, the Portuguese Government Rs. 200.

Under contract with the Post Office from 1st July 1884 to 30th June 1889. Monthly postal subsidy Rs. 350, of which the Imperial Post Office contributes Rs. 183, terminable by six months' notice.

NOTE.—A service by sea worked by native boats is maintained by the Government of Ceylon between Point Calimere on the Indian side and Kankasanturai on the Ceylon side.

III.—CHARGES NOT DEALT WITH IN THE POSTAL DEPARTMENT, BUT DEBITED TO POST OFFICE IN FINANCE AND REVENUE ACCOUNTS.				
District Post Establishments, including Zemindari Daks in Bengal			11,53,819	11,44,970
Stores from England			4,99,400	4,76,460
Payments under Postal arrangements with Lords of the Treasury			6,50,000	3,75,000
Exchange on charges in England			4,82,990	3,96,170
TOTAL			27,86,209	23,92,600
GRAND TOTAL			1,37,52,151	1,34,24,524

* Subsidy for conveyance of mails between Rangoon and intermediate stations and subsidy for Daily Mail Service between Dhubri and Dibrugarh were shown under steam service contract in the statement for 1887-88. In this statement these items have been shown under Subsidy Payments.

† Charges for passenger service are shown at the same figure as the collections. In the statement for 1887-88 Contributions from Native States were included under Passenger Service, but in this statement Contributions are shown separately vide Passenger Service Receipts.

Appendix

Accounts showing the Gross Revenue, Cost of Management, and Net Revenue, &c.,

[NOTE.—The financial figures in this table do not include either receipts or disbursement

YEAR.	POSTAGE REVENUE PROPER.			Miscellaneous cash receipts.	Total receipts.	Net receipts after deduction of postage due to foreign countries.	Net receipts deducting also official postage.	Disbursements.	Excess of receipts.	Deficit, if official postage be not reckoned as a receipt.	Proportion of postage revenue proper realized in cash.	POSTAL TACKLES AT THE OF EACH POST OFFICE.
	Sale of stamps to public.	Official postage.	Cash on unpaid and insufficiently paid letters, &c.

Column 2.—These figures represent the net proceeds of the sale of ordinary postage stamps after deducting the sale discount.

Column 3.—The great differences observable in this column are due mainly to changes of system in the treatment of official correspondence, which was charged at full letter rates up to 1865-66, at the same rates as ordinary correspondence (letters and newspapers, &c.), from that year on to 1872-73, after which a low privileged rate of 1-anna for each letter not exceeding 10 tolas (about 4 oz.) was conceded, thus reducing immensely the postage income.

Column 4.—The figures in this column are useful, as shewing the revenue undisturbed by the changes of system in respect of official correspondence explained in the note referring to column 3.

No. XII.

of the Post Office Department in India from 1853-54 to 1888-89.

on account of conveyance of passengers or any of the Non-Postal Branches.]

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on Monday, February 17th, 1890.

During the past week pressure has been disturbed by the passage from north-west to south-east across Northern India of a somewhat important depression. During the opening days of the week the distribution was such as has characterised the greater part of the present cold season, but on the 14th signs of a depression were observable on the north-west frontier. On the following day a well marked storm lay over the Indus Valley whence it travelled on a curved course across North-Western India and down the Gangetic plain. Subsequently there occurred a rapid barometric recovery in the north-west and the normal distribution was re-established.

The chart of the 11th showed a large high pressure area over the north-western and central parts of India, and relatively low pressures over the Bay and off the Malabar Coast. The winds had the directions which usually accompany this distribution, blowing from north-west and west down the Gangetic plain, from north over Bengal, from north-west on the Madras side of the Peninsula, and from north-east on the Bombay side. There was some cloud over North-Western India, but elsewhere the weather was fine. On the 12th and 13th there was no change of importance, but on the 14th the report showed a rapid barometric fall in Baluchistan and Upper Sind and south-easterly winds over a large part of North-Western India. On the following morning, the 15th, a large well-marked depression lay over the Indus Valley, the centre being not far from Jacobabad where the abnormal depression of the barometer amounted to 0.30". Strong and squally cyclonic winds prevailed throughout North-Western India. By the morning of the 16th the storm had reached the east of the Punjab and the west of the North-Western Provinces. It was less distinctly marked than on the 15th, owing probably to its neighbourhood to the hills, but the anomalous depression of the barometer was as great at the centre as on the previous day. By the morning of the 17th the storm lay over Bengal, where it was occasioning a depression of the barometer almost as large as that registered in North-Western India. In the Punjab, North-Western Provinces and Rajputana pressure had increased rapidly and the distribution had to a large extent re-assumed the conditions it exhibited at the commencement of the week. During the passage of the disturbance across Northern India, the weather was squally and gales of wind were experienced at several stations with showers in many places.

Temperature.—At the commencement of the week there was a slight deficiency of temperature in Bengal and an excess elsewhere. In North-Western India, and more particularly on the hills, the weather was most exceptionally warm. This warm weather in North-Western India continued during the greater part of the week, but the amount of the excess gradually decreased till, on the 17th, the mean temperature in the Punjab was below the normal average.

The following table shows the variations of the mean temperature of the present and of the past weeks from the normal average:—

PROVINCES.	Difference of mean temperature of last week from normal.	Difference of mean temperature of present week from normal.
Burma	+0.8	+1.3
Bengal	-0.9	+2.2
North-Western Provinces	+0.7	+4.4
Punjab	+2.2	+5.9
Bombay	+1.6	+2.7
Central Provinces	+2.2	+2.8
Guzerat and Central India	+0.8	+5.0
Sind and Rajputana	+1.9	+6.4
Madras	+0.2	-0.6

This table shows that, with the exception of Madras, the mean temperature of every Province in India was above the normal average, the mean excess exceeding 5° in the Punjab, Guzerat, Central India, Sind and Rajputana. In this comparison the readings at the hill stations are omitted, or the excess in the North-West would have been still larger. The following figures give the difference of the mean temperature at the following stations from the normal average for the week under review:—

DATE.	11		12		13		14		15		16		17	
Station.	Maxi- mum.	Mini- mum.	Maxi- mum.	Mini- mum.	Maxi- mum.	Mini- mum.	Maxi- mum.	Mini- mum.	Maxi- mum.	Mini- mum.	Maxi- mum.	Mini- mum.	Maxi- mum.	Mini- mum.
Quetta	+3.8	+3.9	+5.9	+6.7	+17.1	+10.0	+17.7	+15.4	+18.3	+5.1	-2.7	+6.9	+1.4	-2.2

Simla	+11.2	+15.5	+14.0	+13.0	+7.4	+8.2	+9.2	+10.4	+1.9	+2.0	-3.8	+3.3	+0.3	+2.5
Ranikhet	+7.2	+12.0	+11.7	+10.5	-2.8	+4.3	+5.8	+6.7	+8.6	+0.4	+0.5	+4.2	+6.4	+3.5
Mean	+10.0	+10.8	+12.2	+10.6	+9.2	+8.2	+11.1	+11.1	+9.1	+2.0	-2.7	+2.3	+2.6	+0.1
	+10.4		+11.4		+8.7		+11.5		+5.6		-0.2		+1.4	

In most parts of India the weather was warmer than usual throughout the entire week, but Bengal experienced one day, Burma two days, and Madras five days cooler than usual.

Rainfall.—The rainfall of the week has been entirely confined to two regions in India, viz., the Punjab and Assam. In the latter region the falls were very slight, the mean rainfall of the week in the Southern Valley being only 0.02" and in the Northern Valley 0.21". Sibsagar and Dibrugarh both received $\frac{1}{2}$ inch of rain, while Cherrapunji received only 0.05 inch, so that the amount of rain apparently decreased from the hills southward. In the Punjab the districts which received the largest average rainfall were the hills, the submontane and the north-western parts of the Province. In the west, south, and centre the rainfall was very light, the mean fall not exceeding one-twentieth of an inch, and over the whole Province the average fall was less than that normally expected at this season. The heaviest fall throughout the Province was $\frac{1}{4}$ inch at Pathankot, this was followed by 1 inch at Attock and $\frac{1}{2}$ inch at Dasuya (Hoshiarpur) and Sialkot.

The week's fall having been everywhere below the normal average, it has had but little effect on the state of the seasonal rainfall. From Behar north-westward and westward across Northern India as far as the Indus, the rainfall of the season is deficient, the amount varying from 41 per cent. in the east of the North-Western Provinces to 100 per cent. in Rajputana and Kattiawar.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—For week ending 22nd February.—Rainfall very slight in Madura and none elsewhere. Crops generally good, but withered in parts of Nellore, Chingleput, South Arcot, Tanjore, Madura, Tinnevely, Coimbatore, and Salem. Paddy blighted in one taluk in North Arcot; cotton affected by northerly winds in parts of Tinnevely. Prices rising in ten districts, falling in seven, stationary in others. Prospects generally fair.

Bombay.—For week ending 26th February.—Slight rain in Shikarpur and Hyderabad, more wanted for late crops in Karachi and Upper Sind Frontier. Crops blighted or damaged by frost or locusts in two districts of Sind, indifferent or middling in Poona, Ahmednagar and Satara; cotton in Dharwar blighted; crops otherwise satisfactory. Opium in Baroda fair.

Bengal.—For week ending 25th February.—Weather becoming gradually warmer. No rain during the week. *Rabi* crops ripening, and harvest prospects generally hopeful. Mustard and other early *rabi* crops being gathered. Tobacco generally and *ganja* in Rajshahye good. Sugar manufacture proceeding with fair outturn in many districts. Collection of opium in progress, the weather being very favourable. Spring rice doing well, and ploughing for early rice and jute going on in some districts. Common rice still generally dear, and no marked fluctuation in price reported from any of the districts during the past week. No change to report as to condition of people in the area of Balasore, where apprehensions of distress have been entertained.

North-Western Provinces and Oudh.—For week ending 26th February.—Weather generally cloudy and warmer, but rain holds off. *Rabi* harvest has begun in the eastern districts. The poppy is in flower and is doing well, but the prevalent high winds are unfavourable to the later sowings. Supplies are sufficient and fluctuations in prices unimportant.

Punjab.—For week ending 26th February.—Slight rain has fallen in Ferozepur, Rawalpindi, and Peshawar. Prices are stationary in Hissar, Ferozepur and Dera Ismail Khan and rising elsewhere. Sowings of extra *rabi* in progress; ploughings for *kharif* have commenced in Lahore. Crops are suffering for want of rain in most districts. Prospects of wheat doubtful in Amballa. Locusts appeared in Rawalpindi and Shahpur, but damaged the crops in only two villages of the latter district. Fodder sufficient except in Hissar, Sialkot, Lahore, Dera Ismail Khan, and in parts of Multan.

Central Provinces.—For week ending 26th February.—Weather warm and rather cloudy towards close of week. *Rabi* harvest in progress. Estimated outturn of wheat and linseed is up to the average in most districts. Prices remain steady.

Burma.—For week ending 22nd February.—The only district in which rain fell was Mergui. In Upper Burma in the Bhamo district the crop prospect is not good for want of water, elsewhere the prospect is satisfactory. In Lower Burma a rise in the price of paddy is noticeable in four and a fall in two districts. In Upper Burma there is a fall in the price in Mandalay and a rise in Yamethin, elsewhere no fluctuations are shown. The food-supply is sufficient throughout the Province.

Assam.—For week ending 26th February.—Weather getting warm. Slight rain in Cachar, Sibsagar and Lakhimpur. Gathering of mustard, pressing of sugarcane and ploughing for summer rice still continue. Tea doing well.

W. L. DALLAS,

Assistant Meteorological Reporter to the
Government of India.

E. C. BUCK,

Secretary to the Government of India.

SIMLA, the 21st February, 1890.

Mysore and Coorg.—For week ending 26th February.—In Mysore the standing crops are in good condition. Paddy and sugarcane harvested in parts. Outturn and prospects generally favourable.
No standing crops in Coorg.

Berar and Hyderabad.—For week ending 26th February.—In Berar the weather is somewhat warm. Threshing of *jowari* and other *kharif* crops almost finished. *Rabi* in good condition, harvesting commenced. Land being prepared for next season. Fodder sufficient except in Ellichpur and Dariapur taluks. Prices unchanged.

No rain at Hyderabad. Weeding of *tabi* crops commenced; *rabi* crops thriving. Prices stationary.

Central India.—For week ending 26th February.—Opium crop slightly injured by frost in Bhopal. Wheat harvesting commenced in the Nimar district of the Bhopawar Agency; yield below average. Wheat ripening in other parts. Prices of food slightly risen in Jhalna, but falling somewhat in Bhopal. Cultivation restricted in Nimar owing to want of water. Partial rain in Baghelkhand. No other material changes since last report.

Rajputana.—For week ending 26th February.—Agricultural operations satisfactory except in Kerowli. Standing crops good except in Harowtee and Kerowli. Agricultural stock good. Pasturage or fodder sufficient except in Marwar and Dholpur. Prices rising in Marwar, Kerowli and Harowtee, steady elsewhere.

Nepal.—For week ending 20th February.—No rain; weather clear, but cloudy at times. Prospect of wheat crop fair. Potatoes are being sown.

E. C. BUCK,
Secretary to the Government of India.

J. W. P. MUIR-MACKENZIE,
Under-Secretary to the Government of India.SUPPLEMENT TO
The Gazette of India.

No. 10. } CALCUTTA, SATURDAY, MARCH 8, 1890.

OFFICIAL PAPERS.

A SUPPLEMENT to the GAZETTE OF INDIA will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in PART VI of the GAZETTE.

Non-Subscribers to the GAZETTE may receive the SUPPLEMENT separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The SUPPLEMENT and PART VI of the GAZETTE can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA is required by Law, or which it has been customary to publish in the CALCUTTA GAZETTE, will be included in the SUPPLEMENT. For such Orders and Notifications the body of the GAZETTE must be looked to.

APPROPRIATION REPORT ON THE ACCOUNTS OF 1888-89.

GENERAL REVIEW.

It was explained in the last report that the financial position of the Government of India made it necessary, towards the close of 1887-88 to increase the rate of Salt duty and impose a duty on the import of petroleum. Full allowance was made for these measures in the Budget of 1888-89, which shewed a surplus of Rx. 423,500, excluding the charges for Special Defence Works. In the course of the year, the rate of exchange suffered a fall of over a half penny per rupee, and Rx. 374,300 was spent on the Sikkim, Hazara, and Lushai Expeditions. The Revenue from salt was also Rx. 446,900 less than anticipated owing to persistent rumours about an intended reduction in the duty, and the collections of Land Revenue in March 1889 were small partly on account of unfavourable season and poor crops, and partly from a change in the date of payment. These adverse circumstances were, however, more than counterbalanced by improvements in various heads of Revenue, principally Forest and Exchange on Railway transactions, and by reductions in expenditure especially under Land Revenue and Civil Works. The actual result produced in the accounts is a surplus of Rx. 826,600 without the expenditure for Special Defence Works, or Rx. 37,000 including it. Particulars of the various changes comprised in this result are given in the following paragraphs, in which the accounts of 1888-89 are first contrasted with those of the preceding year, and then with the Budget Estimate.

2. No important changes of classification of Revenue and Expenditure were made during the year, but the minor heads under the section "Interest" were revised with reference to the new scheme of Provincial Loans explained in page 120 of this report.

3. The following summary gives the Budget and Account figures of 1888-89 to be reviewed in this report, and the details will be found in the statements on pages 126 to 138. Throughout the report the figures are tens of rupees (Rx. 1 = Rs. 10) with the last two figures cut off for the sake of shortness, thus, 149,7 reads one hundred and forty-nine thousand seven hundred tens of rupees :—

36,493,2	48,568,0	GRAND TOTAL	36,493,2	48,568,0

Comparison with the year 1887-88.

4. The comparison in respect of revenues is as follows:—

REVENUES.	1887-88.	1888-89.	Difference, 1888-89, greater (+) or less (-).
Principal Heads of Revenue	54,781,0	56,220,8	+1,439,8
Interest	746,6	841,8	+95,2
Post Office, Telegraph, and Mint	2,229,5	2,244,8	+15,3
Civil Departments	1,495,7	1,508,0	+12,3
Miscellaneous	1,606,1	1,792,8	+186,7
Railways	14,533,4	15,520,7	+987,3
Irrigation	1,714,3	1,900,7	+186,4
Buildings and Roads	592,3	604,7	+12,4
Army Services	1,060,8	1,062,4	+1,6
	78,759,7	81,696,7	+2,937,0

5. Of the large increase under *Principal Heads of Revenue* 1,004,9 is due to Salt owing to the enhanced rate of duty, and 225,0 to Forest from the restoration of order in Burma and the extension of the area under the Forest administration. The advance in *Interest* results from the investment of large balances in England at favourable rates as explained in paragraph 46, and in *Miscellaneous* from unusually large gain by exchange on transactions with the Railway Companies. The *Railway Revenue* has been enlarged by the opening of new lines and extension of old ones, but it is counterbalanced to some extent by a rise in railway expenditure. The *Irrigation Revenue* was improved by opening additional lengths of canals chiefly in Upper India. The differences under the other heads are not important and do not call for special notice here.

6. The comparison of the expenditure side is as follows:—

	1887-88.	1888-89.	Difference, 1888-89, greater (+) or less (-).
Direct Demands on the Revenue	9,438,2	9,737,9	+ 299,7
Interest	5,441,8	4,712,3	- 729,5
Post Office, Telegraph, and Mint	2,255,8	2,146,5	- 109,3
Civil Departments	12,906,4	13,013,6	+ 107,2
Miscellaneous	4,761,1	4,884,4	+ 123,3
Famine	91,4	78,3	- 13,1
Construction of Railways	80,9	22,4	- 58,5
Railways	16,655,7	17,754,1	+ 1,098,4
Irrigation	2,461,0	2,623,0	+ 161,4
Buildings and Roads	5,451,1	5,310,7	- 140,4
Army Services	20,417,9	20,301,8	- 116,1
Special Defence Works	456,0	789,6	+ 333,6
	80,417,9	81,374,6	+ 956,7

7. The excess in 1888-89 under *Direct Demands on the Revenue* occurs principally in opium charges (173,3), owing to the large crops in Bengal, and in Forests (72,2) mainly from a special payment in Upper Burma. As explained in last year's report, the interest payments in 1887-88 included a large sum connected with the conversion in England of the 4 per cent. stock into 3½ per cents. The abatement under *Post Office, Telegraph, and Mint* is produced mainly by savings in the Telegraph Department caused by contracted operations in Upper Burma. On the other hand, the greater part of the increase under *Civil Departments* was paid for that country, as shewn in paragraph 81. The excess under *Miscellaneous* represents a progressive increase in pension charges. The *Famine* expenditure and *Construction of Railways* were small owing to completion of works in progress in 1887-88. Of the rise in *Railway* charges, 465,1 relates to working expenses for State lines and 623,4 to interest and annuities. The enlarged working expenses were partly the result of additional traffic on the railways as well as of additions to the open mileage, from both of which the earnings have increased in a greater ratio than the charges. The accounts also shew that heavy renewals of permanent way and rolling stock became necessary for some of the undertakings. The enhanced payments for interest and annuities are due respectively to the progress of construction, the fall in exchange, and the large amount of capital deposited with the Secretary of State. The advance in *Irrigation charges* is exceeded by the improvement in *Irrigation Revenue*, both proceeding from extended operations of the department. The saving under *Buildings and Roads* accrues from the completion of Frontier Roads in Biluchistan and the Punjab, and from reduced charges in Upper Burma. The most noticeable feature in the *Army Expenditure* of the year is a reduction of 843,7 in the Upper Burma charges, which was counterbalanced by additional payments for the Sikkim, Hazara and Lushai Expeditions, and the increased loss by exchange on sterling payments. The *Special Defence Works* cost more in 1888-89 owing to the rapid progress of the constructions to which they appertain.

Comparison of Accounts with Budget Estimates, 1888-89.

9. The difference of 133.5 in *Principal heads of Revenue* includes a saving of 125.1 on the expenditure side, brought about by reduced charges on account of District Administration and Survey and Settlement, counterbalanced to some extent, by increased payments for Opium and Forest. On the Revenue side, the Land Revenue collections were short by 74.1 and the Salt receipts by 446.9 as explained in paragraph 17, but these deficiencies, were covered by improvements under the other heads—notably Opium (108.4), Forest (177.5), Excise (95.9) and Stamps (72.7). The head *Interest* compares well with the Budget so far as the net result is concerned, but there are considerable differences in the details, as no provision was made for the additional charge caused by the new debt raised in England for the purchase of the Oudh and Rohilkhund Railway, nor for the interest received by investing the surplus cash balance of the Secretary of State. The *Post Office* shows a better revenue of 39.4 and a smaller expenditure of 17.8, and the result in the *Telegraph* Department is equally satisfactory, giving a net improvement of 74.7. The improvement of 168.7 in *Civil Administration* is almost equally distributed between receipts and expenditure, and is the balance of a number of minor variations. *Miscellaneous* comprises an increased gain of 545.1 derived from exchange on transactions with Railway Companies, the greater part of which was not treated as revenue in the Budget, and the remainder accrues from several unexpected fluctuations on both the receipt and charge side. Under *Railways* the revenue was better by 336.0 owing to favourable traffic on some of the lines, but the expenditure was 454.5 more than anticipated in working expenses consequent on extra traffic, in increased charges for interest, and in increased loss by exchange. The *Irrigation* revenue was benefited by 142.0 from extensions in Upper India, but this was partly counterbalanced by greater working expenses. The saving in *Buildings and Roads* is ascribed in large measure to an overestimate of the actual requirements. The most prominent fact connected with the *Army Services* of the year is a saving of 188.4 in the Upper Burma charges, but against this must be placed additional payments aggregating 374.3 on account of the Sikkim, Hazara, and Lushai Expeditions. The Army receipts show an increase of 140.6 under Commissariat and other heads, but this was more than counteracted by a greater loss by exchange (163.8) on the English payments. The lapse under *Special Defence Works* was caused chiefly by delay in making certain payments in England.

10. The Budget estimated for an excess expenditure of 1,181.6 on the whole account, of which 483.6 was payable from the past accumulations of Provincial and Local Balances, leaving a net deficit in the Imperial account of 698.0. The accounts close with a surplus of 37.0 in the Imperial account, and an increase in the Provincial and Local Balances of 285.1 instead of the estimated decrease of 483.6. The net Imperial Revenue has, therefore, been better than the Budget by 698.0+37.0 or 735.0 and the Provincial and Local Balances by 483.6+285.1 or 768.7. The details of these fluctuations are given below the sign + meaning better and — worse than estimate :—

54,781,0 RECEIPTS.	56,212,4	56,397,5
		56,220,8

12. The principal feature of this group is the advance in Salt as compared with 1887-88 owing to the enhanced duty. Opium also has improved from a rise in the price of the Bengal drug, and Forest from returns in Upper Burma. The land revenue was short in Bengal partly from suspensions in districts which were suffering from scanty harvests, and in Madras from the scarcity in Ganjam, and from postponement of the dates fixed for some of the instalments.

13. The difference in India under *Ordinary Revenue* consists of the sale-proceeds of waste lands in Coorg, which were wrongly classified hitherto under this head, but have now been entered correctly as *Sale of Proprietary right, &c.*, where a corresponding increase will be found. The improvement in the Central Provinces occurs chiefly in the Chhattisgarh Division, and is the result of the revised settlements now in progress. The Burma collections during 1887-88 included arrears, and the budget accordingly allowed for a reduction in 1888-89; but the date of collection having been postponed in the Akyab and Kyookphyoo districts, a sum of 87,0 was not realised until 1889-90. In Assam, the revenue came in promptly, especially in Sylhet and Cachar. The Bengal collections were short by about 80,0, of which 37,0 is attributable to suspensions in districts which were suffering from scanty harvests. The deficiency in the North-Western Provinces proceeds from unfavourable weather, which damaged the crops in both seasons of the year. The Punjab budget was framed high with reference to the improvement expected from increased assessments, but it was not reached owing to certain suspensions and remissions which became necessary. The Madras revenue was unusually large in 1887-88, and included some advance payments as stated in last year's

Section A.—PRINCIPAL HEADS OF REVENUE—continued.

I.—Land Revenue—continued.

report. The budget was framed with these facts in view, but the season was again favourable, except in Ganjam, where there was fear of a famine, and the collections exceeded all expectation. In addition to the scarcity in Ganjam, the collections were retarded by postponement of the dates fixed for payment of some of the instalments. In Vizagapatam also certain sums due in 1888-89 were not realised till the following year. Of the increase in Bombay, 25,7 was derived from the use of canal water for cultivation over an extended area in Sind, and 43,1 from exceptionally large sales of lands in four districts. The revised was not reached owing to postponements, chiefly in the Ahmednagar district.

14. As regards the other headings, the improvement in the Punjab, under *Rent of Resumed Police Service Lands*, is due to re-assessment operations, and in Bombay to enhanced Survey rates. The head *Sale of Proprietary Right, &c.*, in India includes a transfer from ordinary revenue as explained above. In Assam in 1887-88, it was enhanced by special credits on account of Redemption of Waste Land grants, and in Bengal by some special items also. These receipts in the last-named province follow the ordinary collections, and were consequently rather low in 1888-89. In this year the North-Western Provinces and Oudh receipts were enhanced by unexpected sales of waste lands, and the Bombay receipts by the value of the land taken up for the new municipal offices in Bombay. The head *Fisheries and other Receipts* in India includes for the first time the khetran revenue (4,4) as well as the balance of the Pachotra Fund (1,4) transferred to Government, and these two items constitute the main difference between the two years 1887-88 and 1888-89. The transfer of the Pachotra Fund was not settled when the Budget was framed, and consequently was not estimated. The Quetta assigned revenue and the Bori Valley revenue were better than the estimate by 1,2 and 9 respectively. The improvement in Burma is the result of larger fines levied on villagers under Act II of 1880 and Regulation XIV of 1887, and in the Punjab of increased receipts under the new mutation rules and the re-assessment operations. There is also a large increase in the local section of the account, provision for which was erroneously made by District Boards in the estimates under XXV—Miscellaneous. The Revised in Bombay was too high. The growing receipts from Upper Burma are due to the gradual establishment of order in that country.

15. The following statements, A and B, give the usual particulars regarding the distribution of Land Revenue between the Imperial and Provincial Governments. As stated in the last report, a change has been made in the method of distribution by the present contracts, and the several Provincial shares as now fixed are given in Column 4 and the special adjustments in Column 5 of Statement B.

A.—Transactions affecting the Distribution of Land Revenue in 1888-89.

5,2	Punjab	4,9	4,8	4,4
8,8	Miscellaneous	13,0	9,0	8,9
8,515,5	TOTAL	8,453,9	8,560,9	8,562,3

16. The large sum realised in 1888-89 from the *Bengal sale of opium* as compared with the accounts of the previous year and the budget is due to the higher prices obtained in the Opium Sales, the average price in 1888-89 being Rs. 1,120 per chest against Rs. 1,059 in 1887-88 and Rs. 1,042 adopted for the budget. As stated in paragraph 21 of the last Financial Statement, this rise in prices is believed to be due to short crops in China and Malwa. The *Bombay Opium Pass Fees* were small in consequence of poor crops in Malwa which resulted in an export of 30,222½ chests only against 35,338 chests estimated in the budget. As regards the *excise opium* the improvement in the Central Provinces is caused by recovery of the revenue after the bad harvests of 1887-88, in Burma, by a stricter application of the law against smuggling, and in the North-Western Provinces and Oudh by larger sales of the drug. There is nothing special to report with respect to the other provinces. The following table shows the produce and sales in Bengal and the export from Bombay:—

Year.	BENGAL.					BOMBAY.		
	Balance in stock on 1st April, Chests.	Produce of season, Chests.	Chests sold.	Average price per chest, R	Total price.	Chests.	Rate.	Amount.

17. The difference between the actuals of the two years is mainly due to the enhanced duty on Salt which was imposed throughout 1888-89, whereas in 1887-88 it was levied during the last three months only. The budget was framed high in consequence of the duty having been raised, but the revenue was retarded towards the end of the year by unfounded rumours of abatement of duty which had the effect of checking issues and causing traders to keep their stock at a minimum. The receipts were also affected by special circumstances in some provinces. In *India* the sale of Government Salt has been checked from the opening of the Jodhpore line to Pachbadra, whereby the Pachbadra Salt is able to compete with Baragora Salt in Rajputana, Central India and the North-Western Provinces and Oudh. The excise on local manufacture was improved by greater activity in the Saltpetre trade. There was no revenue in the *Central Provinces* owing to abolition in 1887-88 of the Government agencies which had been established for the sale of Baragora Salt. The small amount realised in *Burma* is attributed to diminished importations consequent upon the large stocks held in the country, as well as to fish salted in the Straits having to some extent taken the place of the local article. The fluctuations in *Madras* under the heads Sale of Government Salt and Excise on Local Manufacture are caused by the extended substitution of the excise system in place of the Government monopoly. The duty on imported Salt was high in 1887-88, as it included the differential duty collected on duty-paid imports which were landed after the rate had been increased. The decline in sale of Government Salt in *Bombay* is attributed to the displacement of Baragora Salt by the Pachbadra commodity beyond the frontiers of that Presidency, and would have been larger had it not been counterbalanced under Portuguese India by the opening of additional salt works.

18. As regards *Court-fee Stamps*, the large receipts in India and Assam in 1887-88 accrued respectively from exceptionally heavy suits filed in Coorg, and from special measures which became necessary for recovery of the land revenue in Sylhet as noticed in last year's report. The improvement in 1888-89 in the Central Provinces, the North-Western Provinces and Oudh, the Punjab and Madras was due to increased litigation, which in the Punjab was especially noticeable in those districts where settlement operations were in progress. The improvement in the Central Provinces was also due in part to increased facilities granted for the purchase of stamps. There was a falling off in the number of suits instituted in Burma, Assam, and Bengal. As regards *Commercial and other Stamps*, the improvement in Burma is due partly to a stricter enforcement of the Stamp Act, and partly to documents being registered locally in larger numbers instead of being sent to Calcutta for this purpose. The other provinces also shew improved receipts under this head, the increase being ascribed generally to the normal development of the revenue from this source. The head *Fines and Penalties and Miscellaneous* is always an uncertain quantity, but the Bengal Budget was too high, while in Bombay a large number of documents were impressed under "Duty on Forms of Insurance Policies." During the year the Stamp Act was fully introduced into *Upper Burma*, and the enlarged actuals of 1888-89 are due to this cause as well as to the settling down of the country.

19. The *India* revenue was unusually high in 1887-88 owing to exceptional causes as shown in last year's report. The Budget for 1888-89 was framed accordingly for a lower amount, but the completion of the Railway works at Sibi and the gradual dispersion of the large bodies of men who were massed there before 1888-89, diminished the receipts. In Bangalore and Ajmere also some portion of the collections due in 1888-89 were not realised till after the year had closed. The Revised Estimate was too high. Owing to bad harvests, the *Central Provinces* revenue was depressed in 1887-88, but it has recovered in the present year, though not to the extent anticipated in the budget. The large amount of license and distillery fees in *Burma* is due to the growing taste for exciseable liquors chiefly by the Upper Burmans who come to work or to settle in Lower Burma, as well as to increase of the population and to the liquors having been brought more under control and illicit distillation checked. The improvement in Opium receipts arises from the introduction of the Opium Act into Upper Burma, whereby the price of the drug has been increased and smuggling made difficult. The large amount realised in Upper Burma as compared with 1887-88 has accrued from the introduction of the Excise Act into that country.

Section A.—PRINCIPAL HEADS OF REVENUE—continued.

V.—Excise—continued.

in 1888-89. The budget was not reached, but when it was framed there was not sufficient data for an accurate estimate. In *Assam* the competition for liquor licenses was greater than in 1887-88, but the demand for opium was smaller. In *Bengal* the Excise revenue had been steadily growing for some years and the budget was framed accordingly, but in 1888-89 the high price of food grains in some parts of the Province checked the advance. The *North-Western Provinces and Oudh* had a bad year in 1887-88 owing to the high price of food grains. There was a recovery from this depression in 1888-89, but not to the extent expected in the budget. The improvement under Opium is due to increased sales of Excise Opium. The *Punjab* revenue has been increased by improved Excise Administration leading to the substitution of licit for illicit consumption, and by the permission to import Malwa Opium at one-fourth duty into certain districts of the Province. The rise in *Madras* as regards liquors and drugs is attributed to greater competition among bidders owing to the sub-division of farms and the separate sale of shops, as well as to the extension of the tree-tax system. The Opium Pass duty yielded more than in 1887-88, but not to the extent provided for in the estimates. The expansion of the revenue in *Bombay* was due particularly to a good season and general prosperity, and to the substitution in Dharwar, during the year, of the tree-foot booth and licenses in place of the monopoly and farming systems. The Opium receipts were enlarged by raising the price of the drug.

Section A.—PRINCIPAL HEADS OF REVENUE—continued.

VI.—Provincial Rates—continued.

20. The explanations given under I—Land Revenue apply generally to this head, and hence it is necessary only to note here the special points peculiar to it. In *Bengal* the District Post cess is now levied at an enhanced rate. In the *Punjab*, the actuals of 1888-89 under Village Service, Patwari and Chowkidari Cesses have been increased in consequence of recent orders regarding the transfer of the Patwari's share of mutation fees from Land Revenue to this head. In *Madras*, the house tax levied under the Local Funds Act V of 1884 continues to yield a larger revenue than was expected.

21. The large amount of *import duties* realised in 1888-89 as compared with the previous year is due mainly to the tax on petroleum which was levied with effect from 19th January 1888. The Budget was framed with a view to this increase, which however was counterbalanced in *Burma* by a falling off in the duty on liquors and on arms and accoutrements, while in *Bengal*, *Madras* and *Bombay*, the increase was greater than anticipated. In *Bengal* and *Madras*, the duty on liquors was also larger than was expected in the Budget. The diminished receipts from *export duties* in *Burma*, *Bengal* and *Bombay* were caused by smaller exports of rice from those ports, while the reverse occurred in *Madras* whence large shipments were made to *London* and *Ceylon*.

VIII.—Assessed Taxes.

1887-88. Accounts.		Budget.	1888-89. Revised.	Accounts.
199.5	India	191.2	213.3	213.7

Section A.—PRINCIPAL HEADS OF REVENUE—continued.

VIII.—Assessed Taxes—continued.

23. As regards *Civil Departments*, the *India* budget was too low. The enhanced collections in the *Central Provinces* include recoveries from employes of the *Bengal-Nagpore Railway* previously entered in the accounts of the *Public Works Department*. This is the first year of the *Income Tax* in *Burma*, and the estimates accordingly were unavoidably imperfect. In the other Provinces, except *Assam* and *Madras*, the revenue has improved as compared with the previous year. The *Assam* and *North-Western Provinces* and *Oudh* budgets agree closely with the actuals, but the other estimates were too low. As regards the departmental collections, the budgets were inadequate except in the *Marine Department*.

24. The *India* budget was too low, specially for *Coorg* and the *Andamans*. In the *Central Provinces* higher prices were obtained for timber in 1888-89 than in 1887-88, and greater precautions were taken against pilfering on the part of subordinates. The budget anticipated the rise in prices, but was a little too sanguine. The excellent results in *Burma* are due principally to the restoration of order in that country. In the *Pegu Circle*, the sale of timber was satisfactory both as regards quantity and prices, while in the *Tenasserim Circle*, the floating season was exceptionally favourable, twice as much timber having reached *Khado* as was anticipated in the budget. At *Khado* large quantities of teak were cleared in order to avoid the enhanced duty of seven per cent. *ad valorem* which has been levied from 1st April 1889. There was also an active local trade in *kanyin* timber, and a large amount of drift timber lapsed to Government in the absence of claimants. In *Upper Burma*, the *Yaw* forest came into the possession of Government after the budget had been framed, and negotiations were still proceeding with the lessees of other forests as to the terms on which their tracts should be worked. It was impossible in the circumstances to frame an accurate forecast of the accruing revenue. The increase in *Assam* was obtained chiefly in the *Garo Hills*, from which large quantities of forest produce were held back in 1887-88, owing to difficulties of transit as stated in the report of that year. *Bengal* presents a deficiency of 5.3 as compared with the budget. The year was bad for drift generally, and the receipts from *Gunduck* drift were short by 2.2. The remainder of the deficiency was largely caused by opening the forest tracts in *Orissa* and in the sub-division of *Buxa* to the famine-stricken population. Various reasons are assigned for the increase in the *North-Western Provinces and Oudh*, where the demand for indigenous timber was stimulated by the closing of the forests in *Nepal*, owing to the discovery of extensive frauds in connection with them. The demands on the Forest Department were also increased by depletion of merchants' stocks in large selling centres, and by the requirements of the Irrigation Department and of the troops at *Chakrata*. There were large sales of standing trees in *Dehra Dun*, and the arrears of grazing dues in *Saharunpore* were recovered. The *Punjab* was visited with favourable floods, by means of which more timber reached the depôts than was expected. There were also good sales of stock carried over from the preceding year, and of fuel, and considerable arrears were collected on account of grazing

Section A.—PRINCIPAL HEADS OF REVENUE—*continued.*IX.—Forest Revenue—*continued.*

dues. The *Madras* accounts shew large receipts on account of firewood, the long pending claim on the Bellary-Kistna State Railway having been settled during the year. The yield from timber and other forest produce was good and the grazing dues were fully collected. On the other hand, a diminished demand is reported for redwood in Cuddapah and for sal sleepers in Ganjam, and hence the actuals are below the budget. The following are the principal facts in Bombay. The Railway authorities cancelled their indent for firewood and charcoal after the budget was framed, and the Southern Mahratta Railway took a smaller number of sleepers than was expected. On the other hand, a brisk demand sprung up for timber and other minor produce, and a large contract was received for babool bark. Large numbers of cattle also resorted to the Government forests for pasture owing to scanty rainfalls in some parts of the presidency and to inundations in others.

25. The improved receipts during 1888-89 in the *Central Provinces* is ascribed to a revision of the schedule of fees, in *Bengal* to greater registration consequent on the scarcity prevailing in some districts of that Province, in *Madras* to the opening of additional sub-offices for registration, and in *Bombay* to enhancement of the scale of fees as well as to increase in the documents tendered both as regards number and value.

26. The deficiency in the Oodeypur tribute under *Tributes and Contributions of ₹5,000 and over* is nominal, and arises from the peculiar method in which the account is made up. This tribute has hitherto been adjusted in connection with the expenses of the Meywar Bhil Corps, but in future the two will be kept distinct, each being brought to account in full. The differences standing against Kathiawar and Baroda are due to short recoveries. As regards *Contributions for special Military Forces*, Bhopal made advance payments in 1887-88 and so paid less in 1888-89. The short contribution on account of the Southern Mahratta Horse is ascribed to the date of payment having been transferred from March to April in the case of one of the minor States. The India receipts on account of *Tributes and Contributions under ₹5,000* fell below the estimate, as the sums due from Dungerpur and Sillana were realised after the close of the year. The Central Provinces budget was raised consequent on a revision of the tributes of the Chattisgarh Feudatory Chiefs, but the full amount was not realised during the year. In Burma the amounts expected, especially from the Shan States, were not recovered. The short recovery in India under *Fees on Succession to Native States* is caused by the postponement of the amount due from the Gourihar State.

Section A.—DIRECT DEMANDS ON THE REVENUE.

1887-88. Accounts.	Budget.	1888-89. Revised.	Accounts.
9,438,2	9,863,0	9,837,8	9,737,9

27. The principal features of this group may be summarised as follows: The most prominent difference between the two years embraced in this review is in the opium charges, which were 173,3 more in 1888-89 than in 1887-88. This is due to the produce received by the Opium Department in 1888-89 having been largely in excess of the corresponding deliveries in the previous year. The next difference is in *Forest* charges, which are higher in 1888-89 by 72,2, of which 66,4 occurred in Upper Burma, 53,4 having been paid in satisfaction of claims upon the former Government of the country. Similar increases occur under *Assignments* (17,2) owing to the introduction of new survey rates for alienated revenue especially in the Sind districts, and under *Land Revenue* (27,3) owing chiefly to various increases in the Punjab. As compared with the Budget, savings aggregating 170,1 have accrued under *Land Revenue* in charges of District Administration and of Survey and Settlement, under *Salt* owing to the Bombay Budget being too high, and under *Stamps* owing to smaller indents having been sent for them to England than was anticipated. On the other hand, some special payments caused the Grant for *Refunds* to be exceeded by 33,5, and the *Opium* charges were greater than expected by 43,2 from the causes mentioned above. There is also an excess of 21,4 in *Forest* expenditure comprising fluctuations on both sides of the account, the principal difference being in Upper Burma.

28. These refunds are not amenable to very accurate forecast. In *India* under *Salt*, large refunds became necessary owing to the tax having been levied at Rs 2-8 a maund in cases where the old rate of Rs 2 per maund should have been imposed. A refund was also granted to the Bikaner State in respect of sums due to it. In *Burma* a number of unexpected claims had to be paid. The *Bengal* excess under *Other Revenue Refunds* is caused by a readjustment of Ferry Tolls and Road-cess Collections, which were wrongly treated as Provincial Revenue in 1887-88. The other fluctuations in this province do not call for special remark. The *Madras* budget was too low and the *Bombay* budget too high.

29. As regards the *India* compensations, the payment to Dholepur includes arrears on account of 1887-88, while the amount drawn by Meywar is the net sum after deducting the advance payment made last year. The royalty payable to Joudhpur and Jeypur is variable, being regulated by the quantity of salt taken. In *Bengal* the amount of other compensations was high in 1887-88, as it embraced large arrears on account of former years. In 1888-89 the actuals were less than the Budget, as some sayer compensations were not drawn in that year. The saving in the *Punjab* has accrued from lapsed pensions. The *Madras* actuals of 1888-89 under compensation in lieu of resumed lands and other compensations include arrears on account of the preceding year, when the pensions were not fully drawn as explained in the last report. As regards *Bombay*, it is necessary to examine together the two heads, Pensions in lieu of resumed lands and Inamdars and other grantees, owing to the classification of alienated revenue having been revised. The totals of the two heads are 859,7 for actuals of 1887-88 and 860,5, 862,0 and 869,9 for Budget, revised and actuals of

Section A.—DIRECT DEMANDS ON THE REVENUE—continued.

2.—Assignments and Compensations—continued.

1888-89. These totals are made up partly of cash allowances and partly of transfer adjustments on account of alienated revenue. The details shew that the cash allowances in 1887-88 amounted to 117,8 against 111,3 in 1888-89. The excess was due largely to arrears, as these allowances are never drawn regularly. On the other hand, the alienated revenue in 1887-88 amounted to 741,9 and in 1888-89 to 758,6, the difference in this case being attributable to the introduction of new survey rates especially in the Sind districts. The Budget for cash allowances was accurate, the discrepancy between it and the actuals being traceable to a saving of 2,4 in connection with District and Village Officers, but it failed with respect to alienated revenue, a sufficient margin not having been left for increases arising out of the new rates mentioned above. The Goa Salt compensations aggregated 5,9 more in 1887-88 than in 1888-89. The Budget provided 17,0 on account of them, and 177 on account of the customs tariff compensations, but the latter remained wholly undrawn, and of the former, only 10,4 was claimed. The head "Excise and other compensations" includes in 1888-89 8,6 on account of new excise compensations, and 3,3 on account of arrears due to Nawab Bhismilla Khanji of Radhanpur, only a part of which was provided in the estimates.

30. The Charges for District Administration were small in the Central Provinces owing mainly to a portion of the Patwari expenditure remaining undrawn at the close of the year, and in a minor degree to absences on leave. The Burma budget provided for the revised cost of the Commission, with effect from

Section A.—DIRECT DEMANDS ON THE REVENUE—continued.

3.—Land Revenue—continued.

the beginning of the official year, but the scheme was not introduced till December 1888. The Bengal budget was too high. In the North-Western Provinces and Oudh this head now includes the charges of village accountants (putwaris) attached to the Tarai and Bhabar Government estates, formerly entered under *Management of Government estates*. The savings occur chiefly in "Subdivisional offices" and "Kanungo establishments." In the Punjab, the Kanungo establishment since 1887-88 is being gradually brought up to the sanctioned scale, and a general increase has arisen in other items. In the Madras budget a sum of 34,2 was entered for revision of Revenue establishments and re-grading of tehsildars, but these changes were not carried out. Of the difference between budget and actuals in Bombay, about 2,2 comprises charges connected with the Khoti Settlement officer, which, though estimated under this head, have been taken in the actuals under Survey and Settlement. Of the balance, about 3,3 is due to the suspension of the Commissioner, Central Division, and various leave vacancies, and the remainder to savings in travelling allowances and in petty construction and repair.

31. The expenses of Survey and Settlement are composed partly of professional survey charges and partly of district settlement charges as noted below. The professional survey charges represent the amount payable by the Provincial Governments on account of work done for them by the Survey Department. In the present instance, the work performed was less than had been contemplated in the budget, the principal differences being in the Central Provinces, Burma, and in the North-Western Provinces and Oudh. In Madras various reductions have been effected since last year. The excess over 1887-88 in Bombay occurs almost entirely in laying out boundary marks in Sind. As compared with the budget, the actuals of 1888-89 shew a large saving in salaries and smaller savings in supplies and contingencies. As regards district settlement charges, the saving in the Central Provinces accrued from the permanent establishment not being fully entertained, and from economies in field establishments and contingencies, in the North-Western Provinces and Oudh from the closing of settlement operations in some districts, and in the Punjab from certain settlements having been commenced later than originally arranged. The Bengal budget was too high. The Bombay payments were small in 1887-88 owing to the absence on furlough of the Survey and Settlement Commissioner. The excess over budget in 1888-89 is caused mainly by the transfer to this head of the Khoti Settlement Officer, as noted above.

32. The increased charge in Burma for *Land Records and Agriculture* is due to payments having been made in 1888-89 for the whole year, whereas in 1887-88 they were for a few months only. On the other hand, the large expenditure in Bengal during 1887-88 included special items as noticed in last year's report. The head *Management of Government Estates* has diminished in the North-Western Provinces and Oudh in consequence of the transfer to charges of district administration mentioned above. Apart from this transfer, the accounts shew general savings under contingencies. The 6 shewn under India as *Commission on collections* represents payments connected with the Pachotra Fund in Ajmere now treated as a Service charge. The saving in Burma arose out of the postponement of revenue mentioned in para. 13, and in Assam the budget was too high. The Punjab budget for *Allowances to District and Village Officers* was insufficient, and during the year additional Patwari schools were created in consequence of new settlements having been commenced. In Bombay the excess is caused by the transfer to this head of charges of the village cess fund from "20—Police." As regards *Upper Burma charges*, the excess over 1887-88 is due to extension of the regular administration as the country becomes more settled, to larger commission on revenue collections, which have increased, and to the continued operations of the Settlement Survey at Mandalay. The budget was not reached, as the scheme for regular administration of the country was not introduced till late in the year, and various savings were effected in connection with the Mandalay survey and other expenditure. The head *Other Charges* in India includes the cost of revenue collections in stations on the North-West Frontier, and the rise in 1888-89, as compared with the previous year, is almost wholly in collecting the Quetta Assigned Revenue. The charge in the North-Western Provinces and Oudh includes the purchase of estates under the Jhansi Encumbered Estates Act. These payments were 1,8 less than the estimate and there was a further saving of 6 from stoppage of compensation to junior civilians in those Provinces. The Madras payments refer to the Inam Commission.

2,424.6	TOTAL	2,554.7	2,648.5	2,597.9

33. The charges on account of establishment and contingencies of the Behar and Benares Agencies aggregate 126.1, for the accounts of 1887-88 and 139.5, 127.7 and 126.7 for the budget, revised and accounts of 1888-89 respectively. The budget was rather high, but otherwise the fluctuations do not call for special notice.

34. The *Cultivation and Manufacturing charges* in the Behar and Benares Agencies may be divided under four heads, namely, (1) Advances to cultivators; (2) Final payments to cultivators on delivery of the crude drug; (3) Manufacturing charges, and (4) Miscellaneous. The amount under each head is given in the following statement. The advances in 1888-89 were less by 114.2 than those of the previous year, the area under cultivation having been reduced. On the other hand, the payments in 1888-89 on settlement of accounts with cultivators in respect of the previous year's crop amounted to 284.7 more than the corresponding sums in the accounts of 1887-88. The payments on this account in 1887-88 referred to the produce of 1886-87 which was comparatively poor. The manufacturing charges in 1888-89 exceeded those of the previous year by 5.9, which is doubtless due to the larger quantity of the drug to be dealt with. The miscellaneous charges comprise payments for leaves, trash and timber, transit and weightment charges and freight, and the difference in the expenditure of the two years is spread over numerous items. The actuals fell short of the Behar Budget owing to unseasonable weather, while in Benares, the estimate was too low.

35. As stated in last year's report, reductions have been carried out in India under *Establishment and Contingencies*, which explains the savings apparent in the above figures. Of the increase in Madras, as compared with 1887-88, about 1.7 is due to additions to the number of Assistant Inspectors, 3.5 to the entertainment of preventive establishment in Orissa, the establishment of new factories in Madras and the extension of the tree-tapping system, 2.0 to temporary establishments and 6.0 to construction of new factories. The remainder of the increase is in contingencies. The Bombay Budget was too high, in addition to which various economies were effected during the year. As regards *Manufacture and Excavation*, the season was unfavourable for operations at the Sambhur Lake and at Pachbadra, while stocks being large at the Mayo mines, the manufacture there was kept down. The Madras estimate for *Purchase and Freight* was rather high, and the Bombay budget was very much so, in consideration of the fact that the stock was fully replenished by the exceptional purchases in 1886-87 and 1887-88.

Section A.—DIRECT DEMANDS ON THE REVENUE—continued.

6.—Stamps—continued.

36. The actuals have followed the Budget closely except in *Bengal* and *Madras*, where the charges on account of Court-fee and other stamps have fluctuated with the sale-proceeds of stamps. The charge in *Bengal* for stamps supplied from central stores was larger than anticipated in the Budget, partly in consequence of larger indents, but partly also because the price has been raised in order to cover loss by exchange. This excess in *Bengal* explains the corresponding difference between the budget and actuals in *India* against the same head.

37. In *England* the estimate was prepared in the absence of sufficient information from *India* and proved too high.

7.—Excise.

1887-88 Accounts.	CHARGES OF COLLECTION—	Budget.	1888-89, Revised.	Accounts.
1,1	India	1,4	1,9	1,8
7,1	Central Provinces	7,2	7,8	7,2
2,1	Burma	3,2	2,2	2,2
5	Assam	5	5	5
42,7	Bengal	44,5	44,8	43,4

26,9	Madras	23,5	30,0	32,9
29,8	Bombay	29,7	33,2	32,8
127,1	TOTAL	127,6	137,6	137,8
...	England	1	2	1
...	Exchange	...	1	...
127,1	TOTAL	127,7	137,9	137,9

38. The first prominent difference is in *Burma*, where the Budget for Upper *Burma* proved too high. The saving in *Bengal* was in travelling allowances and supplies and services. The *Madras* budget was too low, the combined charges on account of salt and excise having been inaccurately divided between these two heads. Apart from this mistake, there was an actual increase of expenditure, as no offer could be obtained for the Mangalore Taluk farm owing to the belief that the increase in the tapping fees would lead to a strike among the toddy drawers, and the Government was therefore obliged to arrange for the purchase of unexcised liquor. The *Bombay* excess is attributed to the entertainment of additional distillery establishments at Kaira, Panch Mahals, Kolaba and Khandesh, and to the charges for supplies and services having been greater than was anticipated.

4,8	Bombay	5,3	5,0	4,7
62,1	TOTAL	57,6	62,0	59,4

39. The apparent saving in *Burma* in 1888-89 is mainly due to postponement of the revenue collections in the Akyab District, whereby the commission payable thereon was not drawn during the year. The *Bengal* budget was framed before the additional establishments required in that Province were sanctioned, and although provision for the extra charge was made in the revised estimate, it was not fully spent.

42. The *India* charges for conservancy and works exceeded the budget in Coorg and the Andamans where the operations had to be expanded. This increase of expenditure was counterbalanced by increased revenue as noted in paragraph 24. In the *Central Provinces* expenditure amounting to 6,2, now treated as establishment, was in 1887-88 regarded as appertaining to timber removed by purchasers. Apart from this change of classification, the accounts of 1888-89 disclose a large addition to the permanent establishment, together with new charges aggregating 4,0 on account of Forest surveys. The cost of these surveys was not entered in the budget, but on the other hand savings were effected in the estimate of the head "Timber removed by Government agency." The grant for establishments also was not fully expended, as qualified persons could not be found for the better paid appointments. As stated in paragraph 24, forest operations in *Burma* were carried out on a larger scale than was possible in 1887-88, or contemplated in the budget, the enhanced expenditure being covered by improved revenue. The excess expenditure in Lower Burma occurred in commission to contractors, in forming and clearing plantations, in forest surveys and drift collections. The *Upper Burma* figures include 53,4 paid to the Bombay-Burma Trading Corporation, Limited, in respect of their claims upon the former Government and of expenses incurred since the annexation. About 2,8 was paid for elephants and other live-stock and buildings, but 2,4 was saved under Demarcation, improvements and extensions. In *Assam* the actuals fell below the budget, as much of the demarcation work was paid for in kind by free grants of forest produce. The working plans were also curtailed in consequence of difficulty in obtaining local labour. In *Bengal* savings were effected under the head "Other charges" by diminishing road-work in Singbhoon when it was found that timber would not be required to the extent anticipated, and by giving up the project of leasing forests in Chota Nagpur. The charge for establishment was small, chiefly on account of absences on leave. The *North-Western Provinces and Oudh* budget for "Timber removed by Government agency" was insufficient. Under "Other charges," various economies were carried out in the matter of road-making, erection of rest-houses, surveys, demarcation, plantations and fire protection. The grant for establishments, was exceeded mainly by the appointment of an additional Assistant Conservator. The *Punjab* saving under "Timber removed by Government agency" is connected with the cessation of boxwood operations and the curtailment of work in timber and fuel. The difference under "Other charges" is due to the irrigation channels at Changa Manga not having been constructed, and under "Establishment" to absences on leave and deputation. The *Madras* budget was too high, and was accordingly reduced in the revised. The large expenditure in 1888-89, as compared with 1887-88, is caused (1) by extensions in South Canara, from which additional revenue is expected, (2) by the purchase of tramway plant for North Arcot, Nellore and South Coimbatore, and (3) by the new charge for forest surveys. Nearly all the saving in *Bombay* is in conservancy and works, and arose out of the Railway authorities having cancelled their indent for fuel as stated in paragraph 24. The budget apparently did not make sufficient allowance for deductions on account of clothing.

43. As regards the expenditure in *England*, the cost of the continental tour of the Forest students was larger than the estimate.

44. The saving in Bombay under *superintendence* has been obtained by abolishing the office of Branch Inspector General in Sind, and by reducing the scale of travelling allowance. The rise in *District charges* in Bengal and Bombay represents increased commission paid on increased collections, while, in Madras, it consists largely of arrear charges.

46. The interest on Loans to Native States obtained in 1888-89 by Madras was low owing to repayment of amounts due by the Mysore Government and the Ramnad Zemindary. The recoveries in 1887-88 from Presidency Corporations in Bengal included large arrears on account of the Kidderpore Dock Loan

Section B.—INTEREST—continued.

and the loan to the Calcutta Municipality. The increased receipts in 1888-89 in the other two Presidencies arise out of the additional loans taken by the Madras Harbour Trust and the Bombay Port Trust respectively, but the Bombay Revised was too high. As regards *Municipalities and other Corporations* the amounts due on account of the Mhow Waterworks were omitted from the India Budget, and in the Punjab the actuals include a portion of the interest relating to the Simla Town Hall which should have been paid in 1887-88. The Bombay Estimates under this and the next head included amounts for which the corresponding actuals have been entered under *Interest on advances to Cultivators*. The large sum credited in India under *Interest on Loans to Landholders, &c.*, represents arrears recovered in Ajmere, and the small sum credited in respect of the *Currency Investment* is owing partly to a change in the investment, by which interest which otherwise would have been received in 1888-89 was not realised till the following year, and partly to the security reserve having been reduced by 50,0 for about nine months of the year. The *interest on securities of Provincial Funds* in the North-Western Provinces and Oudh was reduced by cancelling the securities belonging to the Benares College, and the actuals in 1888-89 under *Other items* in India were enlarged by a special recovery connected with certain temporary loans. Owing to the favorable state of the money market, the loan required in *England* for the purchase of the property of the Oudh and Rohilkhand Railway Company was issued in anticipation in May, and a large proportion was paid in full. Owing to this and other causes the Cash balance was abnormally large during the last eight months of 1888, and the surplus became available for investment. The rate of interest obtainable during that period was also unusually high, and these two circumstances combined to produce the large credit in 1888-89.

47. The balances under Loans to Municipalities, &c., have in the last six years, stood as follows: The column headed 31st March 1889 includes 1,182,9 advanced under the new Provincial Loan Scheme as explained on page 120. The amount of interest paid in 1888-89 by the Local Governments to the Government of India on account of these advances aggregated 47,4, while the actual sum realized by them and credited to Provincial Revenues amounted to 54,7.

48. It is necessary in the first instance to ascertain the amount of Loans raised or discharged during the year, and the following figures supply these particulars for 1887-88 and 1888-89:—				
1887-88. Accounts.		Budget.	1888-89. Revised.	Accounts.
INDIA—				
5,505,3	Debt incurred . . .	3,001,5	4,632,6	4,637,5
69,5	Debt discharged . . .	3,0	1,855,1	1,848,7
+5,435,8	NET IN INDIA . . .	+2,998,5	+2,777,5	+2,788,8
ENGLAND—				
Debt incurred—				
...	at 3½ per cent. . .	...	4,030,7	4,030,7
...	at 3 per cent. . .	...	7,206,5	7,206,5
...	Debenture and Debenture stock . . .	...	3,415,0	3,415,0
...	TOTAL INCURRED . . .	...	14,652,2	14,652,2
Debt discharged—				
...	at 5 per cent. . .	...	...	...
...	at 4 per cent. . .	...	3,730,7	3,667,6
...	TOTAL DISCHARGED . . .	...	3,730,7	3,667,6
...	NET IN ENGLAND . . .	...	+10,921,5	+10,984,6
+5,435,8	NET IN INDIA AND ENGLAND . . .	+2,998,5	+13,699,0	+13,773,4*

* The above amounts are exclusive of 91,1, comprising 82,1 charged to Railways on account of Sinking Funds of East Indian, Eastern Bengal and Sind, Punjab and Delhi Railways and 9,0 to Discount Sinking Fund.

49. As regards the *India* account, the loan raised during the year was 3,000,0 as proposed in the budget, but in addition to it operations were undertaken for discharging the 4½ per cent. loan of 1870 and the stock notes in circulation. The greater portion of this discharge was effected by transfer into the 4 per cent. loans of 1865 and 1842-43, the amounts actually paid in cash during the year being 210,0 and 1,7 respectively. The difference between the budget and actuals under debt incurred is due to these two operations, the increase of the 4 per cent. debt caused thereby being 1,635,4. As regards the debt discharged, the budget provided 3,0 for the payment of Government promissory notes on which the interest had ceased, and of debentures of the Nagpur-Raipur Railway. The actual payments on these accounts amounted to 1,6, or 1,4 less than the estimate. The amount discharged on account of the 4½ per cent. loan of 1870 and stock notes was 1,847,1, of which 1,635,4 was effected by conversion into 4 per cent. debt as stated above, 211,7 being actually paid off.

50. In *England* the amount (4,030,7) entered as debt incurred represents the 3½ per cent. stock which was issued for discharge of a like amount of 4 per cent. India stock. The sum of 7,206,5 is 3 per cent. stock raised for the purchase of the property of the Oudh and Rohilkund Railway Company, and for the discharge of such of the debentures of that Company as fell due in the year 1888 before the date of the purchase. The amount actually received on account of this stock was 6,921,0, the balance being discount. The third sum of 3,415,0 includes the debentures and debenture stock of the Oudh and Rohilkund Railway for which the Secretary of State incurred liability on the purchase of the property of that Company. The debt discharged (3,667,6) is the amount paid on account of the India 4 per cent. stock mentioned above as having been discharged during the year. These transactions were not provided for in the budget. Those connected with the purchase of the Oudh and Rohilkund Railway could not be so entered, as the nature of the offer to be made to the Company had not been settled at the time.

Section B—INTEREST—continued.

13.—Interest on Ordinary Debt.

51. A Statement analysing this charge may be given as follows:—

1887-88. Accounts.	Rate.	DEBT IN INDIA ON 31ST MARCH 1888.	Principal.	Interest.	Budget.	1888-89. Revised.	Accounts.

5,054,8	Interest on ordinary Debt				4,075,4	4,264,5	4,274,8
4,359,4	Interest on debt for Railways and Irrigation Works				4,533,0	4,655,3	4,659,0

52. As explained in the last report the interest on both the 4½ and 4 per cent. loans had not been fully claimed in 1887-88. The arrears thus left amounted to about 54,9 on account of the 4½ per cent. debt, and were paid in 1888-89. Deducting this sum from the total payments of 1,080,3 entered above, the ordinary payments of 1888-89 come to 1,025,4 against a budget provision of 1,042,7. This saving of 17,3 is connected chiefly with the discharge of the 4½ per cent. loan of 1870 which reduced the interest payable at that rate. Due allowance was made for this change in the Revised, but the actual proved slightly higher chiefly in the interest on the 4½ per cent. Loan of 1879. The additions which are made almost every year to the 4 per cent. debt have naturally increased the interest payments on account of it. There was moreover, at the close of 1887-88, a certain amount of interest remaining unclaimed as noticed in the report of that year. This unclaimed amount appears to have been drawn in 1888-89, but its effect is not apparent in the figures given above, as the Gwalior Durbar drew 47,0 less than was due. The Revised has turned out well considering the uncertain character of these payments. The 9,8 entered against the head *Interest on Loans in course of discharge* includes payments after October 1888 on the 4½ per cent. Loan of 1870 mentioned above. The small sum, as compared with the budget, debited to *Discount on new Loans and Miscellaneous* is owing to the Loan of 3,000,0 having been raised on more favourable terms than was anticipated.

53. Particulars are given below of the interest paid in *England*. As regards the *Interest not charged to Railways* the payments in 1887-88 were exceptionally high owing to special charges connected with the conversion of 4 per cent. Stock into 3½ per cent. Stock as explained in last year's report. The difference between the budget and actuals of 1888-89 is in the interest paid, and not in the discount on new debt or in the commission allowed on further conversion of India 4 per cents. into 3½ per cent. Stock. The excess over budget is due entirely to the interest on the new debt which became necessary when it was determined to purchase the property of the Oudh and Rohilkund Railway company, and on account of which no provision was made in the budget for the reasons explained in paragraph 50. As already explained, this loan was raised in anticipation of the purchase being completed, and the interest to date of purchase has been charged to this head, the later interest being debited to interest charged to Railways. This additional interest amounted to 120,7, but against it must be set two short payments aggregating 52,6, making a net difference of 68,1 as disclosed in the following figures. The first reduction is a sum of 42,4, which was included in the interest charged to Railways, as it relates to the substitution of India Stock for a portion of the East Indian Railway Annuity. The second reduction is a sum of 10,2 entered in the budget as interest on temporary loans, but such loans were not needed during the year. Of the increase in *Interest charged to Railways*, 42,4 is due to the change of classification just mentioned, and the remainder to interest on the new debt raised for purchase of the Oudh and Rohilkund Railway. The difference in *Exchange* occurs partly from additional interest paid during the year as noticed above, and partly from the rate having been lower than was anticipated in the budget.

54. The interest on *Special Loans* in India exceeded the budget as it includes 5.5 on account of arrears on one of the Oudh Loans, payment of which was expected in the previous year. The usual details of the interest on *Treasury Notes and Service Funds* are given below. The estimates of this head and of *Savings Bank Deposits* appear to have been closely followed by the actuals. The head *Miscellaneous* is composed of interest on Railway Funds, and other sums of the same kind. The excess in India is due chiefly to increased payments on Railway Funds, and to 8, connected with the Madras Railway, provision for which was made in the Madras Estimates. The Bombay charges in 1887-88 included the interest paid to the Local Fund Pension Fund which is now treated as a Savings Bank Deposit. Apart from this change of classification, the interest on local loans and on compensation for land taken up for public purposes was 3 less in 1888-89 than in 1887-88. The budget provided 3 as interest on private contributions for public works, but this is no longer paid.

Details of Interest on Treasury Notes and Service Funds.

1887-88. Accounts.		Budget.	1888-89. Revised.	Accounts.
57.3	Bengal Uncovenanted Fund	60.0	60.0	59.9
5.7	Bombay	6.8	6.1	6.3
2.6	Other Funds	2.7	2.8	2.9
65.6	TOTAL	69.5	68.9	69.1

Section C.—POST OFFICE, TELEGRAPH, AND MINT.

1887-88. Accounts.		Budget.	1888-89. Revised.	Accounts.
2,229.6	RECEIPTS	2,131.3	2,240.4	2,244.8
2,255.8	EXPENDITURE	2,182.2	2,167.6	2,146.5
—26.2	NET	—50.9	+72.8	+98.3
—161.0	POST OFFICE (NET)	—118.1	—56.4	—60.9
—22.7	TELEGRAPH (NET)	—36.7	+11.4	+38.0
+157.5	MINT (NET)	+103.9	+117.8	+121.2

55. The Post Office continues to show good progress, the excess of expenditure over revenue being 60.9 in 1888-89 against 161.0, 196.0 and 189.5 in the three preceeding years. This improvement is in the revenue which has advanced by 168.4 since 1885-86 while the expenditure has increased by 39.8 only. The Telegraph Revenue has received a great addition since the conquest of Upper Burma in 1886-87. It reached its highest point in 1887-88 owing to the Military operations in Burma. In 1888-89 it amounted to 113.6 more than the receipts of 1885-86. The expenditure in 1888-89 is lower than it has ever been since 1883-84, and for the first time since 1880-81 there is an excess of revenue over charges. As regards the mint revenue the actuals of 1888-89 are better than the budget, but lower than the revenue of 1887-88 owing partly to small importations and smaller coinage of silver, but mainly to diminished gains from copper owing to the high price of the metal. The charges were high owing to the recoinage of shroff-marked and Burmese rupees.

XIII.—Post Office.

1887-88. Accounts.		Budget.	1888-89. Revised.	Accounts.
144.8	Parcel and other Postage collected in cash	145.0	147.0	148.1
719.7	SALE OF POSTAGE STAMPS—			
181.1	Ordinary	725.2	755.0	750.5
	Service	181.5	189.9	189.9
900.0		906.7	944.0	940.4
28.2	Deduct—Payments to English, Colonial and other Foreign Post Offices	26.0	26.0	28.2
872.6	MAIL CART AND PARCEL	880.7	918.0	912.2
20.0	VAN PASSENGER SERVICE	20.1	21.1	21.5
152.2	MONEY ORDER RECEIPTS	167.0	168.0	168.8
10.5	BULLOCK TRAIN COLLECTIONS	10.0	16.4	10.7
9.2	OTHER RECEIPTS	9.1	15.1	14.2
1,209.3	TOTAL	1,237.9	1,285.6	1,275.5
6	DISTRICT POST COLLECTIONS—			
1.5	Central Provinces	1.6	1.6	5
2.6	Bengal	2.4	3.8	1.4
2	Punjab	2	2	4.0
4.9	Bombay	4.2	6.3	1
1,214.2	TOTAL	1,242.1	1,291.9	1,281.5

56. These results show substantial improvement under every head of account. The increase in parcel and other postage collected in cash flows from the more extended use of the rules relating to privileged publications. The sale of postage stamps grows steadily every year. In 1888-89

Section C.—POST OFFICE, TELEGRAPH, AND MINT—*continued.*

a large quantity of these stamps was used for payment of telegrams in remote stations. The Budget for payments to English, Colonial and other Foreign Post Offices was exceeded as it did not provide for the amount due to the London Post Office for the statistical account of open and closed mail transit, the charge not having arisen when the estimate was framed. The revenue from *Mail Cart and Parcel Van Passenger Service* fluctuates with the amount of traffic on the Umballa to Simla road. The *Money Order* system still remains in great favour with the public. The difference between the Budget and Actuals under *Bullock Train collections* is due to the amount being shown gross in the former, while in the latter the payments to the North-West State Railway for carriage of packages has been deducted. The head *Other receipts* includes this year a gain of 5.3 on Continental and Colonial money orders. The improvement in *district Post collections* in the Punjab arises partly from the extension of the mail cart service in the Dera Ismail Khan district, and partly to the transfer of the management of the line in the Bannu district from a contractor to the local District Board.

Section C.—POST OFFICE, TELEGRAPH, AND MINT—*continued.*

Indian Telegraph.

57. Compared with the actuals of 1887-88 the revenue in 1888-89 shows a falling off of 30.0. This is due chiefly to the receipts in the former year having been abnormally large from State messages owing to the Military operations in Upper Burma, and from the interest on Railway lines and from rent of instruments and appliances.

58. The actuals of 1888-89 exceed the Budget Estimate of the year by 33.8 and the Revised Estimate by 12.1. At the time the Budget Estimate was prepared, a great falling off in the revenue from the State Traffic with, and in, Burma was anticipated. As the year progressed, however, it became evident that a general improvement of revenue had set in, and the Revised was accepted for an increase of 21.7 over the Budget, but the Revised also has proved too low. The improvement is caused by extending the number of combined Post and Telegraph Offices, and by the Military expeditions undertaken during the year. There happened also to be an increase in the amount in balance belonging to other administrations.

Indo-European Telegraph.

59. The receipts in 1888-89 show an increase of 5.2 over those of 1887-88, when the revenue was exceptionally low on account of the interruption in the line between Emden and Lowestoft.

60. The increase over the Budget is attributed to an expansion of traffic in India and to a larger employment of the Indo-European route, mainly owing to interruption of communication by the Eastern Company's cables between Bombay and Aden in August and September 1888.

61. The decrease in the actuals, as compared with the Revised Estimate, is due to the revenue being somewhat over-estimated and to fluctuation of traffic.

Exchange.

62. The increase in Gain by Exchange is produced chiefly by increased receipts in England on account of the Indo-European Telegraph, and partly to the fall in the rate of Exchange.

XV.—Mint.

1887-88. Accounts.		Budget.	1888-89. Revised.	Accounts.
149.8	Seignorage on Silver	130.0	137.2	138.9
1	Doitto on Gold	1	1	2
90.3	Gain on Copper coinage	50.0	65.0	63.7
Other receipts—				
7.6	Calcutta	4.8	5.9	6.0
3.7	Bombay	5.0	7.6	12.3
251.5	TOTAL	189.9	215.8	221.1
...	England	...	...	...
251.5	GRAND TOTAL	189.9	215.8	221.1

63. The amount of *Seignorage on Silver* depends upon the quantity of the metal tendered for coinage as noted below, and considering the uncertain character of the circumstances which influence the importation of silver, the estimates appear to have been fairly followed by the actuals. The *Gain on Copper Coinage* accrues on the amount of the coin passed into circulation during the year. In 1888-89 the price of copper was very high owing to the action of a French Syndicate, and the coinage was therefore restricted to immediate requirements. This led to smaller issues from the Depôts and consequently to lower gain than in 1887-88. The excess over budget under *Other receipts* in Calcutta, is ascribed to enhanced demands for coin from Ceylon and the Straits Settlements, and in Bombay, chiefly to a change of system by which recoveries from dross and gain on coinage operations are now adjusted monthly instead of at irregular intervals. This increase, however, is to a considerable extent counterbalanced by a corresponding excess on the charge side as noticed under the head "17 Mint." The importation of silver in recent years has been as follows:—

	Net Importation.	Silver Coinage.	Seignorage.
1881-82	5,379.0	2,186.3	43.4
1882-83	7,480.6	6,427.4	108.9

64 The increased cost of the *Chief Office, Calcutta*, is due mainly to privilege leave arrangements and to the employment of an additional Superintendent in the Director General's Office. The excess caused by these two items amounts to 8 and 5, respectively, and a further sum of 3 was spent on account of additional establishment in the Comptroller's department. The budget for *Presidency and District offices* provided for a large revision of establishment, and for alteration of the system of railway sorting, but both these measures were carried out at a smaller cost than was expected, the saving in each case being 7,6 and 8,1. Some savings also accrued from alterations in the rules for travelling allowances which are granted at a lower rate. As regards the *Conveyance of Mails*, the budget for *Road establishment* included 2,0 and 1,3 which in the actuals have been properly classified under mail cart establishment and charges and other charges. Besides these nominal abatements, a real saving of 2,1 was obtained by abolishing some lines and introducing economies in others. The excess in *payments to State Railways* is about equally divided between the North Western State Railway for haulage, and the Burma State Railway for three additional vans. The head *mail cart establishment and charges* includes the 2,0 mentioned above as having been estimated under the head *Road establishment*, but the effect of this addition is neutralised by a corresponding saving in other items. Of the increase under *Railway charges* about 2,3 is due to the experiment which was tried for accelerating the mails to England, and about the

Section C.—POST OFFICE, TELEGRAPH, AND MINT—*continued.*

same sum was paid on account of haulage, rent and interest in excess of the budget provision. About 1,5 was paid on account of arrears of 1887-88 not drawn in that year. The excess in *subsidies* is caused by sums due to the Tigris and Euphrates Company in 1887-88, but not drawn in that year. The head *other charges* includes the sum of 1,3 mentioned above as having been entered in the budget under Road establishment. Besides this sum the bills of the British India Steam Navigation Company for conveying mails to Burma and the Coast amounted to 2,4 more than was contemplated in the budget, and there was also an excess of 3 in rainy season charges.

65. As regards the *District Post*, the India charges are gradually diminished as railway communication is extended in Biluchistan. The rise in Bengal is covered by an increase in the District Post cess as noticed under the head VI Provincial Rates. In the North Western Provinces and Oudh some of the establishments were revised during the year. In the Punjab the increase is due to the changes noted under the head XIII—Post Office.

66. In *England* the reduced payments to English Post Offices are connected with a re-arrangement of the transit rates in France and Italy, owing to which the credit to India for sea-postage was increased, and the net charge reduced.

Section C.—POST OFFICE, TELEGRAPH, AND MINT—*concluded.*

Indian Telegraph.

IMPERIAL.

67. The actual expenditure in 1888-89 is 76,0, less than that of 1887-88, the reduction being the result of contracted operations in Upper Burma.

68. The decrease, as compared with the Budget Estimate, in the English expenditure, is due to a smaller purchase of stores in England than was anticipated. The India Budget was too low, and the India revised too high.

Indo-European Telegraph.

69. The expenditure in 1888-89 followed closely the actuals of 1887-88 and the Budget. The Revised Estimate was too high.

EXCHANGE.

70. The diminished charges on account of Exchange, as compared with those in the previous year, and the Budget and Revised Estimates, are due chiefly to a smaller outlay in England, partly counterbalanced by the fall in the value of silver.

71. The *establishments* in Calcutta were not maintained at their full strength as the coinage was restricted. The *loss of weight in coinage* was high in Calcutta owing to the recoinage of Burmese and shroff-marked rupees, and in Bombay a change was introduced in the method of adjusting loss on coinage, whereby charges were brought into the accounts of 1888-89 which, otherwise, would not have been settled till the following year. *Other Charges* were small in Calcutta as the demand for stores was reduced consequent upon the restricted coinage. The charge in Bombay includes arrear payments on account of 1887-88 as noted in last year's report.

72. In *England* the stores supplied to Bombay involved heavier expenditure than was indicated in the Estimates sent from India.

1887-88. Accounts.	RECEIPTS	Budget.	1888-89. Revised.	Accounts.
1,495.7		1,424.0	1,480.5	1,507.9

73. There is nothing special to note regarding the receipts of 1888-89 as compared with those of the previous year. As compared with the Budget, they shew that the heads Law and Justice—Courts of Law and Police were under-estimated, and that in the Marine Department a larger number of vessels were sold than was contemplated in the Budget.

74. The excess in India under *Sale-proceeds of unclaimed and escheated property* consists of lapsed estates received from the Administrator General, Bengal. The rise in *General Fees, Fines and Forfeitures* is ascribed in Bengal to the large commission realised by the Receiver of the High Court, Calcutta, and in the other Provinces except Punjab, to larger Magisterial fines, but in Madras part of the increase was derived from the translation fees realised in the High Court. As regards Burma, the increase indicates that the country is gradually settling down, and the ordinary action of the Courts coming more into play. In the Punjab the increase consists mainly of Jirga fines, Political fines of the Black Mountain expedition, and fines realised under the Frontier Crimes Regulation Act of 1887. Assam exhibits a decline under this head, owing, it is alleged, to a decrease in crime and to better behaviour on the part of the Nagas.

75. The India budget for other receipts was exceeded owing to the number of prisoners received from Native States which paid for their expenses. The budget for Port Blair and Nicobars was too low, and did not provide sufficiently for the sale proceeds of stores. The Central Provinces budget was too high, in addition to which the business done in tents in the Jubbulpore School of Industry fell off during the year, and the transfer credit formerly taken for the value of printing executed by Jail Presses for other departments has now been discontinued. In Burma the prisoners were employed more on extramural labour than on manufactures, but the latter were being introduced into the prisons of Upper Burma. The Assam budget was framed low owing to the cessation of work on the Cherra Companyganj State Railway, but a demand for convict labour and products sprang up during the year. In Bengal the Commissariat and Opium Departments took larger supplies from the Jails than was anticipated. In the North-Western Provinces and Oudh the decline under Sale-proceeds of Jail manufactures is due partly to diminished sales, and partly to the budget having taken credit for the raw material required for prisoners' clothing and bedding, which is not allowed in the Actuals. The increase in other receipts is connected with the employment of convicts on the new Central Jail at Bareilly. The Madras revenue has drooped during the last few years, but it seems now to be recovering, and in Bombay the receipts were checked by the appearance of cholera in some district jails which interfered with the employment of the prisoners.

(a) Included under the head "Police supplied to Public Departments."

Section D.—RECEIPTS BY CIVIL DEPARTMENTS—continued.

XVII.—Police—continued.

76. The India estimates under *Police supplied to Railways* represent the amount payable to Government on account of Railway Police, but in the actuals this recovery has been deducted from expenditure, according to the new classification. The head *Police supplied to Municipal Funds* includes in the North-Western Provinces and Oudh arrears on account of 1887-88, and in Madras certain Mopilla fines not anticipated in the Budget. The receipts under *Police supplied to Public Departments, &c.*, were high in the Central Provinces and Bengal, owing to recoveries in connection with the unopened portion of the Bengal Nagpur Railway. The Burma Budget was too low, and in the Punjab the full amount due from the Jhelum Municipality was not received during the year. In Madras the estimates for the head *Presidency Police* were distributed under the other heads, and the Bombay actuals include special sums realised from the Port Trust on account of repairs to the *Czarewitch*, and the increased contribution on a revision of establishment on the opening of the new Victoria Dock. As explained in the last report, the large Bengal credit in 1887-88 under *Fees and Fines, &c.*, was due to high rents obtained for pounds, and though these rents declined in 1888-89, the result was much better than expected. In Bombay, additional cattle pounds were formed during the year as explained in para. 91, and enhanced rates levied for inspecting steam boilers. The increase under *Other receipts* is ascribed in Burma to unforeseen recoveries, and in Bengal to assessments made under Bengal Act V of 1887 for regulating the rural police in Chota Nagpore. In Upper Burma large sums were received in connection with the Punitive Police and as contributions from Municipal and Cantonment Funds.

77. The Pilotage receipts fluctuate with the tonnage of the ships visiting the Port, and in Bengal this tonnage was less in 1888-89 than in 1887-88. In Madras these receipts are now credited to the Port Fund. The increase in Dockyard Services arises from larger supplies than was expected having been made to vessels of the Royal Navy and other Departments, and in Sale proceeds of Vessels and Stores partly from the vessels and stores fetching higher prices than was contemplated at the time of framing the Budget, and partly also from two additional vessels having been sold during the year which it was not intended to sell when the Budget was prepared. The Registration Fees were unusually large in Burma in 1888-89, while the Coast Light Dues declined owing to the smaller arrival of ships.

78. The important differences here are in Bengal, the North Western Provinces and Oudh, the Punjab Madras and Bombay. As regards *Bengal* the increase in fees and fines is real, but under "Other Receipts" it consists of adjustments made with District Boards on account of charges paid in previous years. In the *North-Western Provinces and Oudh* an enhanced scale of fees was introduced in 1888-89. The small amount realised in the *Punjab* is ascribed to the agent not having paid within the year the amount due from him on account of sales of books belonging to the late Book Depot. The *Madras* budget was too low, a larger abatement having been made on account of schools transferred to local agencies than is justified by the result. *Bombay* erred in the opposite direction, sufficient allowance not having been made for such transfers.

79. Considering the uncertain character of these receipts, the foregoing figures present no more than the ordinary fluctuations, except in the *Punjab* where a considerable discrepancy is apparent between budget and actuals under the head Lunatic Asylum Receipts. This comes from a change of classification, whereby the recoveries from District Boards for the maintenance of lunatics are no longer credited to this head, but are set off against the expenditure in a debt account. See corresponding reduction under the charge head, 24—Medical.

	Accounts	1888-89	1.2	5	1.7							73.5

80. The Bengal receipts on account of experimental cultivation represent the sale-proceeds of farm produce not anticipated in the Budget. As regards *Cinchona plantations* the Bengal recoveries were especially large in 1887-88 as noted in the report of that year. The Madras Budget was framed high as no sales were effected in 1887-88, and it was expected that large quantities would be placed in the market during 1888-89. It was decided, however, not to tender any of the crude bark, and as the machinery and chemicals required for the prepared febrifuge did not arrive from England, there were practically no sales in this year. The Punjab Budget for receipts on account of public Exhibitions and Fairs was too low. The small sum entered in India on account of the *Mathematical Instrument Factory* is due to a change in the accounts, since these receipts are now deducted from the expenditure and not credited gross as was formerly done. The increase in Madras under *Other Miscellaneous Receipts* is derived from examinations for the public service.

Section D.—SALARIES AND EXPENSES OF CIVIL DEPARTMENTS.

1887-88. Accounts.	Budget.	1888-89. Revised.	Accounts.
12,906,4	13,098,3	13,038,0	13,013,6

81. The fluctuations in this group are largely due to charges on account of *Upper Burma* which shew an increase of 95,6 since 1887-88. This increase is in Courts of Law (10,7), in Jails (9,1), and in Police (85,9), counterbalanced by 5,1 and 5,0 respectively in Administration and Medical. The accounts shew further that reductions were effected during 1888-89 in the salaries, contingencies, and Store Department of the India Office. Full effect was given to the new contracts with the Presidency Banks by which the allowances for management of the Public Debt are reduced. In Bengal additions have been made to the number of Subordinate Judges and Munsiffs.

82. The excess in Bengal in 1887-88 on account of *salaries of Governor General, &c.*, is due to a portion of the salary of the Chief Commissioner of Burma having been paid in that Province. The reduced charge in India for *Staff and Household* consists of savings in telegrams and hill journey charges. The payment under this head in Assam represents the salary of the Personal Assistant to the Chief Commissioner and was entered in the budget under 3—Land Revenue and 19 A—Law and Justice, as that was the classification at the time. In the India Budget for *Legislative Council* provision was made for the full number of members, but no member was appointed for Madras, while the member for the North Western Provinces was on special duty in Bombay for a part of the time, and the Punjab member arrived late. The excess under *Military Secretary to the Viceroy* is in hill journey charges and telegrams.

83. As regards the *Secretariats*, the charges relating to the Government of India are particularised in the following figures, from which it will be seen that the Financial Department spent about 1,5 more than its budget grant owing to the appointment of a Deputy Secretary and the employment of a junior officer on special duty. The Revenue Department presents an excess of 1,1 on account of acting arrangements and the employment of a special officer on deputation in Burma and Assam. The saving of 1,4 in the Public Works Department occurs almost entirely under Salaries, owing to the absence of some of the higher officers on leave. The charge in Burma now represents the amalgamated Secretariat for the whole Province, the budget having been exceeded chiefly in the cost of telegrams. The expenditure in Bengal includes the salaries of the officers employed on the "Statistical account of Bengal" and on enquiries into the excise systems of Madras and Bombay.

1887-88. Accounts.	Secretariat (India).	Budget.	1888-89. Revised.	Accounts.
31,3	Financial Department	31,6	33,4	33,1
22,3	Home Department	21,7	21,8	22,2
42,3	Foreign Department	40,4	41,5	40,9
18,1	Revenue and Agriculture	18,6	19,7	19,7
7	Translator's Department	7	7	7
28,7	Public Works Department	30,2	27,7	28,8
143,4	TOTAL	143,2	144,8	145,4

84. The *Tour charges* in India fell short of the budget owing apparently to the Viceroy's tours having been curtailed, while in the North-Western Provinces and Oudh the tours were more extended than was contemplated in the budget.

Section D.—SALARIES AND EXPENSES OF CIVIL DEPARTMENTS—continued.

85. The new charge in Burma on account of *Board of Revenue and Financial Commissioner* is occasioned by the appointment of a Financial Commissioner for that Province with effect from 1st June 1888. The fluctuations under *Commissioners* in the Central Provinces, Bengal, and the North-Western Provinces and Oudh arise from absences on leave or deputation. In Bengal the difference is also due in part to the temporary appointment of an Additional Commissioner in Patna.

86. The saving in the India *Account Officers* accrued in the Comptroller and Auditor General's Department, from which one officer was deputed to officiate in a leave vacancy at Madras, another at Bombay, and a third in the Paper Currency Office. He also employed temporary establishments to a smaller extent than was anticipated. The increase in Burma was caused by the appointment of an additional officer and clerks to the Comptroller's Office consequent on the annexation of Upper Burma. The Accounts Office at Lahore had not its full complement of officers throughout the year. The fluctuations in Bombay are attributable to changes in the Gazetted staff. The decrease in the *allowance to Presidency Banks* is due to the new contracts having come fully into operation during 1888-89.

87. The great increase in Bengal on account of *General Establishment of Local Fund Offices* arises out of a change in the accounts, whereby the establishments entertained by District Boards are now included in this head, instead of being distributed under Education, Pounds, Ferries, &c. In Madras the number of Panchayats and Unions was increased during the year. The *Upper Burma charges* have diminished as compared with 1887-88, owing chiefly to the amalgamation of the Secretariats as noted above, but there have also been savings in the Grant for Commissioners. The Budget made no provision for the audit of District Fund accounts, in addition to which the actuals shew excess expenditure on account of acting arrangements resulting from privilege leave vacancies, and for postage and telegrams. The reduction in *Other charges*, India, as compared with 1887-88 ensues from the present practice of charging rents, rates and taxes against the several departments for which they are paid.

88. In *England* there were decreases of 1.5 in salaries, 1.9 in charges of the store department, 4 in law charges, 2.0 in telegrams and 1.6 in office contingencies, while 1.5 more than the budget was spent on the management of Debt, and 1.6 on account of the administration in India owing to the Member of the Royal Commission on gold and silver, deputed from this country, being detained in England longer than had been anticipated. The estimate for Currency Notes, which was framed on the average of previous years, proved too high.

89. The fluctuation under *High Courts* is largely due to the absence of officers on leave, but in Burma the new appointment of Registrar was not filled up, and in the Punjab and Madras the Additional Judge was engaged for a longer period than was contemplated in the budget. The new charge in the Central Provinces under *Law Officers* refers to the recently created office of Government Pleader. The Assam budget was too high, while in Bengal the actuals are high owing to additional allowances drawn in privilege leave vacancies, and to larger fees than were expected having been granted to Counsel in criminal cases. The high charge in Madras is caused by the transfer to this head of Pleaders' fees which were formerly treated as district contingencies, and partly to some important cases which arose during the year and which necessitated the payment of special fees. The large payment in Bombay is due to the prosecution of Jāghirdār Haumantrao, and the refund to Mr. Wilson of his expenses in connection with the charges brought against him by the Dewan of Cambay. The rise in Bengal on account of *Civil and Sessions Courts* is due to the appointment of additional Subordinate Judges and Munsiffs since 1887-88, to increased outlay on establishments for serving processes, and on supplies and services and contingencies. The North-Western Provinces budget was too low, and an extra Judge was appointed at Ghazipur. The saving in the Punjab is composed of numerous items, and in Bombay it is effected in contingencies and process serving. As regards *Criminal Courts* the small amount charged in the Central Provinces is ascribed to the reduced scale of diet money now granted to witnesses in criminal cases. In Burma the establishments have been revised and the budget was raised to provide for the additional cost, but the new scheme was introduced later than was expected. The fluctuations in the other Provinces are due to absences on leave, but in Bengal additional expenditure was incurred for Deputy Magistrates' establishments, and in Madras the budget allowed for a revision of establishments, but it was not carried out. The *Upper Burma charges* fell short of the budget owing to delay in giving effect to the reorganisation mentioned above. In *England* the budget provided for the outfit allowance of three Judges whereas no Judge came to India in the year.

Section D.—SALARIES AND EXPENSES OF CIVIL DEPARTMENTS—continued.

90. The saving under *Jail Manufactures* in the Central Provinces, as compared with the Budget, is due to curtailed expenditure on raw materials in the Jubbulpore School of Industry consequent on a falling off in the demand for tents. The increased expenditure in Bengal is counterbalanced by increased receipts as noted in para. 75. The Madras budget was too high. The saving in *other Jail charges*, India, is made up of numerous small items. The large expenditure in the Central Provinces is ascribed (1) to increase in the number of prisoners, (2) to improved dietary of short-term men, and (3) to high prices of grain. The excess in Burma is largely due to transport charges, the District Jails not affording sufficient accommodation, as well as to large demands for rations, hospital expenses and petty construction and repairs. The expenditure was over-estimated in Assam. The increase in Bengal was in rations and clothing, and in the North-Western Provinces and Oudh in rations. In the Punjab the budget was exceeded in consequence (1) of an increase in the Jail population, (2) of the high prices of food-grains which prevailed in the Province, and (3) of the erection of a new Central Jail at Mooltan. The Madras saving occurred in the cost of rations, owing, it is reported, to more careful supervision over the expenditure, but this saving was partly counterbalanced by increased expenditure for clothing and bedding. The Bombay increase is spread over many items, supplies and services being the chief. The India Budget for *Convict charges at Port Blair and Nicobars* was too low and did not provide sufficiently for stores. A part of this increase is met by improved receipts as noted in para. 75. The head *Other charges* in India includes the cost of Indian convicts in the Straits. The rise in *Upper Burma charges* consists of rations and other charges, a larger number of convicts having been admitted into jail than was provided for in the Budget.

(a) Included under District Executive Forces.

Section D.—SALARIES AND EXPENSES OF CIVIL DEPARTMENTS—continued.

91. The charge for *superintendence* was raised during the year in the Central Provinces and in the North-Western Provinces and Oudh owing to the formation of a special branch in the office of the Inspector General. There was also an increase in Burma where one Inspector General was appointed for the whole country, the officer holding that appointment in Upper Burma, together with his Deputy, having been transferred to Rangoon. The head *District Executive Force* shews savings on the Budget in all Provinces except Bengal, where extra expenditure was incurred on account of privilege leave vacancies and for additional police entertained in Darjeeling and Julpaiguri. The saving in India has accrued from reductions in the strength of the Quetta Police and smaller payments as compensation for dearness of provisions. In the Central Provinces the full complement of Chief and Head Constables and Mounted Police was not maintained, and economies were effected in the cost of clothing and other fluctuating items. The Burma saving is spread over all the classes of charges comprised in this head and resulted no doubt from the quieter condition of the country. The North-Western Provinces saving is in the grant for clothing. The Punjab and Madras budgets were too high, while in Bombay the decline is almost wholly due to stoppage of recruiting. As regards the *Government Railway Police* the India charge is a net sum, a recovery of 6.5 having been deducted from it, instead of being credited to XVII—Police as was the former practice. The excess in India has occurred on the Sindh-Pishin line, and in the Central Provinces on the Bengal Nagpur Railway. The provision in the Burma budget was not required. The increased expenditure for *Village Police* in Burma is due to larger payments on account of Headmen in 1888-89, while in Bombay there has been a change of classification by which local charges connected with village accountants are now placed under 3—Land Revenue, Allowances to District and Village Officers. The small charge for *Special Police* in Burma is ascribed to the abolition of the Burma levy in Tharawady, and to transfer of the grant for Police Barracks to the Public Works Department. The excess in Assam was spent mainly on arms and accoutrements, petty construction and repair and miscellaneous contingencies. The reduction in Bombay has occurred in Mahikantha, Palanpur and Rewakantha. The Madras and Bombay accounts shew that additional *Cattle Pounds* were established during the year, for which the refund of Pound receipts which had been wrongly treated as Provincial revenue in the preceding year. The budget for *Upper Burma Charges* proved inadequate as regards the cost of punitive and Village Police, and travelling and escort charges and rewards.

92. The decrease in *General Supervision and Accounts* is chiefly due to the absence on furlough of the Director of the Indian Marine and to economies in the office of the Examiner of Marine Accounts. The *Marine Survey* Department was revised after the budget was framed, with the result that the number of officers was reduced. The large saving in India on account of *Salaries and allowances* is attributed to the employment of a smaller number of officers afloat, and to the late arrival of the new torpedo boats whereby the grants sanctioned for them were only partially used. The saving in Bengal is due to the sale of the "Undaunted". The details of the head *Marine Stores and Coal* shew an actual extra expenditure of 7.2 owing to increased indents received from other Departments involving a large expenditure for stores, and to unexpected purchases of stores for vessels in Burma. On the other hand 3.0 was provided for coal and stores for the new torpedo boats, but it was eventually not required for the reasons stated above. The large expenditure in 1887-88 was caused by the operations in Burma as explained in the report of that year. The Burma expenditure was high in 1887-88 owing to the state of the country. In 1888-89 one of the Arrakan steamers was sold and the other discontinued working. In Bengal the demand for coal and stores diminished after the sale of the "Undaunted". The Budget in this Province for *Pilotage* was insufficient. The head *Other Charges* in India comprises (1) Miscellaneous shore establishments, (2) Purchase and hire of ships, and (3) Miscellaneous. As regards miscellaneous shore establishments the expenditure in 1888-89 exceeds that of 1887-88 by 2, and exceeds the budget by 6, chiefly on account of work done by the Agent for Government Consignments for other departments. The savings in purchase and hire of ships and in miscellaneous, amount to 29.3 and 5.5 as compared with 1887-88 and to 15.4 and 4.3 as compared with the budget, the reduction being due in both cases to the more settled state of the country in Burma. In Burma itself the charges for light-houses and light-ships exceeded by 1.4 and 2.8 the actuals of the preceding year and the budget, owing to repairs done to the light-vessel "Colombo" and to large supplies of stores and provisions. The main difference, however, is in a sum of 4.4 paid for steamer service on the Sittang River. The large outlay in Bengal comprises payments on account of a new pilot brig under construction in England. The Madras Budget made provision for a new steam launch which eventually was not required.

93. The excess in *England* arose from indents for the Eastern Division of the Indian Marine having been greater than the estimated requirements.

94. The *Bengal* figures are again incapable of analysis in the usual detail as the District Boards have not followed the authorized classification. This is unsatisfactory, as the necessity for carrying out the prescribed procedure was noticed in the report of last year and the expectation was entertained that the irregularity would not be repeated. As it is, the Bengal figures must be divided into Provincial and Local Expenditure, and this is done in the following statement. No satisfactory explanation is received regarding the discrepancies in the Local Accounts, but the Provincial Account has been affected by the following circumstances. The excess over Budget under *Inspection* is due to the appointment of two assistant Mahomedan Inspectors with establishment after the Budget was framed, and under *Scholarships* to unexpected arrear payments.

		PROVINCIAL ACCOUNT.							LOCAL ACCOUNT.

Section D.—SALARIES AND EXPENSES OF CIVIL DEPARTMENTS—continued.

95. As regards the other Provinces the charge in Assam for *Direction* is new and appears for the first time this year. It is due to the designation of Inspector of Schools in that Province having been changed to Director of Public Instruction from 1st January 1889, and the charge is counterbalanced by an abatement under *Inspection*. The saving under *Inspection* in the North-Western Provinces and Oudh has accrued from the retirement of an officer whose place was not filled up. The Madras budget provided for the revised scale of Inspectors, but effect was not given to it till late in the year. The *University* in the North-Western Provinces and Oudh is now treated in the accounts as a Local Fund, and hence there is no expenditure under this head. The Madras expenditure on *Government Colleges* now embraces the charges of the Teachers' College and the College of Agriculture formerly taken under *Government Schools*. The Madura College has been abolished with effect from 1st January 1889. As regards *Government Schools* the short charge in the Central Provinces is due to general savings, and in Burma to the abolition of the Normal School at Rangoon and other economies. The fluctuations in Bombay occur mainly under the heads Head Masters and Teachers, Grants to Municipal and Cantonment Schools and in the Local Expenditure. As regards *Grants-in-aid and Payments by results* the expenditure in Burma is more uncertain than in other Provinces owing to the state of the country. In the Punjab the building and miscellaneous grants were not fully drawn, and in Madras the schools were unable to take full advantage of the rules for result payments, as owing to a reorganisation of the Inspecting Agency, the necessary examinations could not be held. The Bombay expenditure was particularly small in 1887-88. Of the saving in 1888-89 about 3.9 occurs in the local grants, and the rest is largely nominal as it represents building grants provided for here but charged in the Public Works Department. Under *Scholarships*, the excess in Bengal comprises arrear payments. The Punjab and Bombay estimates were too high. The saving in *Other charges* in the Punjab is attributed mainly to the estimate for Technical Education not having been fully utilised. This head "Other charges" includes grants for the encouragement of Literature and to Book Societies, and charges of Book Depôts and Registration of Books, &c.

96. These charges vary according to the number of chaplains on leave out of India, and were particularly small this year in *India* and *Burma* owing to the absence on leave of the Bishop of Calcutta and the Bishop of Rangoon. The *Madras* charges were diminished by the temporary transfer to the *Bengal*

Section D.—SALARIES AND EXPENSES OF CIVIL DEPARTMENTS—continued.

establishment of an Assistant Chaplain of the Church of Scotland. The *English* budget made provision for six chaplains whereas eleven chaplains came out during the year.

97. The expenditure on *Medical Establishments* is necessarily fluctuating as it depends largely on the number of absentees and the standing of the officers actually on duty. In *Burma* this head is now debited with a portion of the allowances sanctioned for the Inspector General of Prisons and for the Secretary to that officer, as they are also in charge of the Civil Medical Administration of the Province. The North-Western Provinces budget was too high and the Bombay budget too low. The saving in Bombay under *Vaccine Establishments and Sanitary Commissioner* resulted from the retirement of the Sanitary Commissioner in the beginning of the year, and from his successor commencing on the minimum salary of the office. The Bengal Budget for *Medical Colleges and Schools* omitted to provide for the salary of the Ophthalmic Surgeon. The excess in this Province as compared with 1887-88 is due partly to the payment of arrear charges and partly to larger outlay on Supplies and Services and Contingencies. The Bengal Budget for *Government Hospitals and Dispensaries* was inadequate. The excess in the North-Western Provinces and Oudh is caused by the opening of new dispensaries. The Madras Budget was insufficient, especially in the Local Section. The Bombay saving is chiefly in grants to Hospitals and Dispensaries. The small expenditure in the Punjab on *Lunatic Asylums* arises out of a change in the accounts, whereby charges payable by District Boards are carried to a Debt head. This is explained under the head XX—Medical, where there is a corresponding reduction in the receipts. The saving in *Other Charges* in Madras accrues from the abolition of the Lock Hospital. The reduction in *Upper*

Section D.—SALARIES AND EXPENSES OF CIVIL DEPARTMENTS--continued.

Burma Charges has been effected by transferring the control of Medical Establishments in Upper Burma to the Inspector General at Rangoon. Towards the end of 1888-89 the Medical Establishments in Upper Burma were reorganised and this will involve some additional expenditure.

98. Of the saving in India under *Political Agents* 24 is derived from abolition of the Office of Superintendent of Political Pensions in Calcutta, and 30 from acting arrangements. The balance is made up chiefly of short payments to news-writers and for secret service. The excess in *Charges on the North-West Frontier* in the Punjab consists of increased outlay for Jezailchi corps and for great-coats supplied to the Khyber Rifles. The payments in 1888-89 on account of *Political Subsidies* include the amounts short

Section D.—SALARIES AND EXPENSES OF CIVIL DEPARTMENTS—continued.

drawn by the Amir of Afghanistan in the preceding year, as noticed in the last report. There is nothing special to record in connection with the heads *Entertainment of Envoys and Chiefs and Durbar Presents and Allowances to Vakeels*, which are of a fluctuating character, the expenditure being regulated according to circumstances. The India estimates for *Refugees and State prisoners* were too high. The excess in *Upper Burma charges*, as compared with the Budget, is due to charges connected with the Shan, Mongong, and Chin expeditions. The pay of the Superintendent, Southern Shan States, has been increased, and a Superintendent with establishment appointed for the Northern Shan States; an Additional Assistant Commissioner and Myooks have also been appointed. The expenditure grouped under the head *Other Charges* relates to the various Political Missions on the Frontier, the charges for the Merwara Battalion in Ajmere, the Toll Establishment at the Khyber Pass and rewards for political services. It also includes charges against the Revenues of Berbera and Zaila on the Somali Coast, and the cost of special political arrangements. These latter are always variable and difficult to estimate, and in 1888-89 the excess in India is made up chiefly of two items, namely, 4.1 relating to the expenses of the Kabul Mission, and 13.1 paid in the Military Department in connection with political arrangements.

99. The head *Other Charges* in England records the payment for English stores and various other items connected with the Indian political service. In 1833-89 the account includes a contribution of 2,500 rupees made towards the cost of a steamer for purposes of commercial navigation on the Upper Karun.

100. The amount entered against the *Survey of India* is a net charge after deducting the share of the gross expenditure payable by Provincial Governments. This share was greater than was anticipated in the budget and hence the apparent saving. The saving in *Geological Survey and Museum* is due largely to leave arrangements in the higher grades, and to the appointment of Artist not having been filled. The abolition of a fixed travelling allowance to the Director, and of conveyance allowance to Assistant Superintendents appointed after June 1887, has also contributed to this result. The actuals under *Meteorological Department* are low mainly in consequence of smaller payments to observers. The head *Other Scientific Departments* represents donations to Scientific Societies, &c., and the Madras Expenditure embraces a grant of 4.6 for the Victoria Technical Institute. In Bengal the head *Experimental Cultivation* includes the cost of experiments in silk, and of establishing an experimental farm in Burdwan for agricultural purposes. The head *Other Agricultural Charges* shows the cost of Veterinary Colleges and Schools and of the Establishments for prevention of cattle disease. The Assam Budget for *Emigration* was high. *Other Statistical Charges* comprise expenditure for registration of Railway, River and Road-borne Traffic and similar items. As regards the head *Miscellaneous*, it shows the charges for the Board of Examiners at Calcutta and the payments for various Civil Service Examinations. The Punjab account includes the expenses of the Jhajjar Fuel and Fodder Reserves, an incorporated Local Fund, for which no provision existed in the Budget. The increase in Madras is almost entirely in the remuneration granted to Examiners of the Minor Civil Service Examinations, and is counterbalanced by additional receipts as credited under the head XXI—Scientific and Other Minor Departments. The Bombay charge is composed almost entirely of payments for the Reporter on the Native Press.

Section E.—MISCELLANEOUS.

1887-88. Accounts.		Budget.	1888-89. Revised.	Accounts.
1,606,1	RECEIPTS	1,166,2	1,796,5	1,792,8

101. The leading feature in this section is the large receipt under *Exchange* which shews a gain in excess of the Budget of 536.5 of which 301.7 arose out of transactions connected with subsidized Railway Companies and the Mysore Railway, and was excluded from the Budget pending orders. In addition to these special items, the gain by exchange on railway transactions exceeded expectations, owing partly to large withdrawals by the Companies and partly to the fall in the value of the rupee.

XXII.—Receipts in aid of Superannuation, Retired and Compassionate Allowances.

102. *Subscriptions to the Military, Military Orphan and Medical Retiring Funds* are declining with the retirement of old subscribers, since their places are not filled with new admissions. The India estimate for *Appropriation from the Capital account of the Military Orphan Fund* was a mistake, as the amount

Section E.—MISCELLANEOUS—continued.

available was exhausted in 1887-88 except the small sum now credited. The next head requiring attention is *Contributions for Pensions and Gratuities* which shews a large excess. This excess represents the contribution now levied for the first time in respect of the British Officers employed in the Hyderabad Assigned Districts. In the Central Provinces recoveries were made on account of officers lent to the Bengal-Nagpur and Indian Midland Railways, and in Madras on account of officers transferred from the Bellary-Kistna State Railway to the Southern Mahratta Railway Company. These recoveries were not anticipated when the Budget was framed.

103. In *England* there were exceptional receipts this year in consequence of the investment of certain Trust funds. There were also small increases in the subscriptions realised on account of the various Service Funds in India.

104. The receipts from sale of Stationery were large in Bengal, owing to increased supplies made to State Railways. They are very fluctuating in the North-Western Provinces and Oudh, where they were particularly low in 1888-89. The Punjab receipts have diminished as the North-Western Railway no longer indents upon the Stationery Department. The sale of Gazettes and other publications in India and Bengal was increased by a demand for the publication "Digest of Indian Law" and for Law Reports. The shrinkage in other press receipts was caused in Bengal by the stoppage of supplies to District Boards. The Punjab credit in 1887-88 was large in consequence of a misclassification as explained in the report of that year.

XXIV.—Exchange.

+744,5	Total (gain + loss—)	+415,0	+951,8	+951,5

105. In paragraph 103 of the report for 1885-86, it was explained in detail how the gains and losses arise on the various transactions included in the foregoing statement, and the information was repeated in a condensed form in paragraph 122 of the report for 1886-87. All that need be stated here is that the results produced in this account depend first upon the sterling amount of the transactions with which the exchange is connected, and second upon the average rate at which Her Majesty's Secretary of State in Council is able to sell his bills on India.

106. The actual gain in 1888-89 exceeds the Budget by 536,5 which comprises 31,0 realized on transactions with Guaranteed Railways and 527,3 with Subsidized Railways, counterbalanced by a loss of 21,8 on other accounts. The improvement under Guaranteed Railways is due to increased credits for Revenue Stores as stated in paragraph 255. Of the improvement connected with Subsidized Railways 240,5 is derived from capital issues to the Companies in England, for which no provision was made

Section E.—MISCELLANEOUS—continued.

XXIV.—Exchange—concluded.

in the Budget, as the question whether this gain should be treated as current Revenue was then under the consideration of the Secretary of State. A further gain of 61.2 arising out of transactions of the Mysore Railway was also omitted from the Budget pending orders of the Secretary of State. The balance (225.6) of the gain relating to Subsidized Railways arose, partly from the net withdrawals by the Companies having exceeded the limits assumed in the Budget, and partly from the rate of exchange having been over half a penny lower than was estimated. The loss of 21.8 is made up of 10.6 on advances to the East India Railway Company, 2.6 on advances for the Rajputana-Malwa Railway and 8.6 on Miscellaneous Accounts. These Railway losses are attributable to the decline in exchange, enhanced in the case of the East India Railway by the increased amount of advances. The loss of 8.6 on Miscellaneous Accounts is due chiefly to large purchases of stores in England for the Patiala-Bhatinda and Kathiawar Railways.

Section E.—MISCELLANEOUS—continued.

XXV.—Miscellaneous—continued.

* 107. All the items in this group are more or less of a fluctuating character, and hence it is necessary only to notice the most striking differences. In connection with the head *Gain by exchange on transactions in India*, it is reported that towards the end of the year the rate for Hali Sicca rupees in Hyderabad, Deccan, fell from 120-4, and 119-12, to 114-12, per 100 Government rupees. In Bengal and the North-Western Provinces and Oudh the amount of *Unclaimed deposits* lapsing to Government was unusually great, and in the former province a larger sum than expected was realised on account of survey of tea and arable lands and partition fees, and credited under *Miscellaneous fees, fines and forfeitures*. The head of *Contributions* represents sums received on various accounts from Municipalities and Excluded Local Funds. The amount in 1888-89 was low in the North-Western Provinces and Oudh, as the Lucknow Municipality was released from payment till March 1891 and the sum due from Meerut was reduced. The increase under *Rents* consists in Burma of bazaar rents, and in Madras of adjustments on account of certain endowments in the Tanjore district. The *Extraordinary items* in the North-Western Provinces and Oudh were sale proceeds of gold mohurs presented by the Nawab of Rampur. In Bombay, about half the amount represents the value of Government buildings transferred to the Bombay, Baroda and Central India Railway Company, the balance being the sale proceeds of Government Promissory Notes belonging to Local Boards and similar authorities. In Bengal the head *Other items* includes large recoveries on account of insurance on State Railway Stores, and the local revenue was larger than anticipated. The Punjab budget was too high. The increase in Madras is partly in the receipts relating to the Village Service Fund, and partly in recoveries connected with service inams in the Kurnool district. The budget for *Upper Burma receipts* was quite insufficient, but when it was framed little reliable information was available.

108. The account in *England* includes 7 in respect of damage to stores during shipment and in transit to India; and the receipts under several other heads exceeded the budget.

Section E.—MISCELLANEOUS.

4,761,1	EXPENDITURE	4,857,9	4,895,9
			4,884,3

109. In this section there is a large increase in Superannuation and Retired Allowances which continue to grow rapidly. The Territorial and Political Pensions have diminished since the death of the ex-King of Oudh, and the charges for stationery are small this year owing to the reduced indents sent from this country to the Secretary of State.

27.—Territorial and Political Pensions.

	Revised	21,2	0,0	31,1							540,9
	Accounts . 1887-88.	18,3	8,5	26,8							543,7

110. The decline in India under *Territorial and Political Pensions* is due to the death of the late Ex-King of Oudh. Allowances have been granted to various members of his family, but many of them are drawn in other Provinces, and especially in Bengal, where the payments have consequently increased. From Bengal, on the other hand, some Nizamut pensions have been transferred to Bombay which explains the increase in that Presidency. The reduction in Madras is ascribed to commutations granted chiefly in connection with the Carnatic and Mysore stipends.

111. The excess in *England* is owing to advances made for the benefit of the eldest son of the Maharajah Dhulip Singh, as well as to an addition to a Nizamut pension with payment of arrears.

28.—Civil Furlough and Absentee Allowances.

1887-88, Accounts.	Budget.	1888-89, Revised.	Accounts.
1,3	India	5	7,7
1	Burma	...	...
6	Bengal	1,5	7
3	North-Western Provinces and Oudh	...	...
..	Madras	1	1
3	Bombay	1,0	2
2,6	TOTAL	3,1	8,7
215,5	England	217,0	214,0
90,6	Exchange	91,1	99,5
308,7	TOTAL INCLUDING ENGLAND	311,2	322,2
			318,4

112. The fluctuations in these figures are inseparable from the uncertain nature of the charges. There is nothing special to record except that the India Revised was raised to 7,7 to provide for payments to certain British Officers serving in Berar, but it was subsequently decided to charge such payments finally in the accounts of the Secretary of State.

	Accounts . 1887-88.	1,612,2	750,1	2,362,3							3,114,8

113. The charges under this head need to be examined in totals for the whole of India, as the provincial distribution is liable to disturbance by change of residence among the pensioners. The payments on account of *Superannuation and retired allowances* have exceeded the expenditure in 1886-87, and are still growing rapidly. The decline in *gratuities* flows out of the new pension rules, under which the maximum gratuity is limited to a sum equal to nine months' emoluments, instead of twelve, as formerly, and as regards pensions instead of gratuities are admissible for service extending from ten to fifteen years. As regards the other heads, the budget has been fairly well sustained, considering the uncertain character of the charges.

114. The saving in *England* is due to a decrease in several descriptions of pensions.

115. The actuals this year in Bengal have closely followed the Budget in the matter of *Purchase of Stationery*. The expenditure in 1887-88 was specially high as explained in the report of that year. The Punjab expenditure was high in 1888-89 owing to a larger number of settlements being in progress. In Madras a large stock was brought over from 1887-88 which diminished the quantity needed in 1888-89. The excess over Budget in Bombay is due to the increasing substitution of articles of local manufacture for European Stores. The India Budget for *Government presses* proved too low, chiefly because the cost of Type Foundries was greater than expected owing to development of this work to meet demands from other provinces. The Government presses in Burma were reorganised during the year with a view to meet the additional demands made upon them. The saving in the Punjab is in the grant for materials and stock and in the miscellaneous expenses of the Secretariat press. In Bombay the Superintendent of the Government Central Press was on leave for seven months of the year, and the allotments for establishment, contingencies and supplies and services were not fully needed. The cost of *Stationery supplied from Central Stores* fluctuates according to the necessities of the various departments, and the only points to be noticed in connection with it are, that some of the Punjab indents were not supplied within the year, and that the price of water-marked paper was lower than was contemplated in the Budget. The head *Other Charges* includes printing at private presses, lithography and refunds. The rise in Bengal is due to increased expenditure by District Boards. The Punjab Budget was too high as regards the grant for lithography.

116. The reduced expenditure in *England* is ascribed to smaller demands from India than were indicated in the estimates, owing partly to the stores having been obtained locally.

117. There is nothing special to note in connection with the first two heads, which are necessarily of a fluctuating character. The head *Charitable Donations* in Bengal includes a grant for the construction of a Zenana Hospital in Calcutta. The Madras Budget for *Rewards for the Destruction of Wild Animals* was again too high. The excess over Budget in the same Presidency on account of *Petty Provincial and Local Establishments* is in the local expenditure for sanitation and cleaning of wells and tanks. The actuals for *Special Commissions of Enquiry* comprise in India charges relating to the Jail and Public Service Commissions, and in Bombay the expenses of the Crawford Commission

Section E.—MISCELLANEOUS—continued.

and the Commission appointed to enquire into the working of the Dekkhan Agriculturists Relief Act. In 1887-88 the head *Rent, Rates and Taxes* in Bengal included all the payments made on this account, but in 1888-89 these charges have been debited to the various departments to which they severally relate. The India Budget was incomplete. The *Extraordinary Items* in Bombay represent sums drawn by Messrs. Thomas Cook & Sons in connection with the guarantee for the conveyance of pilgrims from India to Jedda. The excess in *Upper Burma Charges* is in rewards for proficiency in Oriental languages, in Upper Burma claims, in donations for charitable purposes, and in unforeseen expenditure. *Other Items* comprise refunds of lapsed deposits in excess of the credits of the year, and miscellaneous unforeseen charges which are not provided for within the regular classification. This head also includes the cost of books and publications of general utility not required by any particular department, and also ordinary charges of a charitable nature for food supply and shelter not forming part of organized measures for the relief of famine. The Bengal charge in 1887-88 included the write-off relating to the frauds in the late District Savings Bank in Chittagong. The Punjab and Madras Budgets provided a reserve of 10,0 and 15,0 respectively, which was not utilised.

118. In *England* additional expenditure was incurred as compared with the Budget for Insignia of the Order of the "Indian Empire," and for stores lost in transit to India.

Section F.—FAMINE RELIEF AND INSURANCE.

1887-88. Accounts.		Budget.	1888-89. Revised.	Accounts.
91,4	EXPENDITURE	73,2	82,9	78,3

119. Considerable changes have been introduced into this section of the account as explained in paragraph 124 of the report of 1886-87. It now includes expenditure under the two heads 33—Famine Relief and 35—Construction of Protective Irrigation Works, of which the charges were as follows:—

1887-88. Accounts.		Budget.	1888-89. Revised.	Accounts.
4	Famine Relief	5	10,2	7,8
91,0	Construction of Protective Irrigation Works	72,7	72,7	70,5
91,4	TOTAL	73,2	82,9	78,3

3	Central Provinces	...	...	...
...	Bengal	...	10,0	7,5
1	Madras	5	2	3
4	TOTAL	5	10,2	7,8

120. The charges in *Bengal* comprise 3,3 expended in the districts of Champaran, Mozufferpore, Durbhanga, Gya, Puri, and Patna for charitable relief, and 4,1 on relief works carried out through the Public Works Department. The amount charged in Madras is composed of certain irrecoverable advances made during the famine of 1876-78 and now written off.

" Revised Estimate	...	2,2

(a) Includes £285,400 outlay from funds not classed under this special head.

122. The decrease in 1888-89, as compared with the previous year, is due to the near completion of the Betwa and Swat river canals, which thereby needed less expenditure, and to the Buckingham Canal receiving no grant-in-aid. The estimates have been closely followed by the actuals.

36.—Reduction of Debt.

„ Budget Estimate		...		58,5
„ Revised Estimate		4,4		21,4

125. The decrease in the outlay of 1888-89, as compared with the previous year, is due to the practical completion of the Cherra-Companygunj and Lucknow-Sitapur-Seramau Railways in 1887-88, resulting in reduced expenditure during 1888-89. The decrease as compared with the Budget Estimate is due to the abolition of the ferry service on the Cherra-Companygunj Railway for which provision was made in the latter, to the construction of certain bridges provided for in the Budget of the Kaunia-Dhurla Railway having been deferred, and to a steamer having been sold and the proceeds deducted from charges. The extension of the Lucknow-Sitapur-Seramau Railway to Mailani was also not undertaken as was contemplated when the Budget Estimate was under consideration. The increase over the Revised Estimate ensued from the rates entered in the estimate for indents for English stores for the Lucknow-Sitapur-Seramau having been too low.

