On the 18th the barometer was still falling everywhere. The relative positions of the areas of highest and of lowest pressure were unaltered, but, except at the head of the Bay and in Lower Bengal, where strong southerly to south-westerly winds prevailed, the wind directions were more variable. Light rain continued to fall in the extreme north-east of India, while local showers were reported from Colombo, Cochin, Lahore, and Murree. On the 19th the barometer was falling over the Punjab and Rajputana, while it was rising elsewhere. Hence, though the general distribution of pressure was similar to that reported on the preceding days, *i.e.*, the highest pressures lay over Guzerat and the lowest over Behar, a disposition to change was observable, and readings were nearly as low in Rajputana as in Behar. Also a small local depression had appeared over the extreme south of the Peninsula. The wind directions were generally fairly normal, while the force remained fresh in several parts of the country and was strong at the head of the Bay. Light showers had fallen during thunderstorms over the west of the Peninsula, over the North-Western Himalayas, and over Assam. The barometric changes reported on the 20th were generally small, and there was very little alteration either in pressure or winds. The thundershowers had ceased over the west of the Peninsula, but continued over the North-Western Himalayas and over Assam. On the 21st pressure was nearly steady over Burma and the Peninsula, but was falling elsewhere. The fall had been brisk over North-Western India, and the transference of the area of lowest pressure to that region had taken place. The winds were irregularly cyclonic over North-Western India, variable over the Gangetic plain, and westerly to southerly elsewhere. Thundershowers had occurred over the North-Western Himalayas, the North-Western Provinces, and Assam, the amounts being somewhat larger than of late. On the 21st the barometer was rising over the Gangetic plain and Bengal, but was falling elsewhere. The low pressure area in the north-west had become more marked and gradients over Guzerat and the head of the Peninsula were steep. Pressure was highest in Malabar and Tenasserim. Easterly breezes were appearing over Northern India, and the weather was more unsettled. Moderate to heavy thunderstorms had occurred over North-Eastern India, and light thundershowers over the North-Western Provinces and the neighbouring districts. Thundershowers had also occurred over the centre and south-west of the Peninsula.

Temperature:—The following table shows the variations of the mean temperature from the normal on each day of the week for the principal provinces of India:—

Province.	April.							Mean variation of week.
	16th.	17th.	18th.	19th.	20th.	21st.	22nd.	
	°	°	°	°	°	°	°	°

Sind and Rajputana	—0·9	—0·8	—1·1	—0·4	+0·4	+0·7	+4·5	+0·3
Madras	—1·6	—1·4	+0·3	+0·3	+0·8	+1·0	+0·4	0
Mean for whole India	+1·5	+0·6	—0·2	—0·1	+0·1	+0·3	+0·3	+0·4

On the first day of the week there was a considerable excess of temperature over North-Western and Central India. On the 17th the area of this excess though still considerable, had diminished, but on the 18th temperature fell over a large part of the country, and from that date until the close of the week the variations of the mean temperature from the normal average were small in most provinces. The mean variation for the whole of India for the week was only +0·4°.

Rain.—The past week has been marked by very general rain accompanying the numerous thunderstorms which have prevailed over the country. In the great majority of cases, however, the rainfall has been light, the average actual fall of the different divisions being in many instances less than one-tenth of an inch. Of the fifty-one rainfall divisions, twelve received during the week absolutely no rain, twenty-four received some rain, but with rain so light or so partial that the average for each division was less than one-tenth of an inch, while fifteen received effective rainfall, *i.e.*, an average fall of over one-tenth of an inch in each division. The regions which received effective rainfall included the following divisions:—Eastern, Deltaic, and Northern Bengal, both the Assam Divisions, the hill and north-western districts of the Punjab, Malabar, Madras (South-Central and Central), Coorg, Mysore, the Bombay Deccan, Sind, and West Rajputana. The heaviest average actual fall was in Assam (Surma Division), and amounted to 9·26 inches; this was followed by 3·74 in the Assam Valley, by 0·61 inch in Eastern Bengal, and by 0·50 inch in Northern Bengal. The regions which had absolutely no rain included the Burma Divisions, except Upper Burma, Khandeish, Berar, the Central Provinces (West), Kathiawar, Central India (West), and the East Coast Divisions.

The third column of the concluding table shows that the rainfall of the week has been largely in excess in the Surma Division of Assam, considerably in excess in the Brahmaputra Division, and slightly in excess in the Oudh Divisions, in the submontane division of the North-Western Provinces, in the Hill Division of the Punjab, in Mysore, in the Konkan, in the Bombay-Deccan, in Guzerat, in Sind, in Rajputana (West), and in Madras (Central). The only case of considerable deficiency is in Tenasserim, where no rain has been received, while the normal average of the week is 1·08 inch.

The rainfall of the past week has not made any material change in the condition of the seasonal rainfall, except in the case of the Assam Divisions. In these divisions at the close of last week there was considerable deficiency, but the heavy rainfall of the week under review has raised the actual total for the season, so that it now about equals the normal. There is a very large excess over the central parts of the country and the Peninsula.

The following gives the largest total amounts received during the week as reported in the rainfall telegrams of the week:—

Divisions.	Districts.	Stations.	Amount.
Eastern Bengal	Mymensingh	Netrakona	2·02 inches.
Assam	Khasia Hills	Cherra	28·52 ,,
	Goalpara	Sudder	7·25 ,,
Deltaic Bengal	Faridpur	Ditto	3·47 ,,
Mysore	Mysore	Ditto	3·47 ,,
Deccan	Belgaum	Gokak	3·38 ,,

PROVINCE.	DIVISION.	Rainfall data for week ending April 22nd.			Rainfall data from February 26th to April 22nd, 1893.		
		Average actual rainfall of division.	Average normal rainfall of division.	Excess or defect in inches.	Average actual rainfall of season to date.	Average normal rainfall since February 26th to April 22nd.	Excess or defect of (seasonal) rainfall expressed as a percentage.

SIMLA, *27th April, 1893.*

W. L. DALLAS,
Asst. Meteorological Reporter to the Government of India.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the state of the Season and Prospects of the Crops.

Madras.—*For week ending 22nd April.*—Moderate showers in Nilgiris and in parts of the Central and West Coast districts and scattered showers in other parts, except the Carnatic. Cultivation proceeding on West Coast and to a limited extent elsewhere. Standing crops under wells and large irrigation works generally fair, but rain wanted for recent sowings in Southern districts. Harvest still going on in parts with fair outturn. Pasture and fodder generally sufficient. Prices slightly easier in Nilgiris, West Coast, and Central districts, rather dearer in the Circars and Southern districts, and stationary elsewhere.

Bombay.—*For week ending 26th April.*—Rain in parts of eleven districts. Standing crops damaged by rain, rats, or blight in parts of three districts; otherwise good. Reaping of late crops nearly completed in seven districts, and progressing in six others. Preparations for next season continue in fourteen and cotton picking in six districts. Prices steady. Agricultural stock good and fodder sufficient.

Bengal.—*For week ending 22nd April.*—Light rain fell during the week in North and East Bengal; practically no rain elsewhere. Generally agricultural prospects continue favourable. The spring harvest is nearly finished, and the outturn, taking the Province as a whole, is estimated at not less than fourteen annas of an average crop. Poppy and tobacco are estimated to be not less than twelve annas. Spring rice is being harvested, and promises well. Ploughing continues, and the autumn rice, jute, and millets are being sown. Sugarcane and indigo prospects are good. *Mahua* (*Bassia latifolia*) is being gathered with good results. Mangoes are deficient. Prices of common rice remain almost stationary. Fodder and water supplies are generally plentiful, except in Palamau and parts of Hooghly. Condition of cattle generally good.

North-Western Provinces and Oudh.—*For week ending 26th April.*—Weather somewhat unsettled during the week, with slight showers and thunderstorms in places. Harvesting of spring crops almost completed; threshing and winnowing in progress. Outturn generally good. Irrigation of summer crops going on. Opium weighments commenced. Prices fairly steady.

Punjab.—*For week ending 26th April.*—Slight rain has fallen in all but three districts. Reaping and threshing of spring crops in progress. Condition of standing crops is generally good. Cattle generally in good condition. Fodder sufficient throughout the Province. Prices falling in six districts, rising in two others, and stationary elsewhere.

Central Provinces.—*For week ending 26th April.*—Weather stormy with slight showers of rain in eight districts. Threshing and winnowing of winter crops progressing. Fodder insufficient in one district and in part of another. Prices falling in one district; elsewhere stationary.

Burma.—*For week ending 22nd April.*—In Upper Burma planting of dry-weather paddy continues, while in Mandalay and Sagaing the crop is being reaped. Peas are being reaped in Myingyan and beans in Lower Chindwin. Crops are generally good, but in the Pagan sub-division of the Myingyan district the crops have failed in most places. Rain is needed in parts of Bhamo, and water is wanted in parts of Kyaukse. In Lower Burma the price of paddy has risen slightly in Amherst; elsewhere prices are almost stationary. In Upper

Burma there have been slight increases in two districts and slight decreases in two others. Number on relief works in Meiktila not reported.

Assam.—*For week ending 25th April.*—Weather seasonable. Sowing of early rice continues. Prospects good. Condition of cattle fair. Fodder and water sufficient.

Mysore and Coorg.—*For week ending 26th April.*—MYSORE: Rainfall general and good in the Mysore district. Standing crops have been benefited, but more rain is required in parts of five districts. Prospects generally favourable. Prices fallen in one district.

COORG.—Rainfall moderate. Prospects of coffee and cardamom crops fair. Prices stationary. Water and fodder for cattle sufficient.

Berar and Hyderabad.—*For week ending 26th April.*—BERAR: Weather hot. Harvesting of spring crops almost completed. Preparation of land for ensuing season continues. Fodder and water sufficient. Cattle generally healthy. Prices almost steady.

HYDERABAD: Slight rain during the week. Harvesting of hot-weather crops continues. Prices fairly steady.

Central India.—*For week ending 26th April.*—Rain in four Agencies and Neemuch. Wheat being threshed in Bhopal and gathered in other parts; probable outturn fair, except in two Agencies and in Neemuch. Agricultural stock generally in good condition. Prices rising in the Neemuch district, falling slightly in Bhopal, and steady elsewhere. Poppy in flower in parts of Gwalior. Opium collected in three Agencies; outturn fair.

Rajputana.—*For week ending 26th April.*—Rainfall slight in parts. Agricultural operations satisfactory. Cutting of crops going on. Harvest prospects good, except in Jhallawar, where wheat is reported below average. Agricultural stock generally good. Pasturage or fodder sufficient, except in two States, where fodder is reported scarce. Prices rising in two States, falling in five others, and steady elsewhere.

Nepal.—*For week ending 22nd April.*—Weather showery and cool. Prospects good.

E. C. BUCK,
Secretary to the Government of India.

(*a*) Includes the Godhra-Rutlam railway.
(*b*) Includes the Guntakal-Dharmavaram section from 1st April 1893.
(*c*) Includes the Tirhoot state railway. Although for convenience classed amongst the state railways, the company's section of this line is the property of the Bengal and North Western railway company.
(*d*) Includes the Jammu and Kashmir and the Hyderabad-Umarkot railways.
(*e*) Although for convenience classed amongst the state railways, this line is the property of the Bengal Central railway company.
(*f*) Includes the Wardha Coal, Dhond-Manmad, Khámgaon, and Amráoti railways.

F. B. HEBBERT,
Under-Secretary.

Simla, the 27th April 1893.

Printed and published for the GOVERNMENT OF INDIA *at the* GOVERNMENT CENTRAL PRINTING OFFICE, *Simla.*

SUPPLEMENT TO

The Gazette of India.

No. 18.} CALCUTTA, SATURDAY, MAY 6, 1893.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in* PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on Saturday, April 29th, 1893.

The unsettled weather which had commenced over India at the close of the preceding week continued and intensified during the week under review. In Northern India the weather was affected by a low pressure area, which appeared first in the extreme north-west, and then drifted slowly eastward down the Gangetic plain. It was accompanied with easterly winds up the Gangetic plain, and with showery weather over Central and North-Eastern India. Over the Eastern Peninsula the weather was affected by a small cyclonic storm. The first indications of this storm were given by the winds over the Bay on the morning of the 25th. On the 26th rain and strong easterly winds were reported in Lower Burma, and on the 27th the storm lay between Bassein and Rangoon. Heavy rain fell over Lower Burma. Over the Indian Peninsula more or less unsettled conditions have also prevailed, more particularly during the latter half of the week, when thundershowers were very prevalent. Due to this showery and unsettled weather there had occurred a fall of temperature, so that, while the mean temperature of the whole of India for the preceding week had been 0·4° above the normal, the mean temperature of the present week was 1·0° below the normal.

The chart of Sunday, the 23rd, showed a large low pressure area over the western desert, while readings were relatively high in Malabar and the south of the Bay, and highest in the Assam Valley. Pressure differences were, however, small or moderate. An abnormal easterly current prevailed up the Gangetic plain, but elsewhere the directions were fairly normal. Rain had fallen during dust and thunder storms over Assam, Bengal, at several central stations, and at a few places on the East Coast of the Peninsula. On the 24th pressure was rising everywhere. Gradients had become somewhat steeper over the Gangetic plain, but in other respects the general distribution was similar to that reported on the previous day The winds were also little changed. Numerous thunderstorms had given rain to Burma, Assam, Bengal, and the central stations. Darjeeling and Balasore received over 2 inches, and Colombo about 1½ inch On the 25th the low pressure area over North-Western India commenced to intensify and to move to the eastward. Otherwise there was again but little change to record in the general distribution. The pressure differences were larger than usual over a large part of the country. The winds were cyclonic over North-Western India, westerly and south-westerly across the Peninsula and the central parts of the country, and south-easterly to easterly over Northern India. At Diamond Island the wind had shifted to east. Rain had almost ceased in Bengal, but over a large part of Burma and of Assam, as well as around the head of the Bay and at a few stations in the south of the Peninsula, in the Central Provinces, and in North-Western India, showers had fallen. The chart of the next day, the 26th, showed a general barometric fall. The depression over North-Western India had moved very little, and there was again very little change to record in the general distribution. The winds were similar to those recorded on the preceding day. At Diamond Island the force had increased considerably, and pointed to the existence of a depression over the east of the Bay. The wind was strong in force over a large part of the country Rain had fallen fairly generally over the south of the Peninsula and over Burma, and showers were reported from other parts of the country. The amounts were generally moderate or small. On the morning of the 27th the depression over North-Western India had commenced to move decidedly in an easterly direction, the centre being near Agra. The barometer had consequently fallen over the Gangetic plain and North-Eastern India, while it had risen over North-Western India. At the same time a small storm had passed from the Bay into Burma, the centre lying between

Bassein and Rangoon. Pressure was highest in Malabar. The barometer read everywhere—but particularly in the neighbourhood of the low pressure areas noticed above,—largely below the normal average, and gradients in several part of the country were steep. Strong cyclonic winds prevailed over Lower Burma. Elsewhere the winds were similar to those reported on the previous day. Rain had fallen over Burma, Bengal, the north of the Gangetic plain, and a large part of the Peninsula. The amounts were large in Lower Burma and considerable in parts of Bengal. By the morning of the 28th the depression from North-Western India had reached West Bengal, while the depression over Lower Burma had disappeared. Readings were highest in Malabar and lowest in the neighbourhood of Allahabad, the pressure differences being considerable. Winds were variable over Northern India and Burma, westerly over the Peninsula and the central parts of the country, and southerly in Bengal. The distribution of rain was the same as on the preceding day, but the amounts were smaller. On the 29th the barometer was falling over North-Western India and rising elsewhere. Readings were lowest over the Gangetic plain and along the foot of the North-Western Himalayas and over West Bengal, and were highest over the south-east of the Bay. The wind directions were fairly normal, but the force was higher than usual. Rain was falling generally over Burma, Assam, and Bengal.

Temperature.—The following table shows the variations of the mean temperature from the normal on each day of the week for the principal provinces of India:

Province.	April.							Mean variation of week.
	23rd.	24th.	25th.	26th.	27th.	28th.	29th.	
	°	°	°	°	°	°	°	°
Burma	+1·3	−2·6	−1·9	−2·8	−6·8	−7·2	−4·2	−3·5
Bengal and Assam	−3·9	−5·6	−4·4	−2·4	−2·0	−1·8	−1·9	−3·1
North-Western Provinces and Oudh.	−3·0	−2·2	−2·2	−0·9	−1·2	−1·8	−6·1	−2·5
Punjab	+0·6	+3·3	+4·0	+2·9	+0·1	−2·5	−2·9	+0·8
Bombay	−2·0	−0·8	−0·2	−0·6	−1·6	−1·5	−1·7	−1·2
Central Provinces and Berar	−2·0	−5·7	−4·4	−2·2	−0·6	+1·7	−1·9	−2·2
Central India and Guzerat	−0·4	+1·5	+0·9	+2·0	+2·6	+1·2	−1·0	+1·0
Sind and Rajputana	+4·2	+4·3	+4·8	+4·8	+3·8	+0·2	−1·8	+2·9
Madras	−1·3	−2·0	−2·4	−2·7	−2·4	−1·3	+0·7	−1·6
Mean for whole India	−0·7	−1·1	−0·6	−0·2	−0·9	−1·4	−2·3	−1·0

The above table shows that for the whole of India the mean temperature of the week was 1·0° below the normal average, and that on all days of the week the mean temperature of the whole country was lower than usual. The abnormal deficiency was less than 1·0° on the 23rd, 25th, 26th, and 27th, but amounted to 1·4° on the 28th and to 2·3° on the 29th. The mean temperature of Sind and Rajputana was excessive throughout almost the whole week, and that of Central India and of the Punjab during the middle of the week, but in all the other provinces the mean temperature was almost uninterruptedly below the normal.

Rain.—As shown in the earlier paragraphs of the summary, the weather has been very unsettled throughout the greater part of the Indian region during the week under review. Numerous thunderstorms have given very general rain to the greater part of India, and the cyclonic storm which passed from the Bay into Burma gave heavy rain to a large part of that province.

Of the fifty-one rainfall divisions, only eight had absolutely no rain during the week, eight more received only slight rain, the average actual fall of each division being less than one-tenth of an inch; while the remaining thirty-five divisions received effective rainfall, the average actual fall ranging from 6·96 inches in Tenasserim to 0·10 inch in the Konkan and Berar. The regions which received actually or practically no rain included the following divisions:—The North-Western Provinces (East, Central, and West), Oudh (South), the Punjab (South, Central, and West), Coorg, the Central Provinces (Central), Guzerat, Kathiawar, Sind, the Central India, and Rajputana divisions, and Hyderabad (south). The heaviest rainfall, attributable to the cyclone which entered Lower Burma on the 27th, was 6·96 inches in Tenasserim; this was followed by 5·27 inches in Lower Burma; by 3·74 inches in North Bengal; by 3·15 inches in the Surma division of Assam, and by 2·12 inches in the Brahmaputra division. The heaviest rainfall during the week under review is ordinarily in Assam and North Bengal, so that the heavy falls reported in Burma are exceptional. The third column of the table at the close of the summary shows that over the greater part of the country the rainfall of the week was excessive. The only regions where the fall was lighter than usual were the two Assam divisions, the North-Western Provinces (East), and Oudh (South), the Punjab (South and West), Coorg, Sind, the two Rajputana divisions, and Hyderabad (South), and in nearly all these divisions the deficiency was unimportant. On the other hand, over a large part of North-Eastern India the excess was large, and in some parts of the Peninsula it was considerable. Thus in Tenasserim the average normal rainfall of the week is only 0·67 inches, while the average actual was 6·96 inches; in Lower Burma the normal is only 0·30 inch, while the actual is 5·27 inches, and in North Bengal the normal is 1·68, while the actual was 3·74 inches.

With regard to the seasonal rainfall, the most important change which has occurred during the present week is the excess which has appeared in Burma. Hitherto there has been a considerable deficiency over that province, but with the heavy rain of the past week that has been changed, and, except in Arakan, there is now a large excess. In all places, except the extreme north-west (where there is an unimportant deficiency), the rainfall of the season—February 26th to April 29th—has been good and sufficient, and in some divisions has been very heavy.

The following gives the largest total amounts received during the week as reported in the rainfall telegrams of the week:

Divisions.	Districts.	Stations.	Amount.
Tenasserim	Amherst	Thaton	7·58 inches.
Lower Burma	Maubin	Danubyn	9·48 ,,
Central Burma	Shwegyin	Sudder	4·88 ,,
Eastern Bengal	Dacca	Narainganj	4·07 ,,
Assam	Khasia	Cherra	7·78 ,,
Do.	Sibsagar	Sudder	2·91 ,,
Deltaic Bengal	Nuddea	Chuadanga	4·32 ,,
Central Bengal	Moorshedabad	Azimganj	5·00 ,,
North Bengal	Darjeeling	Siliguri	5·30 ,,
Behar	Purneah	Sudder	3·82 ,,
Punjab	Rawalpindi	Fatehganj	2·31 ,,
Malabar	Travancore	Alleppy	5·40 ,,
Madras	Nilgiris	Kodanad	4·53 ,,
Mysore	Bangalore	Kankanhilli	4·28 ,,
East Coast	Vizagapatam	Narsapatnam	4·95 ,,

SIMLA, *4th May, 1893.*

W. L. DALLAS,
Asst. Meteorological Reporter to the Government of India.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the state of the Season and Prospects of the Crops.

Madras.—*For week ending 29th April.*—Heavy rain in two Northern districts and in parts of the Central and Southern districts and Nilgiris. Showers over rest of Presidency, but scattered in the Deccan and Carnatic. Cultivation commenced in many parts, and some sowings are in progress. Standing crops generally fair, but more rain is needed in parts of Southern districts. Fodder and water generally sufficient and condition of cattle good. Prices almost unaltered, though slightly easier in the Central districts.

Bombay.—*For week ending 3rd May.*—Rain in parts of ten districts. Standing crops damaged in parts of two districts; otherwise good. Cotton picking and reaping of late-crops progressing in several districts. Preparations for next season continue generally. Prices steady. Agricultural stock good and fodder sufficient.

Bengal.—*For week ending 29th April.*—There was rain in all districts during the week due to thunderstorms, the falls being heavier in North and East Bengal than elsewhere. Standing crops were benefited, and ploughing and early sowings facilitated. Autumn rice and jute are doing well. Prospects of young sugarcane and indigo are also favourable. Spring rice is being harvested. The spring and opium harvests are practically over. No marked fluctuation in prices. Supplies of fodder and water are sufficient, except in parts of Hooghly. Cattle are generally reported healthy.

North-Western Provinces and Oudh.—*For week ending 3rd May.*—Weather unsettled in the Central and sub-montane districts, where rain has fallen. Harvesting of spring crops nearly completed; outturn good. Irrigation of sugarcane and extra crops in progress. Supplies ample. Prices generally steady.

Punjab.—*For week ending 3rd May.*—Rain has fallen in three districts. Cutting and threshing of spring crops in progress. Condition of standing crops is generally good and autumn prospects fair. The gram crop is somewhat damaged by insects in part of the Amritsar district. Cattle generally in good condition. Fodder sufficient throughout the Province. Poppy prospects good. Prices falling in seven and stationary in six districts.

Central Provinces.—*For week ending 3rd May.*—Weather hot and occasionally cloudy. Threshing and winnowing of winter crops progressing in nine districts. Land being prepared for autumn sowings. Fodder insufficient in some districts. Prices risen in one district and fallen in another.

Burma.—*For week ending 29th April.*—Rain has fallen throughout Upper and Lower Burma. In Upper Burma reaping of dry-weather paddy has commenced. Peas are being reaped in Myingyan. Standing crops are reported everywhere to be good, except in part of Bhamo, where owing to ravages by insects the crops have been slightly damaged. In Lower Burma the price of paddy has remained stationary, but in Upper Burma it has risen slightly in Mandalay and fallen slightly in Minbu; elsewhere prices are unchanged. Number on relief works in Meiktila not reported.

Assam.—*For week ending 2nd May.*—Weather seasonable. Sowing of summer paddy continues. Condition of cattle fair. Fodder and water sufficient.

Mysore and Coorg.—*For week ending 3rd May.*—MYSORE: Rain reported throughout the State. Crops and prospects good. Prices fallen in two districts and risen slightly in two others.

COORG.—Insufficient rain has affected prospects of coffee. In North Coorg the blossom is only partial, and generally the crop will be below the average. Cardamom crop fair. Fodder and water for cattle sufficient. Prices stationary.

Berar and Hyderabad.—*For week ending 3rd May.*—BERAR: Rainfall fair. Weather hot. Harvesting of spring crops nearing completion. Preparation of land for ensuing season in progress. Fodder and water sufficient. Cattle healthy. Prices almost steady.

HYDERABAD: Rainfall moderate during the week. Harvesting of hot-weather crops continues. Prices steady.

Central India.—*For week ending 3rd May.*—Rain during the week in Bhopal. Reaping nearly completed; probable outturn fair, except in two Agencies. Condition of standing crops generally fair. Agricultural stock good. Pasturage sufficient. Prices of food-grains falling in Goona and steady elsewhere. Condition of opium in Western Malwa good.

Rajputana.—*For week ending 3rd May.*—Agricultural operations satisfactory. Reaping of crops going on; harvest prospects good, except wheat, which is reported much below average in Harowti. Cattle generally good. Pasturage or fodder sufficient, except in parts of two States, where fodder is reported scarce. Prices rising in two States, falling in four others, and steady elsewhere.

Nepal.—*For week ending 29th April.*—Weather cool and showery with thunderstorms. Rice and Indian-corn are being sown. Prospects good.

E. C. BUCK,
Secretary to the Government of India.

(*a*) Includes the Bezváda-Godaveri section of the East Coast railway.
(*b*) Includes the Godhra-Rutlam railway.
(*c*) Includes the Guntakal-Dharmavaram section from 1st April 1893.
(*d*) Includes the Tirhoot state railway. Although for convenience classed amongst the state railways, the company's section of this line is the property of the Bengal and North Western railway company.
(*e*) Includes the Jammu and Kashmir and the Hyderabad-Umarkot railways.
(*f*) Although for convenience classed amongst the state railways, this line is the property of the Bengal Central railway company.
(*g*) Includes the Wardha Coal, Dhond-Manmad, Khámgaon, and Amráoti railways.

F. B. HEBBERT,
Under-Secretary.

SIMLA, *the 4th May 1893.*

Printed and published for the GOVERNMENT OF INDIA *at the* GOVERNMENT CENTRAL PRINTING OFFICE, *Simla.*

SUPPLEMENT TO

The Gazette of India.

No. 19.} CALCUTTA, SATURDAY, MAY 13, 1893.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in* PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

FINANCE AND COMMERCE DEPARTMENT.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on Saturday, May 6th, 1893.

There has been no important change in the weather during the week under review, conditions over Northern India remaining abnormally unsettled for the time of year. Two deepish depressions appeared in North-Western India during the week—one on the 2nd of May, and a second on the 6th,—and both gave dust and thunder storms over a considerable part of North-Western India. Over North-Eastern India steepish gradients for southerly and south-easterly winds have prevailed continuously during the week. These gradients have been accompanied with strong winds from the Bay into Bengal, and more or less severe thunderstorms and heavy rain have prevailed throughout North-Eastern India. In the Peninsula conditions have been generally less disturbed, but in the extreme south there occurred two bursts of feebly unsettled weather during the week, and slight thunderstorms gave moderate showers. In consequence of these unsettled conditions the general temperature of India was below the normal. The abnormal coolness was most marked over North-Eastern India and the Gangetic plain. In North-West India the rainfall attributable to the two depressions noticed above occurred mainly over and along the foot of the hills, and the mean temperature of the Punjab, of Rajputana, and of Sind was excessive.

On Sunday, the 30th April, pressure was low over the Gangetic plain and the North Punjab and highest over Tenasserim and the south of the Bay. The mean features of the distribution were thus fairly normal, but the pressure differences were much larger than usual, and such as are ordinarily associated with the period immediately preceding the rains. This condition was characteristic of the pressure distribution throughout the week. There was an abnormal easterly current of air up the Gangetic plain, but otherwise the winds, though unusually strong, were fairly normal. Rain was general over Bengal and Assam, and showers were reported from parts of Burma and of the south of the Peninsula. The amounts were large at the Bengal stations and at Rangoon. The chart of May 1st showed little change. Gradients remained steep and the winds strong. The abnormal easterly current up the Gangetic plain continued. Rain was reported from the same regions as on the preceding day. In Lower Bengal the amounts were heavy and fell during severe thunderstorms. On the 2nd the distribution of pressure had altered considerably, a deepish depression having appeared over the western desert, and a shallow depression over the Central Provinces. The wind had become cyclonic in the neighbourhood of the two depressions, but otherwise the directions were little changed. Rain was falling at Mussoorie and Chakrata, and showers were reported from a large part of Burma and of the south of the Peninsula, but in Bengal the fall had ceased. The chart of the 3rd showed that the barometer was rising everywhere, but the two depressions were still present, and the abnormal easterly current up the Gangetic plain continued. Rain had fallen over the North-Western Himalayas and at the stations in the west of the North-Western Provinces; it had recommenced lightly in Bengal, but had, on the contrary, almost ceased in Burma and the south of the Peninsula. The amounts were everywhere moderate or small. On the morning of the 4th pressure was lowest over the Punjab, and from that Province an arm of low pressure was protruded south-eastward to the Central Provinces, while pressure was high in North Bengal, in Tenasserim, and on the Konkan Coast. A strong southerly wind was blowing from the Bay into Bengal, and rain was reported from the greater part of North-Eastern India. In Lower Bengal the thunderstorms were severe and the rainfall heavy. In North-Western India the rain had ceased, and in the Peninsula only a few showers were reported. On the 5th the pressure conditions and the winds

were practically unchanged and the weather was fine, except over North-Eastern India and the south of the Peninsula, where the weather was showery. The rainfall was less general and less heavy in Bengal than on the previous day, but in Lower Burma amounts of from 1 to 2 inches were registered. On the 6th the second deep depression appeared in the north-west, gradients became very steep, and the wind increased to a gale over Kathiawar and Guzerat, while the easterly current up the Gangetic plain also strengthened. The weather was very unsettled, with numerous dust and thunder storms over North-Eastern and Northern India, and rain was reported from Burma, Assam, Bengal, Orissa, and Northern India from Gorakhpur to Ludhiana. The amounts were, however, nowhere large. In the south-west of the Peninsula light showers were also reported.

Temperature.—As mentioned above, the heavy rainfall over North-Eastern India and the Gangetic plain has largely depressed temperature. In Sind and Rajputana, where there was no rain, and in the Punjab, where the rainfall was partial, the mean temperature was higher than usual, while in the remaining parts of India the heat was about the average.