Section H.—RAILWAY.

126. The following is a general statement of the Revenue Accounts:—

1888-89.	State Railways.	Guaranteed Railways.	Subsidised Companies.	Miscellaneous.	TOTAL.
GROSS RECEIPTS	11,827,1	7,403,4	42,8	...	19,273,3
WORKING EXPENSES	5,822,6	3,752,6	...	...	9,575,2
Surplus Profits	236,7	570,2	...	...	806,9
Interest	4,548,3	3,959,1	...	...	8,507,4
Annuities	2,474,2	...	...	...	2,474,2
Land and Supervision	...	44,3	28,1	...	72,4
Miscellaneous Railway Expenditure	...	...	...	70,6	70,6
TOTAL EXPENDITURE	13,081,8	8,326,2	28,1	70,6	21,506,7

NET GAIN OR LOSS TO THE GOVERNMENT—

1888-89	—1,254,7	—922,8	+14,7	—70,6	—2,233,4
1887-88	—1,121,4	—930,4	—18,8	—51,8	—2,122,4
1886-87	—375,1	—675,6	—43,6	—94,4	—1,188,7
1885-86	+394,9	—983,3	—44,0	—99,3	—731,7
1884-85	+173,9	—1,043,3	—84,2	—97,6	—1,051,2

127. These figures show that the *State Railways* did worse than last year by 133,3 and the *Guaranteed Railways* better by 7,6. The deficiency in the former is caused to a great extent by increased charges on account of interest, and additional annuities connected with the purchase of Guaranteed lines, amounting to 379,9 and 5,1 respectively, plus exchange 238,4 together with an advance of 465,1 in working expenses including surplus profits. These figures give a total of 1,088,5 but the receipts have improved to the extent of 955,2 which leaves the net deficiency noted above. The other items do not call for special remark here.

128. The following sums are comprised in these receipts, particulars of them being given in the succeeding statements. As regards *State Railways* the Gross Earnings exceeded those of the previous year by 955.2 and the Budget and Revised Estimates by 86.2 and 86.7 respectively. The large increase over the actuals of 1887-88 is chiefly due to transactions of the Oudh and Rohilkhand Railway for the last three months of 1888-89 being included under this head, the line having been purchased by Government on 31st December 1888. There was also a large influx of traffic on the Rajputana-Malwa line in Cotton, Grain and Seed, on the North-Western Railway in Grain and material for Railway Construction, and on the Eastern Bengal Railway in Jute and passengers drawn to Fairs. The Revenue was also enlarged by the opening of the Tounghoo-Mandalay Extension, and by additions to the mileage of the Indian Midland, Bengal-Nagpur and Southern Mahratta Railways. The *Guaranteed* lines are 14.2 better than last year, and have worked up to the Revised Estimate very closely, but have considerably exceeded the Budget. The large increase over the latter appears chiefly on the Great Indian Peninsula Railway, and is caused by large receipts from carriage of Cotton and Wheat and of Railway Material for the Bengal-Nagpur and Indian Midland Railways. The differences under *Subsidised Companies* are due to fluctuations in interest charges produced by a varying capital and an alteration in the method of calculation:—

Section H.—RAILWAYS—RECEIPTS—*continued.*

129. In comparison with the actuals of 1887-88, the earnings during 1888-89 exhibit a falling off which is due to a variety of causes, amongst which may be enumerated the cessation of an abnormally heavy traffic in the previous year caused by scarcity in the North-Western Provinces, a decline in a long lead traffic of wheat and grains from Upper India, certain writes-back due to overcharges, and possibly a diversion of traffic consequent on the opening of the Indian Midland Railway. Contrasted with the Budget Estimate the earnings are short owing to the development of traffic anticipated when the Budget Estimate was framed not having been realised from causes mentioned above. The actual earnings approximate closely with the Revised Estimate, but chiefly in consequence of a decrease in outstanding earnings of 8,9 against an anticipated increase of 7,5, the actuals are better by 20,8.

130. The increase in the earnings, compared with the previous year, is due to the opening of the Dinagepore-Raigunj Section of the Assam Behar Railway, to improvement in 3rd class passenger traffic, and to a favourable jute season. The increase over the Budget Estimate is due to a larger jute traffic than was originally anticipated, and to greater receipts from Fairs on the Eastern Section developed by the passenger traffic on the Dinagepore-Raigunj and Dacca Sections. The actual earnings exceed the Revised Estimate by 13,8, and owing to a decrease of 6,8 in outstanding earnings which was not anticipated, the actuals are better by 20,6. The increase is due to the passenger and jute traffic having been more favourable towards the close of the year than was anticipated.

131. The earnings during 1888-89 have considerably exceeded the actuals of 1887-88, owing to larger quantities of cotton, grain and seeds carried over the line. During 1887-88 the transport of wheat and seeds for export fell off seriously in consequence of a deficient harvest in the Punjab, combined with a partial scarcity in districts traversed by the Railway; whereas during 1888-89 this traffic revived and proved to be unusually favourable. When the Budget Estimate was under consideration, there was nothing to indicate such an improved export traffic, and considering the comparatively low returns of the previous year, a moderate estimate was considered advisable. The improvement was not very marked when the Revised Estimate was under consideration, the traffic during the closing weeks of the year having become unusually high.

132. The large earnings, compared with the previous year, occur in both coaching and goods departments, and are attributable to additions to the open mileage as well as to improvement in wheat traffic and to increased conveyance of Railway materials. The real improvement from these causes is 356,5; but owing to the recovery of some outstanding arrears, the excess is shewn by the above figures to be 385,0. The coaching traffic fell short of budget expectations, but this was more than counterbalanced by the revenue from goods principally in the items of wheat and Railway material. The increase over the Revised Estimate is due to the traffic towards the close of the year having been better than was expected when that estimate was framed.

133. In 1887-88 the Oudh and Rohilkhand Railway was a guaranteed line, and the transactions for that year were recorded under the head XXVII—*Guaranteed Railways*. The line was taken over by Government from the Company on the 31st December 1888, and has been worked as a State line from 1st January 1889. The transactions recorded above, therefore, relate to the closing three months of the year 1888-89. The decrease in earnings, as compared with the Budget Estimate, is due to an over-estimate which was rectified when the Revised Estimate came under consideration.

Other State Railways—Imperial.

134. The increase in the earnings over 1887-88 is principally due to the opening of additional lengths of the Indian Midland, Bengal Nagpur and Southern Mahratta Railways and to the opening of the Tounghoo-Mandalay Railway. In the case of the Indian Midland the mean mileage open rose from 57 miles in 1887-88 to 157 miles in 1888-89, the Bengal Nagpur (including Katni-Umaria) from 186 miles to 213 miles, the Southern Mahratta (including Bellary-Kistna) from 792 miles to 855 miles. Apart from the increased open mileage, the traffic was better on the Wardha Coal, Nellore Branch of the Villupuram Guntakal, and Mysore State Railways and Umaria Colliery. The improvement on the Wardha Coal

Section H.—RAILWAYS—RECEIPTS—continued.

Railway arose from enhanced sales of coal, leading to increased receipts for freight, and for mileage and demurrage of stock running over foreign lines. The increase on the Nellore Branch is due to only three and a half months' transactions having appeared in the accounts for 1887-88 and on the Mysore Railway to the additional mileage opened on the 21st February 1888, and to an improvement in coaching traffic following a reduction in the rate for 3rd class passenger fares. The excess on the Umaria Colliery is due to larger output and larger sales of coal.

135. As compared with the Budget, the receipts of the Bengal-Nagpur and Southern Mahratta lines were short by 22,5 and 10 2, owing to the traffic having been smaller than was anticipated, but there was an improvement of 8,5 on the Wardha Coal Railway caused by larger sales of coal, and of 8,2 on the Indian Midland Railway by the entire main line, from Bhopal to Cawnpore, having been open from 1st January 1889, which was not expected when the Budget Estimate was framed. A decrease of 8,4 appears in the accounts of the Sindia Railway, but the traffic during 1887 was exceptionally good, whereas during 1888 it receded to its normal level.

136. Although the total difference between the actuals and revised is only 3,7, the separate differences comprised in it are even wider than those between the actuals and budget. The Bengal-Nagpur and Indian Midland were short by 25,0 and 4,3 respectively in consequence, it is said of outstandings not having been fully realised. The Wardha Coal was better by 3,0, owing to larger indents than were expected at the close of the year, from the Bengal-Nagpur and Great Indian Railways. The Southern Mahratta is better by 7,3, owing to prompt recovery of dues and the Tounghoo-Mandalay, owing to want of sufficient data at the time to make a satisfactory forecast.

Other State Railways—Provincial, excluding Eastern Bengal Railway System.

RESULTS.		ACCOUNTS.	
		More.	Less.
Actuals with actuals of previous year		...	16,8
" Budget Estimate		...	44,3
" Revised Estimate		...	7,8

137. The earnings realised during 1888-89 fall short of those of 1887-88 by 16,8, the principal differences being decreases of 16,8 on the Burma and of 9,6 on the Tirhoot Railway, and an increase of 7,1 on the Lucknow-Sitapur-Seramau Railway. The decline on the Burma Railway is due to a falling off in both coaching and goods traffic, and on the Tirhoot Railway to the scarcity which prevailed in the northern grain-producing districts of Behar. The improvement on the Lucknow-Sitapur-Seramau Railway is due to the increased open mileage.

138. Compared with the Budget Estimate the actuals show a decrease of 44,3, of which 25,7 was on the Burma Railway, and 19,1 on the Tirhoot Railway. As regards the Burma Railway the conveyance of paddy fell short of expectations and the estimate of additional traffic on the Tounghoo-Mandalay extension was not fully realised, as the extension was not opened as early as was anticipated when the Budget Estimate was framed. The decrease on the Tirhoot Railway is due to scarcity in the northern grain-producing districts of Behar.

139. The principal difference between the revised and the actuals is a decrease of 13,2 in Burma owing to the official year having closed on a Sunday, whereby the station remittances received that day and on the evening of the previous day could not be taken to account until 1st April 1889.

" Revised Estimate				61,1	...

Gross Receipts.

140. The excess in 1888-89 of 162,0 appears chiefly on the Great Indian Peninsula and on the Bombay Baroda and Central India Railways, but the Madras and South Indian lines also shew a satisfactory result. The increase on the Great Indian Peninsula Railway was derived principally from the carriage of cotton and wheat, and on the Bombay, Baroda and Central India Railway from the revival of through traffic between the Rajputana-Malwa Railway and Bombay in grain, seeds, and wheat. The Madras and South Indian lines shew a general development of traffic. The Oudh and Rohilkhand Railway having been worked by the State from the 1st January 1889, the actuals against this line represent transactions for 9 months only of 1888-89 against 12 months of 1887-88.

141. The increase of 418,4 over the Budget Estimate occurred chiefly on the Great Indian Peninsula, Madras and South Indian Railways. The large increase on the Great Indian Peninsula Railway is spread over all the heads of traffic but especially in the carriage of cotton, wheat and Railway materials. The increase on the last two lines is the result of a steady general development of traffic. The decrease on the Oudh and Rohilkhand Railway must be attributed to an excessive estimate.

142. The comparison with the Revised Estimate is made below, and is satisfactory. The increase on the Bombay, Baroda and Central India Railway is due to very favourable passenger traffic, which was unexpectedly high towards the close of the year; on the Great Indian Peninsula Railway to the improvement in traffic noticed during the earlier months having been maintained to the close of the year, and to increased receipts from tolls on the Carnac Bandar and from sales of unclaimed and damaged goods. The Madras Railway exhibited an unexpected development of traffic under coaching and sundries. The small differences on the Oudh and Rohilkhand and South Indian Railways need no remark:—

Bombay, Baroda and Central India	+ 10,6
Great Indian Peninsula	+ 28,1
Madras	+ 16,7
Oudh and Rohilkhand	— 2,3
South Indian	+ 6,3
Net Increase	59,4

Working Expenses.

143. The increase on the actuals of the preceding year is made up as under:—

Bombay, Baroda and Central India	+ 39,4
Great Indian Peninsula	+ 156,8
Madras	— 15,2
Oudh and Rohilkhand	— 42,8
South Indian	+ 9,6
Net Increase	147,8

144. The enhanced charges on the Bombay, Baroda and Central India Railway are due to larger traffic worked as well as to the fall in the rate of exchange. The increase on the Great Indian Peninsula Railway is partly attributable to the same causes, but heavy outlay was also incurred in connection with the maintenance of the line and with repairs and renewals of vehicles. The enhanced price of coal added to the expenditure, and large payments were made to other lines for mileage and demurrage of foreign stock. The decrease on the Madras Railway is due principally to large credits to revenue for work done on the Chittravati and Penner bridges, and on the Oudh and Rohilkhand Railway to the line having been worked by the Company for 9 months only in 1888-89. The increase on the South Indian Railway is due chiefly to increased charges under exchange.

Section H.—RAILWAYS—RECEIPTS—continued.

145. Compared with the Budget Estimate of 1888-89 the actuals show an increase of 172,6 as under—

Bombay, Baroda and Central India	+	9,6
Great Indian Peninsula	+	159,0
Madras	—	11,3
Oudh and Rohilkhand	+	3,3
South Indian	+	12,0
Net Increase		172,6

146. The Bombay, Baroda and Central India Railway had to undertake more extensive renewals of permanent way, than was anticipated while the price of English coal was higher and the quantity consumed greater, and the rate of exchange less favourable. The increased charges due to these causes were counterbalanced to a large extent by savings under other heads. The increase on the Great Indian Peninsula Railway is due to the causes noticed in the preceding paragraph. The accounts of the Madras Railway shew diminished outlay on the re-construction of the Penner and Chittravati bridges, and Beypore-Calicut Extension, &c. The increase on the Oudh and Rohilkhand Railway is small and does not call for any remark, and that on the South Indian Railway arises from insufficient provision having been made for the maintenance and locomotive expenses.

147. The Revised Estimate was exceeded chiefly on the Great Indian Peninsula Railway, owing to high prices paid for coal, and heavy outlay in connection with repairs and renewals of vehicles, and for demurrage and some other charges. The other differences are comparatively small and need no remark.

148. The Gross Receipts, Expenses and Net Receipts of these lines for the past six years are given in the following Statement:—

GUARANTEED RAILWAY COM- PANIES.	GROSS RECEIPTS.						WORKING EXPENSES.						NET RECEIPTS.

XXVIII.—Subsidised Companies (Repayment of Advances of Interest).

1887-88. Accounts.	Budget.	Revised.	1888-89. Accounts.
24,8	38,8	35,1	42,8

149. The credits under this head represent the amounts to be recovered from the Mysore Durbar in settlement of the net charge for interest paid to the Southern Mahratta Railway Company in connection with the Mysore Railway. The receipts and working expenses and interest charges of the Mysore Railway are recorded in the accounts under their respective Railway heads, and only the net charge for interest (i.e., interest on capital expended minus net receipts) which is recoverable from the Mysore Durbar, is credited to this head. The settlement with the Mysore Durbar is effected through the Civil Department. The following shows in detail the results recorded above:—

Accounts. 1887-88.	Budget Estimate.	1888-89. Revised Estimate.	Accounts.
33,9	50,3	46,6	54,1
9,1	11,5	11,5	11,3
24,8	38,8	35,1	42,8

150. The differences in net receipts are comparatively small, and call for no remark. The fluctuations under Interest are caused by the varying capital, and also to a change in the method of computing the interest.

Section H.—RAILWAYS—EXPENSES.

1887-88. Accounts.	Budget.	1888-89. Revised.	Accounts.
16,655,7	17,299,6	17,692,9	17,754,1
151. These figures comprise the expenditure under the following heads:—			
1887-88. Accounts.	Budget.	1888-89. Revised.	Accounts.
STATE RAILWAYS—			
5,594,2	5,982,2	6,043,4	6,059,3
3,341,9	3,486,3	3,594,5	3,598,9
2,390,8	2,398,0	2,473,8	2,474,2
666,4	931,4	948,6	949,4
GUARANTEED COMPANIES—			
714,0	527,5	569,1	614,5
3,853,0	3,873,7	3,959,5	3,959,1
SUBSIDISED COMPANIES—			
43,6	32,2	29,0	28,1
...	...	...	...
51,8	68,3	75,0	70,6
MISCELLANEOUS RAILWAY EXPENDITURE—			
16,655,7	17,299,6	17,692,9	17,754,1

152. In reviewing these figures it must be borne in mind that the transactions of the Oudh and Rohilkund Railway from January to March 1889, have been entered under the head *State Railways*, the line having been purchased by Government from the Guaranteed Company on 31st December 1888. The excess over the actuals of 1887-88 is 1,098,4, and is spread over nearly all the heads. It occurs more particularly in the *State Railways*, owing chiefly to heavier working expenses caused by increased mileage and greater traffic, together with enhanced charges for interest and Annuity caused in a great measure by the continued fall in-exchange. The large increase over the Budget Estimate is due principally to Exchange. The actuals are in fair accord with the Revised Estimate.

38.—State Railways—Working Expenses.

1887-88. Accounts.	Budget.	1888-89. Revised.	Accounts.
5,594,2	5,982,2	6,043,4	6,059,3

153. The particulars of these charges, according to Railways, are given in page 69 and exceed those of 1887-88 by 465,1 and the Budget and Revised by 77,1 and 15,9 respectively.

154. The excess over the actuals of 1887-88 is due to the growth of traffic, to increased open mileage, and to the working expenses of the Oudh and Rohilkhand Railway for the last quarter of 1888-89 being recorded under *State Railways*, whereas they were included under *Guaranteed Railways* in 1887-88. It is also caused in part by heavier renewals of Permanent Way and Rolling Stock on the East Indian and North Western Railways.

155. The excess of 77,1 over Budget is caused largely by the increased traffic worked on several lines, as well as by more extensive renewals than were provided for on the North Western Railway. The Estimates for the newly opened sections of the Bengal Nagpur and Southern Mahratta Railways proved inadequate, and the payments of surplus profits on the Rajputana Railway resulting from the increase in earnings were unexpectedly large.

156. The actuals have closely followed the Revised considering the magnitude of the transactions. The excess is due chiefly to the payment in March instead of April of the surplus profits of the Rajputana-Malwa Railway for the second-half of 1888, owing to a change of system. The expenditure on fuel and repairs of Rolling Stock was heavier than expected, and this was also the case with the establishment charges on the Bengal-Nagpur Railway; while on the Southern Mahratta Railway liabilities were discharged earlier than was anticipated.

Section H.—RAILWAYS—EXPENSES—continued.

157. The following remarks explain the individual differences between Actuals and Estimates:—

1887-88. Accounts.	East Indian Railway.	Budget.	1888-89. Revised.	Accounts.
	WORKING EXPENSES—

1,662,6	TOTAL EAST INDIAN RAILWAY	1,760,0	1,690,0	1,690,0

RESULTS.

Actuals with Actuals of previous year	ACCOUNTS. More.	Less.
„ Budget Estimate	27,4	...
„ Revised Estimate	...	70,0
	...	Nil.

158. The excess over 1887-88 is ascribed chiefly to heavier renewals of permanent-way and of engines and tenders. The saving on the Budget Estimate is due chiefly to renewals of permanent-way not having been carried out to the extent anticipated, in consequence of delay in the supply of materials from England, and partly to reductions effected in consequence of a falling off in the traffic. The actuals and Revised Estimate are practically the same.

Eastern Bengal Railway.

	I	...

159. The increased expenditure is connected with the growth of traffic, and is small compared with the revenue earned as noticed in paragraph 130. The excess over the Budget Estimate is caused partly by the reduction from 60 to 40 per cent. in the charge made for working the Bengal Central Railway, with effect from 1st July 1888. The actuals and the Revised Estimate are practically the same.

160. The excess here is also attributable to growth of traffic, to which may be added the payment of 90 per cent. of the Bombay, Baroda and Central India Railway Company's share of surplus profits for the half-year ended 31st December 1888 under a rule recently framed, as such profits previously would not have been drawn till the ensuing official year.

161. The large increase in expenditure during 1888-89, compared with the previous year, is chiefly in the heads *Locomotive* and *Carriage and Wagon* Departments which required renewals of stock. The excess over the Budget Estimate is attributed to repairs of stations and permanent-way, and to the growth of traffic having called for a higher scale of expenditure generally, as well as to repairs of and additions to Locomotives and Machinery. The decrease on the Revised Estimate is ascribed to the expenditure for the above purposes not having been carried out to the extent contemplated.

	...	2,9

162. In 1887-88, the Oudh and Rohilkhand Railway was a guaranteed undertaking, but having been taken over by Government from the Company, has from the 1st January, 1889, been worked as a State line. The transactions recorded above, therefore, relate to the three closing months of the official year 1888-89. The working expenses are below the Budget Estimate, having been reduced when the earnings declined. The expenses are in fair accord with the Revised Estimate, but owing to an under-estimate of outstandings, the expenditure is below the Revised Estimate by 2,9.

Section H.—RAILWAYS—EXPENSES—continued.

Other State Railways—Imperial.

RESULTS.

163. The actual expenditure during 1888-89 exceeds that of the previous year by 199.1, the principal variations being as follows:—

Bengal Nagpur	+	30.7
Wardha Coal	-	6.7
Umaria Colliery	+	17.8
Bengal Central	-	16.5
Indian Midland	+	49.4
Southern Mahratta	+	70.9
Nellore Branch	+	17.9
Mysore	+	6.9
Tounggoo-Mandalay	+	32.5

164. The increase on the Bengal Nagpur, Indian Midland and Southern Mahratta Railways is due to additional lengths of line having been opened for traffic as explained under Receipts. On the Wardha Coal Railway in 1887-88, heavy and substantial repairs and renewals were executed, which rendered less expenditure necessary during 1888-89. On the Umaria Colliery the expenditure includes special adjustments on account of depreciation, and losses arising in previous years from working the colliery. The net result of the account is that the out-put of coal in 1888-89 was 4.5 more than in 1887-88. The decrease on the Bengal Central Railway is mainly due to the amount payable to the Eastern Bengal State Railway for working the line being calculated at the rate of 40 per cent. on gross earnings from 1st July 1888, in lieu of 60 per cent. as heretofore, in terms of the new working agreement. The increase on the Nellore Branch arises from the line being open for only a part of the year 1887-88, and on the Mysore Railway from the reconstruction of four bridges damaged by floods. The Tounggoo-Mandalay Railway was opened during 1888-89.

165. The actual expenditure during 1888-89 exceeded the Budget Estimate by 30.0, the principal variation being as follows:—

Bengal Nagpur	+	21.6
Umaria Colliery	+	7.4
Bengal Central	-	11.4
Indian Midland	-	8.0
Southern Mahratta	+	12.3
Mysore	+	5.3

166. In the case of the Bengal Nagpur Railway, it was difficult to frame an estimate of the cost of working the line on the altered gauge and in circumstances different to the conditions previously obtaining, and the expenses of the Umaria Colliery were enlarged partly by the special items referred to in the preceding paragraph, and partly by more extensive operations involving larger payments for Royalty than were contemplated when the Budget Estimate was framed. The decrease on the Bengal Central Railway is partly due to the favourable terms of the new agreement with the Eastern Bengal State Railway for working the line, and partly to a credit afforded on account of materials returned to "Stores" during the year from the old alignment which was destroyed by floods. On the Indian Midland Railway, the provision made for maintenance proved much greater than was subsequently found to be necessary. The increase on the Southern Mahratta Railway is due to insufficient provision in Budget for working the additional sections of line opened during the year, and on the Mysore Railway to unexpected expenditure in repairing damages caused by floods.

167. The actuals have exceeded the Revised Estimate by 31.6 chiefly in the following lines:—

Bengal Nagpur	+	16.6
Indian Midland	-	5.5
Southern Mahratta	+	5.9
Tounggoo-Mandalay	+	12.5

168. In the Bengal Nagpur Railway, the Home expenditure has been transferred from Capital to Revenue, together with the cost of repairs to metre-gauge goods stock and establishment charges of the Raipur and Sheonath districts, from the dates these sections were opened for traffic. In addition to which, the expenditure on fuel and on repairs to Locomotives was heavier than anticipated. The saving on the Indian Midland Railway is mainly due to the provision made under *Locomotive and Traffic Expenses* having been based on a higher ratio of expenditure than now appears was necessary. The estimate of the Southern Mahratta Railway was too low, and also that of the Tounggoo-Mandalay Railway, from there not being sufficient data to apportion, with any approach to accuracy, the estimated expenditure between this section and the Prome-Rangoon-Tounggoo section of the Burma Railway.

"	Budget Estimate	...	2.0
"	Revised Estimate	...	11.4

169. As regards the excess over the previous year, the Burma and Lucknow-Sitapur-Seramau Railways show an increase of 14.0 and 3.1, and the Tirhoot Railway a decrease of 9.9. The increase on the Burma Railway is due to the running of additional train mileage in consequence of a large increase in the ton mileage of construction stores, as well as in the running of empty vehicles. Moreover, the paddy season which usually lasts from January to the end of March, was late in 1888-89 owing to a firm stand made by the mill-owners against high prices. The busy season staff had been engaged as usual, and was only partially reduced as the trade might have sprung up any day, and hence, whilst the receipts from paddy traffic fell, the expenses could not be correspondingly reduced. The increase on the Lucknow-Sitapur-Seramau Railway became necessary by the requirements of increased traffic, while on the Tirhoot Railway the opportunity offered for economical working, reduction of establishment, and retrenchment in expenditure generally.

170. As compared with the Budget Estimate, the actuals show on the Burma Railway an increase of 9.9 on account of heavy repairs of stations and buildings and additional cost of station and train staff. On the Tirhoot Railway there is a saving of 11.2 due to economical working.

171. The actuals are less than the Revised Estimate by 11.4; of this 10.1 relates to the Burma Railway and is due to a considerable increase at the close of the year in the balance of the account "Demands Payable," whereas a decrease was provided for in the Revised Estimate.

Interest on Capital.

172. As explained in former reports, the interest charge for State Railways depends upon the progress of construction during the year, and hence the payments in 1888-89 were greater than in the previous year, owing to the larger expenditure on this account. The following statement shows in usual form how the interest charged in the accounts of 1888-89 has been computed.

CAPITAL EXPENDITURE ON WHICH INTEREST IS CHARGEABLE.	E. I. Ry.	E. B. Ry. System	Other State Railways.	TOTAL.
Capital Expenditure at end of 1887-88	2,153.3	5,738.9	53,583.0	61,475.2
Capital Expenditure during 1888-89	—3.6	346.5	857.6	1,200.5
Capital Account at end of 1888-89	2,149.7	6,085.4	54,440.6	62,675.7
Debt and Debt Stock discharged	2,950.0	612.4	...	3,562.4
INTEREST.				
Interest on Capital Account at beginning of the year	96.9	229.6	2,143.3	2,469.8
Interest on Debentures, &c., discharged	132.8	32.6	...	165.4
Half interest on Capital spent during the year	—1	6.9	25.9	32.7
TOTAL	229.6	269.1	2,169.2	2,667.9
Add— $\frac{1}{2}$ per cent. on the Holkar Loan of a crore, which bears $\frac{4}{2}$ per cent. interest	...	...	5.0	5.0
TOTAL INTEREST CHARGED	229.6	269.1	2,174.2	2,672.9

173. The foregoing figures contain no interest on account of the Katni-Umaria line which was transferred to the Bengal Nagpur Railway Company on the 1st April 1888, and the amount accordingly is charged under the head, "Interest on Capital deposited by Companies," noticed in paragraph 177. On the other hand, the Sindia line having been transferred to the Indian Midland Railway during March 1889, the interest for the whole year is included in this portion of the account. The differences between Budget and Actuals in the English account are explained in paragraph 53.

Exchange.

174. The increase, compared with the Actuals of the previous year and the Budget Estimate, is due to the fall in exchange.

Annuities in Purchase of Guaranteed Railways (including Sinking Funds).

" Revised Estimate	5	...

EXCHANGE—

Actuals with Actuals of previous year	98.1	...
" Budget Estimate	19.8	...
" Revised Estimate	3	...

Interest.

177. The increase over the Actuals of the previous year is due to larger deposits of Capital with the Secretary of State by the Companies, and to interest to the 31st March 1888 on account of the Katni-Umaria Railway as stated in paragraph 173, it having been decided to treat the expenditure on that line as an advance towards the completion of the Bengal Nagpur Railway, and to charge interest at 4 per cent. thereon, instead of calling on the Company to refund the amount.

178. The decrease of 1.8 over the Budget represents an increase of 19.3 in India, owing to the charge for the Katni-Umaria Railway just explained, and a decrease of 21.1 in England from capital not having been paid up as early as was expected.

Exchange.

179. The increased charges for Exchange, compared with the Actuals of the previous year and with the Budget Estimate, are due to larger payments of interest on increased deposits of Capital, as well as to a fall in the rate of Exchange.

"	Revised Estimate	...	...	...	5

Surplus Profits.

180. The decline compared with the preceding year, occurred both on the Bombay, Baroda and Central India and Great Indian Peninsula Railways from diminished traffic. The increase over the Budget Estimate was produced chiefly on the Great Indian Peninsula Railway, where the earnings were larger than anticipated from causes noted in paragraph 140. The revised was exceeded by 45.9, in consequence of a change of system by which certain payments were made in March 1889, which otherwise would not have become due till the following month.

Land and Supervision.

181. The main difference between the two years under review is in the recoveries from Companies which were larger in 1888-89 from the increased mileage of Companies' lines under construction. The saving on the Budget provision is due chiefly to delay in settling claims for compensation for land in Madras and Oudh, and to the amalgamation of the office of the Director General of Railways with the Public Works Department Secretariat. The difference between the Actuals and the Revised Estimate is small and needs no explanation.

39.—Guaranteed Companies—Interest.

"	Revised Estimate	5	...

Interest.

182. The decrease, as compared with the preceding year, is due principally to smaller charges on account of interest on overdrawn Capital of the Great Indian Peninsula Railway. The Budget made due provision for the renewal of the Oudh and Rohilkhand Railway Company's debentures falling due in the year, but they were paid off at maturity in anticipation of the purchase. The debentures of the Great Indian Peninsula Railway Company, moreover, were renewed at a lower rate of interest. The difference between the actuals and Revised estimate is small and needs no remark.

Exchange.

183. The excess in all cases is the result of a fall in the rate of Exchange.

184. The difference between the Actuals arises from smaller payments in 1888-89 on account of land on the Bengal and North-Western Railway. The Budget and Revised Estimates were not reached partly on account of delays in settlement of certain claims provided for in them. It may be mentioned that the Estimates for land are prepared by the Revenue authorities, and are beyond the control of the Public Works Department.

186. The details in the preceding table show the variations leading up to the results under *Imperial* and *Provincial*. The increase over the actuals of 1887-88 is mainly due to such new projects having been put in hand during 1888-89, as the Great Western of India, Mu Valley and Western Bengal Surveys. The *Imperial* Budget provided a reserve of 15,8 to meet unforeseen requirements, but it proved to be in excess of the demands arising during the year. The *Provincial* Budget made no provision for the Western Bengal or Tirhoot Surveys which were ordered after it had been dealt with, nor for the extension surveys sanctioned in connection with the Bhatinda-Bhawalpur project. As regards the Revised Estimate under *Imperial*, the full complement of officers was not posted to the Mu Valley Survey, and the staff employed was retained for a shorter period than was anticipated. Under *Provincial* the lapse is due to the late commencement of the survey operations on the Minchinabad-Bhawalpur Section of the Bhatinda-Bhawalpur Railway, and to the grant for land in British territory, required for the Rajpura-Patiala Railway not having been utilised.

1,758.7 1,838.9 1,900.7

187. The collections of 1888-89 exceed those of the previous year by 186.4 and the Budget Estimate by 142.0. The improvement is due to the extension of irrigation chiefly from canals in Upper India. As regards the Revised Estimate the receipts on account of water-rates on lands served by the Godavari and Kistna Delta Systems, were under-estimated.

Imperial Works.

188. The *Gross Revenue* in 1888-89 exceeds that of the previous year by 49.6, the larger part to which occurs in the Punjab, and is due to development of irrigation on all the canals in that Province, excepting the Western Jumna, where a falling-off of 45.2 was registered owing to seasonable rainfall having reduced the demand for canal water. In the North-Western Provinces and Oudh the improvement is slight and is derived from the expansion of irrigation on the Betwa canal. In Bombay there is also an increase in consequence of larger recoveries of previous outstandings from lands in the Khelat territory watered by the Desert and Begari canals. The excess over the Budget is attributed to the rapid growth of irrigation under the Bari Doab and Sirhind canals in the Punjab, and over the Revised to recovery of arrears in Sind, as noticed above.

189. The increase in *Working Expenses* over the Actuals of 1887-88 is due to the maintenance and repairs of greater lengths of some canals in the Punjab, and to charges for their distributaries which

Section J.—IRRIGATION—RECEIPTS—*continued.*

have been lately brought into operation. The greater portion of the increase over the Budget Estimate occurs in the North-Western Provinces and Oudh and in the Punjab, the increase in the former being caused by the writeback to this head of the old outlay on the Nadrai aqueduct of the Lower Ganges canal, shown in the Budget Estimate as a Provincial charge. In the Punjab the heavy floods of 1888 rendered very extensive repairs to works necessary.

Provincial Works.

190. The *Gross Revenue* collected in 1888-89 shows an improvement of 61,2 over that of the previous year. Of this improvement 29,1 has been contributed by Bengal and 32,1 by the North-Western Provinces and Oudh. The improvement in Bengal is due partly to the subsidence of the agitation against the irrigation system of the Sone canal mentioned in paragraph 183 of the previous year's report, partly to the increase of the irrigated area and partly to a larger collection of navigation receipts owing to increased traffic. The increase in the North-Western Provinces and Oudh is attributed to the *rabi* season of 1887-88 and the *kharif* of 1888 having been exceptionally favourable to irrigation on the Ganges and Lower Ganges canals. The Budget of the North-Western Provinces and Oudh was framed for an abnormally small revenue, on the supposition that the abundant rainfall in January 1888 would have reduced the demand for canal water, but the seasons proved very favourable to irrigation.

191. Compared with 1887-88, the rise in *Working Expenses* during 1888-89 is mainly due to large extensions and improvements, which were found necessary on all major irrigation works in the North-Western Provinces and Oudh, especially the Lower Ganges canal.

RESULTS.

	ACTUALS. More.	Less.
Actuals with Actuals of previous year	68,4	...
„ Budget Estimate	80,7	...
„ Revised Estimate	58,9	...

192. The rise of 68,4 occurs chiefly in Madras, and is connected partly with water-rates on lands served by the Godavari and Kistna delta systems, and partly with a credit afforded to this head on re-adjustment of the Revenue accounts of the Cauvery delta system for 1884-85. There was also an increase of 17,2 in Bombay arising out of several causes, of which the principal are the improved working of the Eastern Nara Works and the Begari canal, and the favourable inundation of 1888-89. The Budget Estimate of 1888-89 was framed on the basis of the past year's figures, but owing to a favourable irrigating season in Madras, and to an anticipated growth of irrigation under the Godavari, Kistna and Sangam systems, the Revised Estimate was prepared for an increase of 21,8. The Actuals, however, exceeded the Revised Estimate by 58,9, owing to the causes stated above.

193. The differences under this head are the net result of several small increases and decreases.

Section J.—IRRIGATION—EXPENDITURE.

1887-88. Accounts.		Budget.	1888-89. Revised.	Accounts.
2,461,6	EXPENDITURE	2,582,3	2,630,8	2,623,0

194. The expenditure of 1888-89 exceeds that of the previous year by 161,4, owing (1) to larger working expenses consequent on the greater length of canals and distributaries open for irrigation, (2) to an increase in the interest on debt caused by the additional Capital outlay, and (3) to an enhanced rate of expenditure from Provincial Funds on the Tank Restoration Works in Madras. The excess of 40,7 over the Budget Estimate is due to extensive repairs having been found necessary on the canals in the North-Western Provinces and Oudh and in the Punjab.

Imperial Works.

197. The expenditure in 1888-89 is in excess of that of 1887-88 by 15,1. The increase is chiefly on construction in Upper Burma. The excess of 10,7 over the Budget Estimate is mainly caused by the outlay on the Khushdil Khan reservoir having been debited to this head, whereas provision was made for it in the Budget Estimate under 49—Irrigation, Capital Expenditure not charged against Revenue.

Provincial and Local Works.

198. The excess over 1887-88 by 79,0, has arisen principally in Madras, where a large outlay is proceeding on Tank Restoration Works against assignments from the Provincial resources of that Government. There is also an increase in Lower Burma, where extensive repairs to embankments have been rendered necessary by heavy floods, and a large outlay was undertaken on the construction of the Abya flood escape of the Pegu and Sitang canal.

Section K.—BUILDINGS AND ROADS—RECEIPTS.

1887-88. Accounts.		Budget.	1888-89. Revised.	Accounts.
592.3	RECEIPTS	555.1	588.7	604.7

199. The revenue credited under this head consists, to a great extent, of uncertain items, since there are few regular sources of income. In 1888-89 more buildings were sold and the ferry tolls were more productive than in 1887-88, or was anticipated in the budget. The Revised Estimate provided for an increase of 33.6 over the Budget Estimate, but, owing to some unexpected receipts, the Actuals turned out better by 16.0.

200. The differences between the Accounts and Estimates of the various provinces are explained in the following paragraphs:—

XXXI.—Military Works.

1887-88. Accounts.		Budget.	1888-89. Revised.	Accounts.
23.6	India (General and Political)	22.3	25.0	27.4
2	Central Provinces	3	3	3
6	Upper Burma	7	2	5
7	Lower Burma	8	8	9
6	Assam	3	5	5
4	Bengal	4	2	2
1	North-Western Provinces and Oudh	1	1	1
5	Punjab	6	5	5
2.7	Madras	2.8	2.7	2.7
11.0	Bombay	7.7	9.4	9.4
40.4	TOTAL	36.0	39.7	42.5

RESULTS.

Actuals with Actuals of previous year	More.	Less.
" Budget Estimate	2.1	...
" Revised Estimate	6.5	...
	2.8	...

201. The improvement of 2.1 in the total revenue compared with that of the previous year is almost entirely due to the sale, by the Inspector General of Military Works, of certain bungalows near the site of No. 1 redoubt at Lucknow, and to the operation of the rule requiring recoveries on account of advances made in England in previous years to be credited to Revenue, instead of being deducted from expenditure as was previously done. To these causes, and to increased realisations in Bombay on account of rents of buildings and sales of old materials, is mainly attributable the difference of 6.5 between the Actuals and the Budget Estimate. The improvement of 2.8, in comparison with the Revised Estimate, is due to the sale of the bungalows at Lucknow, already referred to, not having been anticipated, and to a steady increase in the rents recoverable from Military Officers in Upper Burma.

Imperial.

202. The total revenue credited to Imperial Funds agrees closely with that of the previous year. There has been an increase of 3.8 in the Departmental receipts, which is principally attributable to the sale of a house at Simla and another at Sirdarpur. Upper Burma has also contributed to it, and the Pegu saw-mills, which were lately the property of King Theebaw. The falling off of 3.7 in the realisations by Civil Officers is due to the transfer to Incorporated Local Funds of the control and realisation of ferry tolls. This explanation also applies to the difference between the Actuals, Budget and Revised; but in this case there were also larger sales of tools and plant, and of old materials and buildings in Upper Burma than were anticipated, and the rent of the saw-mills at Pegu, from February to July 1889, was received in advance.

Provincial.

203. There is but a small difference of 6 between the total Departmental Actuals of the two years. Under provinces, the only important difference is that of 5.9 in the North-Western Provinces and Oudh, where a falling off appears during 1888-89 in the receipts from the Roorkee workshops and the printing press and book depôt of the Thomason Civil Engineering College, as well as in the revenue derived from sales of buildings. Increases of 1.5 and 1.2 occur in Lower Burma and the Central Provinces, from the rent charged to the Irrawaddy Flotilla Co. for the use of the Dala Dockyard having been raised, and from enhanced receipts on account of ferries, rents of buildings, and sales of buildings and old materials. In Bengal large sums were realised by sale of buildings and materials received from old buildings.

204. As regards the revenue collected by Civil Officers, the principal differences between the Actuals of the two years occur under Bengal and the North-Western Provinces and Oudh, the increase of 4.6 under the former being attributed to higher amounts having been obtained by the lease of ferries, and to the realisation of arrears of ferry tolls. The North-Western Provinces and Oudh exhibit a decrease of 3.5 caused by a decline in the toll collections of the Kalpi ferry, consequent on the opening of the Indian Midland Railway. In the Central Provinces certain toll bars were abolished during 1888-89, while in the Punjab an improvement occurred in the revenue derived from tolls on roads, and sales of land and houses.

205. The difference between Estimates and Actuals is made up of numerous small fluctuations, the general character of which is explained in the preceding paragraph.

Local.

206. Of the total increase of 6.7 over the revenue of the previous year, 4.8 represents realisations in Upper Burma on account of ferry tolls which have hitherto been credited to Imperial Funds. The remainder of the difference is also connected with tolls which have increased in some provinces and declined in others.

Section K.—BUILDINGS AND ROADS—EXPENDITURE.

1887-88.		1888-89.	
Accounts.	Budget.	Revised.	Accounts.
5,451.1	EXPENDITURE .	5,592.9	5,310.7

207. The expenditure is less than that of the previous year by 140.4, and this result is due (1) to the gradual completion of Frontier roads in Baluchistan and the Punjab; (2) to a decrease in the expenditure on Military and Civil Works in Upper Burma which was exceptionally heavy in 1887-88, owing to the then very recent occupation of the country; (3) to the transfer to Native States in Central India and Rajputana of the responsibility for the construction of roads within their territories, and (4) to the savings effected by the amalgamation of Public Works establishments in Central India and Rajputana. The Provincial and Local expenditure has increased by 82.2 and 36.2 respectively, which is chiefly due to larger grants having been made available for expenditure on roads and buildings in Bengal, the Punjab and Madras.

208. The outlay has fallen short of the Budget Estimate by 282.2, of which 106.7 pertains to Imperial, and the balance to Provincial and Local. The differences under Imperial are mainly due to an over-estimate of the establishment charges of the Inspector General, Military Works, to the grant for Military and Civil Works in Upper Burma not having been fully utilized owing to various unforeseen causes, and to the reduction of outlay in Central India and Rajputana, in consequence of the transfer of roads to Native States and the amalgamation of the Public Works establishments in those Provinces. Under Provincial and Local, the difference is principally due to an over-estimate of the outlay on buildings and roads in Bombay and Bengal, and to the postponement of a number of works in the Central Provinces and Madras.

209. The Actuals on the whole agree closely with the Revised Estimate, the short outlay being 18.5 only.

Section K.—BUILDINGS AND ROADS—EXPENDITURE—continued.

210. The difference of 129,8 between the two years under review, is the balance of various provincial fluctuations. The figures entered above, give a saving of 64,9 in *India (General and Political)*, but 30,0 of this sum represents a special charge in 1887-88 on account of a grant-in-aid for the Mhow water-works. The remainder of the saving has occurred from diminished expenditure on barracks for troops at Peshawar and Quetta and on the defensive post at Loralai. The saving in *Upper Burma* is due to the exceptional expenditure which was necessary there in 1887-88 consequent upon the recent occupation of the country. In the *North-Western Provinces and Oudh* the works connected with the defences of Jhansi were finished in 1887-88, and in 1888-89 less was required to be done on the Ranibagh and Ranikhet cart road than in the preceding year. On the other hand some provinces shew a larger expenditure in 1888-89 than in 1887-88. This is the case in the *Central Provinces* where additional accommodation was provided for troops and the Commissariat Department, and some old suspense balances were charged off. In *Lower Burma* three important buildings were commenced at Rangoon and Thayetmyo for military prisoners, medical stores and the Commissariat department. In *Assam* good progress was made on the Golaghat-Nichuguard road, and work was commenced on the fair-weather cart road from the last named place to Kohima, and on buildings for native troops at Shillong, Silchar and Manipur. The excess in the *Punjab* is connected with the construction of buildings for native Infantry at Abbottabad and Dehra-Ismail-Khan. The increase in *Madras* is due to works undertaken for the Ordnance Department. In *Bombay* the expenditure during 1887-88 was limited, owing to the urgent need of funds in Upper Burma and other parts of the country. In 1887-88, moreover, the Bombay expenditure was still further reduced by deducting from it the sum of 25,8 received from Her Majesty's Government in England on account of the defence works at Aden. It is on these accounts that the difference between the two years in Bombay is so great.

211. Of the saving of 62,3 compared with the Budget 35,5 appears under *India (General and Political)*, owing mainly to (1) the establishment charges of the Inspector General, Military Works, having fallen considerably below the estimated amount by reason of a larger proportion being debitable to Special, Defence Works and other funds; (2) to a sum of 10,0 having been held in reserve at the commencement of the year which was subsequently allotted to works in other Provinces, and (3) to transfers from the Indian to the English Account to meet payments on supplementary indents sent forward for stores during the course of the year. This was not foreseen when the Estimate for English stores was framed. The Budget Estimate of *Upper Burma*, owing to various causes, could not be fully utilised. In *Assam* slower progress was made on the Golaghat-Nichuguard road than was originally contemplated, savings accrued on certain completed works, and others could not be carried out to the extent contemplated owing to delay in the receipt of stores from England. The excess expenditure of 1,9 and 1,2 under Bombay and the Punjab, respectively, is the result of additional allotments having been sanctioned from the reserve of 10,0 already referred to, for several works undertaken during the course of the year.

212. Of the difference of 7,5 between revised and actuals, 5,4 occurs in Bombay, where two works were postponed and the barracks for European Infantry and Artillery at Colaba could not be finished within the year as was expected. The estimate for repairs to Military buildings was also fixed too high.

Imperial.

213. A comparison of the Actuals of the two years shows a decrease of 147.9 during 1888-89, which is principally attributable to less expenditure on the construction of Frontier roads in Biluchistan and the Punjab, the new Viceregal residence at Simla, and the new Telegraph Office at Bombay. A considerable portion of the reduction is also accounted for by the completion during 1887-88 of important works in Upper Burma, particularly in the new town embankments at Mandalay and the bund and sluices at Amara-pura, as well as by the transfer to Native States in Central India of the responsibility for the construction and maintenance of roads within their territories. In 1888-89, moreover, the Gwalior Division was abolished, and the establishments in Rajputana and Central India amalgamated. On the other hand, there is an increase of 26,0 in the expenditure of the Punjab, mainly due to the transfer to the control of the Provincial Government of the Imperial buildings at Simla, which have hitherto been dealt with separately, and also to charges having for the first time been incurred in connection with the maintenance of the completed portions of the Frontier roads.

214 Compared with the Budget Estimate, the total Imperial outlay shows a lapse of 57,9, of which 48,4 occurs under *India (General and Political)*, due to the stoppage of work on the new church at Quetta owing to a re-consideration of the project, and also, as stated above, to the reductions carried out in Rajputana, Central India and Gwalior, and the transfer of the Imperial buildings at Simla to the control of the Punjab Government. In *Upper Burma* a part of the Budget was used to provide funds for the Irrigation Branch and for the maintenance by the Provincial Public Works Establishment of frontier roads. Various economies were effected in some parts of the budget and the budget itself was too high as regards certain items. The charge of 3,0 against Civil Officers represents a grant to the Bhamo Municipality. In *Lower Burma* no expenditure was incurred either in India or in England on account of the Oyster Rock Light-house, and in Bengal the saving is attributed to non-commencement of the new opium building at Hajipore, and to inability to utilise fully the grant 32,9 provided for the Surveyor General's Office at Calcutta. These remarks are generally applicable to the Revised Estimate.

Section K.—BUILDINGS AND ROADS—EXPENDITURE—*concluded.*
Provincial.

215. The Actuals of 1888-89 are below those of the previous year in the *Central Provinces*, in the *North-Western Provinces and Oudh*, and in *Bombay* from a general reduction of expenditure. In *Bombay* it is also partly due to the approach towards completion of the new Elphinstone College. The large increase in *Bengal* includes expenditure on several new buildings for the Judicial, Jail, Police and other departments, and for the improvement of communications in various parts of the Province. In *Madras* also the new law Courts and other buildings were commenced in 1888-89, and some large grants were made to Municipalities for water-works and other improvements.

216. As regards the Budget, the estimate of the *Central Provinces* provided for a new residence for the Chief Commissioner which was, however, postponed. It also provided 15,0 as a grant-in-aid to District Funds for the construction of District roads, but the arrangements connected with it were not completed during the year. In addition to these two items the repairs to roads and buildings were not carried out to the extent contemplated. The *Punjab* estimate was too high, and this was also the case with the *Madras* Budget as regards repairs to Civil buildings, but part of the departmental saving is also due to the new law Courts not having progressed as rapidly as was expected. The excess in the *Madras* expenditure by Civil Officers is caused by unexpected grants to Municipalities as mentioned in the preceding paragraph and for the Vizagapatam and Ganjam Agency Works. The *Bombay* estimate was too high.

217. The Revised has been closely followed by the Actuals. In *Lower Burma* greater progress was made with a bridge over the Pegu river than was expected, and this also occurred with certain works in the *North-Western Provinces and Oudh*. The savings arise generally from contractors not having fulfilled their engagements, or from amounts due not having been drawn within the year.

Local.

218. The following are the chief differences in this section of the account between the Actuals of the two years. In *Lower Burma* a good deal of expenditure was incurred for the extension and improvement of communications, principally in the Henzada district. In *Assam* certain works were removed from the Local to the Provincial division, and some that were in progress during 1887-88 were completed in 1888-89. The excess in *Bengal* and the *Punjab* is almost entirely on roads and bridges. In the *North-Western Provinces and Oudh* the saving is composed of many small items. The increase in *Madras* is largely due to a change of procedure in the Trichinopoly district, where certain charges which were formerly deducted from revenue, now appear on the expenditure side of the account.

219. As regards the Budget and Revised Estimates, those of the *Central Provinces* were generally high, and especially the Mandla and Dindori road did not make the progress anticipated. The *Assam* Budget Estimates were too low. In the *Punjab* certain works were postponed and some establishments reduced. The other estimates were too high, but in the *North-Western Provinces and Oudh* and in *Bombay*, expenditure on certain works was retarded in consequence of scarcity of labour, and difficulty in acquiring land and procuring materials.

20,417,9	TOTAL	19,969,0	20,371,5	20,301,8

221. The Army receipts for 1888-89, both in India and England, compare well with those of the previous year. In India the Budget and Revised were made comparatively low, as the year 1887-88 was exceptional, on account of the prolonged operations in Upper Burma. In 1888-89, however, the Commissariat receipts were much higher than expected owing to large sales of stores, elephants, cattle and unserviceable gear. The issues of clothing and soldiers' necessaries on payment were also greater than was anticipated, and large sums were realized in connection with the Sikkim, Hazara, and Lushai Expeditions which were organised after the Budget was framed, together with 13,1 from Berar on account of charges incurred by the British Government for the Hyderabad Contingent while on field service in Burma. In England, the variations occur mainly under the head of Indian Troop Service.

222. As regards Army Expenditure in India, the actuals of 1888-89 were lower than the previous year by 292,3 which is made up of a reduction of 469,4 in special charges and an increase of 177,1 in the ordinary expenditure, the net difference being 292,3. The reduction in special charges occurred in connection with operations in Burma (843,7) counterbalanced by the cost (374,3) of the Sikkim, Hazara and Lushai expeditions, particulars of which are given below in paragraph 236. The ordinary expenditure was increased chiefly by the rupee payments to European troops consequent on a fall in exchange (80,1), by less of the charge for ordnance stores being debited to other departments (84,2) and by charges of the Mobilisation Committee (74,2) counterbalanced by a decline of 126,8 in Commissariat supplies and services. The comparison with the budget shews that the latter provided 820,0 for operations in Upper Burma but the actuals aggregated 631,6 only. Against this saving of 188,4 may be set the additional payments of 374,3 on account of the three expeditions mentioned above for which no allowance was made in the Budget. These figures give an excess of 185,9 over the Budget as the result of special charges. In what may be called the ordinary expenditure of the army, the actuals amount to 3,3 less than the Budget. This reduction is the balance of numerous fluctuations, the chief increases being connected with the purchase of additional remounts in Bengal and with certain Barrack supplies which were formerly provided by the Public Works Department. The savings accrued mainly from the reorganisation of the military commands and staff in India and from the diminished strength of the Native army. The payments of the year also include 48,0 on account of unadjusted expenditure as explained in paragraph 233.

223. The principal differences in *England* are an excess of 30,0 in stores owing to larger indents from this country, and of 13,6 in furlough allowances which is always an uncertain quantity. *Per contra* there was a saving of 18,3 in Home charges of British Forces serving in India and 15,2 in the Indian Troop Service.

224. The following paragraphs supply the particulars usually given with respect to Army Services:—

Section L.—ARMY SERVICES—RECEIPTS.

4,9	Non-Effective Services	5,0	6,2	6,2
17,5	Exchange	13,8	19,1	1,82
1,060,8	GRAND TOTAL	921,8	976,2	1,062,4

225. As explained in former reports, the Military receipts are more or less of a fluctuating character and are not susceptible of an accurate forecast. The increase under *Regimental Pay, &c.*, which was partly anticipated in the Revised has occurred chiefly in Bengal, where large retrenchments were made from payments in the previous year, and where the number of soldiers taking discharge was greater than expected. Against these excesses may be set smaller refunds than anticipated of hutting money advances, and short receipts on other Miscellaneous Accounts in Madras. The improvement in *Commissariat Establishments, &c.*, is due to increased consumption of Malt liquor, to large sales of cattle, including condemnations in Burma, to recoveries of disallowances of the previous year, to improved Khedda receipts and to hire of transport cattle and sale of unserviceable equipment, &c. These excesses were counterbalanced by diminished receipts for rum and malt liquor in Madras and Bombay. The details of the head *Clothing Establishments* shew that in Bengal there was a large demand of clothing and necessaries, and that in Madras the value of clothing supplied to troops of the Hyderabad contingent in 1887-88, was adjusted in 1888-89. The 4,6 shewn in 1887-88 under "Administration of Martial Law" represented forfeited pay of military prisoners transferred to credit of prison funds by debit to *Regimental Pay, &c.* This procedure has been changed, and such sums are now deducted from the charge under the last named grant. Hence no credit is afforded in 1888-89 under Administration of Martial Law. The *Medical Receipts* were low as Madras issued no stores to other departments, though the Budget anticipated 5,0, and in Bengal also such supplies are no longer made to Civil Medical Institutions independent of State aid. As stated in the last report, the *Ordnance Receipts* in 1887-88 were enlarged by the adjustment in respect of Naval Stores taken over by Her Majesty's Imperial Government. In 1888-89 the Bengal Budget was exceeded by 14,0 in consequence partly of certain political arrangements and partly by the value of arms taken by the Gwalior State. On the other hand, the Madras revenue was short by 4,1 owing to sales not having been carried out to the extent estimated, and to smaller indents from the Hyderabad Contingent and other departments. The Budget for *Sea Transport Charges* was too low, while that for *Miscellaneous Services* contained no provision in connection with the Sikkim, Hazara, and Lushai Expeditions, which were subsequently organised, nor for various recoveries in Madras, including a special item of 13,1 due from Berar in connection with the Hyderabad Contingent. The estimates for the group "*Non-effective Services*" were low, but it is difficult to estimate accurately for items of such an uncertain character.

226. The principal difference in England occurred under the head of Indian Troop Service. There was also a small increase in subscriptions towards Indian Military Service Pensions, and in the value of stores in possession of Regiments on their transfer from the Indian to the British Establishment.

227. Of the saving under *Army and Garrison Staff* as compared with 1887-88, 9,5 is nominal, being the cost of garrison instruction now classified under the head Education. The real savings are 24,1 as compared with 1887-88, and 16,6 as compared with the budget, in the Quarter Master General's Department, and in District Commands and Staff resulting from certain reorganisations carried out during 1888-89. There have also been some minor economies, such as the abolition of the Inspector of Army

Section L.—ARMY SERVICES—EXPENDITURE—continued.

Signalling, Madras. On the other hand, there are excesses of 4,0 and 2,3 over 1887-88 and budget, respectively, in the charges for Commander-in-Chief owing, in the former instance, to the absence on special leave of the Commander-in-Chief, Bombay, and in the latter to the extended tours of the Commander-in-Chief, India. The principal difference in the head *Administrative Staff* is under Commissariat and Remount Account, the charge for which is 3,9 more than in 1887-88 and 2,5 more than the budget. This excess is due to the higher rank of the officer holding the appointment of Examiner, and an additional audit office established in Rangoon. The other fluctuations are spread over many items, the most important being the saving caused by abolishing the appointment of Examiner of Medical Accounts, Madras, and the discontinuance of the staff allowances for the Fund Accounts, Madras and Bombay, the work having been transferred to the Pay Examiners.

228. The head *Regimental Pay, Allowances, and Charges* represents 52 per cent. of the effective military expenditure and may be divided into two parts, relating respectively to the expenses of the European and Native army of which the amounts are given below. As regards the European army, the accounts shew that the expenditure in 1888-89 was 50,1 more than the corresponding figure in 1887-88 and 8,8 more than the budget. This increase is entirely in the rupee payment to British Troops which were augmented by the diminished rate of exchange, and also by the present practice of fixing the rate of exchange for these payments half-yearly instead of for the whole official year. With respect to the Native army the expenditure in 1888-89 was below that of 1887-88 and the budget by 6,6 and 140,9 respectively. The decline of 6,6 is almost entirely in kit money to recruits, casualties among the sepoys not having been fully replaced. The saving of 140,9 on the budget consists of three principal items, namely, 20,7 in native cavalry, 102,2 in native infantry, and 17,6 in reserve forces, all being attributable to the actual strength falling below the estimated complement. There are other fluctuations, such as savings of 4,6 and 4,9 respectively, in hutting-money and marching batta, and an excess of 7,7 in the annual grant-in-aid of half mounting. The savings are due partly to erroneous estimate and partly to claims not having been preferred within the year. The excess in the grant-in-aid arose from a larger number of men than usual becoming entitled thereto on completion of the required eighteen months' service.

	Actuals, 1887-88.	Budget, 1888-89.	Revised, 1888-89.	Actuals, 1888-89.
European Army	3,475,3	3,516,6	3,528,4	3,525,4
Native Army	3,708,9	3,843,2	3,731,8	3,702,3
TOTAL	7,184,2	7,359,8	7,260,2	7,227,7

229. The head *Commissariat* represents 23,61 per cent. of the effective military expenditure, and consists of four divisions, namely, (1) establishments, (2) supplies, (3) services, and (4) the Transport Branch. The charges on each account are given below. As regards establishments the expenditure in 1888-89 was 78,6 below that of 1887-88 and 50,4 below the budget. The former saving is almost entirely in the transport establishments, and the latter is in executive and khedda establishments. The actuals under supplies in 1888-89 shew a saving of 182,0 as compared with the previous year, and an increase of 54,8 as compared with the budget. The saving is in provisions for Europeans (56,3) and Natives (135,9), in reserve stock (29,3) and in malt liquor purchased locally (14,7), counterbalanced by an increase in the compensation paid to natives for dearness of provisions and forage (52,1). The excess over budget is in compensation to natives for provisions (72,6) and forage (49,6), counterbalanced by a saving of 18,0 in provisions for natives, of 14,3 in purchase of special forage for field service and of 32,6 in malt liquor and rum. The division services includes hire of transport, sea and inland water charges, railway charges, feed of army cattle, charges for cattle farms and depôts, implements, furniture and freight. As compared with 1887-88, there was a saving of 48,5 in hire of transport, of 107,6 in sea and inland water charges, and of 12,4 in implements, godown furniture and contingencies. As compared with the budget there were savings aggregating 77,9 in the first two heads just mentioned, but increases of 19,5 and 25,7 under railway charges and feed of army cattle. In the fourth division, Transport Branch, the depôt and regimental charges amounted in 1888-89 to 332,3 against 460,2 in 1887-88 and 341,8 in the budget.

	Actuals, 1887-88.	Budget, 1888-89.	Revised, 1888-89.	Actuals, 1888-89.
Establishments	567,0	538,8	509,2	488,4
Supplies	1,846,3	1,609,5	1,656,8	1,664,3
Services	968,2	834,8	805,3	800,9
Transport Branch	465,5	348,6	331,3	336,1
	3,847,0	3,331,7	3,302,6	3,289,7

230. The excess under *Remounts and Cattle* resulted from purchase of additional remounts and country bred stock, and from miscellaneous expenditure for road and other expenses connected with them. Certain compensations were also paid to shippers of Australian horses as the price fixed for the horses by Government was low. This head was also affected by a number of small savings consequent on vacan-

Section L.—ARMY SERVICES—EXPENDITURE—*continued.*

cies in establishments and absence of officers on leave. The Budget grant for *Clothing* compares well with the actuals, the principal difference being an excess of 10,0 in compensation in lieu of clothing, caused partly by special grants, and partly by a fall in the rate of exchange which enhanced the charge for compensation to British Troops. The excess over the actuals of the previous year is chiefly in the same head and is due to the lower exchange just mentioned. The Revised was framed too high. Charges for the *Barrack Department*, in 1888-89, were less than the previous year's by 2,5 and 5,6, in respect to subordinate establishments, and barrack furniture. The comparison with budget shews that the charges for Barrack Bedding and Lighting were under-estimated, while the Military Department had to pay for certain supplies which were formerly obtained from the Public Works Department. It will be seen from the figures given in page 102 that the expenses attending the *Administration of Martial Law* have largely increased since 1887-88. This is due to a change in the manner of bringing to account the cost of maintaining garrison prisons. The cost was formerly carried to a debt account which was credited with deductions made from the pay of the prisoners. This system is changed, the expenses of the prisons being now charged to this head and the pay remaining undrawn, thus causing a reduction in the grant for Regimental Pay, &c. But for this change the account would have presented a saving in 1888-89, since the number of officers to be maintained in the Department has been reduced from 1st April 1888. The *Medical* charges are considerably below the Budget and the Actuals of 1887-88, the decline being in district establishments where both officers and subordinates were under the established strength. Many officers also were on leave and their places filled with junior officers. Medical supplies though costing 8,8 less than in 1887-88, exceeded the budget by 20,3 owing to the prevalence of cholera and other ailments in some districts, and to larger purchases of hospital equipment and stores than was anticipated. The value of stores supplied to other departments was 12,0 less than in 1887-88, but 8,1 more than the Budget.

231. The large expenditure in the *Ordnance* department may be divided into three principal portions as is done in the statement at foot of this paragraph. The charges for establishments are nearly the same in the two years, 1887-88 and 1888-89, and 13,9 less than the budget of 1888-89. This saving occurred chiefly under "Arsenals and depôts, and manufacturing establishments," owing to establishments having been maintained on a reduced scale, to the absence of officers on leave, and to the restricted entertainment of extra artificers and labourers consequent on reduced demands for supplies from the factories in Bengal and Bombay. As regards stores, the expenditure in 1888-89 was greater than that of the preceding year by 24,0 in local supplies to manufacturing establishments, by 7,1 in stores for annual practice, field train, and field telegraph, and in equipment of the Corps of Sappers and Miners, and by 19,9 in purchase and repair of Camp equipage. On the other hand, there was a reduction of 22,1 in the cost of miscellaneous stores. As compared with the budget, savings of 15,1 and 34,7 were effected in the stores and timber for arsenals and factories, the result of restricted purchases and more favorable contract rates for certain articles. The charges for freight of stores from port to port were less by 2,1 than estimated, specially in connection with Burma. As a set off against these savings the account shews an increase of 5,8 under "Stores—Miscellaneous" consequent on the return of a large quantity of stores by other departments including the Burma police. Further increased expenditure (28,4) took place on account of the purchase and repairs of camp equipage owing to arrear payments in Bengal appertaining to the previous year, and to larger purchases and repairs in Bengal and Bombay than was expected when the budget was framed. The provision for the purchase of line gear was under-estimated. As regards the value of stores supplied to other departments in 1888-89 the credit given below shew that these supplies were 57,8 less than in 1887-88, and 14,3 more than the budget. These transactions are necessarily of a very fluctuating character—

	Actuals, 1887-88.	Budget, 1888-89.	Actuals, 1888-89.
Establishments	334,0	349,6	335,7
Stores	300,8	338,6	324,7
TOTAL	634,8	688,2	660,4
Deduct supplies to other departments	141,8	69,7	84,0
Net charge as above	493,0	618,5	576,4

232. The *Education* charges for 1888-89 include the salary of the Director of Military Education and payments connected with Garrison Instruction, hitherto entered under *Army and Garrison Staff*. Against this increase some savings accrued from the reduction of two Sub-Inspectors and one Assistant Superintendent of Army Schools, and the abolition of the Normal Schools, Bangalore and Poona. There were also smaller purchases of books, school materials, &c., in Bengal. *Sea Transport Charges* were enhanced by larger payments to private vessels for conveyance of Bengal and Madras troops to and from Burma. The actuals for *Miscellaneous Services* include 374,3 spent for the Sikkim, Hazara and Lushai Expeditions for which no provision was made in the Budget, but 387,5 was entered in the Revised. Apart from this special item, there was a saving of 24,6 on the Budget, while the Revised was exceeded

Section L.—ARMY SERVICES—EXPENDITURE—*continued.*

by 64,7. The excess occurred in compensation and extra allowances to troops in Burma, in charges for the Mobilisation Committee, purchase of land, printing charges in Madras, and extra frontier telegraph lines. On the other hand, rewards for proficiency in native languages, purchases of Native Cavalry remounts, personal allowances to Military officers employed in the Police and other miscellaneous payments, were smaller than expected. *Volunteer Corps* cost more during the year owing to capitulation grants to a larger number of Volunteers qualified as efficient.

233. The charge for unadjusted expenditure 48,0 is shewn under the rule that when the issues from Civil Treasuries for Military Services exceed the amount brought to account in the Military Books, the difference shall be so shewn, in other words, that no delay in account processes shall hinder the complete exhibition of money outlay.

234. The several heads under the group *Non-effective Charges* in India require no notice, except that the *Rewards for Military Services* were over-estimated, and the Budget for *Widows' pensions* was too low.

235. In *England* the savings are in Home charges, in Indian Troop service, and in Non-effective charges. The first saving is due to the award by Lord Northbrook's Committee having been 13,2 less than was expected, and to decrease in the furlough pay of officers of British regiments and in the pay of troops during voyage to and from India. In the second case the payments for repairs of troopships were less than anticipated. There is nothing special to record regarding the non-effective charges, except that the pay and pensions of non-effective and retired officers did not increase in the same proportion as in recent years. The increase in furlough allowances of officers of the Indian service, arose from a larger number of officers being at home during the year than had been estimated, and in passage of officers and troops otherwise than in Troopships from a larger number of officers requiring such passages. The rise in miscellaneous charges is attributable to the number of officers studying the Russian language, and in stores to increased payments on account of Ordnance stores.

236. The following statement supplies details of the additional expenditure, aggregating 801,9, on account of Upper Burma and the Hazara and Lushai Expeditions. A sum of 201,0, was also spent on the Sikkim Expedition during the year, but separate accounts were not kept for these charges:—

GRANTS.	Upper Burma.	Hazara Expedition.	Lushai Expedition	TOTAL
Army and Garrison Staff	24,7	2,4	2	27,3

237. The increase of 333.6 over the expenditure of the previous year is principally due to Coast Defences at Rangoon, Karachi and Bombay having been pushed on more rapidly, and to larger payments having been made by the Secretary of State on account of armaments. The saving of 331.9 on the Budget Estimate is due to the payments in England on account of heavy guns having been unavoidably retarded, and to the requirements for the fortifications at Aden and for establishment having been over-estimated. The saving of 28.7 on the Revised Estimate is due to the Secretary of State's payments having fallen short of expectation.

238. The Indian expenditure shows an increase of 76,7 over that of the previous year owing to greater activity during 1888-89 on coast defences at Bombay and Karachi, and to the progress of the following important works in Lower Burma: (i) battery at Syriam Point; (ii) re-modelling and completing the battery at Choki Point, and (iii) raising and improving the ground behind the battery at Monkey Point.

• 239. The Actuals are less than the Budget Estimate by 52,2, owing mainly to the requirements of the year for the Defence Works at Aden and the establishment charges in Bombay, having been considerably over-estimated, and to no provision having been made in the estimate for a sum of 16,2 recovered from the Home Government on account of the Aden Defence Works; this recovery was treated as reduction of Indian outlay during 1888-89. Under India (General and Political), the lapse of 13,4 on the Budget Estimate is caused principally by the fact, that provision was made for a much larger staff in the Pishin Division than it was found necessary to employ, and to the proposal to charge a portion of the pay of the Inspector General, Military Works, to the head Special Defences, not having been sanctioned. In Lower Burma, the Budget Estimate was exceeded, as sanction was subsequently given for improving the ground behind the Monkey Point battery and constructing Syriam Point battery—works which were commenced during the course of the year. The total expenditure in India compares very favourably with the Revised Estimate, there being a difference of but 2,2 on a grant of 450,0.

Section M.—PROVINCIAL ADJUSTMENT.

240. As explained in former reports, the above figures represent the surplus or deficit of each Provincial Government in respect of the revenues and charges assigned to it, including Incorporated Local Funds. The Budget contemplated deficits in every province except Burma and Assam, but the actuals give a surplus except in Bengal. Details shewing how each surplus and deficit have been produced are given below, and they shew that as compared with the Budget, the revenue is large by 449.9 and the expenditure less by 318.8, the total improvement being 763.7. Of the larger revenue, 365.8 occurs in the provincial and 84.1 in the local section of the account, the expenditure being smaller by 306.3 and 12.5 respectively. These differences are included in the explanations given in the foregoing pages under each head of account, and hence only their effect on the balance of each province is summed up in the following figures. These figures shew that as regards Provincial Revenues there were increased collections in every province, the largest increase being in Bombay 116.8. Next in order come Madras, Punjab and the N.-W. Provinces, where the improvements were 62.1, 51.6 and 50.8 respectively. Provincial expenditure was kept well within Budget limits in every province except Burma, where the Budget was exceeded by 27.7, the largest savings being in the N.-W. Provinces and Oudh, Madras and Central Provinces where they amounted to 98.4, 88.7, and 85.5 respectively. In the local section the revenue was short by 4, 3.9, and 25.3 in India, Bengal and the N.-W. Provinces and Oudh, while the expenditure exceeded the Budget by 3.3, 9.5, 17.4 and 31.9 in India, Assam, Bengal and Madras. The other provinces present larger receipts and smaller payments than were expected.

Central Provinces.

2,784.8	EXPENDITURE	4,044.5	12,193.8	11,974.0

241. The expenditure is more than in the previous year by 9,189.2 and the Budget by 7,929.5 and particulars of these deviations are given at foot of this paragraph, + meaning less and — more. In the case of capital outlay on railways the differences are due to two main causes: the practical completion in 1887-88 of certain lines and the transfer of others to companies. The capital outlay on irrigation works was in some instances over-estimated; but otherwise there is nothing special to record.

242. During 1887-88 no capital charges were incurred in the redemption of liabilities, but during 1888-89 a sum of 10,336.0 was paid in connection with the purchase of the Oudh and Rohilkhand Railway.

	Less + more — than Accounts, 1887-88.	Less + more — than Budget, 1888-89.

243. It will be convenient to arrange the following explanatory remarks separately for each province, and in the order in which the lines have been placed in the foregoing statement.

India, General and Political.—The decrease on the East Indian Railway, as compared with 1887-88, is due to transfer during the year of the Benares Branch to the Oudh and Rohilkhand Railway. A credit of 61.4 was realized on this account. This transfer also explains the difference between Actuals and Budget. The decrease as compared with Revised Estimate is due to larger issues of stores to Revenue towards the close of the year than was anticipated. The expenditure on the Rajputana-Malwa Railway appears

Section N.—EXPENDITURE NOT CHARGED TO REVENUE—*continued.*

small compared with 1887-88, but in that year there were special charges for stores from England and for land required to improve the accommodation for landing stores at the gun-carriage basin at Colaba. The Budget for 1888-89 was exceeded in the item of stores, a quantity of which was unexpectedly transferred to this line from the Cawnpore-Achneyra Railway, and so disturbed the calculations of the Revised Estimate. The credit under the Sindia State Railway represents the cost of construction transferred to the capital account of the Indian Midland Railway Company, which took it over on 1st March 1889. The head Stores represents a net result, being the difference between the purchases of the year *plus* the balance of the previous year, and the issues in 1888-89. The figures shew that there was a larger depletion of store balances in 1887-88 than in 1888-89, the issues being less than the purchases by 18.7 in the Indian account and 33.6 in the English account, or 52.3 in all as entered above. The Budget was not reached chiefly in England, the indents having been less than was estimated, especially in connection with the North-Western Railway. The difference as compared with the Revised is chiefly in the matter of exchange.

Central Provinces.—The large difference in the expenditure of the Wardha Coal State Railway as compared with 1887-88 is due principally to credit taken in that year for one hundred 10-ton coal wagons transferred to the Katni-Umaria line. As compared with the Estimates, the accounts show larger issues of stores to Revenue than was anticipated. The credit on the Katni-Umaria line has been caused by the transfer of the whole of the expenditure incurred on it to the Bengal-Nagpur Railway Company. The Actuals of the Umaria Colliery for 1887-88 included 8.3 on account of loss incurred in working the Colliery to the 31st March 1887, which it was decided to treat finally as a Capital charge. Excluding this special item the real difference between the two years is only a small excess of 1.6 in 1888-89, which needs no special remark. The Budget and Revised Estimates were excessive, in addition to which the Actuals include certain writes-back which were not known at the time. The credit on the Nagpur-Bengal Railway in 1887-88 was caused by the transfer of the expenditure incurred by the State, on this line, to the Bengal-Nagpur Railway Company. The provision of 200.0 in the Budget Estimate for the re-purchase by the State from the Bengal-Nagpur Railway Company of the old metre-gauge material of the Nagpur-Chattisghur line, that became useless on change of gauge, was found to be unnecessary. Rolling-stock only was taken over from the Company, and for it a ready purchaser was found in the Southern Mahratta Railway Company. The permanent-way and other metre-gauge materials have not been valued yet.

Burma.—The outlay on the Burma line has followed the Revised Estimate closely, but has exceeded the Budget and Actuals of 1887-88 by 47.1 and 61.9, respectively. The difference in both cases is due to additional works, such as doubling the line between Rangoon and Insein, and extending the Rangoon suburban lines. As regards the Toungoo-Mandalay extension, the comparatively small expenditure in 1888-89 is attributable mostly to the works having been well advanced at the close of the previous year. The line was completed and opened for traffic during 1888-89. The excess over the Budget Estimate is caused by larger supplies of stores from England than anticipated, and over Revised by insufficient provision for exchange and Secretary of State's general charges.

Bengal.—The Actuals of 1887-88 on the Eastern Bengal Railway contained considerable outlay on land and works required at Chitpur, and for doubling the line to that terminus, and since the Budget was passed some new works, not contemplated at the time, were undertaken. The lapse on the Revised Estimate is due to short outlay on the Budge-Budge extension, Bugoola Flood-openings, Workshops and staff-quarters and sundry other works. The accounts for 1887-88 of the Tithoo State Railway included heavy expenditure on fencing, on the new temporary Mothurapur Ghat line, and on staff quarters at Somastipur and Mozufferpur, and as regards the Budget additional staff-quarters were built at Mozufferpur and Somastipur, and permanent-way gangmen's quarters along the line, and additions made to the rolling-stock which were not anticipated when that Estimate was framed. The expenditure in 1887-88 on the Tithoo Section of the Assam-Bihar Railway was diminished by large credits for issues of permanent-way material for Revenue purposes, and for sales of material and plant on the completion of the Gunduck Bridge. In 1888-89, after the Budget was passed, additional expenditure became necessary for rolling-stock and for ballast and permanent-way. As regards the Assam-Bihar Section, the increase over the Actuals of the previous year is due to works having been pushed on vigorously on the Kosi Extension, and also to larger expenditure on rolling-stock owing to vehicles received in transfer from the Eastern Bengal Railway. The lapse on the Budget Estimate is due to the failure of some contractors who undertook to supply ballast, sleepers, and fencing posts for the Kosi Extension.

North-Western Provinces and Oudh.—The expenditure on the Dildarnagar-Ghazipur Railway represents, as in the Patna and Gya Railway, a transfer from the East Indian Railway of the amount expended by the Company on this line to the end of December 1888, and previously charged against the Capital Account of the East Indian Railway. This refund was not foreseen when the Budget Estimate was prepared. As regards the Cawnpore-Achneyra Railway, the variation in the actuals as compared with the Estimates is due to the transfer of stores mentioned above. The Oudh and Rohilkhand Railway was a guaranteed line in 1887-88, having been purchased by the State on the 31st December 1888. When the Budget Estimate for 1888-89 was prepared, it was thought that any expenditure found necessary during the last quarter of that year could be met by a reduction in Suspense balances, and

Section N.—EXPENDITURE NOT CHARGED TO REVENUE—*continued.*

hence no grant was provided. It became necessary, however, to allot 59.4 in the Revised Estimate, chiefly to cover the cost of the Benares Branch, which it was decided to take over from the East Indian Railway. The Actuals show a *net credit* of 36.1, due chiefly to a credit of 84.1 not provided for in the Revised Estimate, representing the undrawn balance of the Company's capital on 31st December 1888, in addition to which the expenditure generally was less than expected.

Punjab.—The large expenditure in 1887-88 on the North-Western Railway included heavy outlay on gradient improvements on the Ferozepore and Sukkur Bridges, on rolling-stock and on permanent-way material for renewals of the line, but which was not so used till the following year. It also included the value of the reserve stores at Karachi and of certain other stores which were imported for the Sind-Pishin Railway. The lapse on the Budget is due to the stoppage of the gradient improvements and to the transfer of certain works at Quetta to the Sind-Pishin Railway, and on the Revised to short supplies of stores from England, and to larger issues of stores to works and sales than expected. The Actuals in 1887-88 of the Amritsar-Pathankot Railway consisted chiefly of credits taken for stores supplied to the North-Western Railway, whereas during the year under review some capital outlay was incurred. The transactions of the Rewari-Ferozepore Railway for 1887-88 included various writes-back on account of dismantling of sidings and diversions, &c. The Estimates were not reached as delay occurred in carrying out certain works, and an unexpected credit was received for fencing material transferred to the Rajputana-Malwa Railway. The excess over 1887-88 on the Sind-Pishin State Railway represents a large quantity of work done in 1888-89. The Budget was too high and the Revised too low. Work on the Chaman Extension was only begun in November 1887, and was vigorously carried on throughout 1888-89. The provision in both the Budget and Revised Estimates proved too sanguine, as work could not be carried on to the full extent expected. The expenditure on petroleum operations in Biluchistan in 1887-88 was recorded in the accounts of the Buildings and Roads Branch. It was only in October 1888 that the question of utilising the petroleum oil from the wells at Khattan on the Chaman Extension was taken up, and it was decided to debit all expenditure incurred on "pumping, loading and storing oil at Khattan" to "48—State Railways—Construction." The excess on the Revised Estimate is due to the adjustment of the Kowraduff oil pipe line got out from England, the first intimation of which was only received on the 18th March 1889. The small expenditure on the Sind-Sagar State Railway, Western Section, during 1888-89, is owing to construction work on this line having been practically completed in 1887-88. The Budget for rolling-stock was too high, and unexpected credits were obtained at the close of the year from the sale and transfer of stores and land surrendered. Construction work on the Bolan Railway high-level line was commenced late in 1887-88, and the outlay in that year included the cost of Abt materials and locomotives. In 1888-89 the outlay represented the actual execution of work, which was practically completed before the close of the year. The Budget provided for a credit on account of the value of permanent-way material taken out of the metre-gauge line, but it was disallowed. The credits under Kandahar Reserve represent value of material drawn by the Chaman Extension, the Sind-Pishin and North-Western Railways, and were less than the Revised Estimate, as the issues fell short of anticipations. No comparison can be made between the Actuals of 1888-89 on the Chenab Bridge and those of the previous year, as operations did not commence till November 1887, and were then confined chiefly to collection of material. The excess on the Budget Estimate is due to progress of work being greater than anticipated. The lapse on the Revised Estimate is principally in supplies of English stores and Exchange. The construction of the Jammu-Kashmir State Railway was only sanctioned in February 1888. The lapse on the Budget Estimate is due to work not having progressed as anticipated.

Madras.—The Nellore Branch of the Villupuram-Guntakal Railway was practically completed at the close of 1887-88, which accounts for the small expenditure in 1888-89. The excess on the Budget Estimate is due to additional outlay subsequently sanctioned and to the Suspense balances not having been reduced to the extent anticipated. The lapse on the Revised Estimate is due to credits anticipated under Ballast and Permanent-way, not having been realized, and to less expenditure on rolling stock owing to a dispute between the Contractor and Railway authorities, which prevented the final settlement of bills for work done before the close of the year. The Bellary-Kistna Railway now forms an integral portion of the Southern Mahratta Railway, which took it over from the 1st January 1888. In accordance, however, with the terms of transfer concluded with the Company, certain items of expenditure have to be finally adjusted by the State, and these constitute the payments of 1888-89 as entered above. The construction of the Villupuram-Guntakal Railway was sanctioned during the year 1888-89, and the Budget was for survey expenditure only. Contrasted with the Revised Estimate, the Actuals were short owing to difficulty in procuring skilled labour, to delay on the part of contractors, and to land being acquired more cheaply than was anticipated. The Bezvada Extension was well advanced in 1887-88, and the expenditure in 1888-89 was therefore on a reduced scale. The saving compared with the Budget was in the stores received from England. The Revised Estimate was too high, but there are also some claims for land which could not be adjusted within the year.

Bombay.—The large outlay during 1888-89 on the Dhond and Manmad Railway, as compared with 1887-88, is for waterways and diversions and for fencing. The Budget Estimate was too high.

RESULTS.

Actuals with Actuals of previous year	ACTUALS.	
	More.	Less.
Budget Estimate	...	73,1
Revised Estimate	...	140,1
	...	33,1

244. The decrease in the Actuals of 1888-89 as compared with those of the previous year is mainly due to the approaching completion of the Sirhind and Chenab Canals and the Nadrai aqueduct of the Lower Ganges canal.

245. The decrease, as compared with the Budget Estimate of the year, is due (1) to the outlay on the Khushdil Khan reservoir for which a provision of 35,0 was made under this head, having been debited to "43—Minor Works and Navigation," (2) to an over-estimate of the expenditure on the Jani escape, Ganges canal, and the Nadrai aqueduct of the Lower Ganges canal, and canals in Madras, and (3) to the postponement of certain works in Bombay. The Revised Estimate was too high.

50.—Capital Charge involved in Redemption of Liabilities.

1887-88. Accounts.	Budget.	1888-89. Revised.	Account.
...	...	10,336,0	10,336,0

246. The above figures were brought into the estimates and accounts from advices sent out by the Secretary of State. The payments in 1888-89 were on account of the Oudh and Rohilkhand Railway, for which no provision was made in the Budget Estimate as the nature of the offer to be made to the Company had not then been finally determined.

247. As already explained in para. 49, a public loan of 3,000,0 at 4 per cent. was raised in India in 1888-89 as provided for in the budget, and operations were carried out for the discharge of the 4½ per cent. loan of 1870 and for the withdrawal of stock notes from circulation. In England, the net amount of debt incurred was raised partly to be applied to discharge 363,1 of the India 4 per cent. stock, and partly to purchase the Oudh and Rohilkhand Railway. These arrangements are also explained in the paragraph quoted above.

Section P.—UNFUNDED DEBT.

	Budget.	1888-89. Revised.	Accounts.
Special Loans	— 2	+ 17.3	— 2
Treasury Notes and Service Funds, India	+ 52.5	+ 45.1	+ 48.0
Savings Bank Deposits	+ 793.0	+ 981.3	+ 942.6
TOTAL	+ 845.3	+ 1,043.7	+ 990.4

248. The —2 under *Special Loans* represents payment of capitalized values of small pensions under some of the King of Oudh's Loans. The revised included +17.5 as an expected advance from the Kashmir Durbar for expenditure on the British Section of the Sialkot-Jummoo Railway, but the arrangement under which it was to be received was subsequently cancelled. As regards *Service Funds* the Budget for the Bengal Uncovenanted Service Family Pension Fund was too high and the Revised too low.

249. Details of *Savings Bank Deposits* are given below. The *Presidency and Post Office Savings Banks* showed considerable increase in the first nine months of 1888-89, and the Revised was based chiefly on this experience, but the withdrawals in the last three months were unusually great. The deposits of *State Railway Provident Institutions* were considerably enlarged by the transfer to this head of 40.7 being the balances of the Oudh and Rohilkhund Railway Guaranteed and Fine Funds on the purchase of the line by Government. The *minus* figure against *Regimental Savings Banks* is caused by Regiments returning to England and requiring their balances to be transferred to the War Office. The head *Special Accounts* includes the Bengal Christian and Hindu Family Annuity Funds and other deposits of a similar nature. The large fluctuations between actuals, revised, and budget are due mainly to the unexpected investment of 8.8 on account of certain Local Pension Funds in Bombay.

TOTAL	— 340.9	— 739.4	— 34

250. In the foregoing statement the third column of figures under each of the headings Budget, Revised and Accounts shows net transactions. The gross receipts and payments are entered in the first and second columns, except for the head *Provincial Balances* as they are already given in Section M of this report. The gross receipts and payments relating to Exchange on Remittance Accounts are entered at foot of this paragraph. The first head, *Provincial Balances*, has already been explained in para. 240. The difference in the net result under *Excluded Local Funds* is mainly in the transactions of Cantonment Funds, the receipts of which were larger in the North-Western Provinces than expected, while in the Punjab, the Expenditure Budget was too high. In Madras, provision was made for certain payments which were not required. The head *Political and Railway Funds* includes the Bahu Begum's Stipend Fund and the various funds belonging to the Guaranteed Railway Companies. The large net debit as compared with the Budget is due partly to the removal from this head of the amounts belonging to the Oudh and Rohilkhund Railway when the line was purchased by Government, and partly to a special payment of 37.3 on account of the Fire Insurance Fund of the Bombay, Baroda and Central India Railway. As regards *Departmental and Judicial Deposits*, it has been explained before that the character and magnitude of the transactions do not admit of an accurate forecast, and this year they were enlarged by 172.4 received from the Patiala and Kashmir States for the construction of the Patiala Bhatinda and Jummoo-Kashmir Railways. These sums are held as deposits and are paid away as required. The comparison with budget is also affected by an error in the India Budget, which provided for an appropriation of 32.6 from the unexpended balance of the late Military Orphan Fund, but the amount remaining was 2.3 only, and this sum has been charged in the accounts. The head *Advances* shows a larger net credit than was expected, owing principally to prompt coinage of silver in Bombay, thereby reducing the balance of the Bullion Account as compared with the outstanding balance of Mint certificates, and to the removal of advances to cultivators and other similar items to a separate head under the Provincial Loan Scheme, as explained in para. 252. The head *Suspense* embraces preaudit and other cheques and bills of the Civil Departments, as well as the cash balance held by Departmental officers, and other items of a similar character. The difference between budget and actuals is distributed over several departments. Details are given below of the head *Exchange on Remittance Account*, and they shew that the Subsidized Railway Companies drew more heavily than was anticipated, and that the exchange connected with the Mysore Railway was entered under this head in the estimate, but in the actuals it has been taken to revenue as explained in para. 106.

251. The large payments under *Miscellaneous* include sums which were credited to this head in the previous year, together with a special loan of 150.0 which was recovered in the year 1889-90.

Sections R and RR.—LOANS TO MUNICIPALITIES, NATIVE STATES, &c.

	Budget.	Accounts.
INDIA. { Loans to Native States, &c. (Imperial)	91,1—630,0	93,0—665,4
{ Loans and Advances (Provincial)	92,1—40,0	203,4—198,0

252. During the year 1888-89, the Government of India introduced a scheme under which local loans may be made under certain conditions from resources at the disposal of Provincial Governments. Particulars of this scheme are given in the orders of the Government of India in the Financial Department, No. 13, dated 1st January 1889, in accordance with which, a separate account has been opened with each Government, commencing with the actual outstanding balance of advances and loans in each province on 31st March 1888. Such further sums are placed at the disposal of the Provincial Governments as have been sanctioned by the Government of India, after a consideration of its available resources during the year and of the demands presented. For the sums so assigned by the Government of India, the Provincial Governments pay interest at 4 per cent. on the mean between the outstanding balance at the commencement and the outstanding balance at the close of the year. On the other hand, the Provincial Governments receive credit for the full amount of interest realised on these loans and advances, and are debited with any sums which it may be necessary to write off as irrecoverable. In consequence of these arrangements this section of the account is now divided into two parts, relating respectively to the Imperial and Provincial Governments as entered above, and in the Provincial portion are entered advances to cultivators and advances under Special Laws hitherto classified in "Section Q—Deposits and Advances."

253. Particulars are given below of the *Loans to Native States, &c. (Imperial)*. The 27,8 appertaining to Native States comprises 19,2 received from the Mysore Durbar, 7,4 from the Jaora State and 1,2 from Banswara and Baoni: these were not expected to pay up so largely. As regards the *Presidency Corporations and Port Trusts*, the Calcutta and Bombay Port Trusts took 67,6 and 5,2 more and the Madras Harbour works 35,6 less than was anticipated. The entries shewn against the head *District and other Local Committees* represent advances and repayments connected with the Mhow Water-works, for which no provision was made in the Budget. The difference between Budget and actuals under the head *Landholders and other Notabilities*, is due to various minor transactions not fully anticipated.

1888-89.			1888-89.

...	1,0	" Landholders and other Notabilities	4	1,7
630,0	91,1	TOTAL AS ABOVE	665,4	93,0

254. Particulars are given below of the group *Loans and Advances (Provincial)*. The Kurrachee Port Trust took an unexpected loan which explains the sum of 22,0 entered against Port Funds. In Bombay, loans aggregating 32,0 were estimated as required for certain landholders in that Presidency, but only 2,5 was taken. As stated above, advances to cultivators have hitherto been classified under "Section Q, Deposits and Advances" and the estimate for 1888-89 was made under that head. The actual payments for *advances under Special Laws* as entered below include 48,0 paid under the Bengal Drainage and Embankment Acts, and 7 on the Jhansi *Encumbered Estates* account. The recoveries comprise 10,2 on account of advances made under those Acts, and 34,1 on account of loans taken by taluqdars in Oudh and landholders in Bombay.

B. Central	-10,0	-11,4	-10,7	-2,0	-1,4	-1,3	-12,0	-12,8	-12,0
B. Nagpur	-1,234,4	-1,585,9	-1,533,1	+161,7	-377,7	-329,1	-1,072,7	-1,963,6	-1,862,2
	-3,289,4	-3,747,3	-3,658,0	+904,8	+1,008,9	+245,6	-2,384,6	-2,738,4	-3,412,4
TOTAL	-2,895,9	-3,345,8	-3,307,1	-247,5	-4,9	-724,4	-3,143,4	-3,350,7	-4,031,5

255. As explained in former reports, these are all net sums. The Indian figures represent the difference between the advances taken by the Railway Companies and the credits given to them chiefly on account of stores used. The English figures represent the capital deposited by the Companies with the Secretary of State, less payments made therefrom for stores, establishment charges, &c. These figures are necessarily exposed to great fluctuations. The advances to the Guaranteed Companies in India during 1888-89 include a sum of 84,1 standing at credit of the Oude and Rohilkund Railway when the line was purchased by Government. This amount was transferred to credit of the head 48.—State Railways under Section N. by debit to Capital Advance Account. Excluding this item, the payments closely agree with the Budget, the actual difference being 12,0 only. The receipts from these Companies exceeded the Budget by 29,5 which represents an excess of 69,4 in respect of three Companies, counterbalanced by short credits aggregating 39,9 on account of the other two. As regards withdrawals by Subsidised Companies, the total increase as compared with the Budget amounted to 368,6 being the result of increased drawings amounting to 298,7, 218,9 and 7 respectively by the Bengal-Nagpur, Indian Midland and Bengal Central Companies, and reduced drawings of 149,7 by the Southern Mahratta Company.

256. In England, the Bengal-Nagpur and Southern Mahratta Companies deposited respectively 521,0 and 500,0 less, and the Indian Midland Railway Company 72,9 more than was estimated, while no provision was made in the Budget for transfer fees and miscellaneous refunds amounting to 13,9. The payments to the Companies on account of stores, establishment charges, &c., were also below the Budget by 457,4, the Indian Midland, Great Indian Peninsula and the Madras Railway Companies respectively having drawn 223,4, 136,0 and 69,6 less than was provided for them.

Section T.—REMITTANCES.

	Budget.	1888-89. Revised.	Accounts.
Money order (net)	...	...	+ 23,2

TOTAL	- 69,3	+ 314,5	- 39,5

257. The 23,2 against the first item, represents money orders issued but not paid on 31st March 1889. The following figures shew that there is a progressive increase in the demands for this method of remittance. The other figures entered in this group are the net result of very large transactions, and there is nothing special to record in respect of them.

	Issued.	Paid.
1885-86 } Money order transactions	9,312,4	9,298,4
1886-87 }	10,538,9	10,519,1
1887-88 }	11,665,7	11,660,7
1888-89 }	12,781,4	12,758,2

Section U.—SECRETARY OF STATE'S BILLS.

	Budget.	1888-89. Revised.	Accounts.
Drawings	14,000,0	14,310,1	14,262,9
Payments	14,548,5	15,119,9	15,031,0

258. The following are the amounts of bills and transfers drawn during the year by the Secretary of State:—

	£	Rx.	Rate in Pence.
On account of allotments in April 1888	1,471,6	2,157,6	16'36
" " May "	1,092,2	1,621,9	16'16
" " June "	989,5	1,476,3	16'08
" " July "	1,050,3	1,564,0	16'11
" " August "	799,9	1,193,1	16'09
" " September "	921,2	1,347,9	16'40
" " October "	930,8	1,354,6	16'49
" " November "	1,171,8	1,723,3	16'51
" " December "	980,6	1,439,7	16'34
" " January 1889	1,954,0	2,835,9	16'53
" " February "	1,557,6	2,249,5	16'61
" " March "	1,343,4	1,955,3	16'48
	14,262,9	20,899,1	16'38

259. The sales in 1888-89 were in excess of the Budget Estimate owing to a large demand for telegraphic transfers in March 1889, and produced a corresponding reduction in the requirements of the following year. The payment account of the year may be stated as follows:—

	£	Rx.
Bills of 1887-88 outstanding on 1st April 1888	947,3	1,374,7
Bills drawn in 1888-89 as entered above	14,262,9	20,899,1
Total bills for payment	15,210,2	22,273,8
Bills paid in 1888-89	15,031,0	22,011,4
Bills outstanding on 1st April 1889	179,2	262,4

Section V.—CASH BALANCE.

	Budget.	1888-89. Revised.	Accounts.
Balance on 1st April 1888	19,347,4	19,784,4	19,784,4

Docket from the Director General of Railways No. 10 (Statistical), dated the 25th January 1890, forwarding the Abstract Returns of Accidents to Trains, &c., on the open lines of Railway in India for the quarter ended 30th June 1889.

OBSERVATIONS.—As compared with the average of the five* corresponding previous quarters, the number of accidents to trains, rolling-stock, permanent-way, &c., shows an increase of 99, or 9·84 per cent., with an increase of 2,384·75 miles, or 18·68 per cent. in the mean mileage open, and of 1,105·661 miles, or 8·50 per cent. in the train-mileage. The following are the Railways on which the more important fluctuations occurred:—

RAILWAY.	Number of accidents.	ACCIDENTS.				TRAIN-MILEAGE.	
		Increase.	Decrease.	Percentage of increase.	Percentage of decrease.	Percentage of increase.	Percentage of decrease.
Rajputana-Malwa	185	32	...	20·92	...	24·96	...
Bengal-Nágpur	39	16	...	69·57	...	10·22	...
Southern Mahratta	112	63	...	128·57	...	53·48	...
Indian Midland	55	(a) 49	...	816·67	...	402·60	...
North Western	107	...	59	...	35·54	19·84	...
Oudh and Rohilkhand	37	...	11	...	22·92	13·82	...
Eastern Bengal	118	11	...	10·28	...	23·26	...
Jorhát	6	...	(b) 19	...	76·00	12·96	...
Great Indian Peninsula	63	...	15	...	19·23	...	14·08
Dibru-Sadiya	33	(c) 14	...	73·68	...	22·53	...
His Highness the Nizam's	34	22	...	183·33	...	56·18	...

2. The increase in the number of accidents on the Rajputana-Malwa Railway is chiefly due to the number of "Failures of axles," having been 34 against 6.

3. The increases on the Bengal-Nágpur Railway and His Highness the Nizam's Railway, and the decrease on the Oudh and Rohilkhand Railway, have mainly occurred under "Trains running over cattle on the line," the number returned being on the first-mentioned line 24 against 9, on the second 24 against 5, and on the third 28 against 37.

4. On the Southern Mahratta Railway the number of accidents has increased by 128·57 per cent., with an increase of 108·84 per cent. in the mean mileage worked, and 53·48 per cent. in the train-mileage. Of the increase of 63 accidents, 49 are under "Trains running over cattle on the line."

* Except where statistics for five quarters are not available for any line.
(a) As compared with the corresponding quarter of the previous year.
(b) As compared with the average of 4 corresponding previous periods.
(c) As compared with the average of 3 corresponding previous periods.

5. With an increase from 136.25 to 611 miles, or 348.44 per cent. in the mean length worked, and from 52,213 to 293,748 miles, or 462.60 per cent. in the train-mileage, the number of accidents on the Indian Midland Railway has risen from 6 to 55, or 816.67 per cent. The principal increases are 6 under "Goods trains, or parts of goods trains, engines, &c., leaving the rails," 26 under "Trains running over cattle on the line" and 8 under "Other accidents."

6. Of the decrease of 59 accidents on the North Western Railway, 22 appear under "Trains running over cattle on the line," 8 under "Failure of couplings," 15 under "Fire in trains" and 6 under "Other accidents." The number of cases of flooding of portions of permanent-way has increased from 1 to 8.

7. The principal variations on the Eastern Bengal Railway are increases of 6 accidents under "Goods trains, or parts of goods trains, engines, &c., leaving the rails," and 5 under "Broken rails," and a decrease of 5 under "Failure of machinery, springs, &c., of engines."

8. The decrease on the Jorhāt Railway is principally due to the absence of any accident from "Failure of machinery, springs, &c., of engines" and "Failure of wheels," whereas the average of the four corresponding previous quarters was 7 under the former and 9 under the latter head.

9. On the Great Indian Peninsula Railway there is a decrease of 9 accidents under "Trains running over cattle on the line" and 14 under "Fire in trains."

10. With the exception of an increase of 7 accidents under "Failure of couplings" on the Dibru-Sadiya Railway, no other heads show any noticeable fluctuation.

11. The casualties resulting from accidents to trains, &c., were, among passengers and others, 11 killed and 89 injured, against 1 killed and 11 injured, and among servants, 2 killed and 9 injured, against 3 killed and 13 injured.

12. Of the casualties to passengers, 7 were killed and 80 injured by an accident to an Up mixed train on the Northern Section of the Eastern Bengal State Railway on the 15th April 1889. This train, while crossing a bridge at mile 33, telegraph post 22, just after leaving Madhnagar Station, was blown over by a tornado, 10 passenger vehicles and 19 goods vehicles being thrown down into the bed of the river, or down the abutment. A detailed report of this accident is appended.

13. On the Great Indian Peninsula Railway a serious collision took place between an Up goods train and an engine which was shunting at Lonāvla. A man who was travelling in a covered goods wagon in charge of sheep was killed, three other men, who were also in charge of the sheep, were more or less injured. An extract from the report on this accident is also appended.

14. The following table exhibits the number of accidents under the different classes, due to accidents to trains, rolling-stock, permanent-way, &c., and the number of persons killed and injured thereby, *vide* Tables Nos. 3 and 4:—

Serial No.	CAUSES OF ACCIDENTS.	Average of corresponding quarters of five previous years.*	SECOND QUARTER, 1889.				TOTAL ALL CLASSES.	
			Number.	NUMBER OF PASSENGERS AND OTHERS.		NUMBER OF SERVANTS.	Killed.	Injured.

	1889	...	1,105	11	89	2	9	13
	Total—Average of corresponding quarters of five previous years*	...	1,006	1	11	3	13	24

15. The principal variations occurred under "Goods trains, or parts of goods trains, engines, &c., leaving the rails," 96 against 80; "Trains running over cattle on the line," 561 against 484; "Failure of axles," 39 against 12; "Flooding of portions of permanent-way," 18 against 9; and "Fire in trains," 46 against 90.

16. The largest increase under "Goods trains, or parts of goods trains, engines, &c., leaving the rails," appears on the Indian Midland and Eastern Bengal Railways, *viz.*, 6 on each.

17. The cattle accidents were very numerous on the Rajputana-Malwa, Southern Mahratta, and Eastern Bengal Railways, being 94, 83 and 70, respectively. Next to these stand the East Indian and South Indian Railways, which have returned 32 accidents each. On the Rajputana-Malwa and Southern Mahratta Railways most of the accidents are reported to have occurred on the unfenced portions of the line.

18. Of the 39 cases of "Failure of axles," 34 are recorded on the Rajputana-Malwa Railway alone.

19. Of the 18 cases of flooding of portions of permanent-way, 8 were on the North Western Railway and 4 on the Great Indian Peninsula Railway.

20. The decrease of 44 accidents under "Fire in trains" is mainly due to the number of cases having fallen from 33 to 18 on the North Western Railway, from 15 to 6 on the Madras Railway, and from 20 to 6 on the Great Indian Peninsula Railway.

* Except where statistics for five quarters are not available for any line.

21. On the North Western Railway, there were 10 cases of "The bursting of tubes, &c., of engines" out of a total of 24, and 17 cases of "Failure of machinery, springs, &c., of engines" out of a total of 60; and on the Dibru-Sadiya Railway, 13 cases of "Failure of couplings" out of a total of 35.

22. The casualties to passengers from causes other than accidents to trains, &c., *vide* Table No. 2, were—

Causes of accidents.	SECOND QUARTER, 1889.		AVERAGE OF CORRESPONDING QUARTERS OF FIVE PREVIOUS YEARS.*	
	Killed.	Injured.	Killed.	Injured.
1. From falling between carriages and platforms	...	3	2	1
2. Falling on to the platform, ballast, &c., when getting into or out of trains	1	5	1	2
3. Whilst crossing the line at stations	2	...	...	...
4. By closing of carriage doors	...	1	...	1
5. Falling out of carriages during the travelling of trains	5	30	3	18
6. Other accidents	1	7	1	6
TOTAL	9	46	7	28

23. The accidents to servants in the employ of Railways, or of contractors, whilst performing duties connected directly with the transit of passengers and goods, from causes other than accidents to trains, &c., were as follows, *vide* Table No. 2:—

Causes of accidents.	SECOND QUARTER, 1889.		AVERAGE OF CORRESPONDING QUARTERS OF FIVE PREVIOUS YEARS.*	
	Killed.	Injured.	Killed.	Injured.
1. During shunting operations	4	14	5	12
2. Falling off engines, vans, wagons, &c.	3	13	3	14
3. Coming in contact with over-bridges, &c., during the travelling of trains	1	...	...	1
4. Coming in contact, while shunting, with vehicles, &c., standing in adjoining lines	...	...	...	...
5. Getting on or off trains, engines, &c.	5	14	3	13
6. Whilst loading, unloading or sheeting	...	15	3	16
7. Whilst breaking, spragging, or choking wheels	...	1	...	2
8. Whilst working at cranes or capstans	...	3	...	2
9. Whilst working on the permanent-way or in sidings	2	11	1	5
10. Whilst walking along the line on the way home, or to work	4	6	1	1
11. Whilst walking, crossing, or standing on the line	9	5	10	7
12. Whilst passing between vehicles	1	4	1	2
13. Whilst attending to the machinery of engines, cleaning them, &c.	1	2	...	4
14. Whilst attending to gates at level-crossings	2	1	2	1
15. Falling, or being caught between vehicles and platforms	2	2	1	2
16. Falling off ladders, scaffolds, platforms, &c.	...	5	...	4
17. By falling of lamps, wagon doors, timber, weights, &c.	...	6	...	5
18. Whilst coupling or uncoupling wagons	2	8	2	8
19. Miscellaneous	6	53	5	33
TOTAL	42	163	37	132

24. Of other persons killed and injured by running trains, &c., 5 were killed and 2 injured whilst passing over the line at level-crossings; 50 were killed and 19 injured whilst trespassing on the line; 27 committed suicide, and 3 were injured in attempting to commit suicide; and 6 were killed and 5 injured from miscellaneous causes.

* Except where statistics for five quarters are not available for any line.

25. The following table exhibits the total number of persons killed and injured from all causes over the whole Indian Railway system, as compared with the average of the corresponding quarters of five previous years, *vide* Table No. 1:—

Causes of accidents.	SECOND QUARTER, 1889.		AVERAGE OF CORRESPONDING QUARTERS OF FIVE PREVIOUS YEARS.*	
	Killed.	Injured.	Killed.	Injured.
<i>Passengers.</i>				
From causes beyond their own control	9	90	1	10
From misconduct or want of caution	9	44	7	26
<i>Servants.</i>				
From causes beyond their own control	6	22	5	22
From misconduct or want of caution	38	150	36	124
<i>Others.</i>				
Whilst passing at level-crossings	5	2	1	2
Trespassers, including suicides	77	22	53	12
Other persons	6	5	3	5
TOTAL	150	335	106	201
Total open mileage	15,151½		12,766½	
Total train-mileage	14,115,595		13,009,934	

* Except where statistics for five quarters are not available for any line.

26. In addition to the above, 16 persons are reported to have been killed and 45 injured in yards, workshops, &c., and 184 persons to have died in carriages and at stations from causes unconnected with the working of trains.

27. A tabulated statement has been added to the returns, comparing the accidents on Indian Railways with those on English Railways for the year 1888. The number of accidents per 1,000,000 train-miles on the Indian Railways was 64·90 against 5·64 on the English Railways, and the number of passengers killed and injured per million of passengers 0·03 and 0·27 against 0·01 and 0·80, respectively.

RESOLUTION.—The decrease in the number of "Fires in Trains" is satisfactory, the number having fallen from a quarterly average of 90 to 46 during the quarter under review. This was chiefly due to decreases in this class of accident on the North Western Railway, the Madras Railway, and the Great Indian Peninsula Railway.

2. On the Rajputana-Malwa Railway the large number of "Failures of Axles" is again noticed, being 34 out of a total, on all Indian Railways, of 39 "Failures of Axles" during the quarter.

The Governments of Madras, Bombay, Bengal, the North-Western Provinces and Oudh, and the Punjab.
The Chief Commissioners of the Central Provinces, Burma, and Assam.
The Resident at Hyderabad.
The Agents to the Governor General for Central India, Rajputana, and Baluchistan.
The Director General of Railways.
The Consulting Engineers to the Government of India for Railways, Calcutta, Lucknow, and Central Division.

ORDER.—Ordered, that this Resolution be communicated, for information, to the Local Governments, Administrations, and Officers noted in the margin.

Ordered also, that copies be forwarded for the information of Her Majesty's Government.

Ordered further, that this Resolution, with the Abstract Returns, be published in the Supplement to the *Gazette of India*.

M. C. BRACKENBURY, Major, R.E.,
Under Secretary.

Document accompanying.
Abstract Returns of Accidents
for the second quarter of 1889.

(a) Includes the Prime-Gya, Sindia, Dildarnagar-Ghazipur and Tankeohwar Railways for five quarters; and the *Andes Midland Railway* for four quarters.

(b) Includes the Prime-Gya, Dildarnagar-Ghazipur and Tankeohwar Railways.

(c) Includes H. H. the Gaekwar's Virangam-Nekasur-Vadnagar Railway.

(d) Includes the Katta-Tumaria Branch.

(e) Includes the Bellary-Krishna State Railway.

(f) Includes the Bellary, Bhopal-Hansi State Railways.

(g) Includes the Benares Branch.

(h) Includes the Bengal Central Railway.

(i) Includes the Tongoo-Mandali Extension.

(j) Includes the Villupuram-Dharmavaram, Nellore Branch.

(k) Includes the Phond-Mamadi, Khamsong, and Bhopal-Hansi State Railways.

(l) Includes the Dhond-Mamadi, Khamsong, and Amroli State Railways.

(m) Includes the Puri Branch.

TABLE NO. 1--continued.
GENERAL TOTAL.

Prices subject to change without notice. Some restrictions for the quantities and not available for any line.

TABLE No. 2.

No. 2.
Traffic in INDIA, distinguishing between PASSENGERS, RAILWAY SERVANTS, and OTHER PERSONS, and classifying, as far as
Accidents occasioning the Death or Injury.

[illegible]

(l) Includes the Pátri Branch.
(m) Includes the Bareilly-Pilibhit State Railway.
(n) Includes the Bezwada Extension.
(o) Except where statistics for five quarters are not available for any line.

TABLE No. 3.

ACCIDENTS TO TRAINS, ROLLING-STOCK, PERMANENT-WAY, &c. reported during the Second Quarter of 1889 as having occurred on the several RAILWAYS open for Traffic in INDIA, distinguishing the different Classes of Accidents and the Number of Passengers and Others, and of Railway Servants KILLED or INJURED in each Class of Accident.

SEE ALSO TABLE No. 4.

STATE IMPERIAL.

[illegible]

(4) Includes the Puno-Cuzco, Mito-Morango-Chileno and Tinkashere Railways.
(5) For a passenger, but a freightman.
(6) Includes H. H. the Emperor's Yungay-Mabaco-Vadugay Railway.
(7) Includes the Katin-Umari Branch.
(8) Includes the Estero-Katana State Railway.
(9) Not a passenger, but a cart-man.

TABLE No. 3.--ACCIDENTS TO TRAINS, ROLLING-STOCK, PERMANENT-WAY, &c., reported during the Second Quarter of 1889, &c.--continued.

SEE ALSO TABLE NO. 4.

STATE INTERVIEW—concluded.

[illegible]

(a) Includes the Sindia and Bhopal-Ikari State Railways.
(b) Includes the Amritsar-Pethankot and Rajpura-Bhainda State Railways.
(c) Includes the Benares Branch.

(d) Includes 21 servants employed on Collier
(e) Includes the Bengal Central Railway.

(a) Including holders of season or periodical tickets.

Report on the accident, which occurred on the 15th April 1889, to No. 45 Up mixed train on the Northern Section of the Eastern Bengal State Railway, near Madhnagar Station, by Mr. G. E. Moore, Deputy Consulting Engineer to the Government of India for Railways, Calcutta.

Description.

1. In this case the train, consisting of an engine and tender, 1 low-sided wagon, 18 covered goods wagons, 11 coaching vehicles, and a brake-van, 31 vehicles in all, left Madhnagar (mile 32) at 16.49, right time. While passing over a bridge at mile 32, telegraph post 22, consisting of 9 spans of 6 metre girders of standard type, it was blown off the line, with the exception of the engine and tender, which were about 8 wagons' length clear of the north end of the bridge, and the brake and one third-class carriage just clear of the south end of the bridge. The front wheels of this carriage were derailed.

2. Out of 140 passengers, 89 were emigration coolies, and the rest third class passengers. There were no first or second class passengers. Seven were killed or died from injuries received, and 80 were more or less hurt, 15 of them seriously.

The damage to rolling-stock is estimated at Rs20,000.

Neither the permanent-way nor bridge structure were damaged.

3. The accident occurred just one mile north of Madhnagar Station, where the line crosses, nearly at right angles, a long, low rice-growing jheel, bordered on either side by thick bamboo jungle. The line crosses the jheel on a bank 15 feet high, with a bridge 9 spans of 6 metres near the north end. The height of the bridge from rail level to ground is 20 feet, including about 3 feet of mud and water.

The jheel is now quite dry with the exception of a pool under the bridge, but in the rains the water stands over it from 5 to 10 feet deep.

The line here runs almost due north, and is both straight and level.

The road-way across the bridge consists of sawn teak sleepers, 6' x 9" x 6", spaced 1'6" centre to centre, each sleeper being fixed to the girders by 4 hook-bolts. The rails were new, 50lb steel rails, only 6 months in the road, joined by clip pattern fish-plates, with 4 bolts to each joint, spiked down with 4 spikes in each sleeper.

When I examined the road it was in good order, and the gauge, though slightly tight, was very even throughout. I was informed that the only work done to the permanent-way on the bridge since the accident, was to straighten three or four sleepers which had been displaced.

The masonry of the bridge, with the exception of the ends of the cut-waters on the east side, and the coping of the east wings, where a few bricks had been displaced, was undisturbed.

I also examined the permanent-way for some distance on either side of the bridge without finding any defect.

The girders were undamaged and had not moved on their bed-plates.

Wheel marks were found on the sleepers between the rails and outside the rails on east side only, on the first two spans from the south end, and last span on the north end.

The middle of the bridge was devoid of wheel marks, except on the extreme east end of the sleepers. Most of the east ends of the bridge sleepers were crushed as if struck by the carriages in their descent.

Evidence.

P. P. Rogers, Executive Engineer.—After receiving telegram about the accident, I left Sára on the special relief train, starting from Sára at 19.55. The train arrived at Madhnagar at 22 o'clock, and left for scene of accident at 22.10. On arrival at scene of accident, mile 33, telegraph mile 22, after putting 3rd class carriage No. 73 on the road, and hand-shunting it, and the rear

brake-van of the train, a short distance from the bridge, I examined the permanent-way south of the bridge, on the bridge, and north of the bridge, up to where engine was standing; south of the bridge the sleepers were practically undisturbed, only the two front wheels of 3rd class carriage No. 73 being derailed. A few sleepers on the bridge had been displaced by the wheels of the

vehicles having struck them, and some hook-bolts had been broken. There were no marks on the sleepers to show that both wheels had been on the sleepers, except in one place between the 7th and 8th piers. In most cases the sleepers had been hit in the outside of east rail, showing clearly that the vehicles were lifted up and blown clear off the rails, in a few instances hitting the sleepers outside the rail on their way down to the bed of the river. The noses of the brick piers on the east side were also cut away for a short distance. No damage was done to the girders, which were carefully examined, nor had any shifted on their bed-plates. Altogether about one dozen sleepers required to be straightened on the bridge after the accident. The road over the bridge was gauged, and found to be tight to gauge in places to the extent of from $\frac{1}{8}$ to $\frac{1}{4}$ of an inch. North of the bridge there were four wagons derailed within a distance of 50 feet of the bridge, two of them lying right across the road; from a point 50 feet from the face of north abutment up to where the engine was standing, i.e., for a distance of 150 feet, the wagons had been thrown down the bank, but the road was untouched and, except on two or three sleepers close to engine where the first wagon was derailed, there were no marks of the wheels having been on the road at all. In no place, either on the bridge or in the road each side of it, were any marks found in the rails. Under the wagons derailed north of the bridge, the sleepers had been disturbed by reason of the derailment. There can be no doubt that the train was lifted off the road by the wind because of the absence of any mark in the bridge-sleepers showing that any one pair of wheels had been on them, which would have been the case had any wagon been derailed. On only a few sleepers between 7th and 8th piers were there any marks of a wheel on the west side of the bridge, and generally from the absence of marks of wheels on sleepers, and on road north of the bridge, it may fairly be inferred that the vehicles and wagons were lifted off the line bodily and thrown down.

S. W. Bowen, Permanent-way Inspector.—I have been a Permanent-way Inspector about 13 years, but have only been on this line about a week. Inspected the bridge, measured the girders on Friday, 12th, and it was then in good order. On the night of the accident I saw the ends in the east side of about 30 sleepers damaged by the vehicles falling over, and some of them knocked out of position slightly, and all the cut-walls on the east side, and wing walls of north abutment damaged; the road to the north of the abutment was slightly knocked out of place, and a few spikes bent.

When I arrived, the rear brake-van and a 3rd class carriage were on the south end five feet from the abutment; the leading wheels of the carriage were derailed. On the north end two wagons were standing across the rails, and two

close to the bridge, derailed; the remainder were down the bank or in the river; beyond the wagon across the road up to the engine the road was undisturbed, and never touched by my men. There were no marks on the road to shew any derailment from defect in the road. In my opinion the train was overturned by a cyclone wind.

Foy Foyram.—I was Brakesman of 45 Up on the 15th April 1889. Have been 14 months on the Railway as signalman, gunner, and 4 months as brakesman; there were 11 vehicles behind the vehicle I was in, which was a third class carriage fitted with a brake No. 43; next to my carriage was an 18-foot empty wagon fitted for coolies, and run in case of any being taken ill on the road. When I left Madhnagar a few drops of rain were falling and it was stormy; just before coming to the bridge the wind was blowing harder, and as soon as we got on to the bridge my carriage was blown off. The carriage appeared to jump up and down by the force of the wind. I opened the brake shutter to apply my brake, heard a noise, looked out, saw the three vehicles behind me fall. My vehicle, No. 43, fell clear of the bridge into the water standing on its wheels; there were 12 passengers and myself in the carriage. No one in the carriage was hurt. We were only shaken. The water in the carriage was just over the seats. I should say it fell 30 feet.