The following table shows the variations of the mean temperature from the normal on each day of the week for the principal Provinces of India:

Province.	April.	May.						Mean variation of week.
	30th.	1st.	2nd.	3rd.	4th.	5th.	6th.	
	°	°	°	°	°	°	°	°
Burma	—3·4	—2·4	—2·6	—2·7	—3·2	—3·9	—5·6	—3·4
Bengal and Assam . .	—3·0	—3·2	—2·0	—0·6	—3·4	—5·0	—5·1	—3·2
North-Western Provinces and Oudh.	—5·2	—3·3	+0·9	—3·5	—3·7	—2·4	—5·6	—3·3
Punjab	—0·6	+0·8	+5·5	—0·5	+1·5	+5·2	+2·2	+2·0
Bombay	—1·6	—1·4	—1·4	—0·8	+0·1	+1·2	+1·3	—0·4
Central Provinces and Berar	—4·4	—3·2	—0·7	+0·4	+0·1	+0·8	+1·4	—0·8
Central India and Guzerat .	—0·6	—0·9	+1·0	—1·1	+0·9	+0·7	+0·9	+0·1
Sind and Rajputana . .	+0·6	+3·4	+5·6	+3·9	+0·5	+3·3	+2·4	+2·8
Madras	+0·6	+0·6	+0·6	—0·3	—0·7	—1·1	—1·8	—0·3
Mean for whole India .	—2·0	—1·1	+0·8	—0·6	—0·9	—0·1	—1·1	—0·7

The above table shows that for the whole of India there was a mean deficiency for the week of 0·7°, and that on each day of the week (except the 2nd) the general temperature of India was below the normal. In Burma, Bengal, and the North-Western Provinces the mean temperature was steadily low throughout the week; in the Punjab, Bombay, the central parts of the country, and Madras the variations were irregular; and in Sind and Rajputana there was a steady excess.

Rainfall.—The table at the close of the summary shows that, as stated above, the rainfall of the central parts of the country and of a large part of the Peninsula, except the south, has been very slight, if not absolutely *nil*, while in all other parts of the country it has been general, and in places heavy.

Of the fifty-one divisions into which the Indian region is divided for rainfall purposes, thirteen have received absolutely no rain during the week under review, eight more received ineffective rain, *i.e.*, the average actual rainfall of each

division was less than one-tenth of an inch, while thirty received effective amounts. The regions which received absolutely or practically no rain included the following divisions:—The North-Western Provinces (West), the Punjab (South, Central, North-Western, and West), the Konkan, the Bombay Deccan, Khandeish, Berar, the Central Provinces (West and Centre), Guzerat, Kathiawar, Sind, the Central India and Rajputana divisions, Hyderabad (South), Madras (Central), and the East Coast (Central). Of the divisions which received effective rainfall, the heaviest average fall was 7·79 inches received by Tenasserim. This was followed by 5·65 inches in East Bengal, by 4·74 inches in Lower Burma, by 3·11 inches in Assam (Surma), and by 2·73 inches in Arakan. According to the normal averages, the heaviest rainfall during the present week should be 4·85 inches in Assam (Surma); hence the heavy rainfall of Tenasserim, Lower Burma, Arakan, and East Bengal is unusual, and points to abnormal conditions of pressure and wind. In fact, both the rainfall of Malabar and of Burma and East Bengal, but particularly the latter districts, points to a premature advance of monsoon winds to which the abnormal rainfall is to be attributed.

The third column of the table shows that in twenty-two divisions the rainfall of the week has been in excess of the normal. These twenty-two divisions include all the Burma divisions, East, Deltaic, Central, and North Bengal, Orissa, Chota Nagpur, the Behar divisions, the North-Western Provinces and Oudh divisions, the Punjab, Central, and Submontane divisions (South-Central), Madras, and the north of the East Coast. In Tenasserim the excess is 6 inches, in Lower Burma 4 inches, in East Bengal 3 inches, and in Central Burma, Arakan, Central Bengal, Orissa, and Behar (South) over 1 inch.

The returns giving the state of the seasonal rainfall, *i.e.*, the total actual and normal rainfall of the period February 26th to May 6th, show that over almost the whole country the rainfall has been excessive, and in many divisions largely excessive. In Arakan, Assam, and the Hill, north-west and west divisions of the Punjab, the total rainfall has been about normal, and in the South Punjab, in Kathiawar, in Sind, and in Rajputana it has been somewhat short, but elsewhere it has been heavier than usual.

Most of the rainfall of the week under review has fallen during thunderstorms; hence the distribution has been somewhat irregular, heavy bursts of rain occurring over those parts of the country lying within the direct path of the thunderstorm, while adjacent places have received only moderate falls. Consequently there have been large variations in the amount of rain in the same divisions. The following gives the largest total amounts received during the week as reported in the rainfall telegrams of the week:

Divisions.	Districts.	Stations.	Amount.
Tenasserim . .	Amherst . .	Thaton . .	10·92 inches.
Lower Burma . .	Maubin . .	Sudder . .	9·43 ,,
Central Burma . .	Henzada . .	Okpo . .	8·35 ,,
East Bengal . .	Backerganj . .	Bhola . .	13·34 ,,
Assam . .	Sylhet . .	Sudder . .	4·81 ,,
Central Bengal . .	Pabna . .	Serajganj . .	5·65 ,,
North Bengal . .	Dinajpur . .	Thakurgaon . .	7·36 ,,
North-Western Provinces.	Gorakhpur . .	Maharajganj. .	3·40 ,,
Madras . .	Trichinopoly .	Sudder . .	3·51 ,,

SIMLA, *11th May, 1893.*

W. L. DALLAS,
Asst. Meteorological Reporter to the Government of India.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the state of the Season and Prospects of the Crops.

Madras.—*For week ending 6th May.*—Good rain in most parts of the Central and Southern districts, showers in the Nilgiris, on the West Coast, and in parts of the Circars, but more rain is wanted in parts of Tinnevelly. Cultivation and sowing proceeding where rain has recently fallen. Standing crops generally in fair condition. Harvest of remaining crops producing fair outturn. Water, pasture, and fodder generally sufficient, and cattle in good condition. Prices continue almost stationary, and are still excessively high in Southern districts.

Bombay.—*For week ending 10th May.*—Slight rain in parts of three districts. Standing crops in good condition, except in Karachi, where they are damaged by locusts. Harvesting of late-crops progressing in parts of six districts. Preparations for next season progressing generally. Cotton-picking continues in parts of three districts. Prices steady. Agricultural stock good and fodder sufficient.

Bengal.—*For week ending 6th May.*—The weather has been unsettled, and rain, accompanied by thunderstorms, has fallen throughout the Province during the week. The rainfall has been heaviest in East Bengal and in parts of South-West and North Bengal, where cultivation is retarded in consequence; elsewhere ploughing and sowing are well in progress. All standing crops, including autumn rice and jute, continue to do well. Spring rice is being harvested with a good outturn. The rain has somewhat injured the spring crops still lying on the threshing floors. The *mahua (Bassia latifolia)* harvest is over, and the outturn is satisfactory on the whole. Prices of common rice remain almost stationary. Cattle are in good condition, and there is sufficient supply of fodder and water in all districts.

North-Western Provinces and Oudh.—*For week ending 10th May.*—Weather still unsettled. Rain has been general, and was accompanied by hail in four districts. Harvesting of the spring crops nearly completed; outturn reported to be good. Sugarcane has benefited by the rain. Weeding of indigo and weighments of opium in progress. Supplies are ample and prices generally steady. A flight of locusts appeared in the Saharanpur tahsil.

Punjab.—*For week ending 10th May.*—Rain in parts of four districts. Harvesting of spring crops going on. Weeding of sugarcane and cotton crops in progress. Outturn of the spring crop is good. Extra spring crops doing well. The rain that fell during the week was light, and did not damage the corn on the threshing floors. Prospects of autumn crops fair. A flight of locusts from the west alighted in the Leiah tahsil and went off towards the east, but did no damage. Condition of cattle is generally good, and fodder is sufficient throughout the Province. The poppy outturn is said to be good. Prices falling in eight and stationary in five districts.

Central Provinces.—*For week ending 10th May.*—Weather generally cloudy and stormy, accompanied by slight rain in seven districts. Threshing of spring crops continues in places. Prices rising in three districts; elsewhere stationary.

Burma.—*For week ending 6th May.*—Rain fell generally throughout the Province. In Upper Burma reaping of dry-weather paddy is progressing, and ploughing for wet-weather crops has commenced in some districts. The standing crops are flourishing, except in Shwebo, where the dry-weather paddy has been slightly attacked by insects. In Lower Burma the price of paddy is stationary, except in Moulmein, where it tends to rise. In Upper Burma the price has risen in one district and fallen in four others. Number on relief works in Meiktila 214.

Assam.—*For week ending 9th May.*—Weather seasonable. Sowing of early rice continues. Prospects of crops good. Condition of cattle fair. Fodder and water abundant.

Mysore and Coorg.—*For week ending 10th May.*—MYSORE: Rainfall general. Standing crops in good condition. Ploughing operations commenced in parts. Prospects generally favourable. Prices slightly risen in one district.

COORG.—Rainfall good. Showers favourable for coffee and cardamom crops. Rice sowing commenced. Fodder and water sufficient for cattle. Prices stationary.

Berar and Hyderabad.—*For week ending 10th May.*—BERAR: Weather hot. Harvesting of spring crops almost completed. Preparation of land for ensuing crops in progress. Water sufficient. Fodder deficient in Ellichpur taluka. Cattle generally healthy. Prices almost steady.

HYDERABAD: No rain during the week. Harvesting of hot-weather crops continues. Prices slightly fallen.

Central India.—*For week ending 10th May.*—Slight rain in all parts of Central India, except in Bhopal, Bhopawar, and the Neemuch district. Reaping completed. Threshing of wheat and watering of sugarcane in progress in Bhopal. Land being prepared for the autumn crop sowings in Bhopawar and Western Malwa. Condition of standing crops and pasturage good. Condition of cattle generally good. Prices of food-grains rising in Bhopawar, falling slightly in Bhopal, and steady, but high, elsewhere.

Rajputana.—*For week ending 10th May.*—Rainfall good at Abu. Agricultural operations satisfactory. Reaping of crops nearly completed. Harvest prospects good, except in Kotah, where wheat is reported much below average. Agricultural stock generally good. Pasturage or fodder sufficient, except in Dholepur, where fodder is reported scarce. Prices falling in three States, rising in three others, and steady elsewhere.

Nepal.—*For week ending 6th May.*—Weather showery and cool. Prospects good.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.
PUBLIC WORKS DEPARTMENT.
RAILWAY STATISTICS.

No. IV OF 1893-94.

STATEMENT OF APPROXIMATE GROSS EARNINGS OF INDIAN RAILWAYS.

N.B.—As regards the figures in column *Total Receipts from 1st April 1893*, audited figures have been used as far as possible.

RAILWAY.	Average earnings per mile per week in 1891-92.	WEEK ENDING 30TH APRIL 1892. Mean mileage worked.	Earnings. Total.	Earnings. Per mile open per week.	WEEK ENDING 29TH APRIL 1893. Mean mileage worked.	Earnings. Total.	Earnings. Per mile open per week.	Earnings from 1st to 30th April 1892.	Earnings from 1st to 29th April 1893.	Increases in 1893-94.	Decreases in 1893-94.

FINANCE AND COMMERCE DEPARTMENT
(*Statistical Branch*)
Calcutta, 20th May 1893.

J. F. FINLAY,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on Saturday, May 13th, 1893.

Unsettled weather has prevailed over a large part of the Indian region during the week under review. During the whole week pressure has been low relatively to surrounding regions over the Punjab and the western desert. From this region on most days of the week there has extended south-eastward as far as the coast of the Bay of Bengal an arm of relatively low pressure. To the northward of this arm, *i.e.*, in Assam, North Bengal, and along the line of the Himalayas, pressure was high ; hence the pressure gradient was favourable to south-easterly and easterly winds, and the air from the Bay of Bengal advanced north-westward along the north side of the Gangetic plain as far as the Punjab. This current brought up much moisture, and numerous thundershowers occurred over the regions traversed by it. Over the Peninsula conditions were less abnormal. Gradients were moderate and the wind from north-west and west. Thunderstorms were, however, more numerous than usual, and the rainfall both heavier and more extensive than is ordinarily the case. Owing largely to this general and on the whole heavy rainfall, the temperature has been unusually low, the mean temperature for the whole of India for the whole week being 3·0° below the average.

The chart of the 7th showed a large shallow low pressure area over North-Western India, and a second over Western Bengal, the east of the Central Provinces, and the south of the Gangetic plain, while readings were highest in Tenasserim. The wind was southerly and south-westerly over the Bay, south-easterly to easterly over Bengal and the Gangetic plain, and generally westerly elsewhere. The force was strong over a large part of the country. There had been hardly any rain over the Peninsula or the central parts of the country, but in Burma, Assam, Bengal, and the Gangetic plain the fall had been fairly general. In South-West Bengal the amounts were largish. On the 8th pressure remained lowest over the Punjab, and from this low pressure area a narrow band of low readings extended east-south-eastward as far as the Circars Coast. Pressure was high off the West Coast of the Peninsula, over the south of the Bay, and over North-Eastern India, and gradients over the Gangetic plain and over Guzerat and Sind were rather steep. The winds had become more easterly in Bengal, but elsewhere the directions were similar to those reported on the previous day. Rain had fallen over Burma, Assam, Bengal, the North-West and Central Provinces, and the south of the Peninsula as well as at several stations on the North-Western Himalayas. The amounts were again rather large over Bengal. The chart of the 9th showed a largish depression over the south of the Punjab and north of Rajputana, and steep gradients over the north of the Punjab between the depression and the Hills. On the other hand, pressure had become much more uniform over the Peninsula, the central parts of the country, and Bengal. The winds were easterly all along the line of the Himalayas, westerly and north-westerly over Western India, and variable elsewhere. Scattered thundershowers had occurred in all provinces, except Burma, Bombay, ~~and~~ Sind, ~~but the amounts~~

were generally small. On the 10th the distribution of pressure was abnormal, readings being very much more uniform than is ordinarily the case in the beginning of May. The winds were very variable in direction, though there was still a good deal of easting up the Gangetic plain. Rain was general over the north of the Punjab, and scattered showers were reported from the other parts of India, except the North-West and Central Provinces and Bombay. The chart of the following day, the 11th, showed that the barometer had fallen briskly over Northern, while it had fallen slowly over Southern, India. Hence the pressure difference had again increased. Readings were low over the central parts of the country and North-Western India and high over Malabar and the south of the Bay. The wind continued easterly in the north and generally westerly to north-westerly elsewhere. Rain had again fallen generally over the north of the Punjab and as scattered showers in other parts of the country. The amounts were large both in North-Western and South-Western India. On the 12th pressure was falling again, and readings were becoming uniform. Pressure was relatively low over Burma, over the central parts of the country, and over North-Western India, and high over the west of the Peninsula. The winds were very variable and generally light, and scattered thundershowers were again reported. On the 13th a broad band of low pressure stretched north-west and south-east from the Indus Valley to Madras, while pressure was high on the west coast of the Peninsula and in the south of the Bay. The winds were still light and variable over a large part of the country, and the rainfall again occurred during scattered thunderstorms.

Temperature.—As mentioned above, the showery unsettled weather has been accompanied with generally low temperatures.