H. S. Hutton.—I was Fireman of the engine of 45 Up of 15th; have been a fireman 16 months. After leaving Madhnagar there was a slight breeze and light rain; when I arrived at the bridge there was a stronger breeze—a regular cyclone; we went out slowly, starting from Madhnagar about 7 to 10 miles an hour. When we got to the bridge the breeze all but stopped; in going over the bridge I felt nothing wrong in the road, but after getting over it felt a sudden jerk; the engine stopped. I looked back on the west side; I saw the bridge clear and all the vehicles off; heard no crash but a howling of the wind. I first went with the driver to attend to the passengers, and then the driver sent me and the guard back to protect train and fetch assistance. I think the accident was caused by the train being blown and lifted off the bridge. There was one strong gust just as the engine stopped which lasted about 5 seconds.

Jean Louis Carreau.—I was Guard of 45 Up mixed on the 15th. I have had 3 years 9 months' Railway experience, 3 years Fireman and Driver, 9 months as Guard; left Madhnagar right time. It was then raining, cloudy and stormy; about $\frac{1}{4}$ mile out of Madhnagar close to the bridge I felt a jerk which threw me down; jumped up, looked out and saw the coaching vehicles falling over the bridge on east side, and the breeze was blowing from west to east. I had my window up on the next side as it was raining and blowing. When I looked out on the west side the breeze was so strong it nearly choked me. I applied my brake and stopped

almost instantly; while putting on the brake the brake-van rocked; went down to assist passengers; I helped a few out of the carriages and by that time Driver Read went across. I left him and Ticket Collector McDonald to help the passengers and went back to protect train, and send for assistance. I did not see the fireman, as he went to the north side to protect his train. I believe as the carriages fell they were upright, and seemed as if they had been lifted bodily off the line. I could only see the passenger vehicles. I could hear nothing but the howling of the wind.

The formation of my train was as follows:—

Engine No. 52	
Low-sided truck	750
Empty covered goods	193
Ditto ditto	1,435
Loaded covered goods	1,381
Empty covered goods	31
Ditto ditto	303

Intermediate	284 passengers.
Composite	31 ditto.
3rd class	68 ditto.
Ditto	297 ditto.
Ditto	81 ditto.
Ditto	73 ditto.
Brake-van	143 guard.

A. K. Sen, Assistant Surgeon, Sára.—On arrival at the scene of accident at about 22 hours, I found one woman injured in a carriage with a few bruises only, no external injury, and a man laying on the bank with his head cut and a few bruises. I sent them to the hospital carriage brought by the Special to be treated. Hearing there were more in the village, I found a dead child on the west side with its parents who had brought it there, and they were asleep. I saw about 10 others with bruises, and a woman complaining she had lost a child 12 months old. I made a search with the Sára Station-master and found eight passengers about a mile off, five injured, the others only now in hospital. I went to the village on the east side and found coolies injured, lying two or three together in different houses. I met two village chowkidars, who said there were 60 or 70 lying about in the different houses, and requested them to come for treatment, but they mostly refused to go then. By that time the Saidpur Special had arrived, and asked the Railway Police Magis-

trate and others to assist in getting them in. Those who came first were sent off by Special to hospital. Those found after were sent on by later after being attended to, were sent on by another Special, and four afterwards came in who were sent on to Sára by a return Special.

Altogether there were about 70 injured. The first woman I saw died about 5 A.M.—16 at Madhnagar. A man by name Koomee, Assam Company's coolie, died at 15 hours on 17th from internal injuries received. Only four cases were serious, and two more now have become serious on account of fever having set in.

Most of the injured people say there was a heavy gust of wind like a whirlwind, lifted the carriages up and blew them over.

C. Stephen.—I was Driver of 34 Down mixed of the 15th, and crossed 45 Up at Madhnagar; 45 Up left as soon as I arrived at Madhnagar. There was a breeze blowing when I left Atrai, and a heavy storm came on at mileage 34, two miles from Madhnagar, to the north of the bridge. The storm slowed the train down to four or five miles an hour. There was nothing wrong with the bridge or permanent-way when I came over it.

Edward Read.—I was Driver of 45 Up mixed of 15th; have been a Driver on this system about four years. I arrived at and left Madhnagar, right time, 16-49. On approaching the bridge, 9 spans of 20 feet at mileage 33-22, I felt some heavy gusts of wind which only slightly affected the speed of the train. I was going about 12 miles an hour before, and on the bridge it was reduced to about 10 miles an hour by the wind. I had 31 vehicles in all on the train, 9 coaching, 1 loaded wagon, 21 empties, my engine being F class 52, and its load for a mixed train 35. After my engine had passed over the bridge a few wagons' length I felt a jerk; looked back and saw some wagons near the engine falling over on to the east side of the line; my engine was brought to a stand at once before I had time to apply my brakes. I did not know at first what had caused the accident, but when I got off the engine I at once thought the vehicles must have been blown over. I felt several gusts, and could not say which particular gust did it. I first went and gave assistance to the passengers whose vehicles had fallen into the river, and then went and examined the road. I did not cross the bridge when I went back to the Guard as it was wet and slippery and windy, and an open bridge without side protection, and waded through the water which was up to my middle, 3½ feet deep. I commenced assisting the passengers and sent the Guard back about half an hour after to give the necessary notice and send for assistance. It was dusk before I examined the road and bridge, about 18 hours. I saw a few sleepers at each end of the bridge with wheel marks on, but nothing in the middle of the bridge. I saw nothing wrong with the bridge; I did not run against or over anything to cause an accident. It was 16-55 when my engine stopped. I felt

nothing wrong with the road while I was running attached to my engine by couplings, 4 covered till the time of the accident. I shut off steam wagons on their sides down the bank, and one and my fireman applied the tender brake after low-sided next to the engine canted over to the we had stopped. There were 5 wagons east.

Conclusion.

The accident must be attributed to a violent gust of wind, amounting to a tornado, which unfortunately caught the train passing over an open bridge.

The wheel and other marks on the bridge are inconsistent with a derailment caused by any obstacle on the line or defect in the rolling-stock or way and works. The position of the vehicles after the accident is shown in the accompanying sketch.

No. 43, a third class carriage, with a brake compartment, contained a brakesman and 12 passengers. No. 362, an empty covered goods, attached for use as a hospital in case of cholera. These two vehicles appear to have been lifted up clear of the bridge structure and dropped down on their wheels into about 3 feet of water which broke the shock, causing the passengers and brakesman to escape uninjured.

The other vehicles seem to have caught the ends of the sleepers or cut-waters in their descent, causing them to fall either on their sides or on their roofs. Two 3rd class carriages falling on their roofs were completely crushed by the heavy weight of their frame and wheels. These carriages must have been nearly empty, or the loss of life would have been much greater, as it would seem impossible that any one inside them could have escaped.

The witnesses all agree in the opinion that the train was blown off the bridge, but very slightly in their description of the force and duration of the storm. Fireman Hutton gives 5 seconds as the duration of the gust which caused the accident.

Lieutenant-Colonel Clarke in his note shows that to overturn an empty covered wagon, metre gauge, would require a pressure of 49·4 lb.

To lift bodily, as in the case of covered wagon, No. 362, weighing 3·4 tons, a pressure of 83 lb per square foot must have been exerted—

Wagon weight	3·4 tons = 7,616 lb
frame	14' x 6' 7" = 92 sq. ft.
"	" = 82·78 lb per sq. ft.

The tremendous pressure in this case may perhaps be accounted for by tornado sweeping up an open space being suddenly deflected and obstructed by the high bank and bridge structure.

The narrow track of the storm may be demonstrated by taking the centre as having struck the train at carriage No. 43, the nineteenth vehicle, exerting a force of over 82·78 lb, which at the 30th vehicle had decreased below 49·4 lb, the amount calculated to overturn a 3rd class carriage.

The enormous force developed, and the suddenness and uncertain track of these tornados seem to preclude any reasonable precautions being taken to prevent future accidents from this cause.

APPENDIX

Statement of the damages to the stock in the accident at Madhnagar on 15th April 1889.

No. 1435	18' Iron covered wagon.	Both buffers bent; right side under-frame angle iron bent.
" 1381	" "	Buffer bent; axle-guard bent; axle-boxes broken; door flashings broken.
" 134	" "	Coupling pin, four axle-boxes, brake thrust rod and one door frame broken, buffers and axle-guards bent.
" 1323	" "	Flap door boards and side angle iron broken; hook buffer and door flashings bent.

No. 1361 18' Iron covered wagon.—	Brake-gear bent, partly broken; front left side plate broken; front left side corner angle iron twisted centre angle iron bent; three axle-boxes broken; four axle-guards bent; right end corner angle iron bent; one right end centre angle iron broken; two buffers broken; end bottom gusset plates bent; front end angle iron plate bent; door flashings broken.
1284 Iron covered wagon.—	Buffers broken; two axle-guards bent; two axle-boxes broken; brake rod and rack broken; left side under-frame angle iron bent; one right back and angle iron bent.
1375 " "	Two buffers bent; two axle-guards bent; three axle-boxes broken; two end buffer plates bent, and one broken at corner; six angle irons on right side bent; two angle iron gusset plates broken; one right back side plate broken; one right side under-frame angle iron bent.
193 18' Covered goods wagon.—	Right side sole bar loose; front buffer broken; back buffer bent; cast-iron roof plates bent.
303 " "	One buffer broken; two cast-iron roof plates bent.
339 " "	Right top side rail broken; right sole bars and one side broken.
314 " "	Body completely smashed, back buffer broken; front buffer bent.
415 " "	Two buffers broken; two axle-boxes broken; sole bar broken; axle-guards bent; end and side pillars broken; two cast-iron roof plates broken.
361 Covered goods wagon.—	Side pillars broken; three cast-iron roof plates broken.
668 14' Covered wagon.—	Body badly damaged.
428 " "	Back buffer bent; cast-iron roof plates broken; two back end uprights broken.
438 " "	Three axle-boxes broken; one buffer hook broken; one buffer hook bent; right sole bar broken; four axle-guards bent; four axle-guard bridles broken.
750 Low-sided wagon.—	Both sole bars broken; six floor planks broken; head stock loose; two buffers bent; two side iron brackets broken; three axle-boxes broken; two corner plates broken.
31 24' Iron jute wagon.—	One axle-box broken; two buffers bent slightly.
The bodies of 3rd class carriages Nos. 83, 317, 53, 68, 297 and 81 are damaged beyond repair, and will have to be rebuilt. The under-frames of these carriages are practically uninjured; the buffers are all either broken or bent.	
No. 284 Intermediate.—	One end and side pillars broken; panel plates bent; sunshades broken.
31 Composite.—	End panels and pillars broken; sunshades broken; cushions damaged; axle-boxes broken; and buffers bent; axle-guards bent.

Extract from a Report on the Accident which occurred at Lonávla Station, Great Indian Peninsula Railway, at 12-40 A.M. on the 5th May 1889.

A shunting engine was working in the Lonávla Station-yard, having 15 wagons attached, and was well within the protection of the down station signal, which was set to danger. The shunting train was moving slowly towards the station signal when the driver saw the lights of an advancing train. On this train not coming to a stand outside the station signal, he reversed his engine, but too late, and the trains collided at a point 166 feet inside the signal. This signal, it was stated in the evidence, could be worked at night to show an imperfect or "magpie" light.

The damage done to the shunting engine and attached vehicles was trifling, none of them left the road. The driver and fireman remained on the shunting engine, and none of them were injured. The approaching train, an up-goods, had four of the wagons derailed, two of them overturned, and four men travelling in these (in charge of sheep) were injured, one fatally. None of the train staff were injured.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

CIVIL WORKS.

Irrigation.

REVENUE REPORT OF IRRIGATION WORKS IN THE PUNJAB FOR 1888-89.

No. 40 I., Dated Calcutta, the 1st March 1890.

RESOLUTION—By the Government of India, Public Works Department.

Read—

Letter No. 6578 I., dated 28th December 1889, from the Government of the Punjab, forwarding the Revenue Report of Irrigation Works in the Punjab for 1888-89, and Resolution by that Government reviewing the Report.

OBSERVATIONS.—The canals in the Punjab are twelve in number: one of them, the Swat canal, is classed as a protective work; six, the Western Jumna, the Bari Doab, the Sirhind, the Lower Sohag and Para, the Sidhnai, and the Chenab, are classed as productive; while the remaining five, the Upper Suttlej, the Lower Suttlej, the Indus, the Shahpur and the Muzaffargarh are classed as minor works: for the last-mentioned canal only Revenue Accounts are kept. Of the twelve canals the first four have a perennial flow, the remaining eight are only inundation canals.

2. The following statement shows the capital expenditure during and up to the end of the year:—

		Dunroo from 1888-89.							Total direct and indirect to end of 1888-89.
	Number of works.	Works.	Establishment.	Tools and Plant.	Suspense Account.	Total direct charges.	Indirect charges.	Total direct and indirect charges.	
		Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	
Major Works.									
Protective Works (Account head 85)	1	39,848	8,810	799	—2,068	46,774	2,246	49,020	85,04,223
Productive Works (Account head 49)	6	10,47,699	2,20,567	—12,541	—34,116	12,21,609	51,957	12,73,566	5,54,44,186
Minor Works of which Capital and Revenue Accounts are kept (Account head 48)	4	...	...	...	—177	—177	...	—177	18,60,974
TOTAL	11	10,86,547	2,29,377	—11,742	—36,376	12,35,300	54,203	12,89,503	6,08,09,383

The principal outlay was incurred on the Chenab canal, in which it amounted to Rs. 4,49,977 for works. Three syphons, a fall, eight bridges and two bungalows were completed; a large amount of earthwork was done; a considerable sum paid as land compensation; and good progress made with the distributaries.

On the Sirhind canal the expenditure on works was Rs. 2,92,966 from Imperial funds and Rs. 59,901 from contributions, but the information given in the Report as to what works were in progress during the year is insufficient.

On the Western Jumna canal the completion of the new distributaries was in hand, and progress was made in fixing permanent outlets on all the new rajbahs.

3. The following statement shows the progress that has been made in extending the main canals and their distributaries :—

	SANCTIONED.		COMPLETED.	
	Miles of Canals.	Miles of Distributaries.	Miles of Canals.	Miles of Distributaries.
<i>Major Works.</i>				
Protective Works	22	121	22	116
Productive Works	1,209	4,825	1,154	4,631
<i>Minor Works.</i>				
Of which Capital and Revenue Accounts are kept	1,792	155	1,790	155

Of the total length of main canal 431 miles are available for navigation.

4. The actual financial results of the year for the twelve canals, excluding the Native State portion of the Sirhind canal, were as follows :—

Canal.	Capital outlay.	GROSS REVENUE COLLECTED.			WORKING EXPENSES.			Net Revenue.	Percentage of net Revenue on Capital outlay.
		Irrigation Revenue.	Miscellaneous Receipts.	Total.	Direct.	Indirect.	Total.		
1	2	3	4	5	6	7	8	9	10

SKETCH SHOWING POSITION OF VEHICLE AFTER THE ACCIDENT.

Scale—20 feet=1 in.

E. B. S. R., N. SECTION.

ACCIDENT TO No. 45 UP-MIXED TRAIN AT MILE 33 T-POST 22 ON APRIL 15th, 1889.

SKETCH SHOWING POSITION OF VEHICLES AFTER THE ACCIDENT.

Scale—20 feet=1 in.

0.38 in 1887-88 and that after being only four years in operation. The increase is partly due to the full rate of Rs. 2.8 per acre having been charged for the irrigation of the kharif crop against the interim rate of Re. 1 per acre which was previously levied; but there was also a substantial addition to the area irrigated, which for the two crops was 11,224 acres more than the area for 1887-88. The gross area irrigated amounted to 107,910 acres, which is 17,910 acres more than the ultimate area assumed when the project estimates were prepared. A further increase in area may be looked for, as at no time during the year was the full supply of 700 cubic feet per second, for which the canal was designed, required to be sent down, though sufficient water was always available in the river. The success of the Sidhnai Canal is also very noticeable. The area irrigated during the year was 50 per cent. in excess of that contemplated when the original project was drawn up, although the canal has been only three years in operation, and it already more than covers its interest charges.

On the Western Jumna canal there was a decrease in net revenue from Rs. 8,13,323 for 1887-88 to Rs. 4,45,799, which reduced the percentage of return from 7.47 to 4.03 per cent. This decrease is attributed to the abundant rainfall which rendered canal irrigation less necessary during the rabi season of 1887-88, the revenue of which is collected in the following financial year.

Among the minor works the Upper Sutlej improved its net return from Rs. 2,152 for 1887-88 to Rs. 62,822, the improvement being due to less expenditure and to the large area of the rabi crop of 1887-88. The Lower Sutlej and Chenab canals also show an increase, which is attributed to the carrying out of various works of improvement which have enabled a larger area to be irrigated.

The Bari Doab Canal was closed for 41 days from February 1st, 1889, against 17 days in February 1888, and 68 days in 1887. Such a closure during the irrigation season is much to be deprecated; every effort should be made to shorten the period during which this canal is annually closed, and, if possible, to postpone the closure to a time when water is less urgently required by the crops.

6. The interest account to the end of the year shows a balance in favour of the canals of Rs. 1,92,53,180, which is chiefly due to the small capital outlay and large returns on the West Jumna Canal. It was estimated, in para. 4 of last year's review, that the Bari Doab Canal would have repaid all arrears of interest charges in two or three years, but it has done so in one year and is now on the right side. The Swat river canal will also be able to meet its interest charges in full at no very distant date.

7. The following statement shows the revenue assessed for the year under the different heads, in which is included the rabi assessment for 1888-89, which is not collected till 1889-90. The manner in which the assessments are fixed for the different canals was described in para. 6 of last year's review.

	AREA IRRIGATED.		ASSESSMENT, 1888-89.							RATE PER ACRE IRRIGATED.	
	1888-89.	1887-88.	Water rates.	Occupiers' rates.	Owners' rates.	Share of land revenue.	Water advantage rates.	Gross assessed revenue excluding miscellaneous.	Assessment, 1887-88.	1888-89.	1887-88.

8. The gross area irrigated is again the largest on record, and shows an increase of 361,049 acres over the figures for the previous year. The increase is common to all the canals, but is most marked on the Sirhind canal, in which it amounts to 86,000 acres. This increase has an effect not only on the quantity of crops produced but also on the distribution of population. In the case of the Swat river irrigation the opening of the canal has resulted in a multiplication of the number of villages in the tract commanded. Of the 160 villages now irrigated, only 41 are old villages, the remainder having sprung up since irrigation was started. Under the Bari Doab Canal, irrigation has been extended during the last four years to 173 new villages, and the total number irrigated from this canal is now 1,362. The gross increase in the irrigated area in the five years from 1884-85 is one million acres, of which 700,000 acres belong to the perennial canals.

The areas of kharif and rabi crop for the year under review were as follows:—

	Kharif Acres.	Rabi Acres.
Perennial canals	554,466	1,840,122
Inundation canals	683,481	536,061
TOTAL	1,237,947	1,376,183

9. In the following table the areas under the principal crops are compared with the figures for the previous year:—

	1888-89. Acres.	1887-88. Acres.
Sugar-cane	71,501	83,691
Rice	165,837	158,837
Jowar	171,939	189,339
Maize	222,392	80,876
Wheat	935,510	788,189
Cotton	215,688	223,470

The increase in wheat and maize cultivation during the five-year period from 1884-85 has been most marked, having amounted to 75 and 550 per cent. respectively.

The gross value of the crops irrigated during 1888-89 is estimated at 752 lakhs.

10. Under the Swat river canal 19.28 per cent. and under Bari Doab canal 14.12 per cent. of the total area irrigated were double-cropped. The remark is made in para. 77 of the Report that the increase in the area of double crop is not satisfactory, "as the practice is generally held to be detrimental and exhausting to the soil." This, of course, is not the case when the land is sufficiently well manured, and the efforts of the canal officers should tend rather to facilitate the ample distribution of water to lands which are highly cultivated, and to discourage it where the agricultural system is such that the soil is likely to become deteriorated.

11. Some details are given in Statement No. I. E. of the irrigating duty of each cubic foot of water per second entering the canals, but nothing is said as to the irrigating duty of the standard unit for different descriptions of crops, and without this the information given is not of much value. What is wanted, in order to institute a comparison that may prove both interesting and valuable, is the irrigating duty of each cubic foot per second for wheat, maize, rice,

and the other principal crops cultivated; then taking the average period required to bring each crop to maturity, the total amount of water required for each acre of the different sorts of cultivation can be obtained, and the results compared with similar figures from other parts of India.

12. The working of the Native States branches of the Sirhind canal is described in interesting detail, and for the first time, in paras. 127 to 133 of the Report. The total available supply of the canal is divided between the Imperial and Native States branches in the proportion of 64 to 36, and this for the year under review gave 2,265 and 1,274 cubic feet per second respectively for the kharif crop, and 2,847 and 1,602 cubic feet per second respectively for the rabi crop. As a matter of fact the Native States branches received 152 cubic feet per second more than their share for the former crop and 408 cubic feet per second less for the latter. In return for their share of water the Native States pay 36 per cent. of the charges and receive 36 per cent. of the miscellaneous receipts on the main canal. They also pay all expenditure on the feeders, the three branch canals, and the Patiala navigable canal, the establishment on all of which is a provincial charge. The cost of the maintenance of rajbahs and of their own revenue establishment is paid directly by them. The three States that share the supply are Patiala, Nabha, and Jhind; and they do so in the proportion of 83.6, 8.5, and 7.6. The duty of water obtained in the Native States irrigation is in the aggregate but little more than half that obtained by the Imperial share of the supply. Only 140,234 acres were irrigated in the Native States under the two crops, whereas if the British standard had been reached, 268,114 acres might have been supplied. The proportion is only 52 per cent., and the three States compare as follows:—

State.	Area actually irrigated.	Area irrigable according to British standard.	Percentage.
	Acres.	* Acres.	
Patiala	121,901	224,143	54
Nabha	7,987	23,504	34
Jhind	10,346	20,377	51

13. The following statement shows the particulars of the working of the Native States branches:—

State.	Capital out- lay.	Gross Revenue, less refunds.	Working expenses.	Water-rates assessed.	Area irrigated.	Water-rate per acre.	Working expenses per acre.
	Rs.	Rs.	Rs.	Rs.	Acres.	Rs.	Rs.
Patiala	1,11,18,505	1,69,933	3,97,035	3,07,378	121,901	2.52	3.26
Nabha	11,70,369	35,519	45,252	30,499	7,987	3.82	5.66
Jhind	10,10,778	39,572	32,238	36,372	10,346	3.51	3.11
TOTAL	1,32,99,647	2,65,024	4,74,525	3,74,249	140,234	2.67	3.38

The average water-rate per acre is slightly lower than that on the British branches of the same canal, chiefly because full water-rates are not yet levied in several villages; the schedule of rates is apparently the same. The working expenses are extraordinarily high. The financial position of these branches will no doubt improve, especially in Patiala, where the services of officers of the Public Works Department have been lent to direct irrigation operations, but it will take time to train the native subordinates.

14. In the following statement the working expenses on the different canals are compared with the figures for the previous year:—

		1888-89.					1887-88.
		Works.	Establishment.	Tools and Plant.	Indirect charges.	Total.	TOTAL.
		Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
PERENNIAL	MAJOR WORKS.						
	Protective Works—						
	Swat River Canal .	35,714	51,658	53	7,232	94,657	90,123
	Productive Works—						
	Western Jumna Canal .	2,16,086	2,36,987	12,178	33,278	4,98,529	5,82,300
	Bari Doab Canal .	3,00,947	2,59,938	3,707	36,415	6,01,007	5,28,999
	Sirhind Canal (British portion) .	3,13,682	2,19,088	3,162	30,672	5,66,604	3,61,833
	Lower Sohag and Para Canal .	21,960	28,318	11	3,965	54,254	37,034
	Sidhnai Canal .	44,077	27,345	845	3,828	76,095	41,009
	Chenab Canal .	53,263	24,947	138	3,493	81,841	59,941
INUNDATION	MINOR WORKS.						
	Works for which Capital and Revenue Accounts are kept—						
	Upper Sutlej Canals .	57,276	53,357	1,415	7,666	1,19,774	1,59,642
	Lower Sutlej and Chenab Canals .	2,68,230	99,406	344	14,205	3,82,185	4,00,860
	Indus Canals .	1,57,815	86,235	1,712	12,145	2,57,907	3,12,188
	Shahpur Canals .	28,355	3,478	13	487	32,333	16,673
	Works for which only Revenue Accounts are kept—						
	Muzaffargarh Canals .	1,56,571	43,192	143	6,047	2,06,953	1,72,320
	TOTAL .	16,53,976	11,33,949	23,751	1,59,433	29,71,109	27,62,981
	Per acre irrigated .	...	...	...	..	1.13	1.22

The working expenses for 1888-89 show an increase over those for 1887-88 of only a little over two lakhs, while the assessed revenue has increased by about seven and a quarter lakhs, and the gross revenue collected by about three lakhs and three quarters.

15. On the Western Jumna canal the new Gagsina bridge was completed. On the Bari Doab canal repairs to the training works in the Chakki torrent and to the rapids in the main canal were carried out. On the Sirhind canal the height of the shutters on the Rupar weir were raised; the retaining weir across the Siswan torrent was in progress; flour-mills were constructed at Jaghera and Bhatinda; and a number of rajbahs were provided with regulating gates. The large revenue expenditure on the Lower Sutlej and Muzaffargarh canals is due to the inclusion of Rs. 2,14,480 and Rs. 1,19,204 respectively on account of statute labour, which is included also in the receipt side of the account.

16. The charge for establishment in the last statement is made up of the following items:—

	1888-89.	1887-88.
	Rs.	Rs.
Direction	1,88,453	1,50,704
Executive	6,07,841	5,81,046
Medical	8,098	7,557
Revenue, including collection fees	3,29,208	3,15,695
Navigation	349	
TOTAL	11,33,949	10,05,002

It is noticed that the figures for Establishment under Executive and Revenue given in the individual canal reports only agree in the aggregate, and not separately, with the corresponding figures in columns 14, 16, and 19 of State-

ment I. C. It is suggested that the distribution might be made on the same principles in the Reports and in the Statement.

17. The only canals that are available for navigation are the Western Jumna and Sirhind, the length of navigable channel on which is respectively 243 and 188 miles.

The navigation receipts and expenditure on each are compared in the margin with the figures for the previous year. The principal receipts on the Western Jumna canal, Rs. 41,686, are derived from rafts, but it is explained that this traffic is not so productive as it might be, owing to the rates for the broad-gauge railway sleepers being prohibitive.

	Western Jumna.		Sirhind.	
	1888-89.	1887-88.	1888-89.	1887-88.
	Rs.	Rs.	Rs.	Rs.
Receipts	44,658	47,497	11,288	12,104
Expenditure	7,405	9,101	13,894	18,803

Some modification of these has been proposed, which it is expected will lead to a great expansion of the traffic. The total quantity of goods carried was 73,381 tons valued at Rs. 23,38,020.

18. The miscellaneous receipts for the year amounted to Rs. 3,47,921 compared with Rs. 3,13,700 for the previous year. The increase is mainly due to improved receipts under the head of "Water-power."

19. The Report was received by the Government of India on December 31st, which is a month later than that for the previous year. It is hoped that the report for the current year will not be so delayed. The Report continues to be admirably prepared, but there is a growing tendency to diffuseness in the individual canal reports, and the length of the whole Report has grown from 106 pages in that for 1886-87 and 120 pages in that for 1887-88 to 136 pages in that for the year under notice. The statement of irrigated area and value of crops given in the individual canal reports is given also in the appendices in statement III. E., and its insertion in the former place may be discontinued. The return of rainfall may also be relegated to the appendices. Other means of curtailing the Report without sacrifice of its clearness and interest may perhaps suggest themselves. In future reports each work should be given a distinguishing number. The points at which the gauges on the Sutlej and Chenab rivers are read should also be stated.

20. In the Resolution of the Punjab Government prefacing the Report, His Honour the Lieutenant-Governor congratulates Colonel Home and the officers of the Irrigation Department on the results achieved. The Government of India cordially agrees in these remarks. The progress of irrigation in the Punjab generally, and the special degree of success achieved on the Swat River, Bari Doab, Sirhind and Sidhnai canals are due to their efforts and have been noticed with high satisfaction by the Government of India.

ORDER—Ordered, that copies of this Resolution and of the Report, and of the Resolution by the Punjab Government, be forwarded to the Finance and Commerce and the Revenue and Agricultural Departments for information.

Ordered, also, that copies of the Resolution be forwarded to the Government of the Punjab for information and guidance, and that copies of this Resolution and of the Report and Resolution by the Punjab Government be forwarded to the Local Governments and Administrations in the Public Works Department noted in the margin for information.

Ordered, further, that this Resolution and the Resolution by the Local Government be published in the Supplement to the Gazette of India, and that copies of this Resolution and of the Report be forwarded to Her Majesty's Secretary of State for India.

J. G. FORBES, Colonel, R.E.,
Deputy Secy. to the Government of India.

IRRIGATION BRANCH.

No. 6514 L, dated Lahore, the 21st December 1889.

RESOLUTION—By the Hon'ble the Lieutenant-Governor of the Punjab and its Dependencies.

READ—

Revenue Report of the Officiating Chief Engineer, Irrigation Works, Punjab, for the year ending 31st March 1889.

RESOLUTION.—The following table shows the outlay under Capital during, and to the end of, the year 1888-89:—

BUDGET HEAD.	CANAL.	CAPITAL OUTLAY.	
		During 1888-89.	To the end of 1888-89.
		<i>R</i>	<i>R</i>
35—Protective Irrigation Works.	Swát River	49,020	35,04,223
49—Irrigation Works not charged against Revenue.	Western Jumna	1,75,247	1,10,57,903
	Bári Doáb	1,45,337	1,62,99,349
	Sirhind	3,06,639	2,34,92,823
	Lower Sohág and Para	34,503	6,63,530
	Sidhnai	20,344	7,55,341
	Chenab	5,91,430	31,75,240
	TOTAL	12,73,566	5,54,44,186
43—Minor Works and Navigation not classed as Productive.	Upper Sutlej	...	5,77,251
	Lower Sutlej and Chenáb	...	1,10,102
	Indus	—177	7,08,734
	Shahpur	...	40,739
	Madhopur Workshops	...	4,24,148
	TOTAL	—177	18,60,974
	TOTAL IMPERIAL	13,22,409	6,08,09,383
Contributions	Sirhind Canal	60,150	1,32,99,647

Only revenue accounts are maintained for the Muzaffargarh Inundation Canals.

2. The following statement shows for each canal the revenue assessed during the past five years. The profits based on the assessments are shown as usual in the Chief Engineer's Report, but as the figures necessarily do not agree with those of the Administrative Accounts, which are based on actual collections only, there appears to be no object in bringing them prominently to notice. The figures of assessments are, however, interesting, as they indicate the work done by the canals during the year under review.

Budget Item.	CANAL.	REVENUE ASSESSED.				
		1888-89.	1887-88.	1886-87.	1885-86.	1884-85.
		<i>R</i>	<i>R</i>	<i>R</i>	<i>R</i>	<i>R</i>
35	Swát River	2,74,775	1,87,020	68,342	19,102	...
49	Western Jumna	11,44,888	11,02,415	11,91,931	9,67,87	11,40,788
	Bári Doáb	18,99,663	17,12,122	14,68,350	17,96,938	13,77,388
	Sirhind	13,77,243	10,41,209	5,29,340	3,30,374	75,240
	Lower Sohág and Para	66,070	42,190	18,760	17,755	307
	Sidhnai	2,14,606	1,64,120	57,262	...	...
	Chenáb	75,921	6,232	...	...	...
	TOTAL, 49	47,78,391	40,68,288	32,65,743	30,61,854	25,93,673
	TOTAL, 35 AND 49	50,53,166	42,55,308	33,33,985	30,80,956	25,93,673

Budget Item.	CANAL.	REVENUE ASSESSED.				
		1888-89.	1887-88.	1886-87.	1885-86.	1884-85.
		<i>R</i>	<i>R</i>	<i>R</i>	<i>R</i>	<i>R</i>
43	Upper Sutlej	1,77,907	1,82,220	1,37,219	97,911	1,09,537
	Lower Sutlej and Chenáb	5,82,176	6,08,828	6,08,388	5,57,039	6,02,481
	Indus	2,50,649	2,87,680	2,39,097	2,39,625	2,29,681
	Shahpur	42,559	34,994	27,917	32,306	29,521
	Muzaffargarh	3,94,922	3,74,755	3,51,765	3,38,918	3,69,496
	TOTAL, 43	14,48,213	14,88,477	13,64,386	12,65,799	13,40,716
	GRAND TOTAL	65,01,379	57,43,785	46,98,371	43,46,755	39,34,389

The Major Works (items 35 and 49) show very satisfactory progress, the assessments having nearly doubled themselves since 1884-85. The Minor Works (item 43) naturally do not show such good progress, as they have not been extended like the Major Works.

3. The working of the canals for which interest accounts are kept up is shown for the year 1888-89 in the following statement together with the returns on Capital outlay for three years:—

Budget Item.	CANAL.	Capital Outlay to end of year.	Collections less Refunds.	Working Expenses.	Net Revenue.	Interest Charges.	PERCENTAGE OF NET REVENUE ON CAPITAL OUTLAY.		
							1888-89.	1887-88.	1886-87.
		<i>R</i>	<i>R</i>	<i>R</i>	<i>R</i>	<i>R</i>			
35	Swát River	35,04,223	2,27,496	94,657	1,32,839	1,34,236	3'79	0'38	—0'84
49	Western Jumna	1,10,57,903	9,44,328	4,08,529	4,45,799	4,16,036	4'03	7'47	3'52
	Bári Doáb	1,02,99,349	17,95,996	6,01,007	11,94,989	6,23,849	7'33	6'84	8'09
	Sirhind	2,34,92,823	11,31,798	5,66,604	5,65,194	8,87,568	2'40	1'45	0'51
	Lower Sohág and Para	6,63,530	56,324	54,254	2,070	24,947	0'31	—1'04	1'05
	Sidhnai	7,55,341	1,71,368	76,005	94,273	28,809	12'61	13'84	—0'17
	Chenab	31,75,240	37,684	81,841	—44,157	1,11,349	—1'39	—2'31	...
	TOTAL	5,54,44,186	41,37,498	18,78,330	22,59,168	20,93,458	4'07	4'23	3'57
	TOTAL, 35 AND 49	5,89,48,409	43,64,994	19,72,987	23,92,007	22,27,694	4'05	4'00	3'29
	TOTAL, 1887-88	5,76,25,823	40,05,923	17,01,248	23,04,675	21,62,741	...	...	...

The falling off in the returns from the Western Jumna Canal is due to the demand for water during the Rabi season of 1887-88 having been unprecedentedly small owing to very favourable conditions of rainfall. The slight falling off in the case of the Sidhnai Canal is partly due to protective works at the tail of the needle weir across the Ravi at the head of the canal, on the safety of which the welfare of the canal depends, and partly to a larger share of the establishment charges being debitable to revenue, but the returns from this canal are still very good.

With the above exceptions, all the canals show an improvement on last year, and there is, on the whole, a clear surplus of *R*1,64,313 after meeting all charges for interest: in 1887-88 the surplus was *R*1,41,934.

The Swát River Canal, which is classed as a Protective work, has yielded a percentage of 3'79 on the Capital outlay after having been only four years in operation, and as there is every hope of its yielding still better returns in the future, it might well be classed as a Productive work.

4. The following table shows the financial results of the canals for which interest accounts are kept up to the end of 1888-89:—

Budget Item.	CANALS.	TOTAL OF		BALANCE OF	
		Net Revenue.	Interest Charges.	Net Revenue.	Interest Charges.
		<i>R</i>	<i>R</i>	<i>R</i>	<i>R</i>
35	Swát River	92,893	9,97,761	...	9,04,868
49	Western Jumna	3,64,62,145	73,57,741	2,91,04,404	...
	Bári Doáb	1,58,75,719	1,58,68,167	7,552	...
	Sirhind	8,01,702	93,22,701	...	85,20,999
	Lower Sohág and Pára	3,167	89,478	...	86,311
	Sidhnai	1,95,854	1,10,456	85,398	...
	Chenáb	—1,03,842	3,28,154	...	4,34,996
	TOTAL, 49	5,32,34,745	3,30,76,697	2,01,58,048	...
	TOTAL, 1888-89	5,33,27,638	3,40,74,458	1,92,53,180	...
	TOTAL, 1887-88	...	...	1,90,88,867	...
	TOTAL, 1886-87	...	...	1,89,46,933	...

The Bári Doáb Canal has now cleared off its balance of interest charges, and there is every prospect of the Swát River Canal commencing to meet its interest charges at an early date.

5. The Working Expenses of the abovementioned canals amounted to *R*19,72,987 against *R*17,01,248 in 1887-88, refunds of revenue being excluded in each case.

The outlay on each canal for the last five years will be seen from the following statement:—

CANALS.	WORKING EXPENSES.				
	1888-89.	1887-88.	1886-87.	1885-86.	1884-85.
	<i>R</i>	<i>R</i>	<i>R</i>	<i>R</i>	<i>R</i>
Swát River	94,657	90,123	55,035	24,994	...
Western Jumna	4,98,529	5,82,309	5,13,537	5,13,117	4,71,265
Bári Doáb	6,01,007	5,28,999	5,87,976	5,47,783	4,97,521
Sirhind	5,66,604	3,61,833	2,39,398	2,20,224	1,45,206
Lower Sohág and Pára	54,254	37,034	13,008	8,139	...
Sidhnai	76,095	41,009	14,364	...	...
Chenáb	81,841	59,941	...	...	...
TOTAL	19,72,987	17,01,248	14,23,318	13,14,257	11,13,992

The increase in cost, as compared with that of 1887-88, is mainly due to the last four canals on the list having to bear their full share of maintenance charges. These are all new canals, and so long as considerable sums were being spent on works of construction, the revenue account was relieved of a large share of the cost of establishment under the heads of Direction and Executive; the mileage of distributaries that has to be maintained has also increased, especially on the Sirhind Canal, and the strain on them due to larger supplies being passed down them has also necessitated heavier expenditure in order to keep them efficient. The head works of the Sirhind and Sidhnai Canals also required considerable repairs, while the clearance of silt from the head channel of the Chenáb Canal proved heavy and expensive. There is a satisfactory decrease on the Western Jumna Canal, but on the Bári Doáb Canal extensive repairs to head works, torrent works and rapids, caused an increase.

6. The cost of Working Expenses and Establishment per acre irrigated is exhibited in the following table for the past five years:—

CANAL.	COST PER ACRE IRRIGATED.									
	WORKING EXPENSES.					ESTABLISHMENT.				
	1888-89.	1887-88.	1886-87.	1885-86.	1884-85.	1888-89.	1887-88.	1886-87.	1885-86.	1884-85.
Swát River	0.88	0.93	0.74	0.56	...	0.48	0.47	0.25	0.21	...
Western Jumna	1.71	2.45	1.62	2.29	1.69	0.81	1.09	0.81	1.22	0.91
Bári Doáb	1.16	1.12	1.45	1.08	1.32	0.50	0.51	0.59	0.45	0.51
Sirhind	1.19	0.92	1.11	1.44	4.02	0.46	0.30	0.29	0.35	0.99
Lower Sohág and Pára	0.88	0.90	0.75	0.47	...	0.46	0.39	0.14	0.09	...
Sidhnai	0.70	0.54	0.52	...	...	0.25	0.17	0.15	...	...
Chenáb	1.72	5.52	...	...	...	0.52	1.72	...	...	...

The percentages for the Western Jumna Canal have already been reduced, and a still further reduction may be looked for next year.

7. The working of the remaining canals, which are all Inundation Canals, classed under Minor Works (item 43), will be seen from the following table:—

Budget Item.	CANAL.	Capital Outlay to end of year.	Collections less Refunds.	Working Expenses.	Net Revenue.	PERCENTAGE OF NET REVENUE ON CAPITAL OUTLAY.		
						1888-89.	1887-88.	1886-87.
43	Upper Sutlej	<i>R</i> 5,77,251	<i>R</i> 1,82,566	<i>R</i> 1,19,744	<i>R</i> 62,822	10.88	0.37	—3.35
	Lower Sutlej and Chenáb	1,10,102	5,82,019	3,82,185	1,99,834	181.49	171.43	195.74
	Indus	7,08,734	2,50,979	2,57,907	—6,928	—0.98	—3.74	—0.85
	Shahpur	40,739	38,306	32,333	5,973	14.66	60.34	37.24
	TOTAL	14,36,826	10,53,870	7,92,169	2,61,701			
	Muzaffargarh	...	3,94,794	2,05,953	1,88,841			
	TOTAL, 1888-89	14,36,826	14,48,664	9,98,122	4,50,542			
	TOTAL, 1887-88	14,37,003	14,71,999	11,01,092	3,70,907			

The net revenue has increased by *R*80,000, although the collections were less by *R*23,000; this result was due to the working expenses on the Upper Sutlej and Indus Canals having decreased. The percentages of return for the Lower Sutlej and Chenáb Canals is fictitious, as the Capital outlay does not represent the first cost of the canals, most of which were in existence at the time of the annexation. The Indus Canals are still worked at a loss, owing to the heavy cost of the new heads and embankments which the westward encroachments of the Indus necessitates.

The return from the Shahpur Canals is lower than usual this year owing to outlay having been incurred on a feeder to the new Sahiwal Canal.

The Muzaffargarh Canals are making steady progress.

8. The cost of Working Expenses and Establishment per acre irrigated by these canals is as follows:—

CANALS.	COST PER ACRE IRRIGATED.									
	WORKING EXPENSES.					ESTABLISHMENT.				
	1888-89.	1887-88.	1886-87.	1885-86.	1884-85.	1888-89.	1887-88.	1886-87.	1885-86.	1884-85.
Upper Sutlej	0.86	1.15	1.46	1.49	1.30	0.38	0.41	0.54	0.76	0.40
Lower Sutlej and Chenáb	1.09	1.41	1.20	0.99	0.92	0.29	0.34	0.27	0.21	0.20
Indus	1.27	1.64	1.30	1.37	1.36	0.44	0.44	0.44	0.47	0.41
Shahpur	1.60	0.99	0.83	0.70	0.72	...	...	...	...	...
Muzaffargarh	0.71	0.69	0.55	0.63	0.73	0.15	0.16	0.13	0.15	0.18

On the Shahpur Canals there is no regular establishment kept up, and the only charges made under this head are for Direction and Accounts.

With the exception of the Shahpur Canals the rates for working expenses are generally lower than last year, as are also the rates for establishment.

The cost of working of the Muzaffargarh Canals compares favourably with that of the other canals.

9. The mileage of channels sanctioned and completed at the end of 1888-89 is given in the following table:—

CANALS.	MILEAGE OF CANALS.		MILEAGE OF DISTRIBUTARIES.		Mileage available for Navigation.
	Sanctioned.	Completed.	Sanctioned.	Completed.	
	Miles.	Miles.	Miles.	Miles.	Miles.

{ British	223	223	1,939	1,939	46
{ Native States					

The mileage of the Western Jumna Canal has been reduced from 366 to 279 miles by the transfer of the Butana, Bahadra, and Darba Branches of the Hānsi Branch to their proper head of Distributaries, and by the addition of a mile at the tail of the Delhi Branch which had originally been omitted.

The mileage of the Bári Doáb Canal has been increased from 354 to 362 miles by including the Dinanagar Navigation Channel.

The Sirsa Branch of the Western Jumna Canal, and the Koranga Canal of the Sidhnai system, which were sanctioned during the year, will appear in next year's return.

10. The areas irrigated by canals during the past five years are shown in the following statement:—

YEAR.	PERENNIAL CANALS.			INUNDATION CANALS.			TOTAL.		
	Kharif.	Rabi.	Total.	Kharif.	Rabi.	Total.	Kharif.	Rabi.	Total.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
1884-85	345,869	346,203	692,072	522,474	399,742	922,216	868,343	745,945	1,614,288
1885-86	368,574	557,034	925,608	501,939	360,020	861,959	870,513	917,054	1,787,567
1886-87	351,472	659,389	1,011,061	536,301	403,278	939,579	887,773	1,062,867	1,950,640
1887-88	543,030	655,907	1,198,937	578,216	472,928	1,051,144	1,121,240	1,128,835	2,250,081
1888-89	554,466	840,122	1,394,588	683,481	536,061	1,219,542	1,237,947	1,376,183	2,614,130

The figures for 1888-89 are very satisfactory: the increase in the irrigated area during the five-year period is one million of acres, of which seven hundred thousand acres belong to the perennial canals: the area on the perennial canals has rather more than doubled itself during the same period.

11. The areas of the principal crops irrigated during the last five years is as follows:—

CROPS.	1888-89.	1887-88.	1886-87.	1885-86.	1884-85.
	Acres.	Acres.	Acres.	Acres.	Acres.
Sugarcane	71,561	83,591	59,104	58,398	69,610
Rice	163,837	158,837	146,777	147,529	147,401
Jowár	171,939	189,839	151,525	152,756	159,041
Maize	122,392	80,876	36,961	39,994	18,666
Wheat	935,510	783,189	747,514	649,442	533,838
Cotton	215,688	223,470	218,779	196,851	186,599

The decrease in the area under sugar cane occurs on the Western Jumna Canal, where the area for 1887-88 was unusually high.

There is also a slight falling off in the areas under jowár and cotton.

The rice area has risen slightly, and there are large increases under maize and wheat. The area under maize on the Sirhind Canal continues to increase steadily notwithstanding the comparatively high water-rate levied on it, and it appears likely to become a staple crop on the Chenáb Canal also: the only other canals in which considerable areas of maize are irrigated are the Bári Doáb and the Swát River.

12. The value of crops irrigated by canals during the year under review is estimated at Rs. 7,51,97,720 against Rs. 6,84,66,306 in 1887-88.

The value of crops irrigated by the perennial canals averages Rs. 31.5 per acre, while the average water-rate assessed, including owner's and water-advantage rates, was only Rs. 1 per acre, or one-tenth of the value of the crop raised.

13. The Rávi and Sutlej Rivers afforded better supplies during the Rábi season than they did in 1887-88, but the supply of the Rábi was still very far below the requirements of the Bári Doáb Canal for Rabi crops.

The flood which occurred in the Jumna on the 20th September 1888 was the highest which has yet passed over the Tajawála Weir, but it did not cause any serious damage to the works.

On the same date a somewhat heavy flood passed down to Sutlej, and caused considerable damage to the Rupár Weir owing to the weir shutters not having been dropped in time.

The torrents crossing the main line of the Sirhind Canal were in unusually heavy flood at the same time, especially the Siswan, where the water nearly topped the side walls of the superpassage.

On the Bári Doáb Canal the training works on the Chakki torrent at Dhangu sustained considerable damage.

14. In the Kharif season the rainfall to the east of the Sutlej was about normal and, with the exception of the storm which passed up from Delhi to the Himalayas in the third week of September, fairly well distributed. To the west of the Sutlej the rains ceased at the end of August.

In the Rabi season there was no rain of any consequence till quite the end of January, but the rainfall in that time and during February was both general and heavy.

15. The duty, or area irrigated per cubic foot of water entering the canal, on the perennial canals is shown in the following table for the last five years:—

CANAL.	AREA IRRIGATED PER CUBIC FOOT.									
	1884-85.		1885-86.		1886-87.		1887-88.		1888-89.	
	Kharif.	Rabi.	Kharif.	Rabi.	Kharif.	Rabi.	Kharif.	Rabi.	Kharif.	Rabi.
Swat River	...	...	...	...	62	...	84	...	61	...
Western Jumna	94	...	86	152	66	188	90	145	69	158
Bári Doáb	48	...	59	70	69	110	61	32	62	72
Sirhind	...	115	...	140	...	123	...	123	...	139
	...	...	57	46	...	57	...	57	61	...
	...	...	...	126	...	88	...	107	...	119

The duty on the Western Jumna Canal is lower than it should be in both seasons owing to the supply being in excess of requirements, but an improvement in the duty of this canal may be confidently looked for when the Sirsa Branch is opened for irrigation.

The Bári Doáb and the Sirhind Canals show an improvement in both seasons, and the Swát River Canal an improvement in the Rabi: the falling off in the duty on the last named canal in the Kharif may be ascribed to the larger area of rice irrigated.

16. The Miscellaneous Receipts for the last five years are as follows:—

YEAR.	Miscellaneous Receipts.
	<i>R</i>
1884-85	2,08,141
1885-86	2,73,568
1886-87	2,28,470
1887-88	3,13,700
1888-89	3,47,921

The increase over 1887-88 is mainly due to larger receipts under water power.

17. The Western Jumna and Sirhind Canals are the only ones which are navigable, and the receipts and charges connected with navigation on them during the last three years are shown in the following table:—

YEAR.	WESTERN JUMNA.			SIRHIND.			TOTAL.		
	Receipts.	Charges.	Profit or Loss.	Receipts.	Charges.	Profit or Loss.	Receipts.	Charges.	Profit or Loss.
	<i>R</i>	<i>R</i>	<i>R</i>	<i>R</i>	<i>R</i>	<i>R</i>	<i>R</i>	<i>R</i>	<i>R</i>
1886-87	19,473	5,216	+14,257	8,789	21,803	—13,014	28,262	27,019	+1,243
1887-88	39,474	9,101	+30,373	12,105	18,803	—6,698	51,579	27,904	+23,675
1888-89	44,658	7,405	+37,253	11,288	13,894	—2,606	55,946	21,299	+34,647

The figures for the Sirhind Canal include both "Imperial" and "Contributions." The bulk of the receipts belongs to the raft traffic, the tolls from boats only amounting to about Rs. 5,000 per annum; the raft traffic is being carefully watched, and steps are being taken to encourage it as far as possible by judicious alterations in the rates.

18. The working of the Native States Branches of the Sirhind Canal has been reviewed in paras. 127 to 133 of the Chief Engineer's Report. As might be expected, the progress has not been nearly so rapid as on the British Branches, nor has the same duty been got out of the water, but the following table shows that the irrigated area is steadily rising, and there is every reason to hope that, with the aid of the Engineer Officers who have been lent to the Patiala State, still better results will be shown in the future:—

YEAR.	AREAS IRRIGATED FROM THE NATIVE STATES BRANCHES.											
	PATIALA.			NABIA.			JIND.			TOTAL.		
	Kharif.	Rabi.	Total.	Kharif.	Rabi.	Total.	Kharif.	Rabi.	Total.	Kharif.	Rabi.	Total.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
1886-87	5,651	42,265	47,920	704	5,895	6,599	1,892	7,396	9,288	8,247	55,560	63,807
1887-88	27,032	50,945	77,981	3,828	5,105	8,933	3,756	5,871	9,627	34,616	61,925	96,541
1888-89	39,440	82,461	121,901	2,880	5,107	7,987	5,447	4,899	10,346	47,767	92,467	140,234

The value of crops irrigated by the Native States Branches is estimated at Rs. 37,71,433.

19. The project for the Sirsa Branch of the Western Jumna was sanctioned during the year, but work was not actually started as the alignment had to be laid down. The project for the Jhelum Canal was also sanctioned, and the first forty miles of the main line were marked out on the ground, but it was subsequently agreed that preference should be given to the completion of the Chenab Canal with permanent head works; the estimates for this latter work were in a forward state by the end of the year.

Estimates were submitted during the year for three small canals from the Ravi River in connection with the weir at the head of the Sidhnai Canal, and towards the close of the year permission was accorded by the Government of India to proceed with one of them, the Koranga Canal.

Surveys for inundation canals from both banks of the Chenab River in the Shahpur and Jhang Districts were practically completed during the year; also surveys for the extension of the Swat River Canal across the Kalpani Nadi into the Utman Bulak country, and for the extension of District Canals near Peshawar.

20. The Lieutenant-Governor is glad to be again able to heartily congratulate Colonel Home and the Officers of the Irrigation Department on the results achieved.

The revenue depending on the canals classed as Minor Works, which are all Inundation Canals, is almost all fixed revenue, so that there is no room for great variations in collections, but with the exception of the Indus Canals, which are difficult to maintain, these canals are working well, and the increase of net revenue due to decrease of working expenses is satisfactory.

In respect to the canals shown as Major Works, which class includes all the Perennial Canals, the returns show an increase of eight lakhs in revenue assessed and of more than three-and-a-half lakhs in collections. Almost all these canals again show an improvement this year, and in the case of the two which do not, the causes were of a temporary and unavoidable nature. The growth of irrigation by the canals of all kinds is indicated in a marked way by the further great rise of 67 lakhs in the year's estimates of value of canal-irrigated crops; and the increase of produce which this implies in a country like the Punjab will be recognised when it is remembered that with our rainfalls in some districts no cultivation, and in many others nothing but a precarious growth of the poorer crops are possible without irrigation.

The complete final success of the Bari Doab Canal, the very promising start made by the Sirhind Canal, and the immediate full development of the Swat and Sidhnai Canals, are, in such a country, with its large rivers commanding huge areas of arid waste, facts of the highest importance: they show that we can find room for the growth of the population and can improve the country immensely with benefit alike to the people and to the revenues of the State.

By order of the Hon'ble the Lieutenant-Governor,

F. J. HOME, Lieut. Colonel, R.E.,

P. H. Dept., Irrigation Branch.

ADMINISTRATION REPORT OF IRRIGATION WORKS IN THE MADRAS PRESIDENCY FOR 1888-89.

No. 41 I., Dated Calcutta, the 1st March 1890.

RESOLUTION—By the Government of India, Public Works Department.

Read—

Administration Report of Irrigation Works in the Madras Presidency for 1888-89.

OBSERVATIONS.—The number of works in each class for which Capital and Revenue Accounts are kept, excluding those under investigation only, remains the same as for the previous year. The Capital expenditure on the three classes, during and up to the end of the year, is shown in the following statement:—

	Number of Works.	DURING THE YEAR 1888-89.							Total direct and indirect charges to end of 1888-89.
		Works.	Establishment.	Tools and Plant.	Suspense account.	Total direct charges.	Indirect charges.	Total direct and indirect charges.	
		Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
<i>Major Works.</i>									
Protective Works	1	2,12,322	40,351	7,551	...	2,60,724	38,606	2,99,332	12,79,123
Productive Works	9	9,45,630	2,09,496	2,23,758	—963	12,77,901	64,979	14,42,880	5,31,54,873
<i>Minor Works and Navigation.</i>									
Works for which complete Capital and Revenue Accounts are made up	5	3,15,814	52,589	—3,751	...	3,64,651	15,271	3,80,922	1,20,55,121
Total	15	14,04,266	5,02,435	2,27,558	—963	19,33,376	1,18,858	20,52,234	6,64,69,131

2. The expenditure on Major Works was principally confined to the Rushikulya project, the Kistna Delta System and the Periyar project. In the first of these, progress was made with the dam for the Russellkonda Reservoir. In the Kistna Delta the widening of the Masulipatam and Bank Canal was proceeded with. In the Periyar project the expenditure was considerably less than the grant, work being delayed by repeated accidents to the ring-bunds, and to a portion of the temporary dam being washed away. The principal outlay was incurred on preliminary operations. In the case of the minor works for which Capital Accounts are kept the principal outlay was on the Buckingham Canal, for which no grant from Protective Works was available.

3. The following table shows the revenue and working expenses, excluding the interest charges, of the 13 Major and Minor Works in operation, as recorded in Statement II of the report:—

	Capital outlay.	GROSS REVENUE RECEIVED IN 1888-89.			WORKING EXPENSES.			Net actual Revenue.	Deduct—Receipts and charges on account of old Irrigation.	Net Revenue attributable to outlay of Government Capital.	Percentage of return.
		Irrigation Revenue.	Miscellaneous Receipts.	Total.	Direct.	Indirect.	Total.				
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
<i>Major Works.</i>											
Godavari	1,26,40,748	21,68,816	1,06,645	22,75,461	6,32,721	35,292	6,68,013	16,07,448	99,210	15,08,238	11.93

Total for 1887-88	1,17,45,209	3,26,547	77,967	4,04,514	2,42,893	6,599	2,49,492	1,55,022	1,36,032	18,990	0.17

Of these the Kistna system is still incomplete, and the Sangam system is not yet in full working order. The poor returns on account of the Madras water-supply project are partly due to only Rs. 11,655 having been received by Government on account of the water supplied to the Municipality of Madras. Nothing is said in the report as to the quantity of water supplied, or the rate paid for it, and information on this point is requested. The working of the Karnul Canal resulted in a deficit of Rs. 69,551; the area irrigated shows an increase of 20,566 acres over the previous year. This was partly due to scanty rainfall, which also led to a reduction of half the water-rate on dry crops. Moreover, liberal concessions were made to cultivators willing to take up blocks of waste land under this canal, water being given free of charge for 5 years and at half rates for 5 years, and 4,459 acres have been so occupied. The result was that the average rate per acre paid on the whole irrigated area fell from Rs. 3.19 to Rs. 2.59. The Buckingham Canal is responsible for more than half the outlay on minor works; and its revenue does not meet its working expenses.

4. In the statements attached to the report (I.O. to IV.O.) on the revenue side of the account the share of the receipts due to the old irrigation, and on the expenditure side the old maintenance charges have been excluded. These have again been calculated in the complicated manner which was commented upon in the review of the previous year's report. In letter No. 184 I. of 14th September 1889, the Government of India invited the attention of the Government of Madras to the expediency of crystallizing these old receipts and charges, and suggested figures based on a five-years average at which they might be finally fixed. In reply to this request the Government of Madras has intimated (letter No. 495 I. of 12th October 1889) that the question is now under consideration, but that the proposals made cannot be finally adopted until the accounts for the current official year are dealt with. The system of calculating the revenue due to irrigation in the Madras Presidency is exceedingly complicated, and is unlike that which obtains in any other part of India, and it is therefore eminently desirable that

any measure tending to simplify the system and to shew correctly the great service rendered by the irrigation works to the country, should be introduced without delay. The figures in para. 3 are worked out on this simplified system. The share of receipts due to the old irrigation in the year under review was Rs. 30,26,526, and the old maintenance charges were Rs. 3,91,911.

5. In the statement in para. 3 the Miscellaneous receipts are those realised in the Public Works Department, principally on account of navigation. The irrigation receipts are those realised in the Revenue Department, the details of which are as follows for the 13 Major and Minor Works in operation :—

	Rs.
Share of Land Revenue due to Irrigation	74,18,623
Share of enhanced Land Revenue	4,83,131
Outstandings paid during year	2,48,590
Grand Total	81,50,344

The manner in which the irrigation revenue is calculated was explained in para. 6 of last year's review. The above figures do not include the deduction of 5 per cent. on the revenue on account of collection charges in the Civil Department, which amounted to Rs. 2,46,196.

6. In the following statement the true irrigation receipts are compared with the area effectively irrigated for first and second crop as shown in the detailed canal reports. The corresponding figures for the previous year are also given for purposes of comparison :—

	REVENUE DERIVED FROM IRRIGATED LANDS.		AREA IRRIGATED.		RATE PER ACRE.	
	1888-89.	1887-88.	1888-89.	1887-88.	1888-89.	1887-88.
	Rs.	Rs.	Acres.	Acres.	Rs.	Rs.
Godavari	21,68,816	20,59,625	651,619	608,696	3.3	3.3
Kistna	15,70,020	14,67,333	416,205	387,605	3.7	3.8
Pennér	2,29,387	2,55,951	59,653	64,987	3.8	3.9
Sangam	2,20,011	2,06,786	55,933	51,893	3.9	3.9
Karnul	76,377	56,284	34,999	21,927	2.2	2.5
Barur	8,566	2,105	1,344	492	2.6	4.2
Cauvery	33,42,120	29,06,773	1,007,136	937,634	3.3	3.1
Srivaikuntham	1,84,491	1,86,791	40,420	40,639	4.5	4.5
Total Productive Works	77,94,787	71,41,648	2,267,314	2,113,766	3.4	3.3
Chembrambakam	57,398	48,868	19,416	16,186	2.9	3.0
Palar	2,63,778	2,47,673	97,023	91,479	2.7	2.7
Pelandorai	12,186	9,741	4,529	3,768	2.6	2.5
Madras	22,195	20,265	10,351	9,235	2.1	2.1
Total Minor	3,55,557	3,26,547	131,319	120,663	2.7	2.7
GRAND TOTAL	81,50,344	74,68,195	2,398,633	2,234,429	3.4	3.3

7. A large amount of concealed cultivation was brought to light in the Kistna Delta, and the Madras Government is requested to state whether any measures have been adopted to ensure the detection of similar frauds in other districts and to prevent their repetition. It should also be stated when the new figures of the revenue survey of the Cauvery Delta are likely to be available for the purpose of checking the irrigated area.

8. A noticeable feature in the report is the prevalence of much higher rates on the Srivaikuntham irrigation than anywhere else. The figures are as follows :—

	Srivaikuntham.	Cauvery.	Barur.	Sangam.	Pennér.	Kistna.	Godavari.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
1st crop	5.79	3.00	3.43	3.91	3.56	3.39	3.13
2nd „	3.06	2.29	0.96	2.58	2.66	2.08	2.57

Under the Srivaikuntham also the area of second-crop irrigation bears a much higher proportion to first-crop irrigation than elsewhere, the figures being of first crop 21,506 acres, and of second crop 18,914 acres. It is understood that in the Southern Districts of Madras the first crop or Kar is a short one, lasting from May or June to August; while the second crop (Peshanum or Shambu) lasts from August to December, and is the more valuable of the two. In the northern districts, on the other hand, the first crop is a long crop, remaining five or six months in the ground and much the more valuable of the two. Under these circumstances the question suggests itself whether the irrigation rates quoted above bear the relation they should bear to the value of the crop raised, and whether the first-crop rates in the northern districts could not bear enhancement. The Governor General in Council will be glad to learn the views of the Government of Madras on this suggestion.

9. The Miscellaneous receipts comprise the following items :—

	1888-89.	1887-88.
	Rs.	Rs.
Navigation	1,96,977	2,04,546
Plantation	13,634	7,589
Miscellaneous	45,277	53,988
Less refunds	—1,875	—1,624
	2,54,013	2,64,499

The navigation receipts were divided as follows among the different canals :—

	Length of navigable channel.	Receipts.	Expenditure.	Value of goods.	Ton-mileage.
	Miles.	Rs.	Rs.	Rs.	
Godavari	481	93,271	74,788	1,80,82,324	102,45,080
Kistna	281	31,691	52,829	1,42,55,048	113,86,909
Karnul	190	1,067	36,661	3,33,325	135,86,333
Buckingham	232	70,948	92,431	1,60,17,344	...
Total	1,214	1,96,977	2,56,709	4,86,88,041	352,18,322
Corresponding figures of previous year	1,389	2,04,546	2,54,614	5,22,37,200	409,61,410

Navigation was carried on at a loss on all canals, except the Godavari. The Godavari, Kistna and Buckingham Canals are worked as one system for navigation purposes, one license giving the right to navigate on all three.

The Madras Government is invited to consider whether, in view of the annually recurring loss on navigation, the license fees might not with propriety be raised.

10. The following statement shows the details of the true working expenses of the major works and of the minor works for which Capital and Revenue Accounts are kept without deducting "old maintenance charges." The figures are taken from columns 12 to 27 of Statement I.C. added to those in the table on pages 66-67.

	Productive Works.	Minor Works.	Total.
	Rs.	Rs.	Rs.
Establishment, Public Works Department	4,60,736	48,292	5,09,028
Establishment, collection charges by Civil Officers	4,42,389	9,993	4,52,385
Works and Repairs	7,32,744	1,71,617	9,04,361
Tools and Plant, and Miscellaneous	86,883	3,140	90,023
Indirect	74,021	6,761	80,782
Total	17,96,773	2,39,806	20,36,579

11. The working expenses per acre irrigated, calculated in the same way as in last year's review, are shown for each of the irrigation systems in the following table:—

	Total Working Expenses.	Irrigated area	Rate per acre.
	Rs.	Acres.	Rs.
Godavari	6,68,013	651,619	1.02
Kistna	4,21,752	416,205	1.01
Pennér	48,612	59,653	0.81
Sangam	72,410	55,938	1.29
Karnúl	1,51,097	34,999	4.31
Barur	1,456	1,344	1.08
Cauvery	8,96,461	1,007,136	0.89
Sri vaikuṇṭham	36,972	40,420	0.91
Total Productive Works	17,96,773	2,267,314	0.79
Chembrambakam	6,528	19,416	0.33
Palar	74,387	97,023	0.76
Pelandorai	16,856	4,529	3.72
Madras	14,376	10,251	1.40
Total Minor	1,12,147	131,219	0.85
GRAND TOTAL	19,08,920	2,398,533	0.79
Total for 1887-88	18,07,517	2,234,429	0.80

12. The unrealised demands at the beginning of the year consisted of one item of Rs. 32,700 on account of the Karnúl Canal. At the close of the year Rs. 31,576 remained unrealised on the same canal. All other demands were realised. The irrigation receipts are all for the Fasli year, which ends on June 30th.

13. The third class of works dealt with in the report are Irrigation and Navigation Works, for which neither Capital nor Revenue Accounts are kept. The irrigated area, revenue, and working expenses of this class of works are shown in the following statement:—

	Area, 1st and 2nd crop.	Irrigation Revenue.	Rate per acre.	Working Expenses.	Rate per acre.
	Acres.	Rs.	Rs.	Rs.	Rs.
1888-89	3,511,830	91,68,325	2.61	19,06,882	.54
1887-88	3,607,321	94,74,377	2.62	17,19,693	.47

The area irrigated was made up of 2,699,538 acres of first and 812,292 acres of second crop.

14. The works for which neither Capital nor Revenue Accounts are kept, irrigate, in the aggregate, a larger area and bring in a larger revenue than the important irrigation systems. The works are principally tanks, irrigating areas of from 2 or 3 to 2,000 or 3,000 acres, and the total number of them in the Madras Presidency is probably not less than 50,000. Their proper maintenance is therefore a matter of the utmost importance, and this is a measure to which much attention has been devoted during recent years.

It had long been realised that the Public Works Department was not equal to the task, either as regards the staff or the funds available, of undertaking the maintenance of this enormous number of works, the large majority of which are quite insignificant individually, though collectively they are of great importance. The old system* had been to keep the tanks in repair by means of customary village labour, but with the advent of the Public Works Department this custom fell into desuetude. One of the recommendations of the Irrigation Committee of the Famine Commission of 1877-78 was (Chapter IV of Report) that the tanks in Madras should be separated into Imperial and Minor, the former being defined as including all those irrigating more than 200 acres. The Imperial tanks, it was proposed to place under the charge of the Public Works Department, and the Minor tanks under that of the villagers on the old system, the obligation to keep them in repair being rendered compulsory by legislative enactment. These recommendations were accepted, but pending their final adoption, the Minor tanks were placed under the charge of the Revenue officers, funds for their repair being provided in the Provincial Public Works Department Budget. Subsequent consideration, however, rendered it inadvisable to frame a law making village labour compulsory, and the ultimate proposal was to hand the Minor works over to the villagers to maintain, a payment up to a limit of 4 annas per acre of the area irrigable being made to them to cover the cost of maintenance. On the other hand, no remission was to be granted them on account of failure of supply resulting from neglect to keep the works in repair.

15. A preliminary to the adoption of this proposal was the systematic repair of the tanks; and to effect this a Tank-Restoration Scheme was started in 1882. Tanks dependent on each other are placed in groups, and the requirements of each group are investigated and estimated for collectively. Executive parties follow the investigating parties and carry out the works estimated for. As the work is completed, it was the intention to hand over all Minor tanks as above defined, which do not require professional supervision, to the care of the villagers. There are six investigating parties, exclusive of the central office, and the same number of executive parties. The following statement shows the expenditure incurred on each:—

	Expenditure during 1888-89.					Expenditure to end of 1888-89.
	Works.	Repairs.	Establishment.	Tools and Plant.	Total.	
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Execution	1,41,650	2,09,411	80,750	5,266	4,37,107	11,85,606
Investigation	34,246	...	96,590	984	1,31,820	7,86,404
Total	1,75,896	2,09,411	1,77,340	6,250	5,68,927	19,72,010

The catchment area of the basins entered upon by the investigating parties at the beginning of the year was 8,634 square miles, of which 7,233 had been completely investigated. These totals were increased by the end of the year to 15,516 and 12,226 square miles respectively.

16. The cost of the investigation is, however, high. From the figures given on page 68 of the report for the different investigating parties, it appears that estimates to the amount of Rs. 16,33,847 had been sanctioned up to the end of the year, while estimates to the amount of Rs. 3,85,998 had been prepared and were under disposal. It has therefore cost Rs. 7,86,404 to prepare estimates to the aggregate amount of Rs. 20,22,845. The cost of preparation amounts to 39 per cent., and the Government of Madras is invited to consider whether this percentage cannot be sensibly reduced.

17. It is also a question for serious and immediate consideration whether the whole system on which the Tank-Restoration Scheme is based will not have

to be modified. No mention is made of the fact in the report, but it is observed from Proceedings No. 359 I. of 2nd August 1889, that in the case of the Periyakulam Minor basin, which was handed over to the care of the villagers in 1888, they have refused to undertake the maintenance of the tanks on the terms offered, and the opinion of the Government of Madras is that the experiment must be abandoned. In lieu it is proposed to entrust the maintenance of Minor tanks to the Revenue Officers, the cost being met from the grant for Minor Irrigation Works, while tanks irrigating less than 15 acres are to be made over to the villagers on some special terms, which it is believed means a fixed dry assessment. A full and early report on this subject should be submitted, as it is useless to continue to spend large sums on investigating and estimating for the requirements of works which the villagers refuse to, and the Public Works Department cannot, maintain.

18. The fourth class of works dealt with in the report are Agricultural Works, which mean river embankments and conservancy. The outlay on these during the year was as follows :—

	Rs.
River embankments	2,61,414
„ Conservancy	1,05,280
Miscellaneous	2,030
	<u>3,68,724</u>
Figures for 1887-88	<u>3,28,991</u>

This is exclusive of the charge for Establishment and Tools and Plant.

19. Nothing is recorded in respect to the irrigating duty of water for different crops, the evaporation from tanks, or other matters of professional interest. The large irrigation systems of Madras should afford opportunities for interesting and useful investigation on these and kindred points.

20. The report was received by the Government of India on December 3rd; its general arrangement continues excellent, but there are various small discrepancies in the figures relating to the year 1887-88, which do not agree in some cases with the figures entered in the report for that year. As regards these and some other minor subjects, the Government of Madras will be separately addressed.

ORDER.—Ordered, that copies of this Resolution and of the Report be forwarded to the Finance and Commerce, and Revenue and Agricultural Departments for information.

Ordered also, that copies of this Resolution be forwarded to the Government of Madras for information and guidance, and that copies of the Resolution be forwarded to the Local Governments and Administrations in the Public Works Department noted in the margin, for information.

The Governments of Bombay, Bengal, the North-Western Provinces and Oudh, and the Punjab.
The Chief Commissioner of the Central Provinces.
The Agent to the Governor General for Rajputana.

Ordered further, that this Resolution be published in the Supplement to the *Gazette of India*, and that copies of this Resolution and of the report be forwarded to Her Majesty's Secretary of State for India.

J. G. FORBES, Colonel, R.E.,
Deputy Secy. to the Govt. of India.

GOVERNMENT OF INDIA.
REVENUE AND AGRICULTURAL DEPARTMENT.
(STATISTICS.)

Not sold.

Shipowners are earnestly requested to co-operate by offering to take out specimens free of freight; and all who are interested in the commerce and productive prosperity of Jamaica are desired to give their help to an undertaking which must be beneficial to the Colony and all concerned in its fortunes.

As the Exhibition will be made as attractive as possible, the question of hotel accommodation for visitors from all parts of the British Empire, from the Continent of Europe, and the United States and South America will be considered, and details published in good time.

Communications and applications for forms and regulations to be addressed as early as possible to the Chairman, 1, Fen Court, London, E. C.

December 1889.

Regulations for the Jamaica Exhibition, 1891.

1. The Exhibition shall be one of Island Products, Manufactures and Works of Art, together with Exhibits of Works of Art, Machinery and Industrial and Agricultural Products from Great Britain and other countries and Colonies.

2. The Exhibition shall be under the management and conduct of "The Jamaica Exhibition Commissioners" under Law 33 of 1889.

3. The Exhibition will be held in buildings to be erected for the purposes of the Exhibition on the grounds of "Quebec Lodge," conveniently situated on the northern boundary of the City of Kingston.

4. The Exhibition shall be opened on Tuesday the 27th January 1891, and shall remain open for a period of not less than three months.

5. In order to secure uniformity of action there should be in each Country or Colony a Central Committee or a single Commissioner to act on behalf of the Exhibitors. Such Committee or Commissioner should perform the following functions:—

- (a) Distribute the Rules and Regulations, Application Forms, &c., to those likely to become Exhibitors.
- (b) Receive the forms when filled up, the lists of articles for Exhibition, &c.
- (c) Communicate upon all matters directly with the Secretary of the Exhibition, and forward to him, from time to time, any applications for space.
- (d) When the Commissioners shall have decided how much space is available it will be the duty of the Committee or Commissioner to divide it amongst the Exhibitors of such Country or Colony.

There should also be an Agent in Jamaica for each Country or Colony. The same person can, of course, act for more than one Country or Colony.

6. Any expenses of whatsoever nature connected with the representation of any Country or Colony, not borne by the authorities of such Country or Colony, must be defrayed by the Exhibitors themselves.

7. Applications for space must be made in the printed forms prepared by the Commissioners. These must be in the hands of the Secretary on or before the 1st May 1890.

8. The Secretary shall, before the 1st of July 1890, notify the decision of the Commissioners, and shall state what space, if any, has been allotted.

9. The reception of articles in the Exhibition Buildings shall commence on the 1st September 1890, and no articles shall be admitted after the 1st December 1890. Space assigned and not occupied on the 1st December 1890, shall revert to the Commissioners, and shall be subject to re-assignment.

10. All Exhibits shall be arranged under some one of the following groups:—

- Group I.—Raw Materials.
- Group II.—Implements for obtaining Raw Materials.
- Group III.—Machines and Processes used in preparing and making up the Raw Materials into Finished Products.
- Group IV.—Manufactured Goods.
- Group V.—Education.
- Group VI.—Fine Arts, Literature and Science.

Each of these groups is divided into classes, according to the system of general classification annexed to these Regulations (Appendix). This Appendix includes for each class a summary enumeration of the objects which it will comprise.

11. All packages from places in Jamaica containing goods intended for Exhibition must have placed on them the distinctive mark *Jamaica Exhibition*, as well as the name of the Exhibitor, and must contain a detailed list of contents.

12. Packages from Great Britain or other Countries or Colonies must likewise have painted on them the distinctive mark *Jamaica Exhibition*. They must be addressed to the Exhibitor himself or his private Agent, if any, or to the Agent, if any, of the Country or Colony from which they are sent. They must all be marked in such a way as to show distinctly the name of the Country or Colony from whence they come, and they must contain a detailed list of contents, a duplicate copy of which should be sent by post to the Consignee.

13. Every object sent for Exhibition should be accompanied by a label stating the name and address of the Exhibitor and the number of the group to which it belongs.

14. Exhibitors outside Jamaica must provide either personally or through Agents for the despatch and transmission of their goods.

15. The Agents in Jamaica of the Countries or Colonies from which the Exhibits are sent are expected to provide for the reception, unpacking and, at the close of the Exhibition, the removal of the goods.

16. The Exhibits in Jamaica, except in the City of Kingston, shall be received by the Parochial Committees in the several parishes and shall be forwarded by them to the care of the Commissioners in Kingston, who shall arrange them in the Exhibition and return them to the Parochial Committees at the close of the Exhibition, if not otherwise disposed of. Exhibits in Kingston should be forwarded direct to the care of the Commissioners. Individual Exhibitors may, however, if they prefer that course, either personally or through their own Agents, undertake the reception, unpacking, arrangement, and final removal of their goods, subject to the control of the Commissioners.

17. Exhibitors shall not be required to pay rent for the space occupied by Exhibits not intended for sale during the Exhibition. Information as to the renting of space for the sale of goods may be obtained from the Secretary.

18. EXHIBITION SPACES.—The space granted to a Country or Colony within the Building is available for floor space, exclusive of passages for the public.

19. SHOW CASES.—No particular form or design is prescribed for cases, counters, platforms, &c., but they must not exceed the following heights without the special written permission of the Commissioners:—

Show cases and partitions	10 feet above floor.
Counters	3 do. do.
Platforms	1 foot do.

Such structures are to be erected by Exhibitors at their own cost.

20. Railings of a uniform height of 2 feet 6 inches above the floor level may be erected. In every instance the railings must be within the area of the space allotted.

21. The putting up of decorations and sign-boards and the display of printed or written bills shall be subject to any special arrangements made by the Commissioners.

22. Cases must be unpacked as fast as received and the empty cases taken away by the Exhibitors or their Agents. No space will be reserved for empty cases.

23. No Exhibitor shall be allowed to transfer any allotment of space, or to allow any other than his own duly admitted Exhibits to be placed thereon, except by special permission.

24. Exhibitors should mark the selling price of articles intended for sale, for the information of visitors.

25. Objects sold cannot be taken away before the close of the Exhibition without special permission. Special arrangements will be made with regard to perishable Exhibits.

26. Exhibitors of apparatus requiring the use of water, gas, or steam must state on applying for admission the quantity considered necessary. Those who wish to show machinery in motion must state the rate of speed at which the machine is to be driven. The furnishing of all countershafting, pulleys, gas, water, steam, &c., must be at the entire expense of the Exhibitor, but under the direct control of the Commissioners or their appointed Officer.

27. Spirits or alcohol, oil, essences, corrosive substances, and generally all substances which might spoil other articles and inconvenience the public, can be received only in solid and suitable vessels of small size.

28. Percussion caps, fireworks, chemical matches, and other similar objects can be received only when made in imitation and deprived of inflammable ingredients.

29. Articles that are in any way dangerous or offensive shall not be admitted into the Exhibition.

30. No article exhibited may be photographed, drawn, copied, or reproduced, in any way whatsoever, without the special sanction of the Exhibitor.

31. Awards will be made by Committees specially appointed.

32. The Commissioners will not hold themselves responsible for any loss or damage occurring to any Exhibit from any cause whatsoever; but while declining any responsibility it is the intention of the Commissioners to take such precautions as they deem necessary.

33. The Commissioners reserve the right to remove the objects belonging to any Exhibitor who shall not conform to the Regulations.

34. Exhibits brought into Jamaica at any port of entry will be allowed to go forward to the Exhibition Buildings, under such arrangements for supervision by the Customs Officers as may be deemed proper, without examination at the port of entry, and at the close of the Exhibition will be allowed to go forward to the port from which they are to be exported. No duties will be levied upon such goods unless disposed of in Jamaica.

35. Immediately after the close of the Exhibition, Exhibitors whose Exhibits are not under charge of the Commissioners shall remove their effects, and complete such removal within one month. Goods remaining after the expiry of the month will be removed by order of the Commissioners and sold for expenses, or otherwise disposed of under the direction of the Commissioners.

36. Each person who becomes an Exhibitor thereby acknowledges, and undertakes to keep the Rules and Regulations established for the government of the Exhibition.

37. The Commissioners reserve the right to add to, alter, amend or expunge any of the foregoing Regulations.

APPENDIX.

System of General Classification of Exhibits.

GROUP I.

Raw Materials.

Class 1. Raw Materials in the Mineral Kingdom:—

- | | |
|--|--|
| a.—Minerals. | d.—Rocks and their contained Fossils. |
| b.—Ores. | e.—Mineral Springs of Jamaica; their analysis and value. |
| c.—Phosphates and other Natural Manures. | |

Class 2. Raw Materials in the Vegetable Kingdom:—

- | | |
|---|--|
| a.—Foods.—Sugar Canes, Cereals, Roots, Cacao, Kola. | e.—Drugs.—Tobaccos, Coca, Cinchona, &c. |
| b.—Fruits and Vegetables.—Bananas, Oranges, &c. | f.—Condiments and Stimulants.—Coffee, Peppers, Ginger, Pimento, Rum. |
| c.—Fibres.—Sisal Hemp, Manilla Hemp, Cocoanut, Cotton, Ramie. | g.—Dyes.—Logwood, Fustic, Annatto. |
| d.—Timbers. | h.—Oils.—Castor Oil, Cocoanut Oil, Essential Oils. |
| | i.—Ornamental Plants. |

Class 3. Raw Materials in the Animal Kingdom:—

- | | |
|--|--|
| a.—Cattle and Horses, Sheep, Pigs, &c. | c.—Bees and Silk-Worms at work. |
| b.—Poultry, Birds, Fishes, Turtle, &c. | d.—Wool, Horn, Turtle-Shell, Corals, &c. |

GROUP II.

Implements for obtaining Raw Materials.

Class 4. Implements used in—

- | | |
|----------|------------------|
| Mining. | Extracting Ores. |
| Geology. | |

Class 5. Agricultural and Horticultural Implements.

Class 6. Fishing Implements. Guns and Hunting Equipments.

GROUP III.

Machines and Processes used in preparing and making up the Raw Materials into Finished Products.

Class 7. In the Mineral Kingdom:—

- | | |
|------------------------------|--|
| a.—Potter's Wheel, &c. | d.—Cutting and mounting Precious Stones. |
| b.—Glass-blowing. | e.—Metal Work, Blacksmith's Work, &c. |
| c.—Making China, Firing, &c. | |

Class 8. In the Vegetable Kingdom:—

- | | |
|--|---|
| a.—Sugar-machinery, curing Cacao, making Arrowroot, Tapioca, Starch, Corn Shellers and Driers. | d.—Carpentry, Cabinet-making. |
| b.—Fruit Evaporators, packing Oranges, &c. | e.—Making Cigars and Cigarettes. |
| c.—Fibre-extracting, Rope-making, Mat-making, Hat and Basket-making, Weaving Cotton, Paper-making. | f.—Coffee-machinery, Rum-distilling. |
| | h.—Apparatus for expression and distillation of Oils. |

Class 9. In the Animal Kingdom:—

- | | |
|---|--|

JAMAICA EXHIBITION, 1891.

APPLICATION FOR SPACE.

Name in full, or name of Firm	_____
Business or Profession	_____
Address in full	_____
General nature of goods specifying Groups in which it is proposed to exhibit. (For particulars see back.)	_____
Space applied for subject to Rules and Regulations.	_____
Signature	_____
Date	_____

No. of Square Feet.

As the allotment of space must depend upon the number of individual applications it may be found necessary to give precedence to those made at an early date. It is therefore requested that this form may be forwarded before the 1st May 1890, to

LAURENCE R. FYFE, Esq.,
Secretary, Jamaica Exhibition,
Kingston, Jamaica.

On the allotment of space being officially notified Exhibitors will be requested to furnish the necessary information for the Catalogue.

Intending Exhibitors are requested to mark under the Heads set apart for the purpose the Group or Groups in which they propose to exhibit, with such details as at the present date they are able to supply.

Full particulars will be found under the Appendix to the GENERAL REGULATIONS, "SYSTEM OF GENERAL CLASSIFICATION OF EXHIBITS."

GROUP I. Raw Materials.	
GROUP II. Implements for obtaining Raw Materials.	
GROUP III. Machines and Processes used in preparing and making up the Raw Materials into Finished Products.	
GROUP IV. Manufactured Goods.	
GROUP V. Education.	
GROUP VI. Fine Arts, Literature and Science.	

ORDERED, that the foregoing papers be published in the Supplement to the *Gazette of India* for general information, and that copies be forwarded to the

Madras.	Central Provinces.
Bombay.	Burma.
Bengal.	Assam.
North-Western Prov-	Coorg.
vinces and Oudh.	Hyderabad.
Punjab.	Ajmere-Merwara.

Local Governments and Administrations noted on the margin, with a request that the Prospectus, &c., may be published in the Local Gazette, and that such steps may be taken to make it known among

Merchants and Manufacturers as may be considered desirable.

(True extract.)

E. C. BUCK,

Secretary to the Government of India.

GOVERNMENT OF INDIA.
REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Summary for January 1890.

The weather during the past month has maintained the reputation for dryness which the present cold weather season has acquired, owing to the exceptional fineness, over by far the greater part of the country, of the months of October, November and December 1889. Ordinarily January is an unsettled month over a large part of Northern India and to a certain extent in Central India also. Depressions either formed over India or advancing across our frontier from countries further to the westward are generally fairly frequent incidents in this month's weather, and as a rule they are accompanied by general rain on the plains and snow on the hills. During the month under review not only has the record of storms been a singularly light one, but the storms themselves have been exceptionally feeble and the rain and snowfall resulting from them exceedingly light. On the hills to the north of Simla the snowy range during the whole of the month under review was very lightly covered, and snowfall reports subsequently received show that this deficiency is not confined to the ranges adjacent to the plains in Northern India but prevails over a very large area. The Assistant Commissioner, Kulu, reported at the close of the month that the season so far had been the driest and mildest on record, and that foot passengers could still cross the passes of from 10,000 to 11,000 feet in height. The Deputy Commissioner, Kohat, reports that there was a good fall of snow in Thal on the 17th of January, but that the fall was followed by rain, so that only the Sufed Koh and the highest ranges remained white.

On the 1st of January a large high pressure area overlay North-Western India, and extended southward over the west of the Central Provinces as far as the Deccan. A second area of high pressure overlay the Upper Assam valley. From these two high pressure areas readings decreased slowly in all directions and relatively low pressures were reported from Bengal and from both coasts of the Peninsula. The winds blew out from these high pressure areas with the usual anticyclonic circulation of little force and the weather was fine generally. These conditions lasted, with slight modifications, until the 20th when a fall of the barometer commenced in the north-west and a depression began to appear over the Indus Valley. This depression advanced slowly north-eastward

towards the Punjab and completely broke up the high pressure area which had previously obtained there. The disturbance subsequently passed down the Gangetic plain and apparently collapsed over Bengal. It was succeeded by a rapid barometric rise which re-established the distribution formerly prevailing. This distribution lasted until the close of the month.

The only depression then of any importance during the month was that of January 20th to 25th. Over Bengal, as noticed above, pressure was abnormally low throughout the month, and within this low pressure on one or two occasions small local depressions were developed. Of these the least unimportant were those of the 6th, the 20th and the 27th; the first and second of which occasioned somewhat unsettled weather.

Depression of January 20th to 26th.—On the 20th the barometer began to fall in the extreme north-west, and south-easterly winds appeared at one or two stations. On the 21st the wind was south-easterly at Karachi, easterly at Jacobabad and southerly at Quetta where the barometer had fallen. Rain had occurred in the north-west of the Punjab, but this was apparently connected with an independent disturbance occurring over the North-West Himalaya. On the 21st the chart showed that the depression from Sind had advanced north-eastward to the south of the Punjab. A fairly well marked cyclonic circulation of the winds prevailed around it and rain was falling on its northern side. The storm apparently travelled along a curved trajectory the southern extremities of which were over Sind in the west and Bengal in the east, and of which the most northerly point was the south of the Punjab. The abnormal depression of the barometer at its centre increased as the storm travelled eastward and rain fell on its northern side throughout. The following table gives the amount of the barometric abnormalities near the centre for each day:—

Date.	STATION.	Amount of depression.	Date.	STATION.	Amount of depression.
January 21st	Jacobabad	0.112"	January 23rd	Agra	0.199"
	Hyderabad	0.078"		Allahabad	0.198"
	Mooltan	0.107"	" 24th	Saugor Island	0.199"
" 22nd	Jacobabad	0.162"		Calcutta	0.210"
	Hyderabad	0.108"		Burdwan	0.237"
	Kurrachee	0.111"		Berhampore	0.235"
	Mooltan	0.154"		Purneah	0.213"
	Ludhiana	0.156"		Gya	0.230"
	Sirsa	0.154"	" 25th	Dacca	0.188"
" 23rd	Meerut	0.183"		Jessore	0.180"
	Bareilly	0.189"			

Strong squally winds accompanied the storm centre, and dust storms, lightning and unsettled weather were reported from most parts of Northern India during its existence.

Temperature.—The absence of rain on the plains and of snow on the hills has resulted in a generally high temperature throughout India—an excess which

was generally more marked at the hill stations than on the plains. As has been frequently noticed, the temperature anomalies of Northern and Southern India were of opposite signs, thus from the 1st to the 23rd the whole of the northern and central parts of India were steadily the seat of excessive temperatures, while the Peninsula was equally steadily the seat of deficient temperatures. On the 24th a wave of relative cold commenced in the north-west of India, and on the following day the mean temperature all over Madras exceeded the normal average, and throughout the whole period during which this wave of cold was crossing Northern India, the mean temperature of the south of the Peninsula was abnormally high. This wave was much more severe and longer-lived on the plains than on the hills, and hence during its continuance there occurred on reversal occasions that several of the ordinary relation between temperature and altitude which has so frequently been noticed, *i.e.*, the night temperatures at the level of the plains were frequently lower than those at an elevation of 7,000 feet. The following table shows the progression of temperature week by week throughout the month for each Province:—

PROVINCE.	DIFFERENCE OF MEAN TEMPERATURE FROM NORMAL FOR WEEK ENDING JANUARY				Difference of mean temperature from the normal for the month.
	6th.	13th.	20th.	27th.	
Burma	+1'5	+1'6	+1'2	+2'0	+1'7
Bengal	+1'3	+2'3	+2'4	+1'7	+1'3
North-Western Provinces	+3'0	+3'1	+3'7	+1'8	+2'1
Punjab	+3'9	+4'9	+3'1	+0'4	+2'6
Bombay	-0'1	+0'2	+0'6	-1'1	-0'3
Central Provinces and Berar	-0'1	+0'4	+2'7	-0'8	-0'1
Guzerat and Central India	+1'4	+3'3	+2'7	0	+1'4
Sind and Rajputana	+4'1	+6'1	+3'5	+0'8	+3'1
Madras	-1'4	-1'1	-1'1	+0'8	-0'6

Rain.—The table at the close of the Summary shows that in three Provinces in India (*viz.*, North Bengal, Assam-Cachar, and Lower Bengal) and in Lower Burma the rainfall of the month has been in excess and that in all other parts of the Indian region it has been in defect. In Lower Burma and in Assam the excess has been considerable, but in the other two Provinces it has been slight and unimportant. All over the central parts of the country, *i.e.*, from the Central Provinces westward across Rajputana to Sind and across Berar to the Konkan there has been no rain whatever throughout the month, while in Malabar, Behar and Orissa any rainfall has been insignificant. In Upper India the average rainfall was about $\frac{1}{2}$ an inch which was about 1 inch below the normal. The Carnatic received very nearly the average amount, but in Ceylon the rainfall was as deficient as in any part of India where any rain was received.

The following table gives complete data and shows the actual average rainfall and the normal rainfall of the month of the twenty-one districts into which

the country is divided so far as it is indicated by the telegraphic reports of a few stations in each district:—

DISTRICTS.	Number of Stations.	Normal average rainfall in January.	Actual average rainfall in January 1890.	Difference from the average in January 1890.

W. L. DALLAS,

Assistant Meteorological Reporter to the Govt. of India.

SIMLA,

The 2nd March 1890.

GOVERNMENT OF INDIA.
REVENUE AND AGRICULTURAL DEPARTMENT.Weather Review of India for the week ending at 8 a.m. on
Monday, February 24th, 1890.

In the weather review of last week an account was given of the appearance of a depression on the north-western frontier, which crossed North-Western India and passed down the Gangetic plain, after giving fairly general rain to the Punjab. During the period covered by the present review a similar change has occurred, only on a much slighter scale. The depression of the barometer was much smaller and the rainfall accompanying or following the depression was lighter and less general.

The chart of the 18th exhibited the distribution of pressure which has prevailed more or less throughout the whole of the present cold weather. Readings were highest in the north-west of India, low over the Bay and Bengal, and relatively low off the west coast. The winds were north-westerly and westerly over North-Western India and down the Gangetic plain, feebly cyclonic in Bengal, northerly over the head of the Bay, and rather variable over the Peninsula. The weather was very fine, though with slight cloud in a few places. On the 19th the feeble depression noticed above had appeared over Sind; but in other respects the distribution of pressure and the circulation of the winds had hardly changed. South-easterly breezes had, however, sprung up on the hills and the weather had become very cloudy over the Punjab. The chart of the 20th showed that the Sind depression had advanced slightly north-eastward towards the south of the Punjab. Cyclonic winds prevailed over North-Western India and rain had fallen at Peshawar, Murree and Quetta. During the day (the 20th) further rain fell in the submontane districts of the Punjab and North-Western Provinces and snow on the hills. This apparently resulted in a general decrease of temperature in the north-west and a strong outset of air from the hills. This brought about a rapid rise of the barometer over the Punjab on the 21st and a fall of temperature over North-Western India. While this rise was in progress in the north-west, a barometric fall occurred in the extreme south and the edge of a small local squall affected Ceylon and the extreme south of the Peninsula. On the 22nd the distribution of pressure had resumed its normal cold weather condition again, and on the 23rd there was very little change of importance. At Colombo a south-easterly wind had sprung up and nearly one inch of rain had fallen there. On the 24th the unsettled weather from Ceylon had extended over the south of the Peninsula where moderate or light rain had fallen.

Temperature.—There has been an excess of temperature in all provinces of India during the week. The warmest day was the 20th when the mean temperature was 3° or more above the normal average in Bengal, the Punjab, Guzerat or Central India, 4° above in the Central Provinces, and 7° above in Sind and Rajputana.

The coolest day for the whole of India was the 23rd when the weather was affected by cold northerly breezes from the hills noticed above.

In most provinces the weather was abnormally warm throughout the week, but in Burma one day and in the Punjab two days were cooler than usual.

On the hills the excess of temperature has been small relatively to the excess which has occurred there during the past few weeks, and on the 21st there was an actual deficiency.

The following table shows the variations of the mean temperature of the present and of the past week from the normal average :—

PROVINCES.	Difference of mean temperature of last week from normal.	Difference of mean temperature of present week from normal.
Burma	+1'3	+1'7
Bengal	+2'2	+3'3
North-Western Provinces	+4'4	+2'9
Punjab	+5'9	+1'3
Bombay	+2'7	+2'1
Central Provinces	+2'8	+2'7
Guzerat and Central India	+5'0	+8'9
Sind and Rajputana	+6'4	+6'
Madras	—0'6	+0'9

This table shows that except in Burma, Bengal and Madras the mean temperature relatively to the average has fallen, the change being greatest in North-Western India.

Rain.—The table at the close of the summary shows that rain has fallen during the week in three regions, *vis.*, the north-west of India, Assam and the south of the Peninsula. The fall within the first and last of these regions was due to the two disturbances noticed above, while the fall in Assam was owing to circumstances which apparently determine rain to the north-east corner of India when the weather is unsettled in the north-west corner. The only districts in which the rainfall of the week exceeded the normal average of the period were Madras, South-central and South. In all the other districts where rain was recorded the amount received was very light and in defect of the average. In North-Western India, with the exception of Sind, the districts where rain fell were either on or near the hills.

The maximum falls exhibit little worthy of note. In Assam, Cherrapunji and Sibsagar each received $\frac{1}{2}$ inch during the week, in the submontane districts of the North-Western Provinces Pithoragarh received the heaviest fall, *vis.*, $\frac{1}{2}$ inch, in the hill districts of the Punjab Palampur received nearly $\frac{1}{2}$ inch and in the north-western districts of the same province Kallanga (Peshawar district) received $2\frac{1}{4}$ inches. This was by far the largest amount recorded in Northern India. In Sind the slight rain which fell occurred in the Sukker district. In the south of the Peninsula Ponani in the Calicut district of Malabar received $1\frac{1}{2}$ inches, and Ambasamudram in Tinnevely received 3'05 inches. This was the heaviest fall throughout India. In addition to the above, Jubbulpore reports a slight local shower on the 24th. The figures in the final column of the table have not been materially changed by the records of the past week.

GOVERNMENT OF INDIA.
REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of
the Crops.

Madras.—For week ending 1st March.—Rainfall moderate in the Nilgiris and Tinnevely, slight in Tanjore, Madura, Trichinopoly, Coimbatore, Malabar; none elsewhere. Crops generally good but withered in parts of Nellore, Chingleput, South Arcot, Tanjore, Tinnevely, Coimbatore, and Salem. Paddy blighted in parts of North Arcot. Prices generally rising. Prospects fair. More rain has fallen since in Tinnevely.

Bombay.—For week ending 5th March.—Slight rain in parts of Karachi and Ahmedabad. Cotton blighted in parts of Dharwar, and crops generally in some talukas of Sind damaged by blight, frost or locusts. Wheat in Upper Sind, Frontier and crops generally in Poona, Satara and parts of Nasik below average. Prospects otherwise good. Probable outturn of opium in Baroda 12 annas.

Bengal.—For week ending 4th March.—A few local showers of little importance reported in South Bengal, Orissa, and Behar. Rain wanted in places in the Rajshahye and Chittagong divisions, but general agricultural prospects on the whole continue satisfactory. All cold-weather crops, including poppy and tobacco, are generally in good condition, and harvesting in progress. Sugar manufacture proceeding with good results in many districts. Spring rice nearly transplanted and doing well. Cultivation for early rice and jute going on in some districts, and in Behar sowing of indigo begun. Prices remain almost stationary, but at Balasore common rice has fallen from 19 to 21 seers per rupee. In Balasore the two tracts, called Talpada tract and Somnathpur tract, comprising respectively the southern portion of Balasore thana with the north-eastern corner of Soro thana and part of the western side of Balasore thana, are the worst in the area in which distress is apprehended. In Talpada tract test relief works on a small scale opened, and destitute persons being fed at Government expense. In Somnathpur tract no necessity for affording immediate relief, the employment obtainable during the shipping season being sufficient at present.

North-Western Provinces and Oudh.—For week ending 5th March.—Weather generally cloudy with light rain here and there, but more is wanted. Slight hail fell in the Rae Bareilly district but did no injury. Harvesting has begun in most of the eastern districts. Unirrigated crops are suffering in Cawnpore, Sitapore, Agra, and Saharanpore. Poppy is in good condition, but third sowings have partially failed in Ballia. Markets are full, but prices show a tendency to rise.

Punjab.—For week ending 5th March.—Rainfall slight in Lahore, Rawalpindi, and Peshawar. Prices stationary in Ferozepur and Dera Ismail Khan and rising elsewhere. Sowings of extra *rabi* crops in progress. Ploughings for *kharif* commenced in Jullundur and Lahore and sowings in Shahpur. Crops are suffering for want of rain in most districts. If the rain does not fall soon the wheat will be a total failure in Umballa. Locusts visited Amritsar and Tank (Dera Ismail Khan) and caused slight harm to the crops in the latter place. Fodder sufficient except in Hissar, Jullundur, Lahore, Mooltan, Dera Ismail Khan and parts of Rawalpindi.

Central Provinces.—For week ending 5th March.—Cloudy with light rain. *Rabi* crops being harvested. Slight damage by rain and hail in Jubbulpore, and general prospects continue fair. Prices steady.

Burma.—For week ending 1st March.—Slight rain fell in Moulmein and Amherst but nearly 2 inches in Mergui. In Upper Burma no rain fell. The

SIMLA, 28th February, 1890.

W. L. DALLAS,
Assistant Meteorological Reporter to the
Government of India.
E. C. BUCK,
Secretary to the Government of India.

crop prospect remains good. The price of paddy has fallen in Sandoway, Prome, Bassein, and Thongwa and risen slightly in Thayetmyo. In Upper Burma prices show no fluctuations except in Pynmana where the price has fallen.

Assam.—For week ending 5th February.—Weather seasonable. Slight rain in some districts. Crushing of sugarcane, gathering of mustard and ploughing for early rice still continue. Tea doing well.

Mysore and Coorg.—For week ending 5th March.—In Mysore crops and prospects good. Sowing of paddy and planting of sugarcane completed in parts. Outturn of harvests generally fair. Prices slightly risen in Mysore district.

Slight rain in Coorg.

Berar and Hyderabad.—For week ending 5th March.—In Berar weather slightly warm and cloudy. Harvesting of *rabi* continues. Fodder sufficient except in Ellichpur and Dariapur taluks. Prices almost stationary. Land under preparation for ensuing crops.

No rain in Hyderabad. Weeding of *tabi* crops continues. Harvesting of *rabi* crops commenced. Prices stationary.

Central India.—For week ending 5th March.—Slight rain in Bundelkhand, Baghelkhand and Western Malwa. Water getting scarce in parts. *Rabi* being reaped in Gwalior. Crops damaged and below average in Baghelkhand. Prices high in Goona, rising in Baghelkhand and Dhar and falling in Bhopal. Opium crops damaged in Baghelkhand and Neemuch.

Rajputana.—For week ending 5th March.—Slight rain at Abu, Ajmere, Jeypore, and Bhurtore. Agricultural operations satisfactory except in Kerowlee. Standing crops good. Agricultural stock good except in parts of Ulwar. Pasturage or fodder sufficient, except in Marwar and Dholepore. Prices rising in Meywar and Harowtee, steady elsewhere.

Nepal.—For week ending 27th February.—Slight rain at Sadr station. Weather cold in the mornings and evenings. Prospects of the crops good if rain falls soon.

E. C. BUCK,

Secretary to the Government of India.

SUPPLEMENT TO
The Gazette of India.

No. 11. } CALCUTTA, SATURDAY, MARCH 15, 1890.

OFFICIAL PAPERS.

A SUPPLEMENT to the GAZETTE OF INDIA will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in PART VI of the GAZETTE.

Non-Subscribers to the GAZETTE may receive the SUPPLEMENT separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The SUPPLEMENT and PART VI of the GAZETTE can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA is required by Law, or which it has been customary to publish in the CALCUTTA GAZETTE, will be included in the SUPPLEMENT. For such Orders and Notifications the body of the GAZETTE must be looked to.

Printed and published for the GOVERNMENT OF INDIA, at the Office of the SUPERINTENDENT OF GOVERNMENT PRINTING,
INDIA, No. 8, Hastings Street, Calcutta.

GOVERNMENT OF INDIA.
REVENUE AND AGRICULTURAL DEPARTMENT.

**Weekly Report on the State of the Season and Prospects of
the Crops.**

Madras.—No report received.

Bombay.—*For week ending 12th March.*—Slight rain in Khandesh and Sholapur. Crops damaged by blight, frost or locusts in a few talukas of Sind, and below average in Poona and Satara. Cotton in Dharwar blighted and *jowari* in Ahmednagar withering. Crops otherwise satisfactory.

Bengal.—*For week ending 11th March.*—Rain in almost every district, but generally of not much importance, except in Behar and Chota-Nagpore, where the falls were rather more general. More rain wanted in the Rajshahye and Chittagong divisions for cultivation of autumn rice, jute, and other early crops. *Rabi* crops being gathered, and generally reported on well. Spring rice doing well. Opium collection proceeding, but has somewhat suffered from rain. A good crop of tobacco being gathered, and sugar manufacture in many districts reported to be satisfactory. In Behar indigo sowings in progress. Prices of rice continue almost stationary. According to latest account from Balasore Collector, 401 coolies employed on 2nd and 3rd lines of Bahamagar-Talpada road, and 50 persons, chiefly widows, orphans, and lepers, receiving gratuitous relief from private funds.

North-Western Provinces and Oudh.—*For week ending 12th March.*—Cloudy weather continues and slight showers have fallen in most districts. Hail fell in the Banda and Jhansi districts, but no injury from it is reported. Irrigated crops generally promise well, but the outturn of dry crops will be light. Poppy prospects are fair. From Kumaon only is any scarcity of food stocks reported, but prices are unsteady and tend upwards.

Punjab.—For week ending 12th March.—Rain has fallen in all districts except Multan and Dera Ismail Khan. Prices rising in six districts and stationary in others. Sowings of extra *rabi* and ploughing for *khari* in progress in some districts. Crops are suffering in most districts for want of rain. The wheat crop will fail in Amballa if rain does not fall soon. Fodder sufficient except in Hissar, Jullundur, Sialkot, Lahore, Shahpur and parts of Multan and Rawalpindi.

Central Provinces.—For week ending 12th March.—Weather somewhat cloudy with slight showers of rain. *Rabi* crops being harvested. Prospects continue generally favourable. Prices steady.

Burma.—For week ending 8th March.—A little rain fell in Rangoon and Tavoy districts. The crop prospect is generally good. The price of paddy has risen in Pegu, Tharrawaddy, Prome and Henzada and has fallen in Thayetmyo; in the other districts there have been no fluctuations.

Assam.—For week ending 12th March.—Weather windy. Rainfall slight. Ploughing for summer rice and crushing of sugarcane continue; gathering of mustard nearly over; pruning of tea nearly finished.

Mysore and Coorg.—For week ending 12th March.—No report received for Mysore.

Slight rain has fallen generally in South Coorg which is favourable for coffee blossom.

Berar and Hyderabad.—For week ending 12th March.—Slight rain in Berar. Weather warm and cloudy. Harvesting of *rabi* continues. Threshing commenced in some places. Land being prepared for next season. Fodder sufficient except in Ellichpur and Dariapur taluks. Prices almost stationary.

No report received for Hyderabad.

Central India.—For week ending 12th March.—Rain fell in Bundelkhand, Baghelkhand, Western Malwa and Goona. Crops and opium slightly damaged by rain and hail in Western Malwa, Goona and Baghelkhand. Prices falling in Neemuch. No other changes since last report.

Rajputana.—For week ending 12th March.—Slight rain in Marwar, Jhalawar, Harowtee, Ajmere, Kerowli, Bhurtpore and Alwar, moderate in Jeypore. Agricultural operations satisfactory except in Kerowli. Standing crops good. Slight damage done by hail in Jeypore. Agricultural stock good. Pasturage or fodder sufficient except in Marwar and Dholepore. Prices steady generally.

Nepal.—For week ending 6th March.—Slight showers fell during the week. Weather cloudy. Land is prepared for sowing rice and awaits an appreciable fall of rain.

DEPARTMENT OF FINANCE AND COMMERCE,

STATISTICAL BRANCH;

Calcutta, 24th March 1890.

E. J. SINKINSON,
Secretary to the Government of India.

Printed and published for the Government of India, at the Office of the Superintendent of Government Printing, India, No. 2, Marwar Street, Calcutta.

SUPPLEMENT TO The Gazette of India.

No. 12.} CALCUTTA, SATURDAY, MARCH 22, 1890.

OFFICIAL PAPERS.

A SUPPLEMENT to the GAZETTE OF INDIA will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in PART VI of the GAZETTE.
Non-Subscribers to the GAZETTE may receive the SUPPLEMENT separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The SUPPLEMENT and PART VI of the GAZETTE can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post. No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA is required by Law, or which it has been customary to publish in the CALCUTTA GAZETTE, will be included in the SUPPLEMENT. For such Orders and Notifications the body of the GAZETTE must be looked to.

E.—STATEMENT of NET REVENUE and EXPENDITURE—ENGLAND and INDIA	891

FINANCIAL STATEMENT for 1890-91.

PART I.

IMPERIAL REVENUE AND EXPENDITURE.

Preliminary.

THE Financial Statement for the coming year has been divided into two Parts: Part I deals with the financial position of the Government of India and takes into account only the Imperial Revenue and Expenditure as distinguished from that which is Provincial or Local; Part II contains an explanation of the Indian Budget as a whole. This change has been made with the object of presenting an outline of the financial position which will be sufficient for the ordinary reader. Such an outline will be found in Part I. Those who desire fuller information will find it in the second Part of the Statement.

Section I.—Accounts of 1888-89.

2. Since the last Financial Statement was made the Accounts of the year 1888-89 have been finally closed. They show a surplus of Rx. 37,000.

The Budget Estimate of that year, framed in March 1888, showed a deficit of Rx. 698,000. The Revised Estimate of the year, framed in March 1889, showed a reduced deficit of Rx. 201,700; the Accounts, as I have just said, show that the year has closed with a surplus of Rx. 37,000.

The improvement in the financial position during 1888-89 is satisfactory, but the important question of to-day is the position of the finances during the current and the coming year.

Section II.—Financial position of 1889-90 and 1890-91.

3. The Estimate of the current year, as framed in March last, showed a surplus of Rx. 106,300.

The Revised Estimate, if compiled in the same way as the Budget Estimate, would now show a surplus of Rx. 2,733,200, and the Estimate of the coming year would show a surplus of Rx. 304,900. Certain special arrangements are proposed which will affect the surplus of 1889-90 and of 1890-91, but it will be convenient to keep these arrangements out of sight until it has been explained how it happens that the Budget surplus of the current year has grown into Rx. 2,733,200, while the Estimate of the year 1890-91, if compiled on the same basis, would show a surplus of only Rx. 304,900. Indian finance is subject from year to year to disturbing causes which have a serious temporary effect, and for this reason a surplus in any year can no more be said to prove that the finances are in a sound state, than a deficit in a single year can be held to prove that their condition is unsound. It is important that it should be clearly understood whether the high or low surplus, or, it may be, deficit, of any year is due to permanent or temporary causes, and I shall endeavour to explain to what extent the improvement in the financial position is due to lasting influences and to what extent it is only temporary.

4. In the first place I propose to offer a few remarks on the subject of Exchange, so as to clear that question out of the way at the beginning. I have seen it stated that the improvement in the current year is largely or mainly due to the rise in the rate of Exchange. This is not the case. The rate of Exchange taken in the Budget Estimate was 1s. 4.38d.—one rupee. Although

the rate of Exchange is now considerably higher than that rate, it was lower during a large portion of the year, and the average rate of Exchange for the whole year 1889-90 is now taken at only Rs. 4.552d. per rupee. The rise is therefore only slightly greater than one sixth of a penny per rupee. The rate of Exchange affects so many of our transactions that it would be a difficult and tedious task to calculate precisely the amount of improvement which a rise of one-sixth of a penny per rupee has produced. For present purposes it will be sufficient to put the improvement at Rs. 200,000 in round numbers. In the explanation I am about to give I shall distribute this improvement of Rs. 200,000 among the several heads affected.

5. Although the improvement in the position has not been mainly due to the rise in Exchange, the cessation of the long continued fall in the gold value of the rupee has been a most welcome relief to the finances. From 1873 to 1890 there have only been two other years (1879-80 and 1883-84) in which the actual rate of Exchange exceeded or was equal to the rate taken in the Budget, and the average yearly fall from 1873-74 to 1889-90 has been '36 of a penny per rupee or more than twice the rise in the current year.

Although the cessation of the hitherto continuous fall in the value of the rupee measured in gold has greatly improved the financial position for the time being, the uncertainty as to the future relations of the precious metals constitutes a very serious danger, and one which it would be worth our while to make great sacrifices to escape. The future of the Currency question appears to rest at the present time in the hands of the United States of America.

6. The chief improvement in the current year appears under the head of Opium. There is an increase of Rs. 286,400 in Opium Revenue; there is a decrease of Rs. 708,800 in Opium Expenditure. The total improvement under Opium is consequently Rs. 995,200. In the Budget Estimate the price of Bengal Opium was taken at Rs. 1,070 a chest. It has proved to be Rs. 1,136; this accounts for the improvement in Opium Revenue, an improvement which I regret to say is not likely to be maintained during the coming year, as the price of Bengal opium at this month's sale was only Rs. 1,040 a chest, though the market price has since risen.

The decrease in Expenditure is due to a poor crop of Bengal opium. The total crop of Bengal opium is purchased by Government at a fixed price per seer. A good crop means heavy expenditure in the purchase of opium; a poor crop means a saving in expenditure. The quantity of opium produced in any season does not immediately affect the quantity of opium which is sold, as some time elapses before the new crop comes into the market, and Government maintains a reserve with the object of equalizing the quantity sold from year to year. As it happens, the bad crop of the year has not done us material injury, because the reserve of opium was very high and is still sufficient. The improvement under Opium in the current year must be considered as merely temporary. In a series of years we shall no doubt get average crops, and the present selling price of opium is much below the average price of the year about to close.

7. In addition to the improvement under Opium, there has been, during the current year, a very satisfactory increase of revenue under what is known as the other Principal Heads of Revenue, which include Land Revenue, Salt, Excise, Stamps, Provincial Rates, Customs, Assessed Taxes, Forests, Registration, and Tributes from Native States. This increase is partly Imperial, partly Provincial, partly Local.

The large improvement in Revenue which is shown under the Principal Heads of Civil Revenue (excluding Opium) is of a permanent nature, or in other words, we can safely reckon on obtaining the same increase in future years. If there is any falling-off under some heads it will be balanced by increase under other heads. This improvement amounts to Rs. 766,500 on Imperial account and

is mainly due to an increase of Rs. 298,400 under Land Revenue, of Rs. 149,600 under Salt, of Rs. 79,100 under Excise, of Rs. 31,500 under Stamps, of Rs. 69,600 under Customs, and of Rs. 112,700 under Forests.

The improvement under Opium and the growth of Revenue under the other Principal Heads accounts in all for an improvement of Rs. 1,761,700 in 1889-90, of which more than 40 per cent. is a permanent increase of the public revenue, the rest being temporary.

8. On Special Defences, there has been a reduction of expenditure amounting to Rs. 344,500, which merely represents postponement of charges which will be incurred hereafter, and under Interest not charged against Railways and Canals there has been a net improvement of Rs. 230,900. The improvement in the net Interest charge is due to the high rate of interest obtained by the Secretary of State on that portion of his cash balance which he was able to invest, to the saving from the issue of a loan of 2 crores very nearly at par last year as compared with the estimated charge for the issue of a loan of $2\frac{1}{2}$ crores at a discount, to the rise in Exchange, and to other causes.

There has also been a net improvement of Rs. 118,600 under Army, notwithstanding the expenditure on the Chin-Lushai Expedition, and of Rs. 73,900 in the Railway Account. Under all other heads there is a net improvement of Rs. 97,300. The total net improvement of the year is Rs. 2,626,900.

9. The explanation of the large surplus in 1889-90 may then be briefly stated as follows: in the current year Opium has given a net improvement of Rs. 995,200; other Principal Heads of Revenue have given an improvement of Rs. 766,500; Special Defences show a reduction of expenditure amounting to Rs. 344,500; Interest gives an improvement of Rs. 230,900. All other heads give a further net improvement of Rs. 289,800. The total net improvement of the year is Rs. 2,626,900, and adding the Budget surplus of Rs. 106,300, the surplus with which the year is expected to close is estimated at Rs. 2,733,200. Of this net improvement of Rs. 2,626,900, about Rs. 200,000 has been caused by the rise in Exchange, which has favourably affected Revenue and Expenditure under various heads. As the Accounts almost invariably show a better result than the Revised Estimate, I have little doubt that this surplus will be found to have been exceeded when the accounts of the year are finally closed.

10. We are now in a position to explain in a few words why the surplus of 1890-91 is so small as compared with that of 1889-90. In the first place, we lose the temporary increase from Opium to which I have just referred; the loss on this account is actually Rs. 992,400; in the next place, we receive in 1889-90 a special contribution from Local Governments of Rs. 490,000; there is no such contribution in 1890-91; in the third place the Budget Estimate of net Military Expenditure in 1890-91 shows an increase over the Revised Estimate of no less than Rs. 611,000. On these three accounts—Opium, Contribution from Local Governments, and Military Expenditure—the financial position of 1890-91 is worse than that of 1889-90 by no less than Rs. 2,093,400. Adding to this a net falling-off under Interest of Rs. 113,400 and an increase of expenditure amounting to Rs. 133,900 under Special Defences, we get a falling-off of Rs. 2,340,700. The surplus of 1889-90 being Rs. 2,733,200 this deterioration of Rs. 2,340,700 would of itself be sufficient to cause the large surplus of 1889-90 to be replaced by a surplus of Rs. 392,500. It so happens that under all other heads there is a net deterioration of Rs. 87,600, which reduces the surplus to Rs. 304,900.

11. Although the net deterioration under the heads to which I have just referred is only Rs. 87,600, there are considerable fluctuations under particular heads. Thus the increase of Revenue under Principal Heads, excluding Opium, is no less than Rs. 171,500, of which nearly Rs. 100,000 is due to the raising of the duty on imported spirit and the imposition of a duty on beer brewed in India. There is also a moderate increase of net revenue from Railways and Irrigation

while there is an increase in expenditure of Rx. 85,000 on account of the coming Census, and a reduction in Miscellaneous receipts of Rx. 53,500.

12. The increased expenditure on the Army in 1890-91 is due to the purchase of Magazine rifles and ammunition for them, to the cost of 21 more batteries of 12-pr. breech-loading guns, to the purchase of machinery for making ammunition for the guns in India, and to the provision of Rx. 200,000 for the Chin-Lushai expedition and of Rx. 60,000 to complete the arrangements for prompt mobilisation of the 1st Army Corps. The total cost on the accounts I have stated is no less than Rx. 1,361,300.

13. Summing up the whole case, and putting aside all matters of minor importance, it may be said that in 1889-90 we have a large surplus owing to a temporary improvement under Opium, to a general growth of revenue which will be maintained and will affect future years, to short expenditure on Special Defences, and in connection with the Army, to reduction in the Interest charge, to improvements in the Railway Revenue Account, and to a rise in the rate of Exchange. In 1890-91 we have only a moderate surplus, because we lose the temporary improvement under Opium, because we no longer receive the special contribution of Rx. 490,000 from Local Governments, because there are special demands in connection with the equipment of the Army, and because there is an increase in the net Interest charge, as well as an increase in the expenditure on Special Defences.

Section III.—Proposals in connection with the Grant for Famine Relief and Insurance.