The following table shows the variations of the mean temperature from the normal on each day of the week for the principal provinces of India:

Province.	May.							Mean variation of week.
	7th.	8th.	9th.	10th	11th.	12th.	13th.	
	°	°	°	°	°	°	°	°
Burma	—5·3	—5·8	—3·0	—1·4	—1·5	—1·0	+0·4	—2·5
Bengal and Assam . .	—3·9	—6·3	—5·2	—2·9	—2·7	—0·4	—1·3	—3·3
North-Western Provinces and Oudh.	—6·4	—5·9	—9·8	—7·4	—7·8	—5·5	—4·2	—6·7
Punjab	—0·2	0	+1·1	—6·5	—12·1	—8·8	—5·3	—4·5
Bombay	+0·5	—0·9	—0·7	+0·2	—0·4	—1·2	—0·8	—0·5
Central Provinces and Berar	+0·4	—3·3	—4·1	—3·3	—1·8	—3·8	—5·2	—3·0
Central India and Guzerat .	—0·4	—2·9	—4·2	—3·0	—1·6	—2·4	—3·4	—2·6
Sind and Rajputana . .	+1·2	+1·2	0	—3·2	—6·1	—3·6	—2·6	—1·9
Madras	—1·2	—1·2	—1·5	—1·9	—1·8	—1·7	—2·9	—1·7
Mean for whole India .	—1·7	—2·8	—3·0	—3·2	—4·0	—3·2	—2·8	—3·0

On each day of the week the mean temperature was below the normal, and the mean temperature of the whole country for the whole week has been 3·0° lower than usual. The provincial variations show that the abnormal depression of temperature was greatest in Bengal, the North-Western Provinces, and the Punjab, where it varied between 3·3° and 6·7°. On some days of the week, more particularly the 9th, 10th, and 11th, the day temperatures over Northern India were remarkably low.

Rain.—Rain during the week under review has been exceedingly general throughout India. Kathiawar is the only division which received actually no rain, though in the divisions of Berar, the Central Provinces (West and East), Guzerat, and Sind the average actual rainfall was less than one-tenth of an inch during the week. In all the other divisions effective rainfall was received, the average actual fall ranging from 2·76 inches in Lower Burma to 0·11 inch in Khandeish. In normal years the heaviest rainfall is received in the Surma division of Assam and the least in Kathiawar and Sind, so that there is some departure from the normal in the region of heaviest fall. The third column of the table shows that thirty-four of the rainfall divisions received more and fourteen less than the normal amount for the week. Two had exactly the normal, and in one division no comparison is possible. The regions which had a deficient supply of rain included the following divisions:—*viz.*, Tenasserim, Arakan, East and North Bengal, both the Assam divisions, North Behar, South Oudh, Khandeish, the Central Provinces (East and West), Guzerat, Kathiawar, and Madras (South). In all other places there was an excess. In the Assam divisions the deficiency was large, but in all the other divisions reporting short rains the variation was comparatively small and unimportant. The excess was greatest in Lower Burma, but in South Behar, in several of the Punjab divisions, and in many of the divisions in the Peninsula the excess was considerable.

The three concluding columns of the table show the state of the seasonal rainfall, *i.e.*, the rainfall from the 26th of February to the present date. In Arakan, Assam (Brahmaputra), the South Punjab, the Hill districts of the Punjab, and the north-west and west of the Punjab, Guzerat, and Rajputana (West), the rainfall has been approximately normal, while in Assam (Surma), Kathiawar, and Sind there has been some deficiency. In all the other divisions there has been an excess, which in the case of Lower Burma, Khandeish, the Central Provinces, and parts of the Peninsula has been large.

The rainfall was more general than it was last week, but there were fewer heavy local falls. The following gives the largest total amounts received during the week as reported in the rainfall telegrams of the week:

Division.	District.	Station.	Amount.
Lower Burma . .	Maubin . .	Dedaye . .	5·44 inches.
East Bengal . .	Chittagong . .	Cox's Bazaar .	3·49 ,,
Central Bengal . .	Bankura . .	Sudder . .	5·69 ,,
North Bengal . .	Dinajpur . .	Mahadevpur .	6·50 ,,
North-Western Provinces.	Basti . .	Hansi . .	3·54 ,,
Punjab . .	Rawalpindi . .	Murree . .	3·14 ,,
Malabar . .	Calicut . .	Ponani . .	4·86 ,,
Mysore . .	Mysore . .	Yedatore . .	6·68 ,,
East Coast . .	Ganjam . .	Rambha . .	5·53 ,,
Ditto . .	Tanjore . .	Vallam . .	4·45 ,,

Simla, *18th May, 1893.*

W. L. DALLAS,
Asst. Meteorological Reporter to the Government of India.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the state of the Season and Prospects of the Crops.

Madras.—*For week ending 13th May.*—Rainfall good, except in parts of the Carnatic and Tinnevelly, where there were a few scattered showers. Cultivation generally commencing for early crops, and sowings in progress in parts. Standing crops, except cotton and those under wells, generally fair, but more rain is required in Tinnevelly. Pasture, fodder, and drinking water generally sufficient, and cattle in good condition. Prices almost stationary, but slightly easier in the Carnatic and Southern districts. General prospects favourable.

Bombay.—*For week ending 17th May.*—Rain in parts of fourteen districts. Standing crops in good condition, except in Karachi, where they have been damaged by locusts. Harvesting of late crops continues in parts of four districts. Preparations for next season progressing generally. Cotton-picking continues in parts of two districts. Prices steady. Agricultural stock good and fodder sufficient.

Bengal.—*For week ending 13th May.*—There was general rain in the Province in the early part of the week, and scattered showers, in many instances light, fell in the latter part. The weather during the week has on the whole been beneficial. Ploughing and sowing are now in progress generally. Reports of the standing crops are favourable. The spring rice harvest is proceeding, and is yielding a good outturn. Prices are steady. Cattle are doing well, there being a sufficient supply of fodder and water in all districts.

North-Western Provinces and Oudh.—*For week ending 17th May.*—The weather has been somewhat unsettled, and rain has fallen in the Eastern, Central, and Submontane districts. The heat is, however, increasing. Summer crops are being irrigated, and are promising. Sugarcane in Rohilkhand has benefited by recent rain. Flights of locusts appeared in two tahsils of the Saharanpur district, but no damage is reported. Prices generally steady.

Punjab.—*For week ending 17th May.*—Rain has fallen in almost all districts. Reaping of spring crops almost over, and threshing in progress; outturn is said to be good. Irrigation of extra spring crops going on. Condition of the sugarcane and cotton crops is reported average. In Jullundur prospects excellent. Reaped crops have been slightly damaged by rain in Ferozepore. Slight hail in parts of Dera Ismail Khan, but no damage was caused to crops. Locusts appeared in the Dera Ismail Khan district. Condition of cattle is generally good. Fodder sufficient throughout the Province. Outturn of poppy is said to be good. Prices stationary in four districts and falling elsewhere.

Central Provinces.—*For week ending 17th May.*—Weather continues unsettled, and slight rain, accompanied by thunderstorms, has fallen in several districts. Land being prepared for autumn sowings. Agricultural stock good. Fodder insufficient in the districts and in parts of two others. Prices rising in two districts; elsewhere steady.

Burma.—*For week ending 13th May.*—Rain fell throughout the Province, except in two districts. In Upper Burma reaping of dry-weather paddy and ploughing for wet-weather crops is progressing. The standing crops are flourishing. The price of paddy has fallen in three districts in Lower Burma and has risen in Bhamo; elsewhere it is stationary.

Assam.—*For week ending 16th May.*—Weather seasonable. Sowing of summer paddy continues. Prospects good. Condition of cattle fair. Fodder and water sufficient.

Mysore and Coorg.—*For week ending 17th May.*—MYSORE: Rainfall general and good in the Kadur district. Crops and prospects good. Ploughing operations in progress. Prices fallen in one district.

COORG.—Rainfall moderate in Mercara, but heavy rain in South Coorg. Prices stationary. Water and fodder sufficient for cattle.

Berar and Hyderabad.—*For week ending 17th May.*—BERAR: Rainfall slight. Weather hot. Harvesting of spring crops finished. Preparation of land for ensuing season in progress. Water sufficient. Fodder deficient in two taluks. Cattle generally healthy. Prices almost steady.

HYDERABAD: Rainfall moderate during the week. Harvesting of hot-weather crops continues. Prices steady.

Central India.—*For week ending 17th May.*—Slight showers in most parts of Central India during the week. Heavy rain in the Bhopawar Agency. Agricultural operations completed; the average outturn will probably be fair. Cattle in good condition, except in Bhopal. Pasturage sufficient. Prices of food-grains fluctuating in Gwalior, rising in Goona, falling in Bhopal, and steady elsewhere.

Rajputana.—*For week ending 17th May.*—Rainfall general, except in Kherwara. Agricultural operations satisfactory. Reaping of crops completed. Harvest prospects good. Slight damage has been done to crops in Sirohi, Merwara, and Dholpur by rain. Agricultural stock generally good. Pasturage or fodder sufficient, except in Dholepur, where fodder is reported rather scarce. Prices falling in four States, rising in four others, and steady elsewhere.

Nepal.—*For week ending 13th May.*—Weather seasonable. Prospects good.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

NO. 22-P.

Extract from the Proceedings of the Government of India, in the Revenue and Agricultural Department (Patents),—dated Simla, the 18th May, 1893.

Read—

The appended Report on the working of the Office of the Secretary under the Inventions and Designs Act, 1888, during the year 1892.

RESOLUTION.

The Government of India are satisfied with the working of Act V of 1888 (Inventions and Designs Act) during the year. In particular the large increase of income from fees paid under section 8 of the Act in respect of the continuance of an exclusive privilege indicates that the Act is usefully serving its purpose of stimulating and protecting inventions in this country.

2. The opportunity is taken to call attention to the following points in connection with which applicants for exclusive privilege under the Act have more or less frequently either misunderstood or paid insufficient attention to the provisions of the law. One is a misapprehension regarding the nature of a design. A large number of applications were in 1890 and 1891 rejected because the invention for which protection was sought was a trade-mark and not a design as defined under the Act. The rejections in those years appear to have led in 1892 to a material diminution in the number of applications of the kind, but even in that year a large percentage of claims were rejected on the same ground.

Another frequent mistake which has occurred, and which has led either to the rejection or to the return for amendment of a large number of applications, has been the omission to define, as required by the Act, the particular novelty of which the invention consists "with reasonable precision and detail." Thus numerous applications have been received for the grant of exclusive privilege to machines and processes, in which are included or combined old and well known contrivances as well as alleged novelties. Under the Act exclusive privilege can only be granted to the latter, which must, in accordance with the directions of section 5, clause 3, be carefully separated in the application from the former.

3. As the Governor General in Council is desirous that fees, for the return of which there is no legal provision, should not be needlessly paid for the protection of inventions which cannot be brought under the cover of the law, the present occasion is taken to warn the public against the errors pointed out in the preceding paragraph.

ORDER.—Ordered, that the above Resolution be forwarded to the Local Governments and Administrations noted on the margin, and that a copy be published in the Supplement to the *Gazette of India*.

E. C. BUCK,
Secretary to the Government of India.

APPENDIX.

Report on the working of the Office of the Secretary under the Inventions and Designs Act, 1888, during the year 1892.

The arrangement by which the Inventions and Designs Office was placed under the superintendence of the Officer in charge of the Mathematical Instrument Department of the Survey of India continued in force during the entire period to which this report refers.

No matters of public interest were dealt with during the year under report.

The Museum for models provided in the year 1891 was not taken advantage of to the extent that was expected, the number of models sent in by inventors having been very small.

A slight change of procedure was introduced, by which applicants for exclusive privilege are now required to state whether or not a patent has at any time been applied for in the United Kingdom in respect of the invention for which protection is claimed. This was found necessary as instances had occurred of English patents having been applied for without any intimation of the fact being given, and the Department had no means of ascertaining whether the application had been submitted within the period of one year prescribed in section 25 of the Act without examining the volumes of the Journals of the English Patents Office at a considerable expenditure of time and trouble.

There was a slight decrease in the number of applications filed, the total being 336 against 347 in the preceding year.

Of this number, 228 were granted, 26 rejected, and 82 remained pending at the close of the year. Experts were referred to in 198 cases against 149 in 1891. Of these, 53 were on payment of fees and 145 without, the latter including 47 references to the Public Works Department, being 15 more than in the previous year. Twenty-four of these were for inventions connected with railways, and the remainder were for electric, hydraulic, and other miscellaneous inventions.

The number of specifications filed was considerably in excess of those of the preceding year, being 305 against 236 in 1892. These included 20 connected with electricity, 17 connected with railways, 12 for punkah-pulling machines, 8 for the treatment of ores, 20 for the treatment of cotton and other fibres, 4 for the manufacture of tea, 4 for the manufacture of indigo, 4 for baling presses, and 4 for water-lifts.

Eighty-nine applications for the registration of designs were received, or about half the number received in the previous year; 76 of these were granted and 13 rejected.

Two cases involving points of law were referred to the Legal Advisers to Government against 5 in 1892.

The fees collected showed an increase of over Rs. 2,000, having stood at Rs. 15,852-10 against Rs. 13,762 in the year previous.

This amount included Rs. 1,400 on account of the continuance of exclusive privilege as compared with Rs. 750 in 1892. The copying fees were double those of the year before, while Rs. 117 were received for the inspection of applications

and specifications. From the total receipts must, however, be deducted a sum of Rs. 147-4 representing refunds made to applicants.

The statement below furnishes statistics of the working of the Inventions and Designs Office during the year under reference as compared with the previous two years:—

Statement showing the working of the Office of the Secretary under the Inventions and Designs Act, V of 1888, during the year 1892 as compared with the years 1890 and 1891.

(*a*) Includes the Bezvada-Godaveri section of the East Coast (state) railway.
(*b*) Includes the Godhra-Rutlam railway.
(*c*) Includes the Guntakal-Mysore frontier section from 1st April 1893.
(*d*) Includes the Tirhoot state railway. Although for convenience classed amongst the state railways, the company's section of this line is the property of the Bengal and North Western railway company.
(*e*) Includes the Jammu and Kashmir and the Hyderabad-Umarkot railways.
(*f*) Although for convenience classed amongst the state railways, this line is the property of the Bengal Central railway company.
(*g*) Includes the Wardha Coal, Dhond-Manmád, Khámgaon, and Amráoti railways.
(*h*) Includes the Bangalore-Nanjangud and the Bangalore-Mysore frontier sections.

E. D. HERBERT.

SUPPLEMENT TO

The Gazette of India.

No. 21.} CALCUTTA, SATURDAY, MAY 27, 1893.

OFFICIAL PAPERS.

A SUPPLEMENT to the GAZETTE OF INDIA will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

RAILWAY STATISTICS.

RETURNS OF ACCIDENTS ON INDIAN RAILWAYS FOR THE NINE MONTHS ENDING THE 30th SEPTEMBER, 1892.

No. 172 R. Stat., dated Simla, the 13th May, 1893.

ORDER—By the Government of India, Public Works Department.

Read again—

Public Works Department Order No. 159 R. Stat., dated the 10th May, 1892.

Read also—

The following note by the Director General of Railways, No. 165 Stat., dated the 3rd May, 1893, with abstract returns of accidents to trains, etc., on the open lines of railway in India for the nine months ending the 30th September, 1892.

Summary of accidents to trains, rolling stock, etc.