14. It will be seen from what I have just said, that the estimates for next year would have shown a very considerable surplus but for the heavy and special demands that have fallen on them in connection with the Army. These special demands come to no less than Rx. 1,361,300, exclusive of a provision of Rx. 892,300 on account of Special Defences. It is reasonably certain that there will be special demands of a somewhat similar nature in 1891-92, but it is not probable that they will be so heavy as in the coming year. Nor are the finances of 1891-92 exposed to any special dangers, so far as can now be seen, other than those vicissitudes which must always attend Indian finance. On the other hand, we may look forward during 1890-91 to the normal growth of revenue. There are, therefore, strong grounds for holding that in 1891-92 we shall at least find ourselves in a position of comparative ease, with a surplus in hand, moderate in amount, but sufficient to allow of some improvement in financial conditions.

15. In view of this comparatively favourable prospect the Government of India has decided to anticipate the future to some extent and to take immediate steps for the partial restoration of the Famine Grant. This can be done by measures which I shall now explain; but in the first place I propose to refer briefly to the nature of the Famine Grant and its history.

The policy of strengthening the finances in connection with Famine was originally adopted in order to protect the country against the financial effects of Famine. It was calculated that Famine would cost, either directly in expenditure intended to relieve distress, or indirectly through loss of revenue, no less than Rx. 15,000,000 every ten years, and it was therefore decided that in ordinary years the Government should take measures for providing a surplus of Rx. 1,500,000. This surplus would be used either to reduce debt directly by buying up and cancelling public obligations, or to indirectly reduce debt by diminishing borrowing.

16. It has been sometimes assumed that the object of this policy was the provision of funds for the actual relief in time of famine of persons who were in distress, and it was argued that when the money so provided was no longer

available, the people could not be relieved in case of famine, and must perish. This was not the case. Whether a surplus exists or not the Government recognises its obligations in case of famine, and the actual amount of cash in the treasury is regulated from time to time by considerations which are quite independent of the absorption or maintenance of the Famine Grant. The objects which the Famine Grant is intended to secure are purely financial. So long as it is maintained we have in ordinary years a surplus of Rx. 1,500,000, and this surplus of Rx. 1,500,000 in ordinary years will, it may reasonably be hoped, balance the deficits which must occur from time to time in a country of which the financial conditions are so uncertain. The policy of maintaining a surplus in ordinary years was devised with special reference to the injurious effect on the finances which is produced by famine, but in practice it is an insurance against temporary financial disaster of any kind, because to strengthen the finances by creating a surplus has precisely the same effect whatever may be the object of those who take measures to strengthen them. In any case the finances are strengthened and are able to better meet any special demands on them.

17. The misapprehension as to the nature and effects of the Famine Grant seems to have arisen, to some extent, from the manner in which the policy was carried out in years subsequent to its first adoption. The Famine surplus was intended, in the first instance, to operate in the direction of reducing debt. At a subsequent period it was decided to use one half of it for the construction of Railways and Canals which would protect the country from famine. I think this was, under the circumstances of the case, a wise and prudent measure, but it was a slight departure from the objects of the original policy. These were, as I have said, purely financial. In so far as the Protective Canals and Railways constructed from the Famine Grant returned a fair profit, or lessened the cost of relieving famine, in so far the original purpose of strengthening the finances was maintained. In so far as they failed to return this profit the original purpose was departed from. On the other hand it was an important consideration that the construction of these Railways and Canals might have the effect of mitigating famine to the extent of preserving human life, which would otherwise have been lost.

18. The Government of India was willing in past years to go further in the direction of using the Famine Grant for the construction of Protective Works, than was actually done, and would have appropriated it to meet any loss that might arise on Protective Railways constructed by means of borrowed money; in 1886 the Secretary of State did actually agree that the interest charge on the Indian Midland and the Bengal-Nagpur Railways should be a charge against the Famine Grant. These Railways were held to be of importance for the protection of the country against famine, and it was only on the understanding I have stated that their construction was sanctioned. The decision of the Secretary of State is contained in a Despatch which is published as an Appendix to this Statement. This matter has somewhat fallen out of sight in recent years, because shortly after the decision of the Secretary of State was given, the financial difficulties of the Government became so great that the Famine Grant was practically abolished for the time, and there was no special reason for calling attention to the fact that a portion of it went to meet the loss on the Indian Midland and Bengal-Nagpur Railways.

19. The Government of India and the Secretary of State have, however, always attached importance to the maintenance of the Grant for Famine Relief and Insurance. If the Indian finances show bare equilibrium in normal years, the deficits of bad years can only be met by borrowing; such borrowing must in time lead to a large growth of debt incurred for non-productive purposes.

The provision of what is really a yearly surplus of Rx. 1,500,000 is the most effective means of preventing the growth of debt of this character.

20. The manner in which it is proposed to partially restore the Famine Grant at once will now be explained.

We receive this year a special contribution of Rx. 490,000 from Local Governments. This transaction is carried out by debiting the amount to the balances of Local Governments and crediting it to the Government of India. It is practically the same thing to all parties whether the transaction is carried out this month or next month. The credit is therefore postponed till next month, and the effect on the finances is to diminish our surplus of this year by Rx. 490,000 and to increase that of next year by an equal amount.

After this change is made there will be a surplus of Rx. 2,243,200 in 1889-90 and of Rx. 794,900 in 1890-91. In both these years a certain amount of expenditure is already shown under the Grant for Famine Relief and Insurance, partly on account of the construction of Protective Canals and partly for relief of distress. Of the surplus of 1889-90, a sum of Rx. 433,500 will be utilised to raise the total Famine Grant to Rx. 600,000; of the surplus of 1890-91, a sum of Rx. 524,500 will be utilised to raise the Famine Grant of that year to a like amount. The surplus of the Revised Estimate will then stand at Rx. 1,809,700 and the surplus of the Budget Estimate of 1890-91 will be Rx. 270,400.

The amount provided to meet the net charge on account of the Indian Midland Railway and the Bengal-Nagpur Railway is Rx. 458,100 in 1889-90, and Rx. 432,800 in 1890-91.

The final result then of the policy which the Government of India has decided to adopt is that in the current year we have provided in all Rx. 1,058,100 (Rx. 600,000 *plus* Rx. 458,100) on account of the Famine Grant, that in the coming year we have provided Rx. 1,032,800 (Rx. 600,000 *plus* Rx. 432,800), on the same account, and that we have nevertheless a surplus of Rx. 1,809,700 in 1889-90 and of Rx. 270,400 in 1890-91; these surpluses are available for the reduction of borrowing and will in practice be used for that purpose.

The sums provided under the Grant for Famine Relief and Insurance *plus* the sums that go to meet the net charge on the Indian Midland and Bengal-Nagpur Railways, together with the surpluses of the current and coming years, amount to Rx. 4,171,000 in the aggregate, so that, practically, the Famine Grant has been more than restored for the years 1889-90 and 1890-91, as we have in the two years a sum of Rx. 4,171,000 available for the purposes for which the policy of the yearly grant of Rx. 1,500,000 for Famine Relief and Insurance was adopted.

Section IV.—Practical Results of the Policy now adopted.

21. The general effect on our borrowing of the surpluses of 1889-90 and 1890-91, which amount to Rx. 2,080,100, and of the sums now set aside for Reduction of Debt, amounting to Rx. 958,000, making Rx. 3,038,100 in all, is shown by the following facts.

The Government of India has arranged to spend in 1890-91 the sum of Rx. 3,750,000 on the construction of Railways and Canals, not chargeable against Revenue.

Under ordinary circumstances we must have borrowed largely in the open market on this account. As our balances now stand we expect to be able to find this sum of Rx. 3,750,000 in addition to Rx. 907,000, on account of loans to be made by Government for local purposes, without raising a loan this year. This result is mainly due to the existence of the sum of Rx. 3,038,100 to which I have just referred, which enables us to avoid borrowing a like amount and in this way effects a permanent saving of about Rx. 120,000 yearly in interest. To this extent the finances of the country have been strengthened.

22. A further advantage of the improvement that has occurred in the financial position is that it is unnecessary at the present time to revise the financial relations between the Imperial Government and the Provincial Governments. The present contracts can be left to run their course, and the relations between the Local and Imperial Governments can be settled in 1892 and included in the contracts that will then be made.

Section V.—Financial Prospects in the Future.

23. In the Statement of last year I made the following remarks on the financial position of the Government of India: "My deliberate conclusion is, that while there is every need for economy and for husbanding our revenue, there is no ground for despondent or pessimist views. Unless some unforeseen disaster occurs, there is every reason to hope that the lapse of two or three years will show a decided improvement in the financial position of the Government of India. It is true that the surplus which we have been able to show in the Estimates is only Rx. 106,300, but the Estimates have been framed with great moderation, and if the Indian revenues continue to exhibit their usual elasticity and no unforeseen disaster occurs, I anticipate that the Financial Statement of 1890-91 will show decided improvement." These remarks were not universally accepted: those who had previously taken a pessimist view of Indian finance were not prepared to admit that there were signs of improvement. The progress made in the current year, however, confirms the soundness of the opinion I expressed in March last. Only twelve months have elapsed since I ventured to make that prophecy, and the signs of improvement are unmistakable.

In 1889-90 and 1890-91 we have partially restored the grant for Famine Relief and Insurance; we have a large surplus in 1889-90, and a moderate surplus in 1890-91 after making provision for altogether special demands for the equipment of the Army. Although the coming year is unlikely to prove so prosperous from a financial point of view as 1889-90, I look forward, in the absence of unforeseen disaster, to still further improvement in 1891-92.

24. But my remarks regarding the signs of improvement in the finances had another effect which I did not anticipate at the time. It was assumed in some quarters that I was of opinion that the financial position was in all respects thoroughly satisfactory, and that the Government of India might at once with safety enter upon schemes which their promoters held would have the best effects on the country, but which certainly involved very heavy expenditure at the outset. Nothing was further from my intention than to convey any such impression, or to give the slightest encouragement to those who wish to mortgage the future of our finances for the sake of entering upon hazardous speculations.

I said last year that there were signs of improvement. I say now that my forecast has been borne out by the facts of the year about to close, and that there are good grounds for expecting further improvement in the coming year, but I fully recognise that we have difficulties of no slight magnitude still to meet, that the finances are exposed to many dangers, and that unforeseen disaster might for a time upset our calculations. There is every need for caution and for economy, and I should greatly regret if anything I now say, or have said in the past, conveyed the impression that the Government of India is in a position to embark on a policy of adventure of any description.

PART II.

IMPERIAL, PROVINCIAL, AND LOCAL FINANCE.

Section I.—Accounts of 1888-89.

In the Revised Estimates of 1888-89 prepared in March last the Revenue of that year was taken at Rx. 81,585,500 and the Expenditure, including outlay on Special Defence Works, at Rx. 81,787,200, the net result being an anticipated deficit of Rx. 201,700.

As the accounts were compiled, it was seen that the year would close with a small surplus, and this fact was brought to notice in the Financial Statement presented to Parliament by the Under-Secretary of State for India.

2. The actual figures of the accounts for 1888-89 as now finally closed, are—Revenue Rx. 81,696,678 and Expenditure Rx. 81,659,660, showing a surplus of Rx. 37,018. The following statement compares the Actuals for 1888-89 with the Revised Estimate, and complete details will be found in the Appropriation Audit Report published in the *Gazette of India* of 8th March 1890.

		1888-89.		Accounts, Better.	Accounts, Worse.
		Revised Estimate.	Accounts.		
REVENUE.					
India (Imperial, Provincial, and Local) Rx.		81,106,100	81,212,210	106,110	...
England Rx.	£	327,200	330,631	3,431	...
Exchange Rx.		152,200	153,837	1,637	...
TOTAL Rx.		81,585,500	81,696,678	111,178	...
EXPENDITURE.					
India—					
Imperial Rx.		37,651,100	37,556,716	94,384	...
Provincial and Local . . Rx.		21,897,300	21,863,169	34,131	...
Adjustment of Provincial and Local Surplus Rx.		+ 203,100	+ 285,118	...	82,018
England Rx.	£	15,941,500	14,932,221	58,279	...
Exchange Rx.		6,994,200	6,971,430	22,704	...
TOTAL Rx.		81,787,200	81,659,660	127,540	...
DEFICIT Rx.		201,700	...	238,718	...
SURPLUS Rx.		...	37,018		

It will be seen from the figures in this statement that, compared with the estimate framed in March 1889, there was an improvement in the Total Revenue in India (Imperial, Provincial, and Local) of Rx. 106,110 and a saving in the Total Expenditure in India of Rx. 128,515. The sum of these two amounts, less the increase of Rx. 82,018 in the Provincial adjustment, or Rx. 152,607, represents the net Imperial improvement in the Indian portion of the accounts of 1888-89, excluding Exchange; adding to this figure the net improvement in England and also the improvement in Exchange, we get a total improvement of Rx. 238,718, which accounts for the difference between the deficit of Rx. 201,700 expected in the Revised Estimate and the surplus of Rx. 37,018 with which the accounts of the year have closed. It may be mentioned that the increase in the Provincial adjustment means that the surplus of Provincial and Local Revenue over Provincial and Local Expenditure was more by Rx. 82,018 than was anticipated when the Revised Estimate was prepared.

3. The increases of Revenue result chiefly from improved receipts aggregating Rx. 234,700 under State Railways, Irrigation, and Army, counterbalanced by a falling off in Land Revenue of Rx. 185,896 due to scanty harvests in some provinces and to suspensions. Of the saving of Rx. 94,384 in Imperial Expenditure, Rx. 50,528 occurred under Opium and Rx. 27,409 under Army. There was an excess of Rx. 45,440 under Guaranteed Railways, chiefly due to a change in the date of payment of surplus profits, which brought into the accounts of the year expenditure which, under the previous practice, would have fallen into the following year. The reduction in Provincial and Local Expenditure occurred principally under Land Revenue, Police, and Education, and the gain in the English Account was chiefly due to reduced expenditure under Army and Special Defence Works.

4. The difficulties which stand in the way of preparing in March an accurate Estimate of the Revenue and Expenditure of the year which is about to close have been explained more than once, but I do not think that attention has been specially called to the remarkable fact that the Actuals almost invariably show better results than the Revised Estimate.

In every year since, and including, 1882-83, the Accounts have shown an improvement over the Revised Estimates. For 1882-83 the improvement was Rx. 646,800; for 1883-84 it was Rx. 1,116,100; for 1884-85 it was Rx. 566,500; for 1885-86 it was Rx. 89,100; for 1886-87 it was Rx. 177,900; for 1887-88 it was Rx. 987,900; for 1888-89, as I have just explained, it was Rx. 238,700.

The explanation is simple. The latest figures of receipts and disbursements under the different heads can always be obtained from the Treasuries. Under certain heads the Treasury receipts and issues correspond closely with the Revenue and Expenditure, and if we know the Receipts and Issues to the end of February, or even of January, and the head be one under which transactions occur with regularity throughout the year, we have no difficulty in calculating with great precision the probable Revenue and Expenditure of the remaining portion of the year.

But in other cases transactions do not proceed with the same regularity throughout the year, and the receipts and issues of the Treasuries afford a very imperfect guide. Such heads are Land Revenue, Public Works of all kinds, and the expenditure under the head of Army. For Public Works and Army the receipts and issues at the Treasuries are only an imperfect guide to the Revenue and Expenditure.

In the case of the important heads I have just mentioned, as well as of others, we have to depend on the judgment of local officers, and, on the whole, the forecasts of these officers are marked by caution. No officer, apparently, will estimate for more revenue than he feels sure he will obtain, and every officer puts down the very maximum of expenditure which he may possibly incur. The inevitable result is that in nine cases out of ten the total Revenue of the year exceeds, and the total Expenditure of the year falls short of, the amounts that have been entered in the Revised Estimate.

5. There was also a saving in expenditure not charged against Revenue. The Capital Expenditure on Railways was Rx. 1,178,111 and on Productive Irrigation Works Rx. 459,890 against Rx. 1,364,800 and Rx. 493,000 provided in the Revised Estimate, the saving being Rx. 186,689 and Rx. 33,110 respectively. The former was chiefly due to reduced expenditure in England on stores for Railways. These reductions do not, of course, affect the surplus of the year 1888-89, which, as stated before, was Rx. 37,018, after including in the expenditure the sum of Rx. 789,595, spent on Special Defence Works.

Section II.—Revised Estimates of 1889-90 and Budget Estimates of 1890-91.

6. The Budget Estimate of Revenue for the current year was Rx. 82,935,300, and of Expenditure Rx. 83,469,800. Of the latter, Rx. 640,800 was chargeable to accumulated Provincial and Local balances, and not against the revenue of the year. The expenditure chargeable against revenue was therefore Rx. 82,829,000, and the resulting surplus was estimated at Rx. 106,300.

The surplus is now expected to be Rx. 1,809,700, and the following table shows how much of it is due to increase of Revenue and how much to decrease of Expenditure:—

	Budget Estimate.	Revised Estimate.	Revised Estimate + Better — Worse than Budget.
	Rx.	Rx.	Rx.
Revenue	82,935,300	84,636,300	+ 1,701,000*
Expenditure	83,469,800	82,474,100	+ 995,700
Provincial deficit	—640,800	+ 352,500	—993,300

7. The improvement of Rx. 1,701,000 in Revenue occurs mainly under *Land Revenue, Opium, Salt, Stamps, Excise, Provincial Rates, Customs, Assessed Taxes, Forest, Interest, Miscellaneous, State Railways, and Irrigation*, while there is a considerable falling off in receipts from *Exchange*, and a heavy one under *Guaranteed Railways*, owing to the great and sudden diminution of traffic on the Great Indian Peninsula Line. The contribution of Rx. 490,000 from Provincial to Imperial revenues, for which credit was taken in the Budget Estimate of 1889-90, has also been transferred, for reasons explained in Part I, to the Estimates of 1890-91. It will be understood that this transaction has no effect on the total revenue of the year; what is lost by the Imperial Government being gained by the Local Governments. The main increases and decreases in Revenue are as follows:—

Better than Estimate.		Worse than Estimate.	
	Rx.		Rx.
Land Revenue	425,600	Exchange	73,900
Opium	286,400	Guaranteed Railways	460,000
Salt	162,600		
Stamps	101,000		
Excise	110,100		
Provincial Rates	87,800		
Customs	68,900		
Assessed Taxes	51,800		
Forests	176,800		
Interest	133,500		
Miscellaneous	98,400		
State Railways	256,800		
Irrigation	96,000		

8. The decrease in expenditure is mainly due to the rise in the rate of *Exchange*, and to less expenditure under *Opium production and manufacture, Interest, Police, Education, Working Expenses of State Railways, Surplus profits of Guaranteed Railways, and Defence works*. The chief increases of expenditure occur under *Marine, Famine Relief and Insurance, Miscellaneous, Railway Expenditure, and Irrigation*. The meaning of the large excess under

Famine Relief and Insurance is that the improvement in the financial position has enabled the Government to take measures for gradually restoring the *Famine Insurance* Grant, which has been in abeyance since 1885-86.

The Budget Estimate of net expenditure in England was £14,956,100, and the Exchange on it, Rx. 6,954,500; the Revised Estimate of that expenditure is £14,751,200, and the Exchange on it, Rx. 6,638,000. In the Budget the rate of Exchange was taken at 1s. 4.38d. = R1; in the Revised it is taken at 1s. 4.552d. = R1 (R145 = £10).

The following table shows the principal variations from the Estimate of Expenditure:—

Better than Estimate.		Estimate.	
	Rx.		Rx.
Opium	708,800	Marine	92,600
Interest	96,300	Famine Relief and Insurance	507,000
Police	58,800	Miscellaneous	
Education	51,000	Railway Expenditure	72,700
State Railways—Working Expenses	78,400	Irrigation	94,600
Surplus profits of Guaranteed Companies	182,100		
Defence works	344,500		

Provincial deficit less (owing partly to postponement to 1890-91 of special contribution of Rx. 490,000 made by Local Governments) 993,300

9. The Budget Estimate of 1890-91 is framed for, Revenue Rx. 84,932,100 and Expenditure 85,419,400, of which Rx. 757,700 is chargeable against Provincial and Local balances. The expenditure chargeable to Revenue is therefore Rx. 84,661,700 and the estimated surplus is Rx. 270,400.

The following table compares the Revenue and Expenditure as estimated at an interval of a year:—

	Budget Estimate, 1889-90.	Budget Estimate, 1890-91.	Budget, 1890-91 + better — worse than Budget, 1889-90.
	Rx.	Rx.	Rx.
Revenue	82,935,300	84,932,100	+ 1,996,800
Expenditure	83,469,800	85,419,400	—1,949,600
Provincial deficit	—640,800	—757,700	+ 116,900
Surplus	+ 106,300	+ 270,400	+ 164,100

10. As explained last year, the extension of railways and the changes in their status involve considerable additions annually to both Revenue and Expenditure. In 1889-90 the gross transactions of the Oudh and Rohilkhand Railway came on both sides of the Estimates, whereas, while it was a Guaranteed line, only the net earnings were shown as Revenue and the interest charged as Expenditure. In 1890-91 a re-arrangement of the same nature is necessary, as from the 31st December 1890 it is expected that the South Indian Railway will become a State line. In 1890-91 Railway Revenue is estimated higher by Rx. 464,900 than it was a year ago and Railway Expenditure Rx. 304,800 higher. The transfer of the Provincial contribution mentioned above adds Rx. 490,000 to the Imperial Revenue of the year, though, as explained above, it does not mean that the total revenues are increased by that amount. The further improve-

ment in Revenue occurs mainly under *Land Revenue, Salt, Stamps, Excise, Provincial Rates, Customs, Forests, Interest, and Irrigation*, while lower receipts than those estimated a year ago are expected under *Opium, Exchange, and Guaranteed Railways*. The following statement indicates generally in what respect the position has changed in the course of twelve months:—

Better than Budget Estimate of 1889-90.		Worse than Budget Estimate of 1889-90.	
	Rx.		Rx.
Land Revenue	482,700	Opium	56,700
Salt	203,600	Exchange	83,800
Stamps	75,400	Guaranteed Railways	218,000
Excise	117,200		
Provincial Rates	91,400		
Customs	142,700		
Forest	144,800		
Interest	55,700		
State Railways	673,800		
Irrigation	145,700		

11. The very large increase in the Estimates of Expenditure is mainly the result of the following variations:—

Less than Budget Estimate of 1889-90.		More than Budget Estimate of 1889-90.	
	Rx.		Rx.
Opium	59,500	Land Revenue collection	84,300
Interest	62,300	Minor Departments (chiefly Census)	79,400
Guaranteed Railways, surplus profits	81,000	Salaries and Expenses of Civil Departments other than Minor Departments	226,200
Defence works	210,600	Stationery and Printing	82,100
		Famine Relief and Insurance	499,500
		Railways (excluding surplus profits)	385,800
		Irrigation	124,700
		Civil Works	234,900
		Army	530,400

The rate of Exchange has been taken at Rs. 4'552d., as in the Revised Estimate.

The Estimates of both years are examined in detail in the remaining paragraphs of this section.

LAND REVENUE.

12. The Estimates are—

	Budget Estimate, 1889-90.	Revised Estimate, 1889-90.	Budget Estimate, 1890-91.	Increase of Revised Estimate over Budget Estimate of 1889-90.	Increase of Budget Estimate, 1890-91, over Revised Estimate, 1889-90.
	Rx.	Rx.	Rx.	Rx.	Rx.
Revenue (including Land Revenue due to Irrigation)	24,021,100	24,486,700	24,562,500	465,600	75,800
Expenditure	3,629,100	3,632,900	3,713,400	3,800	80,500
NET	20,392,000	20,853,800	20,849,100	461,800	-4,700

With the exception of the districts directly administered by the Government of India, in which a small decrease is anticipated, and Assam, where the original Estimate has undergone no alteration, all Provinces participate in the

improvement of Rx. 465,600 in Revenue expected in the Revised Estimate of 1889-90. Of this improvement, Rx. 142,600, or nearly 31 per cent., has been contributed by Burma, in the proportion of Rx. 70,900 by Lower and Rx. 71,700 by Upper Burma. With the restoration of order, cultivation has greatly extended, and assessments and collections are being made with more regularity. It may also be mentioned that Rx. 20,000 of the increase in Upper Burma represents the first instalment of rent paid by the Ruby Mines Company for its lease. After Burma, the greatest increase is expected from the temporarily-settled zemindari provinces, namely, the Central Provinces, the North-Western Provinces and Oudh, and the Punjab, which, between them, account for an improvement of Rx. 125,900, or 27 per cent. of the whole. In these Provinces the settlements are falling in, and fresh settlement operations, the effect of which is reflected in the gradual increase in the revenue demand, are in active progress. Of the remaining increases, Bombay furnishes Rx. 76,100, due to large sales of waste lands, the introduction of revised settlements, and a favourable season; Madras finds Rx. 69,500, and Bengal Rx. 55,000, most of which represents the recovery of arrears.

13. The Estimate of Revenue for next year provides for a further increase of Rx. 75,800, towards which Upper Burma contributes Rx. 54,000 and Lower Burma Rx. 50,000. In Bengal there is a decrease of Rx. 37,100, and in Bombay of Rx. 37,200, the explanation of which is that there have been special and non-recurring receipts in the current year, as explained above.

It should be mentioned that it is possible that the failure of the winter rains in Upper India and the scanty north-east monsoon in Madras may to some extent interfere with the realisation of these estimates.

14. The increase of the Revenue demand in one year from Rx. 24,021,100 to Rx. 24,562,500 or by Rx. 541,400 is remarkable, as hitherto the growth of this branch of revenue has been slow and has scarcely responded to the large outlay incurred by Government on canals and railways. The relation of the settlements now in progress in the three temporarily-settled Provinces of Northern India to the improvement in the revenue will be seen from the following statement, which contrasts the revenue demand of 1890-91 as measured by the Budget Estimate of that year, with the revenue demand of four years ago ascertained from the average receipts of the three years 1884-85 to 1886-87:—

	Demand of 1886.	Demand of 1890-91.	Increase in 1890-91.
	Rx.	Rx.	Rx.
Central Provinces	612,700	665,300	+ 52,600
Punjab	2,148,500	2,286,900	+ 138,400
North-Western Provinces and Oudh	5,812,200	5,935,000	+ 122,800

The figure Rx. 122,800 does not represent the full measure of increase in the North-Western Provinces and Oudh, for in two of the years (1884-85 and 1886-87) from which the demand of 1886 is calculated, the receipts were unusually high. The figures, however, sufficiently illustrate the effect, now beginning to be felt, of the revision of the settlements.

15. The total of the Revised Estimate of Expenditure agrees very closely with that of the original Estimate, the difference between them being only Rx. 3,800; but the following important variations are noticeable in the details. An increase of Rx. 12,900 is provided for in Upper Burma to meet additional expenditure on surveys of (what used to be) Royal lands, and of Rx. 36,300 in Madras owing to the introduction of a revised scale of allowances to

Subordinate Revenue Officers; while a decrease of Rx. 17,800 is expected in Bombay. For 1890-91 the estimate is framed for an increase of Rx. 80,500, which is distributed among all Provinces except the North-Western Provinces and Oudh, where the expenditure is expected to be less by Rx. 6,300. The principal increases occur in the Central Provinces, Upper and Lower Burma, Bengal, and Punjab, and, except in Bengal where the excess arises from revision of establishments, are due generally to the extension of survey and settlement operations.

OPIUM.

16. The following are the figures:—

	Budget Estimate, 1889-90.	Revised Estimate, 1889-90.	Budget Estimate, 1890-91.
	Rx.	Rx.	Rx.
Revenue	8,260,000	8,546,400	8,203,300
Expenditure	2,364,300	1,655,500	2,304,800
Net	5,895,700	6,890,900	5,898,500

The net receipt in the current year is expected to exceed the Estimate made a year ago by no less than Rx. 995,200. Of this sum, Rx. 286,400 represents improvement in Revenue, and Rx. 708,800 saving in Expenditure. The increase in Revenue is entirely due to the high average price obtained at the Calcutta sales. The estimated average was Rs. 1,070 a chest, whereas, till the sale held in February, the price was always much higher. The highest figure was reached in September when the price realised was Rs. 1,215 a chest and the lowest in the present month when it was Rs. 1,040. The average price of the year was Rs. 1,136.

These violent fluctuations indicate how difficult it is to make any satisfactory estimate, and it may be noted that, so long as the number of chests sold is maintained at the present figure, a difference of Rs. 100 a chest in the price of Bengal opium represents a difference of Rx. 570,000 in revenue.

The revenue from the pass duty on Malwa opium was estimated at Rx. 1,953,000 on 30,000 chests. The general course of the weighments has coincided with our expectations, but owing to a slackness recently observed the estimate of revenue has been reduced to Rx. 1,850,000.

The expenditure charged under *Opium* is—except to a very inconsiderable extent—incurred in Bengal. The estimate is based on the forecasts of produce of the standing crop rendered by the Opium Agents in January and February, and it amounted to Rx. 2,358,800 for an expected production of 58,800 chests. Almost immediately after the publication of the Financial Statement, it was reported that, in consequence of unfavourable weather, the produce would be far short of the Estimate. The actual production has been 38,305 chests, and the saving in expenditure will be Rx. 708,800.

In view of the low prices that prevail at present and the prospect of better crops in Malwa and China, it has been decided to adopt the Rs. 1,060 as the estimate of the average price for Bengal opium next year.

Owing to the favourable crop expected in the current season in Central India, the estimate for receipts from pass duty on Malwa Opium has been placed higher than the sum taken for the Revised Estimate, namely, at Rx. 1,950,000 as against Rx. 1,850,000.

Turning to the Expenditure, the Opium Agents give, as their latest estimate of production, opium sufficient to make about 55,000 chests. The estimated expenditure has been taken at Rx. 2,300,000.

Before last year's manufacture the reserve on 31st December 1890 was estimated at the inconveniently large figure of 51,505 chests. The short crop of last year has largely reduced the reserve. Assuming the forecast of the current year's crop to be fulfilled, the reserve will stand as follows:—

	Chests.
On 31st December 1890	31,010
" " 1891	29,010

SALT.

17. The Estimates are—

	Budget, 1889-90.	Revised.	Budget, 1890-91.
	Rx.	Rx.	Rx.
Revenue	8,029,900	8,192,500	8,233,500
Expenditure	462,000	420,900	453,000

The consumption of salt up to the latest date (28th February), for which returns have been received, is compared below (in thousands of maunds) with the consumption in the same period of the previous three years:—

	1886-87.	1887-88.	1888-89.	1889-90.
Bengal and Orissa	8,963	8,824	8,596	8,241
Madras	6,073	6,051	6,074	6,217
Bombay	6,635	6,789	6,124	6,800
Sind	205	211	211	221
Northern India	6,227	6,204	6,117	6,631
Total	28,103	28,079	27,122	28,110
Burma	1,249	1,841	253	1,060

18. The figures in the following statement give the consumption (in thousands of maunds) (excluding Burma), for the four years previous to the present one, for the periods 1st April to 28th February, and 1st to 31st March, and also for the whole year, of salt on which duty at the full rate, Rs. 2-8 a maund, was paid.

	INDIA (BURMA EXCLUDED).		
	From 1st April to 28th Feb- ruary.	From 1st to 31st March.	Whole year.
1885-86	27,100	2,689	29,789
1886-87	28,103	2,973	31,076
1887-88	28,079	2,360	30,439
1888-89	27,122	2,703	29,825
1889-90	28,110	2,900 Estimate	31,010

The yearly totals differ materially from those shown in paragraph 78 of the Financial Statement of 1889-90, which dealt with consumption only and did not therefore distinguish between salt paying varying rates of duty. The salt produced at the Kohat mines across the Indus is taxed at 8 annas only on each 102 lbs., which is equal to 6½ annas a maund of 82½ lbs.; and the incidence of the British share of the duty on the salt produced in the Mandi State and imported

under treaty into British Territory, is 5 annas a maund. The aggregate consumption of both these descriptions was about 775,000 maunds in 1888-89. Clearly, for the purpose of testing the estimate of revenue by the progress of consumption, this lightly-taxed salt must be separated from the salt which bears the full duty. The estimate for 1889-90 as shown above should be increased by 800,000 maunds, as representing the consumption of the Kohat and Mandi salt, for the purpose of ascertaining the consumption of the whole of India.

In Burma an import of about 1,150,000 maunds is indicated by the latest figures. The estimate of consumption in Burma of locally produced salt is placed, by the most competent authorities, at about 560,000 maunds.

19. It was explained in the Financial Statements for 1888-89 and 1889-90 that the increase in the duty in January 1888 was followed by a general falling off in the revenue. But it is not clear that there was a decrease in salt actually consumed proportional to the reduction in the quantity of salt cleared for consumption. It is certain that to some extent the dealers in salt deferred making new purchases, on which the higher rate of duty had to be paid, until they had exhausted the stocks on which the lower duty had been paid, and had secured the profit to be obtained by selling them at a price which was increased in full proportion to the increase in the duty.

20. The following figures for Burma, where the duty was raised from 3 annas to R 1 a maund from the 19th January 1888, are, for imported salt only :—

	To 28th February.	From 1st to 31st March.	Total.
1884-85	1,594	93	1,687
1885-86	954	169	1,123
1886-87	1,249	325	1,574
1887-88	1,841	90	1,931
1888-89	253	61	314
1889-90	1,060	90 Estimate	1,150

The decline following on the rise in the duty is remarkable, but the explanation is simple.

Very large importations had been made towards the end of the previous year, some knowledge or suspicion of the intention of Government to raise the duty having probably been circulated, and the stocks were therefore abnormally large. Local manufacture also received a stimulus from the increase of the import duty; for the duty on locally manufactured salt is light and is levied by means of a half yearly fee, and until July last year, when this fee was doubled, the local manufacturer had a substantial advantage over the importer of salt. These two circumstances combined to reduce the apparent consumption of imported salt in Burma to a very low level. A revival in the demand for imported salt, which was doubtless due to the approaching exhaustion of the imported stocks, set in about the commencement of the current financial year. The competition of locally-produced salt was also regulated by the doubling of the fee. The question of the measures to be taken for equalising the incidence of the duty on locally-made and imported salt is one of importance. The question is surrounded by difficulties, as the manufacture of salt in Burma is carried on at places and under conditions which practically render any effective check on production impossible. A specially qualified officer of the Northern India Salt Department was deputed last year to investigate the matter on the spot, and his report is now under consideration.

21. In Northern India also there was a pause in consumption in the year following the increase of duty, but the reduction was so slight that it was pro-

bably caused by the action of holders of stocks. In the present year there has been a substantial increase, the consumption of both Sambhar salt and the rock salt of the Punjab Mines having been large.

In Madras in 1888-89 prices rose to a high level, the rise being ascribed, at least in part, to a combination of manufacturers. Partial resumption of manufacture by the State was begun and prices have since fallen, while consumption shows a satisfactory increase.

22. The only province in which consumption has not fully recovered is Bengal, and there the imposition of the increased duty has not been the only cause of the falling off, which is largely attributable to the increase in price resulting from the action of the English Salt Syndicate and the higher level of freights. The average maximum prices in Calcutta of Liverpool salt (exclusive of duty) have been as follows per 100 maunds since January 1888 :—

	1888.	1889.	1890.
January	88'2	97'8	102
February	149'	96'25	97
March	154'25	94'25	
April	138'75	94'	
May	137'4	90'	
June	133'5	92'2	
July	94'63	94'25	
August	94'	94'4	
September	74'25	99'75	
October	83'	111'83	
November	91'25	105'75	
December	96'75	105'6	

Before January 1888 the average highest price varied between 61 and 72 rupees; prices rose after the increase of the duty to a high point, falling again to almost their normal level, but the formation of the Salt Syndicate raised them towards the end of the year, and they have remained high ever since. The increase in price (exclusive of duty) may be taken to be from four to five annas a maund.

The falling off in the imports into Bengal does not, however, imply an equivalent falling off in consumption. Both Sambhar salt and rock salt from the Punjab Mines have found a market in a wider zone in Bengal, since the increased price of Liverpool salt has enabled them to compete with it lower down the railway line. The competition would have been more active and effective but for the action of the East Indian and Oudh and Rohilkhand Railway lines in raising the rate of freight. The question of these higher rates of freight is under consideration.

23. The Revised Estimate provides for a consumption in India (excluding Burma) of—

	Maunds.
Fully taxed salt	31,010,000
Lightly taxed salt (about)	800,000
TOTAL	31,810,000

This is the figure with which those of paragraph 78 of last year's Financial Statement are comparable. The figures are continued up to 1890-91 below—

	Consumption of Salt in Maunds.
1882-83	28,720,000
1883-84	29,338,000
1884-85	31,348,000
1885-86	30,606,000
1886-87	32,200,000
1887-88	31,186,000
1888-89	30,600,000
1889-90 Estimate	31,810,000
1890-91 „	31,930,000

The Revised Estimate also takes into account a consumption in Burma of—

	Maunds.
Imported Salt	1,150,000
Locally-made Salt	560,000
TOTAL	1,710,000

The Budget Estimate of Revenue is Rx. 8,233,500 or Rx. 41,000 in excess of the Revised, and provides for an increased consumption of about 200,000 maunds in India and Burma.

The estimates of expenditure for both years are on a higher scale than previously, principally in Burma, Bengal, and Madras. In Burma, the imposition of fees at higher rates on locally-made salt involves a proportionate increase in the commission payable on collections. In Bengal, provision has been made for payments on account of new scales of an improved type. In Madras, the opening of new salt works on account of Government will involve increased expenditure.

STAMPS.

24. The Estimates are—

	Budget Estimate, 1889-90.	Revised Estimate, 1889-90.	Budget Estimate, 1890-91.
	Rx.	Rx.	Rx.
Revenue	3,959,500	4,060,500	4,034,900
Expenditure	134,300	134,700	143,100
Net	3,825,200	3,925,800	3,891,800

The Revenue promises to be better than the Estimate by Rx. 101,000, the improvement being contributed by Burma (Upper and Lower), Assam, the North-Western Provinces and Oudh, Madras, and Bombay. The increases in the North-Western Provinces and Oudh and Madras are considerable, namely, Rx. 25,000 and Rx. 35,000, and the slight falling away in the estimated revenue of 1890-91 is due to the fact that it is not thought desirable to reckon on these increases being maintained.

The variations in the Expenditure are unimportant and are mainly due to the charges in England. A larger quantity of Stamps is to be supplied in 1890-91, and this accounts for the increased charge.

The question has been a good deal discussed in recent years whether the revenue derived from the sale of Court-fee Stamps did or did not greatly exceed the cost of the Administration of Civil Justice. An enquiry was undertaken in 1886 with the view of ascertaining and putting beyond question what the true facts are. The result of this enquiry was published in a Resolution in the *Gazette of India* of the 11th January last, in which it was shown that including all India there was a yearly loss of Rx. 125,100, and that instead of surpluses there were deficits in every Province except (1) Bengal, and (2) Madras, where the receipts and charges were practically equal.

EXCISE.

25. The Estimates are—

	Budget Estimate, 1889-90.	Revised Estimate, 1889-90.	Budget Estimate, 1890-91.
	Rx.	Rx.	Rx.
Revenue	4,727,300	4,837,400	4,844,500
Expenditure	154,200	154,200	172,600
NET	4,573,100	4,683,200	4,671,900

In the current year the improvement in Revenue is Rx. 110,100, and the Revenue is better than the Estimate in all Provinces except Bengal, where the decrease is Rx. 30,000 and in Upper Burma where it is Rx. 13,400. The large increases occur in Madras, Rx. 60,000, and Lower Burma, Rx. 31,400.

The Excise question has been discussed at great length in the collection of papers published in the *Gazette of India* of 1st March, and nothing more need be said on the subject in this place. It was to be expected that the changes in system which are being made in Bengal would be attended at first with some loss of revenue, though the falling off is also largely due to bad seasons. The falling off in Upper Burma is due to the fact that the estimate first made was a mere conjecture. The Revenue Officers had no facts to guide them and they framed their estimates too high.

The rapid advance in the Madras Revenue is worthy of notice. It is due to better management, to an efficient preventive service, to the gradual and systematic enhancement of the rate of taxation which has now in some districts reached the tariff rate, and to the extension of the Bombay system of taxing the trees from which toddy for consumption or manufacture into spirit is drawn. In Lower Burma the increase is due to raising the duty on spirits locally manufactured.

The estimate of Revenue for 1890-91 varies only slightly from the Revised Estimate. A decrease is expected in Bombay owing to a partial modification of the method hitherto followed in fixing the "minimum guarantee," and a further increase is expected in Madras and Lower Burma.

The Expenditure is increasing mainly in Bengal and Madras. In Bengal the re-establishment of Central Distilleries under proper supervision, with a considerable strengthening of the Excise establishments, accounts for the growth of expenditure. In Madras, as the tree-tax system extends, the preventive establishment necessarily expands also.

PROVINCIAL RATES.

26. The Estimates are—

	Budget Estimate, 1889-90.	Revised Estimate, 1889-90.	Budget Estimate, 1890-91.	Revised Estimate, Better + than Budget Estimate of 1889-90.	Budget Estimate, 1890-91, Better + than Revised Estimate of 1889-90.
	Rx.	Rx.	Rx.	Rx.	Rx.
Revenue	3,258,000	3,345,800	3,349,400	+ 87,800	+ 3,600
Expenditure	60,500	54,900	43,500	+ 5,600	+ 11,400
NET	3,197,500	3,290,900	3,305,900	+ 93,400	+ 15,000

The rates and cesses credited under this head are assessed at varying percentages on Land Revenue; and as a large increase in Land Revenue is estimated for in both years, the Estimates of the rates necessarily respond. This is the general explanation of the increase, but the following special items deserve notice. In Madras an increase of Rx. 52,400 is expected, the bulk of which is due to the fact that the original Estimate, which was prepared on a consideration of the actual receipts of past years, was too low. In the North-Western Provinces and Oudh, the Patwari cess promises to produce Rx. 6,300 more than the Estimate.

The variations in the Estimates of Expenditure are comparatively trifling, and the only point which requires notice is that in the Punjab the discontinuance, with effect from 1st October 1889, of the payment of fees to Patwaris for the collection of the rates and cesses causes a reduction of Rx. 7,500 in the Revised Estimate, and of a further sum of Rx. 9,300 in the Budget Estimate for 1890-91. It must also be borne in mind that the Expenditure recorded under this head represents only the cost of collection of the cesses.

CUSTOMS.

27. The Estimates are—

	Budget, 1889-90.	Revised.	Budget, 1890-91.
	Rx.	Rx.	Rx.
Revenue	1,418,400	1,487,300	1,561,100
Expenditure	138,300	134,500	138,600
Refunds	49,400	48,700	44,000

The Revised Estimate provides for an improvement of Rx. 68,900 over the Budget, most of which is contributed by Burma. In Bengal the estimate will not be realised.

28. For the ten months ending 31st January the receipts from import duty and their distribution among the dutiable articles have been :—

	1886-87.	1887-88.	1888-89.	1889-90.
	Rx.	Rx.	Rx.	Rx.
Arms, &c.	18,500	18,200	20,200	19,500
Malt Liquor	8,600	10,400	12,700	13,900
Spirit	350,900	375,800	405,500	403,100
Wines, &c.	38,500	42,500	41,100	40,200
Petroleum	...	...	97,100	131,200
	<u>416,500</u>	<u>446,900</u>	<u>576,600</u>	<u>607,900</u>

In the export revenue there has been a considerable increase in the ten months of the present year. The figures are :—

	Rx.
1886-87	411,000
1887-88	453,000
1888-89	363,000
1889-90	458,000

This increase is due to the unusually large export of rice from Burma, the export of rice from Bengal having declined materially in consequence of high prices following on unsatisfactory crops.

29. In the estimate for 1890-91 the continuance of the favourable conditions of the current year is not fully reckoned on, though a recovery is looked for in Bengal. The increase estimated for is wholly due to the additional revenue which will be yielded by the enhanced tax on imported spirits. At Rs a gallon the average net receipts from the duty on spirits are about Rx. 480,000. We therefore estimate the additional revenue, due to the increase of the duty by Rx. 1, at about Rx. 92,500. The reasons which have influenced the Government in deciding to raise the duty have been explained in introducing the Bill to amend the Tariff Act, and in this place it will suffice to give a very brief recapitulation of them.

The reasons are :—

- (1) On general grounds, it is desirable to increase, within reasonable limits, the cost to the consumer of intoxicating liquors, by increasing the duty on them.
- (2) It is an accepted principle of Excise administration in India to endeavour to gradually raise the duty on spirits made in India to the tariff rate, which practically sets a limit to the increase. It has been found possible in some places to increase the duty to the tariff rate, so that the occasion for a further increase of that rate has arrived.
- (3) It is hoped that the increase may check the increasing import of cheap deleterious foreign spirit.
- (4) The increased duty will make a substantial addition to the public revenue.

The estimates of expenditure and refunds are fairly constant and call for no remarks.

ASSESSED TAXES.

30. The Estimates are—

	Budget, 1889-90.	Revised, 1889-90.	Budget, 1890-91.
	Rx.	Rx.	Rx.
Revenue	1,515,300	1,567,100	1,558,700
Expenditure	28,800	28,000	31,200

The Revised Estimate provides for an increase in Revenue of Rx. 51,800, to which all Provinces contribute except the districts directly administered by the Government of India. The chief increases are, Rx. 11,300 in the Punjab, due to revision of assessments, and Rx. 10,000 in Madras, to realisation of arrears.

The variations of the receipts from year to year are necessarily small, and the Budget for 1890-91 virtually repeats the Revised Estimate for 1889-90.

The variations in the estimate of expenditure are trifling, the increase occurring in Bengal and representing provision for a separate assessing establishment.

The net collections amounted to Rx. 1,477,514 in 1888-89, or more by Rx. 94,706 than the collections of the previous year. The following table shows how this increase is distributed:—

	Income-tax collections, 1886-87.	Income-tax collections, 1887-88.	Income-tax collections, 1888-89.	Percentage of total collections, 1888-89.	Increase (+) or Decrease (—) in 1888-89, compared with 1887-88.
	Rx.	Rx.	Rx.		Rx.
India	122,406	133,874	139,787	9'4	+ 5,913
Central Provinces	39,836	40,348	42,464	2'9	+ 2,116
Burma	16	29	50,036	3'4	+ 50,007
Assam	19,905	22,661	22,232	1'5	—429
Bengal	333,626	364,122	381,648	25'8	+ 17,526
North-Western Provinces and Oudh.	213,639	213,963	218,150	14'8	+ 4,187
Punjab	105,652	106,639	113,271	7'7	+ 6,632
Madras	138,674	162,658	164,877	11'1	+ 2,219
Bombay	303,756	338,514	345,049	23'4	+ 6,535
TOTAL	1,277,510	1,382,808	1,477,514	100	+ 94,706

More than half of the total increase occurred in Burma, to portions of which the tax was extended from 1st April 1888. Leaving that Province out of account, the collections in India shew an increase of Rx. 44,699, or 3'23 per cent., of which rather more than a third occurred in Calcutta.

FORESTS.

31. The following statement shows the present state of the Forest Revenue:—

	Budget, 1889-90.	Revised, 1889-90.	Budget, 1890-91.
	Rx.	Rx.	Rx.
Revenue	1,269,600	1,446,400	1,414,400
Expenditure	801,300	815,700	847,900
Surplus	+468,300	+630,700	+566,500

The increase of gross revenue indicated in the Revised Estimate is Rx. 176,800, of which the greater part is due to an exceptionally favourable season for floating down timber and to rising prices in Upper and Lower Burma, the improvement having produced Rx. 45,100 in Upper and Rx. 91,500 in Lower Burma. Bombay shows an advance of Rx. 17,100, due to increased operations, and the North-Western Provinces, the Punjab, and Bengal between them contribute an additional revenue of about Rx. 19,300, due to sale of railway sleepers in the first Province, supply of fuel for railways in the second, and improved sales of timber in the third.

The increased expenditure involved by these more active operations is expected to be only Rx. 14,400. The surplus for the current year is expected

to be Rx. 73,700 better than that of 1888-89, which was about Rx. 157,000 higher than that of any previous year.

The Budget Estimate of Revenue is Rx. 32,000 less than the sum expected in the current year. There is a general increase in all Provinces except Burma, where the falling off means that the continuance of the exceptionally favourable conditions of the current year cannot be reckoned on. The proportion of expenditure to income has fallen from 59 per cent. in 1888-89 to 56 per cent. in the current year.

INTEREST ON DEBT.

32. The Estimates are:—

	Budget Estimate, 1889-90.	Revised Estimate, 1889-90.	Budget Estimate, 1890-91.
	Rx.	Rx.	Rx.
Receipts	734,200	867,700	789,900
Expenditure	4,358,600	4,262,300	4,296,300
Net	3,624,400	3,394,600	3,506,400

The explanation of the expected increase in the receipts in the current year is that the Secretary of State has had control of a high cash balance and has been able to invest a large portion of it temporarily at a high rate of interest. The explanation of the reduction in the expenditure is (1) that the Budget provided for a loan in India of 2½ crores at a discount, whereas a loan of only 2 crores was raised at about par; (2) that no temporary loans were required in England; (3) that a loan of only £3,500,000 was raised in sterling in place of one of £3,750,000 anticipated at the time the Budget was framed; (4) because the charges transferred from this head to the Railway Revenue Account for interest on advances to Companies were larger than anticipated, on account of advances being made at earlier dates, and (5) because the rate of Exchange on the sterling payments is better than the Estimate.

33. The following figures show in thousands of £ the amount of the sterling debt of the Government of India at the end of each year from 1881-82, the amount of interest paid during the year, and the distribution of the total amounts between ordinary debt and that held on account of Railways:—

	1881-82.	1882-83.	1883-84.	1884-85.	1885-86.	1886-87.	1887-88.	1888-89.	1889-90, Revised.	1890-91, Budget.
Sterling Debt—										
Ordinary Account	58,620	59,094	56,910	56,758	60,207	65,714	65,626	66,184	65,881	65,881
Railway Account	9,522	9,492	11,199	12,513	13,600	18,514	18,514	28,850	32,350	38,745
TOTAL	68,142	68,586	68,109	69,271	73,807	84,228	84,140	95,034	98,231	104,626
Interest—										
Ordinary Account	2,512	2,481	2,442	2,610	2,429	2,597	3,365	2,662	2,402	2,482
Railway Account	353	348	312	353	366	566	552	632	914	988
TOTAL	2,865	2,829	2,754	2,963	2,795	3,163	3,917	3,294	3,316	3,470
Interest Receipts—										
Ordinary Account	56	24	30	35	9	41	66	135	134	62

It will be seen from these figures that in nine years the debt on ordinary account has increased by £7,261,000, while the Railway debt has increased by £29,223,000. The addition to the ordinary debt really represents the cost of Railway Construction, the Public Works loans in 1885-86 and 1886-87 having been raised in England, but as the transfer from ordinary to Railway account is always

made in the Indian portion (that is, the rupee portion) of the Accounts whether the debt is created in England or India, the amounts raised in England have been added to the ordinary sterling debt, while a corresponding reduction has been made in the ordinary rupee debt. The conversion of £53,261,820 four per cent. into three and a half per cent. stock resulted in a net saving of £266,310 a year.

Of the total increase in the Railway portion of the sterling debt a sum of £3,500,000 has been raised in the current year under the Oudh and Rohilkhand Railway Purchase Act for making advances to Railway Companies, and it is proposed to raise a similar loan of £1,700,000 next year. The practice is obviously economical, as the Secretary of State can borrow at less than 3 per cent. while the Companies have to pay higher rates for their debentures. The rest of the increase in the nine years represents the purchase money paid for the Oudh and Rohilkhand and South Indian Railways and the redemption of liabilities incurred by the acquisition of the Sind, Punjab and Delhi, the Eastern Bengal, and the East Indian Railways. It will thus be seen that the greater portion of the increase to the debt is only nominal, having been incurred to extinguish existing liabilities which were shown in the Railway Revenue Account under other heads than Interest on Debt. The charges on account of interest have correspondingly increased, but there has been a much larger reduction under other heads, notably under Interest payable to Guaranteed Companies.

34. The following are the details of the debt in India :—

	Thousands of Rx.								
	1882-83.	1883-84.	1884-85.	1885-86.	1886-87.	1887-88.	1888-89.	1889-90, Revised.	1890-91, Budget.
Permanent Debt—									
Ordinary Account .	35,770	35,993	21,633	14,459	8,234	10,693	11,457	9,869	6,083
Railway Account .	54,919	57,198	71,551	78,245	84,420	87,397	89,422	92,890	96,640
Special Loans .	1,953	1,809	1,799	1,782	1,782	1,781	1,781	1,780	1,780
Service Funds, &c.	951	1,000	1,056	1,082	1,137	1,179	1,227	1,275	1,326
Savings Banks .	3,744	4,017	4,722	5,116	5,836	6,721	7,664	7,631	7,890
TOTAL	97,337	100,017	100,761	100,684	101,409	107,771	111,551	113,445	113,719

A large portion of the public debt has been incurred for the purpose of advancing funds on easy terms to Municipalities and other Public Bodies, and to Native States. Rx. 6,250,000 of it also represents the investment of the currency reserve. The following figures show the net charge in India on account of interest on ordinary account, as well as the interest on the Capital expenditure on Railways and Irrigation Works :—

	Thousands of Rx.								
	1882-83.	1883-84.	1884-85.	1885-86.	1886-87.	1887-88.	1888-89.	1889-90, Budget.	1890-91, Revised.
Charged to Interest on Debt .	1,719	1,517	1,371	1,137	737	662	811	803	779
Recovered .	670	820	668	687	614	653	643	690	673
Net Charge	1,049	697	703	450	123	9	168	113	106
Interest on Railways .	1,621	1,785	1,959	2,182	2,423	2,558	2,692	2,779	2,770
" Irrigation Works .	816	895	932	965	993	1,018	1,041	1,065	1,061
Total	2,437	2,680	2,891	3,147	3,416	3,576	3,733	3,844	3,831

The net charge on ordinary account in 1887-88 was unusually low, partly because about Rx. 90,000 of the charges remained unpaid at the end of the year and were paid in the following years, and partly because about Rx. 40,000 were received during the year on account of arrears of interest on the Kidderpore Dock loan. The singular and interesting fact which this statement reveals, is that there is now an actual net receipt on account of the ordinary rupee debt. In other words the interest on the investments held on account of Government, and on the advances made to Public Bodies and others by Government, exceeds the interest payable on that portion of the rupee debt which is not actually represented by Railways and Irrigation Works.

POST OFFICE, TELEGRAPH, AND MINT.

35. The net result of the working of these three *quasi*-Commercial Departments will be apparent from the following figures :—

	1888-89.	1889-90.		1890-91, Budget.
		Budget.	Revised.	
Post Office—	Rx.	Rx.	Rx.	Rx.
Revenue	1,281,540	1,348,000	1,304,300	1,386,200
Expenditure	1,342,452	1,402,800	1,366,100	1,419,900
NET	—60,912	—54,800	—61,800	—33,700
Telegraph Capital Account—				
Receipts	1,191	...	...	...
Expenditure	158,858	180,100	157,000	222,300
NET	—157,667	—180,100	—157,000	—222,300
Telegraph Revenue Account—				
Revenue	740,957	752,100	768,300	793,200
Expenditure	545,234	582,300	562,900	578,200
NET	195,723	169,800	205,400	215,000
Mint—				
Revenue	221,138	228,600	267,100	244,000
Expenditure	99,967	103,100	119,100	108,200
NET	121,171	125,500	148,000	135,800

These figures do not profess to give a complete account of the profit and loss of the Departments, but merely show the difference between the revenue and expenditure as recorded in the accounts and estimates. As regards the Post Office, the somewhat unfavourable result of the current year is mainly due to a change in the system of accounting. Hitherto it has been the practice to credit as revenue, (1) the cost of Postage Stamps sold by Treasuries to Postmasters, whether disposed of to the public within the year or not, and (2) all postage due on articles remaining undelivered at the end of the year, by debit to advances. In future only the sum received for stamps actually sold to the public and postage actually realized will be credited as revenue of the year. The effect of this change has been to reduce the revenue of the current year by about Rx. 41,000.

The Revenue Account of the Telegraph Department indicates a gradual expansion of traffic and a slowly increasing surplus. The increase in the capital expenditure is due to the contemplated construction of new lines, most of which are necessitated by the extension of Railway communications.

The imports and coinage of silver during the three closing months of the current year will be very heavy. This large coinage, and the higher gain on the copper coinage resulting from the reduced price of copper, account for the improvement shown under Mint.

CIVIL DEPARTMENTS.

36. The Estimates of the several heads which fall into this group are compared below:—

	Budget Estimate, 1889-90.	Revised Estimate, 1889-90.	Budget Estimate, 1890-91.	Revised Estimate, 1889-90, Better + Worse — than Budget Estimate of 1889-90.	Budget Estimate, 1890-91, Better + Worse — than Revised Estimate of 1889-90.
	Rx.	Rx.	Rx.	Rx.	Rx.
Receipts	1,464,200	1,518,700	1,521,500	+54,500	+2,800
Salaries and expenses	13,291,200	13,282,500	13,596,800	+8,700	—314,300
Net Expenditure	11,827,000	11,763,800	12,075,300	+63,200	—311,500

The improvement in Revenue does not call for special notice, as, with few exceptions, it results from a number of minor variations.

The Revised Estimate of Expenditure approximates closely in the aggregate to the original Estimate for 1889-90, but the following variations call for a few words of explanation:—

	Expenditure less.	Expenditure more.
	Rx.	Rx.
18. General Administration	25,800	...
20. Police	58,800	...
21. Marine	...	92,600
22. Education	51,000	...
25. Political	...	37,000
TOTAL	+135,600	—129,600

Of the improvement under *Administration*, Rx. 16,600 is the result chiefly of economies effected in the offices of the Government of India, and Rx. 13,400 occurs in England and Exchange. The smaller expenditure under *Police* is almost entirely due to savings in the District Executive Force and Special Police charges in Burma, rendered possible by the restoration of order and decrease of crime in that Province. The considerable increase in *Marine* Expenditure is due to provision having been made for the purchase of a steamer for the Andamans and a steam launch for the Port Officer, Calcutta, to the payment of the balance of the purchase-money of a steamer to replace the *Undaunted*, and to a large supply of Stores from England. The improvement under *Education* is distributed in small amounts over all Provinces, and the increase under *Political* is chiefly due to the payment of arrears of subsidy to the Amir of Afghanistan.

37. The increase of expenditure provided for in the Budget Estimate for 1890-91 is expected under all heads except *Marine*, where the absence of provision for the special items of expenditure referred to above results in a reduction of Rx. 55,400 from the amount provided in the Revised Estimate. The following are the principal items of increase: *Courts of Law*, Rx. 51,300, owing chiefly to provision having been made for additional Judicial Establishments in Burma and in Bengal; *Fails* Rx. 35,300; *Police*, Rx. 63,000, of which 29,300 is provided in Lower Burma principally on account of additional Police to be entertained in place of men under training, and the balance in the Punjab, Madras, and Bombay as the result of revision of establishments, contemplated or in pro-

gress; *Education*, Rx. 92,400, in consequence generally of an increase in the number of Government Schools and in the grants-in-aid to private Educational Institutions in all Provinces; and *Scientific and Other Minor Departments*, Rx. 64,100, resulting almost entirely from the provision for the forthcoming Census.

MISCELLANEOUS.

38. The Estimates are as follows:—

	1888-89, Accounts.	Budget.	1889-90, Revised.	1890-91, Budget.	Increase (+) or Decrease (—) of Revised, as com- pared with Budget Estimates, 1889-90.	Increase (+) or Decrease (—) of Budget, 1890-91, as compared with Revised Esti- mates, 1889-90.
	Rx.	Rx.	Rx.	Rx.	Rx.	Rx.
Revenue	1,793,000	1,340,300	1,325,500	1,243,000	—14,800	—82,500
Expenditure	4,884,000	4,823,200	4,848,700	4,945,400	+25,500	+96,700

The variations in revenue occur mainly in the receipts under Exchange, which were Rx. 951,500 in 1888-89, and are estimated at Rx. 527,300 and Rx. 453,400 in the Budget and Revised Estimates of 1889-90, and Rx. 443,500 in the Budget Estimate of 1890-91. It has been explained in previous years that these receipts accrue almost entirely in connection with the capital transactions of the subsidised Railways, the most important of which are the Southern Mahratta, Indian Midland, and Bengal-Nagpur Railways. The gradual falling off in the receipts is due to the smaller capital expenditure on these Railways, some of which have already been completed and others are approaching completion. Excluding *Exchange*, the revenue under this group amounted to Rx. 841,300 in 1888-89, and is estimated at Rx. 813,000 and Rx. 872,100 in the Budget and Revised Estimates of 1889-90, and at Rx. 799,500 in the Budget Estimate of 1890-91. The balance of the deposits of the Military Orphan Fund having been exhausted in 1888-89, the credit which used to be taken to revenue from this balance on account of the net payments made for the Fund, ceased in that year and accounts for a falling off of about Rx. 35,000. In the current year, however, this falling off has been more than compensated by special receipts, of which the principal are, a fine of Rx. 20,000 from a Karen Chief, and a recovery of Rx. 21,900 from the Bombay Port Trust on account of their non-interest-bearing debt, which represents the value of land purchased, and buildings constructed, from revenue and taken over by the Trust.

The increase in Expenditure is chiefly attributable to increasing superannuation allowances and to increased demands for Stationery and Printing, following on the growth of public business and the multiplication of public offices.

FAMINE RELIEF AND INSURANCE.

39. The Estimates are:—

	Budget, 1889-90.	Revised.	Budget, 1890-91.
	Rx.	Rx.	Rx.
Famine Relief	20,500	100,000	10,500
Construction of Protective Irrigation Works	80,000	74,000	65,000
Reduction of Debt	...	433,500	524,500
TOTAL	100,500	607,500	600,000

In the Budget Estimate for the current year Rx. 20,000 were provided for the relief of the scarcity in Behar. When the estimates were prepared it was not thought that the scarcity in Ganjam would be of a nature to require expenditure on direct relief. It is well known that in both districts the scarcity turned out to be more serious than was at first anticipated. Rx. 50,000 were spent on direct relief operations in Behar and the same sum in Madras. An outlay of Rx. 32,500 was also incurred on the Rushikuliya Canal and helped to alleviate the distress in Ganjam. Most of the rest of the outlay on the irrigation works charged to this head represents the cost of construction of the Nira Canal in Bombay. Next year's grants provide for further progress on the two works mentioned above, and a precautionary provision of Rx. 10,000 is made for direct relief in Bengal.

It has been explained elsewhere that the great improvement in the financial outlook has enabled the Government to take steps for the gradual restoration of the Famine Insurance Grant, and no detailed explanation is therefore required of the entries against *Reduction of Debt*.

RAILWAY FINANCE.

40. The extent to which the Indian Budget is influenced by the condition of Railway Traffic and Construction will be apparent from the following figures:—

	REVENUE.				EXPENDITURE.		
	Budget, 1889-90.	Revised, 1889-90.	Budget, 1890-91.		Budget, 1889-90.	Revised, 1889-90.	Budget, 1890-91.
	Rx.	Rx.	Rx.		Rx.	Rx.	Rx.
	16,686,200	16,503,000	17,151,100	India	10,503,400	10,273,000	10,727,900
	200	200	200	England	5,603,900	5,609,600	5,717,200
	100	100	100	Exchange	2,605,800	2,524,300	2,572,800
Loss on the Railway Account	2,026,600	1,903,600	1,866,500	TOTAL	18,713,100	18,406,900	19,017,900
TOTAL	18,713,100	18,406,900	19,017,900				

Of the various items of Revenue which enter into the Estimates, Land Revenue alone furnishes a larger contribution to the Treasury than the gross Railway Revenue; and the Expenditure on the working of Railways and in paying the interest on the money spent in constructing them, is second only to that incurred on the Army.

41. For the current year, the Revised Estimate compares with the Budget as follows:—

RECEIPTS.

	Budget.	Revised.	Better + Worse—.
	Rx.	Rx.	Rx.
State Railways (gross Traffic Receipts)	13,103,500	13,360,300	+ 256,800
Guaranteed Railways (net Traffic Receipts)	3,560,000	3,100,000	— 460,000
Subsidized Companies (Repayment of advances of interest)	23,000	43,000	+ 20,000
TOTAL	16,686,500	16,503,300	— 183,200

EXPENDITURE.

	Budget.	Revised.	Better + Worse—.
	Rx.	Rx.	Rx.
State Railways	14,454,000	14,310,700	+ 143,300
Guaranteed Railways (Surplus Profits, Land and Supervision and Interest)	4,089,100	3,866,900	+ 222,200
Subsidized Companies	87,500	74,100	+ 13,400
Miscellaneous Railway Expenditure	82,500	155,200	— 72,700
		NET	+ 306,200

The receipts are therefore expected to be Rx. 183,200 worse, and the expenditure Rx. 306,200 better, than the estimate, the whole of the deterioration in Receipts and most of the improvement in Expenditure appearing against "Guaranteed Railways." Low earnings of course mean that low surplus profits have to be paid; in other words, that a part of the loss of Revenue comes back to us in the shape of reduction of Expenditure.

42. *State Railways Traffic Receipts and Working Expenses.*—The most marked variations from the receipts as originally estimated occur on the following lines:—

	Rx.
North-Western Railway	265,000
Eastern Bengal	75,000
Rajputana-Malwa	60,000
Oudh and Rohilkhand	45,000
Toung-hoo Mandalay	42,500
Tirhoot	40,000
Indian Midland	180,000
Bengal-Nagpur	52,500
Southern Mahratta	25,000

and the working expenses are heavier on the—

	Rx.
North-Western Railway, by	50,000
Rajputana-Malwa	47,500
Toung-hoo-Mandalay	23,500
Burma	22,500
Bengal-Nagpur	21,000

but fall short of the Estimate on the—

	Rx.
Indian Midland, by	132,500
East Indian	75,000
Sindia	14,600

The large increase in the receipts on the North-Western Railway is due to a very favourable grain traffic. The Rajputana-Malwa line has carried more grain and cotton; and the Eastern Bengal Railway an exceptional quantity of jute. The failure to realise the estimates in the case of the three State lines leased to Companies is due partly to the conjectural nature of the estimates, as there were no data available for framing them; and partly to various sections of the lines not having been opened to traffic as early as anticipated.

Heavy traffic leads to increased working expenses, and this is the explanation generally of the increased expenditure. The original estimate for the East Indian Railway provided for a larger renewal of locomotives than was made; and the saving on the Sindia line is due to the fact that the provision

made for the settlement of a long outstanding claim preferred by the Bombay, Baroda and Central India Railway was not utilised, as the claim is yet under consideration.

43. *Guaranteed Railways.*—As already explained, the failure of the estimate of receipts and also most of the saving in Expenditure have occurred in connection with the guaranteed lines. The falling off occurs almost entirely on the Great Indian Peninsula Railway, the gross receipts being now estimated at Rx. 510,000 below the Budget figure. This is due mainly to a decrease in the wheat traffic, resulting from (1) poor crops in the localities served by the Railway, (2) a reduced demand for export owing to favourable crops in Europe and America, and (3) unusually large exports from the Punjab. There was also a falling off in the linseed traffic, and in the carriage of materials for Railway construction owing to the completion of the Indian Midland line.

The Madras Railway has, without any sensible increase in its expenditure, improved its receipts by Rx. 70,000 over the Estimate.

44. *Miscellaneous Railway Expenditure.*—The increase from Rx. 82,500 to Rx. 155,200 is principally due to the cost of material for a few miles of an experimental railway (the Abt) with a rack rail, and also to a large outlay on surveys, among which may be mentioned the Bikanir Desert Survey, the East Coast Survey, the Hyderabad-Umarkot Survey, Surveys in the Shan Hills, and on the Chindwin, and also on the North-West Frontier.

CAPITAL EXPENDITURE.

45. *Construction of State Railways (not charged against Revenue).*—The Budget Estimate provided for an outlay of Rx. 3,562,000. The present estimate is for Rx. 3,066,200, or a reduction of Rx. 495,800. The greater portion of the reduction occurs in the sterling expenditure in England which is now expected to be less than the estimate by £236,500. No progress has been made on the Peshawar-Jumrood or Burrakar lines or on the Kistna Bridge, for which Rx. 200,000 were provided in the Estimates. The year's record of construction is as follows:—

The Assam-Bihar Railway, the Tounghoo-Mandalay Railway, the Sind-Sagar Railway, and the Chenab Bridge have been practically completed; considerable progress has been made with the Villapuram-Dharmavaram line, and with the Chaman Tunnel and extension. The Mu Valley line has been commenced, and the Jammu-Kashmir line is in progress.

BUDGET ESTIMATE, 1890-91.

45. The Budget Estimate for 1890-91 compares with the Revised Estimate of the current year as follows:—

RECEIPTS.

	Revised.	Budget, 1890-91.	Better + Worse—.
	Rx.	Rx.	Rx.
State Railways (gross Traffic Receipts)	13,360,300	13,777,300	+ 417,000
Guaranteed Railways (net Traffic Receipts)	3,100,000	3,342,000	+ 242,000
Subsidized Companies (Repayment of advances of interest)	43,000	32,100	—10,900
TOTAL	16,503,300	17,151,400	+ 648,100

EXPENDITURE.

	Revised.	Budget, 1890-91.	Better + Worse—.
	Rx.	Rx.	Rx.
State Railways	14,310,700	14,841,900	—531,200
Guaranteed Railways (Surplus Profits, Land and Supervision and Interest)	3,866,900	4,012,700	—145,800
Subsidized Companies	74,100	52,000	+ 22,100
Miscellaneous Railway Expenditure	155,200	111,300	+ 43,900
TOTAL	18,406,900	19,017,900	—611,000

An increase of Rx. 648,100 in receipts and of Rx. 611,000 in expenditure is, therefore, estimated for, the net improvement being Rx. 37,100.

47. *State Railways, Traffic Receipts and Working Expenses.*—The chief improvements in receipts are expected on the following lines:—

	Rx.
South Indian (owing to change of status)	132,500
Midland	130,000
Bengal-Nagpur	102,500
Southern Mahratta	70,000
Oudh and Rohilkhand	35,000
Burma	30,000
Tounghoo-Mandalay	22,500
East Indian	10,000
Villapuram-Guntakal (Nellore Branch)	7,100

and the only material falling off on the

North Western	165,000
-------------------------	---------

The improvement in the Midland and Bengal-Nagpur lines is anticipated for the reason that the former will be completely open for traffic throughout the year, and the latter for a portion of it. The estimates are, however, to some extent conjectural, and it is well to bear in mind that the results of the current year have not accorded with the anticipations on which the estimates were framed a year ago. The completion of the Southern Mahratta system explains the expected increase of Rx. 70,000 on that line. The traffic on the Oudh and Rohilkhand line is developing in a satisfactory manner, and both the Burma lines have done remarkably well and promise to continue to do so. The following figures for the Upper Burma line have some interest:—

	Budget, 1889-90.	Revised.	Budget, 1890-91.
	Rx.	Rx.	Rx.
Receipts	115,000	137,500	180,000
Working Expenses	100,000	123,500	130,000
Net	15,000	34,000	50,000

The improvement on the Villapuram-Guntakal (Nellore Branch) line is not altogether real, as owing to the change of status of the South Indian Railway, through which agency this line is at present worked, the receipts will be adjusted monthly instead of half-yearly, thus throwing the transactions of 15 months into the accounts of 1890-91. A falling off on the North-Western line of Rx. 165,000 is expected; in the current year the grain traffic has been unusually heavy, and with the failure of the winter rains in the Punjab its continuance on the same scale cannot be looked for.

In *Working Expenses* the increase is estimated at Rx. 300,300, and may be stated generally to be proportionate to the increased traffic expected.

The addition to the *Interest* charge is Rx. 230,900. This, of course, represents the interest on the additional outlay on construction and on the additional capital deposited by the Assisted Companies during the year.

48. *Guaranteed Railways*.—In consequence of its change of status on 31st December 1890, the net earnings of the South Indian line for nine months only come into the Estimates. On the Madras and Bombay, Baroda and Central India lines slight increases aggregating Rx. 20,000 are expected. The increase of Rx. 242,000 is due to the more favourable view taken of the prospects of the Great Indian Peninsula line. The partial collapse of the traffic, and the special reasons for it, have already been alluded to. A recovery set in in November, and as it is understood that the wheat crop in the Central Provinces is a fair one, there is reason to hope that the improvement may be maintained. The Estimate provides for Gross Earnings at Rx. 4,000,000 and working expenses at Rx. 1,960,000, giving net earnings of Rx. 2,040,000 and a net increase of Rx. 260,000. The following figures show that with ordinary conditions this is not a sanguine estimate :—

Net earnings (actual)—		Rx.
1886-87	.	2,114,300
1887-88	.	2,142,400
1888-89	.	2,209,100
Budget Estimate	1889-90	{ 2,270,000
Revised Estimate		
Budget	1890-91	2,040,000

The *Surplus profits* and *Interest* are more by Rx. 145,800 than in the current year; the greater portion of which is the consequence of the higher estimate of earnings, and the rest of additional capital outlay on which interest has to be paid.

49. Under *Miscellaneous Railway Expenditure* the improvement of Rx. 43,900 is nominal, as the current year bears the exceptional charge for the Abt experimental material. The provision of Rx. 111,300 is for surveys.

Before leaving the subject of Railway Revenue and Expenditure it is desirable to call attention to the magnitude of the transactions and to the impossibility of framing a close estimate of the probable traffic earnings. The Budget Estimates for the current year promise to be fulfilled within an inconsiderable margin; but this is not because each estimate has proved a good one: on the contrary, the variations from expectation, on the Great Indian Peninsula line in particular, and on the Midland and Bengal-Nagpore in a less degree, indicate the perplexing nature of the task. This liability to fluctuation in the net earnings of our great Railway system adds one more cause of uncertainty to those which already affect Indian finance.

CAPITAL EXPENDITURE.

50. The provision in 1890-91 for construction of Railways not charged to Revenue is Rx. 362,000 less than the original provision of the current year thus :—

	India.	England.	Exchange.	Total.
	Rx.	£	Rx.	Rx.
1889-90	1,697,100	1,273,000	591,900	3,562,000
1890-91	1,960,200	855,000	384,800	3,200,000

The works on the Chaman Extension, for which a heavy grant was made in 1889-90, are now far advanced and require a very much smaller grant in 1890-91 to provide for their completion. The Chenab Bridge is practically completed. The Sind-Pishin, Sind-Sagar, and Assam-Bihar Railways and the Mandalay Extension, on which considerable sums were expended during the past year, are now finished, and the expenditure next year will be restricted to requirements which the exigencies of traffic or safe working may prove to be necessary.

The expenditure on the Villapuram-Guntakal Railway, under construction on behalf of the State by the South Indian Railway, will still be high, and provision to the extent of Rx. 968,600 has been made in the estimates. It is expected that 160 miles of this line will be sufficiently far advanced to be open for traffic about January next.

During the current year, the Mu Valley Railway, the Durbhunga-Bairagnia Branch of the Tirhoot State Railway, and an extension of the Sind-Sagar Railway from Mianwali to Mari were sanctioned, and work on them is now in progress. The grants allotted to these projects in 1890-91 are Rx. 500,000, Rx. 75,400, and Rx. 195,000, respectively. The allotments to the two last named projects provide for their completion during the coming year.

Provision to the extent of Rx. 250,000 is made for either the Panchnpara-Ganjam or East Coast project now under investigation. Other important grants are, Rx. 63,600 for improving the gradients on the North-Western Railway between Jhelum and Rawalpindi, and Rx. 62,800 for completing the reserve of material which it has been decided to maintain for future possible extensions of the Frontier Railways.

51. The following figures shew the rate at which Railways have been constructed at the cost, or on the responsibility, of the Government since 1880 :—

Date.	Number of miles open.
31st March 1880	8,382
" 1881	9,134
" 1882	9,437
" 1883	9,748
" 1884	10,188
" 1885	10,824
" 1886	11,173
" 1887	12,000
" 1888	12,915
" 1889	13,648
" 1890 (Revised Estimate)	14,437

Between March 1880 and March 1890 the number of miles open has increased from 8,382 to 14,437, or by more than 72 per cent.

The following Table gives the Total Capital outlay on Railway Construction up to date :—

	State Railways.	State Railways constructed through the Agency of Companies.	Guaranteed lines.	TOTAL.	Annual progress.
	Rx.	Rx.	Rx.	Rx.	Rx.
To end of—					
1879-80	28,007,395	...	96,829,969	124,837,364	...
1880-81	67,224,624	...	66,348,478	133,573,102	8,735,738
1881-82	70,569,867	...	67,021,756	137,591,623	4,018,521
1882-83	72,800,428	468,270	67,431,448	140,700,146	3,108,523
1883-84	76,653,281	704,155	68,769,369	146,126,805	5,426,659
1884-85	81,389,391	3,126,906	69,904,427	154,420,724	8,293,919
1885-86	90,863,111	4,775,059	67,883,682	163,521,852	9,101,128
1886-87	108,456,220	7,915,378	57,046,325	173,417,923	9,896,071
1887-88	110,788,941	12,979,680	57,694,898	181,463,519	8,045,596
1888-89	111,989,453	18,097,843	58,313,774	188,401,070	6,937,551
1889-90, Revised	124,329,814	20,284,543	49,499,263	194,113,620	5,712,550
1890-91, Budget	127,534,564	22,631,443	50,281,163	200,447,170	6,333,550

IRRIGATION.

52. The Irrigation revenue makes satisfactory progress. The figures are—

	Budget, 1889-90.	Revised, 1889-90.	Budget, 1890-91.
	Rx.	Rx.	Rx.
Revenue	1,889,300	1,985,300	2,035,000
Expenditure	2,614,700	2,709,300	2,739,400
Net	—725,400	—724,000	—704,400

It must be recollected that these figures include the transactions classed as "minor works" as well as the revenue transactions of the productive or 'major works.' The broad distinction between the two classes is that the *Capital* cost of minor works is charged against Revenue, while the cost of construction of major works is charged to Debt. The distinction is not absolute, for there are works classed as "Major Works" on which there has been large capital expenditure from Revenue, that is, charged against the grant for Famine Insurance. In the current year most of the improvement in revenue arises through the extension of irrigation in the Punjab, and is mainly due to the approaching completion of the distributaries of the Sirhind Canal. In 1890-91, the increase is shared between the Punjab and the North-Western Provinces, the former contributing Rx. 58,700 more than the estimate of a year ago, and the latter Rx. 21,300. Extension of distributaries and an advance in popular favour are the general explanation of the increase in both cases. There is, however, a special influence in the case of the North-Western Provinces. It may be recollected that in 1886, the irrigation from the Lower Ganges Canal system was stopped by the collapse of the Nadrai aqueduct. The reconstruction of the aqueduct has now been completed and therewith a large area is again brought within reach of canal water.

53. *Construction of Irrigation Works (not charged against Revenue).*—The Estimates are—

	Budget, 1889-90.	Revised, 1889-90.	Budget, 1890-91.
	Rx.	Rx.	Rx.
	527,500	401,900	550,000

The reduction of the Estimate from Rx. 527,500 to Rx. 401,900 in the current year is due to the postponement of the construction of the Jhelum Canal. The conversion of the Chenab Inundation Canal into a perennial Canal has taken the place of the Jhelum project for the present.

In 1890-91 the outlay will be almost entirely in the Punjab (Rx. 191,200), Madras (Rx. 130,000), and the North-West Provinces and Oudh (Rx. 105,000). In the Punjab, the Chenab and Sirsa Canals will be proceeded with; the outlay in Madras represents the progress on the Perriar project, and in the North-Western Provinces it is distributed over the Ganges and Jumna Canals.

It may be mentioned that it has been arranged to apply a fixed sum of Rx. 550,000 from loan funds to construction for each of the next few years, in addition to construction charged under "minor works" and against the Famine Grant.

BUILDINGS AND ROADS.

54. This head comprises both Military and Civil Works. The Estimates are :—

RECEIPTS.

	Budget, 1889-90.	Revised, 1889-90.	Budget, 1890-91.
	Rx.	Rx.	Rx.
Military and Civil Works	603,700	649,200	589,400

EXPENDITURE.

	Budget, 1889-90.	Revised, 1889-90.	Budget, 1890-91.
	Rx.	Rx.	Rx.
Military Works	1,157,400	1,158,000	1,160,700
Civil Works	4,325,000	4,281,400	4,556,600

In the Revised Estimate the expected improvement in revenue, Rx. 45,500, is almost entirely due to the sale of the Burrakur iron-works to a Company. The price was Rx. 45,000, which was received and credited in the current year.

The Military Works expenditure is composed of a grant of Rx. 1,000,000 which has been regularly made for several years, *plus* Rx. 150,000 for Burma, with an addition for Exchange on the small English expenditure.

55. By far the greatest portion of the Civil Works Expenditure is Provincial and Local. The Imperial share is only Rx. 822,500 in the Revised Estimate,

and a large part of this, namely, Rx. 304,000, represents the cost of the progress made during the year in equipping Upper Burma with Jails, Court-houses, and Roads. The expenditure classified as Local, that is, incurred mainly through the agency of District and Local Boards, amounts to Rx. 1,493,300 and is not far short of the sum spent by Provincial Governments.

The Provincial expenditure is largely determined by the state of the Provincial balances. The increase in the total grant for Civil Works is considerable, but it only means that Local Governments have abundant balances, and having arranged their programmes for utilising their surplus funds, are now carrying them out. Provincial expenditure on Civil Works was estimated at a high figure in the Budget of the current year, but a considerably higher provision is made for next year. The figures are :—

	Budget, 1889-90.	Budget, 1890-91.	Increase.
	Rx.	Rx.	Rx.
Provincial Civil Works Outlay	1,970,900	2,221,900	+ 251,000

ARMY.

56. The Estimates are :—

RECEIPTS.

	Budget, 1889-90.	Revised, 1889-90.	Budget, 1890-91.
	Rx.	Rx.	Rx.
India and England	944,600	1,022,100	982,600

EXPENDITURE.

	Budget, 1889-90.	Revised, 1889-90.	Budget, 1890-91.
	Rx.	Rx.	Rx.
India	15,107,000	14,950,000	14,806,000
England	4,005,300	4,126,600	4,620,100
Exchange	1,862,400	1,857,000	2,079,000
TOTAL	20,974,700	20,933,600	21,505,100

The increase in the Revised Estimate of receipts represents increased sales of stores to Civil Hospitals and Dispensaries and to the forces engaged in the Sikkim and Chin-Lushai Expeditions.

Notwithstanding the heavy outlay on the Chin-Lushai Expedition, the Revised Estimate of expenditure in India is expected to be appreciably less than the Budget grant for the year. The main causes of this somewhat unexpected result are the following: considerable economies have been effected in the Upper Burma charges; the rate of exchange for the conversion of the pay of British troops is $\frac{1}{4}d.$ better than that provided in the Budget; and the actual strength of the Army was less than that provided for.

In the English expenditure there is a considerable increase, but it is an increase which will give relief to the Estimates of future years. A special payment of £150,000 to the War Office has been provided for on

account of arrears of what are technically described as "Home Charges on account of British troops serving in India—effective," and a provision of £70,000 on the same account has been made in the Estimates of 1890-91. These charges represent the amount payable by India on account of the raising and equipment of the British Army in India; the method of assessing them has been under discussion for many years, and is at present being considered by a Committee over which Lord Northbrook presides. It is understood that the payment of this £220,000 will extinguish, or almost extinguish, all liabilities on this account other than current ones.

57. It will be noticed that in 1890-91 there is a decrease of expenditure in India, but a very large increase in the English expenditure. The decrease in India, however, requires explanation. The Estimates of both 1889-90 and of 1890-91 include provision for considerable expenditure of a special and temporary nature. The decrease expected in 1890-91 is not a decrease in the ordinary charges for the Army, but merely means that the Estimates are burthened with a smaller sum for exceptional services. Next year shows an improvement over the current one in the following respects—

- Better Exchange for payment of British troops, *i.e.*, 1s. 5d. in place of 1s. 4d.
- Less expenditure on Commissariat requirements.
- Reduced provision on account of troops in Sikkim.
- Reduced expenditure in Upper Burma.
- Reduction in mobilisation charges.

The aggregate improvement on these accounts is not far short of Rx. 700,000, so that for purposes of comparison the ordinary charges included in the Budget Estimate of 1889-90 may be reckoned at about Rx. 14,400,000 as compared with the actual Estimate of Rx. 15,107,000 in all. The Budget of 1890-91 provides for an expenditure of Rx. 14,806,000, and the difference between that figure and Rx. 14,400,000 or Rx. 406,000 may be taken roughly as the measure of the special charges to be met in the coming year. The greater portion of this is due to a provision of Rx. 200,000 made for operations in the Chin-Lushai country, Rx. 60,000 for mobilization, and the rest to numerous causes, of which may be mentioned (1) extra grants for Volunteer Corps, and (2) the disbandment of certain Madras Regiments and the substitution for them of corps for local service in Burma.

58. The increase in the English charges is very great, namely, £614,800, and practically represents the cost of re-arming the British troops throughout with the new rifle, and of supplying 21 more batteries of 12-pounder breech-loading guns. The increase in the estimated cost of Ordnance stores over the actual cost in 1888-89 is no less than £745,600 [945,800—200,200]. The re-arming of the Army is a reform that had to be undertaken sooner or later and which could not safely be postponed. The increase in the Home charges is thus not permanent, but incidental and temporary, and we may hope for some reduction in liabilities in the Budget of 1891-92.

SPECIAL DEFENCES.

59. The Estimates are :—

	Budget, 1889-90.	Revised.	Budget, 1890-91.
	Rx.	Rx.	Rx.
	1,102,900	758,400	892,300

In the current year the expenditure is much below the grant in both India and England. The grant for India was Rx. 545,000 and the lapse is expected to be no less than Rx. 139,000. The lapse on the English grant, due to the slower supply of heavy ordnance and stores than was reckoned on, is £137,800, and the resulting saving in Exchange Rx. 67,700. The grant for next year is Rx. 425,800 for India, the highest expenditure in India in one year hitherto having been Rx. 447,800.

Section III.—Progress in Upper Burma.

60. The recent financial progress of Upper Burma may appropriately be noticed.

The following statement shows the Revenue and Expenditure as they were estimated in the Budget Statements of 1888-89 and 1889-90, and as they are estimated in 1890-91 :—

REVENUES.

	1888-89.	1889-90.	1890-91.
	Rx.	Rx.	Rx.
Civil Revenue	547,000	755,200	901,100
State Railway Receipts	...	115,000	180,000
TOTAL .	547,000	870,200	1,081,100

EXPENDITURE.

	1888-89.	1889-90.	1890-91.
Civil Expenditure —	Rx.	Rx.	Rx.
Police	732,000	868,200	838,100
Other Departments	339,000	366,400	450,200
Railways (including interest on Capital)	...	192,800	226,400
Military Works	190,000	150,000	150,000
Civil Works	314,000	298,100	290,000
Irrigation	23,000	20,000	30,000
Army Special Expenditure	824,000	600,000	450,000
TOTAL	2,422,000	2,495,500	2,434,700

Thus the deficit in 1888-89 was estimated at Rx. 1,875,000, in 1889-90 at Rx. 1,625,300, and in 1890-91 it is expected to be Rx. 1,353,600. The actual results have recently turned out considerably better than the anticipations of them, and we may hope for a considerable reduction in the expected deficit of Rx. 1,353,600 by the end of the year. The increase of revenue is remarkable, and has been referred to in the remarks on Land Revenue in paragraphs 12 and 13 and in those on Railways in paragraph 47.

Section IV.—Ways and Means—Home Treasury.

61. The Secretary of State's Revised and Budget Estimates of the transactions at the Home Treasury for 1889-90 compare as follows :—

	Budget.	Revised.
<i>Net Receipts.</i>		
Council Bills	£ 14,689,900	£ 15,400,900
Permanent Debt for Advances to Companies	3,750,000	3,500,000
Capital Receipts from Railway Companies	515,000	1,540,900
Deposits and Advances	...	1,800
Add Opening Balance	3,849,797	3,259,933
TOTAL	22,804,697	23,703,533
<i>Net Outgoings.</i>		
Excess of expenditure over Revenue	14,956,100	14,751,200
Capital expenditure of Government in England	1,273,000	1,038,800
Permanent Debt—Discharge of 4 per cent. stock	300,000	300,000
" " " 5 per cent. stock	...	2,600
Issues to Railway Companies on Capital Account	3,056,700	2,258,200
Deposits and Advances	2,700	...
On account of Remittances from India	1,069,500	848,900
Add Closing Balance	2,146,697	4,503,833
TOTAL	22,804,697	23,703,533

The most important variations from the Budget Estimate have occurred in Council Bills, in the amount of debt created for making advances to Railway Companies, and in the Capital Receipts from, and the net issues to, them for expenditure. These variations are briefly explained below :—

COUNCIL BILLS.

Throughout the current year the demand for remittances from England to India has been strong, and it is expected that the Secretary of State will sell bills for a considerably larger amount than that anticipated. The excess drawing gives a corresponding relief to next year, in which the drawings would otherwise have been unusually high, in consequence of the large increase in the net expenditure in England.

DEBT INCURRED, AND CAPITAL RECEIPTS FROM, AND ADVANCES MADE
TO, RAILWAY COMPANIES.

It was explained in paragraph 95 of last year's Financial Statement that the Secretary of State proposed to borrow, under the powers conferred by the Oudh and Rohilkhand Railway Purchase Act, for the purpose of advancing funds to the "Aided" Railway Companies, and that provision had been made for a loan of £3,750,000 for this purpose. Soon after the Financial Statement was issued, it was found that the requirements of the Railway Companies had been overestimated and that a loan of £3,500,000 would be sufficient. It will be understood that this sum provides for Capital outlay by the Companies (Southern Mahratta, Indian Midland, Bengal-Nagpur, and Bengal Central) receiving the advances, both in England and India. • Three per cent. stock for

this amount was accordingly issued in May 1889 at a premium of £1—1s. 5d. per cent. The large increase in the amount received from Companies is due chiefly to £600,300 raised by the Great Indian Peninsula Railway Company and £583,200 by the Indian Midland Railway Company which, it was expected, would be raised in 1888-89. The issues to Companies in England on Capital account were overestimated; the Revised Estimate of £2,258,200 on this account includes £600,000 for discharge of debentures, the balance representing purchase of Stores, &c.

62. The following is the Secretary of State's Budget Estimate of Ways and Means for 1890-91 :—

<i>Net Receipts.</i>	£
Council Bills	14,989,000
Permanent Debt for Advances to Companies and discharge of Oudh and Rohilkhand Railway Debentures	2,200,000
Permanent Debt for Purchase of the South Indian Railway	3,200,000
Capital Receipts from Railway Companies	2,732,300
Deposits and Advances	2,200
Add Opening Balance	4,503,833
TOTAL	27,627,333
<i>Net Outgoings.</i>	
Excess of expenditure over Revenue	15,674,300
Capital expenditure of Government in England	857,800
Permanent Debt—Discharge of the Oudh and Rohilkhand Railway Debentures	500,000
Issues to Railway Companies on Capital Account	4,045,600
Capital charge involved in redemption of liabilities	3,200,000
On account of Remittances from India	1,197,200
Add Closing Balance	2,152,433
TOTAL	27,627,333

The most important feature of this Estimate is the provision for the proposed purchase of the South Indian Railway. The terms have not yet been finally settled, but it should be noted that in the case of this Company the purchase can only be effected under the contract by actual payment and not by an annuity. Under the contract, the Secretary of State has to pay the equivalent of the mean market value of the share capital of the Company during the three years ending on the 1st March 1890, and to accept the liability for the debentures and debenture stock issued by the Company which now amounts to £1,495,000. But as it is proposed that the management of the Railway, after its acquisition by the State, shall be entrusted to a Company which will provide a small portion of the capital, it will not be necessary to provide for the redemption of the whole existing share capital. It is accordingly proposed to raise only £3,200,000 on account of the purchase, although the capital of the Company amounts to £3,208,952, the mean value of which, according to the terms of the contract, would be about £4,200,000. The entries on account of the transfer of liability of the debentures and debenture stock are omitted from both sides of the abstract account given above. They appear on both sides of the account in Statement C of the Appendix. The Secretary of State also proposes to raise a loan of £2,200,000 for advances to Railway Companies in India and England under the Oudh and Rohilkhand Railway Purchase Act and for the discharge of debentures for £500,000 of the Oudh and Rohilkhand Railway. Of the payments to Companies on Capital Account £1,804,300 represent discharge of debentures. He also proposes to draw £14,989,000 by Council Bills

during the year. It should be understood that, in stating these as the present intentions of the Secretary of State, no sort of pledge is given that he will adhere to the programme thus explained, and that the amounts to be raised by bills or by loans may be varied from time to time as may seem expedient.

Ways and Means—India.

63 The Ways and Means Estimate of India is as follows :—

	1889-90.		1890-91.
	Budget.	Revised.	Budget.
NET RECEIPTS.	Rx.	Rx.	Rx.
1. Excess of Revenue in India over the Expenditure charged against it	22,016,900	23,198,900	22,998,100
2. Public Loan	2,500,000	2,000,000	...
3. Increase of Unfunded Debt—mostly Savings Bank Deposits	629,700	14,100	309,600
4. Appropriation from Revenue for Reduction of Debt	...	433,500	524,500
3. <i>For Remittance to Secretary of State</i>	1,112,300	891,400	1,179,400
Add Opening Balance	12,900,001	13,305,189	14,596,889
	39,158,901	39,843,089	39,608,489
NET OUTGOINGS.			
6. Expenditure charged to Provincial Balances	640,800	—352,500	757,700
7. Capital Expenditure of Government in India	2,224,600	1,961,900	2,506,100
8. Loans to Municipalities, &c	827,700	709,900	907,000
9. Other items	170,400	—552,500	—177,700
10. <i>Issues on Capital Account to Railway Companies</i>	1,221,400	985,800	887,200
11. Council Bills. <i>Sterling Account</i>	14,690,900	15,509,300	14,921,900
12. Do. <i>Exchange</i>	6,829,800	6,984,300	6,712,200
Add Closing Balance	12,553,301	14,596,889	13,094,089
	39,158,901	39,843,089	39,608,489

The headings in italics are connected with and explained by the corresponding figures of the Secretary of State's account in England. The others refer to purely Indian transactions.

64. In the Budget Estimate, provision was made for a loan of Rx. 2,500,000 in India. By the 29th June, on which date the Notification calling for tenders was issued, the partial failure of the opium crop was known and the consequent saving in Expenditure was assured. The Revenue receipts also indicated an improvement over the Estimate. Under these circumstances it was determined to reduce the amount of the loan offered for subscription to Rx. 2,000,000. This was taken up at an average rate of Rs. 99-14-11½ per 100 rupees yielding Rx. 1,998,697.

In 1890-91 it is not proposed to raise any loan in India, notwithstanding a contemplated Capital Expenditure on Railways and Canals of Rx. 3,750,000. The large surplus expected in the current year, both on Imperial and Provincial account, and the provision made under Famine Insurance for reduction of debt in both years, and which appears against item No. 4 in the statement above, will enable us, we hope, to avoid borrowing in 1890-91. This is the present intention of the Government, but full liberty is reserved to modify this intention to any extent that circumstances may require.

SAVINGS BANKS.

65. The influences which determined Government to reduce the limits of deposits in Savings Banks were mentioned in paragraph 101 of last year's Financial Statement. It was to be expected that for the first year the effect of this

change would be marked, as deposits, which at the date of change were in excess of the new maximum (Rs. 2,000), had to be reduced below that sum before further sums could be received to credit of the same account. The effect of the change of rule will be evident from the following figures :—

YEAR.	Net addition to deposits in the year (cash).	Interest.	Total net addition.
	Rx.	Rx.	Rx.
1887-88	+ 656,300	+ 224,000	+ 880,300
1888-89	685,200	+ 261,800	+ 947,000
1889-90 } Estimates {	- 320,500	+ 281,500	- 39,000
1890-91 }	- 34,400	+ 288,800	+ 254,400

The objections which might be taken to an alteration of rule which leads to such results are obvious. But it was impossible for the Government to continue a system under which the sum held at call had approached to an amount nearly equal to the minimum cash balance necessary for the discharge of public business, and which promised to further increase at the rate of nearly a crore a year.

LOANS TO MUNICIPALITIES AND PRESIDENCY CORPORATIONS.

66. The net figures for Local loans in 1889-90 and 1890-91 are Rs. 709,900 and Rs. 907,000, of which Rs. 300,000 and Rs. 370,000 represent the balances of the advances made by Local Governments under the system described in paragraphs 114 to 118 of last year's Financial Statement. Judged from the demands made by Local Governments, the system has proved very acceptable to them.

In the current year a total sum of Rs. 420,000 will be advanced to the Port Commissioners on account of the Kidderpore Docks, and in 1890-91 a sum of Rs. 553,200. The Bombay Port Trust only asks for Rs. 20,000, and that in the current year.

The advances made to these two Corporations on account of the Docks will stand thus :—

	Calcutta. Rx.	Bombay. Rx.
Up to 1888-89	1,377,600	848,600
Advanced in 1889-90 } Estimates {	420,000	20,000
„ 1890-91 }	553,200	...
TOTAL	2,350,800	868,600

67. Owing to the favourable nature of the year the closing balance on 31st March 1890, which was estimated at Rs. 12,553,000 a year ago, is now expected to be Rs. 14,597,000, notwithstanding provision for an increase of Secretary of State's drawings of £818,400. In 1890-91 provision is made for payments of Secretary of State's Bills to the extent of £14,922,000, and the year is expected to close with a balance of Rs. 13,094,000.

Section V.—Summary.

68. The principal features in this Statement are :—

(a) The Accounts for 1888-89 have closed with a surplus of Rs. 37,018 after including in the Expenditure Rs. 789,595 spent on Defence Works.

(b) The Revised Estimates of 1889-90 show a surplus of Rs. 1,809,700 after restoring the Famine Grant to Rs. 600,000 (or Rs. 1,058,100 including the net charge on the revenues on account of the Protective Railways con-

structed through the Agency of Companies), and postponing the contribution of Rs. 490,000 from Provincial resources for which credit was taken in the Budget Estimate, to 1890-91. All the main Revenue heads have contributed to this improvement. The saving in Opium expenditure, owing to a scanty crop, is Rs. 708,800. The Estimate of Exchange, which was taken in the Budget at 1s. 4'38d.=Rs. 1, is placed at 1s. 4'552d.=Rs. 1, and yields a saving of about Rs. 200,000. Rs. 758,400 spent on Defence Works are included in the Expenditure.

(c) The Budget Estimates show a surplus of Rs. 270,400. Exchange is taken at 1s. 4'552d. as in the Revised Estimate. Extra taxation has been imposed on imported spirits and Indian brewed beer has been made subject to the same tax as is levied on imported beer, the expected addition to the revenues being estimated at about Rs. 100,000. Credit has been taken for the contribution of Rs. 490,000 from Provincial Revenues, originally estimated for as a receipt of 1889-90. The Famine Relief and Insurance Grant has been maintained at Rs. 600,000. Including the net charge on the revenues on account of the Protective Railways the grant is Rs. 1,032,800. Army Expenditure is unusually heavy, being estimated at about Rs. 1,203,300 more than the expenditure in 1888-89, chiefly owing to the contemplated re-armament to be carried out next year. The Estimate of Expenditure includes Rs. 892,300 for Defence Works. In view of the heavy charges that fall on the revenues of the year in connection with the re-armament, the result is considered satisfactory.

(d) The Capital outlay on Railways and Irrigation Works is estimated at Rs. 3,468,100 in 1889-90 and at Rs. 3,750,000 in 1890-91.

(e) The Secretary of State proposes to sell £14,989,000 of Council Bills, also to borrow £5,400,000 for purchase of the South Indian Railway, for making advances to Companies engaged in constructing Railways for the State, and for paying off debentures. This announcement is accompanied by the usual reserve that, though these are the present intentions of the Secretary of State, he will remain entirely at liberty to vary the amounts to be raised by bills or by loans as he may find occasion.

(f) Although the estimates provide for a Capital outlay of Rs. 3,750,000 on Railways and Canals and for Rs. 907,000 to be advanced to Port Commissioners and Local Governments for local purposes, it is not expected that a loan will be necessary in India in 1890-91. It is mainly owing to the partial restoration of the Famine Insurance Grant, and the high cash balances resulting from the surplus of 1889-90, and the estimated surplus of 1890-91, that the Government expects to be able to find funds for the Capital outlay on Public Works without having recourse to borrowing. No pledge is, however, given that Government will not borrow in India during the year.

(g) The warning against desponding and pessimist views in connection with Indian Finance given last year is justified by the course of events. Further improvement in the financial position is anticipated, but prudence and economy are needed to meet the dangers and difficulties of the future.

D. BARBOUR.

CALCUTTA;
March 21, 1890.

APPENDIX I.

Despatch from Her Majesty's Secretary of State for India, to the Government of India, No. 378, dated 17th December 1885.

In my Despatch of the 10th instant, No. 367, I authorized your Government to charge against the Famine Insurance Grant the amount payable during the next five years as interest on capital raised by Companies for the purpose of constructing any of the lines which are mentioned by your Government as being, in your opinion, needed for the protection of the country against famine, but which you are not at present able to construct through State agency.

2. It was not my intention thereby in any way to interfere with the new form of account suggested in my despatch of the 27th of August, No. 237, by which all charges on account of the working expenses and interest payable for railways are to be collected into one group, apart from the capital expenditure on the construction of such works.

3. I have, accordingly, to request that the interest mentioned in the first paragraph of this despatch may be placed under the head of Railways (Expenditure on Revenue Account); and that under Famine Relief and Insurance a note may be appended, stating that there is a further sum (to be specified) which has been charged under the head of Railways, for interest paid to Companies formed for the construction of lines calculated to protect the country against famine.

Telegram from the Government of India, to Her Majesty's Secretary of State for India, dated 5th March 1890.

Please refer to paragraph 3 of Your Lordship's Financial Despatch No. 378, dated 17th December 1885. We suggest that in future the net charge on the revenues, i.e., interest less net earnings, on account of Protective Railways constructed through the agency of Companies, namely, the Indian Midland and the Bengal-Nagpur Railways, be shown in the note under the head "Famine Relief and Insurance" instead of interest. Please télégraph reply as quickly as possible.

Telegram from Her Majesty's Secretary of State for India, to the Government of India, dated 6th March 1890.

Your telegram in the Finance Department, dated 5th March last, regarding note under the head Famine Relief and Insurance. I agree to your proposal.

APPENDIX II.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on Monday, March 3rd, 1890.

Feebly unsettled conditions have prevailed over a large part of the Indian region during the week under review. The high pressure area in the north-west, which is characteristic of the cold season in India, has been, during part of this week, much less pronounced than in previous weeks. Hence barometric gradients and air movements have been slight, while the power of the sun has increased considerably. In consequence conditions have been favourable to the production and development of small local depressions which have resulted in thunder or dust storms and slight rainfall. There has been no serious storm during the week, but a depression, which appeared over Guzerat on the 3rd, though slight in itself, produced, owing to the high pressures which temporarily prevailed in the Punjab, steep gradients for easterly winds in North-Western India, and the weather in that region became very unsettled.

The chart of the 25th exhibited a somewhat complicated distribution of pressure. Relatively high readings were reported from the north-west of the Punjab, the Upper Assam Valley, and the south of the Peninsula, while low readings were shown over the west of the North-Western Provinces and the north of Bengal. Irregular cyclonic movements of the wind prevailed in the neighbourhood of the two depressions, and a northerly current was shown over Sind, Guzerat, and the Bay area, but in other parts of the Indian region the directions were variable. There was a good deal of cloud, except in Rajputana, the Peninsula, and parts of Bengal, and the weather was somewhat unsettled over Northern and Central India. On the 26th the only change of importance was the enlargement of the Bengal depression by the advance eastward of the depression from the North-Western Provinces. The general wind circulation was the same as that on the previous day. The weather in the northern and central parts of the country remained somewhat unsettled. The chart of the 27th showed that the Bengal depression was filling up, that the barometer had risen in the north-west, and that the general distribution was such as is characteristic of the cold season. The weather was fine. On the 28th conditions were practically unaltered, and on March 1st the only important feature in the changes was a rapid barometric fall in the Punjab. During this day (the 1st), there was probably a fall of snow and rain over the mountains to the west and north-west of the Punjab, as the next morning's observations showed a brisk fall of temperature and rise of pressure in north-west of the Punjab. At Colombo, the wind had shifted to east, but these were the only important alterations. On the 3rd the barometer was still rising in the Punjab, but it had fallen in Guzerat and Kattiawar, where a well marked depression had appeared. There was a general indraught of wind towards this depression from surrounding regions. The easterly wind noticed at Colombo on the 2nd had extended over the south of the Peninsula.

Temperature—Though less high than in the preceding week, has been generally above the average. The warmest day, relatively to the average, was the 25th; the coolest the 28th. In Burma, the Punjab and Bombay on every

day of the week the mean temperature was more or less excessive, and in Bengal, the Central Provinces, Guzerat, Central India, Sind, and Rajputana, there was only one day on which the weather was cooler than usual. In the other Provinces the days of excessive and of deficient temperature were nearly equal. On the hills the variations from the normal have been comparatively slight.

The following table shows the variations of the mean temperature of the present and of the past week from the normal, according to Provinces:—

PROVINCE.	Difference of mean temperature of last week from normal.	Difference of mean temperature of present week from normal.
Burma	+1'7	+1'3
Bengal	+3'3	+1'2
North-Western Provinces	+2'9	+1'4
Punjab	+1'3	+1'8
Bombay	+2'1	+1'1
Central Provinces	+2'7	+1'5
Guzerat and Central India	+3'6	+1'8
Sind and Rajputana	+3'6	+2'0
Madras	+0'9	—0'1

These figures show that, except in the Punjab, the weather relatively to the average has been considerably cooler during the week under review than during the preceding week. At Sholapur on the 1st the maximum temperature exceeded 100° (100°·7).

Rain.—The area of rainfall this week is much larger than that recorded during many weeks past. At twenty-seven out of the fifty-one rainfall divisions rain has been recorded. The amounts are not large, the average rainfall of the division only exceeding $\frac{1}{2}$ inch in four cases and being below $\frac{1}{10}$ of an inch in sixteen cases, but it is nevertheless a substantial improvement on the records of many weeks past. The regions in which the rainfall was heaviest are the south-west of the Peninsula and the Tenasserim division of Burma, while the regions without rainfall include the following divisions, *viz.*,—Central and Upper Burma and Arakan, Central and North Bengal, North-Western Provinces, West, and the Punjab, South and Central, all the divisions in the west, centre and east of the Peninsula, the west of the Central Provinces, the west of Rajputana, and the whole of Sind, Guzerat and Kattiawar. The rainfall in all parts of the Indian region was scattered throughout the week. The maximum falls exhibit very few amounts calling for notice. The following were the largest amounts:—Tavoy 1 $\frac{3}{4}$ inches; Ghazipur (North-Western Provinces) 2 $\frac{3}{4}$ inches; Bansdeh (Ballia, North-Western Provinces) 1 $\frac{1}{2}$ inches; Badagara (Calicut) 4 $\frac{1}{4}$ inches; Cunoor (Nilgiris) 8 inches; Bilaspur (Central Provinces) 6 inches; and Ambassamudram (Tinnevely) 2 $\frac{3}{4}$ inches.

The state of the seasonal fall as shown by the concluding column of the following table has been very little modified by the slight falls here recorded.

PROVINCE.	DIVISION.	RAINFALL DATA FOR WEEK ENDING 3RD MARCH 1890.			RAINFALL DATA FROM OCTOBER 15TH TO 3RD MARCH 1890.		
		Average actual rainfall of Division.	Average normal rainfall of Division.	Excess or defect in inches.	Average actual rainfall of season to date.	Average normal rainfall, October 15th to 3rd March.	Excess or defect of (seasonal) rainfall expressed as a percentage.

W. L. DALLAS,

SIMLA, the 6th March, 1890.

Assistant Meteorological Reporter to the
Government of India.

E. C. BUCK,

Secretary to the Government of India.

GOVERNMENT OF INDIA.
REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on Monday, March 10th, 1890.

From a consideration of the weather reports of the past week, it appears that we have now entered on the period known as the spring storm rainfall of India. This period has set in somewhat earlier than usual—an effect due probably to the high temperatures and low pressures which, during the past two months, have resulted from the absence of the normal winter rainfall. This storm rainfall, to which all parts of India except perhaps the west of the Peninsula are liable, originates in all probability in the increasing effect of the ascending sun on the land surface of India. This effect causes, more particularly during the day, a large flow of moist air from the sea to the land areas, and the great contrasts of humidity which exist between the land and sea generated currents of air occasion small local storms during which the vapour of the damper current is precipitated with considerable electrical disturbance.

During the week under review these causes have been operative over the greater part of India and though the rainfall has been light the area over which rain has fallen is larger than that shown in any previous week since the monsoon rains of last year. Only in Burma, the west coast of the Peninsula and the normally dry provinces of Guzerat, Kathiawar and Sind has there been no rain and at a great number of the rainfall divisions the average amount of rain received has exceeded the normal of the week.

The chart of the 4th showed that a shallow depression which had appeared over Sind on the 3rd had advanced eastward and covered the North Konkan, Khandeish and a large part of the Central Provinces, while the highest readings were reported from the submontane parts of the North-Western Provinces, hence feeble gradients for easterly winds prevailed over Northern India and rain was falling all over the region intervening between the areas of high and low pressures. A shallow depression also existed to the south of the Peninsula and the weather was unsettled at the more southern stations. Fresh winds prevailed in several parts of the Indian region, but the directions were variable. On the 5th the depression, now very slight, lay near Allahabad and the weather was rainy and unsettled over the whole of the Gangetic plain and the Punjab. The fall of snow on the hills had apparently resulted in a strong outset of heavy cool air from the Himalayas, so that northerly winds and a rising barometer prevailed along the line of the hills. In the south the weather was unaltered. On the 6th the normal cold weather distribution, *viz.*, high pressures over North-Western and Central India and low pressures over the Peninsula, the Bay and Bengal, was established and the weather had become much finer. On the following day, the 7th, a similar distribution existed and the weather was fine all over Northern India. A slight depression had formed over the Peninsula and slight rain was falling in the east and south. Pressure was, however, giving way briskly in the north-west. On the 8th, under the influence of the fall noticed on the preceding day, the high pressure area had deserted North-Western India, and advanced south-eastward to Central India and the North-Western Provinces, while the small depression over the Peninsula had advanced northward to Berar, and rain had fallen over the Central Provinces. On the 9th a moderate depression was shown over Sind and gradients between Sind and the north-west of the Punjab were rather steep. In other parts of the Indian region pressure was uniform with numerous very slight local depressions, and very variable winds. The chart of the 10th showed that the depression from Sind had advanced south-eastward to Guzerat, Kathiawar and the North Konkan, but that there was very little other change.

Temperature.—A cold period set in over India early in the week and lasted till its close. It commenced in Sind and Rajputana on the 4th, but was not

felt in the other provinces until the 5th. The cold was most severe on the 6th, after which the intensity decreased until the 8th, when it again increased, and the 10th was almost as cold as the 6th. In Madras, the variations were to a certain extent the reverse of those existing in other parts of India, the weather at the close of the week being warmer than the normal.

The following table shows the variations of the mean temperature of the present and of the past weeks from the normal average according to Provinces:—

PROVINCES.	Difference of mean temperature of last week from normal.	Difference of mean temperature of present week from normal.
Burma	+1'3	—0'2
Bengal	+1'2	—1'7
North Western Provinces	+1'4	—1'4
Punjab	+1'8	—2'5
Bombay	+1'1	—0'3
Central Provinces	+1'5	—2'2
Guzerat and Central India	+1'8	—0'2
Sind and Rajputana	+2'0	—0'2
Madras	—0'1	+0'1

This table shows that compared with the normal the mean temperature, in all provinces, except Madras, where, as previously stated, the variations are frequently the reverse of those existing in other parts of India, has fallen quickly since the preceding week and that the temperature has been low for the season. The greatest relative fall has been in the Punjab and exceeds 4°. The maximum temperature on no occasion exceeded 100° during the week under review.

Rain.—Fell in some parts of India on each day of the week under review. It is reported from forty out of the fifty-two rainfall districts into which India is divided, the heaviest average fall being in Malabar. There was no rain over Burma or in the Konkan, the Bombay Deccan, Guzerat, Kathiawar, Sind or the Jeypore district of North Madras, but in all these divisions the rainfall expected is either nil or exceedingly slight. The rainfall was in excess of the normal in one or two divisions in Bengal, in several divisions in the North-Western Provinces, in the submontane division of the Punjab, all over the south of the Peninsula and at all the Central India, Rajputana and Central Provinces divisions. Elsewhere it was defective, but generally by small amounts. The maximum falls exhibited large variations. In Bengal and Assam the only large fall reported was 3 inches at Sudiya in Lakhimpur. In the North-Western Provinces the maximum falls were generally about $\frac{1}{2}$ inch, but Bora, in the Allahabad District received 3 inches; and Muskara (Hamirpur) 1 inch. In the southern parts of the Punjab the maxima were also generally about $\frac{1}{2}$ inch, but in the submontane and north-western divisions they generally exceeded 1 inch and in Pipli in Umballa the fall equalled $1\frac{1}{2}$ inch. In the south of the Peninsula the falls were larger Palghat (Calicut) received 4 inches; Cotlayam (Travancore) 3 inches; Salyanagar (Coimbatore) $4\frac{1}{2}$ inches; Katagari (Nilgiris) 3 inches; in the central parts of the country the maxima were relatively small, seldom exceeding 1 inch, and in Rajputana and Central India they were even smaller.

The final column of the concluding table shows that in Chota Nagpur and several divisions of the North-Western Provinces, the Punjab, and Central India, there has been a considerable improvement in the seasonal rainfall.

GOVERNMENT OF INDIA.
REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of
the Crops.

Madras.—For week ending 8th March.—No rain in Godaveri, Cuddapah, Kurnool, Madras and Chingleput; moderate in Tinnevely, Nilgiris and Malabar, and slight elsewhere. Crops generally good, but withered in parts of Nellore, Chingleput, South Arcot, Tanjore, Tinnevely and Coimbatore. Paddy blighted in parts of North Arcot. Prices generally steady. Prospects fair.

For week ending 15th March.—No rain in Bellary, Anantapur, Madras, Chingleput, South Arcot, Tanjore, Trichinopoly and South Canara; slight elsewhere. Crops generally good, but withering in parts of Nellore, Chingleput, South Arcot, Tanjore, Trichinopoly, Coimbatore and Tinnevely; crops blighted in parts of North Arcot. Outturn of paddy and dry grains below average in many districts. Prices generally rising. Prospects fair.

Bombay.—For week ending 19th March.—Slight rain in two talukas of Sind. Crops damaged by locusts in Shikarpur, poor in Nasik and below average in Satara. *Fowari* in Ahmednagar withered and cotton in Dharwar blighted. Prospects otherwise satisfactory.

Bengal.—For week ending 18th March.—Rainfall more important than for some weeks past, being rather general in South-West and East Bengal, Orissa, and Chota Nagpore. Cultivation for early crops proceeding, but in North Bengal rain much wanted. *Boro* or spring rice doing well. *Rabi* crops being gathered with generally fair results. Sugarcane harvest nearly over, and new cuttings being planted out. Opium collection satisfactory, but in Mozufferpore and Sarun it has suffered from high wind and cloudy weather. In Hajipore Sub-Agency outturn of opium will be below the average. In Chota Nagpore rain has done some damage to the *mohwa* crop. Price of rice remains steady and high. Nothing further to report regarding Balasore.

North-Western Provinces and Oudh.—For week ending 19th March.—Weather warmer and occasionally cloudy, but no rain. The *rabi* on dry lands in Kumaon is nearly withered, elsewhere harvesting is in progress, and opium collection has begun, in Pertabgarh the flow of juice is reported to be poor. Summer crops are being irrigated and cane and indigo being sown. Grain is scarce in Kumaon and prices high, but elsewhere markets are fairly supplied, though prices are still unsteady.

Punjab.—For week ending 19th March.—Slight rain has fallen in parts of Ferozepore and Rawalpindi. Prices rising in Hissar, Multan, Rawalpindi, Dera Ismail Khan and Peshawar, stationary elsewhere. Sowings of extra *rabi* in progress in Lahore. Ploughings and sowings of *kharif* commenced in Jullundur, Sialkot and Lahore. Crops are said to be average in irrigated tracts and indifferent elsewhere. Outturn is expected below average. More rain urgently needed throughout the Province. Fodder is reported scarce in Hissar, Delhi, Jullundur, Lahore and parts of Multan and Rawalpindi. Poppy sowings completed in Amritsar.

Central Provinces.—For week ending 19th March.—Weather cloudy in southern and eastern districts with some heavy showers in Sambalpur. Hail has caused some damage in Saugor, Seoni and Raipur, but the prospects of the *rabi* crops continue generally favourable. Prices steady.

Burma.—For week ending 15th March.—Slight rain fell in Akyab in Lower Burma; and rain fell in ten districts in Upper Burma. The crop prospect is on the whole good. In Lower Burma there is a rise in the price of paddy in Akyab and Thayetmyo, elsewhere no fluctuations are shown. In Upper Burma there is a fall in the price in Pokokku; elsewhere no changes.

SIMLA, 10th March, 1890.

W. L. DALLAS,
Assistant Meteorological Reporter to the
Government of India.

E. C. BUCK,
Secretary to the Government of India.

Assam.—*For week ending 19th March.*—Weather seasonable. Rainfall almost general. Sowing of early rice commenced. Pressing of sugarcane and gathering of mustard still continue. Plucking of tea leaves begun in some gardens.

Mysore and Coorg.—*For week ending 12th March.*—Some rain in the civil and military station and in parts of Bangalore and Hassan districts. Crops and prospects good. Outturn of harvests favourable. Prices slightly risen in Tumkur and fallen in Mysore district.

For week ending 19th March.—Standing crops in good condition in Mysore. Rain required in Kolar. Prospects favourable. Harvesting continues. Prices slightly fallen in Shimoga.

No rain in Coorg. Coffee blossoms out.

Berar and Hyderabad.—*For week ending 12th March.*—No rain at Hyderabad. Weeding of *tabi* crops and reaping of *rabi* crops continue. Prices stationary.

For week ending 19th March.—In Berar the weather is warm and cloudy. Threshing of *rabi* in progress. Land under preparation for next season. Fodder sufficient except in Ellichpur and Dariapur taluks. Prices stationary.

Central India.—*For week ending 19th March.*—No rain fell during week. Crops and opium in Baghelkhand reported damaged by frost and rain. No other change of importance since last week.

Rajputana.—*For week ending 19th March.*—Drops of rain in Marwar and Jeypore. Agricultural operations satisfactory except in Kerowli. Standing crops good; slight damage by recent rain in parts of Kotah, Jeypore and Bhurt-pore. Agricultural stock good. Pasturage or fodder sufficient except in Marwar and Dholepore. Prices rising in Kerowli and Ulwar; steady elsewhere.

Nepal.—*For week ending 13th March.*—No rain. Weather is beginning to be warm. Prospects fair.

E. C. BUCK,

Secretary to the Government of India.

GOVERNMENT OF INDIA.
REVENUE AND AGRICULTURAL DEPARTMENT.

SCHEME FOR GIVING IMPERIAL PROTECTION TO PATENTS, DESIGNS AND TRADE MARKS IN THE UNITED KINGDOM, INDIA, AND THE COLONIES.

CIRCULAR No. $\frac{532}{72-2}$ P.

Extract from the Proceedings of the Government of India, Revenue and Agricultural Department (Patents), dated Calcutta, the 13th March 1890.

PATENTS.

The following Despatch from Her Majesty's Secretary of State for India relative to a proposed scheme for giving Imperial protection to Patents, Designs, and Trade-marks in the United Kingdom, India, and the Colonies, is published for general information:—

No. 10 (Statistics), dated India Office, London, the 23rd January 1890.

From—The RIGHT HON'BLE VISCOUNT CROSS, G.C.B., Her Majesty's Secretary of State for India,

To—The Government of India.

I forward, for the consideration of Your Excellency's Government, a copy of a memorial from the Associated Chambers of Commerce, and of the reply which I have caused to

be sent thereto upon the subject of a scheme for giving Imperial protection to patents, designs, and trade-marks in the United Kingdom, India, and the Colonies.

2. The patent business of India has increased very little since 1859; the latest return received from your Government shows 30 patents filed in the year 1860 and only 217 in 1886; while the same return shows no design registered under Act XIII of 1872. In the United Kingdom there were 9,226 patents sealed, 26,165 designs registered, and 5,520 trade-marks registered for the year 1887. If a practicable scheme is suggested for realizing the objects supported by the Associated Chambers, and if such scheme should be accepted by Great Britain and the Colonies, then it might be for the advantage of India to come under such a scheme, provided that no share in the patents charges of other countries fell upon India, and provided that no increase in expense was caused to inventors or designers seeking protection in India only.

3. I shall keep your Government informed if anything further comes of the suggestions now put forward by the Associated Chambers. Meanwhile I suggest that Your Excellency should take steps for ascertaining the views of commercial bodies in India, and of other persons who may be interested upon the matter. And I shall be glad to learn hereafter what views your Government may form of the probable advantages, disadvantages, and difficulties of the scheme which has been put forward.

• *To—The RIGHT HON'BLE VISCOUNT CROSS, G.C.B., Her Majesty's Secretary of State for India.*

The humble memorial of the Associated Chambers of Commerce of the United Kingdom.

SHEWETH—

1. That much inconvenience is at the present time caused to traders having interests in patents, designs, and trade-marks by the necessity which exists for separate grants and registrations of such patents, designs and trade-marks in the United Kingdom and in the various colonies and dependencies of the Empire.

2. That in many instances, especially with regard to trade-marks, conditions are laid down in the colonies which preclude the attainment by traders there of the privileges which, in respect of the same premises, they have been able to obtain in the United Kingdom.

3. That a desire exists in the colonies for a scheme of Imperial protection of patents, designs, and trade-marks upon application made in the applicant's place of origin, and that such desire was pointedly expressed at the Colonial Conference held at the Foreign Office in 1887 by the representatives of the colonies.

4. That the Association are fully aware of the practical difficulties which stand in the way of the realisation of a scheme of Imperial protection for patents, designs, and trade-marks, but they believe that these difficulties in no way affect the principle of such a scheme but relate only to its details, and are, moreover, such as by mutual concessions between the colonies and the mother country may be readily removed.

5. That any difficulties which at present exist to the realisation of a scheme of Imperial protection of patents, designs, and trade-marks must of necessity be increased by lapse of time, inasmuch as interests adverse to those of existing patentees and owners of registered designs and trade-marks may grow up in the various colonies and dependencies of the Empire until they in themselves create a formidable obstacle to the realization of the project, the subject of this memorial, and for this reason it is the opinion of the Associated Chambers of Commerce that it is a matter of great regret that no steps have been taken in this direction since the subject was mooted at the Colonial Conference in 1887, and it appears to the Association that the matter is one of urgency which should be taken in hand without any further delay.

6. And lastly, the Association is of opinion that the realization of a scheme of this description whereby the mother country and her colonies and dependencies will be welded together for a practical purpose, namely, the protection of their common interests in industrial property of great value and importance, would be, if only a partial, yet at the same time a most practical realization of the general aspirations of men of all parties in the Empire in the direction of Imperial Federation.

Given under the common seal of this Association the first day of January 1890.

No. R. & S. 9, dated India Office, the 23rd January, 1890.

From—SIR HORACE WALPOLE, Under-Secretary of State for India,
To—The President of the Associated Chambers of Commerce.

I am directed by the Secretary of State for India in Council to acknowledge the receipt of a memorial in which the Associated Chambers of Commerce of the United Kingdom

916 SUPPLEMENT TO THE GAZETTE OF INDIA, MARCH 22, 1890.

remark upon the inconvenience caused by the existence of different Patent and Designs laws in India and other parts of the British Empire, and urge the adoption of some scheme whereby Imperial protection, over the whole of Great Britain and the Colonial and Indian possessions of Her Majesty, might be given to patents, designs and trade-marks.

In reply, I am directed to say that your representation will be forwarded for the consideration of the Government of India.

ORDER.—Ordered, that the foregoing despatch, with enclosures, be published in the Supplement to the *Gazette of India* for general information, and that copies be forwarded to the Governments of Madras, Bombay, Bengal, and the North-Western Provinces and Oudh, and the Chief Commissioner of Burma, with the request that the views of the Chambers of Commerce and other persons interested in the matter may be obtained and communicated to the Government of India.

(True Extract.)

E. BUCK,

Secretary to the Government of India.

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

OFFICES TO WHICH THE RULES REGULATING APPOINTMENTS TO THE SECRETARIAT CLERICAL SERVICE OF THE GOVERNMENT OF INDIA APPLY.

No. 12R
708/26.

Extract from the Proceedings of the Government of India in the Home Department (Public),—
under date Calcutta, the 19th March 1890.

READ—

Home Department Resolution No. 22—1368-82, dated the 5th August 1889.

RESOLUTION.

In paragraph 18 of Home Department Resolution No. 1817, dated 3rd July 1888, enumerating the offices to which the rules regulating appointments to the Secretariat Clerical Service of the Government of India apply, the Governor General in Council is pleased to direct that for the words "The Consulting Engineers for Railways" shall be substituted the words "Consulting Engineer to the Government of India for Railways, Calcutta."

ORDER.—Ordered that a copy of this Resolution be forwarded to all Departments of the Government of India, to the Heads of Offices under the Home Department, and to the Governments of Bengal, North-Western Provinces and Oudh and the Punjab, and the Chief Commissioner, Central Provinces, in continuation of endorsement No. 22—1368-1382, dated 5th August 1889.

Ordered also that the Resolution be published in the *Gazette of India* for general information.

(True Extract.)

C. J. LYALL,

Offy. Secretary to the Government of India.

FINANCE AND COMMERCE DEPARTMENT
(Statistical Branch)E. J. SINKINSON,
Secretary to the Government of India.GOVERNMENT OF INDIA.
FINANCE AND COMMERCE DEPARTMENT.

REPORT ON THE CASH BALANCES AND MOVEMENT OF FUNDS FOR THE PAST YEAR.

No. 1964, dated Calcutta, the 22nd February 1890.

From—The Comptroller and Auditor General,

To—The Secretary to the Government of India, Finance and Commerce Department.

I have the honour to submit my report on the cash balances and resource operations of our treasuries for the twelve months from October 1888 to September 1889.

Minimum Balances.

2. The following table gives the estimated minimum balance for all India and its distribution among the several provinces for each month from October 1889 to September 1890. The figures are again distributed between District Treasuries and Reserve Treasuries and Presidency Banks in the accompanying statements marked A and B. As explained in the last report, these balances are computed with the object of providing a sum of eight crores in December, and such amounts in the previous four or five months as will admit of a steady fall from July to November and still leave the eight crores in December. As the estimates for the year are framed on the understanding that a considerable part of our Public Works expenditure is met from loans raised in July or August, the estimated amounts to be so received are duly added to the balances of August and September in addition to the net probable transactions of those months. Sufficient margin is allowed for such fluctuations in expenditure as may be produced by a sudden demand for telegraphic transfers from London or by a bumper opium crop. The balances so estimated, it must be remembered, are minimum balances, and they will be found to be lower than are usually reached in the several months of the year. The Provincial figures represent the most economical distribution of this minimum, and are safe practical guides for working our treasuries, since they enable Accountants General to ascertain the amount of help that may actually be required in any particular months.

(In lakhs of Rupees.)

MONTH.	India.	Central Provinces.	Burma.	Assam.	Bengal.	N.W. Provinces and Oudh.	Punjab.	Madras.	Bombay.	TOTAL.	Estimated gross issues.
1st October 1889	2,68	55	77	22	1,05	1,27	94	1,02	2,10	10,60	8,20
„ November „	1,82	49	48	18	1,05	1,00	83	1,00	1,80	8,65	8,24
„ December „	1,64	40	40	15	1,00	1,06	75	1,00	1,60	8,00	8,32
„ January 1890	1,58	33	40	22	1,00	1,29	84	1,24	1,65	8,55	9,37
„ February „	1,83	39	40	21	1,15	1,09	1,02	2,01	2,00	10,70	8,85
„ March „	2,14	49	62	26	1,15	1,59	96	1,89	1,90	11,00	10,76
„ April „	2,53	47	82	27	1,65	1,57	99	2,10	2,10	12,50	10,04
„ May „	1,81	42	83	33	1,05	1,36	1,01	1,64	2,25	10,70	9,43
„ June „	2,03	52	77	29	1,10	1,68	94	1,27	2,40	11,00	8,27
„ July „	2,88	64	66	25	1,15	2,19	1,12	1,36	2,25	12,50	8,31
„ August „	2,55	61	62	26	1,30	2,28	1,26	1,32	2,30	12,50	8,14
„ September „	2,47	56	64	22	1,10	1,75	1,21	1,15	2,10	11,20	8,42

3. It was stated in my last report that the method of providing a sufficient balance for one month's expenditure was more useful in limited areas than when applied to the whole of India. The principle involved in this method is that the solvency of the treasuries for one month is ensured by providing for the gross expenditure without regard to the expected receipts of the month. I have noted above in the last column the estimated gross issues for each month, and the details of the calculation are given below. It will be seen that these gross issues are larger than our working minimum in the period of pressure, while for the revenue season they are necessarily much lower than the expected balances. Practically, however, we cannot depend on the month's gross expenditure plan

in detail for the whole of India. For instance, we cannot ordinarily have in balance at Calcutta or Bombay on the 1st of each month the whole of the Presidency payments of the month, including Council Bills. On the other hand, some allowances must always be made for the delay and difficulty, to say nothing of the expense, of moving surplus funds from district treasuries, these operations being, as a rule, directed by the local Accountants General on receipt of the month's cash balance report, and time must be given even for bringing collections of revenue from the interior of the district to the head-quarter station where payments are made. A balance equal to the gross expenditure of the month forms an ample provision when the money has been already brought to head-quarters, but when land revenue is in course of receipt at twenty sub-treasuries in an extensive district (as may happen in Madras or Bombay), it may not be available for the head-quarters payments which occur mostly at the beginning of the month.

4. It is evident, therefore, that if the plan of providing a balance of a month's gross expenditure were tried in practice, it would be necessary in many cases to make large additions in the following table; however, I have not done so, but even without them the minimum in the months of pressure (October to December) would still on this principle exceed that which is in practice found sufficient:—

	Oct.	Nov.	Dec.	Jan.	Feb.	March.	April.	May.	June.	July.	Aug.	Sep.
India	86	1,18	71	71	90	86	1,03	1,12	72	71	88	76

6. The balances on the 1st of November were practically the same for the two years, but owing to a great scarcity of money in the Indian markets, large telegraphic transfers were granted from London in January and February 1889, and the payments in India during those months in bills and transfers amounted to 572 lakhs. Temporary loans aggregating 45 lakhs were also granted to one of the Presidency Banks at its own minimum rate of interest to relieve the pressure, and the cash balances in February and March were allowed to run down lower than they had been for many years.

7. In connection with these cash balances, it may be observed that the period of revenue collections being coincident with the large export season, it is often alleged that Government might lend its balances to assist trade. This and other similar allegations were discussed in paragraphs 108 to 111 of the last Financial Statement, where it was pointed out that, considering the special conditions affecting the Indian money market, the large area over which the balance is distributed, and other circumstances, the fact of the cash balance being large is no proof that it is larger than is required for the wants of Government. To give a more precise idea of the diffusion of the Government balance, I now append a statement, marked E, showing the actual distribution of the amounts on 1st April 1889. From this statement it will be seen that, while the nine Civil Accountants General and Comptrollers are supposed to incorporate in their accounts the cash transactions of about 250 treasuries, including the head offices and branches of the Presidency Banks, these treasuries include the transactions of over one thousand sub-treasuries and tehsils; and, though a balance of 13 crores in itself may appear very high, the fact that it is scattered over more than 1,250 different localities forms an important element in the question how far it can be utilised.

8. If this statement be studied, it will be manifest why at the close of the financial year the actual cash is always so much in excess of the minimum working balance, and also why so apparently large a minimum as 8 crores is required. On the 1st April, the season for collection of revenue is at its height, and at hundreds of points the receipts are just ready to be moved to the centres of expenditure. On the other hand, if from these 13 crores, 5 are subtracted to bring the total to the minimum, it will be seen that after providing for the centres, the remainder will furnish but a meagre working balance for more than a thousand treasuries that remain.

9. Comparison is often made between the amounts of the Government balances in India and in England, and as I am not aware that this subject has ever been fully explained in an official report, I take this opportunity of doing so.

10. In England, the balance shown in the Finance Accounts is simply the so-called Exchequer Balance at the Bank of England in London and at the Bank of Ireland in Dublin; this does not even include the balances of the Collectors of revenue or of the Paymaster General in those cities, and it in fact answers more nearly to our Reserve Treasury balances at Calcutta and Bombay than to anything else in India, and these on the 1st April last were $\text{£}1,14,01,833$ against $\text{£}5,992,002$ or $\text{₹}8,84,97,260$ in London and Dublin.

11. When in England, some years ago, I took an opportunity to ask an experienced officer of the English Treasury what additions he thought should be made to this to compare fairly with our Indian Public balances, after a little consideration he gave me a rough estimate, that taking—

(a) Revenue in the hands of Collectors,

(b) Paymaster General's balances (including one million for treasure-chests and deposits),

(c) Money in the hands of Paying sub-accountants,

the total additions to be made to the Exchequer Balance would be

adding then the Exchequer Balances on 31st March 1889 $\text{£}10,600,000$
 $\text{₹}5,992,002$

the Public Cash Balances in England at the close of the year would be

or at the actual Bank rate of exchange on the date (1s. $4\frac{1}{4}$ d.) : $\text{₹}16,592,002$
 $\text{₹}24,50,51,106$

12. Thus it will be seen that in the comparatively small area of the United Kingdom, with the high state of financial organisation which Mr. Gladstone has compared with what he described as the crude and backward state in India, a balance of nearly double the amount is required that we are able to work with; but even this is not all; in the estimate given me for England nothing is said of the balances of the Local Boards, the country Municipal Corporations, the Law Courts throughout the Kingdom, or the local Savings Banks, all of whose balances, as well as the Bank balances of the great system of State and Guaranteed Railways, are included in our Indian Public moneys, but are excluded from those of England. I have no hesitation in affirming that, com-

paring like with like, the Public Cash balances in England are much more than double those of India.

13. The following is the net result of inter-provincial remittances during the year, the details of which are given in the statement, marked C, annexed to this report:—

	Funds supplied to other Provinces.	Funds received from other Provinces.	Net received + Net supplied.	Previous year. Net received + Net supplied.
	R	R	R	R
India, General	7,95,67,491	18,73,27,782	+10,77,60,291	+7,31,97,727
Central Provinces	20,05,800	20,70,500	+70,700	+2,70,618
Burma	72,57,811	23,30,200	-49,27,611	+59,34,743

15. The most noticeable point in the above statements is again the large transfers from Calcutta to Bombay through the Banks. These transfers are allowed at a small premium to assist trade, and remittances of coin are made from Bombay to Calcutta at Government expense to meet the demands. As explained in former reports, the tendency of trade being to move coin from head-quarters to the interior, while our resource operations are directed to the collection of surplus to head-quarters for Council Bill payments, these collections are made, as far as possible, either by bills or transfers, and when these are insufficient, coin remittances become necessary. The most important of the coin remittances

are made from Bombay, where the greater portion of the silver imported into India is tendered for coinage. As a general rule, when specie is withdrawn from districts which are local centres of trade, the operation has to be reversed later either by Government or the public, and advantage has been taken of this fact to dispose of the treasury surplus by issue of bills at a small premium. The system under which this becomes possible by making use of the large cash balances held as the Paper Currency Reserve, while keeping this reserve in tact, was explained in the last Financial Statement. The Accountant General, Bengal, reports as follows on the working of the plan in his province during the past year:—

The treasuries situated near the several centres of trade, against which supply bills were drawn and telegraphic transfers ordered during the year, are chiefly as follows:—

(1) Jalpaiguri, (2) Dinajpur, (3) Rungpur, (4) Bogra, (5) Mymensing, (6) Serajganj, (7) Maldah, (8) Rajshahye, (9) Purneah, (10) Chittagong, (11) Backerganj, and (12) Balasore.

The drawings of the current year show an increase of Rs. 20,36,000 over those of the preceding year. This favourable result has been attained chiefly by transferring periodically to temporary currency chests the surplus balance in whole rupees of the treasuries above named, which were re-transferred to the respective treasuries at particular seasons when there was a demand for bills and drawn against. By this method the advantage of being able to dispose of the surplus specie of the treasuries named and those of the neighbouring treasuries which were remitted to them, at a premium, had been gained to the great advantage of local trade, and the incidental costs in remitting the surplus specie periodically to Calcutta, which would otherwise have been incurred, saved. The general principle observed in these transactions is never to remove a single coin that will have to be replaced within a short time by Government or the public. Thus the surplus of the jute-producing districts is stored until the jute season comes on, and then is entirely removed by bills to Calcutta. If wanted in the meantime, it is deposited in a temporary currency chest and credit given in Calcutta.

16. Other means are also adopted for regulating our resource operations with the demands of trade. Large amounts of the local surplus at mofussil treasuries are taken by the Presidency Banks by opposite payment at Presidency towns. In the North-Western Provinces, the surplus revenue is collected generally at treasuries banking with branches of the Bank of Bengal, and, if not immediately taken up, it is transferred to temporary currency chests from which it is gradually withdrawn as demands arise. In Madras, the total sum withdrawn from district treasuries amounted to 5.62, of which 3.28 lakhs were transferred through the Bank's branches. The actual trade demand on the head-quarters treasury is represented by a sum of 2.82 lakhs in Council Bills and transfers, and 2.65 in Bank Bills purchased, amounting in the aggregate to 5.47 lakhs, of which 3.28 was met by means of Bank transfers as stated above, and 68 lakhs by coin remittance, leaving a deficiency of 1.51 lakhs, to cover which a large currency remittance of silver from Bombay was necessary.

17. I may also mention that when the treasury balances are not sufficient to meet the transfers required for trade, they are granted through the Currency Department at a premium. This arrangement, together with the system of currency transfers for treasury purposes noted above, no doubt reduces, to a considerable extent, our charges for coin remittances, but at the same time the distribution of the currency balances is greatly affected. For instance, a large part of the coin balance held against the currency circulation in Bengal and the North-Western Provinces, is ordinarily locked up in temporary currency agencies, while in Rangoon, we allow a larger balance to accumulate than would be justified by the circumstances of the Burma Circle. The following statement gives the amount of transfers granted through the currency during the year 1888-89, and the premium realised on them. The largest of these remittances are made between Calcutta, Rangoon, and Bombay. The remittances to Rangoon are chiefly made for financing the rice crop, while those from Bombay are, no doubt, due to the large coinage of silver at that place. The remittances of silver to Rangoon are now made by Government steamers which are available in the transport season. In the case of district agencies in Bengal and the North-Western Provinces, no coin remittances are necessary, but the plan is resorted to to avoid treasury remittances that would otherwise be required. Hence the whole of the premium realised on the currency transfers in these provinces is a gain to Government.

Statement of Telegraphic Transfers granted to Banks, Merchants and others, through the Currency Department, during 1888-89.

18. During the twelve months under report, the demands for Supply Bills in Upper Burma fell off to a considerable extent, owing, it is believed, to the good crops of the year, which much reduced the import of rice from the Lower Provinces. Considerable remittances of silver had to be made to that country to replace the large withdrawals of Burmese coin. These coin remittances were made from Lower Burma, and Burma, as a whole, was able for the first time since the recent annexation to render assistance to India, the amount so drawn in the twelve months under review being Rs. 49,27,611 as entered in the statement in paragraph 13. This assistance comprised 32 lakhs transferred through currency, over 18 lakhs sent to the Calcutta Mint in Burmese coin, and two lakhs in foreign circle notes sent to the different provinces. On the other hand, Burma received three lakhs in small silver and copper and ten lakhs in subscriptions to the loan of rupees two crores. Allowing for issues of foreign remittance transfer receipts, the net surplus of receipts over disbursements in Burma amounted to about 22 lakhs. The remittances by Bengal and the North-Western Provinces to the opium districts were small owing to the poor crop of the year, and of the sum of 1,47 lakhs so sent as noted above, 12½ lakhs had to be withdrawn from Patna to Calcutta through the Bank of Bengal. Bombay required less help from other provinces than was necessary in the preceding twelve months, as its cash balance on 30th September 1888 was very high, and was reduced by 2,25 lakhs in the subsequent twelve months. It will be understood that in these remarks only local cash transactions are regarded; nothing is shown by them of the surplus or deficit of a province as affecting Revenue or Charge.

19. In connection with the large cash remittances, I should report to Government a change of system which has been introduced during the past year; hitherto, for the sake of economy, advantage has been taken of Government steamers to distribute coin from Bombay to Calcutta, Madras, Karachi, and Rangoon; for the last two places the same arrangement will continue, but for Calcutta and Madras it appeared that, considering the relations between Government and the Railway Companies and the risk of loss by sea, it would be desirable to try and arrange for the transit of large remittances of coin on moderate terms by railway.

20. I accordingly addressed the East Indian, the Great Indian Peninsula, and the Madras Railway Companies, and obtained their consent to the following arrangement. For some years past a reduced rate of one pie per maund per mile has been levied on consignments of 20 lakhs or upwards; it is now agreed that on consignments of 50 lakhs from Bombay to Calcutta or Madras ⅔ pie per maund per mile shall be charged; at their reduced rate I propose in future to send all these large remittances by land instead of by sea.

Small Silver and Copper Coin.

21. A statement D is annexed giving the circulation of small coin during the twelve months under review, as compared with the previous three years, and it shows that the absorption of these coins in all the provinces continues as large

as before. There is a slight decline in the demands for single pice in the Central Provinces as the Railway lines through that province are approaching completion. On the other hand, the construction of the Bengal-Nagpur Railway through Chota Nagpore has increased the demand in Bengal as compared with previous years, and the large and still increasing consumption in Assam deserves notice. The copper coin of native mintage in Burma has not been accepted in Government treasuries from 1st October last, and the demand for British coins is steadily increasing. The rise in the Punjab is ascribed to the enforcement of the Metal Tokens Act of 1889, which drove out of circulation Mansuri pice from the eastern districts of the province.

Shroff-marked Coin.

22. The following statement shews the collection and recoinage of shroff-marked coins during the year under review, as compared with the three previous years:—

	(In thousands.)

23. The diminished withdrawals of shroff-marked coin in the North-Western Provinces point to the progressive purification of the coinage. In the Punjab, over 40 lakhs of rupees were received from the Patiala and Kashmir States for railway construction, and a part of these amounts appears to have been paid in shroff-marked coin. The total amount of Burmese Peacock coin withdrawn from circulation up to 31st December last is 77½ lakhs.

A. Statement shewing the estimated minimum Cash Balances in the District Treasuries of each Province (excluding Head Offices of Presidency Banks and Reserve Treasuries) at the beginning of each month of the years 1881-82 to 1889-90.

SUPPLEMENT TO The Gazette of India.

No. 13. } CALCUTTA, SATURDAY, MARCH 29, 1890.

OFFICIAL PAPERS.

A SUPPLEMENT to the GAZETTE OF INDIA will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in PART VI of the GAZETTE.

Non-Subscribers to the GAZETTE may receive the SUPPLEMENT separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The SUPPLEMENT and PART VI of the GAZETTE can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA is required by Law, or which it has been customary to publish in the CALCUTTA GAZETTE, will be included in the SUPPLEMENT. For such Orders and Notifications the body of the GAZETTE must be looked to.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on Monday, March 17th, 1890.

The storm period, which had commenced over the greater part of India during last week, has continued during the week under review, but on the whole with rather less intensity. The number of divisions in which rainfall has been registered are fewer, and, except in North-Eastern India, the amounts are generally smaller than they were last week. This alteration is due to the intensity of the barometric depression over Bengal as compared with that in other parts of India. A condition which not only induced strongish south-westerly moist winds from the Bay to Bengal, Assam and Upper Burma, but, at the same time, resulted in a rather extensive cyclonic circulation over a large part of Northern India. Such a system of wind circulation is not favourable to the production of the small thunder-storm depressions such as affected the weather last week, so that, though more rain fell in the immediate neighbourhood of the region of maximum barometric depression, other parts of the country had less unsettled weather than was the case last week.

The chart of the 11th showed relatively high pressures existing over Sind on the one hand and Upper Assam, Upper Burma, and Tenasserim on the other. Between these two regions existed a large area of comparatively low readings, the greatest depression of the barometer being over North Bengal. The winds were anticyclonic over the western half of Northern India, cyclonic over the eastern half. In the latter region the force was fresh. Over the Peninsula the directions were variable. On the 12th the barometer had fallen over North-Western India and risen in the north-east, so that, though the same relation between the positions of the areas of high and of low pressures existed as on the previous day, readings were very much more uniform, and the winds, except just at the head of the Bay, lighter. The chart of the 13th showed that the depression over

North Bengal had re-developed and conditions were similar to those existing on the 11th. The indraught over the head of the Bay was very strong. On the 14th, conditions were generally unaltered, readings remaining highest over North-Western India and lowest over Bengal, and the winds were north-westerly to north-easterly over North-Western India and strong from south-west over the head of the Bay and Bengal. On the 15th the only change of importance was a brisk barometric fall over the Punjab. This had apparently occasioned the high pressure area to move southward to the west of the Peninsula, while it had produced relatively low pressures all over Northern India. Gradients were moderately steep over the Bay and the south-westerly current continued strong. On the 16th a similar distribution prevailed, but on the 17th the low pressure area over Bengal had again intensified into a distinct disturbance, and a new depression had appeared over Sind. The wind was cyclonic all over Northern India, circulating around the two low pressure areas. Over the Peninsula pressure was uniform and the winds variable.

Temperature.—The cool period which commenced last week has continued during the period under review. On three days the average temperature of the whole of the Indian region was above the normal and on four it was below. The coolest day was the 11th, when, with the exception of the North-Western Provinces and Madras, the temperature of all Provinces was below the average. All over the central parts of the country, Sind, Rajputana and Bombay, the weather was cooler than usual throughout almost the whole week, while in Burma, the Punjab, and Madras on the contrary the majority of days were slightly warmer than usual.

The following table shows the variations of the mean temperature of the present and of the past weeks from the normal:—

PROVINCES.	Difference of mean temperature of last week from normal.	Difference of mean temperature of present week from normal.
Burma	—0·2	+0·7
Bengal	—1·7	—0·3
North-Western Provinces	—1·4	—0·7
Punjab	—2·5	+0·3
Bombay	—0·3	—0·8
Central Provinces	—2·2	—1·6
Guzerat and Central India	—0·2	—0·8
Sind and Rajputana	—0·2	—0·2
Madras	+0·1	+2·3

This table shows that, as compared with last week, there was a fairly general increase of temperature, though, except in three provinces, the mean was still below the normal.

Rain.—Fell in 27 out of the 52 divisions into which India has been divided. It was most general over North-Eastern India and the south of the Peninsula and least general in the Gangetic plain, the Punjab, the west of the Peninsula, and the Central Provinces. The heaviest rainfall was in Assam, East Bengal and Orissa, and it was only in these districts that there was any important excess over the average. In Central Burma, Arakan, Malabar, Madras (South Central) Coorg, the Central Provinces (East), Rajputana (West) and the East Coast (Central) divisions there was also more than the usual amount of rain, but in all these regions the excess was moderate or slight. In all the other divisions where rain fell the amount was less than the normal.

The records of maximum falls show some considerable amounts in North-Eastern India, thus in Noakhally, Tipperah and Dacca the maximum falls exceed 2 inches; Sudya, in Lakhimpur, reports 4 inches; Cachar 7 inches; and Balasore 2½ inches. The falls in the North-Western Provinces and the Punjab are all unimportant, but in Madras (South Central) between 2 and 3 inches are recorded in most districts. Sambalpur (Central Provinces, East) received 1½ inches; Rambha in Ganjam 3 inches; and one district in Tinnevely, 2 inches.

PROVINCE.	DIVISION.	RAINFALL DATA FOR WEEK ENDING 17TH MARCH, 1890.			RAINFALL DATA FROM OCTOBER 15TH TO 17TH MARCH, 1890.		
		Average actual rainfall of Division.	Average normal rainfall of Division.	Excess or defect in inches.	Average actual rainfall of season to date.	Average normal rainfall, October 15th to 17th March.	Excess or defect of (seasonal) rainfall expressed as a percentage.

W. L. DALLAS,
Assistant Meteorological Reporter to the
Government of India.

SIMLA, 21st March, 1890.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 22nd March.*—Slight showers throughout except in Bellary, Anantapur, Kurnool, Madras, Chingleput, South Arcot, Tanjore and South Canara. Crops generally good, but withering in parts of Nellore, Chingleput, South Arcot, Trichinopoly, Coimbatore and Tinnevely. Paddy blighted in parts of Anantapur. Outturn of sugarcane good. Paddy and dry grains generally below average. Prices generally steady. General prospects fair.

Bombay.—*For week ending 26th March.*—Slight rain in parts of Sind, Kaira, Poona, Ahmednagar and Sholapur. Cotton in two talukas of Dharwar blighted; *jowari* in Ahmednagar middling and late crops in Satara except gram below average; crops otherwise good. Fodder sufficient except in parts of Khandesh, Nasik and Dharwar.

Bengal.—*For week ending 25th March.*—General rain in East Bengal, but elsewhere partial showers only. No rain in Behar except a light shower at Gya. Cultivation of early rice and jute proceeding, but more general rain wanted in many districts. Spring rice doing well. *Rabi* being rapidly harvested, and expected to yield fair results in most districts. Opium collection nearly over, and outturn generally reported satisfactory except in Mozufferpore and Sarun. Indigo prospects favourable throughout Behar and in Midnapore. A good crop of *mahua* expected in Chota Nagpore and the Sonthal Pergunnahs. The rice market showed a tendency to fall in East Bengal, but a slight rise reported from several other districts. Latest report regarding Balasore shows that the number of labourers employed by the District Board on the Talpada road has fallen off owing to recent showers of rain which have facilitated cultivation, but that the number of beggars receiving charity from private funds is slowly increasing.

North-Western Provinces and Oudh.—*For week ending 26th March.*—The weather has been cloudy with dust-storms and light showers here and there. Hail fell in the Meerut and Aligarh districts, and enquiries are being made as to the damage done. Harvest operations and opium collections continue, and summer crops are being sown and watered. In a few districts prices have risen but generally they are stationery, or easier, and stocks are nowhere deficient except in Kumaun.

Punjab.—*For week ending 26th March.*—Slight rain has fallen throughout the Province. Prices rising in Hissar, Sialkot and Peshawar, stationary elsewhere. Ploughing for *kharif* in progress. More rain wanted. Crops are generally suffering from want of rain. Prospects of crops on irrigation lands are reported to be average, but poor elsewhere. Crops slightly damaged by hail in Dera Ismail Khan tahsil. Fodder scarce except in Ferozepore, Amritsar, Shahpur and Peshawar.

Central Provinces.—*For week ending 26th March.*—Weather cloudy in places with slight rain in Bilaspur. Threshing of *rabi* continues. Outturn of wheat up to the average in twelve districts and somewhat below in five districts. Prices remain steady.

Burma.—*For week ending 22nd March.*—Rain fell in three districts of Lower Burma and in seven districts of Upper Burma. The crop prospect is on the whole good. The price of paddy has risen slightly in Akyab, Rangoon, Tharawaddy and Thongwa, and fallen in Prome, Thayetmyo and Toungoo; in Upper

Burma there is a rise in Mandalay and Pakôku, but elsewhere no fluctuations are shown.

Assam.—*For week ending 26th March.*—Weather seasonable. Rainfall general. Sowing of summer rice in progress. Pressing of sugarcane continues. Tea plucking begun in some gardens.

Mysore and Coorg.—*For week ending 26th March.*—Crops and prospects good in Mysore. Rain required for wet crops in parts of Kolar and Tumkur districts. Outturn of harvests generally favourable. Prices slightly fallen in Mysore.

No rain in Coorg. Prospects good.

Berar and Hyderabad.—*For week ending 26th March.*—Slight rain in Berar. Weather warm and partially cloudy. Threshing of *rabi* continues. Fodder sufficient except in Ellichpur and Dariapur taluks. Prices stationary. Land being prepared for ensuing season.

No rain at Hyderabad. Weeding of *tabi* and reaping of *rabi* crops continue. Prices stationary.

Central India.—*For week ending 26th March.*—Wheat, gram, and opium being harvested in Neemuch and Bhopawar. Water scarce in parts of Bhopawar. No other important changes since last week.

Rajputana.—*For week ending 26th March.*—Showers in parts of Alwar. Agricultural operations generally satisfactory. Standing crops good; slight damage in Jeypore. Pasturage or fodder sufficient except in Marwar. Prices generally steady.

Nepal.—*For week ending 20th March.*—Showers of little importance fell at Kathmandu. Weather cloudy at times. Potato fields are being irrigated. Prospects of wheat crop fair.

J. W. P. MUIR-MACKENZIE,
Offg. Secretary to the Government of India.

SUPPLEMENT TO
The Gazette of India.

No. 14. } CALCUTTA, SATURDAY, APRIL 5, 1890.

OFFICIAL PAPERS.

A SUPPLEMENT to the GAZETTE OF INDIA will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in PART VI of the GAZETTE.

Non-Subscribers to the GAZETTE may receive the SUPPLEMENT separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The SUPPLEMENT and PART VI of the GAZETTE can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA is required by Law, or which it has been customary to publish in the CALCUTTA GAZETTE, will be included in the SUPPLEMENT. For such Orders and Notifications the body of the GAZETTE must be looked to.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Summary for February 1890.

The weather charts of India for the month of February show that the weather conditions, which have been characteristic of the present cold weather season, have continued during the month under review. Temperature has been exceptionally high and the rainfall exceptionally light, and such depressions as have disturbed the weather, though occasioning considerable oscillations of the barometer and bringing rough squally winds to a large part of the country, have been accompanied with, when compared with similar disturbances in previous years, very slight precipitation. On the hills there has been rather more snow than during January, and at the close of the month the hills to the north of Simla appeared to have a thicker covering than they had at the close of the preceding month. The Assistant Commissioner, Kulu, reported that on the 25th of February the measurements of snow on the Kulu and Plach hills indicated a slightly deficient snowfall on the former and a considerably deficient fall on the latter, as compared with the measurements taken on the same day in 1889. He, however, explains that the reason that the amounts of the two seasons approximates at all, is, that on the day the measurements were taken this year, considerable snow fell in the Upper Valleys, so that the amounts given for the present year exhibit a somewhat exaggerated idea of the real amount, which is, as a fact, much less than at the end of February last year. Snow fell on the hills on four occasions during the month.

On the 1st of February the normal cold weather distribution of pressure and circulation of the winds existed, and the weather was fine everywhere. These conditions lasted until the 5th, when a rapid fall of the barometer in Sind heralded the approach of a depression from the westward. The chart of the 6th showed this depression overlying the western desert, and a very complete though on the whole feeble cyclonic circulation of the winds over Northern India. By the next

INDIA, No. 8, Hastings Street, Calcutta.

morning the disturbance had disappeared, and conditions were such as existed prior to the appearance of the disturbance. Normal cold weather conditions prevailed until the 14th, when another rapid barometric fall occurred in Sind, which was followed by the advance of a considerable depression across the Indus. This depression travelled north-eastward to the hills, and then passed along the line of the hills south-eastward into Bengal, where it filled up. The earlier portions of its course were marked by much rough weather, and a fair fall of rain on the plains and of snow on the hills. It left the weather over North-Western India in a somewhat unsettled state, and was followed by one or two small and feeble depressions over Sind. On the 21st pressure rose quickly in the North-West and a large high pressure area was established in that region, and lasted practically until the close of the month. During the period from the 22nd to the 28th pressure was unusually low over the North-Western Provinces and Bengal, and at times the weather was squally and unsettled over that region.

From this summary of the weather it will be seen that the only important depression of the month was that of the 14th to 17th, but that other smaller disturbances were not infrequent.

Slight depression of the 5th to 7th.—On the 4th the chart showed that the barometer had fallen as much as 0·1" over Baluchistan and the Upper Indus Valley, and that the wind had fallen to calm over that region. On the 5th pressure continued to give way, only less quickly, while the winds had shifted to south-east and east-south-east and increased slightly in force. During this day the depression, which had occasioned these changes, advanced north-eastward and the chart of the following day (6th) showed it lying over the western desert. The abnormal depression at the centre was about 0·08". By the morning of the 7th the disturbance had completely filled up. The only precipitation it occasioned was a slight snow storm at Quetta and Murree.

Important depression of the 14th to 17th.—The barometer began to fall over North-Western India on the 9th and the decrease continued slowly until the 14th when it became quicker, and amounted to 0·1" at Quetta and Mooltan. A slight cyclonic circulation was at the same time shown over Sind. During the 14th the depression advanced to the Indus and at 8 A.M. on the 15th the centre lay near Jacobabad. A well marked cyclonic circulation prevailed around the centre, but except at Karachi on the south and Murree on the north, the force was no where strong. The sky was overcast and rain had fallen at Murree and Rawalpindi. The depression apparently travelled east-north-eastward during the day and on the morning of the 16th was shown as an irregularly shaped depression at the foot of the hills in the Punjab and North-Western Provinces. The cyclonic circulation was less distinctly marked than it was on the previous day, but the south-easterly winds on the hills was strong to a gale and showers had occurred westward from Roorkee to Quetta and Peshawar. By the 17th the depression had apparently advanced into Bengal and a rapid rise of the barometer, accompanied with clear weather, north-westerly winds and a briskly falling humidity had occurred in the North-West.

Slight depressions of the latter half of the month.—A feeble depression was shown over Lower Sind on the 17th. It occasioned some cyclonic movements over Sind, Guzerat and Central India and a cloudy sky, but its influence on the weather was very slight. A second depression appeared in the same neighbourhood on the 19th with similar results. On the 25th a slight depression appeared over parts of the North-Western Provinces and slight rain fell in the Central Provinces and at Ranikhet, Simla and Patna.

Temperature.—The continued absence of rain on the plains and of snow on the hills has resulted in a prolongation of the warm period which prevailed during January. In Burma and generally throughout Northern India the excess of the mean monthly temperature over the normal average is the same as in the preceding month, but in Bombay and the Central Provinces, and to a less extent in Central India and Guzerat also there has been a rise of temperature, relatively to the mean, as compared with last month. In Madras the mean temperature of February exactly equals the normal. In the January summary it was noticed that a cold wave had commenced in the north-west on the 24th and was passing across India. The cold wave still held over a great part of India at the

commencement of the month under review, but on the 4th a recovery commenced in the extreme north-west, and this wave of warmth gradually extended until by the 7th it had reached all parts of India except Bengal and the Bay area. On the 9th a very small cold wave had appeared in the north-west, whence it worked its way quickly across Northern India, and reached Bengal on the 11th. It was succeeded by a very strongly-marked wave of heat which extended quickly to all parts of India except Madras. It was most intense on the 14th, 15th and 16th. On the last date, deficient temperatures appeared in the extreme north-west, but they made very little way, and excessive temperatures continued to prevail over the greater part of the Indian region until the last days of the month when the thermometer fell below the normal at many central stations.

The high temperatures about the middle of the month were very striking, and the course of the wave across Northern India was well marked. The following table shows the excess of the mean temperature over the normal average along a line running from Peshawar to Calcutta :—

Date.	Peshawar.	Lahore.	Delhi.	Lucknow.	Allahabad.	Gya.	Burdwan.	Calcutta.
12	0	0	0	0	0	0	0	0
13	+11·7	+8·7	+6·0	+1·4	+0·1	+1·7	—2·5	—3·6
14	+9·1	+6·5	+7·7	+3·9	+3·9	+2·1	—1·1	—1·9
15	+12·4	+6·1	+6·5	+3·7	+3·5	+4·2	+1·3	+0·1
16	+8·6	+11·1	+5·7	+1·2	+3·3	+3·5	+4·6	+3·7
17	—3·0	+3·1	+2·2	+5·6	+5·9	+2·4	+3·4	+3·9
18	—0·4	—2·6	+3·9	+5·9	+8·8	+8·2	+6·7	+7·0
19	+0·7	+4·4	+1·4	+2·2	+2·9	+6·5	+9·9	+6·0

On the hills at this period the excess of temperature was even more marked than on the plains :—

Stations.	12th.	13th.	14th.	15th.	16th.	17th.	18th.
Murree	0	0	0	0	0	0	0
Simla	+14·8	+15·8	+12·5	+13·1	+4·0	—5·1	—0·5
Darjeeling	+13·5	+8·1	+7·8	+9·8	+2·0	—0·3	+1·4
Mount Abu	+10·2	+9·3	+5·3	+6·7	+4·8	+7·2	+6·4
Pachmarhi	+6·9	+6·2	+6·0	+6·3	+4·1	+5·8	+5·8
	—0·2	+3·1	+3·1	+3·2	+11·2	+5·6	+1·3

This table shows that the excess of temperature was just as marked at a height of 7,000 feet as at the sea level, but the propagation eastward of the wave was less distinct at the higher than at the lower level.

The following table shows the progression of temperature week by week throughout the month for each province :—

TABLE A.

PROVINCE.	DIFFERENCE OF MEAN TEMPERATURE FROM NORMAL FOR WEEK ENDING FEBRUARY				Difference of mean temperature from the normal for the month.
	10th.	17th.	24th.	3rd March.	
Burma	+0·8	+1·3	+1·7	+1·3	+1·2
Bengal	—0·9	+2·2	+3·3	+1·2	+1·3
North-Western Provinces	+0·7	+4·4	+2·9	+1·4	+2·2
Punjab	+2·2	+5·9	+1·3	+1·8	+2·5
Bombay	+1·6	+2·7	+2·1	+1·1	+1·8
Central Provinces and Berar	+2·2	+2·8	+2·7	+1·5	+2·1
Guzerat and Central India	+0·8	+5·0	+3·6	+1·8	+2·6
Sind and Rajputana	+1·9	+6·4	+3·6	+2·0	+2·6
Madras	+0·2	—0·6	+0·9	—0·1	0

Rain.—The concluding table shows that except the south of the Peninsula and Ceylon all parts of the Indian region have received less than their normal amount of rain. In the Cis-Gangetic portions of the North-Western Provinces, North Bengal, Orissa, the North Circars, Berar, Khandeish, Sind, Cutch, Guzerat, the Konkan and the Deccan, there was no rain whatever throughout the month, and in seven other divisions the total rainfall of the month was less than one-tenth of an inch.

The heaviest rainfall was in Ceylon where the total for the month amounted to $4\frac{1}{2}$ inches; this was followed by $1\frac{1}{4}$ inches, in Mysore and Bellary, and this again by $\frac{1}{2}$ inch in the Western Punjab. In other divisions any rain which fell was light and insignificant.

The following table gives complete data and shows the actual average rainfall and the normal rainfall of the month of the twenty-one districts into which the country is divided, so far as it is indicated by the telegraphic reports of a few stations in each district:—

DISTRICTS.	Number of Stations.	Normal average rainfall in February.	Actual average rainfall in February, 1890.	Difference from the average in February, 1890.

Government of India.

SIMLA;

The 24th March, 1890.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on
Monday, March 24th, 1890.

The period of unsettled weather and of fairly general storm rainfall which commenced three weeks ago has continued over India during the week under review. The particular distribution of pressure which has prevailed has determined the heaviest rainfall to two regions, *viz.*, the north-east and north-west of India; but the greater part of the country has been visited at some time during the week by local showers of greater or less amount. In the two regions of heavier rainfall the weather has been cloudy and unsettled and the winds strong and squally at times, while dust and thunderstorms have occurred frequently. In other parts of the Indian region the weather has been fine with only occasional cloudy periods and temperature has increased steadily. On the hills of North-Western India the unsettled conditions common to the whole of that tract of country have been more intense than on the neighbouring plains, and on some days of the week the rainfall was heavy and continuous. In consequence, at the hill stations the temperature has been low both relatively to the normal and to the temperature of some preceding weeks.

On the morning of the 18th a large low pressure area overlay Northern India with the exception of Assam and Bengal. Within this large low pressure area two small depressions were shown—one over Sind and a second over Central India. Readings were relatively high on the coasts of the Peninsula and highest over Assam and Upper Burma. Gradients were comparatively slight, and, except in Assam, where the wind was north-easterly, at the head of the Bay, where it was south-south-westerly, and in North-Western India, where the directions were cyclonic, the winds were generally light and variable. Thunder showers were reported from Assam, but elsewhere the weather, though in places cloudy, was fair. The chart of the 19th showed a fairly general and brisk rise of the barometer over India; but owing to the increase being less within the depression over North-Western India than in surrounding regions the relative intensity of the disturbance had increased and the cyclonic movements around the centre were more marked. In other respects very little change had occurred. The weather was rather cloudy over a large part of India and the notices of dust or thunderstorms and of gales of wind were very numerous. On the 20th there was no important change, the weather remaining unsettled all over Northern India with depressions in the North-East and North-West. On the 21st very uniform pressures prevailed over India, though feeble depressions were shown in different parts of the country. The wind was steady and fresh at the head of the Bay and on the Sind and Konkan coasts, but elsewhere it was variable in direction though often strong in force. A good deal of cloud prevailed over Northern India with showers on the hills. On the 22nd the uniformity of pressure noticed on the previous day had disappeared. Readings were high in the north-west of the Punjab and over Kattiawar, while depressions were shown over Sind, the Central Provinces, and Bengal. Strongish cyclonic winds prevailed both in North-Western and North-Eastern India, while over the Peninsula the directions were variable. The weather was somewhat finer than on the preceding morning. The charts of the 23rd and 24th showed no practical change in the distribution. Depressions with their surrounding cyclonic circulations existed both in the north-east and north-west, and the weather both in the Punjab and Assam was cloudy and showery. Elsewhere pressure was more uniform and the weather fine.

Temperature.—The general temperature of the whole Indian region for the week has been above the normal. The warmest day was the 19th when the mean temperature of all provinces exceeded the normal; the coolest day was the 22nd when the mean temperature of North-Western India was largely below the average. On the 21st and 22nd the cold in the Punjab, both on the hills and

plains, was very great for the time of year. The following table gives the deficiency of the maximum temperature compared with the normal maximum on those two days. On the other hand, the temperature over the Peninsula and to a certain extent over the Central Provinces has risen steadily and been fairly high. Maxima between 100° and 105° were reported from the inland parts of Madras and from one station in Burma on the 18th. As the week progressed these two areas of high temperature extended, and at the close of the week the former had included a

large part of the Central Provinces and Orissa, the latter the whole district from Tounghoo to Mandalay. The following figures give the variations of the mean temperature of the present and of the past weeks from the normal average:—

STATION.	DIFFERENCE OF MAXIMUM FROM NORMAL MAXIMUM.	
	21st.	22nd.
Delhi	— 15.9	— 5.6
Lahore	— 9.1	— 10.5
Rawalpindi	— 2.6	— 15.6
Peshawar	+ 0.2	— 8.2
Ranikhet	— 10.2	— 12.8
Simla	— 10.0	— 18.9
Murree	— 3.9	— 5.2

PROVINCES.	Difference of mean temperature of last week from normal.	Difference of mean temperature of present week from normal.
Burma	+ 0.7	+ 1.8
Bengal	— 0.3	+ 1.6
North-Western Provinces	— 0.7	+ 0.5
Punjab	+ 0.3	— 1.2
Bombay	— 0.8	+ 1.1
Central Provinces	— 1.6	+ 2.2
Guzerat and Central India	— 0.8	+ 1.6
Sind, Rajputana	— 0.2	+ 0.8
Madras	+ 2.3	+ 0.9

This table shows that in all provinces except the Punjab the mean temperature of the week has exceeded the normal average and that except in that province and in Burma the mean temperature as compared with the normal has been higher than it was last week.

Rain.—As mentioned above the rainfall has been fairly general, but except in the north-west and north-east, the amounts are small and have mostly fallen during the occurrence of slight dust or thunderstorms.

In Tenasserim, Lower and Central Burma and Arrakan there has been no rain during the week, but as hardly any fall is expected during this period, the deficiency is of no importance, and does not affect the seasonal rainfall. In Bengal and Assam the rainfall has been general, but the amount received decreased on proceeding northward, and in Behar there was practically none. The North-Western Provinces, with the exception of the submontane district, was like Behar practically rainless, but still further to the westward the amount again increased and over the Punjab was heavy. Over the Peninsula the fall was very light, the average amounts received in each division varying between 0.01 inch and 0.10 inch, while Coorg, Mysore, the Konkan and Madras South and Central received none at all. Guzerat, Kattiawar and Sind with the whole of Central India were also rainless, but the Central Provinces received a moderate rainfall.

The divisions in which the weekly rainfall is in excess of the normal are those in Assam and Bengal and the Punjab, the submontane division of the North-Western Provinces, Khandeish, Berar and the Central Provinces (East). The greatest excess was in Assam (Surma).

The maximum falls reported are in many cases large. Two subdivisional stations in East Bengal received $4\frac{1}{2}$ inches; Sylhet received $5\frac{1}{2}$ and Silchar 7 inches; and Sibsagar and Lakhimpur received between 2 and 3 inches. In other parts of North-Eastern India the amounts were smaller and over Western Bengal and the greater part of the North-Western Provinces the falls were insignificant. Kalsi (Dehra Dun) received 1 inch and in the submontane and north-western divisions of the Punjab falls of 1 inch were general. Dera in Kangra received 3 inches; over the Central parts of the country and the Peninsula there were no falls worthy of note.

PROVINCE.	DIVISION.	RAINFALL DATA FOR WEEK ENDING 24TH MARCH 1890.			RAINFALL DATA FROM OCTOBER 15TH TO 24TH MARCH 1890.		
		Average actual rainfall of Division.	Average normal rainfall of Division.	Excess or defect in inches.	Average actual rainfall of season to date.	Average normal rainfall, October 15th to 24th March.	Excess or defect of (seasonal) rainfall expressed as a percentage.

W. L. DALLAS,

Assistant Meteorological Reporter to the
Government of India.

E. C. BUCK,

Secretary to the Government of India.

SIMLA,

The 27th March, 1890.

GOVERNMENT OF INDIA.
PUBLIC WORKS DEPARTMENT.
CIVIL WORKS.

Irrigation.

REVENUE REPORT OF IRRIGATION WORKS IN BENGAL FOR 1888-89.

No. 63-L, dated Calcutta, the 27th March 1890.

RESOLUTION—By the Government of India, Public Works Department.

Read—

The Revenue Report of Irrigation Works in Bengal for 1888-89 and the Resolution thereon by the Government of Bengal, No. 64 I. A., dated 13th January 1890.

OBSERVATIONS.—The canals or systems of canals in Bengal dealt with in the Revenue Report for 1888-89 are eight in number: the Nuddea rivers system has been transferred from the charge of the Board of Revenue to that of the Public Works Department from the beginning of the year. The Major Works are four, of which the Hidgelli Tidal Canal is for navigation solely, while the Orissa, Midnapore and Sone systems are mainly intended for irrigation; and of the four Minor Works only the Sarun Canal has any irrigation under it. For the Nuddea rivers system only Revenue Accounts are kept. The following statement shows the Capital expenditure during and up to end of the year 1888-89 on the remaining seven works:—

	Number of works.	DURING THE YEAR 1888-89.							Total direct and indirect to end of 1888-89.
		Works.	Establishment.	Tools and Plant.	Suspense Account.	Total direct charges.	Indirect charges.	Total direct and indirect charges.	
		R	R	R	R	R	R	R	R
<i>Major Works.</i>									
Productive	4	5,73,880	1,27,067	36,390	37,210	7,74,547	18,229	7,92,776	6,05,42,061
<i>Minor Works and Navigation.</i>									
Provincial (in operation)	3	1,10,743	35,728	8,693	—4,491	1,45,673	5,002	1,50,675	1,02,41,327
TOTAL	7	6,84,623	1,62,795	40,083	32,719	9,20,220	23,231	9,43,451	7,07,83,388

2. The principal share of the Capital outlay was incurred on the Orissa project, on which it amounted to R4,88,452 for works, but no details of the expenditure are given in the Report. It appears, however, that 13 miles of canal for irrigation only and 42 miles of distributary channel were added to the system during the year. It is requested that more information may be supplied in future Reports, on the nature and distribution of this expenditure.

On the Sone Canal R93,250 were spent on works on Capital account. The principal works carried out were three docks at Bedadi, Nasriganj or Daodnugger, a warehouse, a syphon aqueduct and numerous permanent outlets.

The Capital outlay incurred on the Orissa Coast Canal and the Calcutta and Eastern Tidal Canals amounted to R70,302 and R40,448 on works respectively. On the former the canal-banks, locks, and ferry-ghats were finished off, and the Panchpara supply pipe completed. On the latter two wrought-iron caissons for closing the large locks at Dhappa and Chitpore were provided.

3. The following table shows the progress that has been made in extending the main canals and their distributaries:—

	SANCTIONED.		COMPLETED.	
	Miles of canals.	Miles of distributaries.	Miles of canals.	Miles of distributaries.
<i>Major Works.</i>				
Productive Works	752	3,637	720	2,211
Figures for 1887-88	752	3,623	701	2,168
<i>Minor Works.</i>				
Of which Capital and Revenue Accounts are kept (in operation)	145	Nil	143	Nil
TOTAL	897	3,637	863	2,211
Figures for 1887-88	897	3,623	844	2,108

A long length, about 1,387 miles, of distributaries remain to be completed on the Orissa system, and until considerable progress with these is made, the financial results of this system must continue to be bad.

4. The actual financial results for the year of the works in operation are shown in the following statement:—

Canal.	Capital Outlay.	GROSS REVENUE COLLECTED.			WORKING EXPENSES.			Net Revenue.	Percentage of net Revenue on Capital outlay.
		Irrigation Revenue.	Miscellaneous Receipts.	Total.	Direct.	Indirect.	Total.

" 1887-88	6,98,39,937	7,53,196	9,88,320	17,41,516	18,08,736	1,00,994	19,09,730	—1,68,214	...
<i>Minor Works of which only Revenue Accounts are kept—</i>									
Nuddea Rivers, 1888-89	...	...	1,91,888	1,91,888	1,34,694	6,075	1,40,769	51,119	...
Ditto, 1887-88	...	...	...	1,98,675	...	...	92,022	1,06,653	...

These figures show a marked improvement over those for the previous year. Excluding the return from the Nuddea rivers, a deficit on the remaining systems of ₹1,68,214 in 1887-88 has been converted into a surplus of ₹1,48,846 for the year under review. This result is principally due to the deficiency and early cessation of the rainfall, which forced the cultivators to apply more freely than usual for canal water. The increase in gross revenue from the four Major Works amounts to nearly three lakhs, and is combined with a decrease in working expenses of nearly one lakh, so that the total improvement in this class of works amounts to nearly four lakhs. But the combined result for these works still exhibits a deficit of over one lakh. This is excluding the interest charges on the Capital outlay. The simple interest account to the close of the year shows a deficit of nearly 341 lakhs.

5. The following statement shows the revenue assessed for the year on the irrigation works in operation, in which is included the rabi assessment for 1888-89, the greater part of which is not collected till 1889-90. The corresponding figures for the previous year are also given, but as they only include those instalments of the assessment which became actually due during the year, they are not directly comparable with the figures for 1888-89, which comprise the whole demand :—

	Area irrigated.		Assessed water-rates.		Rate per acre irrigated.	
	1888-89.	1887-88.	1888-89.	1887-88.	1888-89.	1887-88.
	Acres.	Acres.	₹	₹	₹	₹
Orissa Canal	159,292	109,506	2,42,808	1,50,297	1.52	1.37
Midnapore Canal	69,777	65,864	1,31,433	1,02,532	1.88	1.56
Sone Canal	355,909	315,380	8,05,790	7,25,810	2.26	2.30
TOTAL	584,978	490,750	11,80,031	9,78,639	2.02	1.99

6. The area irrigated shows a substantial increase over the figures for the previous year, due to the cause mentioned in the last paragraph. The failure of the rains in Orissa occurred in October 1888 just at the time the majority of the leases expired, so that the cultivators were left no option but to renew. The system that obtains in Bengal is to issue water leases for areas to be irrigated. The leases are either for five years, in which case any crop can be grown and the land is measured once for all, or annual leases which are granted for particular crops only, and the area irrigated is measured before the crop is gathered.

In Orissa, almost the whole irrigated area is under five-year leases, 152,282 acres out of the total area of 159,292 acres being so cultivated. For the Sone Canal the figures are—

	Leased acres.	Irrigated acres.
Five-year leases	200,275	200,102
Annual leases	345,682	355,909.

The excess in the irrigated over the leased area in the case of the annual leases is due to unauthorised irrigation, but this shows a satisfactory tendency to diminish.

7. The proportion of kharif to rabi cultivation is as follows :—

Canals.	Kharif. Acres.	Rabi. Acres.
Orissa	156,513	2,779
Midnapore	69,777	...
Sone	246,922	108,987
Sarun	3,897	3,316
TOTAL	477,109	115,082

The following were the principal crops irrigated :—

	Acres.
Rice	447,919
Wheat	42,742
Barley	15,521
Sugarcane	22,664

The gross value of all the crops irrigated is estimated to be 181 lakhs.

The demands and realizations of the year were as follows :—

	Major Works. ₹	Minor Works. ₹
Opening balance of demands	5,59,883	33,492
Demands of year	14,65,751	8,55,709
Closing balance	5,79,983	34,927

8. In para. 69 of the Report it is remarked that the appointment of the Committee to investigate the complaints that had been made against the administration of the Sone Canal had an unfavourable effect on the collections of the year. This is, however, hardly borne out by the figures given, which show that the percentage of collection of the current demand was larger for 1888-89 than for the previous year. The Committee referred to was appointed in November 1887, and a copy of its Report and of the Resolution of the Government of Bengal thereon was received by the Government of India with letter No. 231 I of 8th February 1890. The Report is very elaborate and complete, and it is satisfactory to learn that the adoption of some of the Committee's recommendations had almost put a stop to the complaints and agitation which preceded its appointment.

9. There are one or two points in the Committee's Report which seem to call for some notice from the Government of India, and they may be conveniently referred to here. The first of these is the proposal made in paras. 194 to 212 of the Report to substitute for the present method of leasing by areas, which areas it is the duty of the Canal Officers to supply with water, that of leasing by volume. In other words, they would select an area of ground that can be commanded by an outlet, would assume an irrigating duty of (say) 80 acres per cubic foot per second as suitable for rice crops, and then would lease the outlet to the cultivators and let them make the most of the supply that they can. This system of co-operative irrigation has been followed with much success in Spain and Italy, and if capable of adoption in India it would enable the villagers to cultivate what crops they pleased, avoiding all the troublesome measurements of areas and inspections of crops now necessary, and the opportunities for oppression thereby afforded to the subordinate Canal Officers. Theoretically speaking, this proposal cannot but commend itself to the Government of India. It is probable that it could not be carried out everywhere; it is possible that the conditions necessary before it can be given a trial do not yet exist anywhere in Bengal; but the Government of India regrets to find that the matter is not so much as referred to in the Resolution on the Committee's Report. The attention of His Honour the Lieutenant-Governor is invited to this important question.

10. In para. 16 of the Resolution of the Government of Bengal on the Committee's Report it is stated that the existing long leases for kharif irrigation at the rate of ₹2 per acre will be extended from five to seven years, and an undertaking given that no increase shall be made in this rate in respect to leases entered into before the close of 1895-96. This practically extends the maintenance of the present rate per acre to the year 1902-3. It seems questionable whether this term is not too long, as it is impossible to forecast whether the value of agricultural produce will not largely increase in the period named, which might render the rate inadequate, even if at present it is as high as the cultivators find it profitable to pay. The Lieutenant-Governor has pointed out very distinctly in his Resolution that the water-rates should not be unduly lowered, since the Sone Canal cannot yet be considered self-supporting, so that any deficiency has to be met from the general revenues, and falls on the general tax-payer.

11. The details of the working expenses are shown in the following statement :—

	1888-89.					1887-88.
	Works.	Establishment.	Tools and Plant.	Indirect charges.	Total.	Total.

Per acre irrigated* . . .	...	...	...	...	2.44	3.10

* Irrigation systems only.

On the Orissa Canal the principal works carried out were the repair of the apron of the Mahanadi weir, of a large stone groyne above the Brahmini weir, and of the slopes and crests of the protective embankments. The average rate per mile for the maintenance of the main and branch canals was R480 against R328 for the preceding year. For distributaries the rate was R48.77 against R39.69.

On the Sone Canal masonry arches were substituted for wooden platforms in the case of 14 bridges, and the rebuilding of the piers of the river sluices on the Dehree side of the Sone weir was completed. The average rate per mile for the maintenance of main and branch canals was R1,504 against R1,512 in the previous year, and for distributaries R51.66 against R50.00.

On the Midnapore Canal the apron of the Midnapore weir was replaced, and the shutters of the Panchkoora weir sluices repaired; the cost of clearing silt from the locks and lock entrances was considerable. The maintenance rates were for main canals R1,743 and for distributaries R79 per mile.

12. Credit is taken, in para. 4 of the Resolution that prefaces the Report, for a substantial reduction in the charges incurred for establishment on the maintenance and management of the canals, but the proportionate charge under this head is still very high. A large share of the establishment charge is on account of the cost of revenue management, no less than R5,39,571 being so debited. Of this R2,27,337 is on account of the Civil Officers engaged in the collection of revenue. The total irrigation revenue collected was only R10,22,352, so that the proportionate amounts on account of revenue management and collection charges were respectively 52.78 and 22.23 per cent. These proportions are very high, and the Canal Department should aim at a substantial reduction. The incidence of working expenses per acre irrigated, which was R2.44 in Bengal, compares with rates of R1.13 and R0.79 per acre in the Punjab and Madras respectively.

13. The number of complaints filed during the year on the Orissa system was 4,676, and 1,632 were left over from the previous year; 5,067 were disposed of, leaving 1,241 pending. On the Midnapore Canal the number of complaints outstanding and filed, was 1,731, of which 1,492 were disposed of. On the Sone Canal 7,637 complaints were outstanding or filed, of which 5,772 were settled. Of the complaints 5,161 related to remissions, and in 2,201 cases remission was allowed, and refused in 2,960.

A large number of these complaints appear to have related to assessments on account of "unauthorised irrigation." The Government of India observes with satisfaction the statement in para. 19 of the Lieutenant-Governor's Resolution on the Irrigation Committee's Report, that assessments on this account will cease in future.

14. The following statement shows the receipts and expenditure on account of navigation, and compares the figures with those of the previous year :—

	Orissa Canal.		Midnapore Canal.		Hidgelli Tidal Canal.		Sone Canal.		Calcutta and Eastern Canals.		Orissa Coast Canal.		Nuddea Rivers.	
	1888-89.	1887-88.	1888-89.	1887-88.	1888-89.	1887-88.	1888-89.	1887-88.	1888-89.	1887-88.	1888-89.	1887-88.	1888-89.	1887-88.
	<i>R</i>	<i>R</i>	<i>R</i>	<i>R</i>	<i>R</i>	<i>R</i>	<i>R</i>	<i>R</i>	<i>R</i>	<i>R</i>	<i>R</i>	<i>R</i>	<i>R</i>	<i>R</i>
Receipts . . .	77,908	71,004	1,49,480	1,26,574	53,921	41,858	57,823	55,904	5,69,920	5,79,934	65,047	53,854	1,91,791	1,98,67
Expenditure . . .	46,606	27,766	12,480	31,329	78,040	66,976	40,373	35,356	2,93,801	2,24,656	77,018	83,524	1,40,769	92,07
Length of navigable canal . . .	Miles.	Miles.	Miles.	Miles.	Miles.	Miles.	Miles.	Miles.	Miles.	Miles.	Miles.	Miles.	Miles.	Mile
	177	170	53	53	29	29	218	218	27	27	97	97	477	4

The receipts were divided as follows :—

	<i>R</i>
Tollage on private boats	11,14,478
Ditto Government boats	15,369
Ditto rafts	14,065
Transport service	13,745
Fines and sundries	7,239

The aggregate ton-mileage was 50,658,504; the estimated value of the cargoes was 1,366 lakhs, and the number of passengers carried was 466,000.

The receipts of the Calcutta and Eastern Canals are said to have suffered from railway competition, and arrangements are under consideration for altering the system of toll collection in a manner more advantageous to the canal revenue.

The scheme for the remodelling of the Hidgelli Tidal Canal has been sanctioned by the Secretary of State, and will be carried out as a Provincial work. It is anticipated that the defects in the cross-drainage arrangements, which were prominently brought to notice by the severe floods of August 1888, will be remedied by the lowering of the bed of this canal, which is a feature of the new scheme.

15. Some interesting details are recorded in the Report of the irrigating duty of water. The figures given apply only to the kharif crop when the demand for water is large, and the supply available is fully utilised; whereas, while the rabi crop is being cultivated, the supply is always in excess of the demand. On the Orissa Canal the duty of the supply utilised ranged from 200 to 98 acres per cubic foot per second, the figures for High Level Canal Range II being neglected, as being untrustworthy. The average duty during the period when the demand for irrigation was at its highest was 60.32 acres. This is higher than the duty for the previous year on account of the greater rainfall. On the Sone Canal the duty varied from 80 to 49 acres, the average being 65.2 acres.

16. Crop experiments on the irrigation under the Orissa Canal gave an average return of 1,298lb of paddy (unhusked rice) and 1,610lb of straw per acre. These figures are less than the average for the five previous years. On

unirrigated land the returns were 880lb and 1,120lb of paddy and straw respectively. On the Sone Canal some special experiments were made by a Revenue Officer deputed for the purpose. He estimated the return from selected crops in irrigated land to be nearly 1,500lb of paddy. From average crops for a series of years the return is estimated to be 1,300lb. The quantity of rice may be taken as being two-thirds of that of the paddy.

Experiments comparing the fertilising properties of canal and well water were uniformly in favour of the former, except in the case of the barley crop. Barley is never irrigated from wells when canal water is available in the North-Western Provinces and Punjab.

17. The attention of the Government of Bengal is invited to the early consideration of the question whether the continued maintenance of the Sarun Canals is necessary and advisable. They were primarily intended for the supply of water for the manufacture of indigo, and a guarantee of a portion of the annual cost of maintenance was given by those interested in its construction, who were also appointed Canal Managers. The annual guarantee amounted to R21,850, but the cost of maintenance for the year under review was R36,332. The collections on account of the guarantee amounted to only R20,814, and there is a recurring and increasing deficit under this head. The period for which the guarantee is current expires on 1st April 1890, and thereafter the canal will, so far as can be judged, be worked at a greater loss even than at present.

18. The complete copy of the Irrigation Revenue Report was received by the Government of India only on 1st March, which, though earlier than the date of receipt of the Report for the previous year, is still three-and-a-half months after the date fixed for its submission. The Report is drawn up in correct form, and is well illustrated with maps of the various systems.

ORDER.—Ordered, that copies of this Resolution and of the Report be forwarded to the Finance and Commerce, and Revenue and Agricultural Departments for information.

Ordered also, that copies of this Resolution be forwarded to the Govern-

The Governments of Madras, Bombay, North-Western Provinces and Oudh, and the Punjab.
The Chief Commissioners, Central Provinces, Burma, Assam, and Coorg.
The Residents at Hyderabad and in Mysore.
The Agents to the Governor General for Central India and Rajputana.

ment of Bengal for information and guidance, and that copies of the Resolution be forwarded to the Local Governments and Administrations in the Public Works Department noted in the margin, for information.

Ordered further, that this Resolution, and the Resolution by the Local Government be published in the Supplement to the *Gazette of India*, and that copies of this Resolution and of the Report be forwarded to Her Majesty's Secretary of State for India.

J. G. FORBES, Colonel, R.E.,
Deputy Secretary to the Government of India.

No. 64 I.A., dated Calcutta, the 13th January 1890.

RESOLUTION—By the Government of Bengal, Public Works Department.

READ—

The Canal Revenue Reports for 1888-89, and Chief Engineer's Note on same.

The outlay, direct and indirect, on canals in Bengal, for which capital accounts are kept, amounted at the close of the year 1888-89 to R7,15,56,843. Of this sum R6,05,42,061 is the amount spent on Major Irrigation Works and charged to Loan Funds; while the expenditure on Minor Works was R1,10,14,782, of which R93,75,327 was provided from Provincial Revenues, R8,66,000 was the grant contributed by the Imperial Government from Famine

Relief and Insurance Funds in aid of the construction of the Orissa Coast Canal and R7,73,455, representing expenditure on surveys and investigations for irrigation works which have not been carried out, was provided from Imperial revenues, but is not now chargeable with interest.

On Major Works the capital outlay during the year was R7,92,776, of which R6,38,718 represents the progress made with the revised project for the Orissa Canals, and R1,51,340, the expenditure on the Sone system; that on Minor Works was R1,49,475, of which R1,01,306 was spent on the Orissa Coast Canal, now nearly completed and open to traffic throughout its length, and R49,369 on the Circular and Eastern Canals.

2. The length of the canals in Bengal now in operation is altogether 864 miles, of which 621 miles are navigable. The area which, in their present state of completion, they are capable of irrigating is 1,422,319 acres, and the area actually irrigated in 1888-89 was 574,216 acres, the crops raised on which are valued at R1,81,10,045.

The traffic is represented by 195,140 boats which plied on the canals with passengers or cargo, and measured 3,747,300 tons. These figures do not include the traffic on the Nuddea rivers, which were brought under the management of the Public Works Department at the commencement of the year. On these rivers the boats which paid toll were 48,224 in number, and were measured at 839,502 tons.

3. Receipts and expenditure are shown in the following statement, where the results of three years can be compared.

	1888-89.		1887-88.		1886-87.	
	Receipts.	Expenditure.	Receipts.	Expenditure.	Receipts.	Expenditure.
<i>Major Irrigation Works.</i>	R	R	R	R	R	R
Orissa Canals . . .	2,43,294	4,05,019	2,22,679	5,02,450	1,79,519	5,20,543
Midnapore Canal . .	2,51,510	2,09,804	2,33,925	2,50,396	2,33,974	2,35,038
Hidgellee Tidal Canal .	55,097	78,040	41,858	66,976	53,494	22,735
Sone Canals . . .	8,31,278	7,94,432	5,88,618	7,52,348	9,02,692	5,97,821
TOTAL . . .	13,81,179	14,87,295	10,87,080	15,72,170	13,69,679	13,76,137
<i>MINOR WORKS AND NAVIGATION.</i>						
<i>Irrigation and Navigation Works.</i>						
Sarun Canals . . .	20,814	36,332	20,665	29,397	12,427	28,659
Calcutta and Eastern Canals	5,75,125	2,93,801	5,79,934	2,24,657	4,83,654	1,92,264
Orissa Coast Canal . .	66,174	77,018	53,837	83,507	29,488	61,426
TOTAL . . .	6,62,113	4,07,151	6,54,436	3,37,560	5,25,569	2,82,349
GRAND TOTAL . . .	20,43,292	18,94,446	17,41,516	19,09,730	18,95,248	16,58,486

The net deficit on Major Works is R1,06,116 contrasting with deficits in 1887-88 of R4,85,090 and in 1886-87 of R6,458, while Minor Works show incomes in 1888-89 of R2,54,962, in 1887-88 of R3,16,876, and in 1886-87 of R2,43,220. All irrigation works taken together shew a net income in 1888-89 of R1,48,846; but as interest charges payable to the Imperial Government on the capital spent on Major Works amounted to R23,39,849, the actual deficit to be met from Provincial revenues was R21,91,003.

4. The better results of 1888-89 as compared with 1887-88 have been mainly due to increased receipts, but the statement shews that considerable re-

ductions of expenditure were also effected. In Orissa one great outlet of expenditure, the reconstruction of the two weirs which were partially overthrown by the floods of 1886, a work which for two years has been a heavy charge on the revenues of the Orissa Canals, is now happily closed. On the other hand, the ordinary maintenance charges of these canals are found to be higher than usual, a point to which the attention of the Superintending Engineer has been drawn in the Chief Engineer's Note. It seems to be probable, however, that so long as the reconstruction of the weirs was in progress, expenditure on ordinary repairs was restricted to the more imperative requirements of the works, and more therefore had to be spent in 1888-89 in carrying out repairs which could be and had been postponed for a while. The cost of establishment chargeable against Revenue, which in 1886-87 was Rs. 16,714 for the works given in the table above, rose in 1887-88 to Rs. 21,376, an increase due not to greater extravagance in the establishment employed, but to the introduction of a new and fairer method of distributing establishment charges between Irrigation and Roads and Buildings. For 1888-89 the corresponding figure is Rs. 7,01,050, and the saving would have been greater, but for an increase of Rs. 27,996 in the cost of establishments employed under Civil officers for the collection of revenue on the Orissa, Midnapore and Sone Canals, an increase which was due chiefly to the greater amount of work involved in realising the heavier collections. On the whole, therefore, there has been a substantial saving in the charges incurred for establishment on the maintenance and management of the canals. The occurrence of this saving can be traced chiefly to the increased amount of work carried out by the Irrigation staff on Roads and Buildings, and the consequent transfer of a larger share of establishment charges from the Irrigation to the Roads and Buildings Branch. Similarly the larger Capital expenditure in 1888-89, on works not chargeable to Revenue, has tended to relieve the canal Revenue account of a portion of its establishment charges.

5. The revenue collected in the last three years on the works mentioned in the above statement is shown below :—

HEAD.	REVENUE.		
	1888-89.	1887-88.	1886-87.
	R	R	R
Water-rates	10,22,352	7,69,362	10,43,342
Navigation	9,74,105	9,21,482	7,88,685
Miscellaneous	60,298	66,838	80,171
TOTAL	20,56,755	17,57,682	19,12,198
Less refunds of revenue	13,463	16,166	16,950
NET TOTAL RECEIPTS	20,43,292	17,41,516	18,95,248

6. The recovery of the revenue derived from water-rates from the depression of 1887-88 was assisted by the character of the irrigation season of 1888-89, which was such as to lead to a full appreciation of the value of canal water. On the Sone Canals, where collections had been to some extent suspended in consequence of the agitation of the previous year, the receipts rose from Rs. 19,586 to Rs. 59,556, and it is clear that the efforts of the managing staff to restore public confidence in the canals have been attended with success. Irrigation in Orissa also has received a fresh impetus, and the collections of 1888-89 are higher than those of any year since 1882-83, while on the Midnapore Canal, where no great development of irrigation can be expected owing to the limited and fluctuating character of the source of supply, there is a slight improvement on the results of 1887-88.

7. The activity of irrigation in 1888-89 is evident from the figures in the following table, where actual areas irrigated during the last three years are shown :—

		1888-89.	1887-88.	1886-87.
		Acres.	Acres.	Acres.
Orissa	{ Kharif	156,319	108,867	75,115
	{ Rabi	2,779	502	2,440
	{ Perennial	194	137	154
	TOTAL	159,292	109,506	77,709
Midnapore	Kharif, including boro rice crop	69,777	65,864	69,762
Sone	{ Kharif	69,628	57,595	80,082
	{ Rabi	69,817	27,501	16,662
	{ Perennial	4,600	6,265	11,626
	{ Hot-weather	11,762	13,855	15,278
	{ Five-year lease	200,102	210,164	194,556
TOTAL		355,909	315,380	268,204
TOTAL MAJOR WORKS		584,978	490,750	415,675
Sarun	{ Kharif	3,897	1,699	566
	{ Rabi, including hot-weather	3,316	2,519	1,580
TOTAL MINOR WORKS		7,213	4,218	2,146
GRAND TOTAL, MAJOR AND MINOR WORKS		592,191	494,968	417,821

8. The "earnings" of the year's work, of which the above table shows the extent, are as follows :—

		Water-rates earned. 1888-89. R
Orissa Canals		2,42,808
Midnapore Canal		1,31,433
Sone Canals		8,05,790
Sarun Canals		21,850
TOTAL		12,01,881

These sums represent the whole of the liabilities incurred by cultivators on crops raised by canal-water during the year. In previous years the definition of the word "earnings" has been restricted to the assessments, which were not only fully completed, but also legally recoverable within the year. Exact returns of "earnings" (in the wider sense of the word now adopted) are not available for previous years; but owing to the extended use of canal-water already noticed, the earnings of 1888-89 considerably exceed those of 1887-88 and 1886-87. This is in favour of good collections in 1889-90.

9. The arrears of water-rates outstanding at the close of each of the last three years are shown in the following statement :—

NAME OF CANAL.	ARREARS.		
	1st April 1889.	1st April 1888.	1st April 1887.
	R	R	R
Orissa Canals	1,14,597	92,109	87,458
Midnapore Canal	84,773	56,493	50,749
Sone Canals	3,80,613	4,11,281	2,31,582
Sarun Canals	34,927	33,492	32,712
TOTAL	6,14,910	5,93,375	4,02,501

NOTE.—The figures are those of the Examiner, Public Works Accounts; but it is believed that they will require correction, since they do not agree with those given by the Superintending Engineer, which again differ from those of the Collector.

The reduction effected in the outstanding balances of the Sone Canals is less than the increments in the balances of the Orissa and Midnapore Canals taken together. The progress made with collections on each system can be compared as follows:—

	Percentage of current demand adjusted.	Percentage of arrear demand adjusted.
Sone Canals	60	80
Midnapore Canal	31	89
Orissa Canals	46	72

These results (except in the case of the Sone Canals) cannot be considered good, and it is again necessary to call the attention of District Officers in Orissa and Midnapore to the steady growth of the arrear balances as a subject which demands early and energetic treatment.

10. In Navigation Receipts improved results are shown on all the lines except the Calcutta and Eastern Canals. There is reason to suppose that the income from this route, on which the traffic receipts are greater than on all the other canals of the Province combined, is being unfavourably effected by the competition of the Central Bengal Railway. Under arrangements which existed before the construction of the railway, when the canals had a monopoly of the traffic, and which have not yet been altered, tolls are only collected at the Calcutta terminus of the boat route, and the railway is thus enabled to tap the canal traffic before the latter has paid toll, and therefore at present competes with the canal at an advantage. The actual tollage collections for each system are given below for three years—

YEAR.	Orissa. Canals.	Midnapore Canal.	Hidgellie Tidal Canal.	Orissa Coast Canal.	Sone Canals.	Calcutta and Eastern Canals.	TOTAL.
1886-87	₹ 58,664	₹ 1,09,693	₹ 51,904	₹ 28,587	₹ 49,665	₹ 4,73,193	₹ 7,71,706
1887-88	66,628	1,26,574	46,406	52,828	50,984	5,71,872	9,09,292
1888-89	69,830	1,46,760	53,910	65,010	52,162	5,65,491	9,53,163

On the Nuddea rivers the collections fell from ₹1,98,318 to ₹1,91,749.

11. The number of complaints which came up for disposal during the year was altogether 14,710, of which 12,506 were complaints made during the year and 2,204 were old complaints left over for disposal from the files of the previous year—

	ORISSA.		MIDNAPORE.		SONE.		TOTAL.	
	Number.	Percent- age on cases dis- posed of.	Number.	Percent- age on cases dis- posed of.	Number.	Percent- age on cases dis- posed of.	Number.	Percent- age on cases dis- posed of.
Pending from last year . . .	1,503	...	84	...	625	...	2,212	...
Filed during the year . . .	3,780	...	1,647	...	7,062	...	12,498	...
TOTAL	5,282	...	1,731	...	7,687	...	14,710	...
Disposed of { Admitted . . .	...	...	216	14.5	2,253	39.0	...	...
{ Dismissed . . .	...	...	1,276	85.5	3,519	61.0	...	...
TOTAL	4,110	100.0	1,492	100.0	5,772	100.0	11,374	100.0
Pending on 31st March 1889 .	1,182	...	239	...	1,915	...	3,336	...
Area irrigated in 1888-89. Acres	159,292		69,777		355,909		584,978	
Proportion of acres irrigated to one complaint (current year only)	42.04		42.3		50.4		46.7	
Ditto for 1887-88 (including cases pending from previous years)	37.9		78.3		46.7		47.5	

The above table, which is an abstract of the information given in the various Revenue reports on the filing and disposal of complaints, is defective in the case of the Orissa Canals, where the Deputy Revenue Superintendent has failed to

distinguish the claims admitted and those rejected. Also, since in the reports of 1887-88 current and pending complaints were taken together, it is impossible to exactly compare the work done in each year. As, however, the number of complaints, current and pending, in 1887-88 was 10,332, being in the ratio of 1: 47.5 to the number of acres irrigated, while in 1888-89 the number of current complaints is 12,498 and the ratio 1: 46.8, it is clear that not only was the number of complaints greater in the latter year, but the proportion of complaints with regard to the area irrigated has also risen. In the case of the Midnapore Canal that proportion has almost doubled—an unsatisfactory state of affairs which should have received attention in the reports of the officers responsible.

12. The number of certificates issued for the recovery of arrears has fallen from 28,805 to 19,536, and the number pending at the close of the year from 19,536 to 15,880—

	Pending at close of 1887-88.	Instituted during 1888-89.	TOTAL.	Disposed of.	Pending at close of 1888-89.
Midnapore	5,310	11,201	16,511	9,326	7,185
Orissa	9,047	5,259	14,306	8,553	5,753
Sone	5,179	4,216	9,395	6,453	2,942
TOTAL	19,536	20,676	40,212	24,332	15,880

The reduction in the cases pending has been effected entirely on the Sone and Orissa Canals, as in Midnapore there is a considerable and highly unsatisfactory increase, notwithstanding that the number of cases disposed of is actually higher than in either of the other systems. The percentage, however, of cases disposed of, as compared with the number pending and instituted, is not so good, the respective percentages being for Midnapore 56.5, Orissa 59.8, and Sone 68.7. Judging by the very large proportion of cases struck off compared with the total number disposed of in Midnapore, namely, 5,478, or nearly 59 per cent., it appears probable that sufficient care is not exercised in issuing these certificates, and that much unnecessary work is in consequence thrown on the officer who is trusted with their disposal.

13. The Lieutenant-Governor notes with satisfaction the names of the various officers to whom Colonel Harrison awards special praise, and he takes this opportunity, on Colonel Harrison's connection with the province being severed, of recording his acknowledgment of the excellent service rendered by him during his tenure of the office of Chief Engineer and Joint Secretary, and of the admirable tact and judgment which Colonel Harrison has always displayed in administering the department confided to him.

ORDER.—Ordered that a copy of this Resolution, and of the Note and its accompaniments, be submitted to the Government of India, in the Public Works Department, for information; also that copies be forwarded to the Appointment, Revenue, and Financial Departments of this Government; the Board of Revenue, Lower Provinces; the Commissioners of the Presidency, Burdwan, Patna, and Orissa Divisions; the Collectors of the 24-Pergunnahs, Nuddea, Hooghly, Midnapore, Burdwan, Patna, Shahabad, Gya, Sarun, Cuttack, and Balasore; the Superintending Engineers of the Orissa, South-Western and Sone Circles; and Examiner, Public Works Accounts, Bengal, for information.

By order of the Lieutenant-Governor of Bengal,

C. W. I. HARRISON, *Lieut.-Col., R.E.*,

Offg. Joint Secy. to the Govt. of Bengal,
P. W. Dept.

SUPPLEMENT TO
The Gazette of India.

No. 15. } CALCUTTA, SATURDAY, APRIL 12, 1890.

OFFICIAL PAPERS.

A SUPPLEMENT to the GAZETTE OF INDIA will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in PART VI of the GAZETTE.

Non-Subscribers to the GAZETTE may receive the SUPPLEMENT separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The SUPPLEMENT and PART VI of the GAZETTE can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA is required by Law, or which it has been customary to publish in the CALCUTTA GAZETTE, will be included in the SUPPLEMENT. For such Orders and Notifications the body of the GAZETTE must be looked to.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 'a.m. on
Monday, March 31st, 1890.

The storm period, which has been so marked during the past two or three weeks, has, to a great extent, subsided during the week under review. The distribution of pressure has been fairly steady throughout, and moderate gradients have existed—conditions which are unfavourable to the production of the small local depressions on which the Spring storm rainfall normally depends. No travelling vortex of any importance has appeared during the week, but slight disturbances have on two occasions entered North-Western India from the westward, while throughout the week there has existed a well marked low pressure area over Bengal and the neighbouring parts of the North-West Provinces. Into the latter, winds from surrounding regions have fed with a strong cyclonic circulation.

On the 25th the conditions described above were strongly marked. Pressure was high in the north-west of the Punjab, relatively high in Kathiawar and the North Konkan and in Mysore, while a feeble depression was shown over the Western desert, and a moderate depression over North Bengal. The wind was northerly over the Punjab and south-westerly over Sind and Guzerat, westerly to southerly over Bengal, and variable over the Peninsula. The weather was unsettled and rainy over the Punjab, and showery in Assam and in the extreme south of the Peninsula. Slight duststorms and haze, lightning, &c., showed that conditions were slightly unsettled over the greater part of the country. The Chart of the following day showed that the high pressure area in the north-west had to a large extent given way, and the highest pressures were shown over the west and south of the Peninsula. The depression over Northern Bengal was unaltered. There was a general westerly (north-west—south-west) current of wind across the country, and the weather though still exhibiting some of the characteristics of the previous day was on the whole finer. On the 27th the distribution of pressure and the circulation of the winds was almost the same as that reported on the 25th. Showers had again fallen over parts of the Punjab and in Assam, but elsewhere the weather remained fairly fine. Conditions on the 28th showed no change of importance. On the 29th pressure had become more uniform over the Peninsula, and the weather exhibited a liability to thunderstorms in that quarter. On the 30th a feeble depression crossed the Indus and appeared over the Western desert. It occasioned a slight cyclonic circulation over North-Western India, but though the sky became very cloudy over that region later in the day no rain fell. Showers were again reported from Assam, and generally the weather remained unaltered. The Chart of the 31st showed that the depression over the Western desert had filled up. The barometer had risen rapidly in the north-west, and a strongly marked high pressure area had been formed over the Punjab. As at the same time the low pressure area over North-Eastern India had developed somewhat, gradients had become steep over Northern India, and gales and strong winds were experienced. Over the Peninsula pressure was much more uniform than over Northern India, but the observations around the Bay apparently gave evidence of the initial formation of a slight depression.

Temperature.—The earlier days of the week, taking into consideration the whole of India, were generally warmer than the average, while the closing days were somewhat cooler. Hence there has been practically no advance of

temperature during the week. The mean temperatures at the principal stations in India on the 25th and 31st were as follows:

	Twenty-fifth.	Thirty-first.
Rangoon	87.5°	87.1°
Calcutta	87.3°	88.1°
Allahabad	83.8°	81.8°
Lahore	69.6°	75.1°
Karrachi	77.6°	78.1°
Bombay	82.0°	80.7°
Nagpur	89.2°	89.7°
Madras	83.0°	85.8°
Colombo	81.3°	83.5°

These figures show that on the average of the whole country there has been very little advance of heat during the week. On the 25th the highest maximum temperature recorded was 107.8° at Cuddapah, and on the 31st the same reading at the same station was the highest recorded temperature, though the area over which the maxima equalled or exceeded 100° had extended somewhat. In Burma, Bengal and Madras the mean temperature of each day of the week exceeded the normal, while in North-Western India, on the contrary, every day was cooler than the normal. In Bombay and the Central Provinces four days were warmer and three cooler than the average.

The following table shows the variations of temperature from the normal according to Provinces for the present and the past week:

PROVINCES.	Variation of temperature from normal for past week.	Variation of temperature from normal for present week.
Burma	+ 1.8°	+ 3.0°
Bengal	+ 1.6°	+ 2.9°
North-West Provinces	+ 0.5°	— 0.9°
Punjab	— 1.2°	— 4.1°
Bombay	+ 1.1°	+ 0.1°
Central Provinces	+ 2.2°	+ 0.6°
Guzerat and Central India	+ 1.6°	— 1.8°
Sind and Rajputana	+ 0.8°	— 1.7°
Madras	+ 0.9°	+ 2.6°

This table shows that in Burma, Madras and Bengal there has been a rise of temperature as compared with the past week, while in all other Provinces there has been a fall. The coldest Province was the Punjab, where there was a deficiency exceeding 4°.

Rain has fallen in fifteen of the rainfall divisions, but, except in Assam (Surma), the amounts were very small, in no case equalling one-quarter of an inch, and being generally under one-tenth. Burma, with the exception of Lower Burma, has been without rain. The whole of Bengal, the North-West Provinces, and the south and centre of the Punjab, have been equally dry, but in the north and west of the Punjab there have been slight showers. The greater part of the west of the Peninsula has received slight rain, and part of the east and centre records an equal amount.

The maximum falls are nowhere important. Cherrapunji received 3½, and Cachar 5 inches, but in no other part of Northern India was there any fall amounting to 1 inch. In Malabar and Madras (central) there were one or two falls equalling 1 inch.

W. L. DALLAS,

Assistant Meteorological Reporter to the
Government of India.

W. C. BENETT;

Offg. Secretary to the Government of India.

SIMLA, 5th April 1890.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on
Monday, April 7th, 1890.

During the week under review there has been a further decrease in the intensity of the storm rainfall and in the area over which the rain fell. In Northern India only a few scattered storms occurred, and the principal rainfall was over the western half of the Peninsula, where it was apparently connected with a shallow area of depression which passed from the Bay westward across Southern India. A slight vortex appeared over Sind during the week and occasioned rather strong squally winds over the north-west of India, but the currents feeding into it appear to have been dry, and except on its western side the weather though cloudy was dry. The low pressure area over Bengal and the North-West Provinces, which formed a marked feature of the pressure distribution of last week, was not noticeable during the present period except just at the commencement. In Burma the closing days of the week were unsettled, and dust or thunder storms occurred over a large part of the country.

On the 1st the chart showed a distribution similar to that prevailing at the close of the previous week. Pressure was high in the north-west and low over Bengal and the North-West Provinces, so that steepish gradients and strongish northerly to north-westerly winds prevailed over North-Western India. At the same time the feeble depression, evidences of the formation of which were afforded by the chart of the 31st, had advanced from the Bay to the Madras Coast. In consequence the southerly wind at the head of the Bay had decreased in force, and feeble cyclonic movements were shown along the East Coast of the Peninsula and northerly winds on the West Coast. On the 2nd the depression over Bengal, &c., had largely filled up, and the shallow depression over the Madras Coast had moved slightly inland. Over the Western desert there were indications of the formation of a slight depression, but on the whole the general distribution and winds were little changed. On the 3rd pressure was very uniform and the barometer had generally risen, except over the Central Provinces, Berar and Khandeish, which regions were affected by the shallow depression which had advanced from the Bay. On the 4th there was no change of importance, pressure remaining very uniform, with readings slightly lower over the central parts of the country than elsewhere. On the 5th the only important alteration was the appearance of a small and slight depression over Lower Sind. On the 6th this depression had developed somewhat and advanced north-eastward to the south of the Punjab. A fairly complete cyclonic circulation surrounded it, and the weather was cloudy in Sind, Rajputana and the south of the Punjab. Pressure was high in Assam and moderate gradients existed over North-Eastern India, but elsewhere pressure remained uniform. On the 7th the depression in the north-west was filling up, but the winds around it were blowing strongly. In Burma the barometer had changed rather irregularly, and pressure was apparently unsettled there.

Temperature.—The most important meteorological changes during the week have occurred in the element of temperature. The closing days of last week were, taking into consideration the whole of India, somewhat cooler than usual. This cool period lasted into the beginning of the present week, the mean temperature of all Provinces on the 1st showing a deficiency, compared with the normal, of nearly 2°. On the 2nd this deficiency had disappeared, and the mean temperature of India was exactly normal; but on the 3rd a rapid increase set in, and the excess of temperature which then commenced continued and intensified (with a very slight interruption on the 6th) till the close of the week. Thus on the 3rd the mean excess was 5.9° and on the 7th was as much as

11.9°. On the latter date in the Punjab, both on the hills and plains, both the day and night temperatures were from 5° to 15° higher than the normal, the mean excess for the Province being as much as 8°. As mentioned above, the maximum temperatures have been high for the season. On the 1st readings of 100° and above were mainly confined to the inland and southern parts of the Peninsula, with only a few instances in Northern India, but by the close of the week the readings of the maximum thermometer exceeded 100° over a large part of Behar, the whole of the North-West Provinces and several districts of the Punjab, as well as over the Peninsula. The region of greatest heat has travelled northward during the week. On the 1st, 2nd and 3rd the highest temperatures were recorded in the Nellore and Cuddapah districts of Madras, on the 4th they had advanced to Berar and Khandeish, and on the 5th and 6th they were reported from Berar, Khandeish and Guzerat. On the last date almost equally high readings were also shown at Jhansi in the North-West Provinces.

The following table shows the variations of temperature from the normal according to Provinces for the present and the past week:

PROVINCES.	Variation of Temperature from Normal for Past Week.	Variation of Temperature from Normal for Present Week.
Burma	+3.0°	+0.6°
Bengal	+2.9°	+0.8°
North-West Provinces	—0.9°	—0.6°
Punjab	—4.1°	+1.9°
Bombay	+0.1°	+0.7°
Central Provinces	+0.6°	+0.8°
Guzerat and Central India	—1.8°	—0.1°
Sind and Rajputana	—1.7°	+1.2°
Madras	+2.6°	+0.8°

These figures show that compared with the normal there has been a fall of temperature in Burma, Bengal and Madras and a rise elsewhere, the rise in the Punjab amounting to 6°.

Rain has fallen in twenty-two out of the fifty-two rainfall divisions, the principal rainfall areas being Burma, Assam and Lower Bengal and the south-west of the Peninsula. In other parts of the Indian region any rainfall has been light and scattered. In five divisions the amount received has been in excess of the normal, the largest excess being in Coorg, where about four times the average fell. In the other seventeen divisions where rain has occurred the amount was below the average, and in nine out of the seventeen was less than $\frac{1}{10}$ of an inch.

The maximum falls were again unimportant. In Burma the heaviest fall was 4 inches (Shwegyin). One station in Mymensing received 3 inches, one in Jessore 2½ inches, and Cherrapunji 1 inch. In all other places the amounts were less than 1 inch. In the south-west of the Peninsula the maximum falls ranged between 1 and 3 inches, and in the Kurnool and Bellary districts falls of over 1 inch are also reported.

PROVINCE.	DIVISION.	RAINFALL DATA FOR WEEK ENDING APRIL 7TH, 1890.			RAINFALL DATA FROM OCTOBER 15TH TO APRIL 7TH, 1890.

W. L. DALLAS,

SIMLA, 10th April, 1890.

Assistant Meteorological Reporter to the
Government of India.

W. C. BENETT,

Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of
the Crops.

Madras.—For week ending 29th March.—Very slight showers in Ganjam, Vizagapatam, Bellary, Anantapur, South Canara and Malabar. No rain elsewhere. Crops generally good but withering in parts of Nellore, Tanjore, Chingleput, South Arcot, Trichinopoly, Coimbatore and Tinnevely. Outturn of sugarcane fair. Paddy and dry grains generally below average. Prices nearly steady. Prospects fair.

Bombay.—For week ending 2nd April.—Slight rain in Karachi. Exotic cotton in two talukas of Dharwar blighted; *jowari* in Ahmednagar middling, and late crops, except gram, in Satara below average. Crops otherwise satisfactory. Fodder sufficient except in parts of Khandesh, Nasik, Poona and Dharwar.

Bengal.—For week ending 1st April.—No rain during the week. Weather dry and hot. Rain wanted generally for ploughing and early sowings. *Boro* or spring rice doing well, but requires rain in some districts. Planting of sugarcane in progress. In Behar paddy, *chena* and *mung* being sown on *char* lands, and indigo prospects favourable, except in Sarun. Opium collection completed; estimated outturn in Chumparun 12 to 13 annas, Mozufferpore 12 annas, and Sarun 10 annas. No estimates given for other districts. A good crop of *mahua* being gathered in Chota Nagpur and the Sonthal Pergunnahs. Prices generally stationary. In Balasore one hundred and sixty coolies employed on relief works opened by the District Board near Talpada.

North-Western Provinces and Oudh.—For week ending 2nd April.—Hot dry weather with westerly winds has prevailed generally. Harvest operations are nearly over, and the outturn is fairly satisfactory. In most parts markets are well supplied and fluctuations in prices are unimportant.

Punjab.—For week ending 2nd April.—Slight rain in Rawalpindi, Shahpur and Peshawar. Prices rising in Hissar and Peshawar; stationary elsewhere. Harvesting of *rabi* crops commenced; cotton sowings and sugarcane ploughings in progress. More rain wanted. Crops on *barani* land generally suffering for want of rain. Prospects of crops on irrigated lands are average, but poor elsewhere. Fodder sufficient, except in Hissar, Jullundur, Sialkot and parts of Mooltan.

Central Provinces.—For week ending 2nd April.—Weather hot and sometimes cloudy. *Rabi* harvest almost completed. In Khandwa fields are being prepared for *kharif*. Prices steady.

Burma.—For week ending 29th March.—A little rain fell in Mergui, Bhamo and Lower Chindwin districts; none fell elsewhere. Dry weather crops generally promise well. The price of paddy has risen slightly in Prome and Mandalay and has fallen in Meiktila and Yamethin; elsewhere prices are stationary. There is no scarcity of food-grain.

Assam.—*For week ending 2nd April.*—Weather warm. Rainfall scanty. Sowing of early rice and pressing of sugarcane continue. Tea doing well.

Mysore and Coorg.—*For week ending 2nd April.*—Standing crops in good condition in Mysore. Paddy sown and sugarcane planted in parts. Outturn of harvest fair; no material changes in prices. Slight rain in Coorg. Prospects good.

Berar and Hyderabad.—*For week ending 3rd April.*—Weather warm. Threshing of *rabi* continues. Land under preparation for next season. Fodder sufficient, except in Ellichpur and Dariapur taluqs. Prices almost stationary. No rain in Hyderabad during week. Weeding of *tabi* crops continues. Prices stationary.

Central India.—*For week ending 2nd April.*—Prices fallen slightly in Barwani and Manpur. No other change of importance since last week.

Rajputana.—*For week ending 2nd April.*—Cutting of crops commenced generally. Agricultural stock good, except in Ajmere. Pasturage or fodder sufficient, except in Marwar and Dholepur. Prices rising in Harowti and Kerowli; falling in Meywar and Jhallod; steady elsewhere.

Nepal.—*For week ending 27th March.*—Showers of little importance fell; weather cool in the morning and evening. Prospect of wheat crops fair.

The 5th April, 1890.

J. W. P. MUIR-MACKENZIE,
Under-Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 5th April.*—Slight showers in Vizagapatam, Bellary, Anantapur, Kurnool, North Arcot, Coimbatore, Nilgiris, Salem, South Canara and Malabar. No rain elsewhere. Standing crops generally good but withering in parts of Nellore, South Arcot, Tanjore, Trichinopoly and Tinnevely, and suffering from want of rain in parts of Vizagapatam, Chingleput and North Arcot. Outturn of sugarcane and oilseeds good; paddy, dry grains and cotton generally below average. Prices steady. Prospects fair.

Bombay.—*For week ending 9th April.*—Slight rain in Poona, Bijapur and Belgaum. Exotic cotton in parts of Dharwar blighted; *jowari* in Ahmednagar middling, and late crops in Satara, except gram, below average; crops otherwise satisfactory. Fodder sufficient except in parts of six districts. Agricultural stock generally good.

Bengal.—*For week ending 8th April.*—Weather generally dry and hot; rain only in Dacca, Chittagong and Midnapore. It is generally wanted for ploughings and early sowings. *Boro* or spring rice also requires rain in some districts. *Rabi* crops nearly all gathered, and threshing in progress in Behar. Weighment of opium has begun. The *mahua* crop is good in Chota Nagpur but poor in the Sonthal Pergunnahs. Prices remain almost stationary, but common rice had a slight tendency to rise in some districts during the past week. No further particulars received regarding distress in Balasore.

North-Western Provinces and Oudh.—*For week ending 9th April.*—Weather hot. Harvesting almost completed. Opium collecting finished. Supplies ample. Prices steady.

Punjab.—*For week ending 9th April.*—Slight rain has fallen in Peshawar only. Prices rising in Hissar and Delhi, falling in Mooltan, and stationary elsewhere. Harvesting of *rabi* crops going on; cotton and sugarcane ploughings and sowings commenced. Prospects of crops on irrigated lands are generally average but poor elsewhere. Fodder is reported scarce in Hissar, Delhi, Jullundur, Sialkot and Mooltan; sufficient elsewhere.

Central Provinces.—*For week ending 9th April.*—Weather hot and somewhat cloudy, with slight rain in Seoni and Nagpur. Threshing of *rabi* crops continues. Sugarcane planting in progress. Prospects favourable. Prices steady.

Burma.—*For week ending 5th April.*—Rain fell heavily in Shwegyin, and in smaller quantities in Rangoon, Mandalay, Pynmana, and Lower Chindwin. Showers also fell in Sandoway, Thayetmyo, Tavoy and Magwe. Dry-weather crops doing well generally. Food-supply is sufficient. Price of paddy has fallen in Prome and risen in Tavoy and Mandalay slightly. Elsewhere prices are stationary.

Assam.—For week ending 9th April.—Weather seasonable. Rainfall insufficient. Sowing of summer paddy continues, that of cotton in Garo Hills commenced. Prospects of tea good.

Mysore and Coorg—For week ending 9th April.—Slight rainfall. Crops good, except in parts of Kolar, where rain is required. Outturn of harvests favourable. Prices slightly fallen in the Mysore district. Rainfall over 1 inch in Coorg.

Berar and Hyderabad.—For week ending 9th April.—Weather warm and cloudy in Berar. Threshing of *rabi* continues. Land under preparation for next season. Fodder sufficient, except in Ellichpur and Dariapur taluqs. Prices almost stationary.

Rainfall slight in Hyderabad during the week. *Rabi* crops progressing. Prices stationary.

Central India.—For week ending 9th April.—Crops reaped in Baghelkhand and Western Malwa, and nearly so in Bhopawar. Prices slightly risen in Dhar. No other change of importance since last week.

Rajputana.—For week ending 9th April.—Cutting of crops continues generally. Agricultural stock good, except in Ajmere. Pasturage or fodder sufficient, except in Marwar. Prices steady generally.

Nepal.—For week ending 3rd April.—No rain. Weather seasonable. Prospects fair.

The 11th April, 1890.

W. C. BENETT,
Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.

SUPPLEMENT TO

The Gazette of India.

No. 16.]

CALCUTTA, SATURDAY, APRIL 19, 1890.

OFFICIAL PAPERS.

A SUPPLEMENT to the GAZETTE OF INDIA will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in PART VI of the GAZETTE.

Non-Subscribers to the GAZETTE may receive the SUPPLEMENT separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The SUPPLEMENT and PART VI of the GAZETTE can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA is required by Law, or which it has been customary to publish in the CALCUTTA GAZETTE, will be included in the SUPPLEMENT. For such Orders and Notifications the body of the GAZETTE must be looked to.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Review of India for the week ending at 8 a.m. on
Monday, April 14th, 1890.

The extent of the storm area and the amount of rainfall during the period under review has been practically the same as was reported last week. In Assam towards the close of the week there were very frequent showers, and in the Punjab the extent of the rainfall area has slightly increased. The heat has been great—more particularly over the Gangetic plain, the Punjab and the Western desert, and it is probably in part due to this cause that pressure has been so steadily low over that region. There have been no cases of serious cyclonic storms during the week, but duststorms and dusthaze have been frequently and widely reported.

The Chart of the 8th showed comparatively uniform pressures all over the country, but with slight areas of low readings over Lower Sind and the centre of the North-Western Provinces. There was a fairly general northerly current of wind over North-Western India and down a part of the west of the Peninsula, and a very general southerly wind over the head of the Bay and Lower Bengal. Elsewhere the directions were very variable. On the 9th the low pressure area over Sind had disappeared, but that over the North-Western Provinces had moved north-eastward to Behar and the Gorakhpur district of the North-Western Provinces and developed somewhat. There was a considerable indraught towards this depression, and the north-westerly winds over the Upper Gangetic plain, as well as the southerly winds over the head of the Bay, &c., blew strongly. In other parts of the country there was no important change. On the 10th the low pressure area had filled up slightly, but it still exercised a good deal of influence on the winds which were still blowing strongly in the two regions noticed on the 9th. Over the Western desert another depression was developing. In the Peninsula the general conditions were unaltered. The Chart of the 11th showed very little change, except that the depression which had formed over the Western desert had moved into the Punjab, and south-westerly winds had been produced over the south of that Province and in Rajputana. On the 12th a well marked cyclonic storm existed over the Punjab, and a cyclonic circulation of the winds prevailed over North-Western India. Moderate gradients for southerly winds continued over North-Eastern India, and the winds at the head of the Bay remained very strong for the season. In other parts of the Indian region pressure was uniform and the winds variable. The report of the 13th showed a very rapid rise of the barometer in the Punjab and the disappearance of the depression. In other respects the distribution and the winds were unaltered. On the morning of the 14th the barometer was falling everywhere, particularly over Northern India, and the barometric gradient in North-Eastern India had increased. Very high westerly winds prevailed down the Gangetic plain, and southerly winds, strong to a gale, over the head of the Bay.

Temperature.—The warm period which commenced on the 3rd has continued steadily during the week under review. Taking all the Provinces of India into consideration there has been a considerable excess of temperature on each day of the week, but the warmest days were the 10th, 11th and 12th, when all parts of India experienced abnormal heat. The greatest excess has been in the Punjab, and in that Province, on the 11th, the maximum temperatures at Sialkote and Dera Ismail Khan, and the minimum temperatures at Dera Ismail Khan and Mooltan exceeded the normal average by over 10°. In all Provinces except Madras, Bengal and Burma the mean temperature on every day of the week was above the normal, but the three excepted Provinces had 2, 1 and 5 days respectively, when the heat was below the average of the season. The region of absolute

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on
Monday, April 14th, 1890.

The extent of the storm area and the amount of rainfall during the period under review has been practically the same as was reported last week. In Assam towards the close of the week there were very frequent showers, and in the Punjab the extent of the rainfall area has slightly increased. The heat has been great—more particularly over the Gangetic plain, the Punjab and the Western desert, and it is probably in part due to this cause that pressure has been so steadily low over that region. There have been no cases of serious cyclonic storms during the week, but duststorms and dusthaze have been frequently and widely reported.

The Chart of the 8th showed comparatively uniform pressures all over the country, but with slight areas of low readings over Lower Sind and the centre of the North-Western Provinces. There was a fairly general northerly current of wind over North-Western India and down a part of the west of the Peninsula, and a very general southerly wind over the head of the Bay and Lower Bengal. Elsewhere the directions were very variable. On the 9th the low pressure area over Sind had disappeared, but that over the North-Western Provinces had moved north-eastward to Behar and the Gorakhpur district of the North-Western Provinces and developed somewhat. There was a considerable indraught towards this depression, and the north-westerly winds over the Upper Gangetic plain, as well as the southerly winds over the head of the Bay, &c., blew strongly. In other parts of the country there was no important change. On the 10th the low pressure area had filled up slightly, but it still exercised a good deal of influence on the winds which were still blowing strongly in the two regions noticed on the 9th. Over the Western desert another depression was developing. In the Peninsula the general conditions were unaltered. The Chart of the 11th showed very little change, except that the depression which had formed over the Western desert had moved into the Punjab, and south-westerly winds had been produced over the south of that Province and in Rajputana. On the 12th a well marked cyclonic storm existed over the Punjab, and a cyclonic circulation of the winds prevailed over North-Western India. Moderate gradients for southerly winds continued over North-Eastern India, and the winds at the head of the Bay remained very strong for the season. In other parts of the Indian region pressure was uniform and the winds variable. The report of the 13th showed a very rapid rise of the barometer in the Punjab and the disappearance of the depression. In other respects the distribution and the winds were unaltered. On the morning of the 14th the barometer was falling everywhere, particularly over Northern India, and the barometric gradient in North-Eastern India had increased. Very high westerly winds prevailed down the Gangetic plain, and southerly winds, strong to a gale, over the head of the Bay.

Temperature.—The warm period which commenced on the 3rd has continued steadily during the week under review. Taking all the Provinces of India into consideration there has been a considerable excess of temperature on each day of the week, but the warmest days were the 10th, 11th and 12th, when all parts of India experienced abnormal heat. The greatest excess has been in the Punjab, and in that Province, on the 11th, the maximum temperatures at Sialkote and Dera Ismail Khan, and the minimum temperatures at Dera Ismail Khan and Mooltan exceeded the normal average by over 10°. In all Provinces except Madras, Bengal and Burma the mean temperature on every day of the week was above the normal, but the three excepted Provinces had 2, 1 and 5 days respectively, when the heat was below the average of the season. The region of absolute

greatest day temperature has moved about the country in a somewhat irregular manner owing to slight local variations in the weather.

On the 8th the highest maximum was	107.5°	at Jhansi.
" 9th " " "	109.5°	" Jhansi.
" 10th " " "	108.2°	" Nagpur.
" 11th " " "	108.4°	" Deesa.
" 12th " " "	108.2°	" { Sholapur. Akola.
" 13th " " "	108.7°	" { Sholapur. Nagpur.
" 14th " " "	109.1°	" Patna.

These figures show that, omitting the exceptional heat at Jhansi on the 9th, the maximum temperature has increased slowly during the week, but that the locality of the greatest day heat has shifted about to different parts of the head of the Peninsula and the Gangetic plain. On the 12th the day temperature was very high over the Punjab, readings of between 105° and 107° being reported from the south-east, south and centre of the Province.

The following table shows the variations of temperature from the normal, according to Provinces, for the present and the past week :

PROVINCES.	Variation of Temperature from Normal for Past Week.	Variation of Temperature from Normal for Present Week.
Burmah	+ 0.6°	— 0.7°
Bengal	+ 0.8°	+ 1.0°
North-West Provinces	— 0.6°	+ 3.9°
Punjab	+ 1.9°	+ 4.8°
Bombay	+ 0.7°	+ 1.4°
Central Provinces	+ 0.8°	+ 3.0°
Guzerat and Central India	— 0.1°	+ 3.3°
Sind and Rajputana	+ 1.2°	+ 3.9°
Madras	+ 0.8°	+ 0.4°

These figures show that with the single exception of Burma, the mean temperature of all Provinces for the present week has been in excess of the normal. In all parts of the Indian region except Burma and Madras the mean temperature compared with the normal has risen, the increase being large over the central and north-western parts of the country.

Rain.—The rainfall of the week has been of the usual spring storm character. It has fallen within 24 of the 52 divisions into which India has been divided for rainfall purposes. This extent of rainfall is very slightly in excess of that reported last week, the excess being due to an increased number of showers in the Punjab and the Carnatic. The principal rainfall areas are, as was the case last week, North-Eastern India and the south-west of the Peninsula. In all other parts of the Indian region any rainfall has been light and scattered. In four divisions the amount received has been in excess of the average, the largest excess being in Assam and North Bengal. In the remaining twenty divisions where rain has been received the amount has generally been small, and in twelve out of the twenty less than 1¹⁰th of an inch.

In Assam the Surma division received nearly 5 and the Bramaputra division about 2¹/₄ inches of rain as the mean fall for the week. In Northern Bengal the mean amount was nearly 1¹/₂ inches, but in all other divisions the average fall was less than 1 inch.

Of the maximum falls the only important amounts are reported from North-Eastern India. Thus Sylhet received 12³/₄ inches during the week, Sibsagar 4 inches, Lakhimpur 4³/₄ inches, and parts of Darrang, Kamrup and Goalpara over 2 inches. In Deltaic and Central Bengal there were no important falls, but in North Bengal, Cooch Behar received 5 inches, and Kurgram (in Rungpore) received 2 inches. In North-Western India the only district reporting a fall of over 1 inch was Thull (in Kohat). In the west of the Peninsula, Palghat (Calicut) reports 2¹/₂ inches and Kotagari (Nilgiris) 3 inches for their week's fall. The Bombay Deccan had heavyish rain. Akybag (Kolapur) received 3¹/₄ inches, and one district in Belgaum 2 inches.

W. L. DALLAS,

Assistant Meteorological Reporter to the
Government of India.

W. C. BENETT,

Offg. Secretary to the Government of India.

SIMLA, 17th April, 1890.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 12th April.*—Slight showers in Ganjam, Vizagapatam, Bellary, Anantapur, Tanjore, Trichinopoly, Madura, Tinnevely, Coimbatore, Nilgiris, South Canara and Malabar. No rain elsewhere. Crops generally good, but withering in parts of Nellore, South Arcot, Tinnevely and Coimbatore, and suffering from want of water in parts of Vizagapatam and North Arcot. Outturn of sugarcane good. Tobacco and cotton average. Paddy and dry grains below average. Water-supply and pasturage generally decreasing. Prices rising. Prospects fair.

Bombay.—*For week ending 16th April.*—Rain in parts of Sind, Kofikan, Deccan and Karnatic. Exotic cotton in parts of Dharwar blighted; *jowari* in Ahmednagar middling; crop prospects otherwise satisfactory. Fodder sufficient except in four districts. Agricultural stock generally healthy.

Bengal.—*For week ending 15th April.*—Scattered showers fell in North-East and Central Bengal. General rain wanted for cultivation of lands all over the Province. Early rice and jute sowings begun, and sugarcane being planted in Behar. Indigo, *cheena* and *mung* being sown. *Boro* or spring rice reported as doing well generally, but suffering from want of rain in some districts. *Rabi* harvest over in most parts, with a fair outturn on the whole. *Mahua* expected to yield 12 to 16 annas in Chota Nagpur, but is a poor crop in the Sonthal Pergunnahs and Bhagulpore. Latest report from Balasore shows that there is no ground for serious anxiety. Work on the Behamagar Talpada road undertaken by the District Board finished. Relief work at Government cost begun, and 187 coolies employed during the past week. Beggars still being fed from private funds, and there is a decided improvement in their appearance.

North-Western Provinces and Oudh.—*For week ending 16th April.*—Weather seasonable. *Rabi* harvest approaching completion. Threshing and winnowing in progress in several districts. Summer crops doing well. Supplies ample, and prices fairly steady, but somewhat high.

Punjab.—*For week ending 16th April.*—Slight rain in Rawalpindi, Shahpur and Peshawar. Prices rising in Hissar and Mooltan; fluctuating in Delhi; and stationary elsewhere. Harvesting of *rabi* crops in progress. *Kharif* sowings going on in Jullundur, Sialkot and Peshawar. Prospects of crops generally average on irrigated lands, but poor elsewhere. Fodder sufficient in Ferozepore, Amritsar, Rawalpindi, Shahpur, Dera Ismail Khan and Peshawar; scarce elsewhere.