The following summary gives the total number of accidents to trains, rolling stock, permanent-way, etc., for the nine months ending the 30th September, 1892, distributed under the classification adopted in abstract No. 4 of the returns:—

Serial No.	Calsses of accidents.	Number of accidents during the corresponding nine months of 1891.			Nine months ending the 30th September, 1892. Number.			Number of passengers and others.		Number of servants.		Total all classes.	
		Accidents reported to Local Governments under section 83 of the Indian Railways Act (IX of 1890).	Other accidents.	Total.	Accidents reported to Local Governments under section 83 of the Indian Railways Act (IX of 1890).	Other accidents.	Total.	Killed.	Injured.	Killed.	Injured.	Killed.	Injured.

	TOTAL for the corresponding period of 1891	...	...	...	134	3,235	3,369	(c) 9	(d) 52	16	44	25	96

(a) Not passengers.
(b) Of these, two were not passengers.
(c) Of these, seven were not passengers.
(d) Of these, eleven were not passengers.

2. As compared with the corresponding period of 1891, the number of accidents to trains, rolling stock, permanent-way, etc., during the nine months ending the 30th September 1892, shows an increase of 56 or of 1·65 per cent., with an increase of 613·46 miles or of 3·61 per cent. in the mean mileage worked, and of 555,238 miles or of 1·19 per cent. in the train-mileage run.

Principal variations as compared with the corresponding period of 1891.

3. The chief variations occurred under "Collisions between goods trains or parts of goods trains," 59 against 88; "Collisions between light engines," 32 against 18; "Goods trains or parts of goods trains, engines, etc., leaving the rails," 298 against 221; "Trains or engines travelling in the wrong direction through points," 56 against 42; "Trains running over cattle on the line," 1,559 against 1,520; "Trains running over obstructions on the line," 82 against 140; "The bursting of tubes, etc., of engines," 72 against 110; "The failure of machinery, springs, etc., of engines," 338 against 302; "The failure of couplings," 165 against 136; "The flooding of portions of permanent-way," 119 against 50; "Slips in cuttings or embankments," 23 against 71; and "Other accidents," 161 against 190.

4. Under "Collisions between goods trains or parts of goods trains," there was a decrease of 29 accidents, *viz.*, 4 under "Serious" and 25 under "Minor." The decrease under "Serious" was chiefly due to the number on the Great Indian Peninsula railway having fallen from 3 to *nil*, while that under "Minor" was due to a reduction of 7 each on the Rajputana-Malwa state and the North Western railways, and of 6 on the Eastern Bengal state railway.

5. The increase under "Collisions between light engines" was chiefly due to the numbers recorded on the East Indian and the North Western railways having risen from 6 to 14 and from 3 to 7 respectively. The increase of 8 on the East Indian railway was made up of 2 under "Serious" and 6 under "Minor."

6. "Goods trains or parts of goods trains, engines, etc., leaving the rails" showed an increase of 77 accidents. The chief variations were increases of 44 on the South Indian railway, of 32 on the East Indian railway, and of 15 on the Bengal and North-Western railway, including the Tirhoot section, and a decrease of 17 on the Eastern Bengal state railway.

7. The increase under "Trains or engines travelling in the wrong direction through points" was chiefly contributed by the East Indian railway, on which the number rose from 3 to 15.

8. The number of cattle accidents was largest on the Southern Mahratta railway, *viz.*, 390; next to that line comes the South Indian railway with 205; then the Rajputana-Malwa state railway with 141; the Eastern Bengal state railway with 110; the North Western railway with 101; the East Indian railway with 99; the Oudh and Rohilkhand railway with 89; and the Madras railway with 72.

As compared with the corresponding period of the previous year, the chief variations were an increase of 78 on the Southern Mahratta railway and a decrease of 39 on the North Western railway.

In relation to train-mileage run, the number was highest on the Southern Mahratta railway, which gave an average of 1 accident in 4,509 train-miles, the Dibru-Sadiya railway coming next with an average of 1 in 5,259; then the Nizam's Guaranteed State, the Jorhát, the South Indian and the Rohilkhand and Kumaon railways with averages of 1 in 7,124, 1 in 8,408, 1 in 11,687 and 1 in 21,861, respectively. The lowest number recorded relatively to train-mileage run was on the Bombay, Baroda and Central India railway, *viz.*, 1 in 197,546; the Great Indian Peninsula railway coming next with an average of 1 in 149,113; then the East Indian railway with 1 in 77,449; the Gaekwar's Dabhoi railway with 1 in 67,685; the North Western railway with 1 in 61,776; and the Burma state railway with 1 in 48,519.

9. The decrease of 58 accidents under "Trains running over obstructions on the line" was mainly due to there having been 33 less on the Eastern Bengal state railway, 8 less on the Rajputana-Malwa state railway, and 7 less on the North Western railway.

10. Under "The bursting of tubes, etc., of engines," there was a noticeable decrease of 29 accidents on the South Indian railway.

11. The number of accidents from "The failure of machinery, springs, etc., of engines" increased mainly on the East Indian railway, *viz.*, 73 against 16; on the Rajputana-Malwa railway, 28 against 14; and on the North Western railway, 74 against 60; and decreased on the Nizam's Guaranteed state railway, 4 against 34; and on the South Indian railway, 3 against 26.

12. Accidents from "The failure of couplings" were most numerous on the Rajputana-Malwa state railway, which showed an increase of 24 out of a total increase of 29.

13. Under the head "The flooding of portions of permanent-way," there was an increase of 69, of which 23 cases are recorded under "Serious" and 46 under "Minor." Under "Serious" the principal variations were increases of 15 on the North Western railway, of 7 on the Eastern Bengal state railway, and of 6 on the Nazim's Guaranteed State railway, and a decrease of 2 each on the Bombay, Baroda and Central India and the Bhávnagar-Gondal-Junágarh-Porbandar railways; while under "Minor" the increases were chiefly contributed by the Jodhpore-Bickaneer, the Rajputana-Malwa state, the Southern Mahratta and the North Western railways, on which the numbers rose from 3 to 19, 3 to 15, 4 to 12 and 6 to 12, respectively.

14. Under "Slips in cuttings or embankments," there was a decrease of 48 accidents, made up of an increase of 3 under "Serious" and a decrease of 51 under "Minor." The increase under "Serious" was due entirely to 7 accidents having been recorded under this head on the Bengal-Nágpur railway against *nil* in the corresponding period of 1891; while the decrease under "Minor" was owing principally to the numbers recorded on the Bengal-Nágpur, Great Indian Peninsula and North Western railways having fallen off from 27 to 3, 11 to *nil* and 17 to 7, respectively.

15. Under "Fire at stations, or involving injury to bridges or viaducts," the accidents numbered 41 against 59, of which 12 against 27 took place on the Eastern Bengal state railway alone.

16. The cases recorded under the head "Other accidents" decreased chiefly on the North Western railway, 31 against 54; on the Burma state railway, *nil* against 15; on the South Indian railway, *nil* against 13, and on the Bombay, Baroda and Central India railway, 4 against 16; but increased principally on the East Indian railway, *viz.*, 54 against 18.

17. The casualties to passengers, and to servants in the employ of railways or of contractors, from accidents not coming under the classification adopted in paragraph 1, were, as compared with the corresponding period of 1891, in the case of passengers, 43 killed and 112 injured against 52 killed and 160 injured, and, in the case of servants, 141 killed and 454 injured against 121 killed and 398 injured. (For details, *vide* abstract No. 2.)

Casualties to passengers and servants not included in paragraph 1.

18. The total casualties to persons from all causes, including trespassers, cases of suicide, etc., were 466 killed and 730 injured against 455 killed and 724 injured in the corresponding period of 1891. (For details, *vide* abstract No. 2.)

Total casualties from all causes.

19. In addition to the above, 71 persons were reported to have been killed and 154 injured in yards, workshops, etc., and 749 persons to have died in carriages and at stations from causes unconnected with the working of trains.

Casualties in yards, workshops, etc.

20. The accidents *for the 3rd quarter of 1892* are dealt with in the following note.

Note on accidents for the 3rd quarter of 1892.

The following table gives the number of accidents, as classified in paragraph 1 of the previous note, which resulted in loss of, or injury to, life and limb, and shows the railways on which they occurred:—

Casualties resulting from accidents to trains, rolling stock, etc., for the 3rd quarter of 1892.

RAILWAY.	Number of accidents during the 3rd quarter of 1892.	Passengers and others.		Servants.		Total.	
		Killed.	Injured.	Killed.	Injured.	Killed.	Injured.

Total	...	3	2	1	7	4	9
Total of the corresponding quarter of 1891	...	1	6	1	6	2	12

2. *Bengal-Nágpur railway.*—On the 10th August, 1892, the engine and six vehicles of a down mail train were derailed at mileage 67¾ from Katni, owing to a small bank having been washed away by heavy rain. Three passengers were killed and two passengers and a railway servant injured. There was also considerable damage to rolling stock.

3. *Rajputana-Malwa railway.*—On the 26th July, 1892, a brake-van of a down goods train was derailed whilst shunting at the Bhátinda station. A railway servant was slightly injured.

4. *North Western railway.*—On the 16th August, 1892, the engine of an up mail train fell into the Pulkoo Nullah between Wazirabad and Kathála, owing to the line having been breached. A fireman was drowned.

5. *Eastern Bengal state railway.*—On the 3rd September, 1892, an up goods train ran over a bull at mile 17 on the Raita extension, which led to the train being derailed. The line was unfenced and the engine was not fitted with a cow-catcher. The guard and the driver were injured.

6. *Great Indian Peninsula railway.*—On the 21st September, 1892, the rear brake and a third class carriage of an up mixed train were derailed while shunting at Bhusával. The guard was slightly injured.

7. *Madras railway.*—On the 8th September, 1892, the engine of an extra goods train was derailed at Jalárpet, owing to the train having been turned into a dead siding. Two railway servants were injured. The pointsman, who was at fault, was prosecuted and sentenced to eighteen months' rigorous imprisonment.

ORDER.—Ordered, that the above note, with the abstract returns, be communicated for information to the Local Governments and Administrations, and to the officers noted in the margin.

The Governments of Madras, Bombay, Bengal, North-Western Provinces and Oudh, and the Punjab.
The Chief Commissioners of the Central Provinces, Burma, and Assam.
The Resident at Hyderabad.
The Resident in Mysore.
The Agents to the Governor General for Rajputana, Central India, and Baluchistan.
The Director General of Railways.
The Consulting Engineers to the Government of India for Railways, Calcutta, Central Division, Lucknow, and Assam.

Ordered also, that copies be forwarded for the information of Her Majesty's Government.

Ordered further, that the note, with the abstract returns, be published in the Supplement to the *Gazette of India*.

F. B. HEBBERT,
Under Secretary.

Documents accompanying.

Abstract returns of accidents for the nine months ending the 30th September 1892.

ABSTRACT No. 1.

GENERAL TOTAL.

NUMBER of PERSONS reported, during the NINE MONTHS ending the 30th September 1892, as KILLED or INJURED on ALL RAILWAYS open for TRAFFIC in INDIA, distinguishing between PASSENGERS, RAILWAY SERVANTS and OTHER PERSONS; and distinguishing also, in the case of the two former classes, between ACCIDENTS caused by ACCIDENTS to TRAINS, ROLLING-STOCK, PERMANENT-WAY, etc., and ACCIDENTS happening otherwise.

	Killed.	Injured.	REMARKS.
PASSENGERS:—			
From accidents to trains, rolling-stock, permanent-way, etc.	8	41	
By accidents from other causes, including accidents from their own want of caution or misconduct	43	112	
SERVANTS:—			
From accidents to trains, rolling-stock, permanent-way, etc.	17	36	
By accidents from other causes, including accidents from their own want of caution or misconduct	141	454	
OTHER PERSONS:—			
Whilst passing over railways at level-crossings	19	12	
Trespassers	195	63	
Suicides	38	4	
Miscellaneous, not included in either of the above	5	8	
TOTAL	466	730	

ABSTRACT

NUMBER of PERSONS reported, during the NINE MONTHS ending 30th September 1892, as KILLED or INJURED in INDIA by the RAILWAY SERVANTS, and OTHER PERSONS, and classifying, as far as practicable,

No. 2.

TRAVELLING of TRAINS or the MOVEMENT of VEHICLES used exclusively upon RAILWAYS, distinguishing between PASSENGERS, the nature and causes of the ACCIDENTS occasioning the DEATH or INJURY.

| Serial No. | RAILWAYS. | PASSENGERS. | | | | | | | | | | | | | | | | | | | | | | SERVANTS. | | | | | | | | | | | | | | | | | | |

ABSTRACT No. 3.

ACCIDENTS to TRAINS, ROLLING-STOCK, PERMANENT-WAY, ETC., reported during the NINE MONTHS ending 30th September 1892, as having occurred on the several RAILWAYS open for TRAFFIC in INDIA, distinguishing the different classes of ACCIDENTS and the number of PASSENGERS AND OTHERS, and of RAILWAY SERVANTS KILLED or INJURED in each class of accident.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on Saturday, May 20th, 1893.

During the week under review the most important feature of the weather has been the extension northward over the Bay and Burma of monsoon winds and the appearance of monsoon weather on the Malabar Coast. This extension of the monsoon has been accompanied with general moderate rainfall over Burma, and with scattered rain over the west and south of the Peninsula. At the same time there has been a considerable increase of heat over Northern India, where the mean temperature has considerably exceeded the average, and the day temperatures have been very high. Hardly any rain has fallen over the central and northern parts of the country, except on Monday, when dust and thunder storms occasioned scattered showers.

The chart of the 14th showed that pressure was high over Ceylon, while three shallow low pressure areas existed—one over the western desert; a second over the central parts of the country; and a third over Central Burma. Pressure was higher than usual almost everywhere. The excess was greatest in the north, and pressure was more uniform than usual. The winds varied a good deal in direction, and light scattered showers due to dust and thunder storms were reported from different parts of the country. On Monday, the 15th, pressure had increased briskly in the north-west, and the shallow depression over the western desert had disappeared, but otherwise the general distribution was unchanged. The winds remained very variable. Showers, almost everywhere of very small amount, had occurred over the Punjab, the North-Western Himalayas, Burma, and the south of the Peninsula. On Tuesday, the 16th, the barometer was falling everywhere, the change being rapid in the extreme north-west. Pressure was high on the West Coast of the Peninsula and over the south of the Bay, and low over Northern and Central India and Central Burma; but the pressure differences continued smaller than is ordinarily the case at this season. Strong north-westerly and north-north-westerly winds prevailed over the Bombay Presidency, and north-westerly winds were appearing in the Punjab and the Gangetic plain, but elsewhere the directions were still variable. Rain was falling in the south of the Peninsula, in Burma, and at one or two central stations, but the amounts were again generally small. The chart of the 17th showed that the barometer was rising again, except at some of the Madras stations. Pressure was high on the Konkan and Kathiawar Coasts and in the south of the Bay, and low over Northern and Central India and the Bay. Gradients remained abnormally slight for the time of year. Fresh northerly winds continued down the West Coast and at several central stations, while south-westerly winds prevailed over the head of the Bay and in Lower Bengal. Elsewhere the directions were very variable. In Burma rain continued fairly general, but over India the only rainfall was a few scattered showers. On the 18th pressure was falling over Northern and Central India and Burma and rising over the west of the Peninsula. In consequence gradients were increasing and the general distribution assuming a more normal condition. Northerly and north-westerly winds prevailed over a large part of Western and Central India, and hot north-westerly winds were blowing down the Gangetic plain. On the other hand, in Burma the wind was south-easterly. Elsewhere the directions were variable. Rain had fallen over Burma and the west of the Peninsula and at a few scattered stations. The fall was becoming heavier, Moulmein, Mangalore, and Calicut having received over 2 and Tavoy and Akyab over 1 inch. The chart of Friday, the 19th, showed that the barometric changes which had commenced on the preceding day had been maintained. The barometer had risen over the Peninsula and the south of the Bay and fallen over Northern India. Hence gradients had

continued to steepen, and the pressure difference over India was somewhat greater than usual. North-westerly and westerly winds prevailed over Western India and the Gangetic plain, and southerly winds over Burma and the Bay. The force was strong over a large part of the country. Rain had again fallen over the west and south of the Peninsula and in Burma. Tavoy had received over 2 and Moulmein, Bassein, and Chittagong over 1 inch. On the 20th pressure was falling everywhere. The distribution was unchanged as regards the relative positions of the areas of high and of low pressure, but the pressure difference had increased, and was about 0·30″ instead of the normal 0·20″. The winds were generally similar to those reported on the previous day, and were strong over a large part of the country. Rain had fallen generally over Burma, and scattered showers had occurred over the west of the Peninsula and North Bengal. Tavoy again received over 2 and Akyab, Chittagong, and Bijapur over 1 inch.