Central Provinces.—*For week ending 16th April.*—Weather unusually hot, with occasional clouds. Threshing and winnowing of *rabi* crops in progress. The wheat crop in Hoshangabad is reported to have turned out a scanty one, and that in Raipur is returned at eight annas only, otherwise no change in prospects.

Burma.—*For week ending 12th April.*—Heavy rain at Mergui and in small quantities at Sandoway, Bassein, Thongwa, Shwegyin, Toungoo, Tavoy, Bhamo, Yeu, Upper and Lower Chindwin, Myingyan, Yamethin and Pynmana. Showers also fell at Thayetmyo, Moulmein, Amherst, Katha, Sagaing and Kyaukse. Rise in paddy in Thayetmyo, and fall in Mergui. Food-supply sufficient.

Assam.—*For week ending 16th April.*—Weather seasonable. Rainfall general and beneficial to crops. Sowing of early rice still continues. Prospects of tea and other crops good.

Mysore and Coorg.—*For week ending 16th April.*—Rain reported in parts of the Shimoga district. Standing crops in good condition. Paddy sown and sugarcane planted in parts. Prospects generally fair. Prices slightly risen in the Bangalore district.

Season favourable in Coorg during the week. Rainfall slight.

Berar and Hyderabad.—*For week ending 16th April.*—Weather warm. Threshing of *rabi* continues. Fodder insufficient in Ellichpur, Daryapur, Yeotmal and Kelapur taluks. Water scarce in Amraoti, Murtizapur, Yeotmal and Kelapur taluks. Prices stationary. Land under preparation for next season.

No rain in Hyderabad during the week. Reaping of *tabi* and *rabi* crops continues. Prices stationary.

Central India.—*For week ending 16th April.*—Crops reaped in Bundelkhand. Prices fallen slightly in Dhar, Barwani and Jhabua. No other change of importance since last week.

Rajputana.—*For week ending 16th April.*—Cutting of crops continued generally. Agricultural stock good, except in parts of Ajmere. Pasturage or fodder sufficient, except in Marwar. Prices steady generally.

Nepal.—*For week ending 10th April.*—No rain. Weather warm and cloudy, with dust storms at times. Prospect of crops fair. Owing to absolute want of rain, sowing of *ghaia* rice and Indian corn postponed.

W. C. BENETT,

Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.
PUBLIC WORKS DEPARTMENT.
RAILWAY TRAFFIC.

No. L. OF 1889-90.

APPROXIMATE STATEMENT OF GROSS RECEIPTS AND EXPENSES OF INDIAN RAILWAYS.

N.B.—As regards the figures in column *Total Receipts from 1st April to date*, audited figures have been used as far as possible.

N. B.—As regards the figures in column 10, Receipts from 1st April to 22nd March, the figures have been taken from the latest return received.

Under-Secretary.

SIMLA, 17th April, 1890.

SUPPLEMENT TO The Gazette of India.

No. 17. } CALCUTTA, SATURDAY, APRIL 26, 1890.

OFFICIAL PAPERS.

A SUPPLEMENT to the GAZETTE OF INDIA will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in PART VI of the GAZETTE.

Non-Subscribers to the GAZETTE may receive the SUPPLEMENT separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The SUPPLEMENT and PART VI of the GAZETTE can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA is required by Law, or which it has been customary to publish in the CALCUTTA GAZETTE, will be included in the SUPPLEMENT. For such Orders and Notifications the body of the GAZETTE must be looked to.

GOVERNMENT OF INDIA.

FINANCE AND COMMERCE DEPARTMENT,
(Statistical Branch)
Calcutta, 26th April 1890.

E. J. SINKINSON,
Secretary to the Government of India.

Continuation Sheets of Supplement to the Gazette of India published at Calcutta.

OF INDIA.

URAL DEPARTMENT.

week ending at 8 a.m. on

Monday, April 21st, 1890.

There has been practically no change in the weather during the week under review as compared with that prevailing during the two preceding weeks. Pressure has been steadily low over the Gangetic plain and North-Western India, and at different times and at different places within this large low pressure area small disturbances have been formed and have had the usual effect on the weather. In the extreme north-east of India the latter part of the week has been exceedingly rainy and unsettled, a condition attributable to the steady prevalence of two strong wind currents over that region. The charts for this period show a strong, damp and warm wind blowing in from the Bay, while down the Assam Valley and across Bengal there was a much cooler easterly and north-easterly current. The latter passing under the former occasioned ascensional movements in the almost saturated wind from the Bay and brought about the constant rainfall over Bengal and Assam which is noticed above. In the Peninsula also there has been a good deal of showery and unsettled weather. It commenced in the extreme south on the 15th and gradually extended northward, till by the 18th it had spread as far as Berar, after which the disturbed area suddenly contracted and rainfall was again confined to the south of the Peninsula.

The chart of the 15th showed pressure low over North-Western India and the Gangetic plain and high over the west of the Peninsula, the south-east of the Bay and Lower Burma. The weather was unsettled in the Circars, Lower Bengal and Malabar, and the wind was becoming cyclonic over the Punjab. At the head of the Bay the southerly wind blew very strongly. On the 16th a well marked depression was shown over the central parts of the Punjab, where a further brisk barometric fall had occurred. Gradients were steepish between the Punjab and Sind and a well defined cyclonic circulation prevailed over North-Western India; elsewhere there was little change. By the morning of the 17th the storm over the Punjab had reached the hills and begun to break up, while a fresh though unimportant depression had formed over Behar, &c. From the 18th to the end of the week the distribution of pressure on each day was similar in all important respects. Low barometric readings prevailed over the Gangetic plain and a large part of Central India and the Western desert, while pressure was high in Assam, in the south of the Peninsula, in Sind and Kattiawar and in the north-west of the Punjab. During this period the southerly wind at the head of the Bay and the north-westerly wind on the Sind-Kattiawar coast blew strongly or freshly and the easterly wind in Assam moderately.

Temperature.—The warm period which had prevailed during the two preceding weeks continued during the greater part of the week under review. About the middle of the week however a considerable though temporary interruption occurred, and the mean temperature of the 18th and 19th for the whole of India was below the average. After the 19th the mean of all the Provinces again rose above the normal, but not to the same extent as during the early days of the week. Burma was the only Province which had a higher temperature than usual throughout the whole week, all other parts of India experiencing, either two or three, days of cooler weather than usual.

The region of absolute highest day temperature has been less erratic during the present than during the preceding week.

On the 15th	the highest maximum was	109° 7' at Nagpur.
" 16th	"	109° 7' " Nagpur.
" 17th	"	108° 4' " Allahabad.
" 18th	"	107° 0' " Gya.
" 19th	"	105° 4' " Allahabad.
" 20th	"	108° 2' " Deesa.
" 21st	"	111° 5' " Sholapur.
"	"	" Deesa.

These readings show that for the first five days, during which there was a steady decrease in the value of the absolute maximum, the region of greatest heat lay over the Central Provinces, the east of the North-West Provinces and Behar, but that on the 20th and 21st it was transferred to Guzerat and the Bombay Deccan. The reading of $111^{\circ}5'$ at Deesa on the 21st was the highest yet recorded this season and was the first exceeding 110° .

The following table gives the variations of temperature from the normal, according to Provinces, for the present and the past week :

PROVINCES.	Variation of Temperature from Normal for Past Week.	Variation of Temperature from Normal for Present Week.
Burmah	- 0.7°	+ 1.2°
Bengal	+ 1.0°	- 0.4°
North-West Provinces	+ 3.9°	+ 0.3°
Punjab	+ 4.8°	+ 1.3°
Bombay	+ 1.4°	+ 0.6°
Central Provinces	+ 3.0°	+ 0.7°
Guzerat and Central India	+ 3.3°	+ 1.6°
Sind and Rajputana	+ 3.9°	+ 2.4°
Madras	+ 0.4°	+ 0.4°

These figures show that, compared with last week and with the normal average, there has been an increase of temperature in Burma, no change in Madras, and a fall in all other Provinces. The greatest fall is in the Punjab and Central Provinces.

Rain.—As mentioned in the earlier part of this Summary, rain has been very general throughout India during the past week. The fall has been most continuous in North-Eastern India and the south of the Peninsula, but at different times during the week—more particularly on the 18th—the different centres of rainfall extended and showers were reported from most Provinces. The rainfall in the North-West was connected with the depression which formed slowly over the Punjab during the 14th, 15th and 16th, that in the Peninsula with small and feeble depressions which appeared in the extreme south and that in North-Eastern India, which occurred mostly during the last three days of the week, was due, as explained in the first paragraph, to a cool easterly current from Assam causing ascensional movements in the almost saturated current from the Bay. As a result of these different actions, no less than thirty-six out of the fifty-two rainfall divisions show rainfall during the week. The regions in which there has been no precipitation are the Lower Burma and Arrakan divisions of the Eastern Peninsula, Western Bengal, and the eastern parts of the North-Western Provinces, the Konkan, the greater part of the Central Provinces, and westward across Rajputana, Guzerat and Kattiawar into Sind. Of the divisions in which rain has fallen one-half report an excess of rain over the normal average of the week and the other half a deficiency. The excess is shown over Assam, Lower and Northern Bengal, Behar (north), the North-Western Provinces (west), the Hill and Submontane districts of the Punjab, the south-west of the Peninsula, the Deccan and Berar, and Central and Southern Madras. The only important instances of excess are in Assam and Bengal and in the south-west of the Peninsula, in both of which regions the total fall is from twice to three times the average. In the other divisions any excess is small and unimportant. In Eastern Bengal and Assam the total fall of the week varies between 2 and $3\frac{1}{2}$ inches, and in Central and North Bengal, Malabar and Madras (south central) is about $1\frac{1}{2}$ inches.

The maximum falls were much larger than of late. Fenny (Noakhally) received nearly 5, Naraingunj (Dacca) $3\frac{1}{2}$, and Agortollah (Tipperah) $5\frac{1}{2}$ inches. In Assam, Cherrapunji received 5 and Dibrugarh and Mangaldai (Tezpur) over 3 inches. In Deltaic, Central and North Bengal the maximum falls were smaller, averaging between 2 and 3 inches, but Lalgola (Moorshedabad) and Nattore (Rajshahye) received $4\frac{1}{2}$ and $5\frac{1}{2}$ inches respectively. In Bhagalpur, Banka received 2 inches. In Upper India the largest falls were 1 inch at Kangra and Mansehra (Hazara). In the south of the Peninsula the largest amount was 5 inches at Coonor. The Bombay Deccan again reported some heavy falls. Athni (Belgaum) received $3\frac{1}{2}$ inches, and in Dharwar, Kolhapur, Satara and Bijapur falls exceeding 1 inch have been registered. In the east of the Peninsula the rainfall varied considerably. One subdivision in Cuddapah received 4 inches and one in Tinnevely 3 inches, but the heaviest amounts in the other districts were between 1 and $1\frac{1}{2}$ inches.

W. L. DALLAS,

Assistant Meteorological Reporter to the
Government of India.

W. C. BENETT,

Offg. Secretary to the Government of India.

SIMLA, 24th April, 1890.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 19th April.*—Slight rain throughout, except in Kistna and Madras. The crops are generally good, but suffering from want of rain in parts of Vizagapatam, Nellore, Cuddapah, Chingleput, North Arcot, South Arcot, Tanjore, Trichinopoly, Tinnevely and Coimbatore. Outturn of sugarcane good; oilseeds average; paddy, dry-grains and cotton below average. Water-supply and pasture generally decreasing. Prices stationary. Prospects fair. More rain has fallen since in Tinnevely.

Bombay.—*For week ending 23rd April.*—Rain in parts of Guzerat, Deccan, Southern Mahratta Country and Kathiawar. Exotic cotton in two talukas of Dharwar blighted; crops otherwise satisfactory. Preparations for next season's crops progressing generally. Agricultural stock healthy except in Hyderabad.

Bengal.—*For week ending 22nd April.*—Rain in almost all districts of Bengal Proper, moderately heavy in some of the eastern and northern districts. A few slight showers also fell in North Behar and in the Balasore district. The rain has facilitated ploughing and early sowings, and has done good to crops on the ground. More rain is still required in many districts. *Boro* or spring rice improved, and harvesting begun in some districts. Cultivation for late rice general in Behar. *Cheena*, *mung* and indigo sowings coming on well, and opium weighments in progress. Price of rice has somewhat risen in the Behar districts generally, and in many of the Bengal districts and also in Balasore and Puri. Latest reports from Balasore state that more than 200 coolies are daily employed on Talpada relief works.

North-Western Provinces and Oudh.—*For week ending 23rd April.*—Weather continues seasonable. Slight showers have fallen in Kumaun and Aligarh. Harvesting of *rabi* completed, outturn fairly good; summer crops doing well. Supplies sufficient, except in Kumaun where grain is scarce. Prices generally steady, but continue high in Kumaun.

Punjab.—*For week ending 23rd April.*—Slight rain in Delhi, Ferozepur, Amritsar, Lahore, Rawalpindi and Peshawar. Prices rising in Hissar and Rawalpindi, fluctuating in Lahore and stationary elsewhere. Harvesting of *rabi* crops in progress. *Kharif* sowings going on in Jullundur, Sialkot, Lahore and Peshawar. Prospects and outturn of crops average on irrigated lands, but poor elsewhere. Hail damaged the crops in Dera Ismail Khan. Pasturage and fodder sufficient in Ferozepur, Amritsar, Rawalpindi, Shahpur, Dera Ismail Khan and Peshawar; scarce elsewhere.

Central Provinces.—*For week ending 23rd April.*—Weather cloudy and hot. Slight rain in Hoshangabad and Khandwa. Threshing and winnowing of winter crops approaching completion in some districts. Land being prepared for autumn sowings. Prospects remain unchanged. Prices steady.

Burma.—*For week ending 19th April.*—A little rain fell in Toungoo, Tavoy, Bhamo, Katha, Ruby Mines, Yeu, Magwe, Meiktila and Yamethin districts. The price of paddy has fallen in Bassein and has risen in Yamethin and Pynmana, and is stationary elsewhere. The food-supply is sufficient.

Assam.—*For week ending 23rd April.*—Weather seasonable. Rainfall sufficient. Sowing of early rice continues. Planting of sugarcane commenced. Standing crops doing well.

Mysore and Coorg.—*For week ending 23rd April.*—Slight rain in parts. Standing crops in good condition. Rain wanted in Kolar. Prospects of season good. Prices rising in Shimoga and fallen in Kolar.

A good fall of rain in Coorg during the week.

Berar and Hyderabad.—*For week ending 23rd April.*—Rainfall good during the week. Weather warm and cloudy. Land being prepared for next season. Fodder insufficient in Ellithpur, Yeotmal, Darwha, and Kelapur taluks. Water scarce in Amraoti, Murtizapur, Yeotmal, Darwha and Kelapur taluks. Threshing of *rabi* continues. Prices almost stationary.

No report from Hyderabad.

Central India.—*For week ending 23rd April.*—Prices rising in Bhopal Agency.

Rajputana.—*For week ending 23rd April.*—Slight rain in Meywar. Reaping and threshing in progress. Agricultural stock good, except in parts of Ajmere. Pasturage or fodder sufficient, except in Marwar and Dholepore. Prices steady generally.

Nepal.—*For week ending 17th April.*—Showers of little importance fell in part of Katmandu. Weather cloudy. Prospects of crops bad. *Ghaia* (early) rice and Indian corn could not be sown for want of rain.

W. C. BENETT,
Offg. Secretary to the Government of India.

(a) Includes the Dildanagar-Ghazipur State Railway.
(b) Includes the Kaim-Umana Branch.
(c) Includes the Asansol-Chakradarpur Section of the Bengal-Nagpur Railway.
(d) Includes the Bellary-Kistna State Railway.
(e) Includes the Sindh and Bhupal-Ikari State Railways.
(f) Includes the Amritsar-Pathankot and Rajputa-Bhatinda State Railways.

(g) Receipts for week ending 30th March 1889.
(h) Receipts for week ending 29th March 1890.
(i) Total receipts from 1st April 1888 to 30th March 1889.
(j) Total receipts from 1st April 1889 to 29th March 1890.
(k) Includes the Toungoo-Mandalay.
(l) Includes the Dhond-Manmad, Khamsaon, and Amroli State Railways.
(m) Includes the Patni Branch.

M. C. BRACKENBURY, Major, R.E.,
Under-Secretary.

SIMLA, 24th April, 1890.

SUPPLEMENT TO The Gazette of India.

No. 18.

CALCUTTA, SATURDAY, MAY 3, 1890.

OFFICIAL PAPERS.

A SUPPLEMENT to the GAZETTE OF INDIA will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in PART VI of the GAZETTE.

Non-Subscribers to the GAZETTE may receive the SUPPLEMENT separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The SUPPLEMENT and PART VI of the GAZETTE can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA is required by Law, or which it has been customary to publish in the CALCUTTA GAZETTE, will be included in the SUPPLEMENT. For such Orders and Notifications the body of the GAZETTE must be looked to.

RETAIL PRICES FOR THE 1st HALF OF MARCH 1890.

* Not sold.

QUANTITIES PER RUPEE IN SERS OF 80 TOLAS.

COMMERCIAL CONVENTION BETWEEN GREAT BRITAIN AND EGYPT,
29TH OCTOBER 1889.

Simla, the 3rd May, 1890.

Read the correspondence mentioned below on the subject of the adhesion of India to the new Commercial Convention between Great Britain and Egypt:

Despatch from Secretary of State for India, No. 70 (Statistics), dated 26th September 1889, and enclosures.

Telegram to Secretary of State for India, No. 5142, dated 7th October 1889.

Despatch from Secretary of State for India, No. 82 (Statistics), dated 7th November 1889, and enclosures.

Despatch from Secretary of State for India, No. 89 (Statistics), dated 19th December 1889, and enclosure.

ORDER.—Ordered, that the correspondence be communicated to the Chambers of Commerce of Bengal, Bombay, Madras, Rangoon, Karachi, and Upper India, and that it be published in the Supplement to the *Gazette of India*.

J. E. O'CONOR,

Asst. Secy. to the Govt. of India.

No. 70 (Statistics), dated 26th September 1889.

From—The Secretary of State for India,

To—The Government of India.

I forward herewith a copy of correspondence with the Foreign Office relative to a proposed Commercial Convention with Egypt, and I shall be glad to learn by telegraph whether Your Excellency's Government agree to the suggestion that India be omitted from the list of British dependencies enumerated in Article XV of the draft Convention, provided that rice and indigo from India are included among the commodities mentioned in Article VI as subject to a duty not exceeding 10 per cent. *ad valorem*.

No. 1010-R. S. & C., dated 22nd June 1889.

From—J. A. GODLEY, Esq., C.B., Under-Secretary of State for India,

To—The Under-Secretary of State for Foreign Affairs.

I am directed by the Secretary of State for India to address you on the subject of the position of Indian trade with Egypt under the tariff which at present exists or may hereafter be settled. In the possible event of a new Convention regulating the trade of Egypt with Great Britain and her dependencies, it may be that certain articles will be admitted into Egypt at a fixed duty *ad valorem* for a term of years, while other articles will be liable to such duties as the Egyptian Government may from time to time decide. If this should be the case, Viscount Cross desires me to represent that Indian rice and Indian indigo, being the chief articles of raw produce which India sends to Egypt, should be placed upon the list of commodities subject to a fixed *ad valorem* duty; and he trusts that the

Secretary of State for Foreign Affairs may be able to secure this concession for Indian trade.

The values of indigo and rice leaving Indian ports for Egypt during the past five years have been—

					In Rs. or in tens of rupees.	
					Indigo.	Rice.
1883-84	...	...	...	...	291,000	1,105,000
1884-85	...	...	...	...	335,000	802,000
1885-86	...	...	...	...	200,000	1,404,000
1886-87	...	...	...	...	331,000	1,250,000
1887-88	...	...	...	...	294,000	2,051,000

Much of these consignments goes only "to Port Said for orders," and is carried to other Mediterranean ports; and His Lordship has no precise information as to the quantities that remain in Egypt. But the trade is large and important. India receives from Egypt cotton and any other commodities which Egypt can send, except salt and liquor, free of all duty. India, therefore, has a good claim to have her chief exports to Egypt treated liberally in the Egyptian tariff; and it is especially for the interest of the Indian trade that the rate of duty on these two commodities should be fixed for a term of years, and should not be liable to sudden alterations.

No. 1015-R. & S., dated 20th June 1889.

From—SIR J. FERGUSSON, G.C.S.I., Under-Secretary of State for Foreign Affairs.
To—The Under-Secretary of State for India.

I am directed by the Marquis of Salisbury to acknowledge the receipt of your letter of the 22nd instant, in which you represent that, in the event of a new Commercial Convention being concluded between this country and Egypt, Indian rice and indigo should be placed upon the list of commodities subject to a fixed *ad valorem* duty for a fixed term of years, and should not be liable to alterations.

I am to request that you will inform Viscount Cross that the Commercial Treaty of 1861 between Great Britain and Turkey, which applied to all the Ottoman Dominions, having expired, British trade at present receives in the Ottoman Dominions most-favoured-nation treatment, the effect of which is that, under the Commercial Treaties still in force between the Porte and certain Powers, an uniform 8 per cent. *ad valorem* duty is now, and will continue to be levied so long as any one of those treaties remains in force on all British goods entering Egypt.

In the recent negotiations for the conclusion of a Commercial Convention with Egypt, it has been proposed by the Egyptian Government that *ad valorem* duties shall be maintained, the minimum rate being raised to 10 per cent., and Her Majesty's Government have stipulated that, if India accedes to the Treaty, rice and indigo shall be included in the list of goods admitted at that rate, which will continue during the time that the Treaty shall remain in force.

No. 1351-R. & S., dated 28th August 1889.

From—SIR J. FERGUSSON, G.C.S.I., Under-Secretary of State for Foreign Affairs.
To—The Under-Secretary of State for India.

With reference to my letter of the 26th of June, I am directed by the Marquis of Salisbury to transmit, for the information of Viscount Cross, a copy of the revised draft of the proposed Commercial Convention between Great Britain and Egypt; and I am to enquire whether, if indigo and rice are inserted in Article VI in the list of goods, the duty on which on importation into Egypt is not to exceed 10 per cent. *ad valorem*, India may be omitted from the list of British Colonies and possessions in Article XV, the subsequent accession of which to the Convention is reserved.

Telegram, No. 5142, dated 7th October 1889.

From—The Government of India.
To—The Secretary of State for India.

Egyptian Trade Convention. We agree to the proposed omission of India from Article 15 upon the understanding that—

Firstly.—Words "and India" should be inserted after "Ireland," line 2, Article 6. We understand that this is the proposal made to us. It is necessary to place Indian cotton and jute goods on same footing as English.

Secondly.—Following should be added to the list of goods in Article 6: Oil-seeds, indigo, rice.

Thirdly.—Article 8 should be expanded so as to secure exemption from duty to goods sent across Egypt by rail. We think it necessary in view of a possibility of Canal being blocked.

Fourthly.—It is expedient that we should be fully consulted before any material alteration can be made in the terms of the draft Convention which would bind India.

No. 82 (Statistics), dated 7th November 1889.

From—The Secretary of State for India,
To—The Government of India.

With reference to the telegram from Your Excellency, dated the 5th October, I forward herewith, for your information, a copy of correspondence with the Foreign Office on the subject of the proposed Commercial Convention with Egypt.

Dated 10th October 1889.

From—H. G. WALFORD, Esq., C.B., Under-Secretary of State for India,
To—The Under-Secretary of State for Foreign Affairs.

In continuation of the letter from this office of the 19th ultimo, I am directed by the Secretary of State for India in Council to forward herewith a copy of a telegram received from the Government of India relative to the proposed Commercial Convention between Great Britain and Egypt.

Viscount Cross apprehends that there will be no difficulty in making the additions proposed in Article VI, and in the insertion in the last clause of Article VIII, after the word "transhipped," of some such words as the following: "whether directly, or after having been conveyed by rail across Egyptian territory."

I am to add that the Marquis of Salisbury will doubtless take note of the provisional desire expressed at the close of the telegram, although it is not probable that occasion will arise for taking any action of the kind.

Dated 16th October 1889.

From—SIR T. V. LISTER, K.C.M.G., Under-Secretary of State for Foreign Affairs,
To—The Under-Secretary of State for India.

I am directed by the Marquis of Salisbury to acknowledge the receipt of your letter of the 10th instant forwarding a telegram which records the conditions on which the Government of India are willing that the proposed new Commercial Convention with Egypt shall apply to India.

In reply, I am directed to state that the Government of India are under a misapprehension in suggesting that the words "and India" should be inserted after "Ireland" in Article VI. It has not been the usage to mention India specifically in this manner in Commercial Treaties, nor is it necessary to do so. By omitting "India" from the exceptions enumerated in the Colonial Article (in the present instance Article XV of the draft Convention), India comes within the general stipulation that the provisions of the Treaty shall be applicable to all the Colonies and foreign possessions of Her Britannic Majesty.

The wishes of the Government of India that Indian cotton and jute goods, as well as indigo and rice, shall enjoy the benefit of the Tariff Article of the Convention will be fully attained. There may, however, be difficulty as regards oil-seeds, but Sir Evelyn Baring will, if possible, give effect to the wishes of the Indian Government.

I enclose, for Viscount Cross's information, a copy of the instructions given to Sir Evelyn Baring upon your letter of the 10th instant.

Dated 16th October 1889.

From—SIR T. V. LISTER, K.C.M.G., Under-Secretary of State for Foreign Affairs,
To—Her Britannic Majesty's Minister Plenipotentiary Agent, and Consul-General in Egypt.

With reference to my Despatch No. 27 (Commercial) of the 19th ultimo, I transmit to you herewith copies of correspondence with the India Office relative to the conditions on which the Government of India is willing that the proposed new Commercial Convention with Egypt shall be made applicable to India.

I have accordingly to request that you will propose that indigo, rice, and oil-seeds shall be added to the goods specified in Article VI, and that in the last clause of Article VIII, after the word "transhipped," the following words shall be inserted: "whether directly, or after having been conveyed by rail across Egyptian territory."

I have further to authorise you to take out "India" from the exceptions enumerated in Article 15, and to ask that you will give full attention to the desire of the Government of India that they should be fully consulted before any material alteration is made in the terms of the draft Convention which would bind India.

I have addressed a telegram to you to-day giving the substance of this Despatch.

Dated 31st October 1889.

From—Sir J. FERGUSSON, G.C.S.I., Under-Secretary of State for Foreign Affairs,
To—The Under-Secretary of State for India.

I am directed by the Marquis of Salisbury to state to you, for the information of Viscount Cross, that Sir E. Baring, in a telegram dated the 25th instant, reported that the Egyptian Government had agreed to the additions to the Commercial Convention desired by the Government of India, subject to the modifications mentioned in my letter of the 16th instant.

Sir Evelyn Baring was accordingly instructed by telegraph on the 26th instant to sign the Convention.

No. 89 (Statistics), dated 19th December 1889.

From—The Secretary of State for India,
To—The Government of India.

In continuation of my despatch dated 7th November, No. 82, I forward herewith, for the information of Your Excellency, a copy of the Commercial Convention between Great Britain and Egypt as signed on 29th October last.

* * * *

Commercial Convention between Great Britain and Egypt signed at Cairo, 29th October 1889.

The undersigned, Sir Evelyn Baring, G.C.M.G., K.C.B., K.C.S.I., C.I.E., Minister Plenipotentiary, Agent, and Consul-General of Her Britannic Majesty in Egypt, and His Excellency Zoulikar Pasha, Minister for Foreign Affairs of the Government of His Highness the Khedive of Egypt;

Duly authorised by their respective Governments have agreed to the following:

ARTICLE I.

There shall be reciprocal freedom of commerce and navigation between the United Kingdom of Great Britain and Ireland and Egypt. British subjects in Egypt, and Egyptians in the United Kingdom of Great Britain and Ireland, shall have liberty freely to come, with their ships and cargoes, to all places and ports in the other country to which natives are or may be permitted to come, and shall enjoy respectively the same rights, privileges, liberties, favours, immunities, and exemptions in matters of commerce and navigation as are or may be enjoyed by natives without having to pay any tax or impost greater than those paid by the same.

ARTICLE II.

No other or higher duties shall be imposed on the importation into the United Kingdom of Great Britain and Ireland of any article, the produce or manufacture of Egypt, from whatever place arriving, and no other or higher duties shall be imposed on the importation into Egypt of any article, the produce or manufacture of the United Kingdom of Great Britain and Ireland, from whatever place arriving, than on the like article produced or manufactured in any other foreign country; nor shall any prohibition be maintained or imposed on the importation of any article, the produce or manufacture of either of the Contracting Countries, into the other, from whatever place arriving, which shall not

Les Soussignés, Sir Evelyn Baring, G.C.M.G., K.C.B., K.C.S.I., C.I.E., Ministre Plénipotentiaire, Agent Diplomatique et Consul Général de Sa Majesté Britannique en Egypte, et Son Excellence Zoulikar Pacha, Ministre des Affaires Étrangères de Gouvernement du Son Altesse le Khédive d'Égypte;

Dûment autorisés par leurs Gouvernements respectifs sont convenus de ce qui suit :

ARTICLE I.

Il y aura liberté réciproque de commerce et de navigation entre le Royaume-Uni de la Grande-Bretagne et d'Irlande et l'Égypte.

Les sujets Britanniques en Égypte et les Égyptiens dans le Royaume-Uni de la Grande-Bretagne et d'Irlande pourront librement entrer, avec leurs navires et leurs cargaisons, dans tous les lieux et ports de chacun des deux pays dont l'entrée est ou serait permise aux nationaux du pays, et ils jouiront respectivement, en matière de commerce et de navigation, des mêmes droits, privilèges, libertés, favours, immunités, et franchises dont jouissent ou pourraient jouir les nationaux du pays, sans qu'ils aient à payer aucune taxe ou droit plus élevés que ceux auxquels ces derniers sont assujettis.

ARTICLE II.

Les importations dans le Royaume-Uni de la Grande-Bretagne et d'Irlande d'un article quelconque, produit du sol ou de l'industrie de l'Égypte, de quelque provenance que ce soit, et réciproquement les importations en Égypte d'un article quelconque, produit du sol ou de l'industrie du Royaume-Uni de la Grande-Bretagne et d'Irlande, de quelque provenance que ce soit, ne seront pas frappées d'autres droits ou de droits plus élevés que ceux dont sont frappées les importations d'articles similaires, produits du sol ou de l'industrie de tout autre pays étranger; de même, il ne sera maintenu ou édicté contre l'importation d'un article quelconque, produit du sol ou de l'industrie de l'un ou de l'autre des deux Pays Contractants, de quelque

equally extend to the importation of the like article being the produce or manufacture of any other foreign country.

This last provision is not applicable to the sanitary and other prohibitions occasioned by the necessity of protecting the safety of persons or of cattle or of plants useful to agriculture.

Tobacco of all kinds, tombac, salt, salt-petre, natron, hasheesh, arms of every description, ammunition, gunpowder, and explosive material are excluded from the stipulations of the present Convention.

ARTICLE III.

No other or higher duties or charges shall be imposed in the United Kingdom of Great Britain and Ireland or in Egypt respectively on the exportation of any article to the other Contracting Country than such as are or may be payable on the exportation of the like article to any other foreign country; nor shall any prohibition be imposed on the exportation of any article from either of the two Contracting Countries to the other which shall not equally extend to the exportation of the like article to any other foreign country.

ARTICLE IV.

The Contracting Governments agree that in all matters relating to commerce and navigation, any privilege, favour, or immunity whatever which one Contracting Party has actually granted, or may hereafter grant, to the natives of any other State shall, on the demand of the other Contracting Government, be immediately and unconditionally extended to the natives of the other Contracting Party, which shall, by the simple fact of such demand, assume, as regards Administrative Regulations of Customs, Coast-Guards, and Police, all the obligations incumbent on the State with which it demands assimilation.

ARTICLE V.

British ships shall in Egypt, and Egyptian vessels shall in the United Kingdom of Great Britain and Ireland, from whatever place arriving, and whatever may be the place of origin or destination of their cargoes, be treated in every respect as national ships.

The preceding stipulation applies to local treatment, dues, and charges in the ports, basins, docks, roadsteads, and harbours of the two countries, pilotage, and generally to all matters connected with navigation.

All vessels which, according to British law, are to be deemed British vessels, and all vessels which, according to Egyptian law, are to be deemed Egyptian vessels, shall, for the purposes of this Convention, be respectively deemed British or Egyptian vessels.

ARTICLE III.

L'exportation, par l'un des Pays Contractants, d'un article quelconque à destination de l'autre pays, ne pourra être frappée en Égypte et respectivement dans le Royaume-Uni de la Grande-Bretagne et d'Irlande de droits ou charges autres ou plus élevés que ceux qui sont ou pourraient être acquittés lors de l'exportation du même article à destination de tout autre pays étranger; il ne pourra, non plus, être établi par l'une des Parties Contractantes à l'égard de l'autre, aucune prohibition à l'exportation que ne soit applicable également à l'exportation du même article à destination de tout autre pays étranger.

ARTICLE IV.

Les Parties Contractantes conviennent que pour tout ce qui concerne le commerce et la navigation, tous privilèges, favours, ou immunités quelconques que l'une des deux Parties Contractantes a déjà accordés ou pourrait ultérieurement accorder aux nationaux de toute autre Puissance seront, sur la demande de l'autre Partie Contractante, étendus immédiatement et sans conditions aux nationaux de celle-ci, qui, par le seul fait de cette demande, assumera, pour ce qui concerne les Règlements Administratifs des Douanes, des Gardes-Côtes, et de la Police, toutes les obligations incombant à la Puissance à laquelle elle demande d'être assimilée.

ARTICLE V.

Quelque soit le port de départ des navires et quelque soit le lieu d'origine ou de destination de leur cargaison, les navires britanniques en Égypte et, réciproquement, les navires égyptiens dans le Royaume-Uni de la Grande-Bretagne et d'Irlande jouiront, sous tous les rapports, du même traitement que les navires du pays.

Cette stipulation s'applique aux Règlements locaux, aux taxes et perceptions dans les ports, bassins, docks, rades et havres des deux pays, au pilotage et, en général, à tout ce qui concerne la navigation.

Tous les navires qui, d'après les lois britanniques, sont considérés comme navires de nationalité britannique, de même que tous les navires qui, d'après les lois égyptiennes, sont considérés comme navires égyptiens, seront, pour tout ce qui concerne la présente Convention, considérés respectivement comme navires britanniques ou égyptiens.

The coasting trade and interior navigation, however, are excepted from the preceding stipulations, and remain subject to the respective laws of the two countries.

All articles, from whatever place arriving, and whatever may be their place of origin, may be imported or exported in the vessels of the Contracting Parties without being liable to any other restriction or higher duties in the other country than if the articles were exported or imported in native vessels, or in those of any other State.

ARTICLE VI.

The undermentioned goods, the produce or manufacture of the United Kingdom of Great Britain and Ireland, shall pay, on importation into Egypt, duty not exceeding 10 per cent. *ad valorem*, viz. :

1. Metals, raw, partially manufactured and wholly manufactured, including machinery and parts thereof, agricultural machines and implements, railway and tramway carriages and engines, hardware, and all articles of which metals (except gold or silver) are the principal component.

2. Cutlery, ordinary, that is to say, with handles of any material except gold, silver, pearl, or tortoiseshell.

3. Yarns, threads, cordage, and cables, nets, velvets, and all other fabrics, plain, openwork, or fancy, unbleached, bleached, printed or dyed, manufactured from any vegetable fibre, such as cotton, jute, flax, hemp, reba, palm, aloe, or the like.

4. Yarns and fabrics as enumerated in class 3 manufactured from wool, worsted, mohair, vicuna, camel-hair, or any animal fibre except silk.

5. Mixed fabrics of the materials enumerated in classes 3 and 4, and also with an admixture of silk or waste silk not exceeding 20 per cent. in weight of the whole fabric.

6. Coal.
7. Indigo.
8. Rice.
9. Oil-seeds.

The Egyptian Government preserves an absolute right respecting the taxation of all other articles. The Regulations and tariffications of such other articles shall be applicable to British subjects under the same conditions as to natives or to foreigners, the most favoured in that respect.

The duties *ad valorem* levied in Egypt on goods, the produce or manufacture of the United Kingdom of Great Britain and Ireland, shall be calculated on the value at the place of shipment or purchase of the object imported, with the addition of the cost of transport, including insurance, necessary for the importation into Egypt as far as the port of discharge.

Cependant, le cabotage, ainsi que la navigation intérieure, sont exclus des stipulations précédentes et restent soumis aux lois respectives des deux pays.

Tous les articles, quels qu'en soient la provenance ou le lieu d'origine, importés ou exportés par les navires des Parties Contractantes ne pourront être soumis, dans l'un ou l'autre des deux pays, à des restrictions autres ou à des droits plus élevés que ceux auxquels seraient assujettis ces mêmes articles dans l'un des deux pays s'ils étaient importés ou exportés par les navires nationaux ou par des navires de tout autre État.

ARTICLE VI.

Les articles ci-après mentionnés, produit du sol ou de l'industrie du Royaume-Uni de la Grande-Bretagne et d'Irlande paieront, à leur importation en Égypte, un droit qui ne pourra dépasser 10 pour cent *ad valorem*, savoir :—

1. Métaux bruts, partiellement ou totalement ouvrés, y compris machines et engins mécaniques, machines et outils agricoles, locomotives et voitures de chemins de fer ou tramway, quincaillerie et tous articles fabriqués principalement en métal, à l'exception de l'or et de l'argent.

2. Coutellerie ordinaire, c'est-à-dire avec manches ou poignées de matière quelconque, à l'exception de l'or, l'argent, la nacre ou l'écaillé.

3. Fils et filés, cordages et câbles, tulles, velours, et tous autres tissus unis, ouvrés à jour, ou de fantaisie, blanchis ou non blanchis, imprimés ou teints, fabriqués avec des fibres végétales quelconques, telles que : coton, jute, lin, chanvre, ramie, palmier, aloès ou similaires.

4. Filés et tissus comme ceux énumérés au paragraphe 3 mais fabriqués en laine ou filés de laine, poils de chèvre, de vigogne, de chameau, ou en fibres provenant de tout autre animal, excepté la soie.

5. Tissus mélangés, fabriqués soit avec les matières énumérées aux paragraphes 3 et 4 soit avec adjonction de soie ou de déchets de soie n'excédant pas 20 pour cent du poids total du tissu.

6. Houille.
7. Indigo.
8. Riz.
9. Graines oléagineuses.

Le Gouvernement Égyptien conserve un droit absolu de taxation sur tous autres articles. Les Règlements concernant ces autres articles, ainsi que leur tarification, seront applicables aux sujets britanniques dans les mêmes conditions qu'aux nationaux égyptiens ou sujets étrangers les plus favorisés à cet égard.

Les droits *ad valorem* perçus en Égypte sur les marchandises, produits du sol ou de l'industrie du Royaume-Uni de Grande-Bretagne et d'Irlande, seront calculés sur la valeur dans le lieu de chargement ou d'achat de l'article importé, avec majoration des frais de transport et d'assurance jusqu'au port de déchargement en Égypte.

For the levying of those duties, the importer shall make a written declaration at the Custom-house stating the description of the goods imported, and their value at the port of discharge.

The Customs may further in contested cases insist on the production of all the documents which should accompany consignments of merchandise, such as invoices, policies of insurance, correspondence, &c.

If the Custom-house authorities shall be of opinion that the declared value is insufficient, they shall be at liberty to take the goods on paying to the importer the price declared by him with an addition of 5 per cent. This payment, together with the restitution of any duty which may have been levied upon such goods, shall be made within the fifteen days following the declaration.

The said authorities shall also have the right of taking the duties in kind. In order to take the duties in kind, the Customs shall have the right of selecting the articles according to their declared value until the amount due to them shall be reached.

ARTICLE VII.

In order to establish for a fixed period the value at the port of entry of the principal articles taxed *ad valorem*, the Administration of the Egyptian Customs shall invite the principal merchants interested in the trade of the said articles to proceed, in common with them, to establish a tariff for a period not exceeding twelve months.

The tariff thus fixed shall, until a Chamber of Commerce representing the entire trade of Alexandria shall have been created, be communicated by the Egyptian Customs to the British Consulate of Alexandria, and shall be considered as officially recognized, as regards British produce and subjects, if the Consulate makes no formal opposition during the fortnight following this communication.

ARTICLE VIII.

Export duties may be levied in Egypt at the rate not exceeding 1 per cent. *ad valorem*.

The value of articles exported shall be determined by the Customs, who will, as far as possible, cause periodic tariffs to be established.

The Egyptian Government reserves the right to insist on the exporter of the articles producing proof of the payment of the special internal taxes to which the articles in question may be liable; if the said proof is not furnished, the exportation of the articles may be prohibited.

Merchandise to be transhipped, "whether directly or after having been conveyed by rail across Egyptian territory," or placed in bonded stores, is free from all import or export duty. But articles intended for the use of the vessels which ship them are liable to a duty equivalent to the export duty, i.e., 1 per cent. *ad valorem*.

Pour la perception de ces droits, une déclaration écrite, donnant la description des articles importés et leur valeur au lieu de déchargement, devra être remise à la Douane par l'importateur.

Les Douanes pourront, en outre, en cas de contestation, exiger la production de tous les documents devant accompagner l'envoi des marchandises, tels que : factures, polices d'assurance, correspondance, &c.

Dans le cas où la valeur déclarée serait jugée insuffisante par les autorités Douanières, celles-ci seront libres de prendre les marchandises, en payant à l'importateur le prix déclaré par lui, avec une majoration de 5 pour cent. Ce paiement ainsi que le remboursement de tous droits quelconques qui auraient pu être perçus sur les dites marchandises seront effectués dans les quinze jours qui suivront la déclaration.

Les dites autorités auront également le droit de percevoir les droits en nature. Pour percevoir les droits en nature, les Douanes auront le droit de choisir les articles, en calculant leur valeur d'après le prix déclaré jusqu'à concurrence du montant des droits à acquitter.

ARTICLE VII.

Afin de fixer pour une période déterminée la valeur dans les ports d'entrée des principaux articles taxes *ad valorem*, l'Administration des Douanes Égyptiennes invitera les principaux commerçants intéressés dans le commerce des dits articles à procéder, en commun avec elle, à l'établissement d'un tarif pour une période n'excédant pas douze mois.

Le tarif ainsi fixé sera, jusqu'à la création d'une Chambre de Commerce représentant le commerce général d'Alexandrie, communiqué par les Douanes Égyptiennes au Consulat Britannique à Alexandrie, et sera considéré comme officiellement reconnu, en ce qui concerne les produits et les sujets britanniques, si le Consulat n'y fait pas une formelle opposition pendant le quinzaine qui suivra cette communication.

ARTICLE VIII.

Les droits d'exportation seront perçus en Égypte à un taux qui n'excédera pas 1 pour cent *ad valorem*.

La valeur des articles exportés sera fixée par la Douane qui, autant que possible, procédera à l'établissement de tarifs périodiques.

Le Gouvernement Égyptien se réserve le droit d'exiger de l'exportateur la production des preuves de l'acquittement des taxes spéciales intérieures auxquelles les articles destinés à l'exportation pourraient être assujettis; à défaut de cette preuve, l'exportation des dits articles pourra être interdite.

Les marchandises destinées au transbordement, soit directement, soit après avoir été transportées par la voie ferrée sur le territoire Égyptien, ou celles destinées à être placées dans les entrepôts réels, seront libres de tout droit d'importation ou d'exportation. Mais les articles destinés à l'usage des navires sur lesquels ils sont chargés seront soumis à un droit équivalent au droit d'exportation, c'est-à-dire, 1 pour cent *ad valorem*.

ARTICLE IX.

If one of the Contracting Parties shall impose an excise tax, that is to say, an inland duty, upon any article of home production or manufacture, an equivalent compensatory duty may be imposed on articles of the same description on their importation from the territories of the other country, provided that the said equivalent duty is levied on like articles on their importation from all foreign countries.

In the event of the reduction or suppression of excise taxes, that is to say, inland duties, a corresponding reduction or suppression shall at the same time be made in the equivalent compensatory import duty on the produce or manufactures of British or Egyptian origin, as the case may be.

The Regulations concerning special taxes and accessory customs duties, such as dues for porters, warehousing, deposit, dues for quays, cranes, sluices, "tamkin," leading, permits to pass, declarations, weighing, measuring, and all other, shall be applied by the Customs of the two Contracting Countries to the natives and merchandise of the other as to their own natives and merchandise.

The preceding stipulations in nowise affect the right of Municipalities and Communes to levy for their profit octroi and excise duties on beverages and liquids, provisions and fodder, combustibles and building materials, on their introduction into the Municipality or Commune for consumption therein even in case articles of a similar description should not exist in Egypt.

ARTICLE X.

Articles liable to duty, serving as patterns or samples, which shall be introduced into the United Kingdom by Egyptian commercial travellers, or into Egypt by commercial travellers of the United Kingdom, shall be admitted free of duty, subject to the following formalities requisite to insure their being re-exported or placed in bond:—

1. The officers of Customs at any port or place at which the patterns and samples may be imported shall ascertain the amount of duty chargeable thereon. That amount must either be deposited by the commercial traveller at the Custom-house in money, or ample security must be given for it.

2. For the purpose of identification, each separate pattern or sample shall, as far as possible, be marked by the affixing of a stamp, or by means of a seal being attached to it.

3. A permit or certificate shall be given to the importer, which shall contain—

(a) a list of the patterns or samples imported, specifying the nature of the goods, and also such particular marks as may be proper for the purpose of identification;

ARTICLE IX.

Si l'une des Parties Contractantes établit un droit d'accise, c'est-à-dire, une taxe intérieure, sur un produit quelconque du sol ou de l'industrie nationale, les articles de même nature importés des territoires de l'autre Partie Contractante pourront être frappés d'un droit compensateur équivalent, pourvu que les articles de même nature importés de tous autres pays étrangers soient soumis au même traitement.

Dans le cas de réduction ou de suppression des taxes d'accise, c'est-à-dire, des taxes intérieures, dans l'un des deux pays, le droit compensateur équivalent perçu dans l'autre pays sur l'importation des produits du sol ou de l'industrie d'origine britannique ou égyptienne, selon le cas, sera, en même temps, supprimé ou réduit dans une mesure correspondante à la réduction opérée sur les dites taxes d'accise.

Les Règlements concernant les taxes spéciales et les droits accessoires en douane, tels que droit de factage, d'entrepôt, de dépôt, droits de quai, de gues, d'écluses, de "tamkin," de plon bages de laisser-passer, de déclarations, de pesage, de mesurage et tous autres droits, seront appliqués par les Douanes de chacun des deux Parties Contractantes aux nationaux et aux marchandises de l'autre pays, comme à ses propres nationaux et aux marchandises du pays même.

Les dispositions qui précèdent n'affectent en rien le droit des Municipalités et des Communes de frapper, à leur profit, de taxes d'octroi ou d'accise les boissons, les liquides, les comestibles, les fourrages, les combustibles, et les matériaux de construction à leur entrée dans la Municipalité ou la Commune pour y être consommés, quand bien même ces articles n'auraient pas de similaire en Égypte.

ARTICLE X.

Les articles passibles de droits et servant, soit de modèles, soit d'échantillons, qui seront introduits dans le Royaume-Uni par des voyageurs de commerce égyptiens, ou en Égypte par des voyageurs de commerce du Royaume-Uni, seront admis en franchise à condition de satisfaire aux formalités suivantes qui seront requises pour assurer leur réexportation ou leur mise en entrepôt.

1. Les préposés des Douanes de tout port ou lieu, dans lequel les modèles ou échantillons seront importés, constateront le montant du droit applicable aux dits articles. Le voyageur de commerce devra déposer, en espèces, le montant des dits droits au bureau de la Douane, ou fournir une caution valable.

2. Pour assurer leur identité, chaque modèle ou échantillon séparé sera, autant que possible, marqué au moyen d'une estampille ou d'un cachet y apposé.

3. Il sera délivré à l'importateur un permis ou certificate qui donnera:

(a) une liste des modèles ou échantillons importés, spécifiant la nature des articles ainsi que les marques particulières qui peuvent servir à la constatation de leur identité;

(b) a statement of the duty chargeable on the patterns or samples, as also whether the amount was deposited in money, or whether security was given for it;

(c) a statement showing the manner in which the patterns or samples were marked;

(d) the appointment of a period which at the utmost must not exceed twelve months, at the expiration of which, unless it is proved that the patterns or samples have been previously re-exported or placed in bond, the amount of duty deposited will be carried to the public account, or the amount recovered under the security given. No charge shall be made to the importer for the above permit or certificate, or for marking for identification.

4. Patterns or samples may be re-exported through the Custom-house through which they were imported, or through any other.

5. If before the expiration of the appointed time (paragraph 3 (d)) the patterns or samples should be presented at the Custom-house of any port or place for the purpose of re-exportation or being placed in bond, the officers at such port or place must satisfy themselves by examination whether the articles which are brought to them are the same as those for which the permit of entry was granted. If so satisfied, the officers will certify the re-exportation or deposit in bond, and will refund the duty which had been deposited, or will take the necessary steps for discharging the security.

ARTICLE XI.

Are alone exempt from all control in Egyptian Custom-houses on importation and exportation, as well as from the payment of duties, articles and personal effects belonging to Consuls-General and Consuls in the regular Consular Service ("Consuls de Carrière") having no other business, engaged neither in trade nor industry, and neither possessing nor working real property in Egypt.

ARTICLE XII.

Each of the two Contracting Governments has the right to put into force any Regulations required for the working of their services and for the suppression of fraud, as well as any measures dictated by reasons of public health or security, on condition that such Regulations are equally applied to the ships and subjects of all other nations.

Such Regulations, including the supervision of ships and the searching for, or pursuit of, contraband goods, as well as the fines and other penalties therein made applicable in case of false declaration; smuggling, or attempting to smuggle; fraud, or attempts to defraud, or any infringement of the Regulations, shall,

(b) un état indiquant le montant du droit dont les modèles ou échantillons sont passibles et spécifiant si ce montant a été déposé en espèces, ou garanti par caution;

(c) un état indiquant la façon dont les modèles ou échantillons ont été marqués;

(d) la limite de temps qui, en aucun cas, ne pourra dépasser douze mois, à l'expiration de laquelle, s'il n'est pas prouvé que les modèles ou échantillons ont été antérieurement réexportés ou mis en entrepôt, le montant du droit déposé sera versé au trésor ou recouvré s'il en a été donné caution. Il ne sera exigé de l'importateur aucuns frais pour la délivrance du certificat ou permis, non plus que pour l'estampille destinée à la constatation de l'identité.

4. Les modèles ou échantillons pourront être réexportés par le Bureau de Douane d'entrée, ou par tout autre Bureau.

5. Si, avant l'expiration de la limite de temps fixée (paragraphe 3 (d)), les modèles ou échantillons étaient présentés à la Douane d'un port ou lieu quelconque pour être réexportés ou entreposés, les préposés de la Douane de ce port ou de ce lieu devront s'assurer, par une vérification, si les articles qui leur sont présentés sont bien ceux pour lesquels a été délivré le permis d'entrée. S'ils reconnaissent ces articles, les préposés de la Douane certifieront la réexportation ou la mise en entrepôt et rembourseront le montant des droits déposés, ou prendront les mesures nécessaires pour la décharge de la caution.

ARTICLE XI.

Sont seuls exemptés de toute vérification dans les Douanes Égyptiennes, aussi bien que du paiement des droits, à l'entrée et à la sortie, les objets et effets personnels appartenant aux Consuls Généraux et Consuls de Carrière qui n'exercent aucune autre profession, ne s'occupent ni de commerce ni d'industrie, et ne possèdent, ni n'exploitent des biens-fonds en Égypte.

ARTICLE XII.

Les deux Gouvernements Contractants ont, chacun, le droit de mettre en vigueur tous Règlements quelconques destinés à assurer le bon fonctionnement de leurs Services, à réprimer la fraude, aussi bien que d'appliquer toutes mesures intéressant l'hygiène publique ou la sécurité du pays, à condition que ces Règlements soient également applicables aux navires et aux sujets de toute autre nation.

Les dits Règlements, y compris la surveillance des navires, la recherche ou la poursuite des marchandises de contrebande; aussi bien que les amendes et autres pénalités applicables en vertu de ces Règlements, en cas de fausse déclaration, de contrebande ou tentative de contrebande, de fraude ou tentative de fraude, ou d'infractions quelconques

together with the measures that may be taken in regard to public health or security, be applicable in either of the two countries to the natives of the other under the same conditions as to natives of the country itself.

If, however, the Egyptian authorities should desire to search the dwelling-house of a British subject or a British ship anchored in an Egyptian port, a duplicate of the search-warrant shall be sent to the British Consular authority, who may at once take part, if he thinks proper to do so, without the formality in question delaying the search, and no such search shall be made except between sunrise and sunset.

It is understood, however, that the preceding stipulation shall not apply to cases in which the search is to be made in a warehouse or dépôt, or on board a ship which may have remained in an Egyptian port, for any reason whatsoever, more than twenty-one days. In such cases notification to the British Consular authority will not be necessary.

It is further understood that the Egyptian Government may, without notification to the British Consular authorities, put guards on board any British ship in an Egyptian port or traversing the Suez Canal.

In cases of suspicion of smuggling, the Egyptian Customs officers may board and seize any British ship of less than 200 tons burthen at anchor outside an Egyptian port, or sailing within 10 kilometers of the shore. Ships of less than 200 tons burthen may, moreover, be boarded and seized beyond the 10 kilometers' limit if the pursuit shall have been commenced within such limit.

Except in the cases provided for in paragraphs 3 and 4 of this Article, no British ship exceeding 200 tons burthen shall be boarded or seized by the Egyptian Customs officers.

ARTICLE XIII.

The provisions of the preceding Articles do not apply—

1. To the special arrangement existing, or which may in the future exist, between Egypt and the other parts of the Ottoman Empire under the direct administration of the Porte, or between Egypt and Persia.

2. To the arrangements which the Egyptian Government may make for the exchange of native or foreign merchandise with the Soudan.

ARTICLE XIV.

The effect of the alterations of the present tariff of duties provided under Article VI remains suspended until the alterations in question are also applicable to all other interested Powers.

aux Règlements seront, ainsi que les mesures qui pourraient être prises relativement à l'hygiène et à la sécurité publiques, applicables aux nationaux de l'un et de l'autre pays dans les mêmes conditions qu'aux nationaux du pays même.

Cependant, si les autorités égyptiennes désirent opérer une perquisition dans l'habitation d'un sujet britannique ou à bord d'un navire britannique ancré dans un port égyptien, un double du mandat de perquisition devra être envoyé à l'autorité Consulaire Britannique, qui pourra immédiatement assister à la perquisition, si elle le juge à propos, sans que, toutefois, l'exécution puisse en être retardée par cette formalité; de telles perquisitions ne pourront être opérées qu'à partir du lever jusqu'au coucher du soleil.

Il est entendu, néanmoins, que la stipulation précédente ne sera pas applicable dans le cas où la perquisition doit être faite dans un entrepôt ou un dépôt, ou à bord d'un navire qui aurait séjourné, pour une raison quelconque, dans un port égyptien, pendant plus de vingt et un jours; en pareil cas, il ne sera pas nécessaire de notifier la perquisition à l'autorité Consulaire Britannique.

En outre, il est entendu que le Gouvernement Égyptien pourra, sans notification aux autorités Consulaires Britanniques, placer des gardes à bord de tout navire britannique dans un port égyptien ou transitant par le Canal de Suez.

En cas de soupçons de contrebande, les agents des Douanes Égyptiennes pourront aborder et saisir tout navire britannique d'un tonnage de moins de 200 tonneaux, ancrés en dehors des eaux d'un port égyptien ou naviguant dans un rayon de 10 kilomètres du rivage; de plus, tout navire britannique de moins de 200 tonneaux pourra être abordé et saisi au delà de cette distance si la poursuite a été commencée dans un rayon de 10 kilomètres du littoral.

Excepté dans les cas prévus dans les paragraphes 3 et 4 du présent Article, aucun navire britannique de plus de 200 tonneaux ne pourra être abordé ou saisi par les agents des Douanes Égyptiennes.

ARTICLE XIII.

Les stipulations des Articles précédents ne s'appliquent pas :

1. Aux arrangements spéciaux actuels ou qui pourraient intervenir ultérieurement, soit entre l'Égypte et les autres parties de l'Empire Ottoman, placés sous l'administration directe de la Sublime Porte, soit entre l'Égypte et la Perse.

2. Aux dispositions que pourrait prendre le Gouvernement Égyptien pour l'échange des marchandises indigènes ou étrangers avec le Soudan.

ARTICLE XIV.

L'effet des modifications du présent tarif de droits, prévus à l'Article VI, demeure suspendu, jusqu'à ce que les dites modifications deviennent également applicables aux autres Puissances intéressées.

ARTICLE XV.

The stipulations of the present Convention shall be applicable, as far as the laws permit, to all the Colonies and foreign possessions of Her Britannic Majesty, excepting to those hereinafter named, that is to say, except to—

The Dominion of Canada.
Newfoundland.
The Cape.
Natal.
New South Wales.
Victoria.
Queensland.
Tasmania.
South Australia.
Western Australia.
New Zealand :

Provided always that the stipulations of the present Convention shall be made applicable to any of the above-named Colonies or foreign possessions on whose behalf notice to that effect shall have been given to the Egyptian Government by Her Britannic Majesty's Representative at Cairo within one year from the date of the signature of the present Convention.

ARTICLE XVI.

The present Convention shall come into force on the 1st January 1890, and shall remain in force for ten years from that date. And in case neither of the two Contracting Parties shall have notified twelve months before the expiration of the said period of ten years its intention of putting an end to the present Convention, it shall remain binding until the expiration of one year from the day on which either of the Contracting Parties shall have given such notice.

In witness whereof the undersigned have signed the present Convention, and have affixed thereto their seals.

Done in duplicate, at Cairo, the twentieth day of October, one thousand eight hundred and eighty-nine.

(L.S.) EVELYN BARING.

(L.S.) ZOULFIKAR.

ARTICLE XV.

Les stipulations de la présente Convention seront applicables, dans la mesure compatible avec les lois, à toutes les Colonies et possessions étrangères de Sa Majesté Britannique, à l'exception des pays ci-après mentionnés :

Dominion du Canada.
Terre-Neuve.
Le Cap.
Natal.
Nouvelle-Galles-du-Sud.
Victoria.
Queensland.
Tasmanie.
Australie du Sud.
Australie Occidentale.
Nouvelle-Zélande :

Sous la réserve, toutefois, que les stipulations de la présente Convention seront rendues applicables à celles des Colonies ou possessions étrangères ci-dessus désignées pour lesquelles notification à cet effet serait donnée au Gouvernement Égyptien par le Représentant de Sa Majesté Britannique au Caire, dans le délai d'un an à partir de la date de la signature de la présente Convention.

ARTICLE XVI.

La présente Convention entrera en vigueur le 1^{er} Janvier, 1890, et restera valable pour une période de dix ans, à partir de cette date. Dans le cas où aucune des deux Parties Contractantes n'aurait notifié, douze mois avant la date de l'expiration de la dite période de dix années, son intention de mettre fin à la présente Convention, celle-ci demeurera obligatoire jusqu'à l'expiration d'une année à partir du jour où l'une ou l'autre des Parties Contractantes l'aura dénoncée.

En foi de quoi les Soussignés ont apposé leurs signatures et le cachet de leurs armes à la présente Convention.

Fait en double au Caire, le vingt-neuf Octobre, mil huit cent quatre-vingt-neuf.

(L.S.) EVELYN BARING.

(L.S.) ZOULFIKAR.

GOVERNMENT OF INDIA.
REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Summary for March 1890.

The month of March is usually the commencement of the hot weather in Northern India. Temperature increases rapidly, and the area of maximum temperature is usually transferred from the South Deccan and South Madras to the Central and North Deccan. The mean temperature in this area also increases from about 83° at the beginning of the month in the South Deccan to 88° in the Deccan and south-eastern districts of the Central Provinces at the end of the month.

Temperature increases most rapidly in Northern and Central India, and pressure hence begins to diminish more or less steadily, and the north-east monsoon winds in the Bay of Bengal and Arabian Sea also decrease in force. Usually hot winds begin in the Gangetic plain before the end of the month, and local south-west winds blow fairly steadily across the Bengal Coast and bring up much vapour and cloud into Bengal and Assam.

The disturbances in the preceding cold weather months are due chiefly to depressions which originate or appear on the North-Western Frontier and usually travel eastwards. They give more or less general rain to the plain districts in the northern and eastern quadrants of the depression, and moderate to heavy snow to the mountain districts of Afghanistan and Northern India. With the establishment of hot weather conditions in March, the character of the disturbances changes. A period of rapidly increasing temperature in Northern India almost invariably gives rise to a disturbed condition of the atmosphere, which manifests itself for a few days by local thunderstorms, hailstorms, duststorms, &c. The precipitation due to these storms is always extremely irregular.

The only areas which receive fairly general and moderate rain in March are Assam, and East Bengal and to a less extent North Bengal. Different causes have been assigned for this rainfall. As it occurs chiefly during thunderstorms, the most probable explanation appears to be that it is due to the local southerly winds which commence in Bengal in the latter part of the month of February. These winds from various causes advance chiefly into East Bengal and towards the Assam hills. The rainfall due to these winds increases steadily in amount with their prevalence and increasing intensity and volume in the months of March, April and May, as is shown by the following data:

Station.	AVERAGE RAINFALL OF MONTH OF		
	March.	April.	May.
Dacca	2.62	5.81	9.03
Mymensingh	2.23	5.44	12.02
Dhubri	2.11	5.26	15.63
Tezpur	2.37	6.12	9.92
Sibsagar	4.54	9.86	11.25
Shillong	1.98	3.73	9.66
Cherrapunji	9.82	29.71	50.61

The preceding remarks show the character of the normal weather during the month of March in India.

The actual weather in March depends very largely upon that of the preceding cold weather months. In the present year the months of January and

February have been abnormally dry in the plains, and unusually little snow has fallen in the Afghan Highlands and Himalayan area. Pressure has been steadily more or less below the normal over the greater part of India, and in addition there have been two remarkable persistent local variations of pressure during the months of December, January and February. These were—

- (1) A considerable local excess of pressure in the West Deccan, Berar and the western districts of Central India.
- (2) A large local deficiency of pressure in North Bengal and Behar.

So far as can be judged, these conditions would probably accompany a general deficiency of rain during the cold weather in North-Western India and a tendency to heavier rainfall than usual in Assam, East Bengal and perhaps Upper Burmah, and heavier snowfall in the Eastern Himalayas. An examination of the weather in previous years indicates that very dry weather in Upper India during the months of January and February is almost invariably followed by heavier rain in March or April (and sometimes in both months) and by a later winter than usual in the mountain districts of Northern India. Occasionally this late cold weather rainfall is associated with prolonged heavy and untimely snowfall in the West Himalayan area. If this occurs in the months of April and May it not only delays the commencement of the south-west monsoon rains in Northern India, but tends to divert them from Upper India to North-Eastern India and the Peninsula.

The months of January and February were very dry in the years 1879, 1881, 1884 and 1886. In 1879 the Punjab received very heavy rain in March and the North-Western Provinces moderate rain. In March 1881 heavy rain fell over the whole of Northern India. In March 1884 light to moderate rain was received in Northern India, but extraordinarily heavy snow fell in March, April and May in the North-West Himalayas, which not only delayed the subsequent south-west monsoon rains, but immediately preceded the great drought and famine in Kashmir. In March 1886 heavy rain was received over the whole of Northern India. The present year has, as is shown below, been no exception to the general rule that very dry weather in January and February is followed by more rainy weather than usual in March or April. It is however too early to discuss the probable character of the approaching south-west monsoon, as, although conditions were favourable up to the end of March, it is possible, although on the whole not probable, that untimely and excessive snowfall may occur in April or May, and introduce very unfavourable conditions in Northern India.

Chief features of the weather of the month.—The past month has been characterised by a large number of small disturbances and by frequent periods of light to moderate rain. Anticyclonic conditions obtained at the beginning of the month. A small depression appeared in Kattiawar and drifted eastwards. It gave disturbed weather from the 3rd to the 6th. Small local depressions in Bengal, Guzerat and Southern India on the 9th accompanied thunderstorms in these areas on that day. During the next four days frequent light showers fell in Assam and East Bengal. The barometer fell rapidly in Upper India on the 15th and 16th and a depression appeared in Sind on the 17th, which moved eastwards in a somewhat irregular manner. It gave disturbed weather from the 17th to the 22nd in Northern India. A brief lived depression appeared in the Punjab on the 24th which gave light rain on that day to nearly the whole Province.

Light to moderate showers were received daily in Assam and parts of Bengal from the 17th to nearly the end of the month, when the weather improved, and anticyclonic conditions of high pressure, light winds, increasing temperature and clear skies were established in Upper India.

The following gives a brief account of the two chief depressions of the month:

1st Depression of the 3rd to the 7th March.—It appeared in Kattiawar and Guzerat on the morning of the 3rd, having probably advanced from the Arabian Sea. It moved eastwards into Central India and the Central Provinces on the 4th and into the south-eastern districts of the North-Western Provinces on the 5th, and disappeared during the day. The depression was small and at no time exceeded a tenth of an inch, and the cyclonic circulation very feeble. It gave general light to moderate rain for about seventy-two hours to the East Punjab, North-Western Provinces, East Rajputana, Central India, Behar and the northern districts of the Central Provinces. The following gives the average amounts in three Provinces and shows the character of the rainfall:

Province.	AVERAGE RAINFALL RECORDED FOR TWENTY-FOUR HOURS PRECEDING 8 A.M. OF		
	4th.	5th.	6th.
Punjab	'03	'17	'08
North-Western Provinces	'12	'16	Nil.
Behar	Nil	'06	'05

The storm gave little or no snow in the mountain districts to the east of the Punjab.

2nd Depression of the 17th to the 22nd.—This appeared in Sind on the 17th, intensified slightly on the 18th and moved slowly eastwards. A smaller depression formed in Central India on the 19th. Both depressions moved eastwards on the 20th and 21st and disappeared on the 22nd. The weather was more or less disturbed over the whole of Northern and Central India during this period. Scattered showers fell in the North-Western Provinces on the 18th, in Bengal the North-Western Provinces and South-East Punjab on the 19th, in the East Punjab on the 20th and in the North-Western Provinces and Punjab on the 21st; but the amounts were nowhere large. Moderate snow fell in the hill districts to the east of the Punjab, chiefly on the 21st.

Temperature was generally below the average in Northern India until the 22nd or 23rd, after which it increased rather rapidly and was above the normal. Temperature was steadily in excess throughout the month in two areas, *viz.*, Lower Burmah and Madras. Very high temperatures were registered in Lower Burmah from the 20th to the 28th, amongst the most noteworthy maximum temperatures being 103°2' at Rangoon on the 21st and 108°7' at Thayetmyo on the 25th and 26th. The highest temperatures registered in the month of March in previous years at these two stations are 104°3' at Rangoon in 1876 and 106°1' at Thayetmyo in 1879.

In Madras the highest temperatures were registered at Kurnool and Cuddapah in the South Deccan, the highest being 108°3' at Cuddapah on the 26th and 107°0' at Kurnool on the 24th.

It may also be noted that the mean maximum temperature of the month was below the average over the whole of India, except South Madras, Burmah and Assam, and that the mean minimum temperature was above the average in all districts, except Upper India. The excess in the latter case was greatest in Burmah and the Deccan, where it ranged between 2° and 4°.

The following table gives the variation of the mean temperature from the normal, week by week during the month, in the larger Provinces:

Provinces.	DIFFERENCE OF MEAN TEMPERATURE FROM NORMAL FOR WEEK ENDING MARCH				Difference of Mean Temperature from the Normal for the month.
	10th.	17th.	24th.	31st.	
Burmah	— 0°2	+ 0°7	+ 1°8	+ 3°0	+ 1°4
Bengal	— 1°7	— 0°3	+ 1°6	+ 2°9	+ 0°4
North-Western Provinces	— 1°4	— 0°7	+ 0°5	— 0°9	— 0°6
Punjab	— 2°5	+ 0°3	— 1°2	— 4°1	— 1°5
Bombay	— 0°3	— 0°8	+ 1°1	+ 0°1	+ 0°1
Central Provinces and Berar	— 2°2	— 1°6	+ 2°2	+ 0°6	+ 0°4
Guzerat and Central India	— 0°2	— 0°8	+ 1°6	— 1°8	0
Sind and Rajputana	— 0°2	— 0°2	+ 0°8	— 1°7	— 0°1
Madras	+ 0°1	+ 2°3	+ 0°9	+ 2°6	+ 1°3

Rainfall.—The weather was more disturbed than usual, but the rainfall during the periods of disturbance was in no case heavy. The chief periods of rainfall were during the existence of the two depressions described above. The only areas which received a rainfall in excess of the normal were Assam and East Bengal (where the rainfall at this time is of importance for the tea plant), the East Punjab, the Nerbudda Valley, Malabar, Mysore, Lower Burmah and Ceylon. The excess was greatest in Assam, where it averaged nearly 40 per cent.

The rainfall in other districts was in defect, but the deficiency was of no importance, except in Bengal, more especially North Bengal, where the rainfall was practically nil. The hill stations received less rain than usual. The deficiency was very marked at Darjeeling which received only '08 inch or less than 5 per cent. of its normal amount. The absence of rain seriously interfered with tea cultivation in Sikkim and the Bhotan Dooars.

The following table gives complete data and shows the actual average rainfall and the normal rainfall of the month of the twenty-one districts into which the country is divided, so far as it is indicated by the telegraphic reports of a few stations in each district:

Districts.	No. of Stations.	Normal average Rainfall in March.	Actual average Rainfall in March 1890.	Difference from the average in March 1890.
Punjab, West	7	1°49	0°97	— 0°52

JOHN ELIOT,

SIMLA, 26th April, 1890.

Meteorological Reporter to the
Government of India.

W. C. BENETT,

Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on
Monday, April 28th, 1890.

The weather during the week under review has undergone a large and sudden change. During the first few days the conditions were similar to those which prevailed at the close of the previous week. Rain was falling over North-Eastern India and the south of the Peninsula, and pressure descended slowly from areas of relatively high readings over the south of the Peninsula and over Assam and Burma to a low pressure area over the Gangetic plain. On the 24th a sudden change occurred. A small depression was formed over the Punjab, and at the same time pressure commenced to rise and fall rapidly over the Indian region. With this change the weather became very unsettled and stormy, rain fell over the greater part of the country, and a very rapid fall of temperature occurred and lasted till the close of the week.

The chart of the 22nd showed relatively high pressures in the north-west of the Punjab, in the south of the Peninsula and in Assam and Burma, with low pressures over the Gangetic plain and along the foot of the hills. The winds were southerly over the Bay, south-easterly in Bengal and westerly over North-Western India. At the head of the Bay and on parts of the Bombay Coast the force was fresh to strong. A very similar distribution of winds and weather prevailed on the following day, but on the 24th the observations showed that a depression was forming over the Punjab and that gradients, owing to the brisk barometric fall over Northern India and the rise over the Peninsula, had become steep. Slight cyclonic movements had commenced in the Punjab and strong southerly winds continued over the Bay, but elsewhere the directions were generally westerly. The chart of the 25th showed that slight but well marked depressions had been developed—one over the Punjab and the second over Lower Bengal—while a rapid barometric rise had occurred over the central parts of the country which had resulted in a ridge of high readings over that region. The winds were cyclonic over North-Western and North-Eastern India and blew strongly in both regions. The weather was very unsettled throughout the whole country, and dust and thunderstorms were reported from the majority of stations. On the 26th the barometer was rising almost everywhere, but there was very little change in the general distribution, the depressions in the north-west and north-east and the intervening ridge of high readings existing as on the previous day. The weather was even more unsettled than on the 25th, and the wind was strong and squally. On the 27th both depressions had disappeared, and the barometer risen everywhere. The greatest rise had occurred over the regions previously occupied by the depressions, so that readings had become much more uniform and the weather much less stormy and unsettled. By the 28th the pressure had practically resumed the distribution it had at the commencement of the week, and the weather was settling down after its period of disturbance.

Temperature.—The changes of temperature have been exceedingly large during the week. At first the warm period with which the preceding week had closed continued, and the mean temperature for the whole of India for the first three days of the week was well above the normal average, the greatest excess being on the 24th. On the following day the thermometer fell to about the normal and on the three following days it was largely below. The largest and most sudden fall was in the Central Provinces and the Punjab, but, as will be seen by the following table, the change was considerable everywhere:

PROVINCES.	Difference of Temperature from Normal on 24th.	Difference of Temperature from Normal on 27th.	Change from 24th to 27th.
Burma	+1°0'	—1°0'	2°0'
Bengal	+2°9'	—0°8'	3°7'
North-West Provinces	+4°7'	—11°3'	16°0'
Punjab	+5°0'	—13°3'	18°3'
Bombay	+0°4'	—2°7'	3°1'
Central Provinces	+5°1'	—14°4'	19°5'
Guzerat and Central India	+3°7'	—7°2'	10°9'
Sind and Rajputana	+3°8'	—6°0'	9°8'
Madras	+0°7'	—3°1'	3°8'

These figures show that between the 24th and 27th over Upper and Central India there was a fall in the mean temperature of between 16° and 20°. Dealing with the maxima this change is somewhat increased; thus at—

Peshawar on the 24th the maximum was 93°0' and on the 27th 71°7'	
Sialkot " " 103°5' " 79°7'	
Delhi " " 108°5' " 84°6'	
Allahabad " " 111°4' " 89°0'	
Akola " " 110°1' " 92°9'	
Nagpur " " 108°2' " 87°2'	
Ajmere " " 103°5' " 90°9'	

but the night temperatures over a large part of the country were relatively to the normal almost as low as the day readings.

After the first few days of the week there were no high maximum temperatures in any part of India.

On the 22nd the highest maximum was 111°5' at Deesa.

" 23rd " " 112°1' " Akola.	
" 24th " " 111°6' " Kurnool.	
" 25th " " 110°7' " Allahabad.	
" 26th " " 110°4' " Cuttack.	
" 27th " " 106°9' " Jacobabad.	
" 28th " " 105°4' " Jacobabad.	

The effect of the rainfall on the temperature is shown very clearly by the above figures, the region of greatest heat which had been previously located over the central parts of the country having been suddenly transferred to the practically rainless region of Upper Sind.

The following table gives the variations of temperature from the normal, according to Provinces, for the present and the past week:

PROVINCES.	Variation of Temperature from Normal for Past Week.	Variation of Temperature from Normal for Present Week.
Burma	+1°2'	+0°1'
Bengal	—0°4'	+0°2'
North-West Provinces	+0°3'	—1°6'
Punjab	+1°3'	—2°8'
Bombay	+0°6'	—1°0'
Central Provinces	+0°7'	—3°0'
Guzerat and Central India	+1°6'	—1°6'
Sind and Rajputana	+2°4'	—0°7'
Madras	+0°4'	—1°4'

The figures show that temperature has fallen in all Provinces except Bengal as compared with last week, but the extent of the fall is masked by the fact of part of the present week having been warmer than usual.

Rain.—As mentioned above, rain has been exceedingly general, and the table at the close of this Summary shows that in only six out of the fifty-two rainfall divisions has there been no rain during the week. In eight more the total of the week amounted to less than 0°10', but in all the remaining divisions a very fair amount of rain was received. The rainless divisions are Behar (South) and North-Western Provinces (East) in North-Eastern India and Guzerat, Kattiawar, Sind and Western Rajputana in North-Western India. Surrounding these two regions are the divisions of unimportant falls noticed above. Of the thirty-eight divisions where the rainfall has exceeded one-tenth of an inch no less than thirty-three have received more than the average amount. The greatest excess is in Assam (Surma) and equals 4½ inches and is succeeded by an excess of 1½ inches over the south of the Peninsula. In other parts of India the differences are less than 1 inch, and are occasionally very slight indeed.

The final column of figures in the concluding table shows a general deficiency in the season's rain, except over Burma and parts of Bengal and the west and east of the Peninsula.

The record of maximum fall shows no very remarkable amounts. In Burma the largest falls vary between 1½ and 3½ inches, and the same is true of Assam. In Bengal the rain has been heavier. One subdivision in Backergunj and one in Jalpaiguri received 4½ inches and one in Faredpur 5 inches. In Western Bengal and the greater part of the North-West Provinces there were no falls exceeding 1 inch, but Bijnor received 1½ inches and one subdivision in Muzaffarnagar 2 inches. In the Punjab the rain was heavier, and maximum falls of between 1½ and 3 inches are reported. In the west and south of the Peninsula falls of between 2 and 4 inches were general and Seringapatam received 7 inches. In the central parts both of the Peninsula and of India the amounts were small, but on the East Coast they increased again and varied between 2 and 4 inches.

W. L. DALLAS,

Assistant Meteorological Reporter to the
Government of India.

W. C. BENETT,

Off. Secretary to the Government of India.

SIMLA, 1st May, 1890.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of
the Crops.

Madras.—For week ending 25th April.—No rain in Kistna, Nellore, Madras and Chingleput; fair in Trichinopoly, Madura, Tinnevely, Coimbatore, Nilgiris, South Canara and Malabar; and slight elsewhere. Crops generally good, but suffering from want of rain in parts of Vizagapatam, Nellore, Cuddapah, Chingleput, North Arcot, South Arcot, Tanjore, Trichinopoly, Tinnevely and Coimbatore. Outturn of sugarcane good; cotton fair; paddy and dry grains below average. Water-supply and pasture generally deficient. Prices stationary. Prospects fair.

Bombay.—For week ending 30th April.—Rain in parts of Sind, Deccan and Southern Mahratta Country. Standing crops satisfactory. Preparations for next season's crops progressing generally. Fodder generally sufficient and agricultural stock healthy.

Bengal.—For week ending 20th April.—General rain in East and North Bengal and parts of Central Bengal. Scattered showers also reported from some other districts. Rain has improved prospects of standing crops and ploughing and early sowings in progress. More rain still wanted in some districts. Boro or spring rice harvest begun and generally expected to yield a fair outturn. In Behar paddy, cheena and mung in low lands coming on well and indigo prospects fair, except in parts of Satun. Sugarcane still being planted in several districts. Opium weighments not yet over. Owing to late seasonable rain in Balasore, number of coolies on Talpada relief works fallen to ninety-two.

North-Western Provinces and Oudh.—For week ending 30th April.—Weather generally unsettled. Slight rain has fallen in several districts. Irrigation of cane and indigo in progress. Markets are well stocked, but prices show a tendency to rise in the eastern districts. In Kumaun grain is scarce and prices high.

Punjab.—For week ending 30th April.—Rain has fallen in all districts except Shahpur. Prices are rising in Hissar, Delhi and Rawalpindi; fluctuating in Lahore; stationary elsewhere. Harvesting of rabi crops in progress. Kharif sowings and ploughings going on in Umballa, Jullundur, Lahore and Shahpur. Prospects of crops average on irrigated lands, but poor elsewhere. Rain and hail injured the standing crops in Peshawar and Lahore. Some damage done to threshed wheat in Multan by hail. Fodder sufficient in Jullundur, Ferozepore, Amritsar, Rawalpindi, Shahpur and Peshawar; scarce elsewhere.

Central Provinces.—For week ending 30th April.—Weather hot and somewhat cloudy, with heavy rain in Wardha, Raipur and Bilaspur, and slight showers in other districts. Threshing and winnowing of winter crops continue. Land being prepared for autumn sowings. Prospects unaltered. Prices steady.

Burma.—For week ending 26th April.—Rain fell in several districts in Lower and Upper Burma. The standing crops in Upper Burma are in good condition. The price of paddy rose in Tharrawaddy, Bassein, Thayetmyo, Shwegyin, Mergui and the Ruby Mines and fell slightly in Rangoon; from other districts no changes are reported.

Assam.—*For week ending 30th April.*—Weather seasonable. Rainfall general. Sowing for summer and ploughing for winter paddy continue. State and prospects of crops good.

Mysore and Coorg.—*For week ending 30th April.*—Rainfall general in Mysore. Standing crops in good condition. Prospects good. Prices fallen in Kolar and Mysore.

Rainfall good in Coorg during the week. Coffee crop partially damaged by rain.

Berar and Hyderabad.—*For week ending 30th April.*—Rainfall slight in Berar. Weather warm and partially cloudy. Threshing of *rabi* nearly completed. Water scarce in Amraoti and Murtizapur taluks and in the Wun district. Fodder insufficient in Ellichpur, Daryapur, Yeotmal, Darwha and Kelapur taluks. Land under preparation for next crop. Prices stationary.

Slight rain in Hyderabad during the week ending 25th April. Reaping of *tabi* crops continues and harvesting of *rabi* finished. Grass plentiful. Prices stationary.

Reaping of *tabi* crops continued in Hyderabad during the week ending 2nd May. Fodder for cattle plentiful. Prices stationary. Rainfall slight.

Central India.—*For week ending 30th April.*—Slight rain seems to have fallen during the week throughout Central India.

Rajputana.—*For week ending 30th April.*—Moderate rain in Abu, Meywar, Jhallawar and Ajmere and slight rain elsewhere. Reaping and threshing nearly completed. Agricultural stock good, except in parts of Ajmere. Pasturage or fodder sufficient, except in Marwar and Dholepore. Prices steady generally.

Nepal.—*For week ending 24th April.*—Beneficial rain fell during the week in the Valley of Nepal. Weather warm and cloudy at times. Cultivators are busily engaged in sowing Indian corn and *ghaia* (early) rice. Prospects of crops improved by recent rain.

W. C. BENETT,
Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.
PUBLIC WORKS DEPARTMENT.

CIVIL WORKS.

Irrigation.

REVENUE REPORT OF IRRIGATION WORKS IN RAJPUTANA FOR THE YEAR 1888-89.

No. 71-I., dated Simla, the 25th April, 1890.

RESOLUTION—By the Government of India, Public Works Department.

Read—

Revenue Report of Irrigation Works in Rajputana for the year 1888-89, forwarded with letter No. 3965 S., dated 28th October 1889, from the Secretary to the Agent to the Governor General and Chief Commissioner, Rajputana.

OBSERVATIONS.—The year 1888-89 was not a favourable one for the crops in Rajputana owing to the short supply of water in the tanks. The rainfall, though less than that of the previous year, was well distributed in point of time.

2. The Capital outlay during the year was Rs. 86 only. The total Capital Expenditure on the three groups of tanks to the end of the year amounted to Rs. 16,46,371.

3. The following statement shows the actual financial results of the year under review as given in the Revenue Accounts :

TANKS IN	Capital to end of year, including Indirect Charges.	Gross Revenue.	Working Expenses.	Net Revenue.	Percentage of Net Revenue on Capital at end of year.
	Rs.	Rs.	Rs.	Rs.	
Ajmere Sub-Collectorate ...	8,78,559	60,031	51,120	8,911	1'01
Beawar Sub-Collectorate ...	6,31,668	45,425	9,509	35,916	5'68
Todgarh Sub-Collectorate ...	1,36,144	24,561	5,329	19,232	14'12
Total ...	16,46,371	1,30,017	65,958	64,059	3'89
Figures for 1887-88 ...	16,46,285	1,18,204	48,961	69,243	4'20

The gross revenue collected was made up as follows :

	1888-89.	1887-88.
	Rs.	Rs.
Water rates directly paid ...	13,093	15,670
Share of enhanced land revenue ...	1,13,049	1,02,534
Miscellaneous ...	3,884	...
Less refunds of revenue ...	—9	...
TOTAL ...	1,30,017	1,18,204

The increase is due to the rabi harvest of 1888 having been a better one than that of 1887. No explanation is afforded of the Miscellaneous Receipts.

4. The revenue assessed for the year is compared in the following table with the area irrigated; the assessment on the rabi crop of 1888-89 is only collected in 1889-90:

SUB-COLLECTORATE.				Irrigation revenue assessed.	Area irrigated or protected.	Assessment per acre.
				Rs.	Acres.	Rs.
Ajmere	...	...	...	55,876	14,873	3.75
Beawar	...	...	...	48,324	15,920	3.03
Todgarh	...	...	...	24,648	5,207	4.73
Total for 1888-89				1,28,848	36,000	3.57
Total for 1887-88				1,26,560	37,625	3.36

No remissions were granted. Of the total area of 36,000 acres irrigated or protected, 17,057 acres formed the kharif, and 18,943 acres the rabi crop; 6,712 acres, or 18.64 per cent. of the total area, was double-cropped. There was less irrigation in the rabi of 1889 than in that of the preceding year, owing to deficiency of water.

5. The following statement shows the distribution of the working expenses:

	1886-87.	1887-88.	1888-89.	Increase.
	Rs.	Rs.	Rs.	Rs.
Maintenance and Repairs	14,903	24,281	36,654	12,373
Establishment	16,680	22,490	26,202	3,712
Tools and Plant	—289	138	384	246
Leave and Pension Allowances	1,163	2,052	2,718	666
TOTAL	32,457	48,961	65,958	16,997

The increase in working expenses is not explained in the Report, but from a letter subsequently received, which is printed as an appendix to this Resolution, it appears that the increased outlay is due to the vigorous prosecution of repairs, which had been somewhat neglected in previous years. These comprise the substitution of iron sluices for plug-holes, the prevention of leakage through the tank-banks, and the clearing from the banks of trees and jungle. There was also an outlay of Rs. 7,555 on the restoration of the Mohani Tank, for which an additional grant was sanctioned. In future reports similar detailed explanation of the cause of increase or decrease in working expenses to that contained in the Secretary's letter No. 1117 S., dated 11th April 1890, should be given. The cost of working expenses per acre irrigated was Rs. 1.83 as compared with Rs. 1.30 per acre in the previous year.

In the Ajmere Sub-Collectorate the working expenses amounted to Rs. 51,120, which is Rs. 3.43 per acre irrigated, and 85.15 per cent. of the gross revenue collected. It is presumed that most of the special repairs referred to by Colonel Marshall were carried out in this subdivision.

6. Some information as regards the experimental cutting of crops is furnished in the Report. The highest produce per acre for wheat crop was 32 maunds of grain and 46 of straw. The value of these were respectively Rs. 87 and 16, and the expenditure is put down at Rs. 81 per acre, leaving a

profit to the cultivator of Rs. 22. These figures are all very high and their accuracy is perhaps open to question.

7. The Report has been correctly prepared, but it would be an advantage if future reports were illustrated by means of a sketch map.

ORDER.—Ordered, that a copy of this Resolution be forwarded to the Agent Governor General and Chief Commissioner, Rajputana, for information and guidance.

Also that a copy of the Resolution and of the Report and Appendix be forwarded to the Governments of Madras, Bombay, Bengal, the North-Western Provinces and Oudh, and the Punjab in the Public Works Department, for information.

Also that a copy of the Resolution and of the Report and Appendix be forwarded to the Revenue and Agricultural Department and to the Department of Finance and Commerce for information.

Also that the Resolution be published in the Supplement to the *Gazette of India*.

Ordered further, that a copy of this Resolution and of the Report and Appendix be forwarded to Her Majesty's Secretary of State for India for information.

J. G. FORBES, *Colonel, R.E.*,
Deputy Secretary to the Government of India.

- (a) Includes the Dildarnagar-Ghaziipur State Railway.
(b) Includes the Katni-Umaria Branch.
(c) Includes the Asansol-Chakardarnpur Section of the Bengal-Nagpur Railway.
(d) Includes the Bellary-Kistna State Railway.
(e) Includes the Sindia and Bhopal-Itarsi State Railways.

- (f) Receipts for first six days of April 1889.
(g) Receipts for first five days of April 1890.
(h) Includes the Amritsar-Pathankot and Rajpura-Bhatinda State Railways.
(i) Includes the Toungoo-Mandalay.
(j) Includes the Dhool-Mannu, Khámgaon, and Amraoti State Railways.
(k) Includes Patni Branch.

Simla, 1st May, 1890.

M. C. BRACKENBURY, Major, R.E.,
Under-Secretary.

Printed and published for the GOVERNMENT OF INDIA at the GOVERNMENT CENTRAL PRESS, Simla.

SUPPLEMENT TO

The Gazette of India.

No. 19. } CALCUTTA, SATURDAY, MAY 10, 1890.

OFFICIAL PAPERS.

A SUPPLEMENT to the GAZETTE OF INDIA will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in PART VI of the GAZETTE.

Non-Subscribers to the GAZETTE may receive the SUPPLEMENT separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The SUPPLEMENT and PART VI of the GAZETTE can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA is required by Law, or which it has been customary to publish in the CALCUTTA GAZETTE, will be included in the SUPPLEMENT. For such Orders and Notifications the body of the GAZETTE must be looked to.

RETAIL PRICES FOR THE 2nd HALF OF MARCH 1890.

QUANTITIES PER RUPEE IN SERS OF 80 TOLAS.

Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on
Monday, May 5th, 1890.

The weather during the week under review has been much less disturbed than was the case during the preceding week. The rainfall has been by no means so general, having been confined mainly to three regions, *viz.*, the north-west of the Punjab, Malabar and Mysore, and the east of Bengal. Even within these three regions there has been very little heavy rain. The distribution of pressure has been remarkably steady. Low readings have prevailed over the Gangetic plain, the east of the Central Provinces and Western Bengal, while pressure has been high in the north-west of the Punjab, along the West Coast of the Peninsula, and in the Upper Assam Valley. Accompanying this steady distribution has been a very steady wind circulation, and conditions generally have been, except in one region, very fairly normal. This region was the Punjab, where there was a considerable excess of pressure, which resulted in abnormal gradients for northerly winds.

The chart of the 29th showed a low pressure area over Northern India, whence readings rose slowly to areas of relatively high pressure in Mysore and the Upper Assam Valley. The wind was somewhat variable, except over North-Eastern India, a steady and strong southerly current prevailing over the head of the Bay and Lower Bengal and an easterly current in Assam, North Bengal and Behar. Rain was falling in Burma, Assam, Malabar and at Dera Ismail Khan and Quetta. The chart of the following day (the 30th) showed that a brisk increase of pressure had occurred over North-Western India. Thus a high pressure area had been formed over the Punjab, and the region of low readings was confined to the Lower Gangetic plain, the east of the Central Provinces and the west of Bengal. Northerly winds had appeared over the Punjab, but otherwise the wind circulation was little changed. Rain had fallen in the north-west. On the 1st the barometer was unsteady, but the changes were generally small and the general distribution was unaltered. Showers still fell in the North-West. On the 2nd there was a general barometric fall reported, but the change was fairly uniform, and the main features of the distribution were unaltered. On the 3rd, 4th and 5th the same general conditions as regards pressure and winds prevailed, but the rainfall more or less ceased in the Punjab, while it extended in Malabar and Mysore.

Temperature has again changed by large amounts, though the variation has been rather less than during the preceding week. It will be remembered that at the close of last week the mean temperature of India was considerably below the normal. This relative coolness continued during the first day of the present week, but by the 30th the mean of all the Provinces had risen to about the average, and from the 1st May onward the mean temperature was high, the hottest day being the 5th. The Punjab was much later than the other Provinces in feeling the recovery—a result due to steady northerly winds and constant slight showers. The greatest excess was in Bengal, where only on one day was the mean temperature below the average.

The following table shows the variations of the mean temperature from the normal according to Provinces for the present and for the past weeks:

PROVINCES.	Variation of Temperature from Normal for Past Week.	Variation of Temperature from Normal for Present Week.
Burma	+	+
Bengal	+	+
North-West Provinces	+	+
Punjab	—	+
Bombay	—	—
Central Provinces	—	+
Guzerat and Central India	—	+
Sind and Rajputana	—	+
Madras	—	+

This table shows that there has been an increase of temperature relatively to the normal in all Provinces, except the Punjab, where temperature has been approximately steady.

The hottest region was at first Guzerat, but after the 1st May the region of greatest heat was moved eastward, and the highest readings from that date till the close of the week were reported from the Central and North-Western Provinces. The following figures give the maxima on each day:

April 29th	Deesa	107.4°
" 30th	Rajkot	107.9°
May 1st	Deesa	111.5°
" 2nd	Nagpur	113.2°
" 3rd	Allahabad	113.4°
" 4th	Nagpur	113.2°
" 5th	Nagpur	113.7°

During the earlier part of the week the maxima over the Punjab were very low for the season.

At Dera Ismail Khan on the 29th the maximum was 87.6°, or 12.2° below the normal.	
" Sialkot " " 86.6° " 14.4° "	
" Lahore " " 88.3° " 13.7° "	
" Peshawar " 30th 74.1° " 18.3° "	
" Sialkot " " 80.7° " 20.0° "	
" Lahore " " 89.3° " 12.3° "	

After the 30th the maxima increased, but remained low for the time of year till the end of the week.

Rain.—The rainfall of the present week was much slighter than during that which preceded it. At nineteen out of the fifty-two rainfall divisions there was no rain as compared with six in the previous week, and at eight more the mean fall was less than one half a tenth of an inch, so that roughly in half the rainfall divisions there was either none or only an insignificant fall of rain. These divisions were Western Bengal, the whole of the North-West Provinces, the centre and south of the Punjab, the west (north of Malabar and Mysore) and centre of the Peninsula, the central parts of India and westward across Rajputana to Sind and Cutch. The regions of most general rain were Burma, Assam and East Bengal, the north-west of the Punjab and the south of the Peninsula. Within these regions the only divisions reporting an excess of rain are Assam (Surma), the hill and west divisions of the Punjab, Malabar, Madras (South Central), Coorg, Mysore, the Bombay Deccan and the East Coast (Central). Of these the only division where the excess exceeds half an inch is Malabar, where three times the usual amount of rain has fallen.

The largest actual deficiency is in Assam (Brahmaputra), where the rainfall is only $\frac{1}{7}$ of the normal.

The record of maximum falls shows large local variations in the rainfall. Thus in Tipperah one subdivisional station reports $4\frac{1}{2}$ inches, while in the neighbouring district of Noakhally the heaviest fall is only 0.43 inch. At Jamalpur (Mymensingh) $3\frac{1}{2}$ inches fell. Sylhet received 9 inches during the week, while in the Brahmaputra Valley the heaviest fall was 1 inch at Dhubri and Goalpara. In Lower Bengal the heaviest amounts were generally about 1 inch, while, in Western Bengal, the North-West Provinces and the east of the Punjab there were no falls of any consequence. In the north-west and west of the Punjab there were some amounts exceeding an inch. In the south of the Peninsula there were several instances of falls of between $2\frac{1}{2}$ and $3\frac{1}{2}$ inches, and one station in Calicut received $6\frac{1}{2}$ inches. On the eastern side of the Peninsula the maximum amounts were generally about 1 inch.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—For week ending 3rd May.—No rain in Madras, fair in Coimbatore, Nilgiris, South Canara, Malabar and slight elsewhere. Crops generally good, but suffering from want of rain in parts of Vizagapatam, Nellore, Cuddapah, Chingleput, North Arcot, South Arcot, Trichinopoly, Tinnevely and Coimbatore. *Cholum* blighted in parts of Trichinopoly. Outturn of sugarcane good; paddy and cotton middling to average; other grains below average. Pasture and water-supply generally decreasing. Prices nearly steady. Prospects fair.

Bombay.—For week ending 7th May.—Rain in parts of Sind, Carnatic, Poona and Sholapur. Standing crops good. Preparation for next season's crops in full progress. Fodder generally sufficient and agricultural stock healthy.

Bengal.—For week ending 6th May.—Rain general in North and East Bengal and showers in some other districts. Ploughing and early sowing proceeding, but are backward in many districts for want of rain. Spring rice being harvested, and outturn generally reported as fair, except in Howrah, where it is only four annas. In Behar *cheena* and *mung*, millets and paddy in the low lands are in good condition, but rain wanted for cultivation of *bhadoi* crops. Sugarcane doing well, but is in want of rain in some districts. Price of rice showed a slight tendency to rise in some districts. In Balasore daily average number of coolies on relief works was 126 during past week.

North-Western Provinces and Oudh.—For week ending 7th May.—Weather hot, with westerly winds. Slight rain has fallen in Jhansi. Threshing of *rabi* almost finished, and the new grain is coming into the market. Cotton, indigo and sugarcane being irrigated; supplies sufficient, except in Kumaun, where grain is scarce. Prices are generally stationary, but have risen slightly in Benares, Cawnpore and Jhansi.

Punjab.—For week ending 7th May.—Slight rain has fallen in Umballa, Ferozepore, Amritsar, Lahore, Rawalpindi, Shahpur and Peshawar. Prices rising in Hissar, Delhi and Rawalpindi, fluctuating in Lahore and Mooltan and stationary elsewhere. Harvesting of *rabi* crops completed in Hissar, Delhi and Umballa and in progress elsewhere. *Kharif* sowings going on in Delhi, Amritsar, Sialkot, Lahore, Rawalpindi, Shahpur and Peshawar. Prospects of crops average on *barani* lands; poor elsewhere. Fodder sufficient in Ferozepore, Amritsar and Peshawar; scarce in other districts.

Central Provinces.—For week ending 7th May.—Weather hot, with occasional clouds. Threshing and winnowing of winter crops approaching completion. Fields being manured and ploughed for autumn sowings. Prospects unchanged. Prices stationary.

Burma.—For week ending 3rd May.—Rain fell in most districts in Lower and Upper Burma, but it was light, except in Thongwa, Prome, Thayetmyo, Amherst, Tavoy, Moulmein, Bhamo, Ruby Mines, Yamethin and Pynmana, in which districts the rainfall was considerable. Prices of paddy have risen slightly in Thongwa, Tavoy, Yeu and Myingyan and have fallen in Katha and Pakokku. Reaping of dry weather crops is progressing in Upper Burma. The crops generally are good.

W. L. DALLAS,

Assistant Meteorological Reporter to the
Government of India.

W. C. BENETT,

Offg. Secretary to the Government of India.

SIMLA, 8th May, 1890.

Assam.—For week ending 7th May.—Weather warm. Rainfall insufficient. Sowing for early and ploughing for late rice continue. Prospect of crops in general good.

Mysore and Coorg.—For week ending 7th May.—Rainfall general in Mysore. Standing crops in good condition. *Eleusine corocana (ragi)* sown in parts. Ploughing operations in progress. No material change in prices.

Rainfall moderate in Coorg during the week.

Berar and Hyderabad.—For week ending 7th May.—Weather warm. Land is being prepared for next season. Fodder insufficient in Ellichpur, Daryapur, Yeotmal, Darwha and Kelapur taluks. Water scarce in Amraoti and Murtizapur taluks and in the Wun district. Prices stationary.

No rain in Hyderabad during the week. Reaping of *tabi* crops continues. Prices stationary.

Central India.—For week ending 7th May.—No material change in condition of crops and weather since last report.

Rajputana.—For week ending 7th May.—Slight rainfall in Ajmere. Reaping and threshing nearly completed. Agricultural stock good, except in parts of Ajmere. Pasturage or fodder sufficient, except in Marwar, Dholepore and Ulwar. Prices steady generally.

Nepal.—For week ending 1st May.—Rain fell during the week. Weather cloudy at times. The rain has immensely helped agricultural operations. Prospects better.

W. C. BENETT,

Offg. Secretary to the Government of India.

(b) Includes the Katni-Umaria Branch.
(c) Includes the Asansol-Chakardharpur Section of the Bengal-Nagpur Railway.
(d) Includes the Bellary-Kistna State Railway.
(e) Includes the Sindia and Bhopal-Itarsi State Railways.
(f) Includes the Amritsar-Pathankot and Rajpura-Bhatinda State Railways.
(g) Includes the Amritsar-Pathankot and Jammu-Kashmir Railways.

- (h) Includes Toungoo-Mandalay.
(i) Includes the Dhond-Manmad, Khamsaon, and Amraoti State Railways.
(j) Includes Patni Branch.
(k) Return not received.
(l) Total receipts from 1st to 13th April 1889.
(m) Total receipts from 1st to 12th April 1890.
(n) Included with the North Western Railway.

SUPPLEMENT TO The Gazette of India.

No. 20. } CALCUTTA, SATURDAY, MAY 17, 1890.

OFFICIAL PAPERS.

A SUPPLEMENT to the GAZETTE OF INDIA will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in PART VI of the GAZETTE.
Non-Subscribers to the GAZETTE may receive the SUPPLEMENT separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The SUPPLEMENT and PART VI of the GAZETTE can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.
No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA is required by Law, or which it has been customary to publish in the CALCUTTA GAZETTE, will be included in the SUPPLEMENT. For such Orders and Notifications the body of the GAZETTE must be looked to.

SIMLA, 8th May, 1890.

M. C. BRACKENBURY, Major, R.E.,
Under-Secretary.

Printed and published for the GOVERNMENT OF INDIA at the GOVERNMENT CENTRAL PRESS, Simla.

Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on
Monday, May 12th, 1890.

The week under review has been marked by the appearance of the first serious cyclonic storm of the season. It was apparently formed over the east of the Bay and gave the first marked indication of its existence on the 6th. This is an unusually early date for the formation of a cyclonic storm in this part of the Bay, and the subsequent track of the storm, *viz.*, north-eastward across the South Arakan hills into Central Burma, was also unusual. The probability, so far as past records afford any indication, is that storms formed over the Bay during the first fortnight of May will advance west-north-westward on to the Coromandel Coast, but that if it form during the last fortnight, it will advance in a northerly direction towards the head of the Bay. In recent years the storm approaching most closely in general character to that which appeared during the present week was the Akyab cyclone of the 13th to 17th of May 1884. This storm was formed to the west of the Andamans, advanced first in a northerly and then in a north-easterly direction, and finally crossed the Arakan Coast at Akyab. The barometer at that station fell to 28.98", and it is probable that at the centre of the cyclone of the present month the barometer was equally low, though at Diamond Island, which was the nearest of the meteorological stations to the storm, the lowest pressure recorded was 29.31". As is not infrequently the case when conditions are intensely disturbed in one quarter of the Indian region, the weather in the other quarters was fairly fine and settled. Hence the distribution of pressure and the circulation of the winds was remarkably steady during the week, and the rainfall away from the neighbourhood of the storm was slight and everywhere below the normal.

The chart of the 6th showed a large area of high pressure overlying North-Western and Western India, with its apex over Mysore and Malabar. From this area pressure decreased eastward and was lowest within a region represented by the stations of Bareilly, Patna, Balasore and Raipur. There were consequently gradients for northerly to north-westerly winds over the western half of India and for southerly winds over the eastern half, and winds from these directions prevailed in these regions. At the same time however the barometer had fallen .160" at Diamond Island, with a north-easterly wind and rain, and a depression was coming in that neighbourhood. The chart of the 7th showed a striking development. The barometer had fallen 0.3" at Diamond Island, 0.2" at Bassein, and 0.1" at Rangoon, and a depression of considerable intensity was shown to the west of Diamond Island, where a southerly gale was blowing. Heavy rain was falling all over Lower Burma. At the same time the barometer was falling very quickly over North-Western India, and a low pressure area had been developed over the north of the Punjab. In other respects the general distribution of pressure, &c., was unaltered. On the 8th the cyclonic storm from the Bay was shown near Thayetmyo, while a well marked depression had developed within the low pressure area noticed over the Punjab on the 7th. The winds were cyclonic around both these depressions. Heavy rain had continued to fall in Burma. By the morning of the 9th the Burmese storm had disappeared, and the general distribution was generally similar to that which prevailed on the first day of the week. From the 10th to the close of the week pressure was steadily high over the west of the Peninsula and low over Northern India. Within this low pressure area small centres of disturbance were formed, but their effect on the weather was generally slight. In North-Western India however strong winds and slight rain accompanied the passage of the disturbances from the plains into the hills.

Temperature.—The general temperature of India has undergone a large oscillation during the week. On the 6th there was a very considerable excess, but during the two following days this gave way, and on the 9th and 10th the general temperature was below the normal. On the 11th there was hardly any

variation from the normal, but on the 12th there was a brisk recovery, which brought temperature nearly to the point at which it stood at the beginning of the week. In Bengal and Madras this oscillation was not felt at all, and the mean temperature in those two Provinces was steadily above the normal.

The following table shows the variations of the mean temperature from the normal according to Provinces for the present and for the past weeks:

PROVINCES.	Variation of Temperature from Normal for Past Week.	Variation of Temperature from Normal for Present Week.
Burma	+ 0.8°	- 2.1°
Bengal	+ 3.0°	+ 5.9°
North-West Provinces	+ 2.0°	+ 2.5°
Punjab	- 3.0°	- 1.4°
Bombay	+ 1.1°	+ 0.4°
Central Provinces	+ 1.5°	+ 0.5°
Guzerat and Central India	+ 1.4°	0
Sind and Rajputana	+ 1.2°	- 0.9°
Madras	+ 0.3°	+ 1.8°

These figures show a large excess of temperature in Bengal, a considerable excess in the North-Western Provinces, a considerable deficiency in Burma, and little departure from the normal elsewhere.

The region of greatest heat has been somewhat erratic. For the first four days the highest maximum temperature was reported from the Central Provinces or Berar, but on the 10th it had moved to Masulipatam, on the 11th to Jacobabad, and on the 12th back to Masulipatam.

The following figures give the maxima on each day:

May 6th	Akola	114.5°
" 7th	Nagpur	114.2°
" 8th	Amraoti and Nagpur	111.2°
" 9th	Nagpur	111.7°
" 10th	Masulipatam	113.7°
" 11th	Jacobabad	115.1°
" 12th	Masulipatam	113.7°

These figures show that the heat on the East Coast was very exceptional during the latter part of the week.

Rain.—As mentioned above, except in Burma, where the weather was under the influence of the severe cyclonic storm generated over the Bay, the rainfall of the week has been everywhere below the average, and over the greater part of the country has been either nil or wholly insignificant. At thirty out of the fifty-two rainfall divisions no rain whatever has fallen, and at five more the total amount received was less than 0.10 inch. This leaves seventeen divisions in which rain of more or less importance has fallen. This number is made up of the Burma, Assam, and East and North Bengal divisions in North-Eastern India, the Malabar, Mysore, and Madras (South Central) divisions in the south-west, and of the East Coast (North) and Madras (South and Central) divisions in the south-east, so that the greater part of northern, the whole of north-western, and the whole of the central parts of the country were without important rain.

The only divisions in which there is any excess are those in Central and Southern Burma, and here the rainfall was very heavy.

The record of maximum falls shows that Tavoy received 13.3 inches, Hanthawaddy 10 inches, Mambu and Kyauktan 8.1 inches, and Magwe 8 inches during the week. In East and North Bengal the maxima were between 2.1 and 3.1 inches generally, but in Assam the amounts were larger. Cherrapunji received 7.1 inches, and stations in Gauhati and Goalpara over 5 inches. In the south-west of the Peninsula Quilon received 5 inches, but the maximum falls in other parts of that region were generally between 1 and 1.4 inches. There were few falls of importance in the east and centre of the Peninsula, but Rajahmundry received 1.1 and Alna (Bellary) 1.1 inches.

The final column of the concluding table does not show a satisfactory state of affairs as regards the season's rainfall (October 15th 1889 to May 12th 1890). The Burma districts, except Arakan, East Bengal, Assam (Surma), Deltaic Bengal, and Orissa, all show an excess. This is also the case in Malabar, Coorg, the Konkan, the Bombay Deccan, the Central Provinces (West), the East Coast (North), and Madras (Central); but, with the exception of these fourteen divisions, the rainfall has been everywhere scanty, and in some parts of Northern India practically nil.

W. L. DALLAS,

Assistant Meteorological Reporter to the
Government of India.

W. C. BENETT,

Offg. Secretary to the Government of India.

SIMLA, 15th May, 1890.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 10th May.*—No rain in Kistna, Madras, Chingleput and Tanjore, moderate in Coimbatore and Salem, and slight elsewhere. Standing crops good, but suffering from want of rain in Vizagapatam, Nellore, Cuddapah, Chingleput, North Arcot, South Arcot, Tanjore, Trichinopoly, Tinnevely and Coimbatore. Cotton affected by rain in Bellary; *cholum* blighted in parts of Trichinopoly. Outturn of sugarcane good; paddy, tobacco, gingelly, and *ragi* middling to average. Other grain and cotton below average. Pasture and water-supply generally insufficient. Prices of *ragi* falling; other grains stationary or rising. Prospects fair.

Bombay.—*For week ending 14th May.*—Slight rain in Kanara. Harvesting of late crops almost completed. Preparations for early crops progressing generally. Fodder generally sufficient, and agricultural stock healthy.

Bengal.—*For week ending 13th May.*—Rain has fallen beneficially in North and East Bengal generally, but is wanted in Midnapore, Burdwan and Chittagong. Ploughing and early sowings of rice and jute still retarded in several districts for want of sufficient rain. In North Behar rain is required for standing crops and for *bhadoi* cultivation. Sugarcane also in want of rain in some districts. Spring rice harvest nearly over. Outturn generally reported as fair, except in Howrah, where it is only 4 annas. Price of rice stationary, with a tendency to rise in some districts. In Balasore daily average attendance on relief works at Government expense was 136 during the past week. Beggars still being relieved from private funds.

North-Western Provinces and Oudh.—*For week ending 14th May.*—Weather has been hot, with dust-storms and westerly winds. Slight rain has fallen in Kumaun. *Rabi* harvesting completed. Opium weighments finished. Extra crops are doing well. Sugarcane and indigo are being irrigated. Markets are well supplied. Prices continue high in Kumaun and are rising in Ballia, Cawnpore, Sitapur, Agra and Jhansi. Elsewhere they are stationary.

Punjab.—*For week ending 14th May.*—Slight rain has fallen in Peshawar only. Prices rising in Rawalpindi; fluctuating in Delhi and Lahore; stationary elsewhere. Harvesting of *rabi* crops over in Hissar, Delhi, Ferozepore and Dera Ismail Khan; in progress in other districts. *Kharif* sowings going on in Delhi, Umballa, Rawalpindi, Shahpur, Dera Ismail Khan and Peshawar. Prospects of *rabi* crops average on irrigated lands; poor elsewhere. *Kharif* crops reported to be in good condition in Dera Ismail Khan and Peshawar.

Central Provinces.—*For week ending 14th May.*—Weather hot, with high winds and occasional clouds. Winnowing of winter crops nearly completed. Preparation of land for autumn sowings in progress. Prices steady, except in Seoni, where they have fallen slightly.

Burma.—*For week ending 10th May.*—Rain fell throughout Lower Burma and was very heavy in Sandoway, Rangoon, Hanthawaddy, Pegu, Tharrawaddy, Prome, Bassein, Thongwa, Henzada, Moulmein, Shwegyin, Tavoy and Mergui districts. In Upper Burma rain fell in all districts, except Upper Chindwin. The rainfall was very heavy in Minbu and also in Myingyan, Meiktila and Yamethin. Reaping of dry weather crops continues, and ploughing has

commenced. The price of paddy has risen considerably in Tharrawaddy, Mergui, and Katha, and slightly in Rangoon, Pegu, Prome and Shwebo, but has fallen in Thongwa, Yeu and Yamethin districts.

Assam.—*For week ending 14th May.*—Weather seasonable. Rainfall general. Ploughing for winter paddy continues. Early rice, tea, and other standing crops doing well.

Mysore and Coorg.—*For week ending 14th May.*—Rainfall slight. Standing crops thriving. Paddy and sugarcane being harvested. Prospects fair. Prices risen in Kolar; steady elsewhere.

Slight rain in Coorg during the week. Ploughing operations delayed by general prevalence of Influenza epidemic.

Behar and Hyderabad.—*For week ending 14th May.*—Weather warm. Fodder insufficient in Ellichpur, Daryapur, Yeotmal, Darwha and Kelapur taluks. Water scarce in Amraoti and Murtizapur taluks and in the Wun district. Land under preparation for next *kharif* crop. Prices almost stationary.

No rain in Hyderabad during the week. Reaping of *tabi* crops continues. Prices stationary.

Central India.—*For week ending 14th May.*—In Bhopawar Agency prices of food-grains slightly fallen, except in Dhar, and steady elsewhere. Probable outturn in Goona Agency reported below average. Condition of agricultural stock good, except in Raghogarh.

Rajputana.—*For week ending 14th May.*—Ploughings commenced in Kotah and Kishengarh. Threshing generally completed. Agricultural stock good. Pasturage or fodder sufficient, except in Marwar, Dholepore and Ulwar. Prices steady generally.

Nepal.—*For week ending 8th May.*—Weather warm and partially cloudy. Wheat has ripened. Outturn bad through want of early rains.

W. C. BENETT,
Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.

SUPPLEMENT TO The Gazette of India.

No. 21. } CALCUTTA, SATURDAY, MAY 24, 1890.

OFFICIAL PAPERS.

A SUPPLEMENT to the GAZETTE OF INDIA will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in PART VI of the GAZETTE.

Non-Subscribers to the GAZETTE may receive the SUPPLEMENT separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The SUPPLEMENT and PART VI of the GAZETTE can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA is required by Law, or which it has been customary to publish in the CALCUTTA GAZETTE, will be included in the SUPPLEMENT. For such Orders and Notifications the body of the GAZETTE must be looked to.

- (a) Includes the Dildarnagar-Ghaziipur State Railway.
(b) Includes the Katni-Umaria Branch.
(c) Includes the Asansol-Chakardharpur Section of the Bengal-Nagpur Railway.
(d) Includes the Bellary-Kistna State Railway.
(e) Includes the Sindia and Bhopal-Itarsi State Railways.
(f) Includes the Amritsar-Pathankot and Rajputana-Bhatinda State Railways.
(g) Includes the Amritsar-Pathankot and Jammu-Kashmir Railways.

- (h) Includes Youngoo-Mandalay.
(i) Includes the Dhond-Manmad, Khamsaon, and Amraoti State Railways.
(j) Includes Patni Branch.
(k) Return not received.
(l) Total receipts from 1st to 20th April 1889.
(m) Total receipts from 1st to 10th April 1890.
(n) Included with the North Western Railway.

SIMLA, 16th May, 1890.

M. C. BRACKENBURY, Major, R.E.,
Under-Secretary.

Read—

Home Department Resolution No. 1817, dated the 3rd July 1888.

RESOLUTION.

In modification of the rules for the regulation of appointments in the Secretariat clerical service of the Government of India and attached offices, published in the Resolution read in the preamble, the Governor General in Council is pleased to direct that these rules shall not apply to the office of the Statistical Officer to the Government of India in the Sanitary and Medical Departments, attached to the office of the Sanitary Commissioner and Surgeon-General with the Government of India.

ORDER.—Ordered, that a copy of this Resolution be forwarded to the Surgeon-General and Sanitary Commissioner with the Government of India for information;

and that it be published in the *Gazette of India* for general information.

(True Extract.)

J. P. HEWETT,

Under-Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on
Monday, May 19th, 1890.

During the week under review the distribution of pressure and the general circulation of the winds have been very steady and undergone little change from day to day. Pressure has been low over the western desert and the Central Provinces and high off the West Coast, over the south of the Bay and in Assam. The oscillations of pressure, which are always more or less in progress, have resulted in variations in the intensity of the above conditions, *i.e.*, in the barometric differences between the high and low pressure areas, so that the weather has at times undergone considerable alterations, but the main features of the distribution have remained practically unchanged throughout. The principal abnormal feature of the distribution has been the exceptionally high pressures which have prevailed over Assam and to a less extent along the foot of the Himalayas. Associated with this extension north-westward of abnormally high pressure has been an extension in the same direction of easterly and south-easterly winds. In normal years in the month of May easterly winds are shown blowing down the Brahmaputra Valley across North Bengal to North Behar and extending as far as Darbhanga and Gorakhpur. To the north-westward of this point north-westerly winds, which are the ordinary hot winds of the hot season, prevail. During the present week not only have easterly winds prevailed over practically the whole of Bengal and Assam, but they have extended up the Gangetic plain as far as the south-east of the Punjab to the complete exclusion of the ordinary north-westerly hot winds. Over the west and centre of the Peninsula and the west of the Central Provinces, beyond the fact that the barometer has been a little higher than usual, there has been little worthy of note, but on the eastern side of the Peninsula pressure has been unusually low; hence the difference between the two Coasts has been increased and northerly to north-westerly winds have been strong and very steady.

The chart of the 13th showed a large area of uniform and rather low pressure overlying the Punjab, the North-West Provinces, the Central Provinces and Behar. From this low pressure area the barometer rose moderately quickly on its southern and south-eastern sides and quickly on its eastern side, the highest readings being reported from Assam. Strongish southerly winds were blowing from the Bay into Bengal, but the surface current over Bengal was an easterly one of low temperature. In consequence the southerly wind was forced to rise, and to part with much of its moisture, which fell as moderate rain over a large part of the Province. South-easterly winds prevailed up the Gangetic plain, while westerly winds were reported over the Central Provinces and north-westerly to northerly winds over the Peninsula. On the 14th conditions were very similar, the only important alteration being an extension of the rainfall area in Bengal. All over North-Western India, the central parts of the country and the greater part of the Peninsula the weather was very fine, and strong north-westerly winds prevailed at most western and central stations. The chart of the 15th showed that the barometer had fallen briskly in the Punjab and that a well defined depression had been developed within the large low pressure area which, as noticed above, had previously overlaid the Punjab, the North-West Provinces and the Central Provinces. This was the only change of importance. Rain still fell generally in Bengal. By the morning of the 16th the depression over the Punjab had undergone still further development, and a feeble cyclonic circulation of the winds was reported from its neighbourhood. Rain had fallen in the south of the Peninsula, around the northern half of the Bay and in Bengal, Assam and Burma. The chart of the 17th showed that the Punjab depression had apparently begun to move south-westward, being followed by a barometric rise and northerly winds in the north of the Punjab. Slight rain had fallen at Rawalpindi and Murree, but the rainfall area both in Southern and North-Eastern India had decreased. On the 18th there was very little change beyond a further rise of the barometer over North-Western India. Rain had extended somewhat in North-Western India but had practically ceased elsewhere. By the morning of the 19th the depression from the Punjab had reached Lower Sind. Rain had extended both over Bengal and in North-Western India.

Temperature.—On the mean of the whole country the temperature of the past week has shown very little departure from the normal average, but in the various Provinces there have been considerable variations. Thus in Bengal every day but one was cooler and in the Punjab every day but one was hotter than the normal, and the mean variation in the one case was -2.8° , in the other $+2.7^{\circ}$. In Sind and Rajputana and in the Central Provinces and the Berar the mean temperature of each day exceeded the normal.

The following table shows the variations of the mean temperature from the normal according to Provinces for the present and for the past weeks:

PROVINCES.	Variation of Temperature from Normal for Past Week.	Variation of Temperature from Normal for Present Week.
Burma	-2.1°	-1.1°
Bengal	$+5.9^{\circ}$	-2.8°
North-West Provinces	$+2.5^{\circ}$	-0.4°
Punjab	-1.4°	$+2.7^{\circ}$
Bombay	$+0.4^{\circ}$	$+0.3^{\circ}$
Central Provinces	$+0.5^{\circ}$	$+1.8^{\circ}$
Guzerat and Central India	0	$+0.5^{\circ}$
Sind and Rajputana	-0.9°	$+1.7^{\circ}$
Madras	$+1.8^{\circ}$	$+1.4^{\circ}$

The most important feature of this comparison is in the temperature of Bengal, where there has been a fall of nearly 8° .

The region of greatest heat has been steadily in North-Western India and generally in Upper Sind. The following is the record of the daily maximum temperatures:

May 13th	Jacobabad	113.7°
" 14th	"	115.1°
" 15th	"	115.6°
" 16th	Montgomery	115.0°
" 17th	Multan	114.3°
" 18th	Jacobabad	115.6°
" 19th	"	115.6°

There was thus very little variation either in the locality or in the height of the greatest temperature.

Rain has been fairly general throughout a large part of India, but there is one extensive tract of country comprising many divisions in which there has been no rain. This tract covers the western part of the Peninsula north of Malabar and Mysore, the whole of the central parts of the country from the Central Provinces westward to Rajputana and Khandeish, and the whole of Guzerat, Kattiawar and Sind. On the other hand the south and east of the Peninsula, Burma, Bengal and Assam, the North-West Provinces and the Punjab, all received more or less rain. No less than thirty-seven out of the fifty-two rainfall divisions have experienced rain; and though in most of these the amount is less than the normal for the week, still in many parts of the country the rain has been very fairly heavy, and in Bengal has been almost everywhere in excess. In Burma and Assam a reaction from the heavy fall of last week has occurred, and the amounts now reported are small in all divisions. In Eastern Bengal the rainfall of the week has been about normal, but in all the other Bengal divisions it has been excessive. In the North-West Provinces and the Punjab the weather generally has been drier than usual, but in four divisions, *viz.*, the east and west of the North-West Provinces and the south and centre of the Punjab, there has been a trifling excess. In the south and east of the Peninsula only one division reports an excess, *viz.*, the South Central Madras, where there have been some sharp thundershowers.

The maximum falls of the week have been fairly large in Bengal and the south of the Peninsula, but elsewhere have been quite unimportant. In Burma the largest amount reported was only $2\frac{1}{2}$ inches at Pegu, and in Assam Cherrapunji received only 3 inches. In East and Deltaic Bengal the maximum falls varied between 2 and 4 inches, but in Central and North Bengal they were larger, Lalgola (Moorsheadabad) receiving 5 and Sibgunj (Maldah), Debegunj (Jalpaiguri) and Kurseong (Darjeeling) over 4 inches. Behar received fairly heavy amounts varying between 2 and 3 inches, and further to the north-westward in the North-West Provinces and the Punjab there were numerous falls of over 1 inch. The heaviest was 2.9 inches at Ghaziabad. In the south-west of the Peninsula there is practically only one heavy amount reported, *viz.*, 15.8 inches at Girdular (Nilgiris).

The concluding column of the following table exhibits no important change as compared with last week:

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—For week ending 17th May.—Rainfall nil in Kistna, Madras, and Chingleput, moderate in Ganjam and Nilgiris, slight elsewhere. Standing crops good, but suffering from want of rain in limited tracts in Vizagapatam, Nellore, Cuddapah, Chingleput, North Arcot, Tanjore, Trichinopoly and Coimbatore. Outturn of sugarcane and tobacco good, paddy and *chulam* middling to average, other grains and cotton below average. Pasture and water-supply generally deficient. Prices steady. Prospects fair.

Bombay.—For week ending 21st May.—Standing late crops good, harvesting nearly completed. Preparations for early crops continue generally, and sowing commenced in Karachi and Belgaum. Fodder and water sufficient, and agricultural stock good, except in a few talukas.

Bengal.—For week ending 20th May.—Good rain in almost all parts of the Province, but more still required in the west of the Burdwan division. Ploughing general and early sowings in progress in North and East Bengal. *Aus*, rice and jute sowings mostly finished and young seedlings coming on well. Slight damage has occurred to young crops in Rungpore owing to excessive rainfall. In Behar, *bhadoi* cultivation begun and *cheena*, *munj* and indigo crops improved by the rain of the week. Sugarcane and plantains also benefited by the rain and generally doing well. *Boro* or spring rice harvest nearly over and is generally a fair crop, except in Howrah as previously reported. Price of rice generally very steady, but a slight rise is reported from Balasore and Cuttack. In Balasore the average daily attendance on relief works was 189.

North-Western Provinces and Oudh.—For week ending 21st May.—Weather unsettled with duststorms and rain in several districts; slight shock of earthquake felt in Benares, Fyzabad, Allahabad and Cawnpore districts. Extra crops flourishing. Irrigation of sugarcane and indigo in progress. Markets continue to be well supplied. Prices are still high in Kumaun, and have slightly risen in Cawnpore and Bareilly; elsewhere they are stationary.

Punjab.—For week ending 21st May.—Rain has fallen in all districts, except in Jullundur, Lahore and Peshawar. Prices fluctuating in Delhi, falling in Multan and Rawalpindi, stationary elsewhere. Threshing and cleaning of *rabi* crops in progress; sowings of *kharif* commenced in Shahpur. Outturn of *rabi* crops reported below average. Fodder sufficient, except in Hissar, Delhi, Jullundur, Sialkote, and parts of Mooltan. Opium produce average in Rawalpindi.

Central Provinces.—For week ending 21st May.—Weather hot and cloudy, with high winds at times. Winnowing of winter crops approaching completion; ploughing and manuring of fields for autumn sowings in progress. Prices stationary.

Burma.—For week ending 17th May.—Rain fell throughout Burma. In Upper Burma reaping of dry weather rice is in progress and ploughing has commenced. The price of paddy fell in Tharrawaddy, Bassein and Thayetmyo, while in other districts there is little or no change. The food-supply is sufficient.

W. L. DALLAS,

Assistant Meteorological Reporter to the
Government of India.

W. C. BENETT,

Offg. Secretary to the Government of India.

SIMLA, 22nd May, 1890.

Assam.—For week ending 21st May.—Weather seasonable. Rainfall slight. Ploughing for late rice and transplanting of sugarcane continue. Prospects of crops in general good.

Mysore and Coorg.—For week ending 21st May.—No report from Mysore.

Rainfall moderate in Coorg during the week. Season favourable for standing crops.

Berar and Hyderabad.—For week ending 21st May.—Weather warm. Land is being prepared for next season. Fodder insufficient in Ellichpur, Daryapur, Yeotmal, Darwha and Kelapur taluks. Water scarce in Amraoti and Murtizapur taluks and in the Wun district. Prices stationary.

No report from Hyderabad.

Central India.—For week ending 21st May.—No material change since last report.

Rajputana.—For week ending 21st May.—Ploughings commenced in Kotah, Ajmere and Kishengurh. Agricultural stock good. Pasturage or fodder sufficient, except in Marwar and Dholepore. Prices steady generally.

Nepal.—For week ending 15th May.—Partial rain fell in the valley of Nepal during the week. Weather refreshing and cloudy. Harvesting of wheat crop commenced. Average outturn poor. Prospects of *ghain* (early) rice and Indian corn good.

W. C. BENETT,
Offg. Secretary to the Government of India.

SIMLA, 23rd May, 1890.

SUPPLEMENT TO

The Gazette of India.

No. 22.

SIMLA, SATURDAY, MAY 31, 1890.

OFFICIAL PAPERS.

A SUPPLEMENT to the GAZETTE OF INDIA will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor-General will in future be published in PART VI. of the GAZETTE.

Non-Subscribers to the GAZETTE may receive the SUPPLEMENT separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The SUPPLEMENT and PART VI. of the GAZETTE can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA is required by Law, or which it has been customary to publish in the CALCUTTA GAZETTE, will be included in the SUPPLEMENT. For such Orders and Notifications the body of the GAZETTE must be looked to.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Summary for April 1890.

The most important feature of the weather in the month of April is the increase of temperature. At the commencement of the month, the area of highest temperature covers the Central and North Deccan, in which the mean temperature of the day averages at that time 88°. Temperature increases during the month about 10° in Upper India, 5° in Central India and the Central Provinces, and is practically unchanged in Southern India. Hence the area of maximum temperature is slowly transferred northwards during the month, and at the end of the month covers the North Deccan, the Central Provinces, the south-western districts of the North-Western Provinces and Central India. The mean temperature in that area slightly exceeds 92°, and maximum temperatures exceeding 110° are usually registered in it before the end of the month.

The increase of temperature in Northern and Central India produces a corresponding change in the pressure distribution. Pressure falls steadily and rapidly in Northern India, and more especially in Upper and Central India. Hence the latter areas, which in January and February are the seat of the highest pressures in India, become in April the area of lowest pressure. Pressure is at the end of the month highest in the coast districts and adjacent sea areas, but the gradients are small, the difference of pressure between the coast districts and Upper India in the last week of the month averaging about an eighth of an inch.

Local sea winds or land and sea breezes prevail in the coast districts. In the interior in Northern India winds blow down the river plains and valleys. The westerly winds of the Gangetic plain are at this time usually of considerable

intensity and are of very high temperature and known as hot winds. The air motion over nearly the whole of the interior occurs almost entirely during the day hours, whilst the nights are generally calm.

One of the more remarkable features of the month is the hot weather depression area, which usually covers the eastern districts of the Central Provinces and Chutia Nagpur. It is more or less persistent during the month, and owes its formation to the action of the systems of winds in North-Eastern India, *viz.*, of the westerly winds in the Gangetic plain and Central Indian plateau, easterly winds in Assam and North Bengal, and southerly winds in South Bengal and Orissa.

The chief disturbances of the month belong almost exclusively to the class of hot weather storms. They are frequently accompanied with thunder, rain or hail in the coast districts and near the hills of Northern and Southern India. In North-Western India on the other hand they very rarely give rain and are known as duststorms. Thunderstorms are of most frequent occurrence at this time in Assam and Bengal (more especially the eastern and northern districts). These two Provinces hence receive a considerable amount of rain during the month. Southern India and Tenasserim also receive occasional and moderate rain during periods of thunderstorms and slightly disturbed weather. The rainfall in these areas appears to be chiefly due to slight temporary advances of southerly moist winds from the neighbourhood of the Equator. The chief effect of these hot weather storms in Northern India is to produce a large temporary reduction of temperature, more especially in the day temperature. This is in part due to cloud, but mainly to the direct and indirect cooling effect of the rainfall.

Temperature was generally slightly above the normal at the beginning of the month and increased more rapidly than usual. The second week of the month was hence marked by very high temperature. It was on the average of the week 5° hotter than usual in the Punjab and 4° in the North-Western Provinces and Rajputana. Weather became unsettled on the 16th and light showers occurred in many districts, which reduced temperature to some extent. Clear dry weather set in again, except in North-Eastern and Southern India, on the 19th and continued until the 24th, on which day weather again became generally unsettled. Thundershowers occurred in nearly every district of India, except the greater part of Rajputana and Lower Sind, during the next three days. They produced a very large and remarkable reduction of temperature. Thus on the 25th the maximum temperature at Seoni and Jubbulpore was 26° below the normal of the day, at Nagpur 25°, and at Sutna 21° below it. On the 26th it was 29° below the normal at Simla, 25° below at Patna, 23° below at Benares, and 21° below at Roorkee, Delhi, Sialkote and Ludhiana. This period of disturbed weather conditions and great coolness lasted until the 28th, when the skies cleared and the temperature increased very rapidly again. The temperature of the fourth week of the month was hence very considerably below the normal of the month—nearly as much as that of the second week was above it. In consequence of these opposite variations the mean temperature of the month differed only to a small amount from the normal and was generally in slight excess. The excess averaged 1½° for Rajputana and 1° in the Punjab and Central India, and was very small for other districts.

The following are the highest day temperatures (exceeding 110°) registered during the month:

Cuttack	113·4°	Delhi	111·0°
Akola	112·1°	Khandwa	110·7°
Kurnool	111·6°	Agra	110·5°
Deesa	111·5°	Malegaon	} 110·3°
Allahabad	111·4°	Benares	
Jhansi	111·0°	Cawnpore	110·1°

The majority of these highest maximum temperatures of the month were recorded on the 22nd and 23rd, immediately before the second disturbed period of the month.

The following table gives the variations of the mean temperature from the normal, week by week during the month, in the larger Provinces:

PROVINCES.	DIFFERENCE OF MEAN TEMPERATURE FROM NORMAL FOR WEEK ENDING APRIL				Difference of Mean Temper- ature from the Normal for the Month.
	7th.	14th.	21st.	28th.	
Burmah	+ 0·6	— 0·7	+ 1·2	+ 0·1	+ 0·3
Bengal	+ 0·8	+ 1·0	— 0·4	+ 0·2	+ 0·3
North-Western Provinces	— 0·6	+ 3·9	+ 0·3	— 1·6	+ 0·5
Punjab	+ 1·9	+ 4·8	+ 1·3	— 2·8	+ 0·9
Bombay	+ 0·7	+ 1·4	+ 0·6	— 1·0	+ 0·3
Central Provinces and Berar	+ 0·8	+ 3·0	+ 0·7	— 3·6	+ 0·1
Guzerat and Central India	— 0·1	+ 3·3	+ 1·6	— 1·6	+ 0·8
Sind and Rajputana	+ 1·2	+ 3·9	+ 2·4	— 0·7	+ 1·5
Madras	+ 0·8	+ 0·4	+ 0·4	— 1·4	— 0·2

Pressure at the commencement of the month was highest in the North Punjab, but gradients were everywhere small. No change of importance occurred until the second week, when pressure decreased rapidly in Upper India and the distribution characteristic of the hot weather months was established, pressure being highest in the coast districts and adjacent sea areas and lowest in Northern India. On the 14th and 15th the barometer fell rather rapidly, and a low pressure area formed in the South-West Punjab. This accompanied slight general disturbance, which gave thundershowers in the Punjab, the North-West Provinces, Bengal, Assam, and Central and Southern India. It disappeared on the 18th, but thundershowers continued in Bengal and Assam and, to a less extent, in Southern India and Malabar until the 24th. In consequence of increasing temperature pressure had fallen considerably in Upper India and steepish gradients were established on the 24th. A low pressure area formed on that day in the Punjab and the weather became generally disturbed, and thunderstorms with more or less rain occurred in nearly every part of India, except Sind and Rajputana, during the next three days (*i.e.*, until the 27th). This disturbance also extended into the hill districts and gave a moderately heavy fall of snow in some parts of the Punjab Himalayas. On the 28th pressure was very uniform over the whole of India, temperature much below the average (especially in Upper India), and winds very light and irregular.

Although the pressure changes during the month were considerable, they were no larger than usually occur, and the mean pressure varied very little from the normal over the whole of India. The barometric anomalies of the month are small and indicated the presence at that time of normal and favourable conditions for the approaching south-west monsoon. The heavy snow in some parts of the Punjab Himalayas during the last week of the month was probably not large enough to produce any important permanent effect upon the distribution of pressure in May or to delay to any extent the establishment of the south-west monsoon.

Rain.—As already pointed out, the only areas which receive moderately heavy rainfall in this month are Ceylon and Assam. In the West Punjab, Bengal, Malabar, Mysore, and Lower Burma the rainfall of the month is moderate

in amount, varying from 1 inch in West Bengal to 6 inches in East Bengal. In all other districts it is small in amount, averaging not more than a few tenths. The first fortnight of the month under review was very dry over the whole of India. Frequent rain, chiefly during thunderstorms, fell in the areas of moderate or heavy rain during the latter half of the month. In the southern areas of Ceylon, Malabar, Mysore, and Burma the rainfall of the month was in excess. It was normal or slightly in defect in the West Punjab, Bengal, and Assam. In the remaining districts the rainfall occurred almost entirely during the two periods of disturbance, *viz.*, from the 16th to the 19th and from the 25th to the 28th. The latter was an unusually prolonged disturbance and gave more widely spread and heavier rainfall than is usual in April in Upper and Central India. Hence these districts received more than the normal amount of the month. In none of the rainfall districts in these areas, except the East Punjab and the adjacent hill districts, did the amount average as much as 1 inch.

The following table gives complete data and shows the actual average rainfall and the normal rainfall of the month of the twenty-one districts into which the country is divided, so far as it is indicated by the telegraphic reports of a few stations in each district:

DISTRICTS.	No. of Stations.	Normal average Rainfall in April.	Actual average Rainfall in April 1890.	Difference from the average in April 1890.
Punjab, West	7	1.42	1.48	+ 0.06

JOHN ELIOT,

SIMLA, 26th May, 1890.

Meteorological Reporter to the
Government of India.

W. C. BENETT,

Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on
Monday, May 26th, 1890.

During the week under review the weather has progressed slowly but steadily from quiet and undisturbed conditions to unsettled and stormy. This change has been produced by the steady increase of heat which has occurred over North-Western India. Under the influence of this increase the barometric gradient between Ceylon and the Punjab has steadily risen. On the 20th the barometric difference between Colombo and Lahore was only 0.15", on the 24th it was 0.31", and on the 26th was 0.44". Accompanying this increase of barometric difference occurred a general rise in the wind force and a strongly marked tendency to more unsettled weather. There has been so far no notice of the appearance of the monsoon in Southern India. Temporary incursions of what are practically monsoon winds have occurred at different times, but the advance has not lasted long, and what is popularly known as the burst of the monsoon has not so far occurred. In Burma more or less steady rain has fallen during the week, but the wind direction has been variable, and until quite the close of the week it was still doubtful whether the monsoon, properly so called, had commenced. The heavyish general rain and the southerly winds on the 26th showed however that the rains had to all appearance set in.

The chart of the 20th showed a low pressure area over Lower Sind and a band of relatively low pressure extending eastward and south-eastward from the Western desert across Rajputana and the Gangetic plain as far as the east of the Central Provinces. The highest readings were reported from the Upper Assam Valley and the south of the Bay, but the barometric differences were everywhere slight. The winds were light or moderate in force and the weather fine in most parts of the country. Light general rain was however reported from Burma and scattered thundershowers from the other Provinces. On the following day the chart showed very little change in the general distribution of pressure. The winds were still very irregular and variable over a large part of the country, but a westerly current was reported from the central stations and an easterly current from Bengal and the North-West Provinces. The force was rising somewhat. The weather was unchanged. On the 22nd the only change of importance was that the barometer had given way decidedly over the north of the Punjab, and a large low pressure area overlay the whole of North-Western India. The wind continued irregular generally and the weather was still unaltered. The chart of the 23rd showed that pressure was falling over Northern India and rising over the Peninsula, so that the barometric gradient was increasing and the wind currents becoming more regular. Some increase in the extent and amount of the rainfall in Malabar was reported, but otherwise there was little alteration. The chart of the 24th showed a further change in the direction noticed on the 23rd, the barometric gradient becoming steeper and the wind circulation more regular. The rain had ceased again in the South of the Peninsula, but elsewhere the weather was the same as on the preceding day. On the 25th the barometric fall in the North-West became very brisk, and on the 26th a slight depression was shown over the Punjab and steep gradients all over the country. The wind circulation was very strongly marked and the wind force high very generally. Although duststorms and dusthaze were very prevalent, the general weather had not much changed, and except in Burma and Lower Bengal rain was light and scattered.

Temperature.—During the first four days of the present week the mean temperature of all the Provinces was very nearly normal, there being a trifling excess on three days and a trifling deficiency on one day. On the 23rd the thermometer began to rise quickly, and on the following two days there was a general excess of heat over India. This excess was greatest over North-Western India and amounted to 10° in the Punjab, 6½° in the North-West Provinces,

and $5\frac{1}{2}^{\circ}$ in Sind and Rajputana. The following table shows the variations of the mean temperature from the normal according to Provinces for the present and for the past week :

PROVINCES.	Variation of Temperature from Normal for Past Week.	Variation of Temperature from Normal for Present Week.
Burma	— 1.1°	— 0.8°
Bengal	— 2.8°	— 0.2°
North-West Provinces	— 0.4°	+ 1.3°
Punjab	+ 2.7°	+ 2.7°
Bombay	+ 0.3°	+ 0.6°
Central Provinces	+ 1.8°	+ 2.2°
Guzerat and Central India	+ 0.5°	+ 1.8°
Sind and Rajputana	+ 1.7°	+ 2.5°
Madras	+ 1.4°	+ 0.5°

These figures show that during the past week there has been an excess of temperature in all Provinces except Burma and Bengal, the excess equalling about $2\frac{1}{2}^{\circ}$ over the north-western and central parts of the country. There has been a slight rise as compared with last week in most Provinces, but the changes are generally small.

Towards the close of the week the maximum temperatures were high all over North-Western India but, as was the case last week, the region of greatest heat held steadily over Upper Sind. The following is the record of the daily maximum temperatures :

May 20th	Hyderabad	113.2°
" 21st	Jacobabad	115.6°
" 22nd	Jacobabad	112.2°
" 23rd	Jacobabad	115.6°
" 24th	Jacobabad	120.0°
" 25th	Jacobabad	121.5°
" 26th	Jacobabad	122.5°

The final temperature (122.5°) is seldom exceeded in any part of India. At Jacobabad in 1888 123.0° was recorded and at Pachbudra in 1886 123.1° , but it is very seldom that the thermometer rises above the reading given above. In the south of the Punjab almost equally high temperatures were recorded on the 26th, while at Cochin the maximum on the same day was 84.2° , so that there was a variation between Southern and Northern India of nearly 40° in the heat.

Rain.—As stated above, the rainfall of India during the week was of two different types. Over Burma and part of Bengal there was steady general rain brought up by the southerly and south-easterly winds, which passed from the south of the Bay across those two Provinces, while in other parts of India the rainfall occurred mostly during local storms, either thunder or dust. The result of the two actions was however that rain fell in almost all the divisions of India during the week. Only in the Konkan, the central division of the Central Provinces, Guzerat, and Sind was there no rain; in all the rest more or less fell. The total of the week was however generally below the normal, the only divisions reporting an excess being Arakan, Deltaic and Central Bengal, Orissa, the North-West Provinces (Central), and Kattiawar; and of these divisions the only one where the excess equalled half an inch was Deltaic Bengal. These figures show that while the fall was general so far as the divisions were concerned, the total was light, and the records show that outside North-Eastern and Southern India the rainfall was due to heavyish rain in individual districts rather than to general light rain throughout the division.

In the returns of maximum falls Burma exhibits no amounts of importance, but in Bengal there were several moderately heavy falls; thus Kooshtea (Nuddea), Contai (Midnapur), and Jajpore (Cuttack) received about 4 inches, and Bissenpore (Bankoora) 5 inches. In Behar and Upper India there were no excessive falls, and in South-Western India the heaviest were $4\frac{1}{2}$ inches at Cochin and $7\frac{1}{2}$ inches at Quilon. In the central parts of the Peninsula and of India there were only moderate amounts recorded, and on the East Coast the heaviest fall was $2\frac{1}{2}$ inches at Vellore.

W. L. DALLAS,

SIMLA, 29th May, 1890.

Assistant Meteorological Reporter to the
Government of India.

W. C. BENETT,

Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 24th May.*—No rain in Madras; moderate in Anantapur, Nilgiris, Malabar and Travancore, slight elsewhere. Standing crops generally good, but suffering from want of rain in limited tracts in Vizagapatam, Cuddapah, Chingleput, North Arcot, Tanjore, Tinnevely and Coimbatore. Paddy blighted in parts of North Arcot. Outturn of sugarcane and tobacco good. Paddy and *cholum* middling to average. Other grains and cotton below average. Pasture and water-supply generally deficient. Prices steady. Prospects fair.

Bombay.—*For week ending 28th May.*—Rain in parts of Deccan, the Karnatic and Kathiawar. Standing late crops good. Preparations for early crops continue generally. Fodder sufficient and agricultural stock healthy, except in a few talukas.

Bengal.—*For week ending 27th May.*—General rain has improved the prospects of the whole Province. Ploughing going on generally and early crop being sown in North and East Bengal, where sufficient rain had fallen previously. Jute and early rice sowings nearly finished and young plants coming up well. Sugarcane plantations and other crops on the ground doing well in Behar. Paddy and millets on low lands in good condition, and cultivation for *bhadoi* sowings begun. Indigo is a promising crop in the Behar and Jessore districts. Spring rice harvest almost over, with fair outturn on the whole. Prices of rice nearly stationary. 179 coolies employed daily on relief works in Balasore.

North-Western Provinces and Oudh.—*For week ending 28th May.*—Weather continues unsettled, with easterly winds and duststorms. Rain has fallen in several districts. The tobacco crop in the Farukhabad district and the mango crop in Karchana (Allahabad district) have been slightly damaged by hail. A slight shock of earthquake was felt in the Rae Bareilly district. Sugarcane and indigo thriving and summer crops being irrigated. Markets are well supplied, but prices have slightly risen in a few districts; otherwise they are stationary.

Punjab.—*For week ending 28th May.*—Slight rain in all districts except Umballa, Jullundur, Ferozepore, Amritsar, Multan, Dera Ismail Khan and Peshawar. Prices falling in Multan, fluctuating in Delhi; elsewhere stationary. Harvesting of *rabi* crops in progress and sowing of *kharif* commenced. *Rabi* outturn in Umballa very poor; in other districts below average, except in Jullundur, where it is good. Extra *rabi* crops in good condition. Prospects of *kharif* crop average. Fodder scarce in Hissar, Delhi and Sialkot; elsewhere sufficient. Opium produce average in Rawalpindi.

Central Provinces.—*For week ending 28th May.*—Weather hot and occasionally cloudy, with duststorms and slight showers of rain in two or three districts. Winnowing of winter crops almost completed. Sugarcane crops doing well. Land being prepared for autumn sowing. Prices steady.

Burma.—*For week ending 24th May.*—Rain fell throughout Lower Burma. In Katha, Ruby Mines, Upper Chindwin, Pakokku, Magwe and Pyinmana districts in Upper Burma the rainfall was considerable. There was a fair rainfall in Shwebo, Yeu and Lower Chindwin, but in other districts of Upper Burma little

or no rain fell. In Upper Burma reaping of dry-weather crops is in progress, and ploughing has generally commenced. The price of paddy has risen considerably in Bassein and in a less degree in Rangoon, Thayetmyo, Shwegyin, Pakokku and Meiktila, while prices have fallen in Thongwa and Pyinmana.

Assam.—*For week ending 28th May.*—Weather fairly seasonable, but rainfall below average. Ploughing for winter paddy continues. Early rice and other crops doing well.

Mysore and Coorg.—*For weeks ending 21st and 28th May.*—During the week ending 21st May the rainfall was general in Mysore and the crops thriving. Sowing operations begun in parts. Outturn of harvests full. Prices steady.

The rainfall was general and good in parts of Mysore during the week ending 28th May. Standing crops in good condition. Prospects fair. Prices risen in Kolar.

Seasonable showers have fallen in Coorg during the week ending 28th May. Prospects good.

Berar and Hyderabad.—*For week ending 28th May.*—Weather hot. Fodder insufficient in Ellichpur, Daryapur, Yeotmal, Darwha, and Kelapur taluks. Water scarce in Amraoti and Murtizapur taluks and in the Wun district. Land under preparation for ensuing *kharif* crops. Prices almost stationary.

Rainfall moderate in Hyderabad. Harvesting of *tabi* crops continues. Prices stationary.

Central India.—*For week ending 28th May.*—Some rain in Baghelkhand Agency. High westerly winds in Bhopawar Agency and Indore.

Rajputana.—*For week ending 28th May.*—Moderate rain in Marwar, Meywar, Harowti, Ajmere and Dholepore. Agricultural stock good, except in parts of Ajmere. Pasturage or fodder sufficient, except in Marwar, Dholepore and parts of Ulwar. Prices rising in Meywar and Jhallawar; steady elsewhere.

Nepal.—*For week ending 22nd May.*—Slight rain fell during the week. Weather partially cloudy. *Ghaia* (early) rice and Indian corn progressing. Potatoes are being harvested.

W. C. BENETT,

Offg. Secretary to the Government of India.

Under-Secretary.

SIMLA, 29th May, 1890.

SUPPLEMENT TO

The Gazette of India.

No. 23.

SIMLA, SATURDAY, JUNE 7th 1890.

OFFICIAL PAPERS.

A SUPPLEMENT to the GAZETTE OF INDIA will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor-General will in future be published in PART VI. of the GAZETTE.

Non-Subscribers to the GAZETTE may receive the SUPPLEMENT separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The SUPPLEMENT and PART VI. of the GAZETTE can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA is required by Law, or which it has been customary to publish in the CALCUTTA GAZETTE, will be included in the SUPPLEMENT. For such Orders and Notifications the body of the GAZETTE must be looked to.

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

MODIFICATION OF RULE 18 OF THE RULES FOR THE REGULATION OF APPOINTMENTS IN THE SECRETARIAT CLERICAL SERVICE OF THE GOVERNMENT OF INDIA AND ATTACHED OFFICES.

No. 15 Pub.
1090-91.

Extract from the Proceedings of the Government of India in the Home Department (Public),—under date Simla, the 31st May 1890.

Read—

Home Department Notification No. 1817, dated 3rd July 1888, publishing rules for the regulation of appointments in the Secretariat clerical service of the Government of India and attached offices.

RESOLUTION.

As the Bengal Circle of the Ordnance Department in India has been divided into two Circles from April 1st, 1890, the Governor General in Council directs that the words "The Inspectors-General of Ordnance, Eastern and Western

Circles," be substituted for the words "The Inspector-General of Ordnance" in the list of offices appended to paragraph 18 of Notification No. 1817 of 3rd July 1888 regarding the Secretariat clerical service of the Government of India and attached offices.

2. The Governor General in Council has also decided that three appointments in the Office of the Inspector-General of Ordnance, Eastern Circle, and two in that of the Inspector-General, Western Circle, shall be reserved for soldier clerks possessing technical knowledge of Ordnance duties. A note to this effect will be added to paragraph 18 of the Notification cited.

ORDER.—Ordered, that a copy of this Resolution be forwarded* to the Military Department for information; and that it be published in the *Gazette*

* Original papers returned.

of India for general information.

[True Extract.]

C. J. LYALL,

Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Memorandum on the Snowfall in the Mountain Districts of Northern India and Afghanistan and the Abnormal Features of the meteorology of India during the period January to May 1890.

The following memorandum includes—*1st*, a statement of the whole of the information relating to the winter snowfall of 1889-90 in the Afghan Mountain districts and Himalayan area; *2nd*, a statement of the chief peculiarities in the meteorology of India during the past five months; *3rd*, a forecast of the probable character of the approaching south-west monsoon rains based on this information.

A brief preliminary statement appears to be desirable in order to explain the principles upon which the forecast is based. The greatest part of the rainfall of India occurs during the south-west monsoon and is brought up by humid winds from the Arabian Sea and Bay of Bengal. The two sets of winds or air currents from these two seas form the two branches of the monsoon current or circulation. The Bay of Bengal current prevails exclusively in Burmah, Bengal and Assam, and more or less in the North-West Provinces. The Bombay or Arabian Sea current obtains in the peninsula and in Central and North-West India. During nearly the whole of the rains there is a narrow belt of country separating the areas in which these currents prevail. It usually stretches from the South-West Punjab to Orissa and is characterized by very variable winds and by lower pressure than in districts either to the north or south. This permanent trough of low pressure is a feature of great importance, as there is a very marked tendency for any cyclonic storms which advance from the Bay in the months of June, July, August and September to run along it and to discharge cyclonic rainfall along this trough.

The south-west monsoon winds are undoubtedly the continuation of the south-east trades winds of the Indian Ocean. In the cold and hot weather these winds only extend northwards as far as the equator. In the latter part of May or the beginning of June they are impelled northwards and eastwards and rapidly extend over the greater part of the interior of India, and produce an almost complete reversal of the previous weather conditions. The primary cause of the extension of this wind system into India is undoubtedly the rapid heating of Central and Northern India in April and May. It however acts indirectly rather than directly. The indraught does not commence at the hot area and extend outwards and increase in intensity with the progress and intensification of hot weather conditions. The advance of the monsoon in the Arabian Sea and along the West Coast of India commences on the Malabar Coast and is occasionally completed in three or four days (as in June 1889). Hence the advance or extension (or burst of the monsoon) takes place from south to north, and therefore cannot be explained as a mere indraught to a hot area. The phenomena rather indicate that there is a vast resistance or obstruction to be overcome, and that when this is overcome by a force from the rear (*vis a tergo*) the massive air current moves forward comparatively rapidly and invades India and the Burmese peninsula. It may also be noted that after the current is once fully established, it is chiefly maintained at the expense of its internal energy, *vis.*, the energy set free during the process of condensation and rainfall.

The motion of this vast air current will evidently obey the ordinary laws of fluid motion. The conditions in India and the adjacent seas before and at the time of its advance differ from one year to another. It is evident that these pre-existing conditions will modify and determine the extension at the time of the advance or give a certain set to the current. Also in virtue of the known laws of air motion the current by its own subsequent action will tend during its

continuance to maintain the peculiarities set up by the conditions in existence at its commencement. The forecast in the final paragraphs is hence based on the important principle indicated above, *vis.*, that the meteorological conditions prevailing in India before and at the commencement of the monsoon mainly determine the character and extension of the current, and thus impress upon it features which are more or less permanent throughout its whole period of prevalence and are largely influential in determining the accompanying rainfall, and may therefore be used as indications of the probable distribution of that rainfall.

It is however necessary to point out that such a forecast is a statement of probabilities and not of certainties and that it is liable to error from the limitation and uncertainty of part of the data on which it is based. The monsoon forecasts as at present issued necessarily leave out of consideration two important points on which the agricultural value of the monsoon rainfall largely depends, *vis.*:

- (1) The probability of the occurrence of a prolonged break in the rains in July or August.
- (2) The probability of unusually early termination of the rains in Upper India or Bengal.

The chief features or conditions which appear to influence and determine the extension and general strength of the south-west monsoon current are as follows:

1st.—The amount and time of occurrence of the cold weather snowfall in the mountain districts adjacent to Northern India.

2nd.—The local peculiarities of the weather in India itself immediately antecedent to the advance of the monsoon currents across the coast of India into the interior, and which it is found are generally impressed upon it during the hot weather and are frequently more or less persistent in character. These abnormal features are on the whole best estimated by means of the variations of pressure from its normal value in different parts of India.

3rd.—Local peculiarities in the Bay of Bengal and Arabian Sea over which the monsoon currents pass before they reach India.

The first of these conditions or factors appears to be mainly influential in determining the northern limits of the monsoon rains, heavy and prolonged snowfall in the Western Himalayan area either preventing or delaying the extension of the monsoon current over Upper India during the rainy season. Heavy and untimely snowfall in April and May appears especially to exercise a very powerful influence in this way.

The second factor appears to determine those large local district or provincial variations of rainfall during the monsoon, which are evidently due to persistent local conditions or peculiarities and not to general causes influencing the whole of India more or less. As a recent example, may be given the prolonged drought in Ganjam in 1888-89.

The third and last factor is almost certainly of equal importance with the preceding two, but it is that on which information is most difficult to obtain and is least in amount and longest in being received. In fact, hitherto information respecting the weather conditions in the Arabian Sea or Bay of Bengal has rarely been received in time to be utilized in drawing up the annual forecasts.

Snowfall Information.—The whole of the information received referring to the snowfall of the past cold weather (up to the end of May) in the mountain districts bordering Northern India is given in the following paragraphs:

I.—AFGHAN HIGHLANDS.

(a) HILLS WEST OF DERA ISMAIL KHAN.

The Deputy Commissioner, Dera Ismail Khan, states that there was a copious fall of snow towards the close of January on the Takht-i-Sulaiman and

neighbouring peaks which gradually melted away in February and March. Notwithstanding this copious fall the season was marked by the total absence of cold north-west winds of the season, and consequently there was not much cold. [With respect to this remark it may be noted that the absence of cold north-west winds was probably due to the unusual absence of storms during the season, as they follow the occurrence of cold weather storms.]

(b) HILLS WEST OF KOHAT.

The Assistant Commissioner, Thal outpost, describes the snowfall on the neighbouring hills as follows:

January.—There was a heavy fall of snow on the Safed Koh and neighbouring mountains on the 17th January. The following gives an estimate of the total snowfall of the month in various parts of the mountain region:

(1) Safed Koh or Spinghar	12 to 13 inches.
(2) Dandaghar	3 to 4 "
(3) Zawa Mountain	5 to 6 "
(4) Samana	4 to 5 "
(5) Mastina (Tirah)	4 to 4½ "

The snowfall was followed by rain on the lower hills which quickly melted or washed away the snow.

No snow fell on the hills in the Tirah district.

February.—No snow fell in this region in February and all the previous snow melted away except on the Safed Koh where it lay at the end of the month to an approximate depth of one foot.

No later information respecting this area has been received.

(c) HILLS NORTH-WEST OF PESHAWAR.

No information has been received.

II.—THE HIMALAYAS.

I.—THE PUNJAB AND CASHMERE HIMALAYAS.

(a) *Leh.*—The Reverend Mr. Redslob, in a letter dated the 13th February, states that up to that date there had been remarkably little snowfall. The passes over the range separating Nubra (to the north) from Leh had not been closed up to that date. There had been some heavy snow on the Zojila Pass on the Cashmere Frontier between Srinagar and Dras. To the east of Dras there had, as in Ladakh, been extremely little snow and the winter was unusually mild. In a letter dated the 12th of May the same gentleman writes: "After a winter without snow at all we have, since the last week of April, had much cloudy weather and snow on the hills. It is, I hear, the same throughout all the neighbouring hill districts, *vis.*, no moisture at all during the winter and only rain and snow now. According to news brought in by traders the winter at Yarkand has been more severe than any experienced during the past 20 years."

(b) *Lahoul.*—The Reverend A. W. Heyde, Superintendent of the Observatory at Kailong, writing of the weather at the end of March, stated that much less snow than usual had fallen on the higher as well as on the lower hills, and that the slopes facing the south were already nearly bare and free from snow. The largest fall occurred on the 16th February when 2 feet fell at Kailong. The total quantity of the snowfall from the 1st of September 1889 to 28th March 1890 was only equivalent to 5.45 inches of rain, whereas in the corresponding period of the preceding winter the amount was 14.70 inches or nearly three times as much. As the snowfall of the previous winter was on the whole normal, these figures show that the snowfall in Lahoul up to the end of March 1890 was abnormally small in amount.

No later news have been received from this district.

(c) *Murree and adjacent hills.*—The following information of the snowfall month by month in this area has been received from the Deputy Commissioner, Rawalpindi. The corresponding data for the previous two years are also given:

District.	Year.	SNOWFALL DURING THE MONTH OF				Total snowfall of season.
		January.	February.	March.	April.	
		ft. in.	ft. in.	ft. in.	ft. in.	ft. in.
Murree	1888	4 7	1 10	Nil	Nil	6 5
	1889	4 9	2 6	Nil	Nil	7 3
	1890	1 4	1 10	0 6	Nil	3 8
Kahuta	1888	3 6	2 6	Nil	Nil	6 0
	1889	2 6	1 9	Nil	Nil	4 3
	1890	0 3	0 6	Nil	Nil	0 9

These figures show that the total snowfall of the past winter was very considerably less than in the preceding two winters.

(d) *Kulu.*—The Assistant Commissioner, Kulu, has sent very complete and interesting information of the snowfall and general character of the weather during the past winter in his district, of which the following is an abstract:

January.—The winter so far has been the driest and mildest on record since snowfall reports began to be sent in (*i.e.*, since 1882). Light snow fell on the 24th December and 12th and 14th of January, but the weather was generally fine and clear until the 17th when there was a general fall of rain in the lower valleys and snow on the hills down to about 6,500 feet. A second similar fall occurred on the 22nd after which the weather was fine and sky cloudless, so that the fallen snow melted rapidly. The Rotang Pass was open until the fall of 17th January and was impassable during the remainder of the month. Foot passengers were able to cross the Bhubhu, Jalori and Basleo Passes during the whole month.

February.—There was a slight fall of snow down to an elevation of 10,000 feet on the 6th and 7th. On the 15th and 16th snow fell as low down as 4,500 feet in the lower valley. On the 20th there was a similar fall, but with higher limits, and on the 25th a thunderstorm passed over the upper valley, and snow fell as low down as 8,000 feet on some of the hills. The Rotang and Hamta Passes were closed during the whole of the month. The Bhubhu, Jalori and Basleo Passes were on the other hand throughout passable by foot passengers.

March.—Snow fell down to a level of 6,000 feet on the 2nd, to 7,000 feet on the 4th and 5th, to 5,000 feet on the 21st and to 6,000 feet on the 24th. The result of these snowfalls was that the amount of snow on the higher elevations was probably about normal. A few Lahoulis succeeded in crossing the Rotang Pass on the 17th. Successful attempts to cross the Pass from the Lahoul side are as a rule made in the course of the third week of the month. The state of the Bhubhu, Jalori and Basleo Passes remained the same as in February.

April.—There was a slight fall of rain on the 13th and a heavier fall with snow down to a level of about 10,000 feet on the 17th. With these two exceptions the weather was clear between the 25th March and 25th of April, and on that day the amount of snow on the passes was about normal. There was however a heavy fall of rain and snow on the 25th, 26th and 27th. Snow fell down to a height of 9,000 feet. The Rotang and Hamta Passes were open during the first three weeks of the month and were crossed by a number of Spiti men, but were probably closed by the snowfall of the 25th, 26th and 27th. The Bhubhu, Jalori and Basleo Passes were not crossed by laden animals during the month, but were passable by mules before the heavy snowfall of the 25th.

May.—As in the years 1887, 1888 and 1889, thunderstorms accompanied by a slight sprinkling of snow on the higher ridges were of frequent occurrence during the month, but the snow melted steadily, and the depth of snow at the end of the month is much the same as it was at the end of May 1888 and less than at the end of May 1889. The Rotang Pass is not yet practicable for mules, but was open for foot traffic during the month except for a few days after the snowfall of the 25th to 27th April. Both in Lahoul and Spiti the winter is said to have been unusually mild.

The following table gives the depth of snow on the chief passes across the two ranges separating Kulu from the Sutlej Valley on the south (in the Tahsil Plach), and from the Lahoul Valley to the north on the 25th of each month from January to May 1890 with corresponding figures for the previous two years for comparison. The Assistant Commissioner states that these figures for the present season were obtained by actual measurement in the case of the lower passes (*e.g.*, Bhubhu, Basleo, &c.), and hence may be relied upon. The higher passes were inaccessible during the greater part of the period, and hence it was only possible to give the depths of snow by estimation:

Kulu District.

III.—ASSAM HIMALAYAS.

The Assistant Political Agent, Sadiya, reports that in his opinion the snowfall on the Himalayas to the north and north-east of Sadiya, was abnormally late this year and less in amount than during the past seven years.

The Deputy Commissioner of Kamrup (Gauhati) reports that in the opinion of the Bhutias and Khampas whom he questioned in a trip to Dewangiri, the snowfall of the present winter was below the normal.

The Deputy Commissioner of Darrang reports that the Charduar Bhutia Sub-Rajah and the Sub-Divisional Officer of Mangaldai inform him that the snowfall this year has been scanty. There was however heavy rain during the last rainy (south-west monsoon) season, which continued for a longer period than usual. The crops on the hills were hence very good last year.

The Sub-Divisional Officer of Koriapara states that so far as he can ascertain the snowfall in the hills to the north was normal. The Bhutias whom he questioned said it was not greater than that of the previous year.

Summary of the Snowfall information.—The following gives the chief facts established by the preceding data:

(a) There is slight evidence that over a considerable portion of Central Asia including Yarkand, &c., the past winter was unusually severe and the snowfall probably excessive.

(b) The amount of the snowfall was on the whole probably less than usual in the mountain region of Biluchistan and Afghanistan. The snow appears to have fallen in the early winter months of December and January and to have melted rapidly in February and March, and it is hence almost certain there is no unusual accumulation of snow in those areas.

(c) The snowfall in the Western Himalayan area was unusually small in amount in the months of January and February, and probably normal in March. Very heavy snow fell during the last week of April which influenced the weather conditions for a short time afterwards, but the snow rapidly melted in May, and the amount at the end of that month was probably considerably below the normal and less than in 1889 and not greater than in 1888, in both of which years the thickness of the snow covering in the Upper Himalayan area was less than usual in May.

(d) The snowfall in the Eastern Himalayan region was almost certainly less than usual. It is however probable that a considerable snowfall occurred during the last rainy season, and hence that the depth of snow may not be less than usual except in Eastern Assam, where, according to the information of the Assistant Political Officer, it is deficient.

Abnormal features of the weather of the past months.—The rains ceased unusually early last September in North-Western India (i.e., to the north-west of a line joining Rajkot and Lucknow). The mean pressure and temperature over India were approximately normal. The only important feature in the distribution of pressure was a large local deficiency on and near the West Coast due to the early retreat of the south-west monsoon from the northern half of the Arabian sea and North-West India. In October the mean pressure over India was '033" below the normal. Temperature was below the normal, more especially in the third and fourth weeks of the month. Pressure was locally in defect in North-East India and in excess in North-West and West India. The north-east monsoon set in late and feebly on the Madras Coast, and gave less rain than usual in Southern India during this month. November was unusually cool over nearly the whole of India and more especially in Bombay and the Central Provinces. The north-east monsoon failed almost entirely to give rain to Southern India during this month. The mean pressure over India was '037" in defect. As in October, pressure was locally in defect in North-East India and in excess in North-West and West India.

The mean pressure of India was '016" below the average in December. The local barometric anomalies of this month were similar to those of the preceding two months, but were generally somewhat smaller in amount than in November.

Temperature continued below the normal until the end of the third week, after which it increased and was above it. In January the mean pressure of India was '053" below the average, and the barometric anomalies or local variations were similar in character, but greater in amount than in the preceding three months. Temperature was above the normal over the whole of Northern India, mainly in consequence of the holding off of the cold-weather rains. The mean pressure of India for February was '008" below the average. Pressure was locally in defect in North-East India and Burmah and in excess in North-West and West India. The month was abnormally dry and little or no rain fell in any part of India. Temperature was hence very considerably above the normal.

The mean pressure of India for March was '047" below the normal. The barometric anomalies were the same in character as in January and February, but were smaller in amount. Moderate rain was received in Upper India and also in North-East India, and the variations of the temperature in Northern India from the normal were hence small. Pressure was '003" below the average in April, and the local variations were everywhere small. Pressure was as hitherto locally in excess in Western India and in defect in North-East India. Upper India and North-East India again received moderate and normal rain. Temperature was hence normal or slightly below the average in these districts, but was above it in Central India, Bombay, the Central Provinces and many parts of the North-West Provinces.

The preceding remarks hence show that from the termination of the rains in September last to the end of April the following variations from the normal conditions were remarkably persistent:

1st.—General deficiency of pressure over the Indian area. The following gives the data:

Deficiency in September	Nat.
" " October	'033"
" " November	'037"
" " December	'016"
" " January	'053"
" " February	'008"
" " March	'047"
" " April	'003"

This general deficiency accompanied decreased temperature in October and November and the greater part of December, and increased temperature after that time. Hence it cannot be due to temperature conditions, and as it probably extends over a much larger area than India it is almost certainly due to much more general and as yet unknown causes.

2nd.—Local deficiency of pressure (relative to the general condition) during the whole period in North-East India (including Assam, Bengal, Behar, the North-West Provinces and the eastern districts of the Central Provinces) and in Burmah. The deficiency during nearly the whole period was greatest in North Bengal and Assam and perhaps Upper Burmah.

3rd.—Local excess of pressure (relative to the general condition) in North-West and West India including the Punjab, Rajputana, Bombay and the greater part of the Peninsula. The excess was greatest throughout in North Bombay.

The weather in May was hotter than usual over nearly the whole of Upper and Central India and the Deccan. It was more disturbed than usual in Burmah, Bengal and Assam, which in consequence received frequent rain. Dust-storms have been numerous in North-West India, but there have been fewer thunderstorms in and near the hills. The hot weather conditions have hence been very strongly marked over the greater part of the interior of India and have

accentuated the pre-existing pressure conditions and anomalies. The following states the chief features of the pressure distribution during May:

- (1) Pressure on the average of the whole of India was '02" below the normal.
- (2) Pressure was locally in defect over Burmah and Northern India and the eastern half of the Peninsula. The negative anomalies were small, except on the northern coast of the Bay defined by the following stations:

Vizagapatam	—'020"
Gopalpore	—'022"
False Point	—'020"
Chittagong	—'025"
Akyab	—'025"
Diamond Island	—'036"

These hence indicate the presence of an area of local deficient pressure over the northern half of the Bay.

- (3) Pressure was locally in excess in the area to the west of a line joining Kurrachee, Jeypore, Nagpore, Kurnool and Cimbatoore. The anomalies ranged from '02" to '04" in Bombay (excluding Sind) and were absolutely greatest at the following stations:

Rajkote	+ '044"
Surat	+ '036"
Indore	+ '035"
Khandwa	+ '032"
Poona	+ '031"
and perhaps	
Ratnagiri	+ '040"

It will thus be seen that the barometric anomalies or abnormal features of the distribution of pressure in May were identical in general character with those of the preceding seven months, the only important difference being that the area of greatest local deficiency of pressure was transferred from North Bengal to the North of the Bay.

Probable character of the approaching South-West Monsoon.—The combination of conditions established in May and stated above are partly favourable and partly unfavourable. The conditions, it may be noted, are more marked than they have been for several years past. The snowfall conditions are undoubtedly favourable to an early and strong monsoon, as it is almost certain there is not only no unusual accumulation of snow in any part of the Himalayas, but that the depth is less than usual, more especially in the Western Himalayas. Also the deficiency of pressure over the Indian area which has obtained for so long a period is a favourable condition for a slightly earlier and stronger monsoon, more especially if the deficiency does not extend over the adjacent seas.

The local deficiency of pressure in the north of the Bay, whilst it may tend to give increased rain to Burmah and the eastern half of Bengal and Assam, is very unfavourable to the early extension of the monsoon up the Gangetic plain. It is hence probable it will delay it, but that, as has occurred in one or two similar instances of deficient pressure in the north of the Bay, it will only act as a temporary obstacle, and will either fill up or be transferred to North Bengal; more probably the latter, as it is almost certainly the continuation of the deficient pressure area which occupied North and Central Bengal during the months of January to April.

Again, the high pressure in Western India and the western half of the Peninsula which is most developed round the Gulf of Cambay is a very unfavourable condition. It is as serious as a similar excess of pressure in 1876 and 1880 in Western India, the only difference being that the pressure and snowfall conditions in Upper India are favourable this year, whilst they were unfavourable in 1876. This high pressure will tend to give a more westerly set to the Bombay

current than usual across the Peninsula, and to give dry north-west winds to North Bombay and the neighbouring districts to the north and east, instead of the normal winds. It is possible that, if a strong monsoon blows on the Bombay side, with the presence of the favourable conditions in Upper India, the high pressure may break down shortly, in which case only it is probable that favourable rain will be received in North-West and Upper India.

The following gives a statement of the inferences which can be drawn respecting the character of the present year's monsoon from the *known* antecedent conditions:

- (1) Snowfall conditions in the Himalayas and Afghan area, and the general pressure conditions over India, are on the whole favourable to a somewhat stronger and earlier monsoon than usual.
- (2) Conditions are more favourable in Northern and Eastern India than in Western India.
- (3) In consequence of peculiar pressure conditions in the north of the Bay there may be a considerable delay in the establishment of the monsoon current over the Gangetic Valley.
- (4) The conditions are very favourable in Burmah, Assam and the greater part of Bengal, which will hence probably obtain normal or excessive rainfall.
- (5) Conditions are somewhat less favourable in the North-West Provinces and Behar, but on the whole it is probable they will receive their normal amount.
- (6) Conditions are distinctly unfavourable in the Punjab and Rajputana, due to the peculiar pressure conditions around the Gulf of Cambay. If the Bombay current be unusually strong in consequence of conditions in the Arabian Sea area (and hence not known), these areas may receive moderate and favourable rainfall. If the Bombay current be weak, it is very probable there will be a considerable deficiency in these two areas.
- (7) The conditions are equally unfavourable in North Bombay (more especially the North Bombay Deccan) and Berar, and the rainfall in those areas will also depend largely upon the strength of the Bombay current. Judging from the present known conditions in India, there is likely to be a considerable deficiency in these areas.
- (8) Taking into consideration the pressure conditions, and the probable strength and set of the Bombay current, the rainfall in the Central Provinces, so far as can be judged, will probably be normal in character, any tendency to excess being more likely in the eastern than the western districts.
- (9) In the Peninsula the pressure conditions are somewhat unfavourable for heavy rain in the districts east of the West Ghats, which will hence probably receive somewhat less than their normal rainfall during the south-west monsoon, whilst the Coast districts south of Bombay will probably receive normal or excessive rain.

It should be noted that one of the important factors, *vis.*, the pressure conditions in the Arabian Sea, is of unusual importance this year, and hence that the inferences stated above are, more especially for North-Western India, uncertain to that extent, and with this element of doubt should be carefully kept in view.

This is the more necessary, as the Bombay current is setting in somewhat earlier than usual, which is generally a sign of an unusually strong current at the commencement of the monsoon.

JOHN ELIOT,

*Meteorological Reporter to the
Government of India.*

W. C. BENETT,

Offg. Secretary to the Government of India.

SIMLA, 5th June, 1890.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on Monday, June 2nd, 1890.

The week under review has witnessed the setting of that most important of Indian meteorological phenomena, the south-west monsoon current. As noticed last week, the rains had already set in in Burma and had commenced in a feeble and undecided manner over a considerable part of Bengal, but on the West Coast, where the setting in of the rains is a more marked and decided event than it is in any other part of India, the weather was fine, the sea smooth and the wind north-west on the first two days of the present week. After 8 A.M. on the 28th, however, the wind shifted round from north-west to south-east in Malabar, and by the morning of the 29th the sky in the south-west was densely overcast, rain was falling fairly heavily and the sea was rough. From this time until the close of the week rain fell on each day on the West Coast, with south-west to south-east winds, a rough sea and more or less unsettled weather. That the very heavy burst of rainfall, which usually characterises the commencement of the monsoon on this Coast has not occurred this year, is probably due to the presence of a disturbance at some distance to the west of the Coast towards which a large part of the monsoon current was directed. At the close of the week however this disturbance, whatever may have been its nature, was moving away westward, and the wind began to show an inclination to draw towards west and south-west again after which rain was likely to set in heavily. The weather has been in an unsettled state throughout the week over a large part of India.

The chart of the 27th showed a well marked depression over the Punjab and relatively low pressures over the Gangetic plain, the east of the Central Provinces and the Circars, while readings were high over the west of the Peninsula and in the south of the Bay. Gradients were steep and the winds were fresh to strong over a large part of the country. Duststorms and dusthaze were reported from the majority of stations, thunderstorms from the hills and Lower Bengal and steady rain from Burma and North Bengal. By the following morning there had occurred a barometric rise over the Punjab and a fall elsewhere, so that gradients had become slighter. The general characteristics of the weather were the same as those of the preceding day, but the rainfall over Burma and Bengal was not only heavier, but more widely extended. On the 29th the first sign of the important change in the south-west appeared. The wind, which had formerly been northerly at Cochin and Mangalore, shifted round to south-east, and rain fell moderately heavily over the south of the Peninsula. The area of depression had been transferred from the Punjab to Sind, but otherwise conditions were similar to those reported on the preceding day. The chart of the 30th showed that the shift of wind noticed on the 29th in Malabar had extended up the West Coast, and with it the rain. General rain continued to fall over Burma and Bengal, while elsewhere the weather was hot and sultry. On the 31st southerly (south-west—south-east) winds continued on the West Coast and the rainfall was general, but in Burma and Bengal the extent of the rain area had decreased, though there were some heavy falls. The chart of the 1st showed that an area of unsettled conditions apparently existed off the North Konkan Coast, and the south-easterly wind there was rising, while the rain was rather heavy all along the Coast. In Burma and Bengal general moderate rain continued, and a few scattered local storms were reported from different parts of the country. The general distribution of pressure was unaltered. On the 2nd the only change of importance was the development of the area of unsettled conditions off the Konkan Coast and the accompanying increase of the south-east winds. Rain was general and moderately heavy all along that Coast and general but light in Bengal and Burma.

Temperature.—The temperature of the whole of India has undergone a considerable oscillation during the week. The 27th, taking the whole country into

account, was excessively warm, and on the 28th there was a moderate excess. On the 29th and 30th there was a slight deficiency, after which the thermometer rose and by the close of the week again showed a moderate excess. Considering next the individual Provinces, the returns show that the Punjab, the Central Provinces and Madras experienced abnormally hot weather throughout the whole week and that the North-West Provinces, Sind and Rajputana had only one or at most two days when the mean temperature was below the normal. In Burma, Bengal and Bombay, on the contrary, most days were cooler than the normal. In the Punjab the mean excess was nearly 10° on the 27th.

The following table shows the variations of the mean temperature from the normal according to Provinces for the present and for the past weeks:

PROVINCES.	Variation of Temperature from Normal for Past Week.	Variation of Temperature from Normal for Present Week.
Burma	— 0.8°	— 1.9°
Bengal	— 0.2°	— 0.3°
North-West Provinces	+ 1.3°	+ 1.6°
Punjab	+ 2.7°	+ 3.4°
Bombay	+ 0.6°	— 0.6°
Central Provinces	+ 2.2°	+ 1.7°
Guzerat and Central India	+ 1.8°	+ 0.2°
Sind and Rajputana	+ 2.5°	+ 1.3°
Madras	+ 0.5°	+ 1.8°

These figures show that, except in the Punjab and Madras, the present week, as compared with the normal, was cooler than the preceding.

The highest maxima have been steadily reported from the extreme north-west, thus:

On May 27th	Jacobabad reported	121.0°
" " 28th	Jacobabad "	121.0°
" " 29th	Jacobabad "	115.1°
" " 30th	Jacobabad "	115.6°
" " 31st	Jacobabad "	113.0°
" June 1st	Jacobabad "	115.1°
" " 2nd	Montgomery "	114.9°

These figures show that there has been a decrease of heat during the week, but that the area of greatest heat has been steadily reported from Upper Sind and the Southern Punjab.

Rain.—The table at the close of the summary shows that there has again been a week of very general rain throughout India. The east of the North-West Provinces, of the Central Provinces and of Central India, the divisions of Kattaiwar, Sind, Western Rajputana and the East Coast Central are the only divisions in which no rain has fallen; in all the remaining divisions more or less rain is reported. In general, however, the amounts have been smaller than the normal, only twelve divisions reporting an excess. These divisions are Tenasserim, East and Central Bengal, Assam (Surma), the whole of Western and South-Western Bengal, Oudh (North), the Punjab (Submontane), Madras (South Central) and the Konkan, but of these only Assam, Orissa and the Konkan show any considerable excess, the variation in the case of the other nine divisions being small.

The final column of the table shows the excess and defect of the seasonal rainfall, but as the present week is the first of the present monsoon season, the results shown by the percentage column are the same as those noted above.

The return of maximum falls shows that the amount of rain is steadily increasing. Falls of between 4 and 6 inches have been common throughout North-Eastern India and have been in many places exceeded thus:—Akyab reports 9 inches; Munshigunj (Dacca), $7\frac{1}{2}$ inches; and Cherrapunji (Assam), 13 inches. In Behar the amounts are smaller, but Purneah received nearly 3 inches and Motihari nearly 5 inches. Utraula (Gonda, North Oudh) received $4\frac{1}{2}$ inches, but, with this exception, there were no large amounts in the North-West Provinces or the Punjab. On the West Coast there were several considerable falls:—Tellicherry reports $6\frac{1}{2}$ inches; Coomdapur (South Kanara), $9\frac{1}{2}$ inches; Ratnagiri, 5 inches; and Shirol (Kolhapur), 5 inches. The central parts of India as well as north-westward in Rajputana, Kattaiwar and Sind received no heavy falls, and in Madras the only large amount is 4 inches at Kulitotal (Trichinopoly).

PROVINCE.	DIVISION.	RAINFALL DATA FOR WEEK ENDING JUNE 2ND, 1890.			RAINFALL DATA FROM MAY 27TH TO JUNE 2ND, 1890.

W. L. DALLAS,

Assistant Meteorological Reporter to the
Government of India.

W. C. BENETT,

Offg. Secretary to the Government of India.

SIMLA, 5th June, 1890.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of
the Crops.

Madras.—*For week ending 31st May.*—No rain in Kistna, Nellore, Anantapur and Madras; moderate in Salem, Malabar and Travancore; and slight elsewhere. Crops generally good, but suffering from want of rain and water in Ganjam, Vizagapatam, Cuddapah, Chingleput, North Arcot, Tanjore, Tinnevely and Coimbatore. Outturn of sugarcane and tobacco good. Paddy, *ragi* and *cholum* middling to average. Other grains and cotton below average. Pasture and water-supply insufficient. Prices nearly stationary. Prospects fair.

Bombay.—*For week ending 4th June.*—Rain throughout the Presidency Proper, except in Satara. Standing crops good. Preparations for early crops progressing generally. Fodder sufficient and agricultural stock healthy, except in a few talukas.

Bengal.—*For week ending 3rd June.*—Rainfall has been general over the whole Province and heavy in North and East Bengal. Cultivation is well forward, and all standing crops are in good condition. Early rice and jute sowings nearly completed and other *bhadoi* sowings in progress in Behar. Millets reported as good crops and about to be harvested. Indigo prospects good and sugarcane plantations doing well. Price of rice continues almost stationary throughout the Province. In Balasore the rainfall has been favourable for cultivation in the Talpada track and elsewhere, and the attendance on relief works has dropped to a daily average of 170.

North-Western Provinces and Oudh.—*For week ending 4th June.*—Weather hot and cloudy, with occasional duststorms and showers. Sugarcane and indigo and extra crops in good condition. Markets continue to be well supplied, but prices of food-grains have risen slightly in Benares, Allahabad and Cawnpore, and are still high in Kumaun.

Punjab.—*For week ending 4th June.*—Slight rain fell in Hissar, Delhi, Jullundur, Lahore and Dera Ismail Khan districts. Prices falling in Multan, and in Tahsil Sharakpur, District Lahore; elsewhere stationary. Harvesting and threshing of *rabi* crops almost completed. *Rabi* outturn good in Jullundur and fair in Lahore and below average elsewhere. *Kharif* crops good in Amritsar and Dera Ismail Khan; average in Peshawar. Slight damage done to cotton and *charri* from storms in Ferozepore. Fodder scarce in Hissar, Delhi, Umballa, Jullundur, Mooltan and in a portion of Shahpur; elsewhere sufficient. Opium produce average in Rawalpindi.

Central Provinces.—*For week ending 4th June.*—Weather cloudy and hot, with high winds, and slight showers of rain in a few districts. Land being prepared for autumn sowing. Prices stationary.

Burma.—*For week ending 31st May.*—The rainfall throughout Lower Burma was considerable, except in Thayetmyo, where but little fell. Ploughing has generally commenced in Upper Burma. The rainfall was heavy in Bhamo, Katha, Sagaing, Upper Chindwin; moderate in Magwe, Meiktila, Yamethin and Pyinmana; and light elsewhere. Ploughing and sowing of paddy, cotton, sessamum and indian-corn have commenced. The price of paddy in Rangoon has risen slightly; in Meiktila prices have fallen; elsewhere changes are but slight.

Assam.—*For week ending 4th June.*—Weather seasonable. Ploughing for and sowing of winter paddy continue. Prospects of tea and other crops good.

Mysore and Coorg.—*For week ending 4th June.*—Rainfall general in Mysore; fair in the Civil and Military Station of Bangalore. Crops in good condition, but more rain wanted in parts of the Kolar district. Ploughing operations in progress. Outturn of harvests generally favourable. No material change in prices.

Rainfall good in Coorg during the week. Monsoon rains have set in lightly. Season favourable.

Berar and Hyderabad.—*For week ending 4th June.*—Rainfall slight in Berar. Weather hot. Land is being prepared for next season. Water scarce in Anyraoti and Murtizapur taluks and in the Wun district. Fodder insufficient in Ellichpur, Daryapur, Yeotmal, Darwha and Kelapur taluks. Prices steady.

No report from Hyderabad.

Central India.—*For week ending 4th June.*—No material change in condition of crops since last report. Weather cloudy and warm in Indore.

Rajputana.—*For week ending 4th June.*—Moderate rain in Ajmere, Kerowlee and Ulwar; slight in Abu and Jeypore. Agricultural stock good, except in parts of Kishengarh. Pasturage or fodder sufficient, except in Marwar, Dholepore, and parts of Ulwar. Prices steady generally.

Nepal.—*For week ending 29th May.*—Partial rain fell in the valley of Katmandu. Weather favourable. Agricultural operations satisfactory.

W. C. BENETT,
Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.

(c) Includes the Asansol-Chakardharpore Section of the Bengal-Nagpur Railway.
(d) Includes the Bellary-Kistna State Railway.
(e) Includes the Sindia and Bhupal-Irtari State Railways.
(f) Includes the Amritsar-Pathankot and Jaipur Bhatinda State Railways.
(g) Includes the Amritsar-Pathankot and Jammu and Kashmir Railways.

(h) Includes Toungoo-Mandalay.
(i) Includes the Dhond-Mannad, Khámgaon, and Amrét State Railway.
(j) Includes Pátri Branch.
(k) Return not received.
(l) Total receipts from 1st April to 10th May 1890.
(m) Total receipts from 1st April to 10th May 1890.
(n) Included with the North Western Railway.
(o) Total receipts from 5th to 17th May 1890.

M. C. BRACKENBURY, Major, R.E.,
Under-Secretary.

SUPPLEMENT TO
The Gazette of India.

No. 24. } CALCUTTA, SATURDAY, JUNE 14, 1890.

OFFICIAL PAPERS.

A SUPPLEMENT to the GAZETTE OF INDIA will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in PART VI of the GAZETTE.

*Non-Subscribers to the GAZETTE may receive the SUPPLEMENT separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The SUPPLEMENT and PART VI of the GAZETTE can also be sub-
scribed for on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA is required by Law, or which it has been customary to publish in the CALCUTTA GAZETTE, will be included in the SUPPLEMENT. For such Orders and Notifications the body of the GAZETTE must be looked to.

Docket from the Director General of Railways, No. 83 Statistical, dated 8th May 1890, forwarding the Abstract Returns of Accidents to trains, &c., on the open lines of Railway in India, for the quarter ended 30th September 1889.

OBSERVATIONS.—As compared with the average of the five* corresponding previous quarters, the number of accidents to trains, rolling-stock, permanent-way, &c., shows an increase of 86, or 11·44 per cent., with an increase of 2,416·76 miles, or 18·62 per cent. in the mean mileage open, and of 1,423,133

* Except where statistics for five quarters are not available.

miles, or 13.57 per cent. in the train mileage. The following are the railways on which the more important fluctuations occurred:—

RAILWAY.	Number of accidents.	ACCIDENTS.				TRAIN-MILEAGE.	
		Increase.	Decrease.	Percentage of increase.	Percentage of decrease.	Percentage of increase.	Percentage of decrease.
Rajputana-Malwa	78	...	16	...	17.02	1.83	...
Bengal-Nágpur	30	21	...	233.33	...	57.53	...
Southern Mahratta	42	16	...	61.54	...	70.38	...
Indian Midland	23	(a) 17	...	283.33	...	671.89	...
North-Western	113	...	22	...	16.30	29.57	...
Oudh and Rohilkhand	19	...	11	...	16.67	20.36	...
Eastern Bengal	89	21	...	30.88	...	26.99	...
Burma	22	14	...	175.00	...	71.09	...
Madras	48	14	...	41.18	...	3.02	...
Bengal and North-Western	22	11	...	100.00	...	33.15	...
His Highness the Nizam's Guaranteed	34	22	...	183.33	...	60.29	...
Bhāvnagar-Gondal-Junágarh-Porbandar	24	20	...	500.00	...	62.11	...

2. The decreases on the Rajputana-Malwa and Oudh and Rohilkhand Railways, and the increases on the Southern Mahratta, Bengal and North-Western and His Highness the Nizam's Guaranteed State Railways have mainly occurred under "Trains running over cattle on the line."

3. Of the increase of 21 accidents on the Bengal-Nágpur Railway, 8 appear under "Goods trains or parts of goods trains, engines, &c., leaving the rails," and 11 under "Slips in cuttings or embankments."

4. On the Indian Midland Railway the number of accidents has increased by 17, or 283.33 per cent., with an increase of 432.11 per cent. in the mean mileage worked, and 671.89 per cent. in the train mileage. There is no noticeable variation under any particular head.

5. On the North-Western Railway the number of accidents recorded under "Flooding of portions of permanent-way" has increased from 10 to 40, but some of the other heads showed decreases; the total number is less by 22. The principal decreases are 7 under "Goods trains or parts of goods trains, engines, &c., leaving the rails," 9 under "Trains running over cattle on the line" and 10 under "Failure of machinery, springs, &c., of engines."

6. On the Eastern Bengal State Railway the number of cases of "Goods trains or parts of goods trains, engines, &c., leaving the rails" has risen from 4 to 12, and that of "Flooding of portions of permanent-way" from nil to 12.

7. The Madras Railway shows an increase of 8 accidents under "Goods trains or parts of goods trains, engines, &c., leaving the rails," and of 6 under "Trains running over cattle on the line."

8. The increase on the Bhāvnagar-Gondal-Junágarh-Porbandar Railway is mainly due to there being 15 cases of "Flooding of portions of permanent-way" against nil.

9. The casualties resulting from "Accidents to trains, &c.," were, among passengers and others, 31 injured, against 1 killed and 7 injured; and among servants, 3 killed and 9 injured, against 2 killed and 7 injured.

10. Of the casualties to passengers, 22 were injured, 6 seriously and the rest slightly, by the derailment of a passenger train at mileage 327½ on the Nagpur Branch of the Great Indian Peninsula Railway on the 18th July. Detailed reports of this accident are attached to the returns under review.

11. On the East Indian Railway, on the 6th July, 4 passengers were injured by a collision between a down passenger train and an up goods train at Barharwa, owing to the former, while proceeding to the station, having been allowed by the Jemadar to go on to the wrong line.

12. The following table exhibits the number of accidents under the different classes, due to "Accidents to trains, rolling-stock, permanent-way, &c.,"

(*) As compared with the corresponding quarter of the previous year.

and the number of persons killed and injured thereby, vide Tables Nos. 3 and 4:—

Serial No.	CAUSES OF ACCIDENTS.	Average of corresponding quarters of five previous years.*	THIRD QUARTER, 1889.				TOTAL, ALL CLASSES.	
			Number.	Number of passengers and others.		Number of servants.	Killed.	Injured.
				Killed.	Injured.

25	Other accidents	50	46	...	1	...	2	3
Total for 1889		...	838	...	31	3	9	3
Total—Average of corresponding quarters of five previous years*		...	752	1	7	2	7	9
								14

13. The principal variations occurred under "Passenger trains or parts of passenger trains leaving the rails," 18 against 28; "Goods trains or parts of goods trains, engines, &c., leaving the rails," 99 against 84; "The flooding of portions of permanent-way," 102 against 42; and "Fire in trains," 9 against 23.

14. The number of "Passenger trains or parts of passenger trains leaving the rails" was the largest on the Dibru-Sadiya Railway, being 10 out of a total of 18.

15. Under "Goods trains or parts of goods trains, engines, &c., leaving the rails" the number has increased from 1 to 9 on the Bengal-Nágpur Railway, 4 to 12 on the Eastern Bengal State Railway and 8 to 16 on the Madras Railway, and decreased from 14 to 7 on the North-Western Railway, 8 to 2 on the South Indian Railway and 18 to 12 on the Dibru-Sadiya Railway.

16. The cattle accidents were most numerous on the South Indian Railway, the number reported being 41. The North-Western and the Eastern Bengal State Railways come next with 31 accidents each. On the Rajputana-Malwa Railway there were 28 accidents of this class, but as compared with the average of the five corresponding previous periods there is a decrease on that Railway of 21.

17. Twelve cases of "Failure of axles" are recorded on the Rajputana-Malwa Railway.

18. The number of "Failures of couplings," viz., 44, is very large on the Dibru-Sadiya Railway.

19. The increase of 60 accidents under "Flooding of portions of permanent-way" is principally due to the number having risen from 10 to 40 on the North-

* Except where statistics for five quarters are not available for any line.

Western Railway and from *nil* to 12 and 15 on the Eastern Bengal and Bhavnagar-Gondal-Junagarh-Porbandar Railways, respectively.

20. Of the 46 accidents classified as "Other accidents," 18 have been returned by the Bombay, Baroda and Central India Railway.

21. The casualties to passengers from causes other than accidents to trains, &c., *vide* Table No. 2, were—

CAUSES OF ACCIDENTS.	THIRD QUARTER, 1889.		AVERAGE OF CORRESPONDING QUARTERS OF FIVE PREVIOUS YEARS.*	
	Killed.	Injured.	Killed.	Injured.
1. From falling between carriages and platforms	...	2	1	1
2. Falling on to the platform, ballast, &c., when getting into or out of trains	...	1	1	2
3. Whilst crossing the line at stations	...	...	1	...
4. By closing of carriage doors	...	...	...	1
5. Falling out of carriages during the travelling of trains	7	26	4	19
6. Other accidents	3	1	2	6
TOTAL	10	30	9	29

22. The accidents to servants in the employ of railways, or of contractors, whilst performing duties connected directly with the transit of passengers and goods, from causes other than accidents to trains, &c., were as follows, *vide* Table No. 2:—

CAUSES OF ACCIDENTS.	THIRD QUARTER, 1889.		AVERAGE OF CORRESPONDING QUARTERS OF FIVE PREVIOUS YEARS.*	
	Killed.	Injured.	Killed.	Injured.
1. During shunting operations	1	10	4	12
2. Falling off engines, vans, wagons, &c.	2	11	3	12
3. Coming in contact with overbridges, &c., during the travelling of trains	1	3	...	...
4. Coming in contact, while shunting, with vehicles, &c., standing in adjoining lines	...	1	...	1
5. Getting on or off trains, engines, &c.	6	9	2	8
6. Whilst loading, unloading or sheeting	...	8	3	10
7. Whilst breaking, spragging, or choking wheels	...	1	...	...
8. Whilst working at cranes or capstans	...	1	...	1
9. Whilst working on the permanent-way or in sidings	1	6	2	3
10. Whilst walking along the line on the way home, or to work	...	3	1	2
11. Whilst walking, crossing, or standing on the line	14	17	9	7
12. Whilst passing between vehicles	1	1	...	1
13. Whilst attending to the machinery of engines, cleaning them, &c.	...	8	...	4
14. Whilst attending to gates at level-crossings	1	1	1	1
15. Falling, or being caught between vehicles and platforms	...	1	1	1
16. Falling off ladders, scaffolds, platforms, &c.	1	3	1	5
17. By falling of lamps, wagon doors, timber, weights, &c.	2	6	1	7
18. Whilst coupling or uncoupling wagons	1	13	1	6
19. Miscellaneous	16	32	5	31
TOTAL	47	135	34	112

23. Of other persons killed and injured by running trains, &c., 1 was killed and 2 were injured whilst passing over the line at level crossings; 55 were killed and 17 injured whilst trespassing on the line; 12 committed suicide and 2 were injured in attempting to commit suicide; 8 were killed and 4 injured from miscellaneous causes.

* Except where statistics for five quarters are not available for any line.

24. The following table exhibits the total number of persons killed and injured from all causes over the whole Indian Railway system, as compared with the average of the corresponding quarters of five previous years, *vide* Table No. 1:—

CAUSES OF ACCIDENTS.	THIRD QUARTER, 1889.		AVERAGE OF CORRESPONDING QUARTERS OF FIVE PREVIOUS YEARS.*	
	Killed.	Injured.	Killed.	Injured.
<i>Passengers.</i>				
From causes beyond their own control	5	31	2	6
From misconduct or want of caution	5	28	8	30
<i>Servants.</i>				
From causes beyond their own control	8	25	6	...
From misconduct or want of caution	42	119	30	100
<i>Others.</i>				
Whilst passing at level-crossings	1	2	4	2
Trespassers, including suicides	67	19	55	14
Other persons	8	4	4	2
TOTAL	136	228	109	173
TOTAL OPEN MILEAGE	15,396.75		12,980.00	
TOTAL TRAIN-MILEAGE	11,906,718		10,483,585	

25. In addition to the above, 6 persons are reported to have been killed and 50 injured in yards, workshops, &c., and 148 persons to have died in carriages and at stations from causes unconnected with the working of trains.

* **RESOLUTION.**—The Government of India notices that there is a large increase on the Eastern Bengal State Railway, &c., from 4 to 12, in the number of cases of "Goods trains or parts of goods trains, engines, &c., leaving the rails;" also on the Madras Railway from 8 to 16, and on the Bengal-Nagpur Railway from 1 to 9.

The "Failure of axles" on the Rajputana-Malwa Railway is also again noticeable; out of a total number of 16 accidents of this nature 12 are on this railway.

The number of cases of "Failure of couplings" on the Dibru-Sadiya Railway is also very large, being 71 per cent. of the total.

The Governments of Madras, Bombay, Bengal, the North-Western Provinces and Oudh, and the Punjab.
The Chief Commissioners of the Central Provinces, Burma, and Assam.
The Resident at Hyderabad.
The Agents to the Governor General for Central India, Rajputana, and Baluchistan.
The Director General of Railways.
The Consulting Engineers to the Government of India for Railways, Calcutta, Lucknow, and Central Division.

ORDER.—Ordered that this Resolution, with the Abstract Returns, be communicated for information to the Local Governments, Administrations and Officers noted in the margin.

Ordered also, that copies be forwarded for the information of Her Majesty's Government.

Ordered further, that this Resolution, with the Abstract Returns, be published in the Supplement to the *Gazette of India*.

M. C. BRACKENBURY, Major, R.E.,
Under-Secretary.

Documents accompanying.
Abstract Returns of Accidents for the third quarter of 1889.

* Except where statistics for five quarters are not available for any line.

No. 2.

in INDIA, distinguishing between PASSENGERS, RAILWAY SERVANTS, and OTHER PERSONS, and classifying, as far as ACCIDENTS occasioning the DEATH or INJURY.

[illegible]

(a) includes the Patna-Gya, Dildarnagar-Ghazipur and Taraheeshwar Railways.
 (b) " H. H. the Gaekwar's Mohadeva-Vadnagar State Railway.
 (c) " the Katni-Umaria Branch.
 (d) " the Bellary-Kistna State Railway.
 (e) " the Sindia and Bhogel-Itarsi State Railways.
 (f) " the Amritsar-Pushknot and Rajpura-Bhatinda State Railways.

ACCIDENTS TO TRAINS, ROLLING-STOCK, PERMANENT-WAY, &c., reported during the THIRD QUARTER of 1889 as having occurred on the several RAILWAYS open for Traffic in INDIA, distinguishing the different Classes of ACCIDENTS, and the Number of PASSENGERS AND OTHERS, and of RAILWAY SERVANTS, KILLED OR INJURED in each Class of ACCIDENT.

TABLE NO. 3.—ACCIDENTS TO TRAINS, ROLLING-STOCK, PERMANENT-WAY, &c., reported during the THIRD QUARTER of 1889, &c.—continued.

[illegible]

(a) Includes the Sindh and Bhopal-Narsi State Railways.
(b) Includes J. missas-Palankot and Rajpura-Bhatinda State Railways.
(c) Includes 20 servants employed on colliery.
(d) Inc des the Bengal Central Railways.

TABLE No. 3.—ACCIDENTS TO TRAINS, ROLLING-STOCK, PERMANENT-WAY, &c., reported during the THIRD QUARTER of 1889, &c.—continued.

Report on the Derailment of a Passenger Train which occurred at mile 327½ on the Nágpur Branch of the Great Indian Peninsula Railway at 2 A.M. on the 18th July 1889.

1. The accident, of which the following is a report, was of a very serious character: though happily unattended by loss of life, it caused injury, more or less severe, to twenty-one native passengers, and the destruction of rolling-stock and permanent-way, estimated at about R9,000.

2. The derailment took place about half-way between Nándúra and Jalamb Junction Stations, that is, at about mile 327½, on the diversion which forms the east approach to a girder bridge.

3. The circumstances of the accident are briefly as follows. The Down Nágpur Passenger Train (No. 197) which was wrecked, consisting of twenty vehicles, left Nándúra (miles 324½) at 1.56 A.M., or four minutes late, on the 18th July. She had passed over the bridge at mile 327½ and proceeded safely to the diversion forming the east approach, but at the middle of the eastern half of the same the train became partly derailed.

The engine, brake and four 3rd class carriages next in rear remained on the rails; behind these came three 3rd and one 2nd class; the latter four were derailed but did not leave formation.

All the above had apparently passed over the diversion in safety and were derailed on the straight.

The condition of the remainder on examination turned out to be as follows:—In rear of the coaches named above came a 1st class and postal van; they were tilted over but went only partly down the embankment, which at this place is 6 or 8 feet high; then came six 3rds: four of these lay at the bottom of the embankment lying on their sides; another 3rd was partly down the embankment, and a 3rd class, the road van and rear brake were derailed on the top of the bank.

The four 3rd class carriages which fared worst contained about 120 passengers, chiefly pilgrims returning from Pandharpur fair, and many of them aged and decrepit.

They were extricated through the exertions of Mr. Wright, Traffic Inspector, who happened to be a passenger in the train, assisted by two European 3rd class passengers, a native policeman, and the guards. The engine was detached, sent on to Jalamb for aid, and eventually all the passengers were transhipped, and resumed their journey at 8.20 A.M. Those too severely injured to proceed (three in number) were cared for in the Shegaon hospital; the remainder went to their respective destinations.

A portion of the damaged stock was taken on to Jalamb; the four 3rds at the bottom of the bank will be broken up and their materials removed; the remaining vehicles were hauled to Nándúra. Communication was restored by linking in the up line to a point beyond the scene of the accident, and then crossing over to the down.

4. This derailment must be ascribed to either defective rolling-stock or defective permanent-way.

With regard to the former, I do not find that the stock was in fault. I personally gauged, at Jalamb, the wheels of the first five of the derailed coaches, and carefully examined them: none were even badly worn, and all might be brought into use with safety.

With regard to the condition of the permanent-way at the time of the accident, nothing could be ascertained with any certainty on account of the destruction caused to it by the derailment.

The reverse curves, however, must have had a length over all of at least 530 feet. The Permanent-way Inspector stated in evidence that he had tested the cant two days before the accident and found it $2\frac{1}{2}$ " and where the spread of the gauge was greatest $\frac{3}{4}$ " was still remaining after the coaches had dropped between the rails. I accordingly am of opinion that the curve had sufficient cant. The sleepers (creosoted pine, where the spread was greatest) appeared firm and solid; they were thoroughly examined, and I consider were in a fit condition to be on the road, and this opinion was borne out on the sleepers being sawn through for inspection.

I can, however, find no other explanation for the spread of the gauge which caused the derailment than that the fibres of the sleepers cannot have been so good as in each case they appeared, and that they might have "perished" to such a degree that they were incapable of resisting the centrifugal pressure of the wheel flanges of the wrecked train.

(Signed) R. SIVEWRIGHT,

Officiating Deputy Consulting Engineer.

Bombay, 10th August 1889.

Note by the Consulting Engineer for Railways.

The causes which might have led to this accident have been most carefully enquired into, but the result is not satisfactory. The details are described in Mr. Sivewright's report, and are further minutely gone into in the reports by the Chief Engineer, Locomotive Superintendent, and General Traffic Manager of the G. I. P. Railway (also attached); so they need not be further described.

2. The stock on the train does not appear to have been in any way defective. The flanges of the wheels of the first five vehicles were in good order, and the gauge of the wheels was correct; and the same is to be said of the wheels of the first two carriages which left the rails and were overturned. Nor does there seem to have been anything wrong with the wheels of the engine, so it is difficult to ascribe any fault to the condition of the stock.

3. The permanent-way was also in very fair order. The pine sleepers were not new, but they were sound, although possibly slightly gone at the spike holes. The chairs were, however, spiked to the sleepers through ordinary bearing plates, so the whole of the spikes would resist any tendency of the rails to spread. The reverse curve was laid with very easy curves of about 2,500 feet radius, and the cant originally given was sufficient for a high speed. It is very probable that the heavy rains at the time had made the road a little uneven, and possibly the cant had been lessened somewhat. But the indications are sufficient to show that there was at least half an inch of cant left in the road after the accident had occurred, and this should have been sufficient for the moderate speed at which the passenger train should have been running. And I know, from actual experience in the inspection train which passed over the place at probably thirty-five miles an hour only eight hours previously to the accident, that the want of sufficient cant was not felt in the least. I passed slowly over this reverse curve on the morning of the 16th July, and being in the verandah of the end carriage, I had a full view of the road. And I passed the same spot on the afternoon of the 17th at high speed and was observing the road from the verandah of the same carriage, which had been reversed at Nágpur. I am quite certain that even if there had been a gradual spreading out of the rails

to any serious extent, I must have noticed it. Indeed, had such been the case, the engines would have been the first to find it cut. So it is difficult to say that there was anything seriously wrong with the road eight hours before the accident.

4. As regards the speed of the passenger train accounts vary. The slight inaccuracy in the Engineering Department notice as to where the speed was to be reduced need not be noticed, as the driver was aware that the speed had to be reduced over the bridge close by where the accident happened; and although the time was 2-0 A.M., the evidence is quite clear that the speed of the train was reduced before passing the bridge. But in passing through stations the practice of drivers is to put on steam before the trailing points are passed, and so in this case the driver acknowledged to having put on steam on the bridge and before he was clear of the diversion. What speed he attained before getting near the end of the diversion cannot be said as he felt his train jerk before he got there and shut off steam, but even if he had been steadily increasing up to twenty miles an hour, there seems to be no reason why any carriages should have left the road.

5. It may be held that the Engineering notice to reduce speed at mile 327½ to 10 miles an hour was too vague, and that the points between which a reduced speed was desired should have been specified. In theory this is doubtless true, but in practice the method of imposing a certain speed at a certain point—say, at the centre of the diversion—is generally sufficient. The diversions are always capable of bearing a much severer test than that imposed, and the main point to be gained by restricting the speed is to be certain that no really high speed can be attained while passing near to that point.

6. The suggestion that the high speed of the special inspection train when passing this point strained the road must be noticed. If I am making an inspection by special train, as in this case, I desire to travel at a speed from five to ten miles higher than that at which the ordinary passenger trains run, as then the defects of the road are rendered more apparent. On the day in question we would, under ordinary circumstances, have changed our Badnera engine at Shegaon, but the new engine was of too heavy a type to go down the Khámgaon branch, so we took on our Badnera engine to Bhusáwal. The driver had not been working for months on the Shegaon-Bhusáwal Section, so was new to the road, and unfortunately overshot mile 327½, where the speed should have been sensibly reduced. We certainly hit the tangent point of the curve rather hard, but that was all, as no further effects of any sort were felt during the passage of the train over the reverse curve. The point of the curve hit by our train was from 120 to 150 feet from the spot where the passenger train went through, and as we went smoothly on beyond that, I cannot think that our train created any disturbance of a serious nature to the road. I certainly noticed nothing, and I was carefully watching the road from the verandah of the rear carriage. On entering from the straight we had hit the tangent point of some other curves during the day, and I attributed the cause to the method of giving super-elevation which is apparently in force on this section of the G. I. P. Railway. No super-elevation is given at the commencement of the curve, but it is gradually given until the required maximum is attained. But the maximum super-elevation is as much wanted at the commencement as at the centre, and should therefore be commenced on the straight; consequently at high speed we felt the want of the super-elevation at the tangent point.

7. I am inclined to ascribe the cause of the accident to the driver of the train putting on steam too suddenly. Travellers by the G. I. P. Railway trains know only too well the severe jerks which are experienced not only at starting, but also often in the course of a run between stations; and as the buffing and draw-

gear under some of the older carriages is weak, the carriages cannot always be properly coupled up. I think, therefore, that the driver must have put on steam too suddenly, and sent such a severe jerk through the front carriages as to cause the leading wheels of the sixth carriage to mount the rail. This would make the carriage turn slightly round, and the trailing wheels then probably fell through; the couplings still holding, the trailing wheels would burst the road, and the following carriages would naturally fall through. I don't think the speed could have been at all excessive, probably not twenty miles an hour, or else the carriages would have telescoped into each other, and the damage to life and stock would have been much greater. The Locomotive Superintendent has, I am aware, been doing his best to make the drivers be more careful when putting on steam, but unless the buffing and draw-gear is sufficiently strong to admit of fairly tight coupling, it is most difficult to avoid the jerks caused by putting on steam too suddenly.

* * * * *

(Signed) F. FIREBRACE, *Lieut.-Colonel,*

Consulting Engineer for Railways.

Poona, 24th August 1889.

APPENDIX A.

GREAT INDIAN PENINSULA RAILWAY COMPANY.

*General Traffic Manager's Office,
Bombay, 23rd July 1889.*

No. 4070.

THE AGENT,

G. I. P. Railway, Bombay.

DEAR SIR,

With reference to my report No. 4019 of the 19th instant, as to the accident near Nándára early in the morning of the 18th idem, I beg to say that the accident happened at a diversion which was being temporarily used in connection with the new doubling works.

The single line over the bridge at the place referred to (which will be the down line) has been used for a considerable time, and, in connection with the doubling works, the new up line has been laid over the bridge, and the traffic has been turned from the present single road (which is to be the down road) on to the road which will be the new up line, and over the bridge, and for some short distance beyond it the trains are running on the to be new up road. The accident occurred at about the spot where trains are brought back from this up line, thus temporarily used, on to the existing single line at the east or Jalamb end of the diversion.

This diversion has been used for some months on, as I understand, the authority of the Consulting Engineer, who sent a representative to inspect it before it was brought into use for traffic.

2. I find that the engine and brake and four third class carriages in front of the train kept on the rails.

Four 3rd class carriages and a 2nd class were derailed only, then a 1st class and a post office van were lying half-way down the bank almost on their sides, the following four 3rd class carriages were lying at the bottom of the bank also on their sides, another 3rd class carriage was half-way down the bank, while one 3rd class carriage, a road van and the rear brake van were simply derailed.

3. The train was a heavy one, being very full of passengers, who were returning from the Pandharpur fair.

We carried a considerable number to the fair, though not so many as in previous years owing to the prevalence and the fear of cholera.

4. You have been already advised that twenty native and one European 3rd class passengers were injured; but the statement, signed jointly by the Government Apothecary of the Civil Dispensary at Shegaon and the Company's Apothecary at Badnera, shows twenty-one natives and one woman (with a European name). Six of these are marked as having received serious injuries; all the rest are marked as slight injuries.

In addition to these, a European named William Staines, also complained of a bruise on his neck and another on his hip; but they were only slight, as he was able to help in getting out the passengers, which he did with great kindness.

I enclose a copy of the list* of all who complained and who were treated by the medical staff. Staines' name is not entered on this list. Nine of the injured passengers were women;

* Not printed.

they were all 3rd class passengers.

After being attended to, they all insisted upon going to their homes.

5. The steps taken to put the road right and get the passengers through were promptly carried out, and by three or four o'clock in the afternoon trains were allowed to pass slowly over the spot, and in the course of a few hours afterwards the road was stated to be all right and trains resumed their ordinary running.

* * * * *

7. I do not propose to delay this report for my final report about the accident, the papers now before me not being complete. I will make the final report as quickly as possible.

8. But with regard to the remark that some previous train must have strained the road, I may say that I understand that the Permanent-way Inspector's statement is to the effect that the road at this point had been specially examined by him and gauged three days before the accident; also that he had lorried over it about nine hours before the accident (that is, about four o'clock in the afternoon of the 17th) and had found it right; for, he says, if it had not been right to gauge, the wheels of his lorry would have dropped between the rails.

After the Inspector had lorried over the spot three trains passed before the accident occurred, namely, *first*, the Up Special Inspection Train in which yourself, the Consulting Engineer, the Chief Engineer, the Locomotive Superintendent, and myself travelled; *second*, the No. 92 Up Goods Train due at the spot at about half-past six, but which was delayed for the special to precede it; and *third*, the No. 51 Down Goods Train due at the place at about ten o'clock.

The special train ran tolerably fast. The two goods trains ran at ordinary speed.

9. The train to which the mishap occurred was running at just about right time. The driver said he left Nándúra four minutes late, and that he

passed on to the diversion at ten miles an hour, but that, upon getting on to the straight line on the diversion, he was going at from twelve to fifteen miles an hour.

Yours truly,
(Signed) HENRY CONDER,
General Traffic Manager.

APPENDIX B.

GREAT INDIAN PENINSULA RAILWAY COMPANY.

General Traffic Manager's Office,
Bombay, 10th August 1889.

No. 4431.

THE AGENT,

G. I. P. Railway.

DEAR SIR,

With reference to my letter No. 4070 of the 23rd ultimo, as to the accident to the No. 197 Down Passenger Train between Jalamb and Nándúra on the 18th idem, I beg to say that I have now received the further information as to the occurrence which enables me, so far, to complete the report of the case.

I enclose a copy of the summary and of the evidence taken at the joint enquiry held at Nándúra Station on Saturday, the 20th July, and also of the joint finding then arrived at.

2. The Chief Engineer and the Locomotive Superintendent and myself met on Wednesday, the 7th instant, and discussed the matter very fully, and we then saw and questioned some of the members of the staff of the three departments who could throw light upon, or give further information about, the case.

3. I have little to add to what was said in my letter No. 4070 of the 23rd ultimo and previous reports as to what may be called the circumstances and details of the accident. They appear to have been correctly stated therein, except that, from the position of the first marks on the rails which show derailment, it seems to be clear that it must have occurred at from 120 to 150 feet before the train reached the spot where the diversion comes back on to the down road, and not at that spot, as was at one time supposed, and as was stated in the first paragraph of my report No. 4070.

4. I find that the damage to the permanent-way is estimated at about R1,460 and to the rolling-stock at about R7,735. I enclose copies of the statements* giving the details of these damages.

* Not printed.

5. In addition to these damages, the telegraph wires were broken in the accident, but the cost of repairs would be hardly more than nominal.

The most serious part of the telegraph breakages was the interruption in the communication, causing delay to messages, and in getting information. The first telegrams about the accident had to be sent by the Government wires.

6. In regard to the injury to the passengers I find that Mr. Wright, the Traffic Inspector, who was in the train, and was riding in the carriage, part of

which is used by the Post Office, which was one of those that were overturned, received some bruises, but fortunately they were only slight. Mr. Wright did his best to re-assure the passengers, and organised and superintended and helped in the steps taken to extricate and relieve them.

7. You may possibly have seen a reference to the accident in the *Times of India* of the 25th ultimo, in which mention is made of a rumour that three or four of the passengers had since died from the injuries they had received. It is added that the rumour required confirmation.

I only refer to it in order to say that, so far as we know, there has been no such result of the injuries, and I hope that we may not have to report any fatal termination in any case.

We have made, with some caution, some enquiry as to the several cases of injury, and I find that there are none that are likely to prove very serious; in fact, that except in two or three cases the passengers are well again.

8. I think I have thus advised you of all the matters so far connected with the occurrence to which I need refer.

I shall be glad if you will let me see a copy of the report of the Deputy Consulting Engineer, Mr. Sivewright, who was present at the enquiry on the 20th ultimo.

9. You are aware of the position of matters before the mishap when you passed the place with the Consulting Engineer and other of the Company's officers in the Up Special Inspection Train between six and seven o'clock in the evening on the 17th ultimo, only a few hours before the accident.

It should be borne in mind that the jerk which was felt in that train when it passed, as an Up Train over the curve on to the diversion, at the Nágpur end of it, was at a spot which was from 120 to 150 feet from the place where the carriages first left the rails with the Down Train which had not passed over the curve where the jerk was felt in the inspection train, and further, that the engine and some of the carriages of the train that met with the accident passed safely over the curve where the jerk was felt in the inspection train.

10. The speed of the inspection train at this place has been variously estimated to have been thirty, thirty-five, forty and even more than forty miles an hour. I find from the records, which are apparently quite reliable, that it took twenty-five minutes to run that train, the distance (eight miles) from Jalamb to Nándúra (between which places the diversion is situated); and as that is not quite twenty miles an hour, the speed is not likely to have been at any part of that distance more than about twenty-five miles an hour.

But twenty-five or even thirty or thirty-five miles an hour cannot be said to have been excessive speed for such a light train as that.

11. Two causes have been considered as likely to have contributed to the accident.

One is the condition of the road.

The other is an impression that the train which met with the accident was going too fast.

12. As to the speed, the driver states that when he got on the straight part of the diversion he gave steam to the engine, and he thinks that the speed was increased from twelve to fifteen miles an hour. I should think it likely that the fifteen miles was somewhat exceeded, but not to any great extent, for there was neither time nor distance for the train to get up any high speed. The driver states that he considers that he was justified, under the instructions he had, in the course he took.

I am of opinion, also, that the damages, though considerable, show that there cannot have been any great speed; for if there had been, both the passengers and the stock would have suffered much more seriously than they did. A sum of less than eight thousand rupees for the repair of fifteen carriages that have passed through such an experience as these did can hardly be considered as a very large amount, and the injuries to the passengers are far less serious than might have been expected, or than would almost certainly have occurred, if there had been any great speed.

The speed, therefore, does not appear to account for the mishap, and I am inclined to think that it had but little to do with it.

13. As to the other possible cause, namely, the condition of the road, it is difficult to say how much of its state after the accident was caused by the accident rather than led to it.

I cannot help thinking that the heavy rain, of which we had experience for some hours before we passed the place, and which, we hear, was renewed after we had passed, must have had some effect on the road. The diversion is on a comparatively new road, which has not had the test of a monsoon over it.

It is right also to say that at the spot where the carriages first left the line, those who were in the inspection train, some seven or eight hours earlier than the accident, did not notice anything the matter, although they were tolerably certain to have done so if there had been any glaring defect, seeing that the jerk at the curve had arrested attention, and some of them were actually watching the road.

14. There are no fixed signals at the diversion, and therefore, in accordance with usual rule in such cases, the hand signal referred to in the Chief Engineer's report was shown by signalmen appointed and controlled by the Engineer's Department. The evidence of the two signalmen was so contradictory, caused apparently by their not being able to understand clearly the questions put to them, that it was quite unreliable.

15. The Chief Engineer had shown me his report No. 7534 of the 9th instant, to your address, about this matter, and I agree generally with what he has said in it.

16. I am of opinion that none of the train or traffic staff can be held to be, in any way, responsible for the accident, or to have contributed to it.

Yours truly,

(Signed) HENRY CONDER,
General Traffic Manager.

APPENDIX C.

Particulars of a joint enquiry held at Nándúra Station on Saturday, the 20th July 1889, in reference to derailment of 197 Down Passenger leaving Bhuswál on Wednesday night, the 17th instant, at 11-30 P.M., at mileage 372½.

PRESENT:

MESSRS. R. SIVEWRIGHT, Offg. Deputy Consulting Engineer to Government.

C. WEST, District Resident Engineer.

J. GARRATT, District Traffic Superintendent.

T. C. BONNER, Assistant Locomotive Superintendent.

The following witnesses were examined:—

1. William Glover, Driver of 197 Down Passenger.
2. E. Green, Head Guard, 197 Down Passenger.
3. J. Wright, Traffic Inspector.
4. H. Hart, P. W. Inspector.
5. Essoo Pandoba, Signalman, mileage 327½.

Summary.

It would appear that 197 Down Passenger left Bhusáwal right time on night of 17th instant, made up of 20 vehicles, in following order:—One brake van, eight 3rd class carriages, one 2nd class, one 1st class, one post office van, six 3rd class carriages, one road van, and one brake van.

The train was in charge of Guard E. Green with C. Oliver as second guard. The train proceeded all right to Nándúra and left that station at 1-56 A.M. for Jalamb. That on arrival at mileage 327½ the train became derailed owing to the bursting of the road on the diversion curve at east of Jalamb end of girder bridge, leaving it in the following position:—The engine, front brake and four 3rd class carriages following kept the road. Third class Nos. 258, 324, 1252, 2019, and 2nd class 1008 were derailed.

The above were all coupled together and standing between telegraph posts 327-14½ and 327-15½. The space between 327-14½ and 327-13 was clear, but between 327-13 and 12 1st class 27 and post office carriage 494 were lying half-way down the bank almost on their sides, and 3rd class 747, 1249, 159, and 576 were lying at bottom of embankment on their sides, third class 347 half down the bank and 3rd class 2021, road van 2824 and brake van 1303 derailed but on the top. That the train became derailed at telegraph post 327-11½, and for a couple of rail lengths the road appears to have opened out, and from this point the road was badly broken up for about three telegraph posts. The evidence of the Permanent-way Inspector shows that this road had been specially examined and gauged three days previously, and also that he had lorried over it the same evening about nine hours before the accident, and found it all correct. The members of the Committee carefully examined the road and found at the point of derailment the gauge was 2½ inches wide. Had the road been in this condition at the time the Inspector passed over, it must have been detected as his lorry would have dropped between the rails. The marks made by the shifting of chairs and bearing plates were very plain, evidently very recent and could not have escaped the Inspector's attention. After the Inspector lorried over the diversion, three trains passed before the accident, namely, the Inspection Up Special, No. 92 Up Goods, and No. 51 Down Goods, and the widening of the gauge must have occurred during this time. The special train appears to have run on to the diversion very fast and may have strained the road, as the curves were not laid with sufficient cant for high speed.

Finding.

We find on examination of the road at the point of derailment that the gauge was gradually opened from zero to 2½ inches on outer curve of diversion at east end of bridge at 327-11½ mileage, at which point the train became derailed. There is absolutely no evidence to account for the widening of this gauge. We find that the speed was in excess of the cautious driving notice for this point, but we also consider that this speed alone was not sufficient to account for this

derailment, except on the supposition that some previous train had passed over this point at an excessive speed and strained the road.

(Signed) T. W. BONNER,
Assistant Locomotive Superintendent.
(„) J. GARRATT,
District Traffic Superintendent.
(„) C. WEST,
District Engineer.

1st Witness, William Glover.

I was the driver in charge of 197 Down Passenger from Bhusáwal to Badnera. On Wednesday night, the 17th instant, I left Bhusáwal right time, and came on all right to Nándúra, which station I left at 1-56 A.M. or four minutes late. About ¼ or ½ of a mile from mileage 327½ I whistled for a signal and a green light was shown. I passed this mileage at about ten miles an hour. When at the bridge I exchanged signals with my guards and put on steam. Before getting on to the straight over the diversion I was going from twelve to fifteen miles an hour. Just before coming off the diversion I felt my engine oscillate, and I shut off steam and looked back and immediately felt a jerk and saw the train was derailed. I then put on steam in order to tighten the couplings, and in a few seconds I shut off gradually and brought the train to a stand. I pulled the train up at mileage 327-15. I put on steam for the purpose of keeping the train from going down the embankment. On coming to a stand I found that the brake and four succeeding vehicles remained on the road. After waiting about twenty minutes I received orders from Mr. Wright, the Traffic Inspector, to proceed at once to Jalamb with the front brake and three 3rds. I have been a driver for 8 or 9 years, and in the service of the Company 13 years.

Questioned.—I did not understand that I was to retain the speed of ten miles an hour after passing mileage 327½, and my line clear ticket was endorsed "Speed ten miles an hour at 327½." I came over this diversion with the 82 Up Passenger on the night or early morning

of 13th, when I did not notice any oscillation or anything unusual at this point.

Guard E. Green.

I am a Head Passenger Guard on the G. I. P. Railway. I was in charge of 197 Down Passenger on night of 17th instant from Bhusáwal to Badnera. I left Bhusáwal right time. My train consisted of 21 vehicles on leaving Bhusáwal, one of which was detached at Nádgaon. I came on all right to Nándúra, and left that station at 1-56 A.M. or four minutes late. We proceeded all right to mileage 327½. After passing the level-crossing gate the driver whistled and shut off steam. We passed mileage 327½ about ten or twelve miles an hour. On passing the bridge I gave all right signal to the driver on getting same from my second guard. On leaving diversion I felt a severe jerk and was knocked forward against the brake handle. The train shortly came to a stand. I was looking out when the driver came up and said he thought something was off the road, and on getting out I found the train derailed in the following position:—

The engine, brake and four 3rds were on the rails; three 3rd class and one 2nd were derailed but on the bank. The couplings of these carriages remained in tact. The 1st class and postal van were lying half-way down the bank on their sides, four 3rds were lying at the bottom of the bank on their sides, another 3rd partly down the embankment, and one third road van and rear brake were derailed on the top of embankment. I assisted in getting out the passengers and then worked under orders of Mr Wright.

Mr. Wright.

I am Traffic Inspector on the Nágpur District. I was travelling in 197 Down on night of Wednesday the 17th instant. I was travelling in the Post Office van and was awakened by a severe jerk. The carriage oscillated very much and then fell over on its side, partly down the embankment. I forced the upper-door open and got out. The guard at this time came up and I took his lamp and went to the top of the 3rd class carriages which were down the embankment to ascertain if any one was killed and to reassure the passengers. I examined all the derailed carriages, the 3rds contained from 30 to 40 passengers each. Then with the assistance of Guard Green, two 3rd class European passengers and a police sepoy, I extricated all the passengers, which was completed about 3-15 P.M. I found about 20 passengers more or less injured; as soon as daylight came the whole of the passengers were transferred to the carriages of 82 Up and left the scene of accident at 8-20 A.M. There was a distance of about 350 feet between the 1st class and the rear of the front portion of the train remaining on embankment. I last passed over this point in the inspection special train on the up journey the evening of 17th about 7 P.M. The signalman was then standing on the

west side of bridge, about mileage 327-9. The driver appeared to reduce speed on coming on to the diversion at east end. I did not then notice anything unusual at this point.

H. Hart, P. W. Inspector.

I laid the diversion at 327-33 on 7th April. I examined the diversion by gauging it and testing the cant of the curves with a level three days before the accident and found it all right, the cant being $2\frac{1}{2}$ inches in the centre of the curve. During the time the diversion has been worked, I have not found the gauge wider at all, and I have not had to re-spike any of the sleepers. I hurried over the diversion on the afternoon of 17th about two hours before the Special Inspection Train. I saw nothing wrong with the road, the rails where the accident occurred have not been moved since the accident. There is one signalman on duty at this bridge. He has orders to show his signal at the end of the diversion to which a train is approaching, and I have noticed that he generally does this.

Essoo Pandoba, Signalman on duty at 327-33 on nights of 17th and 18th July, says that the train that met with the accident passed him at high speed and did not reduce speed as usual.

APPENDIX D.

GREAT INDIAN PENINSULA RAILWAY.

*Chief Engineer's Office,
Bombay, 20th July 1889.*

No. 6816.

THE AGENT.

DEAR SIR,

Accident to 197 Down Passenger Train at mileage 327-33, Nágpur Branch, on the 18th instant.

This occurred at the Nágpur end of a diversion of the main line from the Down (old) to the Up (newly made for double line) side over a bridge, the mileage of which is given above. The diversion was inspected and passed by a representative of the Consulting Engineer, Mr. Sivewright, on the 8th April, so that it has worked safely for a period of over three months.

On the 16th instant Colonel Firebrace inspected the bridge, which has, in connection with the doubling of the line, been converted from a single line bridge of six 30-foot girder openings carried by masonry piers into a double line bridge of two 52-foot and three 30-foot girders carried by new screw pile piers and the old abutments. He on that day arranged for his Deputy to be present three days later to test the bridge and sanction the re-diversion of traffic over the down line side. My inspection carriage in which Colonel Firebrace travelled was at the rear of the train, so that after we left the bridge we continued for some distance to obtain a good view of the diversion of the line over it, but neither of us observed any defect. Late on the following evening when returning from Nágpur we passed over the diversion at a speed exceeding, I think, forty miles an hour, and as we did so, our carriage, still at the rear of the train, received a violent jolt, which we attributed to excessive sharpness of the curve at its junction with the straight portion of the line. Neither the jolt nor the apparent defect was so bad as to suggest that they were calculated to produce an accident to trains travelling at ordinary speed, and at the time I considered that the jolt we experienced had been accentuated by our very rapid passage over the place. I nevertheless realized that the place required attention, and at the next station I despatched a telegram to the Resident Engineer and Permanent-way Inspector, instructing them to ease the curve early next morning.

Our Inspection Special was followed by an Up Goods Train, and the next to pass over the diversion was that to which the accident occurred.

The engine, front brake and three 3rd class carriages passed the defective spot safely and remained on the rails; but the remaining vehicles—one 2nd, one 1st, one post office, nine 3rd class, and the rear brake van—all left the metals, seven of the carriages being precipitated down the bank 9 feet in height, where they lay on their sides.

Providentially no one was killed, though some twenty passengers were more or less injured.

Mr. Mallet, Consulting Engineer to the Government of India for Railways, Central Division, who was travelling from Nágpur to be present at our meeting with the Indian Midland Railway officials at Itársi, was on the spot soon after the accident occurred, and he tells me that in his opinion the accident was caused by pine sleepers so defective as to permit of the gauge spreading. He considers too that the train must have been going at an excessive rate of speed.

I must, however, defer reporting to you more definitely on these points until I obtain further information from the District Engineer and know the result of the joint enquiry which is to be held to-day.

Yours truly,
(Signed) J. G. H. COLLISTER,
for Chief Engineer.

APPENDIX E.

GREAT INDIAN PENINSULA RAILWAY COMPANY.
Bombay, 9th August, 1889.

No. 7534.

THE AGENT,
G. I. P. Railway.

DEAR SIR,

In continuation of my No. 6816 of 29th ultimo, *re* accident to 197 Down Nágpur Passenger Train on the morning of 18th idem, I have to report further. My above was incorrect in two respects.

1. I stated the height of the bank where the accident occurred as being about 9 feet, whereas it is about 6 feet only.

2. I stated that our inspection special was followed by an Up Goods Train, and that the next to pass over the diversion was the passenger train to which the accident occurred. But two goods trains passed the place, one which followed soon after the inspection train on its upward journey, another down at about 10 P.M., and then the ill-fated passenger train.

3. The accident occurred on a diversion, from the old down line side over the up line side of a bridge which was being reconstructed in connection with the doubling. The gradient of the main line and of the diversion is 1 in 1,000 falling towards Nágpur. The line on either side of the diversion is straight for a long distance.

4. The accompanying diagram* will more clearly than words explain its position and those of the several points that will be referred to by me.

* Not printed.

5. The diversion was formed partly (*a* to *x* and *x* to *h*) of the old material in the down line, iron rails laid in 1864, and pine sleepers with iron bearing plates laid in 1884; and (*x* to *x'*) 30 feet steel rails and right and left pot sleepers, never until the diversion was opened, run over.

6. The diversion from (*a*) to (*h*) is 1,466 feet long. The sharpest curve between (*a*) and the bridge is about 3,000 feet radius, and such parts of the curves between the bridge and (*h*) as were not disturbed by the accident were found to be of not less than 2,500 feet radius.

7. The super-elevation of the outer rail is said to have been maintained at $2\frac{1}{2}$ " at the middles of the curves, decreasing of course towards their ends.

8. The road was fairly but not fully boxed up with excellent ballast.

9. The diversion was inspected and passed by Mr. Sivewright, Deputy Consulting Engineer to Government, on the 8th April last.

10. From the 8th April to the 2nd June there was a caution notice ordering speed of ten miles an hour between 327 $\frac{1}{2}$ and 328 $\frac{1}{2}$ mileage, which included this as well as another diversion. From the 2nd June the foregoing was cancelled and in its place was issued a caution notice ordering reduced speed to ten miles an hour at 327 $\frac{1}{2}$ mileage. A caution hand-signal was exhibited day and night.

11. On the 16th ultimo proceeding from Bhusáwal to Nágpur our inspection train ran slowly over the diversion and stopped, when Colonel Firebrace and I examined the newly finished bridgework, and he arranged for it to be tested three days later. Upon getting into my carriage at the rear of the train again and drawing slowly off the diversion, we continued for some little distance to hold a good view of it, and I certainly noticed nothing wrong with the curves.

12. Next evening on our return journey we ran over the diversion at a speed estimated by various members of our party as from thirty to forty miles an hour.

13. Colonel Firebrace, Mr. Jackson, and I were sitting in the rear verandah of my carriage which was at the tail of the train, and at the moment we left the straight and entered the curve we felt a severe jolt and at once discovered that

it had been produced by a most apparent "kink" at the tangent point (*h*) on accompanying diagram.

14. The above sketch in which the red lines indicate the "kink" does not greatly exaggerate what we, or to be more reserved, what I saw. In my own mind there is not the slightest doubt that the one single jolt which we felt occurred at the tangent point.

15. Excepting it there was no remarkable jolting, swaying, grinding or uneasy running over any other part of the diversion, and what little rocking there was I put down to the necessarily frequent changes of cant, emphasized by the speed at which we were travelling. I considered, too, that a train travelling at ordinary speed would only in a reduced degree feel the effect of the kink at the tangent point. Had I observed anything really seriously wrong, my telegram from the Nándúra Station would have been of a far more peremptory and urgent nature.

16. No. 197 Down Nágpur Passenger left Nándúra at 1-56 A.M. or four minutes late on 18th ultimo. According to the driver's evidence on approaching the diversion he whistled for a signal, and a green light was shown, whereupon he reduced speed to ten miles an hour on entering the diversion, and when his engine reached the straight of the diversion over the bridge and he had exchanged signals with the guards, he gave her steam again. When nearing the Nágpur end of the diversion running, he says, at about twelve or fifteen miles an hour, he felt the engine oscillate and then a severe jerk. He then shut off steam, but seeing that some carriages had left the road he put it on again, to keep the train straight, and then, as soon as he could, pulled up. The engine stopped at a point 936 feet beyond the spot where the first marks of derailment were found.

17. The engine, front brake van, four 3rd class carriages remained on the rails, then, attached to them with unbroken couplings, came four 3rd and one 2nd class carriages off the rails, then, after a gap of 355 feet, came one 1st class and one postal carriage half-way down the bank and almost on their sides, four 3rd class quite on their sides at bottom of bank, one 3rd class half-way down the bank, and one 3rd class, one road van and brake van derailed, but on the formation.

18. A joint enquiry into the accident was held, at which were present the District Engineer, the Assistant Locomotive Superintendent, the District Traffic Superintendent, and Mr. Sivewright, Deputy Consulting Engineer to Government.

19. Copies of the evidence taken and of the finding are herewith sent.

20. The exact mileage of the bridge is 327 miles 38 chains. The driver in evidence states that his line clear ticket bore the endorsement "*speed 10 miles an hour at 327 $\frac{1}{4}$* " (which is equivalent to 327 miles 20 chains), and that he did not understand that he was to retain the speed of ten miles an hour after passing 327 $\frac{1}{4}$.

21. The inaccurate and insufficient wording of the caution notice, as given by the Engineer to the Traffic Department, might well have led drivers into error as to the precise place under protection, but in this case it did not do so, for the driver appears to have been well acquainted with the spot, as he says that on approaching it he whistled for and obtained a signal and then proceeded on to the diversion at ten miles an hour, increased to fifteen miles after his engine had reached the bridge.

22. The head guard corroborates the evidence of the driver as to speed.

23. Mr. Wright, the Traffic Inspector, was asleep, and can say nothing on this point.

24. Essoo Pandoba, signalman, says the train passed him at high speed and did not reduce speed as usual. This evidence is not of much value.

25. Judging by the positions of the engine and the rear brake after the accident, and the place of first derailment, I consider the train must have been running at a greater speed than stipulated in the caution notice, but to what extent we shall probably never be able to ascertain.

26. The Permanent-way Inspector who laid the diversion gives evidence that he examined the road testing its gauge and the cant on curves three days before the accident, finding it all right. That during the time the diversion has been run over he has not found the gauge widen. That he has not found it necessary to re-spike any of the chairs, that he lorried over the place on the 17th about two hours before the special inspection train passed, and saw nothing wrong with the road.