Temperature.—The following table shows the variations of temperature from the normal on each day of the week for the principal provinces of India :

Province.	May.							Mean variation of week.
	14th.	15th.	16th.	17th.	18th.	19th.	20th.	
	°	°	°	°	°	°	°	°
Burma	+1·3	+0·6	—1·0	—2·3	—2·1	—2·7	—3·5	—1·4
Bengal and Assam . .	—0·2	+0·9	+2·3	+2·2	+2·6	+3·1	+2·3	+1·9
North-Western Provinces and Oudh.	—2·6	—3·0	—1·1	—0·4	+0·4	+1·4	+3·0	—0·3
Punjab	—3·4	—1·5	—3·7	—2·1	+0·4	+2·8	+4·0	—0·5
Bombay	—0·3	+0·5	+0·1	+0·2	—0·4	—2·3	—2·3	—0·6
Central Provinces and Berar	—4·7	—3·1	—2·1	—0·9	—0·2	+0·7	+0·5	—1·4
Central India and Guzerat .	—2·5	—2·0	—1·3	—1·0	—0·4	—1·0	—1·1	—1·3
Sind and Rajputana . .	—2·9	—2·9	—4·4	—3·0	—2·1	—0·8	—1·3	—2·5
Madras	—3·0	—2·2	—3·2	—1·7	—1·5	0	—1·3	—1·8
Mean for whole India .	—2·0	—1·4	—1·6	—1·0	—0·4	+0·2	0	—0·9

The above table shows that a marked rise of temperature has occurred during the week over Northern India and a marked fall over Burma. The mean temperature of the whole of India for the week was 0·9° below the normal average, and it was only on the 19th and 20th that the general temperature of the whole Indian region equalled the normal. On all the preceding days the heat was less than usual, the abnormal depression ranging from 2·0° on the 14th to 0·4° on the 18th. The provincial variations show that in Bengal the mean temperature of the week was 1·9° higher than usual, but that in all the other Provinces the abnormal depression of temperature, which has prevailed for so long, has continued.

Rain has been somewhat less general in this than in the preceding week, eight divisions reporting absolutely no rain, and sixteen more reporting an average actual fall for the division of less than one-tenth of an inch. In the remaining twenty-six divisions effective rainfall has been received, the actual average fall per division ranging from 6·48 inches in Tenasserim to 0·11 inches in Berar. The rainfall in Burma and parts of Bengal as well as probably that in the south-west of the Peninsula was of monsoon origin, while that recorded in other parts of the Indian region was due to local dust and thunder storms.

As these storms were fewer and less intense than was the case in the last few preceding weeks, the general rainfall of those parts of India outside the influence of the monsoon currents was proportionately lighter, and in most divisions the average fall did not amount to one quarter of an inch. Within the regions affected by the monsoon currents the amount of rain received varied a good deal. Thus the division of Tenasserim, which was most within the current, recorded an average of 6·48 inches, Central Burma of 2·75 inches, Mysore of 2·09 inches, and Lower Burma, Upper Burma, Arakan, Malabar, Madras (South Central), Coorg, and the Bombay Deccan of over one inch.

The third column of the concluding table shows that only in Tenasserim, Central Burma, Punjab (West), Madras (South Central), Mysore, the Konkan, the Bombay Deccan, Khandeish, the Central Provinces (West), Sind, and Rajputana (West) was the average actual rainfall of the week in excess of the normal average fall, and only in Tenasserim, Central Burma, Mysore, and the Deccan was this excess at all large. In all parts of India, except the ten divisions noticed above, the rainfall of the week was in defect, but in the case of most of the divisions the deficiency was small. In Assam and North Bengal, however, and also in Lower Burma, rainfall was abnormally light; thus the Lower Burma division received 1·68 inches instead of 3·31 inches, the Surma division 0·56 inch instead of 5·09 inches, the Brahmaputra division 0·04 inch instead of 2·74 inches, and North Bengal 0·66 inch instead of 1·79 inch.

The three concluding columns of the table show that for the period February 26th to May 20th the average actual rainfall has been heavier than usual over by far the greater part of the country. In Arakan, both the Assam divisions, Guzerat, Kathiawar, and Sind the rainfall has been defective, while in Deltaic Bengal and the Punjab (South, Hills, and North-West) the total amount received has been about normal. In all the other divisions the total rainfall has been in excess.

As stated above, the dust and thunder storms of the week under review were feebler than in the preceding week, and hence there were very few instances of their occasioning heavy falls of rain. Most of the heavy falls given below were attributable to the incursion of the monsoon current.

The following gives the largest total amounts received during the week as reported in the rainfall telegrams of the week :

Division.	District.	Station.	Amount.
Tenasserim . .	Amherst . .	Thaton . .	7·18 inches.
Central Burma . .	Shwegyin . .	Kyaikto . .	14·71 ,,
Arakan . .	Akyab . .	Maungdaw . .	4·51 ,,
North Bengal . .	Darjeeling . .	Kurseong . .	7·40 ,,
Malabar . .	Calicut . .	Ponnani . .	2·98 ,,
Madras . .	Nilgiris . .	Naduvatam . .	4·36 ,,
Mysore . .	Tumkur . .	Kunigal . .	4·54 ,,
Deccan . .	Belgaum . .	Sampgaon . .	4·28 ,,
Madras (Central) . .	Bellary . .	Kudlighi . .	4·65 ,,

SIMLA, *25th May, 1893.*

W. L. DALLAS,
Asst. Meteorological Reporter to the Government of India.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the state of the Season and Prospects of the Crops.

Madras.—*For week ending 20th May.*—Rainfall good, except in parts of the Carnatic, which had only a few scattered showers. Cultivation progressing. Standing crops generally fair, but more rain is required in parts of Madura and Tinnevelly. Pasture, fodder, and drinking water generally sufficient, and cattle in good condition. Prices slightly easier, except in parts of the Carnatic and Central districts, where prices are stationary. General prospects favourable.

Bombay.—*For week ending 24th May.*—Rain in parts of twelve districts. Standing crops in good condition. Harvesting of late-crops continues in parts of two districts and cotton-picking in one. Preparations for next season progressing generally. Sowing commenced in parts of three districts. Prices steady. Agricultural stock good. Fodder sufficient.

Bengal.—*For week ending 20th May.*—The week has been characterized by fine settled weather with excessive temperature, and there has been no rain with the exception of a few scattered showers in North and East Bengal. General agricultural prospects continue favourable. Ploughing and sowing are in full progress, and all standing crops are doing well. Spring rice is still being harvested, and is generally yielding a good outturn. No important change in prices of common rice. Cattle are generally reported well, and fodder and water supplies are plentiful.

North-Western Provinces and Oudh.—*For week ending 24th May.*—Weather seasonable. Heat increasing. Threshing of spring crops in progress, and completed in some districts. Summer crops are being irrigated and are doing well. Preparations for the autumn crops begun. Weighments of opium finished; outturn fair. Prices generally steady. Locusts have appeared in Meerut, but no damage is reported. Large broods of locusts have been hatched in the Saharanpur district, and active measures have been taken for their destruction.

Punjab.—*For week ending 24th May.*—Slight rain has fallen in most districts. Reaping and threshing of spring crops in progress. Sugarcane and cotton sowings going on. Ploughings and sowings for autumn crops commenced. Condition of standing autumn crops is reported excellent, and their prospects are said to be good. Extra spring crops doing well. Locusts appeared in parts of Hissar, Ferozepur, and Shahpur, and have damaged the cotton and indigo crops in Hissar; no damage is reported from the other two districts. Condition of cattle is generally good. Fodder sufficient throughout the Province. Prices rising in one district, falling in seven others, and stationary elsewhere.

Central Provinces.—*For week ending 24th May.*—Weather hot and occasionally cloudy with high winds. Land being prepared for autumn sowings. Prices steady.

Burma.—*For week ending 20th May.*—Rain fell throughout the Province. In Upper Burma reaping of dry-weather paddy and ploughing for wet-weather crops are progressing. The standing crops generally are good, but the paddy crop near Shwebo has been wholly submerged and destroyed by heavy floods in the Mu canal. The price of paddy has risen in Mandalay and has fallen in Katha and Shwebo; elsewhere the price is stationary. The number on relief works in the Meiktila district was 230.

Assam.—*For week ending 23rd May.*—Weather dry and hot, and rain wanted. Sowing of summer paddy continues. Condition of cattle normal. Fodder sufficient.

Mysore and Coorg.—*For week ending 24th May.*—MYSORE: Rain throughout the State. Standing crops good. Ploughing operations in active progress and sowing commenced in parts. Prospects favourable. Prices fallen in one district.

COORG.—Rainfall good. Rice sowing completed in one district. *Ragi* (*Eleusine coracana*) sowing in progress. Late heavy showers have been favourable for the coffee and cardamom crops. Prices stationary. Water and fodder sufficient for cattle.

Berar and Hyderabad.—*For week ending 24th May.*—BERAR: Rainfall moderate. Weather hot. Preparation of land for ensuing season continues. Water sufficient. Fodder deficient in two talukas. Cattle generally healthy. Prices almost steady.

HYDERABAD: No rain during the week. Harvesting of hot-weather crops continues. Prices fallen slightly.

Central India.—*For week ending 24th May.*—Rain fell in two States. Land being prepared for autumn crop sowings in Bhopal and Bhopawar. Condition of cattle generally good. Prices falling slightly in Bhopal, fluctuating in Gwalior, and steady, but high, in other parts.

Rajputana.—*For week ending 24th May.*—Rainfall good in two States and moderate in three others and in Ajmere. Agricultural operations satisfactory. Land being prepared for autumn crops in Ajmere and Ulwar. Harvest prospects good, except in two States, where the outturn is below average. Grain being threshed. Agricultural stock generally good. Pasturage or fodder sufficient, except in Dholpur, where fodder is scarce. Prices rising in three States and steady elsewhere.

Nepal.—*For week ending 20th May.*—Weather hot and fine. Prospects good.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

No. $\frac{8}{111}$.

Extract from the Proceedings of the Government of India, in the Revenue and Agricultural Department (Surveys),—dated Simla, the 22nd May, 1893.

RESOLUTION.

The report for the year ending 30th September 1892 is, as usual, well compiled and accompanied by excellent maps and plates.

2. Twenty-one parties and six small detachments were employed on field operations during the year, as shown in the following list:—

	Number of parties.	Number of detachments.
1. Trigonometrical	1	...
2. Topographical	3	2
3. Forest	4	...
4. Cadastral	7	2
5. Traverse	1	1
6. Scientific	3	...
7. Geographical	2	1

Of these, 12 parties and 3 detachments may be held to have been engaged on remunerative operations, *i.e.*, on work connected with the enhancement of land or forest revenue.

3. The trigonometrical operations were, as in the previous year, carried on by one party only. The topographical establishment was somewhat reduced, and the outturn of work has consequently been a little less than in 1890-91. That of the Forest Surveys is, on the other hand, considerably larger than last year mainly owing to the rapidity of the 4-inch scale operations in Madura and Coimbatore.

4. The establishment engaged on cadastral surveys has been particularly strong during the year under report, and both the outturn of work (6,598 square miles in all) and the reduction which has been effected in its cost are creditable to the Department. The extensive operations in Orissa have been carried out at an expenditure of Rs. 22 less per square mile than last year, and a considerable reduction in the rates has taken place in Upper Burma. In Garhwál the cost has been reduced from Rs. 283 to Rs. 183 per square mile

5. The Government of India notice with satisfaction the efficient manner in which during the year the Survey Department has co-operated with the Provincial Revenue authorities in the conduct of cadastral surveys. As indicated in the Government Resolutions on the survey reports of previous years, the gradual reforms which have been recently introduced, and which require, on the one hand, the more effective utilization of local agency in the construction of field maps, and, on the other, the employment of survey subordinates for the compilation of many of the registers comprised in the record-of-rights, have neces-

sitated intimate and cordial relations between the Survey and Provincial officers. These have now been everywhere established. The amalgamation of the survey and revenue departments has, indeed, during the last year reached its fullest development in the appointment of Lieutenant-Colonel Sandeman as Director of the Bengal Surveys under the administrative orders of the Government of Bengal, and credit is due both to that officer and to Colonel Thuillier for the part which they have taken in the satisfactory arrangements which have been secured for the progress of survey operations in that Province. The instructions in the Resolution of last year on the subject of personal tours have at the same time been zealously carried out in other Provinces by Lieutenant-Colonel C. Strahan, the Deputy Surveyor General directly responsible for the superintendence of revenue surveys, with the result that none of the difficulties which arose occasionally in previous years through want of a complete understanding between the Revenue and Survey officials have occurred during the year under report.

6. The only survey connected with the development of mining industries has been that of the detachment in Mergui and Maliwun, which has under considerable difficulties proceeded with a topographical survey of the tin and coal bearing regions in that neighbourhood.

7. General measures are under consideration for improving the pay and prospects of the Junior Division of the Survey of India. In the meanwhile, one step has been taken in this direction by securing for survey officers of the Junior Division five posts of the newly-constituted Land-Records Department in Burma.

The designation of officers throughout the Junior Division has been altered, and the Extra-Assistant Superintendents, who are at the head of the Junior Division, now rank as gazetted officers.

8. The work done in the Photographic and Lithographic office continues to show a large increase, especially in the printing sections, and it is found very difficult to comply with the demands for colour printing, even with the aid of steam machinery. The combined outturn in pulls of the lithographic and zincographic presses and machines was in 1878-79, 233,989; in 1888-89, 466,082; and in 1891-92, 756,068: these figures serve to show the increase, due in part to the introduction of steam power, in these sections. During the past year there were issued 1,318,597 impressions from print and 92,415 heliogravure prints. In 1878-79 the impressions were 367,175 only: the heliogravure prints in 1888-89, when this process was started, were 20,307.

The value of the outturn for the last three years, as compared with that for 1881-82, was—

1881-82.	1889-90.	1890-91.	1891-92.
Rs.	Rs.	Rs.	Rs.
1,69,654	2,00,374	2,08,654	2,10,357

The increased work in this office has necessitated the strengthening of the establishment.

The value of the instruments issued by the Mathematical Instrument Office at the same time has risen since last year from Rs. 2,88,337 to Rs. 3,16,373.