27. This is all the oral evidence we have.

28. The condition of the road after the accident produced indisputable evidence that the first marks of wheels off the rails were found at a spot 464 feet from east abutment of bridge, *i.e.*, on a curve, the radius and cant of which are said to have been not less than 2,500 feet and 2 $\frac{1}{2}$ " respectively.

29. This fixes the spot as being between 120 and 150 feet on the Bhusawal side of the spot [(h) on diagram], where I in the inspection train felt the jolt or jerk on the evening of the 17th.

30. The road being destroyed for some distance on either side of (h) it was impossible to fix the exact position of the tangent point, hence the want of precise definition in regard to its distance from the point of derailment.

31. The first sign of a vehicle having got off was discovered by the middle of a rail on the left or outer side of the curve where the gauge was found 2 $\frac{1}{2}$ " wide.

From this point backwards the widening of gauge gradually decreased, until at a distance from it of about 30 feet (*i.e.*, up to 437 from abutment of bridge, see diagram) the gauge was found correct.

Forward from the first marks the chairs under the right hand or inner rail, were broken after passing three or four sleepers, and the rail was forced out, making the gauge 6 or 7 inches wide; but under the left or outer rail no chairs were broken, and the movement of the bearing plates on the sleepers plainly

showed the widening as being 2 $\frac{1}{2}$ " at point of derailment, lessening to nothing at the 10th and 12th sleeper forward.

32. This gives the widening of gauge as extending for about a length of 60 feet, that is, 30 feet on either side of point of first marks of derailment, and leaving a length of at least 100' or 120' (according to whether the tangent point (h) was 120' or 150' from point of derailment) of the diversion true to gauge, and over which the foremost part of the train travelled safely. The five vehicles at the rear of the foremost portion were probably derailed when the rear portion was running down the bank and before the severance of the couplings.

33. At the enquiry the chairs were removed from those sleepers where the chairs under the left hand rail had moved more than an inch, and it was found that the spikes were bent, some of them to an angle of 45°, and the spike holes were elongated. Every spike was in its place, none were broken, only two were in any degree reduced in thickness by rust, yet all were bent, adducing an incontestable fact that the wood of the sleepers had been hard enough to very strongly resist the action which caused the spreading of the road.

34. Several sleepers, including those under the rails where the carriages first left the road, were sawn in two and showed perfect soundness, so did those which had been crushed and split by the passage over them of derailed wheels. I have seen several of them.

35. At the enquiry the cant of the curve at the point where the first marks of derailment appeared was found to be less than 1".

36. There are not, I think, further details in connection with the construction of the diversion, description of the accident, on the conduct of those servants of the Company who are directly associated with it, that I need give you, and after quoting the finding of the joint enquiry, I will proceed to analyse such information as we have, and offer my opinion upon what I cannot but feel is a question of extreme complexity.

37. The District Engineer, Assistant Locomotive Superintendent, and District Traffic Superintendent, record as follows:—

"We find on examination of the road at the point of derailment that the gauge was gradually opened from zero to 2 $\frac{1}{2}$ inches on outer curve of diversion at east end of bridge at 327 miles 11 $\frac{1}{2}$ telegraph posts, at which point the train became derailed. There is absolutely no evidence to account for the widening of this gauge.

"We find that the speed was in excess of the cautious driving notice for this point; but we consider that this speed alone was not sufficient to account for this derailment, except on the supposition that some previous train had passed over this point at an excessive speed and strained the road."

38. There can be no doubt that the immediate cause of the accident was the widening of gauge due to the comparatively weak pine sleepers yielding to the pressure exerted by passing trains against the outer rail of the curve and to the bending of the spikes securing the chairs to them, and probably, but I will not say undoubtedly, to insufficiency of super-elevation of outer rail.

39. I believe the accident would not have occurred had a stronger class of sleeper been in the road.

40. I hope I may not be understood to cast any reflection upon the officers who are responsible for having used pine sleepers for this particular work.

41. Mr. Mallet, Consulting Engineer to Government, Central Provinces, who was on the spot soon after the accident occurred, said he would never have rejected the sleepers for such a work. We have satisfactory evidence that they were perfectly sound. The resistance that they offered to the bending spikes is of itself a great testimony of their soundness.

42. We have used, and I believe there are now in the road, pine sleepers which are subjected to strains even more severe than it was contemplated those in this diversion, under the cautious running notice, would have to endure.

43. Although in the light of recent events—a light which will hereafter guide me in the construction of diversions—I say that stronger sleepers would probably have prevented the accident, I cannot attribute to the officers, who in this case used pine, any blame. I think no Engineer would, under the circumstances, have rejected them.

44. Regarding the cant on the curves of the diversion, although I attach no great credence to the Inspector's assertion that he tested and found it accurate, I may express opinion that our very fast special having traversed them safely justifies the impression that there could have been nothing seriously defective in either the alignment or cant of the curves, but that insufficiency of cant for trains running at very high speed may have accelerated the tendency of such to force the gauge.

45. In the finding the members of the enquiry insinuate that the special inspection train had initiated the defect which caused the accident.

46. The District Engineer has in most unqualified terms expressed such belief. He argues that the elongation of the spike holes and the cutting of the bearing plates along the surface of the sleepers had the appearance of having been affected by one action, or, as it were, one blow, and that there were no signs to show that the widening of gauge had been gradual and caused by successive blows imparted by many trains.

47. I cannot endorse this theory.

48. I, at the extreme rear of the train, felt but one jerk at a place 120 or 150 feet before reaching the spot where the derailment occurred, and I detected no defect on any other part of the diversion.

49. The Traffic Inspector, who was in one of the carriages of the special, has recorded that he noticed nothing unusual in passing over the diversion.

50. But, supposing the special had burst the road, would it not be more reasonable to suppose that one of the engines of the three trains that passed over the diversion would have dropped in where the gauge was wide instead of a light carriage?

51. Is it credible that a special conveying the Consulting Engineer to Government and the chief officials of the Railway, and the ill-fated passenger train, were the only one that traversed the diversion at high speed? I think not.

52. I am of opinion that the gauge had been gradually forced by many trains running at speed in excess of the limited ten miles an hour; that the increasing defect had not been detected by the Inspector; and because we have no evidence to prove that at the first point of derailment the gauge, though widened, was sufficiently so to allow a wheel to simply drop in between the rails, I think there is ground for suspicion that there may have been an accessory cause—perhaps a strong jerk or blow imparted by bad driving.

53. The damage to permanent-way was:—

- 11 Iron 24-feet rails bent.
- 279 Pine sleepers broken and split.
- 480 Ordinary chairs broken.
- 480 Bearing plates broken and split.
- 900 Spikes.
- 110 Fish-plates broken.
- 228 Fish-bolts broken.
- 480 Wooden keys broken.

Estimated value—R 1,460.

Yours truly,
(Signed) H. WENDEN,
Chief Engineer.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on
Monday, June 9th, 1890.

During the week under review there has occurred a not inconsiderable extension of the south-west monsoon rainfall on both sides of India, but the current has in neither case been characterised by the strength and force which it usually possesses during its earlier existence and, except in a few places, the amount of rain received has not been large. At first the distribution of pressure was irregular. The effect of the disturbance off the West Coast, noticed in last week's summary, was still felt on the North Konkan Coast, and pressure was unusually low there. At the same time a large irregularly shaped area of low pressure overlay nearly the whole of Northern India, between which and the high pressure area in the south nothing more than moderate gradients prevailed. As the week advanced however, the irregularity off the Konkan Coast disappeared, the barometer fell rapidly over Northern India, while it remained steady in the South, and the ordinary monsoon distribution was established, *viz.*, a high pressure area in the Southern regions and a low pressure area in the North-West, with an average difference of about 0.5".

The chart of the 3rd showed relatively low pressures off the Konkan Coast and over the Gangetic plain and high pressures over the south-east of the Bay, but with only moderate gradients in the intervening space. The wind was south-easterly along the greater part of the West Coast, southerly over the head of the Bay, in Burma and Lower Bengal, and easterly up the north side of the Gangetic plain. Elsewhere the directions were variable. The force was strong at Bombay. Rain was falling moderately heavily on the northern half of the West Coast and in Assam and North Bengal, and scattered showers were reported from several central stations. On the 4th the depression off the West Coast had practically disappeared; the barometer had fallen briskly in Northern India and risen over the west of the Peninsula. The low pressure area in the North had become more defined and gradients slightly steeper. Rain had fallen all along the West Coast and in Lower Burma, and scattered showers at several central stations and in Bengal. The changes which were in progress on the 4th continued on the 5th and gradients had become fairly steep. The wind was beginning to veer on the West Coast. Rain had extended to almost all parts of the Peninsula, and the rainfall area had also extended in Burma and Bengal. The chart of the 6th showed that a distinct depression had been developed over the Punjab, where the barometer read below 29.35". The wind had veered to west on the Bombay Coast, but the rainfall area had, if anything, contracted. On the 7th the depression over the Punjab had intensified somewhat, and readings within it were below 29.30". In other respects the distribution had not changed much. Dust and thunder storms had given rain to the North-West Provinces and the Circars, but with this exception the rainfall area was similar to that reported on the 6th. Between the 7th and 9th the depression in the Punjab

began a south-west movement and the barometer rose over the Punjab. With this change thunderstorms occurred in the North-West, more particularly on the hills, and gradients became very steep and the winds strong over Sind and Guzerat. Rain again extended right across the Peninsula and continued general in Burma and Bengal.

Temperature.—The temperature variations for the whole of India show that, compared with the average, there has been a steady fall of temperature throughout the week. The warmest day was the 4th, when there was a considerable excess; the coolest the 9th, when there was a trifling deficiency. In Bombay the temperature was low throughout and in Bengal, the North-West Provinces and the central parts of the country the latter part of the week was cool, but in the North-West and Burma the temperature was high almost throughout. The greatest excess was in the Punjab.

The following table shows the variations of the mean temperature from the normal according to Provinces for the present and for the past weeks :

PROVINCES.	Variation of Temperature from Normal for Past Week.	Variation of Temperature from Normal for Present Week.
Burma	— 1.9°	+ 0.8°
Bengal	— 0.3°	— 0.3°
North-West Provinces	+ 1.6°	+ 3.4°
Punjab	+ 3.4°	+ 5.0°
Bombay	— 0.6°	— 1.0°
Central Provinces	+ 1.7°	— 0.1°
Guzerat and Central India	+ 0.2°	+ 0.3°
Sind and Rajputana	+ 1.3°	+ 2.3°
Madras	+ 1.8°	+ 0.6°

The principal feature disclosed by these figures is the rise of temperature in the North-West.

The highest maxima have been steadily reported from the North-West, the following being the figures :

On June 3rd	Jacobabad reported	112.7°
„ „ 4th	Sirsa „	114.4°
„ „ 5th	Montgomery „	115.4°
„ „ 6th	D. I. Khan „	116.5°
„ „ 7th	Jacobabad „	115.6°
„ „ 8th	Jacobabad „	120.0°
„ „ 9th	Jacobabad „	120.0°

The figures show that the heat has increased fairly steadily during the week, but that the region of greatest heat has held steadily over the south and west of the Punjab and Upper Sind.

More remarkable than the maximum temperatures have been the very high minima which have prevailed in the North-West, which on the night of the 5—6th were from 11° to 18° above the normal. The highest night temperature recorded was 97.7° at Lucknow.

Rain.—The daily distribution of rain was given in the earlier portion of the summary. As mentioned there, a considerable extension of the rainfall area has occurred, but the amount has been irregularly distributed, certain regions receiving large falls, while, neighbouring regions have had less than the normal. The regions of heaviest rainfall are the northern half of the West Coast on the one side and North Bengal and Assam on the other.

The table at the close of the summary shows that the rainfall during the week has been very general. Only three divisions, *viz.*, North-West Provinces (Central), Kattiawar and Rajputana (West) report no rainfall; in all the other divisions more or less has been received. In the great majority of cases however the rainfall has been less than usual. With the exception of Hyderabad (South), where some heavy thunderstorms occurred, the only region where the rainfall largely exceeded the average was that stretching along the hills from Upper Assam westward as far as the Punjab. All along this tract of country, but particularly in West Assam and North Bengal, the amount received was large. Outside this region the only divisions reporting an excess are Orissa, the Konkan, Berar, the East Coast (North and South) and Hyderabad (South), but except in the last named the excess is small. The deficiency in Malabar and Coorg on the one side and Tenasserim and Lower Burma on the other is large and indicates a weak monsoon current in what are usually significant quarters.

The final column of the table shows the state of the seasonal rainfall, but as the figures only refer to a period of two weeks, they are only important so far as they are indicative of the general tendencies of the monsoon currents.

The return of maximum falls shows the same general features as the return of last week, the amounts being large over North-Eastern and South-Western India and comparatively small elsewhere. Falls of between 2 and 6 inches during the week have been common in those two regions, and heavier falls have been recorded in many places; thus—Pyantasa (Shwegyin) received 8 inches; Netrokhona (Mymensing), 6 $\frac{3}{4}$ inches; Sadiya (Lakhimpur), 7 $\frac{1}{4}$ inches; Dhubri, 21 $\frac{3}{4}$ inches; Gyabanda (Rungpore), 13 inches; Dinhatta (Cooch Behar), 26 $\frac{3}{4}$ inches; Alipur (Jalpaiguri), 20 $\frac{1}{4}$ inches; Silligoree (Darjeeling), 11 $\frac{1}{2}$ inches; Purneah, 7 $\frac{3}{4}$ inches. In Upper India falls of between 1 and 3 inches were common, the heaviest fall being 3 $\frac{1}{2}$ inches at Mowana (Meerut). On the South-West Coast the amounts become again large. Poneny (Calicut) received 7 $\frac{1}{4}$ inches; Mangalore, 11 inches; Honawar, 14 $\frac{1}{2}$ inches; and Ratnagiri, 8 $\frac{1}{4}$ inches. In the Deccan, Khandeish and Berar the maximum falls varied between 1 and 6 inches. In the central parts of the country the only large fall was 4 $\frac{3}{4}$ inches at Narsinghpur (Bhopal), and in Madras there was nothing exceptional.

W. L. DALLAS,

Assistant Meteorological Reporter to the
Government of India.

W. C. BENETT,

Offg. Secretary to the Government of India.

SIMLA, 12th June, 1890.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—For week ending 7th June.—No rain in Madras and Tinnevely; moderate in the Nilgiris, South Kanara, Malabar; and slight elsewhere. Crops generally good, but suffering from want of rain. Water-supply is limited in parts of eight districts. Outturn of sugarcane average. Paddy, *cholum* and tobacco middling to average; other grains and cotton below average. Pasture and water-supply generally insufficient. Prices rising. Prospects fair.

• **Bombay.**—For week ending 11th June.—Rain throughout almost the whole of the Presidency Proper and in a few talukas of Sind. Sowing operations progressing in several districts. Fodder and water sufficient and agricultural stock good, except in a few talukas.

Bengal.—For week ending 10th June.—Rain general, except in South Behar. Agricultural prospects favourable. Early rice and jute sowings nearly finished, and preparations for late rice sowings in progress in Behar. *Bhadai* sowings proceeding, but more rain wanted in parts. Sugarcane, indigo and other crops on the ground doing well. Prices generally steady in Balasore. Common rice showed an upward tendency during the week. The average daily attendance on relief works in Balasore has fallen to 153.

North-Western Provinces and Oudh.—For week ending 11th June.—Weather generally hot and cloudy, with slight rain in most of the districts. Sugarcane and indigo crops thriving and promise a good outturn. Extra crops doing well. Ploughing for *kharif* commenced. Locusts are reported to have appeared in the Fyzabad, Partabgarh, Cawnpore, Banda, Farukhabad and Agra districts, but no damage was done to crops. Markets are well supplied; but prices have risen in Lucknow, Allahabad, Farukhabad, Bareilly, Moradabad and Jhansi, and continue to be high in Kumaun.

Punjab.—For week ending 11th June.—No rain in four districts; slight rain fell in two districts; in others the fall was good and general. Prices stationary in all districts, except Rawalpindi where they are rising. Harvesting and threshing nearly completed. *Rabi* outturn good in Jullundur and fair in Lahore; below average elsewhere. Prospects of *kharif* crops good in Amritsar, fair at Dera Ismail Khan and average at Peshawar. Slight damage to young crops at Ferozepore and to fruit trees at Lahore by severe dust-storms. Fodder scarce or insufficient in six districts; average and sufficient elsewhere. Opium produce average in Rawalpindi.

Central Provinces.—For week ending 11th June.—Weather hot and cloudy, with showers of rain in almost all districts. Preparation of land for autumn sowings in progress. Sowings commenced in Balaghat, Raipur, Bilaspur and Sambalpur. Prices steady.

Burma.—For week ending 7th June.—Rain fell throughout the Province, and agricultural operations are progressing favourably both in Upper and Lower Burma. The price of paddy has risen in eight districts and has fallen in two. Elsewhere no changes are reported.

Assam.—*For week ending 11th June.*—Weather wet. Ploughing for and sowing of winter rice continue. Tea and other standing crops doing well.

Mysore and Coorg.—*For week ending 11th June.*—Rainfall general. Standing crops good. Ploughing continues in parts. Prospects favourable, but more rain wanted in Kolar district. Prices risen slightly in Bangalore district.

Rainfall good in Coorg during the week. Season favourable.

Berar and Hyderabad.—*For week ending 11th June.*—Average rainfall fair in Berar. Weather hot. Water scarce in the Amraoti and Murtizapur taluks and in the Wun district. Land under preparation for ensuing crops. Fodder insufficient in Ellichpur, Yeotmal, Darwha and Kelapur taluks. Prices almost stationary.

Rainfall good in Hyderabad during the week. Reaping of *tabi* crops concluded. Preparations for *kharif* sowings in progress. Prices stationary.

Central India.—*For week ending 11th June.*—Slight rain fell generally in most parts of the Central India Agency during the week. Condition of crops and prices of food-grains remain unchanged since last report.

Rajputana.—*For week ending 11th June.*—Good rain in Sirohi and Pertabgarh; moderate in Kherwara and Jhallawar; and slight in Harowti, Meywar and Bikanir. Ploughing commenced in parts. Agricultural stock good. Pasturage or fodder sufficient, except in Merwara and parts of Ulwar. Prices steady generally.

Nepal.—*For week ending 5th June.*—Seasonable rain fell during the week. For about two days the weather was close and sultry, but now cooler. Sowing of late rice has been completed. Prospect of standing crops good.

W. C. BENETT,
Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.
PUBLIC WORKS DEPARTMENT.

CIVIL WORKS.

Irrigation.

REVENUE REPORT OF IRRIGATION WORKS IN SIND FOR 1888-89.

No. 97-I., dated Simla, the 12th June, 1890.

RESOLUTION—By the Government of India, Public Works Department.

Read—

Letter from the Government of Bombay, No. 59 W.I.—791, dated 15th April 1890, submitting the Revenue Report of the Irrigation Department in Sind for 1888-89, with a Memorandum by the Commissioner in Sind and the Resolution of the Government of Bombay on the subject.

OBSERVATIONS.—There are eleven works in Sind for which Capital and Revenue Accounts are kept. Of these, four are classed as 49, Major Works, and seven as 43, Minor Works and Navigation. There are, in addition, a large number of Minor Works for which only Revenue Accounts are kept. The Capital expenditure on each of the classes for which Capital and Revenue Accounts are kept during and up to the end of 1888-89 is shown in the following statement:

	Number of works.	DURING THE YEAR 1888-89.						Total direct and indirect to end of 1888-89.
		Works.	Establishment.	Tools and Plant.	Total direct charges.	Indirect charges.	Total direct and indirect charges.	
MAJOR WORKS.		Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Works not charged to Revenue	4	92,352	21,509	441	1,14,302	3,011	1,17,313	84,28,392
MINOR WORKS AND NAVIGATION.								
Works of which Capital and Revenue Accounts are kept ...	7	47,000	9,400	...	56,400	6,053	62,453	32,73,637
TOTAL ...	11	1,39,352	30,909	441	1,70,702	9,064	1,79,766	1,17,02,029

2. The Capital outlay on Major Works was chiefly on the Desert and Eastern Nara Canals, on which it was respectively Rs. 31,371 and Rs. 60,808, exclusive of Establishment and Tools and Plant charges. On the former Rs. 30,580 were spent on widening the main canal and closing flood openings. On the latter Rs. 26,683 were spent on extending and improving the Dimwah; some road bridges and an inspection bungalow were also erected. The Capital outlay on Minor Works was all incurred on the Fuleli Canals, and Rs. 45,735 of it were due to the cost of a new regulator at the head of the principal canal.

3. The actual financial results of the year for the Major and Minor Works in operation are shown in detail in the following statement. The aggregate figures for the works for which only Revenue Accounts are kept are also given:

CANAL.	Capital outlay.	GROSS REVENUE COLLECTED.			WORKING EXPENSES.			Net actual revenue.	Deduct average receipts before improvements.	Balance or net revenue due to Capital expenditure.	Percentage of net revenue on Capital outlay.

The interest charges on the four Major Works amounted to Rs. 3,23,670, so that the net profit on these after paying interest on Capital outlay was Rs. 3,92,092.

4. The preceding statement gives the figures for the actual collections. In the following table the assessments for the year under review and for the previous year are compared with the areas irrigated. Of the total consolidated assessment, 90 per cent. is credited as the water share, and the remaining 10 per cent. as the land share; only the water share is included in this statement:

5. It will be observed that the area irrigated is divided into Government land and jaghir, and that the assessment on the former is considerably in excess of that on the latter. The jaghir land represents grants made to the heirs or descendants of the original Chiefs of Sind by the British Government after the conquest of the country. They hold the land subject to the payment of a moderate tribute, and any enhancement of this, such as is suggested in the 23rd para. of the Superintending Engineer's report, in consequence of improved or extended cultivation resulting from the better supply of water, is a question that must, as the Commissioner shows (para. 13 of his Report), be approached with caution. There does however seem reason to think that the Government receives an unduly small return for the water supplied, under the present improved arrangements, to the jaghir lands. It might, perhaps, be possible to set aside a certain area as that for which the Jaghirdars are entitled to receive irrigation at the lower rates, and to assess all extension of irrigation on jaghir land either at full rates or at something not very much below.

6. The principal features of the year were the large increase in the area irrigated, and in the assessed and collected revenue. The results show a great improvement on those of the previous year, which were the best then on record. The increase in area amounted to 13'25 per cent. and in assessed revenue to 13'66 per cent. The gross increase in the area irrigated amounts to 247,521

acres, of which 233,929 acres are in Government and 13,592 acres in jaghir land. The season on the whole was not unfavourable, although the maximum height of the river was the lowest, with the exception of 1881, that has occurred for a long series of years. High freshes came down in the river late in the season, and thus, while the supply for the kharif crops was good, opportunity was afforded for preparing the land for a good rabi crop.

The figures for each crop on Government land were as follows; similar details are not given for jaghir land:

	Acres.
Kharif	1,648,586
Rabi	238,970

In the case of the four Major Works the area irrigated was 131,614 acres, and in the case of the seven Minor Works was 76,099 acres in excess of that contemplated when the projects were sanctioned.

7. The Commissioner in Sind in his remarks on the Superintending Engineer's report observes however that, "although the results of the season, judged from a revenue point of view, were excellent, the effect of the low inundation was very marked in many parts of the country, especially at the tails of the canals, where owing to the deficiency of the water-supply, the yield of the crops was light." There can be no doubt that much of the water-supply that might be made available runs to waste in consequence of the haphazard and unscientific manner in which the bed levels of the canals have been fixed and their sections excavated. It would seem that no proper system has hitherto been followed in this respect, as the connection between the bed-level of the heads of the various canals and the river-gauge at Bukkur has never been accurately determined. This is a matter to which the Superintending Engineer says attention will now be devoted, and it is imperative that an accurate knowledge regarding it should be arrived at without delay.

8. The revenue expenditure of the year on new works amounted to Rs. 1,29,555, of which Rs. 60,280 were for a new loop to the Jhali bund of the Ghar Canals. In para. 6 of his Report the Superintending Engineer puts forward a proposal to the effect that a lump sum of Rs. 1,20,000 shall be placed at his disposal annually subject only to the Commissioner's sanction for distribution as he deems best in extensions and improvements. He would thus avoid the delay and uncertainty which attend the submission of applications to the Government of Bombay and the allotment of special sums for each case so submitted, and he argues that what is required for the province is the certainty of a fixed annual grant which would permit of the improvement of many of the crudely designed canals by means of small well considered projects which would return cent per cent on the outlay. The Commissioner in Sind supports this proposal, which is not however accepted by the Government of Bombay. In the opinion of the Government of India the advantages of extending the policy of decentralisation in this respect, and of giving local officers power to decide small matters of this kind, are considerable. According to para. 57, Chapter III, Vol. I of the Public Works Department Code, Local Governments have power to invest Superintending Engineers, whenever it is thought desirable, with powers of sanction up to Rs. 10,000 for new works and to an unlimited amount within the budget allotment for repairs. As the Superintending Engineer in Sind appears to be vested in other respects with the powers of a Chief Engineer, there would be the less objection to extending to him the extreme powers of sanction authorised for a Superintending Engineer, and the Government of India would be glad if the Government of Bombay would reconsider its unfavourable reception of this proposal, and would endeavour to place a certain proportion of the annual allotment for extensions and improvements at the disposal of the Superintending Engineer, who would exercise his powers of sanction in communication with the Commissioner.

9. No details are given of the expenditure on repairs, the aggregate direct outlay on which for all works amounted to Rs. 8,77,070. The distribution of the

revenue expenditure, including collection charges in the Civil Department, is, as follows:

	1888-89.					1887-88.
	New Works and Repairs.	Establishment.	Tools and Plant.	Indirect charges.	Total.	Total.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
MAJOR WORKS.						
Desert Canal	18,633	20,697	106	1,181	40,617	50,925

MINOR WORKS AND NAVIGATION.						
Sukkur Canal	28,055	19,130	99	921	48,205	44,480
Ghar Canal	1,38,353	79,283	208	7,297	2,25,141	1,64,140
Mehrabwah	15,344	5,201	46	363	20,954	9,386
Alibhar Kacheri Canal	12,242	2,509	37	290	15,078	6,125
Marak Great Canal	12,873	7,774	38	916	21,601	18,559
Surfrazwah	13,228	4,805	40	313	18,386	12,174
Fuleli Canal	1,86,431	71,780	—244	4,861	2,62,828	2,53,049
TOTAL	5,28,668	3,47,509	483	24,609	9,01,269	7,59,936
Per acre irrigated	...	...	...	...	0.72	0.71
MINOR WORKS.						
Works of which only Revenue Accounts are kept	4,77,957	3,23,265	696	...	8,01,918	10,02,394
Per acre irrigated	...	...	...	...	0.92	1.22

The charges for establishment aggregate Rs. 6,70,774, which is distributed thus:

	Rs.
Major and Minor Works for which Capital and Revenue Accounts are kept. {	
Direction	26,543
Executive	1,21,214
Share of collection charges...	1,99,752
	3,47,509
Minor Works for which only Revenue Accounts are kept. {	
Direction	23,848
Executive	1,08,202
Share of collection charges	1,91,215
	3,23,265

In the case of Major Works alone the charge for Public Works establishment amounted to Rs. 68,914 for a works outlay of Rs. 1,22,142. The Government of Bombay remarks on the excessive nature of this charge, which appears to have been due to the late period of the year at which sanction for the Dimwah and Khipra Canal projects was received. The general percentage charge for establishment employed on maintenance and repairs, including revenue management, amounts to 28 per cent.

10. The remissions made during the year were small, amounting to only Rs. 47,828 for the kharif and to Rs. 15,217 for the rabi crop. The revenue collections were very good, less than one per cent. of the demand on Government land remaining unrealised, and the unrealised balance on jaghir lands being reduced from Rs. 94,813, at which it stood at the beginning of the year, to Rs. 38,387.

A special feature of this improvement was the reduction of outstandings in Khelat territory effected by the Political Agent. The outstandings on account of "hakaba" in Khelat which were Rs. 67,507 at the beginning of the year were reduced to Rs. 26,729 at its close, and payment of the whole of the balance, with the exception of an amount of Rs. 9,154 which was not due till after March 31st, had been arranged for.

11. In tables VI and VI-A appended to the report, the Superintending Engineer gives a column headed "Difference of assessment on jaghir lands." This is intended to show the benefit that would accrue to the irrigation revenue if the "hakaba" or water rate on jaghir lands were assessed at the same rate as the water rate on Government land. For the year under review this difference amounted to Rs. 4,09,418, and in the above mentioned tables, showing respectively the assessed and actual direct and indirect receipts, this amount is included. There is no objection to bringing prominently forward in the report the fact that if the canals got a full assessment from the jaghir lands they irrigate, their revenue would be increased by this amount of over four lacs of rupees, but hypothetical figures should be distinguished from actuals, and it would perhaps be better to omit column 6 from Statements VI and VI-A in future.

NOTE.—The difference of 4,600 acres between the totals of areas of crops irrigated and of land irrigated by flow and lift, has not been explained.

12. The area of the principal crops cultivated was as follows :

	Acres.
Jowari	397,624
Bajri	214,199
Rice	366,230
Other crops	310,771

The area irrigated per cubic foot per second of supply varied from 29.07 to 77.11 acres. The area irrigated by flow was 898,332 acres and by lift 395,092 acres.

13. The last class of works dealt with in the report are Agricultural Works, which mean the maintenance of the bunds put up to keep out the inundations of the Indus. The expenditure on these aggregated Rs. 63,763, divided as follows :

	Rs.
Kashmor Bund	60,169
Kasimpur Bund	1,325
Karachi Canals	2,269
	<u>63,763</u>

The charge for the Karachi Canals appears to be due to the cost of the Mathematical Instrument Depôt in Sind, but why this should be charged to agricultural works is not understood.

14. In para. 8 of the Superintending Engineer's report reference is made to the sale of occupancy rights in waste lands commanded by the Sind Canals. Under the orders of the Government of India, conveyed in letter No. 73A.I. of 21st

October 1889, the irrigation works are to be credited with four per cent. on the irrigation share of the price paid for occupancy. This share is nine-tenths of the total price. From Table VII B attached to the report it appears that the occupancy right in 27,144 acres has been sold, realising Rs. 60,617, or about Rs. 2 per acre. Of the amount realised, Rs. 54,565 is the irrigation share, on which four per cent. is Rs. 2,181. It does not appear that this has anywhere been credited in the accounts for the year, but the returns in connexion with these receipts are said to be incomplete, and the question should be properly dealt with in the report for 1889-90.

15. The miscellaneous revenue entered in column 4 of the statement in para. 3 is derived principally from plantations and fisheries. The Superintending Engineer in para. 24 of his report states that, except in one district, no charge is made for water used for plantations. The Commissioner in Sind observes with regard to this that the question will shortly be dealt with by the Revenue Department, and it is one that should not be lost sight of.

16. It is observed that in Statement I-C the amounts shown in columns 2 and 3 to 8 are for a different period to those shown in column 3; the former being the receipts for the official year ending 31st March, whereas the latter are the collections for the revenue year ending 31st July. It is believed that the Commissioner in Sind has expressed his ability to supply by the 1st June of each year the figures of actual receipts on account of the Canal share of land revenue to the 31st March, and it is suggested for the consideration of the Government of Bombay that in future returns these amounts so arrived at should be used for the purposes of this statement.

If the procedure above suggested be adopted, it will be possible for the Examiner of Public Works Accounts to submit the Administrative Accounts for Irrigation Works in Sind at a much earlier date than is now practicable, and probably also the Revenue Report may also be submitted at about the same time as that of the Bombay Presidency (excluding Sind). The report under review was received by the Government of India on the 22nd of April, which is more than five months after the due date.

ORDER.—Ordered, that a copy of this Resolution be forwarded to the Government of Bombay, in the Public Works Department, for information.

Ordered also, that a copy of this Resolution, of the Report, and of the Resolution by the Government of Bombay, be forwarded for information to the Governments noted in the margin in the Public Works Department, and that a copy of this Resolution, of the Report, and of the Resolution by the Government of Bombay, be forwarded to the Department of Finance and Commerce, and to the Revenue and Agricultural Department, for information.

Ordered further, that a copy of this Resolution, and of the Resolution by the Local Government, be published in the Supplement to the *Gazette of India*; and that copies of this Resolution be forwarded to Her Majesty's Secretary of State for India.

J. G. FORBES, Colonel, R.E.,
Deputy Secretary to the Government of India.

Enclosure to Public Works Department Resolution No. 97-I. of 1890.

No. 59W. I.—731, dated 15th April 1890.

RESOLUTION—By the Government of Bombay, Public Works Department.

Read—

Letter from the Superintending Engineer in Sind, No. 5358, dated 22nd December 1889, forwarding the annual Irrigation Revenue Report for 1888-89, with the usual Tables, Charts, and Index Map of Sind, and explaining the causes of delay in submitting it.

Memorandum from the Commissioner in Sind, No. 559, dated 14th February 1890, submitting the Report with his remarks.

RESOLUTION.—It is very satisfactory that the figures for 1888-89 show such a great improvement on those of the previous year, which, as remarked in the review of that year's report, was itself the best on record.

2. These results have been obtained in spite of an indifferent inundation, that of 1888 having been the lowest known since 1881.

3. The mileage of canals and river embankments was 5,916 and 613 respectively, against 5,827 and 610 respectively in the previous year. The increase under canals is due principally to the extension of branches on the Desert Canal and Eastern Nara Works.

4. The following table compares the cultivation and revenue with that of the previous year:

	1888-89.		1887-88.		Increase.	
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
CULTIVATION.						
Government lands ...	1,887,556		1,658,627		228,929	
Jaghir lands ...	231,079		217,487		13,592	
Total Cultivation ... Acres		2,118,635		1,876,114		242,521
REVENUE.						
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
<i>Treated in the Accounts as Indirect Revenue.</i>						
Consolidated land and water assessments ...	47,58,261		41,95,588		5,62,673	
Deduct—Remissions ...	63,045		61,987		1,108	
Net consolidated assessments ...		46,95,216		41,33,601		5,61,615
Deduct—Land share ...		4,69,519		4,13,360		56,159
Irrigation or water share of net consolidated assessments ...		42,25,697		37,20,291		5,05,406
<i>Revenue accounted for as Direct Receipts.</i>						
Assessments on Jaghir cultivation ...	1,37,455		1,18,235		19,160	
Deduct—Remissions ...		1,37,455		1,16,845		20,610
Miscellaneous receipts (actuals) ...		49,604		45,290		4,314
Total Canal Revenue (assessed) ...		44,12,756		38,82,426		5,30,330

The increase in cultivation amounted to 13½ per cent., and that in total canal revenue (assessed) to 13½ per cent. on the figures of the previous year.

5. The Superintending Engineer, comparing the inundation of 1888 with that of 1881, arrives at the conclusion that the quantity of the supply was much the same, and that, although the inundation of 1881 is only classed as favourable, the supply of 1888 must be classed as good when compared with the excellent results it has produced. The Commissioner in Sind observes that, although the results of the season, judged from a revenue point of view, were excellent, the effect of the low inundation was very marked in many parts of the country, especially at the tails of the canals, where, owing to the deficiency of the water-supply, the yield of the crops was light. The injury done was in most cases not sufficient to justify remissions, but the harvests were not first rate, and with such an inundation could not be expected to be so. The Commissioner elsewhere considers that the highly satisfactory revenue

results must be attributed to the greater care and attention which have of late years been given to the clearance and improvement of the canals. It appears indisputable that the satisfactory revenue results of the year, as respects the inundation canals, was in large measure due to the rise of the river in latter half of July and beginning of August, and again at the end of August, and to the gradual fall of the river at the end of the season.

6. The improvement was not confined to one district, but was fairly distributed. It was largest on the four works classed as Major Works, which together account for nearly 50 per cent. of the increase in cultivation on Government lands. The following table shows the comparison for each class of work:

	1887-88.	1888-89.	Increase.	Percentage.
Major Works ... { Cultivation. Acres	373,695	483,311	115,416	31
... { Revenue ... Rs.	6,89,408	9,02,742	2,13,274	31
Minor Works—				
Works for which Capital and Revenue Accounts are kept ... { Cultivation. Acres	526,394	601,970	75,576	14
... { Revenue ... Rs.	12,56,404	14,45,064	1,88,660	15
Works for which only Revenue Accounts are kept ... { Cultivation. Acres	749,385	792,595	43,210	6
... { Revenue ... Rs.	17,67,286	18,71,162	1,03,876	6
Bunds ... { Cultivation Acres	8,953	3,680	—273	...
... { Revenue ... Rs.	7,133	6,729	—404	...
Total ... { Cultivation. Acres	1,653,627	1,887,556	233,929	14
... { Revenue ... Rs.	37,20,291	42,25,697	5,05,406	14

7. The principal increase on works of the first class were on the Eastern Nara and Begari Canal. The canals of the Eastern Nara System worked well, and on the Begari the supply of water was good, and some of the Zemindari branch canals were improved.

8. Of the Minor Works for which Capital and Revenue Accounts are kept, the Ghar, Fuleli and Sukkur Canals showed the largest increases. That on the Ghar appears to have been due principally to the clearance of the Fordwah mouth: the supply in the Sukkur Canal was very good in the latter part of the season, and the rabi head was opened on 7th November, and worked well: the supply in the Fuleli was better than in the previous year.

9. The increase on the old canals for which Revenue Accounts only are kept was small in comparison with that on the other works. The largest increases on works of this class were—

	Increase in cultivation.	Revenue.
	Acres.	Rs.
Hyderabad Canals ...	18,507	31,217
Karachi Canals ...	7,499	11,762
Sind Canal ...	6,143	17,209

The Western Nara shows an increase in the Ghar Canals District of 4,160 acres and Rs. 17,209 revenue, and in the Karachi District an increase of 109 acres in cultivation and a decrease of Rs. 10,221 in revenue. The other canals in the Karachi District thus show an increase in cultivation of 7,390 acres and in revenue of Rs. 21,983. This increase was principally on the Pinyari, a high level canal, which, it is stated, was almost the only canal in the southern talukas which did not suffer from the low inundation.

10. The revenue of the year, based on realizations, was—

	Rs.
Irrigation share of land revenue collections ...	42,15,214
Jaghir receipts ...	1,94,135
Miscellaneous ...	49,604
Total actual receipts	44,58,953

showing an increase of Rs. 5,54,827 as compared with 1887-88, and of Rs. 7,71,741 as compared with the average of the previous five years.

11. Out of the total revenue, Rs. 47,30,651, for collection on Government lands, Rs. 46,83,568 were realized, leaving an outstanding balance of Rs. 47,083, or less than 1 per cent. only.

12. Under Jaghir, out of a total of Rs. 2,32,377 for collection, Rs. 1,93,890 were realized, leaving a balance of Rs. 38,387 as against Rs. 94,813 outstanding at the close of last year. This improvement is satisfactory, and it is further noted that, of the sum (Rs. 26,729) outstanding in Kelat, Rs. 10,125 were collected and paid soon after the year had closed, and the recovery of a further sum of Rs. 7,450 had been definitely arranged for by the Political Agent, Captain Temple, to whom the thanks of Government are due for his efforts to place the assessments and realizations in Kelat on a satisfactory footing. In this connection it is further satisfactory to notice that there were no remissions of the demand made for the irrigation of lands in Kelat territory.

13. The expenditure incurred during the year under all heads was as follows:

	DIRECT CHARGES.					INDIRECT CHARGES.			Revenue Collection.	Grand Total.
	Works.	Repairs.	Establishment.	Tools and Plant.	Total.	Leave and pension allowances.	Capitalization.	Total.		
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
CAPITAL.										
Major Works ...	92,352	...	21,500	441	1,14,302	3,011	...	3,011	...	1,17,313

14. The capital expenditure on Major Works was principally for widening the Desert Canal and for the enlargement and extension of the Dimwah, one of the canals of the Eastern Nara system, estimated to cost Rs. 67,712. On Minor Works the capital expended was principally on the provision of a head regulator to the Faleli Canal, which was commenced in October 1888, and has since been completed.

15. The outlay on new works, under the head "Extension and Improvements," included under Working Expenses, amounted to Rs. 1,32,558. Details thereof are given in para. 34 of the report, which explains the purpose of the several works.

16. The suggestion made in para. 6 of the Superintending Engineer's report that a fixed annual grant of Rs. 1,20,000 should be allotted in future for works of extension and improvement, which projects should be left entirely in the hands of the Revenue and Irrigational Officers of the Province, is recommended by the Commissioner in Sind, but does not commend itself to Government. In the first place, it would be to the detriment of the Province, as Government have always shown themselves ready to at once sanction any well considered

* Includes Rs. 18 shown as refunds of revenue.

scheme of the character referred to, and the average expenditure under that head is shown (Table G (2)) to have considerably exceeded the suggested amount. In the next place, it is extremely undesirable to remove any check on the scrutiny of projects of the kind. They are at present submitted through the Commissioner, and Government have the advantage of his opinion, and are able to consider and weigh the merits of all such schemes which are often of a somewhat intricate character, and experience of the past is altogether against any relaxation of the control which Government now exercise.

17. The expenditure on repairs, as compared with the normal estimate of requirements under that head, was—

	Expenditure.	Normal Estimate.	Less.	More.
	Rs.	Rs.	Rs.	Rs.
Major Works ...	1,22,142	1,31,000	8,858	...
Minor Works—				
Canals ...	6,81,018	6,46,000	...	35,018
Bunds ...	1,17,293	1,23,000	5,707	...
TOTAL ...	9,20,449	9,00,000	...	20,449

These figures give satisfactory evidence of the attention paid to the clearance and repair of the canals. Although it is stated that the normal grant is and will be sufficient for some years to come, yet, inasmuch as experience shows that a grant of Rs. 1,24,000 in place of Rs. 1,31,000 is sufficient for the repair of Major Works, it is argued that the difference of Rs. 7,000 should be added to the grant for Minor Works. The two matters appear to have no connection: it is a mistake to refer to the difference as, in any sense, a 'saving,' and the fact that the requirements are less than estimated under one head cannot be deemed a reason for an increase in the estimate under the other.

18. Under Establishment, the total charge amounted to Rs. 3,25,805 against Rs. 3,41,492 in the previous year. The reduction is mainly due to the saving of Rs. 30,929 under Direction, owing to the revision of the establishment in the Presidency generally, as explained in para. 38 of the report. The charges for establishment debited to the Working Expenses of the Major Works are very heavy. Partial explanation thereof is given in para. 37 of the report, but it calls for some further enquiry, as the establishments would appear to be larger than is justifiable.

19. The financial results of the four Major Works for the year are as follows:

	DURING THE YEAR.			TO END OF THE YEAR.		
	Direct.	Indirect.	Total.	Direct.	Indirect.	Total.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Capital Outlay ...	1,14,302	3,011	1,17,313	81,48,920	2,79,472	84,28,392
Gross Revenue ...	1,38,184	8,94,954	10,33,138	...	...	...
Deduct—						
Previous net Revenue...	...	28,300	28,300	...	...	...
	1,38,184	8,66,654	10,04,838	10,89,931	1,01,58,255	1,12,48,186
Working Expenses ...	2,79,428	9,684	2,89,076	48,79,410	1,75,816	50,55,226
Net Revenue ...		7,15,762			61,87,960	
Simple Interest ...		3,23,670			60,68,886	
Net profit after paying interest...		3,92,092			11,19,074	
Add difference of assessment on Jaghir Lands		84,909			5,07,358	
Total Profit ...		4,77,001			16,26,432	

The net profit during the year, after paying interest, was Rs. 3,92,092 as compared with Rs. 1,91,015 in 1887-88 and with Rs. 1,36,908 in 1886-87, and this result must be regarded as highly satisfactory. If the difference on account of assessment on Jaghir lands is added, the net profit, after paying interest, was Rs. 4,77,001, or 5.66 per cent. on the gross capital outlay to the end of the year.

The increase in gross revenue as compared with the previous year was nearly 34 per cent.

The working expenses, Rs. 2,89,076, amounted to nearly 29 per cent. of the gross revenue, Rs. 10,04,838.

20. The Minor Works for which Capital and Revenue Accounts are kept show the following results as compared with the previous year :

	1887-88.	1888-89.	Increase.
	Rs.	Rs.	Rs.
Capital Outlay to end of year ...	32,11,184	32,73,637	62,453
Gross Revenue ...	13,00,498	14,99,392	1,98,894
Deduct previous Net Revenue ...	3,74,707	3,74,707	...
	9,25,791	11,24,685	1,98,894
Working Expenses ...	5,07,832	6,12,211	1,04,279
Net Revenue ...	4,17,859	5,12,474	94,615
Add difference of assessment on Jaghir Lands ...	1,73,186	1,73,222	36
	5,91,045	6,85,696	94,651

The net profit on the Capital outlay to the end of year on the works of this class thus amounted to 15.7 per cent. excluding, and to 21 per cent. including, the difference of assessment on Jaghir lands.

The increase in gross revenue amounted to 21 per cent. on the previous year.

The working expenses, Rs. 6,12,211, amounted to 40 per cent. of the gross revenue, Rs. 14,99,392.

21. The class, Works for which only Revenue Accounts are kept, gave the following results :

	1887-88.	1888-89.	Increase.
	Rs.	Rs.	Rs.
Gross Revenue ...	18,16,712	19,19,572	1,02,860
Working Expenses ...	10,02,394	8,01,918	2,00,476
Net Revenue ...	8,14,318	11,17,654	3,03,336

The working expenses here show a large reduction on those of the previous year, the principal reduction being in the outlay in the Karachi District.

The increase in gross revenue amounted to less than 6 per cent. in the previous year.

The working expenses, Rs. 8,01,918, amounted to 42 per cent. of the gross revenue.

As regards the Karachi Canals, an incorrect idea of the value of the works in that district is obtained by including therein the Western Nara. This work, with the portion thereof situated in the Shikarpur District, has now been formed into a separate Executive charge,

and the figures of revenue and expenditure pertaining to it will henceforth be separately exhibited. The other canals in the Karachi District gave the following results for the last six years :

	Cultivation.	Revenue.	Expenditure.	Net Revenue.
	Acres.	Rs.	Rs.	Rs.
1883-84 ...	147,045	3,15,102	3,37,368	-22,266
1884-85 ...	159,629	3,68,138	2,76,628	91,510
1885-86 ...	164,246	3,70,163	2,76,216	93,947
1886-87 ...	170,412	3,77,932	2,87,912	90,020
1887-88 ...	178,615	3,98,818	3,92,851	5,967
1888-89 ...	186,005	4,20,801	2,19,449	1,01,352

The cultivation and revenue show steady improvement, but the expenditure (which includes that on new works) previous to 1888-89 was out of all proportion to the revenue. For the five years ending 1887-88 it amounted to 86 per cent. of the revenue, while in 1888-89 it amounted to 52 per cent., which is still very high. The expenditure on new works in the five years ending 1887-88 amounted to Rs. 3,04,698, of which Rs. 2,45,564 was on river embankments and Rs. 59,134 on the canals. In the same period the expenditure on repairs has been Rs. 10,79,219, of which Rs. 3,68,503 was on river embankments and Rs. 7,10,626 on canals. The outlay on the construction and the repair of the bunds was thus very considerable, and the matter requires full enquiry, which has been ordered in para. 23 of Government Resolution No. 51 W. I.—721, dated 31st March 1890.

22. Under the head Agricultural Works for which neither Capital nor Revenue Accounts are kept, the figures compare with those of the previous year as follows :

	1887-88.	1888-89.
	Rs.	Rs.
Outlay—		
Original Works ...	52,035	3,003
Repairs ...	40,165	43,361
Establishment and Tools and Plant ...	19,595	16,736
Collection Charges ...	696	663
	1,12,491	63,763

The decrease is in Original Works, and is due to no fresh loop being required to either the Kashmir or Kassimpur bund.

The receipts under this head were—

	1887-88.	1888-89.
	Rs.	Rs.
Direct ...	254	217
Indirect ...	6,958	6,634
	7,212	6,851

23. Recapitulating the results of the year under all heads, they were as follows :

	Gross Revenue.	Working Expenses.	Percentage.	Net Revenue.
	Rs.	Rs.		Rs.
Major Works ...	10,33,138	2,89,076	29	7,44,062
Minor Works—				
Works for which Capital and Revenue Accounts are kept ...	14,99,392	6,12,211	40	8,87,181
Works for which only Revenue Accounts are kept ...	19,19,572	8,01,918	42	11,17,654
Agricultural Works ...	6,851	63,763	...	-56,912
TOTAL ...	44,58,953	17,66,968	39	26,91,985

This table disregards the deduction made in the administrative accounts on account of the previous net revenue, for the purpose of determining the financial results of capital expenditure in those cases where such has been incurred in the enlargement and extension of works

previously existing. It agrees with Table I of the Superintending Engineer's report, thus:

	Rs.
Net revenue therein shown	23,45,890
Add deduction on account of previous Net Revenue	4,03,007
	27,48,897
Deduct loss on Agricultural Works not included in Table I	56,912
	26,91,985

The net revenue in the previous year on the same basis amounted to Rs. 20,38,559, and there is thus an improvement of Rs. 6,53,426, or 32 per cent.

24. It remains to refer to the several suggestions made in the report. The remarks in paras. 3 and 4 of Mr. Lambert's report are of great interest, and in reference thereto the comments of the Acting Commissioner appear sound. The subject will well repay study, and the collection of data and future discussion will no doubt aid in a practical conclusion being arrived at. The project referred to as the Jacob Canal is now before Government, and will receive due consideration. The question of debiting the cost of the Jheli Bund to the Ghar Canal was decided so long ago as 1873 (Government Resolution No. 148 I.—793, dated 4th April 1873): if there are good grounds for a reconsideration of this order, they should be separately reported. Similarly, the suggestion that the Alibhar Kacheri Canal should be removed from the return of Canals for which Capital and Revenue Accounts are kept, is in effect a suggestion that a previous decision of Government (Government Resolution No. 114 A. I.—458, dated 20th August 1881) should be reversed, and is one which can only be considered on receipt of a special report. The proposition that the Revenue Accounts of works of the class for which no Capital Accounts are kept should show credits for the receipts from sales of occupancy of land under them on the same principles as apply in the case of Capital Account works, is sound and may be acted upon.

25. The subject of the loss to the canals by the difference between the Hakaba levied on Jaghir cultivation and the Government rates is again commented upon, but no practical steps appear to have been taken in the matter. The Revenue Department should be invited to give the matter early consideration, and also the question of the assessment of babul groves.

26. The suggestions in para. 2 of the Commissioner's report regarding the means to be adopted for overcoming the difficulties in the way of an earlier submission of the Revenue Report, will be separately dealt with. The report now under review was submitted by the Superintending Engineer on 22nd December 1889, and reached Government on 21st February 1890. It was received from the Press on 7th March 1890. Its disposal has been delayed by the pressure of other important work.

27. Government concur with the Commissioner in Sind in the opinion that Mr. Lambert and the Irrigational Officers in Sind deserve credit for the year's operations.

SUPPLEMENT TO

The Gazette of India.

No. 25.]

CALCUTTA, SATURDAY, JUNE 21, 1890.

OFFICIAL PAPERS.

A SUPPLEMENT to the GAZETTE OF INDIA will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in PART VI of the GAZETTE.

Non-Subscribers to the GAZETTE may receive the SUPPLEMENT separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The SUPPLEMENT and PART VI of the GAZETTE can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA is required by Law, or which it has been customary to publish in the CALCUTTA GAZETTE, will be included in the SUPPLEMENT. For such Orders and Notifications the body of the GAZETTE must be looked to.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on
Monday, June 16th, 1890.

During the week under review conditions over India have been very similar to those prevailing last week. The monsoon current has been irregular and variable on the West Coast and weak on the Bengal side, and there has been no decided extension of rainfall. There have been some small falls over the central parts of the country and scattered showers have occurred in Upper India, but the principal rainfall has, as was the case last week, been confined to the West Coast regions and to North-Eastern India. The weather has again been unsettled off the North Konkan Coast and a slight cyclonic circulation has prevailed, but the abnormal depression of the barometer there was slight and the area of unsettled conditions soon moved away westward or filled up.

The chart of the 10th showed a low pressure area over Sind and a second over the North-West Provinces, while readings were high in Mysore and Malabar and in Tenasserim; gradients were moderate. The wind was variable on the West Coast, southerly to easterly over Bengal, Burma and the Gangetic plain, and westerly in most other places. It blew strongly across Sind, Guzerat and Central India, but was below the normal monsoon force elsewhere. Rain had fallen generally over the Peninsula, Burma, Assam and Bengal, and scattered thundershowers had occurred at the central stations and in North-West India. On the 11th the depression over the North-West Provinces had disappeared, but otherwise the distribution was little changed, and the winds were practically unaltered. Rain was again general in Burma, Bengal and on the West Coast, with scattered showers in other parts of the country. On the 12th pressure was very uniform over the northern and central parts of India, but moderate gradients prevailed in the neighbourhood of the high pressure areas in the south of the Peninsula and in Tenasserim. The winds were unchanged. Rain had again extended all over the Peninsula and was still general all over Burma, Assam and Bengal. In other parts of India there was very little. On the 13th pressure was falling briskly in the North-West, and the uniformity noticed on the previous day had given place to moderate gradients. Calms and variable breezes prevailed in the North-West, but otherwise there was little change in the winds. The distribution of rainfall was the same as that on the 12th. The chart of the 14th showed that the barometer had fallen rapidly in the North-West and the distribution approximated closely to the ordinary monsoon distribution, but the rainfall area had decreased somewhat and, except in Burma, Bengal and on the West Coast, there was very little rain. By the morning of the 15th rain had again extended right across the Peninsula, but there was little other change to record. The chart of the 16th showed that a well defined depression had been formed within the low pressure area over the Punjab. The wind had shifted round to west-south-west at Bombay, and there had occurred an extension of rainfall into the Central Provinces. Rain was general over the Peninsula and in Burma, while thunderstorms had occurred over the North-West Himalayas and few showers in Bengal.

Temperature.—The cool period which had commenced last week continued on the mean of the whole of India until the 13th, when a rise set in and lasted until the close of the week. The warmest day was the 15th, the coolest the 11th. On the former date Bengal, Bombay and Madras were the only Provinces reporting any deficiency; on the latter Burma, Bombay and Madras were the only Provinces reporting an excess. Burma, Sind and Rajputana had warmer weather than usual throughout the week, while the other Provinces experienced a low temperature at the commencement and a high temperature at the close of the week.

The following table shows the variations of the mean temperature from the normal according to Provinces for the present and for the past weeks:

PROVINCES.	Variation of Temperature from Normal for Past Week.	Variation of Temperature from Normal for Present Week.
Burma	+ 0.8°	+ 1.1°
Bengal	— 0.3°	— 0.9°
North-West Provinces	+ 3.4°	— 0.5°
Punjab	+ 5.0°	— 1.8°
Bombay	— 1.0°	— 1.0°
Central Provinces	— 0.1°	— 0.3°
Guzerat and Central India	+ 0.3°	+ 0.9°
Sind and Rajputana	+ 2.3°	+ 2.6°
Madras	+ 0.6°	— 1.1°

These figures show a considerable fall of temperature in North-Western India and relatively little change elsewhere.

The maxima of the past week were not remarkable:

On June 10th Jacobabad reported	109.8°
" " 11th Jacobabad "	111.8°
" " 12th Jacobabad "	114.2°
" " 13th Jacobabad "	114.7°
" " 14th Jacobabad "	119.5°
" " 15th Jacobabad "	120.5°
" " 16th Montgomery "	121.4°

The maximum temperature hence increased slowly and was at its highest at the end of the week.

Rain has fallen in all the divisions of India except Sind, though in several of the north-western divisions the amount received has been small. As mentioned above, the monsoon currents on both sides of India have been weak and rather irregular, but, with an exception which will afterwards be noticed, the general distribution of rainfall has been fairly normal. The actual heaviest amounts (between 7 and 8 inches) were received on the West Coast of the Peninsula, in Tenasserim and in Assam, and from these regions of maximum precipitation the rainfall steadily decreased and was least over North-Western India. Relatively to the average however, the rainfall of the week has been rather irregular. The third column of the following table shows that over the greater part of the country the fall has been less than the normal. The regions of most remarkable deficiency are Arakan, East and North Bengal, and the North-West Provinces and Coorg, while the regions of important excess are the centre and east of the Peninsula and some of the Punjab divisions. Although the monsoon current was so irregular on the West Coast, a strong westerly wind prevailed across other parts of the Peninsula, carrying much moisture with it, which was deposited over the Deccan and the East Coast. In Northern India the current, though very weak in force, penetrated well up the Gangetic plain and into the Punjab. In the earlier part of its course it apparently passed on uninterruptedly and in consequence occasioned very little rain, but in the Punjab local conditions occasioned much local disturbance and heavy showers and storms were the result.

The final column of the table shows the state of the rainfall between the end of May and the present date. There has been an excess in Assam, North Bengal, Orissa, the submontane and north-western divisions of the Punjab, the Konkan, and most of the Madras and Deccan divisions.

The returns of maximum falls exhibit but few very large amounts. In Burma Thaton (Amherst) received 9½ inches; in Bengal and Assam, Fenny (Noakhally) and Kisharegunj received 8 inches; Dhubri, 11½ inches; Gungajulhoti (Bankoora), 7 inches; Alipore (Jalpaiguri), 14 inches; and one station in Purneah, 7 inches. In North-Western India the falls were of course lighter, but Pilibhit received 3½ inches; Baheri (Bareilly), 2½ inches; Naini Tal, 4½ inches; Padrauna (Gorakhpur), 5 inches; and Ferozepore, 2½ inches.

The heaviest amounts throughout India were recorded in the western divisions of the Peninsula, thus:—Tellicherry received 16 inches; Kasaragad, 13½ inches; Devala (Nilgiris), 8½ inches; Honawar, 16½ inches; Ratnagiri, 12½ inches; Colaba, 11½ inches; Kurla (Tháná), 11 inches. In the Deccan and Khandish the heaviest falls were 12 inches at Hatkalung (Kolhapur) and 12½ inches at Nangaon (Nasik). In the central parts of the country and Guzerat the maximum falls were generally between 2 and 6 inches and were somewhat smaller than usual. In the eastern half of the Peninsula the heaviest fall was 7½ inches at Narsapur (Godavery); but amounts of between 3 and 5 inches were general.

W. L. DALLAS,

SIMLA, 19th June, 1890.

Assistant Meteorological Reporter to the
Government of India.

W. C. BENETT,

Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 14th June.*—Rainfall good in South Kanara; fair in Malabar; moderate in eleven districts; and slight elsewhere. Standing crops good, but suffering from want of water in parts of seven districts. Crops blighted in parts of Kalahasti division in North Arcot. Outturn of sugarcane good. Paddy, *cholum* and *ragi* middling to average. Cotton and indigo poor in parts. Pasture and water-supply generally insufficient. Prices nearly stationary. Prospects fair.

Bombay.—*For week ending 18th June.*—Rain throughout Presidency proper. Ploughing and sowing operations progressing generally. Fodder sufficient and agricultural stock healthy.

Bengal.—*For week ending 17th June.*—Rainfall general; light in South Behar and Chota Nagpur; heavier in the northern districts. Crops are reported to have suffered in Rungpore. Early rice coming up well and still being sown in some districts. Ploughing and sowing of late rice in progress in Behar. *Bhadai* sowings general and winter rice cultivation begun. Prospects of jute, sugarcane and indigo generally promising. Prices of rice have been stationary in almost all districts. In Balasore attendance on relief works steadily falling, the daily average for the past week being 133.

North-Western Provinces and Oudh.—*For week ending 18th June.*—Weather hot and cloudy, with easterly winds. Rain has fallen in most districts. Sugarcane and indigo and extra crops in good condition. Ploughing for *kharif* progressing. Locusts are reported to have appeared in the Rae Bareilly and Agra districts, but no damage was done. Markets continue to be well supplied, but prices have risen slightly in eleven districts and are still high in Kumaun.

Punjab.—*For week ending 18th June.*—Good rainfall in Lahore and Rawalpindi and slight fall in Hissar and Shahpur; in other districts no rain. Prices fluctuating at Delhi; rising at Rawalpindi and Peshawar; elsewhere stationary. Harvesting and threshing nearly over. Prospects of *kharif* crops good at Amritsar and Lahore, average at Peshawar and fair at Dera Ismail Khan. Fodder scarce at Hissar, Delhi and Shahpur; insufficient at Jullundur and Multan; average at Dera Ismail Khan; elsewhere sufficient.

Central Provinces.—*For week ending 18th June.*—Weather cloudy and warm, with showers of rain in almost every district. Land being prepared for autumn sowings which have commenced in some districts. Prices stationary.

Burma.—*For week ending 14th June.*—The rainfall throughout Lower Burma was sufficient; in Upper Burma the rainfall was heavy in Bhamo, Ruby Mines and the Upper Chindwin districts and moderate in Katha, Minbu and Pynmana; elsewhere but little rain fell. Ploughing is progressing favourably. The price of paddy has fallen in one district and has risen in ten districts.

Assam.—*For week ending 18th June.*—Weather wet. Sowing of winter paddy continues. Early rice and tea doing well.

Mysore and Coorg.—*For week ending 18th June.*—Rainfall general in Mysore during the week, and good in Bangalore. Crops in good condition. Sowing operations commenced in parts. Prospects generally favourable. Prices fallen in the Bangalore district.

Rainfall heavy in Coorg. Prospects good.

Berar and Hyderabad.—*For week ending 18th June.*—Average rainfall slightly over 2 inches in Berar. Weather warm. Water scarce in the Wun district. Fodder insufficient in Darwha and Kelapur taluks. Preparation of land for sowing of *kharif* crops has been completed. Cotton sowing completed in some places. Prices of food-grains stationary.

Rainfall fair in Hyderabad during the week. Ploughing for sowing of *kharif* crops commenced. Prices stationary.

Central India.—*For week ending 18th June.*—Rain during the week in all parts of Central India, except in the Gwalior and Goona Agencies; heaviest in Bhopawar and Western Malwa, where sowing operations commenced. Condition of agricultural stock and pasturage in Goona Agency reported indifferent. Prices rising in Neemuch.

Rajputana.—*For week ending 18th June.*—Good rain in Abu and Kherwara; moderate in Sirohi, Pertabgarh, Jhallawar, Tonk, and Shahpura; slight in Marwar, Ajmere, Jeypore and in parts of Ulwar. Agricultural operations commenced generally. Agricultural stock good. Pasturage or fodder sufficient, except in Marwar, Meywar and parts of Jeypore and Ulwar. Prices falling in Meywar; rising in Kerowlee; high and fluctuating in Jeypore; steady elsewhere.

Nepal.—*For week ending 18th June.*—Good rainfall during the week. State and prospects of crops good.

W. C. BENETT,

Offg. Secretary to the Government of India.

Under-Secretary.

SIMLA, 19th June, 1890.

SUPPLEMENT TO The Gazette of India.

No. 26. } CALCUTTA, SATURDAY, JUNE 28, 1890.

OFFICIAL PAPERS.

A SUPPLEMENT to the GAZETTE OF INDIA will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in PART VI of the GAZETTE.
Non-Subscribers to the GAZETTE may receive the SUPPLEMENT separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The SUPPLEMENT and PART VI of the GAZETTE can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.
No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA is required by Law, or which it has been customary to publish in the CALCUTTA GAZETTE, will be included in the SUPPLEMENT. For such Orders and Notifications the body of the GAZETTE must be looked to.

General in Council accepts this view and directs that the Histories be in future prepared in the form appended to this Resolution.

3. The general opinion is that only privilege leave taken since an officer last returned from furlough need be shown in the Histories. This view has the concurrence of the Government of India.

4. Though there is some difference of opinion with regard to the entry of acting appointments, the view most generally accepted is that an acting promotion which involves a change of duties should be shown, but that grade promotions should be omitted. This view appears to the Governor General in Council to be reasonable, but, inasmuch as the Histories include a notice of the services of all Gazetted Officers in Civil Departments, it cannot be brought into practice without some modification. While therefore the appointment of an Assistant Magistrate and Collector or of an Assistant Engineer 2nd grade to officiate as a Joint Magistrate and Collector or an Assistant Engineer 1st grade respectively should not be entered, it will be desirable in the case of members of services which, like the Financial and Educational Departments, consist mainly of grades, the duties of which are not separate and distinct, to enter all acting promotions.

5. Particulars of literary works should be entered in notes at foot of the tabular statements. This information will have to be specially supplied to the Account Offices by officers who have produced literary works, and a note requesting them to communicate such intelligence to the Account Office should be prefixed to each History. The Government of the Punjab is of opinion that the numbers and dates of any official letters in which officers have received the special thanks of Government or the Secretary of State should be added as footnotes, and that the tabular statement should show in italics appointments to and promotions in Orders, such as C. S. I., C. I. E., and C. M. G. The Governor General in Council fears that it would be very difficult to distinguish between ordinary and special commendations, and considers that it would be preferable to omit mention of them altogether, lest the bulk of the Histories should be unnecessarily increased. Information in regard to the different Orders should, as suggested by the Punjab Government, be given in italics.

6. The Punjab Government has hitherto provided for the inclusion in the Histories for that Province of information showing (a) the place of education and academical degree, if any, in the case of European and Eurasian officers; (b) caste, tribe, home of the family if in India; and academical degree, if any, in the case of native officers. There is no objection to the inclusion of this information in the Histories for that or any other Province in which the Local Government or Administration considers it desirable, but no other additions to the information contained in them should be made without the approval of the Government of India.

ORDER.—Ordered, that a copy of this Resolution be forwarded to all Local Governments and Administrations for information and guidance; that a copy be forwarded to all Departments of the Government of India for information; and that it be published in the *Gazette of India* for general information.

[True Extract.]

C. J. LYALL,
Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Summary for May 1890.

General Weather conditions of the month.—This month is usually the last month of the hot weather period in Northern India and completes the temperature and pressure conditions essential to the establishment of the south-west monsoon. The area of maximum temperature at the commencement of the month usually includes the Central Provinces, Berar, and the eastern districts of the North-Western Provinces. Temperature at this time increases more rapidly in North-West India than elsewhere, and the area of highest temperature is usually transferred to Sind, the South-West Punjab, and West Rajputana before the end of the second or third week of the month. This area continues to be the area of maximum temperature in India until the month of September or during the whole of the south-west monsoon rains. The highest temperatures of the year in India are usually observed in the last week of May.

A fairly steady decrease of pressure in Upper and Central India (greatest in amount in the Punjab and Sind) accompanies the rapid increase of temperature in these districts in May. Pressure is usually slightly lower in Upper or Northern India than elsewhere at the beginning of the month. The large fall in that area during the month establishes the baric gradients necessary for the extension of the south-east trade winds across the equator and their continuance northwards into India as the south-west monsoon winds.

Usually one or two feeble advances of these humid winds occur during May which give moderate rain to Ceylon, Malabar, and to Tenasserim. The great advance however does not generally take place until the end of May or the beginning of June. This forms what is known as the setting in of the south-west monsoon. Over the whole of Central and Northern India the weather is generally very hot and dry, but hot weather storms occasionally occur and sometimes give very heavy showers—more especially in Bengal and Assam, and in and near the hills in Behar and the North-West Provinces. In Bengal and Assam the amount of rain received from the local thunderstorms is sometimes very considerable, and the showery weather of May occasionally merges at the end of the month almost imperceptibly into the rains of the south-west monsoon.

Temperature.—The past month has been marked by excessive temperature over nearly the whole of the country and also by very large fluctuations of temperature—more especially in Bengal, Behar, the eastern districts of the North-Western Provinces, and the coast districts of Madras from Coconada to Madras. The following table gives the average maximum, minimum and mean temperatures of the month, and the variations of these averages from their normal values of the month, in different parts of India:

PROVINCE.	Mean monthly maximum.	Variation from normal.	Mean monthly minimum.	Variation from normal.	Monthly mean.	Variation from normal.
Burmah	93.1	-1.8	76.2	-0.3	84.2	-1.1
Bengal	94.8	+1.1	77.1	+0.9	86.0	+1.0
Assam	88.1	+1.3	73.1	+1.0	80.6	+1.2
North-Western Provinces	105.9	+1.9	79.1	+1.2	92.5	+1.6
Punjab	104.2	+1.3	75.1	+1.4	89.7	+1.4
Sind and Rajputana	104.6	+0.7	78.6	+1.1	91.6	+0.9
Central India	106.6	+1.1	77.4	+0.6	92.0	+0.9
Central Provinces	108.4	+2.2	80.8	+1.6	94.6	+1.9
Bombay	95.0	+1.0	76.3	-0.1	85.7	+0.5
Madras	100.1	+1.6	79.9	+1.0	90.0	+1.3

Temperature was above the normal at the beginning of the month in all districts, except Upper India, where it was considerably in defect in consequence of rainfall during the last week of April. The highest temperatures were recorded during the first week of the month in Berar, the Central Provinces, and the eastern districts of the North-West Provinces, where the day temperature ranged between 110° and 115°. Temperature was abnormally excessive in Bengal and Madras at this time. The great heat in Bengal was due to the unusually dry weather which prevailed in that area, in consequence of the indraught to the depression and cyclonic storm which formed in the Bay during the first week of the month and passed into Burmah on the 8th. The following table gives the variations of the maximum temperature from the normal at representative stations in Bengal, Behar and Assam during this period:

	VARIATION OF MAXIMUM TEMPERATURE FROM NORMAL ON								
	4th.	5th.	6th.	7th.	8th.	9th.	10th.	11th.	12th.
Calcutta	+3.6	+6.8	+10.7	+12.2	+13.3	+5.7	+10.0	+5.1	+3.9
Burdwan	+12.0	+10.6	+11.9	+12.2	+12.5	+13.6	+10.9	+10.8	+7.9
Sibsagar	+9.0	+9.2	+11.2	+0.7	+6.4	-1.2	-6.0	-1.4	-0.8
Patna	+11.3	+11.8	+13.0	+10.0	+12.9	+15.4	+10.1	+7.5	+7.8
Hazariabagh	+7.2	+7.4	+7.8	+4.1	+7.1	+8.8	+4.1	+5.8	+9.2

Thundershowers and nor'-westers occurred almost daily in Assam, Bengal, and Behar from the 13th to the end of the month. Temperature was reduced below the normal on the 14th, and was low during the remainder of the month.

The indraught to the area of depression gave north-west winds to the Madras Coast stations during the same period. These winds descend from the East Ghats, and hence are not only hot and dry but are heated by the act of descent, and in this respect resemble the Föhn winds of Switzerland. When these descending hot winds prevail on the Madras Coast, as was the case in the second week of the past month, abnormally high temperatures are recorded at the coast stations of Masulipatam, Nellore, and Madras. For example, the maximum temperature at Masulipatam on the 11th was 113.7°, and was the highest recorded on that day over India. The following gives the variations of the day temperature from the normal during this period at Masulipatam and Madras and also at the nearest inland stations for comparison. It will be seen that the hot period terminated about the same time as in Bengal:

	VARIATION OF MAXIMUM TEMPERATURE FROM NORMAL ON								
	6th.	7th.	8th.	9th.	10th.	11th.	12th.	13th.	14th.
Masulipatam	+2.7	+2.3	+11.6	+16.1	+13.9	+15.4	+12.9	+0.8	-4.6
Secunderabad	+5.0	+5.9	+5.5	+4.6	+2.6	+4.3	+3.9	+3.9	+4.0
Madras	+3.4	+12.6	+12.6	+13.6	+11.9	+11.8	+9.4	+6.5	+0.3
Bangalore	-2.2	-0.3	-1.6	-0.3	+0.3	+0.3	+2.7	-1.0	+3.9
Bellary	-2.7	-0.5	-1.9	-1.2	-3.1	-2.4	-1.5	+1.3	+3.5

The seat of maximum temperature was transferred on the 9th to Sind, the South-West Punjab, and West Rajputana. From the 9th to the 21st the day temperature in that area ranged from 110° to 116°, and temperature was generally above the average during this period over the whole of India except in Bengal and Burmah. A rapid increase of temperature occurred between the 22nd and 25th, and on the latter day the highest temperature of the month (and probably of the year) was recorded at Jacobabad, *viz.*, 122.5°.

The following gives the highest temperatures of the previous four years and the dates of their occurrence :

Year.	Date.	Station.	The highest maximum temperature.
1886	25th May	Pachpadra	123°1'
1887	20th May	Jacobabad	122°4'
1888	27th May	Jacobabad	123°0'
1889	1st June	Jacobabad	123°5'

The following table gives the variation of the day temperature at representative stations in this hot area from the 21st to 27th and on the 31st for comparison :

	VARIATION OF MAXIMUM TEMPERATURE FROM NORMAL ON							
	21st.	22nd.	23rd.	24th.	25th.	26th.	27th.	31st.
Jacobabad	+2°4'	+5°7'	+9°6'	+10°6'	+10°6'	+8°1'	+7°4'	+1°6'
Mooltan	+2°9'	+7°1'	+11°2'	+13°1'	+13°5'	+14°8'	+8°3'	+0°5'
Peshawar	+0°1'	+5°4'	+9°2'	+10°2'	+11°5'	+7°7'	+5°5'	+2°2'
Lahore	—0°1'	+2°4'	+6°7'	+7°4'	+9°3'	+9°6'	+3°5'	+0°4'
Deesa	+3°9'	+4°3'	+6°0'	+6°5'	+3°0'	—1°0'	—3°4'	—1°4'

The effect of rainfall in reducing temperature was strikingly shown during the cyclonic storm in Burmah. Thus the maximum temperature at Tounghoo on the 8th was 18°3' below the normal and at Thayetmio 23°3' below it, whilst only two days previously it was 2° to 4° above it over the whole of Lower Burmah.

The following table gives the variations of the mean temperature from the normal, week by week, during the month in the larger Provinces :

PROVINCE.	DIFFERENCE OF MEAN TEMPERATURE FROM NORMAL FOR WEEK ENDING					Difference of mean temperature from the normal for the month.
	5th May.	12th May.	19th May.	26th May.	2nd June.

Pressure.—The mean pressure of the whole of India was '020" below the normal. The following table gives the variations of the mean pressure of the month in each district from the normal and the anomalies relative to the general condition of the deficient pressure common to the whole of India :

DISTRICT.	Variation of mean pressure of month from normal.	Pressure anomaly.
Burmah	—'034	—'014
Bengal	—'036	—'016
Assam	—'035	—'015
Behar	—'025	—'005
North-Western Provinces	—'025	—'005
Punjab	—'027	—'007
Sind and Rajputana	—'012	+ '008
Central India	—'001	+ '020
Central Provinces	—'014	+ '006
Madras	—'028	—'008
Bombay	+ '010	+ '030

The chief features of the distribution of pressure during the month of May were—

(1) Pressure was relatively to the general condition in defect to the north and east of a line running through Jacobabad, Jeypore, Nagpore, and Bangalore. The depression was small in amount in the greater part of the area, but exceeded '02" at the following stations :

Diamond Island	—'028	Dinajpore	—'021
Akyab	—'026	Gopalpore	—'022
Chittagong	—'025	Secunderabad	—'022
Burdwan	—'022		

Hence pressure was almost certainly most deficient over the centre and north of the Bay. This area of low pressure is probably the continuation of the low pressure area existing in Bengal during the previous four months. If this be the case, it extended southwards temporarily in May, but will probably shift to its former position next month.

(2) Pressure was in excess to the west of the line defined above. The positive anomalies were very large for stations in Bombay and the eastern districts of Central India, and exceeded '03" at the following stations :

Station.	Positive anomaly.	Station.	Positive anomaly.
Indore	+ '035	Poona	+ '031
Khandwa	+ '032	Ratnagiri	+ '040
Rajkote	+ '044	Goa	+ '034
Surat	+ '036		

The probable effect of these large features in the pressure distribution, which have been very persistent during the past four months on the extension of the south-west monsoon currents and the distribution of south-west monsoon rainfall, has been stated in the forecast issued in the first week of the month of June, and hence need not be repeated here.

The second feature of importance in the pressure conditions of the month are the depressions associated with disturbed or stormy weather in India or the adjacent seas. The following gives a brief statement of the depressions of the month:

Depression of the 4th to 9th May.—This began to form in the neighbourhood of the Andamans on the 3rd and 4th during an early advance of humid south-west winds up the east of the Bay. In the absence of information from ships it is not possible to trace its development with certainty. So far as can be judged from the Port Blair observations, it formed a little to the west of the Great Andaman Island on the 3rd, 4th and 5th, and began to move northwards on the 6th. It developed rapidly during the next twenty-four hours. The centre passed a little distance to the west of Diamond Island on the morning of the 7th. The cyclonic storm was at that time apparently of small dimensions, but the depression at the centre was large, as at Diamond Island the barometer was $52''$ below the normal at 8 A.M. of the 7th. It recurved towards east and passed across the Bassin hills, which are of moderate elevation, probably a little to the south-east of Sapdoway. It was a well marked depression on the morning of the 8th, when the centre was near Thayetmio. It filled up rapidly during the day, and disappeared before morning of the 9th in Upper Burmah. It gave a heavy burst of rain to Burmah from the 7th to the 12th, and it is probable that it gave very stormy weather with hurricane winds in the east of the Bay off the south-west Burmah Coast.

Second.—After the dispersion of the preceding storm and until the end of the month pressure was lowest in a belt of country stretching from Upper Sind and the South-West Punjab into Chutia Nagpur and the eastern districts of the Central Provinces. Occasionally shallow depressions developed at the two extremities of this trough of low pressure. The development of the depression at the western extremity occasionally preceded and accompanied a series of duststorms on the plains and thunderstorms in the hills. The development of the depression at the eastern extremity was apparently associated with the occurrence of numerous thunderstorms and general rain in Bengal and Behar. These conditions obtained more especially on the 16th, 17th and 18th, the 21st and 22nd, and from the 26th to the end of the month, on which days well marked depressions were shown in the Punjab or Sind and in Chutia Nagpur and the Central Provinces. It may be noted that this trough of low pressure is further to the north than usual. This will probably cause the storms of the rains to advance by a more northerly track across Northern India than usual.

The remaining important facts in the pressure conditions of the month were the changes which immediately preceded the setting in of the monsoon on the West Coast. The pressure conditions in India were approximately normal on the 23rd. Temperature was above the normal to a moderate extent over the greater part of the interior. It increased rapidly in Upper India during the next three days and pressure decreased very rapidly, and on the morning of the 27th it was $35''$ lower in the Punjab than on the 23rd; steep gradients hence obtained on that day and during the remainder of the month over the Indian land area. According to reports received from ships arriving in Bombay about this time, strong monsoon winds and very squally weather prevailed over the south and centre of the Arabian Sea. The barometer fell slowly but steadily on the West Coast on the 26th, 27th and 28th. Rain commenced to fall generally on the Malabar Coast on the 28th and the weather became very disturbed with strong winds and a high sea. The rainfall extended northwards on the 29th as far as Bombay, and light to moderately heavy general rain fell in the West Coast districts on the 30th and 31st. The monsoon hence set in on the Malabar Coast on the 28th and the Bombay Coast on the 29th. It was hence at least six days earlier than the normal date of its commencement at Bombay (June 4th or 5th).

Storms.—One cyclonic storm (of considerable intensity) occurred during the month and is described above. Duststorms were of frequent occurrence in Upper and Central India during the whole month, and thunderstorms and nor-westers in Bengal during the latter half of the month. No accounts have been received of any very violent storms or tornadoes such as occasionally happen in Northern India in the hot weather. The following storms were reported during the month:

Violent duststorm at Sirsa on the 1st at 7 p.m.; severe thunderstorm at Krishnagar on the 2nd at 4 p.m., which caused some damage to property; hailstorm at Dhubri at 2 p.m. of the 11th; severe duststorm at Benares on the 13th, during which many trees were blown down; violent thunderstorm at Gopalpore (Ganjam) on the 21st; duststorms at Lahore on the 17th, 19th, 20th and 26th; violent duststorm at Gopalpore on the 23rd; severe duststorm at Sutna on the 19th, which caused much damage to houses and trees; thunderstorm at Bareilly on the 28th and very violent duststorm at Hazaribagh on the 29th. The last was apparently a succession of three storms, of which the third at 6 p.m. was the most violent.

Rainfall.—Rain occurs in May over the greater part of the country under similar conditions to those of the preceding two months. Southern India, Tenasserim, and Lower Burmah receive occasional moderate bursts, due to feeble temporary advances of south-west monsoon winds.

Bengal, Assam, and Orissa receive frequent thundershowers, which usually give a total amount considerably larger than that of March or April. Thunderstorms are also of occasional occurrence in North-West and Central India, but the rainfall at this time is always small in amount.

The rainfall of the past month has been less than usual over nearly the whole of India. Burmah received heavy general rain between the 7th and 12th, and also frequent showers from the 21st to the end of the month. The fall over Lower Burmah averaged 22 per cent. in excess. Bengal and Assam were practically rainless from the 1st to the 10th; during the remainder of the month thundershowers occurred more or less generally on every day. The rainfall was heaviest and most general on the 13th, 14th, 15th, 18th, 19th and 26th. Falls of 3 inches in twenty-four hours were of occasional occurrence in East and North Bengal during this period.

Upper India obtained light showers on the 1st and 2nd, and also on the 18th and 19th. The Punjab hill districts received heavy showers on these days.

In Southern India thundershowers gave light to moderate rain during three periods preliminary to the burst of the monsoon, *viz.*, from the 3rd to 6th, on the 16th, and from the 21st to 23rd. As already stated, the monsoon commenced on the Malabar Coast on the 27th and on the Bombay Coast on the 28th, and the West Coast districts received general but moderate rain during the last two days of the month.

The only area in addition to Burmah in which there was an excess was Behar. The deficiency was greatest in Assam, where it averaged $6\frac{1}{4}$ inches, or nearly 43 per cent., and in Bengal, where it slightly exceeded $1\frac{1}{2}$ inches.

The following table gives complete data, and shows the actual average rainfall and the normal rainfall of the month of the twenty-one districts into which the country is divided, so far as it is indicated by the telegraphic reports of a few stations in each district :

DISTRICTS.	No. of stations.	Normal average rainfall in May.	Actual average rainfall in May 1890.	Difference from the average in May 1890.

JOHN ELIOT,

SIMLA, 24th June, 1890.

Meteorological Reporter to the
Government of India.

W. C. BENETT,

Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on Monday, June 23rd, 1890.

Normal monsoon conditions have prevailed during the past week. Pressure has been steadily lowest over North-Western India, and from this region a trough of relatively low pressure has extended east-south-eastward down the Gangetic plain as far as the head of the Bay of Bengal. To the south of this trough pressure has increased briskly, and the highest readings throughout the Indian region have been reported from Tenasserim and from Malabar and Mysore. To the north of the trough the pressure has also increased, though in this case very slightly, and a band of slightly higher pressure has been shown along the foot of the hills. This distribution is that characteristic of the monsoon period. Within the trough of low pressure small depressions ordinarily form and travel in some westerly direction. This phenomenon of the monsoon has been strongly marked during the week under review.

The chart of the 17th showed a low pressure area over the Western desert and in other respects the general distribution was about normal, but a shoulder of relatively high pressure was shown over Central India and Guzerat, which had the effect of causing the trough of low readings to run in a south-east to north-west direction rather than in an east-south-east and west-north-west direction. The wind was southerly on the West Coast, and the Bombay monsoon current was weak and irregular; but in other parts of India the directions were fairly normal, though the force was low. There was no rain in Behar, the Circars, the North-West Provinces, Sind or Guzerat, but elsewhere rain was general, though not heavy. On the 18th the shoulder of high pressure had more or less disappeared, and the general distribution was fairly normal, with the exception that a small storm had appeared on the Circars and Orissa Coasts. Gradients were steep, and the Bombay monsoon had risen to its accustomed strength and returned to the ordinary direction. On the Bengal side the force was low and a small cyclonic circulation was shown over the north-west of the Bay. Rain was still absent from the greater part of the Gangetic plain and North-Western India, but was general and moderately heavy elsewhere. On the 19th a general barometric fall was in progress and gradients had still further increased, but otherwise there was little change in the general conditions. The distribution of rain was the same as on the preceding day. By the morning of the 20th the depression from the Circars had passed inland, and while filling up somewhat, had become larger and more diffused. The winds exhibited the ordinary monsoon circulation, but the force had risen and both currents were blowing strongly. Rain had extended somewhat over the Gangetic plain and North-Western India, and falls, generally of moderate amount, were reported from the great majority of stations. A very small local depression had apparently been formed near the Gulf of Cambay, and excessive rain was reported from Surat. On the 21st the barometer was rising almost everywhere and gradients had decreased somewhat. Three shallow

depressions were shown over Northern India—one over Lower Bengal, a second over the North-West Provinces, and a third over Sind. The winds were less strong and regular than they were on the 20th. Heavy rain was reported from the neighbourhood of the North-West Provinces depression, and moderate or light rain from the greater part of India; but in Sind, Rajputana, the Punjab, and the east and south of the Peninsula the weather was fine. On the 22nd there was little change, except that there were signs of the formation of a small depression in Lower Bengal. The rainfall at Jessore, Calcutta and Burrisal was heavy, but elsewhere the falls were light and mainly confined to the West Coast, the Central Provinces, Burma and Bengal. The chart of the 23rd showed that the small depression over Bengal had intensified considerably. It was accompanied with very heavy rain in Bengal and very strong winds at the head of the Bay. Another small depression lay near Jhansi, and the weather, except in the Punjab and Madras, was squally, rainy and unsettled.

Temperature.—As was to be expected from the general rain which has fallen, the temperature of the past week has been low. Only in Sind and Rajputana, where the rainfall has been lightest, has the temperature equalled the normal, though in the early part of the week in Bengal and at the end of the week in the Punjab there was some excess. The coolest day was the 21st, when the mean temperature showed a deficiency of 9° in the North-West Provinces and of 4° in Bombay and the Central Provinces. The following table shows the variations of the mean temperature from the normal according to Provinces for the present and for the past weeks:

PROVINCES.	Variation of temperature from normal for past week.	Variation of temperature from normal for present week.
Burma	+ 1.1°	— 0.6°
Bengal	— 0.9°	— 0.8°
North-West Provinces	— 0.5°	— 4.4°
Punjab	— 1.8°	— 1.0°
Bombay	— 1.0°	— 2.6°
Central Provinces	— 0.3°	— 2.8°
Guzerat and Central India	+ 0.9°	— 2.3°
Sind and Rajputana	+ 2.6°	+ 0.1°
Madras	— 1.1°	— 2.4°

The maxima of the past week exhibit no features worthy of note.

Rain has fallen in all the rainfall districts of India, the mean fall ranging from only three-hundredths of an inch in the west of the Punjab and twenty-hundredths of an inch in the south of Madras to 15 inches in the Konkan and 13 inches in Tenasserim. The average distribution of rainfall during this week differs somewhat from the distribution as it has occurred. Normally the wettest district is Arakan, followed at some distance by Tenasserim, and after Tenasserim by the West Coast. Actually the wettest district has been the Konkan, followed by Tenasserim, and at some distance by Arakan. The regions of least rainfall are both actually and normally the west of the Punjab and the East Coast of Madras.

Of the fifty-two rainfall divisions, thirty-four have received excessive rain during the week. These divisions embrace Tenasserim, Deltaic and Central

Bengal and westward through Orissa and Chota Nagpur to Behar, and the whole of the North-West Provinces. The submontane and hill districts of the Punjab also show an excess, as well as the whole of Western India from Malabar round to Sind and including the inland districts of Madras (South Central), Coorg, Mysore, the Deccan, Khandeish and Guzerat. Most of the central districts also show an excess, viz., Berar, Central Provinces (West and Central), the whole of Rajputana, and a large part of Madras. The districts where the rainfall has been deficient embrace the whole of Burma (except Tenasserim) and northward over East and North Bengal and Assam. The greater part of the Punjab is also short of rain, as also is Central India (East), the Central Provinces (East), and a small part of Madras. The greatest excess is in Deltaic Bengal, Oudh (North), the Konkan and Guzerat, and within these the greatest excess relatively to the average is in Guzerat.

The final column of the concluding table shows that for the monsoon season of 1890, so far as it has progressed, there has been a deficiency of rain in Burma and East Bengal, in the west of the North-West Provinces, in the whole of the Punjab except the submontane district, over the West Coast districts except Madras (South Central) and the Konkan, over the Central Provinces, Central India and Kattiawar. Elsewhere there has been an excess, which is very large in Oudh (North), Guzerat and Sind.

The records of maximum falls show some large amounts: thus—Thaton in Amherst received 14 inches during the week; Akyab, 19 inches; Jessore, 15 inches; Midnapur, 12 inches; Maliarah (Bankoora) and Raneegunj (Burdwan), 11 inches. In Western Bengal and the North-West Provinces the maximum falls were generally between 4 and 6 inches, but there are several instances of larger amounts: thus—Ragonathpur (Manbhoom) recorded 8 inches, Gogri (Monghyr), $8\frac{1}{2}$ inches; Chakia (Mirzapur), $11\frac{1}{2}$ inches; Allahabad, $7\frac{1}{2}$ inches; Dalmao (Rae Bareilly), $9\frac{1}{2}$ inches; Sitapur, 17 inches; Fyzabad, $8\frac{1}{2}$ inches; Nighason (Kheri), $9\frac{1}{2}$ inches; Khaga (Fatehpur), $8\frac{1}{2}$ inches; Puranpur (Pilibhit), $9\frac{1}{2}$ inches; Dowariagunj (Basti), 9 inches; and Ballia, 28 inches. In the Punjab the falls were much lighter, the heaviest being 2 inches at Sirsa, 3 inches at Karnal, $2\frac{1}{2}$ inches at Nakodar (Jullundur), and 7 inches at Kangra.

In the west of the Peninsula the falls are again large, the following being the record of falls exceeding 10 inches:—Tellicherry, $12\frac{1}{2}$ inches; Hosdrug (South Kanara), $13\frac{1}{2}$ inches; Dasuya (Nilgiris), $12\frac{1}{2}$ inches; Dapoli (Ratnagiri), 20 inches; Mangas (Colaba), 22 inches; Bassein (Thana), 28 inches; and Rybag (Kolhapur), 14 inches.

In the central parts of the country the maximum falls were generally between 3 and 5 inches, but Pusad (Basim) had 9 inches; Raintenk (Nagpur), $10\frac{1}{2}$ inches; and Warora, $8\frac{1}{2}$ inches.

In Guzerat there was locally very heavy rain. Surat received 22 inches; Bardoli (Surat), 32 inches; and Anklesar (Broach), $7\frac{1}{2}$ inches.

In the east of the Peninsula the falls varied very largely, the heaviest being $4\frac{1}{2}$ inches at Palkonda (Vizagapatam) and at Bezvada (Kistna).

SIMLA, 26th June, 1890.

W. L. DALLAS,

Assistant Meteorological Reporter to the
Government of India.

W. C. BENETT,

Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—For week ending 21st June.—Rainfall general; good in South Kanara; fair in Malabar; moderate or slight elsewhere. Standing crops good, but suffering from want of rain in five districts. Outturn of paddy middling to average. Indigo poor in parts. Pasture and water-supply improving. Prices slightly rising. Prospects fair.

Bombay.—For week ending 25th June.—Rain throughout the Presidency proper and in Karachi and Hyderabad. Ploughing and sowing in full progress. Fodder sufficient and agricultural stock healthy, except in a few talukas.

Bengal.—For week ending 24th June.—Heavy rain over greater part of the Province. Cultivation proceeding satisfactorily. Rice and all *bhādoi* sowings in progress and transplanting of seedlings begun in some places. Condition of early rice, jute, and sugarcane generally reported as good. In Rungpore a heavy crop of early rice being reaped. Jute harvest begun in Serajgunge. Indigo has benefited by rain and is a promising crop. In Behar the manufacture of indigo has begun. Price of rice steady in Balasore. All well at Talpada, and the attendance on relief works has fallen considerably, the daily average for the past week being reported as only 68.

North-Western Provinces and Oudh.—For week ending 25th June.—The monsoon has broken and good rain has fallen in most districts, and weather continues to be generally cloudy. *Kharif* sowing is in progress. Locusts are reported to have appeared in Cawnpore, Banda, Agra and Jhansi, but no damage was done. Markets are well supplied. Prices are still high in Kumaun and have risen slightly in Gorakhpur, Rae Bareilly, Bareilly and Jhansi; elsewhere they are stationary.

Punjab.—For week ending 25th June.—Rainfall good. Rain fell in all districts except Umballa, Shahpur, Dera Ismail Khan and Peshawar, in which there was no fall. Prices fluctuating at Delhi, falling at Multan, rising at Rawalpindi and Peshawar, and stationary elsewhere. *Kharif* sowings commenced. Sugarcane and cotton crops in good condition at Lahore, Amritsar and Dera Ismail Khan. *Kharif* crops at Peshawar average. Fodder sufficient at Ferozepore, Amritsar, Lahore, Rawalpindi and Peshawar; average at Dera Ismail Khan; and scarce elsewhere.

Central Provinces.—For week ending 25th June.—Weather cloudy and cool. Rainfall general and sufficient, except in Bilaspur, where more rain is needed. Sowings progressing. Prices steady.

W. C. BENETT,
Offg. Secretary to the Government of India.

IMPORTS OF COTTON, WHEAT, LINSEED AND INDIGO.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

CIVIL WORKS.

Irrigation.

REVENUE REPORT OF IRRIGATION WORKS IN THE NORTH-WESTERN PROVINCES
FOR 1888-89.

No. 105-I., dated Simla, the 23rd June, 1890.

RESOLUTION—By the Government of India, Public Works Department.

Read—

Letter No. 1770-I., dated the 1st May 1890, from the Government of the North-Western Provinces, forwarding the Revenue Report of Irrigation Works in the North-Western Provinces for 1888-89, and the Resolution of that Government reviewing the Report.

OBSERVATIONS.—The number of works dealt with in the report is twelve, of which nine are works in operation and three are surveys. Of the nine works in operation, four, the Upper and Lower Ganges, the Agra and the Eastern Jumna Canals, are classed as Major Works of which the Capital outlay is not charged against Revenue; four, the Dun, Rohilkhand and Bijnor Canals, and the Bundelkhand Irrigation Works, are classed as Minor Works for which Capital and Revenue Accounts are kept; and one, the Betwa Canal, is classed as a Protective Work. The direct and indirect capital outlay during and up to the end of the year under review is shown for each class of works in the following statement:

	Number of Works.	DURING THE YEAR 1888-89.									Total direct and indirect to end of 1888-89.
		Works.	Establishment.	Tools and Plant.	Suspense Account.	Loss by Exchange.	Total direct charges.	Indirect charges.	Total direct and indirect charges.		
<i>Major Works.</i>		<i>Rs.</i>	<i>Rs.</i>	<i>Rs.</i>	<i>Rs.</i>	<i>Rs.</i>	<i>Rs.</i>	<i>Rs.</i>	<i>Rs.</i>	<i>Rs.</i>	
Protective Works (Account head 35)	1	29,250	6,088	—2,377	—177	...	32,784	2,985	35,769	41,36,013

<i>Minor Works.</i>											
Works of which Capital and Revenue Accounts are kept (Account head 43)—											
Works in operation	4	1,454	331	..	—2,323	...	—53	2,407	1,859	24,75,723	
Surveys	3	454	23	...	...	...	477	3	480	2,80,716	
Total Minor Works	7	1,908	354	...	—2,323	...	—61	2,410	2,349	27,56,439	
GRAND TOTAL	...	9,57,508	2,19,381	32,929	—44,544	...	11,65,274	51,058	12,16,332	7,99,83,651	

2. Details of the capital outlay for the year are not given either in the Chief Engineer's summary, or in that of the Local Government, but from the individual canal reports the following particulars have been extracted. The figures given are exclusive of "Receipts on Capital Account" which have been deducted in the preceding table. On the Upper Ganges Canal the outlay on works was Rs. 53,920; the protective works to Asafnagar Falls were completed, the remodelling of the Liberheri distributary was finished, and considerable progress made in building masonry outlets on other distributaries.

On the Lower Ganges Canal the capital outlay on works was Rs. 7,82,725, the principal portion of which was incurred on the re-building of the Nadrai aqueduct, with which good progress was made. There was also a charge under extensions and improvements of Rs. 1,36,880 for works on account of this aqueduct, this amount being the instalment for the year of the cost of the new aqueduct, which under the rules has to be written back from Capital to Revenue Account to cover the original capital cost (Rs. 5,70,000) of old aqueduct.

On the Agra Canal the outlay on works was Rs. 28,562, chiefly on distributaries.

On the Eastern Jumna Canal it was Rs. 65,666; the excavation of the Raipur torrent escape channel was completed and good progress made with the regulator and escape head.

On the Betwa Canal the outlay on works was Rs. 29,737, chiefly on small works.

The capital outlay on Minor Works was insignificant.

It is requested that a brief summary of this kind may be given in future in the Chief Engineer's Review.

3. The following statement shows the progress that has been made in extending the main canals and their distributaries:

	SANCTIONED.		COMPLETED			
			AT END OF 1887-88.		AT END OF 1888-89.	
	Miles of canal.	Miles of distributaries.	Miles of canal.	Miles of distributaries.	Miles of canal.	Miles of distributaries.

Bijnor Canals	69,968	22,478	400	22,878	3,795	322	4,117	18,761	26.8
Jhansi Lakes	82,398	2,323	430	2,753	2,664	201	2,865	—112	...
Hamirpur Lakes		4,025	189	4,214	4,811	288	5,099	—885	...
Total of Minor Works, 1888-89	24,75,723	2,16,967	29,275	2,46,242	1,28,735	11,134	1,39,869	1,06,373	4.3
Total for 1887-88	24,73,854	1,99,898	31,332	2,31,230	1,39,360	11,755	1,51,115	80,115	3.2
Grand Total, 1888-89	7,97,02,953	53,85,545	3,44,408	57,29,953	26,10,458	1,67,733	27,78,191	29,51,762	3.7
" 1887-88	7,84,87,083	50,24,644	3,25,045	53,49,689	24,00,384	1,63,810	25,64,194	27,85,495	3.5

5. The return of the gross revenue collected is better on all the canals, except the Agra Canal, than for the previous year, but at the same time the expenditure has increased in most cases, especially on the up-keep of the Major Works. The net result, including a loss on working of Rs. 39,497 in the case of the Betwa Canal, is a return, excluding interest charges of Rs. 29,51,762 on the capital outlay, which is equivalent to 3.7 per cent. The interest charges for the year amounted to Rs. 28,64,994.

6. The return from the Lower Ganges, Agra and Betwa Canals is very poor and does not nearly come up to the expectations that were originally formed regarding them.

The following table compares the figures that were put forward in the forecast statements submitted with the revised estimates for the Agra and Betwa

Canals with the actuals of the year under review:

CANALS.	CAPITAL OUTLAY TO END OF YEAR 1883-89.		NET REVENUE EXCLUDING INTEREST FOR 1888-89.	
	Revised forecast.	Actuals.	Revised forecast.	Actuals.
	<i>Rs.</i>	<i>Rs.</i>	<i>Rs.</i>	<i>Rs.</i>
Agra	92,42,351	90,89,451	5,15,000	2,10,152
Betwa	43,69,184	41,36,013	27,000	—39,497

The Governor-General in Council would wish a special enquiry to be made into the causes which have reduced the returns from these canals so far below what was anticipated when the schemes were sanctioned. The result of the enquiry might be included in the next Revenue Report.

7. Under extensions and improvements on the Upper Ganges Canal Rs. 10,177 were spent on the Myapur Regulator and Dam, the upstream face of the Solani aqueduct was plastered, and Rs. 9,617 were spent on the completion of the masonry spurs for the contraction of the Pattri torrent.

On the Lower Ganges Canal Rs. 88,978 were spent on training works in the Ganges in connexion with the head works of the canal.

On the Agra Canal Rs. 13,301 were paid for land below the Okla weir.

On the Eastern Jumna Canal masonry spurs were constructed to protect the left bank of the river near the Faizabad dam.

8. In the following statement the assessments for the year under review and for the previous year are compared with the respective irrigated areas:

CANALS.	AREA IRRIGATED.		ASSESSMENTS, 1888-89.				Assess-ments, 1887-88.	RATE PER ACRE IRRIGATED.	
	1888-89.	1887-88.	Occu-piers' rates.	Own-ers' rates.	Share of land revenue.	Gross assessed revenue excluding mis-cellaneous.		1888-89.	1887-88.

Bundelkhand Irrigation Works.	1,567	589	2,689	...	1,299	3,988	2,372	2.5	4.0
Jhansi Lakes	1,861	1,316	3,305	...	1,763	5,068	4,356	2.7	3.3
TOTAL	1,604,753	1,517,288	41,80,276	4,06,792	9,60,417	55,47,483	52,56,085	3.4	3.4

The high average rate on the Eastern Jumna Canal is due to the large proportion of first class crops (sugarcane and rice) irrigated under it; these pay the highest assessment.

9. The area irrigated during 1888-89 was more by 87,465 acres than during the previous year, but was less by 108,620 acres than the average for the preceding ten years. The rainfall on the whole was good, and did not render necessary any special demand for canal water to mature the crops.

10. The areas under the principal crops are compared below with the corresponding figures for the previous year:

	1888-89. Acres.	1887-88. Acres.
Sugarcane		
Rice	224,245	197,532
Indigo	110,137	102,307
Cotton	224,177	212,756
Wheat	53,990	47,912
Barley	545,153	508,263
Gram	92,142	79,937
Poppy	32,279	33,091
	8,819	12,957

The area under sugarcane is the largest on record, and that under rice shows an improvement, but in the case of the other crops, though the figures are in some cases better than those for the previous year, they are still below the average.

The estimated value of the crops irrigated amounted to 531 lakhs, equivalent to Rs. 33 per acre.

Of the total area, 245,232 acres, or 15.3 per cent., were double-cropped. The proportion of flow to lift irrigation was 77.2 to 22.8.

The duty of water according to the statistics furnished for the principal canals was very high, varying between 211 and 123 acres per cubic foot per second of discharge at the head. The figures for actual consumption are given as from 259 to 162 acres per cubic foot per second. The duty of the water for the different descriptions of crop is not however stated.

The area irrigated during the rabi crop was 653,443 acres and that during the kharif crop 951,810 acres.

The balance of demands outstanding at the beginning of the year was Rs. 73,390, and at the end of the year Rs. 1,20,843.

The number of complaints of wrong assessment on the Lower Ganges Canal was 2,248 against 1,457 for the previous year. Of the total, 1,505 were admitted and 743 dismissed. The increase is said to be due to the floods in July and August which obscured the irrigation and rendered it difficult to determine whether some fields had been irrigated or not.

11. The following statement gives the details of the working expenses for the year under review, and compares the total with that of the previous year:

	1888-89.						1887-88.	
	Works.	Estab-lish-ment.	Tools and Plant.	Indirect charges.	Total.	Rate per acre irrigated.	Total.	Rate per acre irrigated.
Major Works.								
Protective Works—Betwa Canal	Rs. 44,378	Rs. 58,790	Rs. 1,098	Rs. 8,192	Rs. 1,12,458	3.44	Rs. 89,696	3.72
Works of which the Capital outlay is not charged against Revenue.	4,44,112	4,03,046	10,206	63,414	9,80,838	1.50	9,43,691	1.57

	Rs.	Rs.
Direction { Revenue management		
Maintenance of works	1,21,926	1,12,754
	65,810	58,505
Executive { Revenue manage-ment.		
Public Works Officers	3,21,264	
Civil Officers	2,32,721	
Maintenance of works	5,53,985	(b) 5,75,711
Medical.	3,16,748	2,74,920
Fees to Lumberdars and Putwaris	5,908	8,625
Navigation	(a) 1,21,835	(a) 1,13,536
Plantations	18,336	19,823
	13,334	12,811
TOTAL	12,17,882	11,76,685

13. The increased cost of establishment under maintenance is said to be due to the reduced expenditure charged to capital, on which a fixed charge of 23 per cent. is made to cover the establishment charges. The charge for establishment under the heads of direction and executive was nearly 30 per cent. of the outlay on works and repairs. The cost of the revenue management appears high, amounting to Rs. 6,75,911 under direction and executive in comparison with an assessed revenue, excluding share of land revenue, of Rs. 45,87,068. The proportion is over 14 per cent. The cost of measuring crops and preparing the demand statements amounted to only Rs. 36,146, which is equivalent to Rs. 2.25 per 100 acres irrigated. Detailed explanation of the balance of the expenditure on revenue management should be furnished in the Report for 1889-90. The cost of collection in the Civil Department was Rs. 2.75 per cent. for the occupiers' and Rs. 1.96 per cent. for the owners' rate. The percentage on both was 2.67, which is the lowest on record. The total revenue outlay was equivalent to 47.2 per cent. on the gross revenue assessed.

14. The total length of canal open for navigation was 500 miles, of which 390 miles was on the Upper and Lower Ganges Canals, and 119 miles on the Agra Canal. The amount of traffic is however small. Only 230 boats plied on the Upper and Lower Ganges Canals, and 63 on the Agra Canal. The aggregate ton-mileage amounted to 7.75 million ton miles, the estimated value of cargoes to Rs. 3 lakhs, and the number of passengers to 1,022. The aggregate receipts and charges for the year under review and for the previous year are stated as follows in the section on navigation operations, at page 69 b of the Report, but the expenditure figures differ from those given in Statement I-D:

	Receipts.		Charges.	
	1887-88.	1888-89.	1887-88.	1888-89.
	Rs.	Rs.	Rs.	Rs.
Upper and Lower Ganges	14,700	16,799	28,449	28,202
Agra	10,535	9,714	7,440	12,530
TOTAL	35,235	26,513	35,889	40,732

(a) Includes collection charges in the Civil Department on account of owners' rates.
(b) Public Works Officers Rs. 3,47,479 and Civil Officers Rs. 2,28,232.

The principal articles carried were grains, building materials and firewood.
The principal items of expenditure were—

	Rs.
Establishment	18,336
Works	7,667
Maintenance	12,067

The principal item of increase was the outlay on works, Rs. 5,667 being spent on a dry dock at Okla.

The navigation returns for the year cannot be deemed satisfactory. In the special report on the Agra Canal reference is made to the excessive cost of establishment, and it is stated that proposals have been submitted for a new method of fixing and collecting the navigation dues, which would result in a saving on this item. The Government of India would be glad to receive further details of this scheme which, if approved, might be applied to the Ganges Canal also.

15. The revenue realised from water-power on the canals was Rs. 71,075 against Rs. 69,362 in the previous year.

16. The following hydraulic details are of interest :

CANAL.	Number of irrigating days.	Mean discharge at head c. ft. per second.	Discharge utilised c. ft. per second.	PERCENTAGES.	
				Discharge utilised.	Discharge escaped.
Ganges	275	2,984	2,724	89.4	10.6
Lower Ganges	275	2,774	2,001	72.1	27.9
Agra	261	1,015	770	75.9	24.1
Eastern Jumna	309	890	818	91.9	8.1

The figures for the discharge of the Ganges Canal are exclusive of the volume passed from it into the Lower Ganges Canal below Roorki. The average discharge so passed during the irrigation season was 2,225 c. ft. per second. It is stated that there is reason to believe that the volume of water passing over the Solani aqueduct is under-estimated by the formula in use. The measures necessary to correct it should be undertaken. The proportion of discharge that remains unutilised on the Agra Canal is high, and is not explained.

17. The following figures give some particulars regarding the distributaries :

CANAL.	Area irrigated per mile of distributary.	Number of outlets per mile.	Area irrigated per outlet.
	Acres.		Acres.
Ganges	247	5.6	43
Lower Ganges	253	5.2	56
Agra	222	6.6	33
Eastern Jumna	284	4.3	68

18. In addition to the Irrigation systems, the operations of which for the year have been noticed in the preceding paragraphs, there are two systems of canals known as the Tarai and Bhabar Canals which are administered by the Superintendent of the Tarai and the Commissioner of Kumaon respectively, who receive however a certain amount of assistance from Public Works officers. The particulars of these canals are as follows :

CANAL.	Irrigated area.	REVENUE RECEIPTS.				REVENUE EXPENDITURE.				
		Water rate.	Plantation.	Water power.	Total.	Original works.	Repairs.	Establishment.	Tools and Plant.	Total.
	Acres.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Tarai	25,931	25,417	...	...	25,417	6,534	3,697	3,482	...	13,713
Bhabar	61,819	1,15,796	417	40,196	1,56,409	24,524	22,876	16,075	795	64,270

19. The Revenue Report was received by the Government of India on the 3rd of May, the due date of submission being the preceding 15th of November. It was the last of the Revenue Reports to be received, and though it was submitted two months later than that for the previous year, no explanation of the delay that has occurred in connexion with it has been furnished. This explanation should now be given, and the Government of India hopes that similar excessive delay will not attend the submission of the Report for 1889-90. The Report has been excellently prepared and is in correct form.

ORDER.—Ordered, that copies of this Resolution and of the Report be forwarded to the Finance and Commerce, and the Revenue and Agricultural Departments for information.

Ordered also, that copies of this Resolution be forwarded to the Government of the North-Western Provinces, for information and guidance, and that copies of the Resolution be forwarded to the Local Governments and Administrations in the Public Works Department, noted in the margin, for information.

The Governments of Madras, Bombay, Bengal, and the Punjab.
The Chief Commissioners of the Central Provinces, Burma, Assam and Coorg.
The Residents at Hyderabad and in Mysore.
The Agents to the Governor-General in Central India and Rajputana.

Ordered further, that this Resolution and the Resolution by the Local Government be published in the Supplement to the *Gazette of India*, and that copies of this Resolution and of the Report be forwarded to Her Majesty's Secretary of State for India.

J. G. FORBES, Colonel, R.E.,
Deputy Secretary to the Government of India.

Enclosure to Public Works Department Resolution No. 105-I. of 1890.

No. 1709½-I., dated 23rd April 1890.

RESOLUTION—By His Honour the Lieutenant-Governor, North-Western Provinces, and Chief Commissioner, Oudh.

Read—

Irrigation Revenue Report of the North-Western Provinces for the year ending 31st March 1888, by the Officiating Chief Engineer, Irrigation Works, North-Western Provinces and Oudh.

Capital Outlay.

RESOLUTION—The total outlay on the Capital account of canals in the North-Western Provinces and Oudh for and to the end of the financial year 1888-89 is shown below:

CANAL.	OUTLAY ON CONSTRUCTION UNDER ALL HEADS.	
	During 1887-89.	To end of 1888-89.
	Rs.	Rs.
Upper Ganges	74,310	2,83,13,996
Lower Ganges	9,66,066	3,24,61,561
Agra	47,868	90,89,451
Eastern Jumna	90,024	32,26,191
Total outlay on Public Works not charged against revenue	11,78,214	7,30,91,199
Dun Canals	173	6,37,904
Rohilkhand Canals	1,705	16,85,453
Bijnor Canals	—9	69,968
Bundelkhand Irrigation Works	...	82,398
Ditto ditto Survey	253	1,74,398
Sarda Canal Survey	227	49,572
Cawnpore Branch Extension Survey	...	56,746
Total outlay on Minor Works and Navigation	2,349	27,56,439
Famine Relief and Insurance. 35—Construction of Protective Irrigation Works.	35,769	41,36,013
GRAND TOTAL	12,16,332	7,99,83,651

The Capital expenditure was Rs. 4,91,764 less than in the preceding year. This sum would have been larger but for the increase of Rs. 70,506, due to remodelling the Eastern

Jumna Canal, and the construction of the Raipur Torrent Escape. The principal decrease, Rs. 4,85,288, is on the Lower Ganges Canal, but all the other canals also exhibit diminished outlay except the Eastern Jumna Canal, as above noted.

Assessments.

The gross assessments amounted to Rs. 58,82,543, or an increase of Rs. 2,98,338 over the figures for the previous year. The charges, direct and indirect, aggregate Rs. 27,78,191, or an increase of Rs. 2,13,997. This is chiefly under "extensions and improvements."

The total net revenue was Rs. 31,04,352, or an increase over 1887-88 of Rs. 84,341, and is equivalent to 3'88 per cent. on the entire Capital outlay of Rs. 7,99,83,651, invested in all classes of canals, Major, Minor, and Protective.

The net revenue on the four productive works alone (Upper and Lower Ganges, Agra and Eastern Jumna Canals) amounted to Rs. 30,34,429, or equivalent to 4'15 per cent. on their capital expenditure.

The interest charges on the total Capital expended on productive and protective works amounts to Rs. 28,64,994; deducting this sum from the net revenue, there is left a clear profit of Rs. 2,39,358, or an advance over the previous year of Rs. 29,152.

Realizations.

3. The income actually realized from all sources amounted to Rs. 57,29,953. After deduction of the working expenses and the interest charges, there is left a surplus of Rs. 86,768, instead of a deficit, as last year, of Rs. 24,130. The loss on the Betwa Canal was reduced from Rs. 2,13,345 to Rs. 1,95,872.

Total Interest Charges.

4. The total interest charges on the Capital expended on productive and protective canals in the North-Western Provinces since 1830, aggregate Rs. 5,60,28,264.

The total net revenue realized on all classes of canals since the same date amounts up to Rs. 6,28,08,153, so that there is a clear profit of Rs. 67,79,889, or 8'5 per cent. on the total Capital outlay.

Working Expenses.

5. The working expenses, both direct and indirect, aggregated Rs. 27,78,191, or an increase of Rs. 2,13,997 over those of 1887-88.

Under the sub-head of establishment there was an increase of Rs. 46,416, as compared with the figures for 1887-88.

The percentage of working expenses to assessments on the four productive works is exhibited in the subjoined statement:

YEAR.	UPPER GANGES CANAL.		LOWER GANGES CANAL.		AGRA CANAL.		EASTERN JUMNA CANAL.	
	Assessments.	Percentage.	Assessments.	Percentage.	Assessments.	Percentage.	Assessments.	Percentage.
	Rs.		Rs.		Rs.		Rs.	
1884-85	21,04,551	47'11	14,04,856	62'42	4,51,040	62'35	5,02,811	34'33
1885-86	23,05,116	40'12	12,47,323	70'27	6,63,655	42'11	7,04,507	27'84
1886-87	18,84,846	48'63	9,81,794	85'66	4,76,057	62'98	6,86,629	32'17
1887-88	20,17,654	46'86	12,53,357	73'10	4,83,271	53'90	6,44,802	32'20
1888-89	21,32,897	45'90	13,64,348	74'74	4,92,589	57'61	6,96,326	38'74

There is a decrease in the figures for the Upper Ganges and Agra Canals, but an increase in those for the Lower Ganges and Eastern Jumna Canals. The figures necessarily vary with the seasons, and are therefore merely indications of, rather than actual, ratios.

The cost of measuring irrigated areas and preparing demand statements came to Rs. 36,146, equivalent to Rs. 2'25 per 100 acres, as against Rs. 2'33 in 1887-88. The bulk of the work is done by the permanent establishment, and therefore the total cost does not vary much from year to year; while the rate per 100 acres varies inversely with the area irrigated.

The Civil Department charges for collection was Rs. 1,18,660 equivalent to 2'67 per cent. on the gross collections. In 1887-88 the percentage was 2'71.

Under owner's rate Rs. 2,093 remained unrealised, and Rs. 31,586 under occupier's rate. Of these sums Rs. 31,591 were under realization and Rs. 2,088 are reported as irrecoverable.

Mileage of Channels.

6. The statement below exhibits the mileage of channels that have to be maintained on the different canals; and shows that 9,956 miles of channels were maintained throughout the year:

CANAL.	Main canal and branches.	Navigation channels.	Escapes and mill channels.	Distributaries.	Drainage cuts.	TOTAL.
Upper Ganges	437	19	62	2,540	956	4,024
Lower Ganges	564	...	78	2,050	339	3,031
Agra	100	25	10	562	39	745
Eastern Jumna	130	...	23	640	319	1,112
Betwa	167	...	12	310	12	501
Dun	...	...	...	74	3	77
Rohilkhand	20	...	...	334	3	357
Bijnor	...	...	...	39	...	39
Jhansi Lakes	...	...	...	45	...	45
Hamirpur Lakes	...	...	...	25	...	25
TOTAL	1,427	44	185	6,619	1,681	9,956

The total mileage has increased since last year from 9,782 to 9,956 miles. The principal increase falls under the head drainage cuts.

Irrigated Area.

7. The following table gives the area of "kharif" and "rabi" crops, 1888-89, and the previous five years:

	KHARIF.	RABI.	TOTAL.	PERCENTAGE.	
	April to September.	October to March.		Kharif.	Rabi.
	Acres.	Acres.	Acres.		
1883-84	825,747	1,471,927	2,297,674	35'94	64'06
1884-85	773,603	843,701	1,617,304	47'83	52'16
1885-86	702,239	1,007,417	1,709,676	41'08	58'92
1886-87	541,821	821,994	1,363,815	39'73	60'27
1887-88	612,436	904,852	1,517,288	40'36	59'64
1888-89	653,443	951,310	1,604,753	40'72	59'28

The area irrigated in both seasons is 1,604,753 acres, which is less than the average of the preceding ten years by 108,620 acres. Nevertheless it is an increase of 87,465 acres, or 5'7 per cent. over the figures of the previous year.

There was nothing very unusual in the early part of the "kharif," but the monsoon broke about a fortnight later than in 1887-88, and then only to the eastwards of Aligarh. It was not till about mid-July that it extended westwards of that place. It then continued without much intermission till towards the end of September and irrigation ceased everywhere except for rice. Very heavy rain fell in most places from the 15th to 21st