9. The Department continues to show good work in all its branches, and the Government of India acknowledge the services rendered by the Surveyor General and the other officers of the Department.

ORDER.—Ordered, that the above Resolution be forwarded to the Surveyor General of India, Inspector General of Forests, Local Governments and Administrations noted on the margin, and to the Foreign, Military, and Public Works Departments.

Madras.	Punjab.	
Bombay.	Central Provinces.	
Bengal.	Burma.	
N.-W. P. and Oudh.	Assam.	
	Coorg.	

Ordered also, that the Resolution be published in the Supplement to the *Gazette of India.*

[True Extract.]

E. C. BUCK,

Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

STATISTICS.

IMPORTS OF COTTON, WHEAT, LINSEED AND INDIGO.

Statement showing in maunds the imports of Cotton, Wheat, Linseed, and Indigo by rail and river into Calcutta, Bombay Town and Karachi during the month of March 1893, and from 1st January 1893 to 31st March 1893, compared with the corresponding periods of the years 1891 and 1892.

J. F. FINLAY,
Secretary to the Government of India

FINANCE AND COMMERCE DEPARTMENT (*Statistical Branch*).

* Not sold.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Memorandum on the snowfall in the mountain districts bordering Northern India and the abnormal features of the weather in India during the past five months, with a forecast of the probable character of the south-west monsoon rains of 1893.

The present memorandum is drawn up in accordance with the practice of the past ten years, and includes, *firstly*, a brief summary of the information received from various officers relating to the snowfall of the past winter or cold weather in the Afghan mountains and the Himalayan area; *secondly*, a statement of the chief peculiarities or abnormal features of the meteorology of India during the past five months; and, *thirdly*, a forecast of the probable character of the approaching south-west monsoon rains based on this information.

The forecast is based in part on the snowfall information and on the abnormal features of the weather during the past five months, and in part on a comparison with the meteorology of the previous 25 years, so far as it is available. It has hence been drawn up carefully after a consideration of all the available information, but it should, to use the words of the Famine Commission report, "*be used with due caution.*"

It is necessary to point out that the forecast is a statement of probabilities and not of certainties, and that it is liable to error from the limitation and uncertainty of part of the data on which it is based. The monsoon forecasts as at present issued necessarily leave out of consideration two important points on which the agricultural value of the monsoon rainfall largely depends, *viz.*,—

(1) the probability of the occurrence of a prolonged break in the rains in July or August;

(2) the probability of the unusually early termination of the rains in Upper India or Bengal;

and are hence imperfect in every year to that extent.

The chief features or conditions which appear to influence and determine the extension and general strength of the south-west monsoon current are as follows:—

1st.—The amount and time of occurrence of the cold weather snowfall in the mountain districts adjacent to Northern India.

2nd.—The local peculiarities of the weather in India itself immediately antecedent to the advance of the monsoon currents across the coasts of India into the interior, and which it is found are generally impressed upon it during the hot weather, and are frequently more or less persistent in character. These abnormal features are on the whole best estimated by means of the variations of pressure from its normal value in different parts of India.

3rd.—Local peculiarities in the Bay of Bengal and Arabian Sea, over which the monsoon currents pass before they reach India.

The first of these conditions or factors appears to be mainly influential in determining the northern limits of the monsoon rains, heavy and prolonged snowfall in the Western Himalayan area either preventing or delaying the extension of the monsoon current over Upper India during the rainy season. Heavy and untimely snowfall in April and May appears especially to exercise a very powerful influence in this way.

The second factor appears to determine those large local district or provincial variations of rainfall during the monsoon which are evidently due to persistent local conditions or peculiarities, and not to general causes influencing the whole of India more or less.

The third and last factor is almost certainly of equal importance with the preceding two, but it is that on which information is most difficult to obtain, and is least in amount and longest in being received. In fact hitherto information respecting the weather conditions in the Arabian Sea or Bay of Bengal has rarely been received in time to be utilized in drawing up the annual forecasts

Summary of snowfall information.

The whole of the information referring to the snowfall of the past cold weather (up to the end of May) in the mountain districts bordering Northern India is now published as it is received in the India monthly weather reviews.

The following gives a brief summary of the information received up to date:—

I.—AFGHAN MOUNTAIN DISTRICTS.

(1) HILLS WEST OF DERA ISMAIL KHAN.

December 1892.—Snow fell unusually early in the season, and lay on these hills from the 3rd to the 10th. This fall was very heavy.

January 1893.—Snow fell on five occasions in unusually large amounts. The fall during a storm on the 27th was "phenomenal," and occurred as low down as 1,800 feet above sea level.

February.—There were three snowstorms during the month. The fall was moderate in amount. The sun was very hot in the intervals between the storms, and the snow melted rapidly.

March, April, and May.—No snow fell.

(2) KURRAM.

November 1892.—Snow began unusually early. There were three periods of snowfall, *viz.*, from the 1st to the 7th, the 25th, and the 29th. The fall during the storms of the 25th and 29th was very heavy, and reached down to 6,000 feet.

December 1892.—Snow fell on three occasions to a depth of about 1½ feet.

January 1893.—Snow fell on eleven days during the month down to a level of 2,000 feet. Twelve to fifteen feet fell on the Sufed Koh. The fall of the month was the heaviest known. The weather was abnormally cold and severe during the month.

February.—Snow fell on several occasions during the month There was a very heavy snowstorm on the 2nd and 3rd, when 5 feet fell on the Sufed Koh. The average depth of the snow on the higher peaks of that range at the end of the month was 25 feet.

March and April.—No snow fell.

(3) HILLS WEST OF BANNU.

December 1892.—Snowfall was normal in amount.

January 1893.—The snowfall was unusually heavy and the weather very cold.

February.—Heavy snow fell on the higher ranges.

March and April.—No snow.

(4) HILLS WEST OF KOHAT.

December 1892.—Snow fell in moderate amounts on the Kurram and Spinghar mountains.

January 1893.—The snowfall was exceptionally heavy. The total fall on the Sufed Koh was according to one estimate 12 to 15 feet, and according to another 29 feet.

February.—Snow fell on the higher ranges on 12 days. A total of 5 feet occurred on the Sufed Koh, and the snow was stated to be 30 feet deep at the end of the month. The snowfall of the season was much above the average.

March.—No snow fell during the month, except a slight fall on the Sufed Koh on one occasion. The weather was unusually warm, and the snow melted rapidly. It had melted from all, except the highest peaks, at the end of the month.

April.—No snow.

(5) KHYBER.

November and December 1892.—No snow fell during this month on the hills near the Khyber Pass.

January 1893.—Heavy snow was received down to 3,000 feet during a storm from the 21st to the 24th. The weather was unusually cold and bitter, with strong westerly winds, during the month.

February to April.—No snow.

(6) KABUL.

December 1892.—Snow fell on one day.

January 1893.—Snow fell on four days.

February.—Snow fell on eight occasions.

March.—There was a snowstorm on the 4th, the last of the season.

The total fall of the season was nearly 5 feet in amount. The weather throughout was excessively cold, and the winter is stated to be the coldest during the past 50 years, although the snowfall was much less than in the winter of 1890-91.

The snow melted very quickly in April, and there was very little snow on the higher hills to the north or south of Kabul at the end of the month.

II.—THE HIMALAYAS.

(A) THE PUNJAB AND KASHMIR HIMALAYAS.

(1) HILLS TO THE NORTH OF HAZARA.

December 1892.—The first heavy fall of snow occurred on the 31st, when 4 feet fell on the Black Mountain.

January 1893.—Three snowstorms occurred during the month in the Hazara District. Snow fell down to 1,500 feet. The fall at Haripur (1,800 feet above sea level) was 6 inches. The total fall of the month was 12 feet on the Black Mountain. The snowfall of the month was the heaviest experienced for many years in this district.

February.—Snow fell on five occasions. A total of 12 feet of snow was received on the high passes to the north. Ten to twelve feet of snow were lying on the Black Mountain at the end of the month.

March.—There was a slight fall of snow in Khagan and on the adjacent hills at the end of the month.

April.—No snow fell. Four to six feet of snow were lying on the northern slopes (above 6,000 feet) of the Khagan Valley.

(2) MURREE.

The following gives a statement of the snowfall at Murree and on the hills adjacent to Kahuta:

District.	Total fall of snow in the month of								Total of period.	
	December 1892.		January 1893.		February 1893.		March 1893.			
	Ft.	In.	Ft.	In.	Ft.	In.	Ft.	In.	Ft.	In.
Murree	0	6	12	1	13	10	2	11	29	4
Kahuta	*Nil*		12	0	6	0	*Nil*		18	0

The following gives comparative data for the past five years:

District.	Total fall of snow from January to March in					
	1893.	1892.	1891.	1890.	1889.	1888.
	Feet.	Feet.	Feet.	Feet.	Feet.	Feet.
Murree	29⅛	5/12	29	3⅜	7¼	6½
Kahuta	18	*Nil*	5¼	⅜	4¼	6

(3) RAWAL PINDI DISTRICT.

January.—Snow fell on the plains in this district on the 28th. The following gives amounts measured:

Pindi Gheb	1 inch.
Rawal Pindi	1 ,,
Gujar Khan	1 ,,

(4) KASHMIR (SRINAGAR).

The snowfall during the past winter was heavier than usual, but was not nearly so large as in 1890-91.

Temperature was, however, exceedingly low, much below that in 1890-91. Snow fell down to a height of 2,250 feet in the valley.

(5) GILGIT.

The snowfall of the past winter on the neighbouring mountains was a little above the average. In the passes to the north the total fall ranged between 6 and 9 feet. According to the natives of the district, there was nothing unusual about the winter except greater cold.

(6) HUNZA (ELEVATION 7,500 FEET).

January.—Snow fell on three days.

February.—There were four snowstorms during the month.

March.—Snow fell on two days. Very heavy snow fell on the passes to the north on the 18th.

April.—No snow.

The snow line on the 15th of April was at a height of 11,000 feet. The depth of snow on the Killik Pass leading to Sarikol was 8 feet. The winter was, in the opinion of the natives of the district, the coldest known for many years, and there was more cloud and snow than usual.

(7) SARIKOL (TASHKURGHAN).

November 1892.—Frequent cloud.

December 1892.—Frequent cloud. Two falls of snow.

January 1893.—Eight falls of snow. Total less than one foot.

February.—Fine weather with clear skies during the greater part of the month.

(8) KASHGAR.

Eight snowstorms occurred during the months of November and December 1892 and January 1893. The winter (up to the end of March) is stated to have been of unusual severity and length, and the snowfall above the average.

(9) LADAKH.

Heavy snow fell to the east of Kashmir in the last week of January. The total precipitation at Leh from November 1892 to March 1893 was considerably less than the normal.

(10) LAHOUL.

The snowfall at Kyelang in Lahoul from 3rd December to the 20th March was only 7 feet, slightly less than the normal fall of that period. The chief feature of the winter was the severe and continuous cold.

(11) KULU.

December 1892.—Snow fell on six occasions. The falls were moderate in amount, and melted rapidly below 9,000 feet. The month was dry and warm.

January 1893.—There were three periods of stormy weather and snowfall. The fall was unusually large in amount, and occurred down to very low elevations. The weather was extremely cold and cloudy, and the snow in the valleys melted very slowly.

February.—Snow fell on thirteen days (down to 3,000 feet). The fall was large, but it melted almost as rapidly as it fell on the lower hills. The snow accumulation on the higher hills was large in amount.

March.—Snow fell on eleven days on the higher hills; no snow fell below 5,200 feet. Snow at the end of the month had all melted below 6,000 feet. The snowfall was very heavy in March, and the depth of snow in the passes very great.

April.—There were slight falls on the higher peaks above 9,000 feet. The snow melted rapidly during the month. The snowfall of the month resembled that of April 1890.

May.—Report not yet received.

The following table gives the depth of snow on the 25th of each month from December to April, and also on the 25th May of the past four years on seven of the passes in this district for comparison:

Tahsil.	Name of pass.	Elevation.	Depth of snow on the 25th of				Depth of snow on 25th May.				
			January.	February.	March.	April	1893.	1892.	1891.	1890.	1889.
		Feet.	feet.	Feet.	Feet.	Feet.		Foot.	Feet.	Feet.	Feet.
Kulu ...	Hamta . . .	14,500	16½	24½	25	11	...	½	12	6	7
	Rotang . . .	13,000	19	29	27	13	...	1	9	5	10
Plach ...	Bhubhu . . .	10,000	9½	17½	12	5	...	...	Nil	Nil	Foot. 1
	Gargarasan . .	17,000	8	24	25	25	...	1	4	2	3
								Feet.			
	Srikand . . .	15,000	13	33	40	30	...	4	32	12	50
	Bashleo . . .	11,000	6	22	15	15	...	...	1	Nil	Nil
	Jalori . . .	10,500	6	20	14	0	...	...	1	Nil	Nil

(12) Simla Hills.

January.—Heavy snow fell during the month. All the higher passes were closed during the month, *i.e.*, all those whose heights are over 8,000 feet.

February.—Frequent snowstorms occurred during the whole month. The cold was unusually severe between the storms, and the snowfall very largely above the average. Snow fell down to the height of 5,000 feet. The heads of all the valleys were filled with snow at the end of the month from the numerous avalanches.

March.—Several snowstorms occurred during the month. The depth of snow on the Borenda Pass was 24 feet, and on the Rupin 30 feet on the 15th of the month. The weather was, according to the natives, exceptionally cold and severe throughout the whole month, and the snowfalls heavier and more frequent than had occurred in their memory.

April.—Weather was bright and moderately warm during the month, and the snow melted rapidly. The snow was lying 30 feet on the Rupin and Borenda Passes on the 15th. The snowfall of this season was much less in Upper Kanawar than in Bashahr.

May.—There were five falls of snow during the first fortnight of the month. The amount received during any one fall did not exceed 1 foot. The lowest level reached during the period was 9,500 feet on the 11th and 12th. Frequent thundershowers, accompanied with high westerly winds, occurred on the lower slopes, generally in the afternoon. The passes up to 15,000 feet became passable for the first time on the 1st of the month.

(13) Chamba.

January.—There were three stormy periods during the month. The snowfall was unusually heavy, and heavier than during the previous ten years.

February.—Snow fell on the 5th, 6th, 7th and 8th, 13th and 14th, 22nd and 23rd. Heavy snow fell during the night of the 13th and on the 14th, and the snow line descended to the river level, but retreated a few days after the storm, and was about 3,800 feet when the third storm commenced. It began with very heavy rain and changed to snow. The snow line again descended to the river level. The following gives the total fall of the month in different parts of the state :

	Fall.		Height to which snow line descended.
	Ft.	In.	Feet.
Tisa	6	3	2,500
Thanela	11	9½	2,500
Bhandal	12	3	5,600
Dalhousie	15	0	...

The weather between the storms was bright and clear, but became slightly cloudy about two days before each fall, which always commenced at Chamba with more or less heavy rain. Thirty feet of snow was reported to be lying on the Chawari Pass (height 8,000 feet) between Chamba and the plains at the end of the month. The winter is stated by the inhabitants to be the most severe that they have experienced. Many of the roads are closed, and much damage and loss of life is reported.

March—Snow fell on five days on the higher hills. No snow fell below 5,500 feet, and on the warm slopes below 8,000 feet.

(B) North-West Provinces Himalayas.

Kumaon.

November 1892.—Little or no snow fell during this month. The total fall on the highest peaks was less than one foot. The weather was very cloudy throughout the month.

December 1892.—Light to moderate snow fell on the higher peaks.

January 1893.—Unusually heavy snow fell throughout the whole district, the heaviest for many years. Snow fell down to a level of 3,000 feet. At elevations of 12,000 feet the fall was about 16 feet, and on the higher passes it was at least 30 feet.

February.—There were several severe snow storms during the month. Ten to twenty feet fell on the higher passes. The weather was unusually cold, damp, and moist, and the snowfall very heavy.

March.—Two snowstorms occurred on the higher peaks. The total fall was 5 to 10 feet deep. The weather was hot between the storms. The snowfall of the month was heavier than usual.

April.—There were four falls of snow during the month, but the amounts were not large. The weather was warm throughout and snow melted rapidly.

(C) Sikkim Himalayas.

(1) *Gnatong.*—Snow fell more frequently, but in smaller amounts than usual. The following gives a summary and a comparison with the two previous years :

Month.	Number of days on which snow fell in 1892-93.	Total Precipitation in		
		1892-93.	1891-92.	1890-91.
October	4	0·80	3·24	11·85
November	3	0·37	1·05	...
December	10	0·86	...	0·22
January	15	2·67	0·54	2·40
February	14	2·63	12·24	0·92
March	17	5·17	3·61	5·66
April	17	10·87	7·26	6·94
May 1st to 15th	6	1·87	2·63	1·66
Total of whole period	...	25·24	30·67	29·65

The natives of the district state that snow has fallen lower down than in any previous year. Thus heavy snow fell at Sedonchin (6,500 feet), which is 1,500 feet lower than it usually occurs.

(2) *Thibet (North of Sikkim).*—Travellers from Thibet to Sikkim report that falls of snow were more frequent, but not so heavy as usual. The winter has been exceptionally severe, although it was later than usual in commencing.

(D) Assam Himalayas.

(1) *Kamrup District.*—Very heavy snow has fallen in the mountains to the north of this district; double as much as in the previous winter according to the native tribes. The snowfall is also stated to have been very heavy in Thibet.

(2) *Darrang District.*—The snowfall of the past winter was much heavier than usual.

(3) *Lakhimpur.*—The fall in the mountains to the north has been much heavier than for many years past. The Duffla hills were covered with snow throughout the months of January and February, which is a very rare occurrence. The snow is hence believed to have been exceptionally heavy.

Summary of preceding snowfall data.

The preceding statements show clearly the character of the snowfall during the past cold weather. The fall was unusually heavy in Baluchistan in the months of December, January, and February; it ceased in the beginning of March, and none has fallen during the past three months. The snow fell down to unusually low elevations in January. This heavy precipitation did not extend into East Persia, as information recently received shows that snow fell much less frequently than in Baluchistan, and that it was on the whole slightly below the average in amount, and did not occur below elevations of 4,500 feet. The snowfall in Afghanistan was probably above the average, but was by no means so heavy as in the winter of 1890-91. The chief feature of the winter was the unusual cold.

In the Western Himalayas the snowfall was unusually heavy during the months of January, February, and March in the outer ranges, but the excess appears to have diminished rapidly into the interior. The precipitation was very heavy at Murree, Dharmsala, Dalhousie, and Simla, but was less than usual at Kyelang in Lahoul and at Kilba in the Upper Sutlej Valley. The information received from Hunza, Gilgit, Sarikol, and Kashgar shows that in all these areas the fall was small in amount, and probably even less than usual. The chief feature was the unusually severe cold during the winter.

The precipitation at Ranikhet, Chakrata, and Naini Tal was even more largely in excess than at the Punjab hill stations, and the additional data of the northern tahsils of Kumaon indicate that the fall was abnormally heavy over that mountain area. The fall during the months of April and May appears to have been very moderate in amount, and probably less than the average. According to the reports received from the civil authorities, upwards of sixty feet of snow fell on the higher elevations in Kumaon during the months of January, February, and March.

The snowfall in Sikkim was probably below the normal. There were very frequent falls, but they were generally light. The total fall at Gnatong for the past winter was less than in the two previous winters.

In the Assam Himalayas the fall is undoubtedly larger than usual, and it was probably almost as excessive as in Kumaon.

The chief features may hence be summed up as follows :—

(1) Moderate snow in East Persia.
(2) Heavy snow in Baluchistan.
(3) Moderately heavy snow in Afghanistan.
(4) Very heavy snow in the outer ranges in the Western Himalayas, decreasing to normal snowfall on the interior ranges.
(5) (Probably) less snow than usual in Little Thibet.
(6) Very heavy snow in the North-Western Provinces Himalayas.
(7) Snowfall normal or slightly below the average in the Sikkim Himalayas.
(8) (Probably) unusually heavy snow in the Assam Himalayas.
(9) A most important feature is that the snowfall occurred during the normal winter period, and that little or no snow has fallen during the hot weather months of April and May.
(10) The snow accumulation at the end of last season was unusually small, and hence, notwithstanding the heavy snowfall in some portions of the Himalayan area, the accumulation at the end of May was probably by no means excessive.

Abnormal features of the weather of the past five months.

The rainfall of the south-west monsoon of 1892 was unusually abundant over by far the greater part of India. It was especially heavy in the West Punjab, Rajputana, Berar, the western districts of the Central Provinces, and the Deccan. It was in moderate excess in Southern India and the North-Western Provinces, the west coast districts, and the central and eastern districts of the Central Provinces. It was in slight defect in Burma, and in moderate to largish defect in the western and central districts of Bengal. The rains ceased in Northern India in the last week of September—very slightly earlier than usual. The rains were deficient in Bengal in October, but a general fall in the first week of November, due to a cyclonic storm, saved the rice crop. The Deccan and northern and central coast districts of Madras received abundant rain in October and the first week of November from three cyclonic storms which formed in the Bay, and advanced towards the Circars coast. The remainder of November was abnormally dry, and Madras received only a few occasional showers instead of the frequent heavy rain that usually occurs in that area during the month. A slight diffused disturbance gave a moderate burst of rain from the 1st to the 4th December, when the south-west monsoon winds retreated from the Bay nearly three weeks before the normal date. The chief features of the retreating south-west monsoon period were hence the very scanty rainfall in the southern districts of Madras (more especially Tanjore, Trichinopoly, Madura, and Tinnevelly), and the very early termination of the retreating south-west monsoon rains in that area.

The meteorological conditions in December were not marked by any very important deviations from the normal. Pressure was in general moderate excess and temperature normal, except in North-Eastern India, Burma, and the Bay Islands, where the weather was cooler and drier and northerly winds stronger and steadier than usual. The abnormal temperature and humidity features in these areas were apparently due to these strong land winds. There were other indications that very abnormal weather conditions prevailed to the north and north-west of the Indian area. Amongst these were—

1st.—Abnormally heavy rain in Baluchistan in November and December.
2nd.—Unusually cold weather in December in the hill districts.

The following gives a very brief summary of the chief features of the meteorology of the past five months :

January.—The meteorological conditions of the first three months of the year were very similar throughout, and dependent upon the unusual precipitation and abnormally frequent disturbances of the period. Pressure was ·043″ in defect in the Indian land area. The local variations were small, except at the hill stations, where there was a large deficiency of pressure relative to the plain stations. Temperature was in defect over the whole of India, except South Madras and Mysore. The deficiency was greater in the day than the night temperature. It was largest in amount at the hill stations and the East Punjab, and slightly exceeded 3° in the latter area. The air was drier in Burma and North-Eastern India and damper in North-Western India. North-Western and Central India had much heavier rain than usual, the chief feature being very heavy rainfall in Baluchistan and the Punjab. Very heavy snow fell on the hills down to lower levels than usual, and snow fell on the plains of the North Punjab on the 28th of the month.

February.—The mean pressure of the Indian area was ·003″ above the normal. Pressure was locally in slight excess in Northern India and in moderate defect in the Deccan. It was largely in defect at the hill stations relatively to the adjacent plains. Temperature was more largely in defect than in January; the deficiency averaged 6½° in the North-Western Provinces, the Punjab, Upper Sind, and North Rajputana, where it was greatest. The humidity and cloud features were similar to those of the preceding month. The rainfall was more largely in excess than in January, and was above the normal over the whole of India. The excess was very large over the whole of Northern India and Baluchistan, and was also large in Southern India. The snowfall in the Himalayan hill districts was also very considerably above the normal.

March.—The mean pressure of the Indian area was ·017″ above the normal. Pressure was in moderate excess in Northern India and in defect in the peninsula and Burma. It was almost as largely in defect at the hill stations relatively to the plain stations as in February. Temperature was below the normal to as great an extent in March as in February. The area of greatest deficiency was, however, transferred to the Central Provinces, over the central districts of which temperature was 8½° in defect. The amount of cloud was in excess, except in Burma, and the air much damper than usual over the whole of India. There were a large number of diffused storms during the month, and the rainfall was more or less in excess over the whole of India. The chief feature was the excessive precipitation in the Central Provinces, Deccan, and North-Eastern India. The rainfall was in moderate excess in North-Western India and the snowfall in the hills considerably smaller in amount than in the preceding two months.

The cold weather of 1892-93 was prolonged to the end of March, or at least a month later than usual. It was marked by very large variations and abnormal features. It may be noted that it is an additional example of the general (but not invariable) rule for a strong monsoon in North-Western India to be followed by heavier winter rains than usual. The following gives the chief features with data:—

(1) Temperature was more or less largely in defect throughout the period January to March:

Hill Station or District.		Variation from normal of mean monthly temperature in			Mean of January to March.
		January.	February.	March.	
		°	°	°	°
Hill stations	Leh	—3·4	—3·9	—4·0	—3·8
	Murree	—7·3	—10·3	—8·1	—8·6
	Darjeeling	—4·1	—3·1	—5·1	—4·1
Plains districts	Punjab	—2·8	—6·8	—5·8	—4·8
	North-Western Provinces.	—1·9	—6·3	—5·8	—4·7
	Sind	—0·5	—6·0	—1·8	—2·8
	Rajputana	—3·1	—6·1	—4·1	—4·4
	Central India	—2·3	—5·6	—5·0	—4·3
	Central Provinces	—2·5	—4·9	—7·2	—4·9
	Behar and Chota Nagpur.	—1·3	—5·5	—5·5	—4·1
	Bengal and Orissa	—1·9	—4·8	—5·3	—4·0
	Deccan	—0·9	—1·8	—3·9	—2·2

(2) The air was much damper, although it generally contained less aqueous vapour than usual, and the amount of cloud largely in excess. The following gives mean data of these elements for the whole period:

Station or District.		Variation from normal of mean aqueous vapour pressure in			Mean of January to March.	Variation from normal of mean cloud amount in			Mean of January to March.	Variation from normal of mean humidity in			Mean of January to March.
		January.	February.	March.		January.	February.	March.		January.	February.	March.

(3) The rainfall was more or less above the normal over the whole of India, excepting Burma and a few districts of South Madras. The chief features were:

(*a*) The excessive precipitation in Baluchistan throughout the whole period.

(*b*) The excessive fall in Northern India, more especially the Punjab, in January and February.

(*c*) The excessive fall in the Deccan, Central Provinces, and Bengal in the month of March.

(*d*) Favourable and unusual rain in South and Central Madras in February and March.

The following gives data illustrating the rainfall distribution of the period:

District.	Station or District.	Rainfall. Actual January to March 1893.	Normal January to March.	Variation.

April.—The mean pressure of the Indian area was ·013″ in defect. The local variations were small and of little importance. The pressure variations at the hill stations were almost identical with those at the neighbouring plains stations. The temperature conditions changed as rapidly as the pressure conditions during the month. The mean temperature of the month was above the normal to a moderate extent in North-Western India (more especially Sind), and below it to a slight extent over the remainder of India. The deficiency was greatest in Bengal, where it averaged 2°. The rainfall of the month was generally below the normal, although hailstorms and thunderstorms were of frequent occurrence.

May.—The mean pressure of the Indian area for the month was ·010″ below the normal. Pressure was locally in defect in Bengal, the north of the Bay, and Burma, and was in excess in North-Western India and the Gangetic plain. The excess was small, except in the North-Western Provinces and in a narrow area stretching from Neemuch to Malegaon. In both of these areas the pressure anomalies slightly exceeded ·025″.

The chief feature of the meteorology of the month was the very early advance of monsoon winds into Burma. They set in about the 16th, and gave moderate general rain during the remainder of the month. This burst of monsoon winds advanced to the head of the Bay on the 21st or 22nd, and originated a cyclone of considerable intensity, which passed northwards on the 27th, 28th, and 29th into Central and North-East Bengal. It was remarkable for the heavy downpour of rain it gave to the area over which it passed. Thus False Point received 35·63 inches during the storm. The advance of the storm gave monsoon winds and rain to the whole of Bengal during the last three or four days of the month.

The Arabian sea current extended northwards along the West Coast during the last week of the month. Karwar had its first heavy rain on the 27th, Ratnagiri on the 28th, and Bombay on the 29th.

Weather has been unsettled with frequent thunderstorms during the month in the interior.

In consequence of these abnormal features, temperature was considerably below the normal over the greater part of India. The deficiency was most marked in Burma and Bengal. Temperature was, on the other hand, in moderate excess in Baluchistan, Sind, West Rajputana, and the West Punjab. It was very slightly below the normal at the Western Himalayan hill stations and above at Darjeeling. The temperature and pressure conditions of the month hence show that the snow accumulation was exercising no large effect, and that it was probably not above the normal to any considerable extent in any part of the Himalayan area (except perhaps Kumaon).

The following is a summary of the features of the meteorology of the months of April and May, which will probably influence the distribution of rainfall in India during the next four months:

(1) Pressure was in slight defect in the Indian land area.
(2) Pressure was in moderate local excess in the North-Western Provinces and South-East Punjab, the excess being greatest at the foot of the hills.
(3) Pressure was in moderate defect in North-Eastern India, more especially Orissa, and in slight defect in the Carnatic relative to the Bombay and Malabar Coast districts.
(4) The pressure conditions of the hill stations relative to the neighbouring plain stations were normal:
(5) The unusually early and strong advance of the first large burst of monsoon winds in the third and fourth weeks of the month of May in both sea areas.
(6) Temperature was in slight excess in Baluchistan and Upper India, and normal or in slight defect at the Himalayan hill stations.

Comparison with previous years.

During the past twenty-five years the snowfall in the Himalayas was very heavy in the years 1868, 1877, 1878, 1883, 1885, and 1891. In all these years heavy snow, however, fell either in April or May, or in both months, and hence the pre-monsoon conditions in these years were very different from those of the present year. The year 1871 was remarkable for the unusual coolness of the hot weather months in Northern India, and more especially Bengal, and for the early commencement of the Bay monsoon and the steady and abundant rainfall throughout the whole monsoon period in Northern India. It was preceded by an unusually dry cold weather in Northern India and by very light winter snowfall in the Western Himalayas. The only years which have some resemblance

to the present year (up to the end of May) are 1877 and 1886. The following gives a brief statement of the chief features of these two years:

1877.—There was heavy snowfall during the months of January, February, March, and April in the Western Himalayas. It appears to have been very excessive only in the Garhwal and Kumaon Himalayas. Pressure was steadily in excess at this period in India. It was during the pre-monsoon period locally in defect in Bombay and the Deccan, and was locally in excess in Northern India, more especially the Punjab, Rajputana, and Central India. Temperature was very considerably below the normal in North-Western India from February to May, the deficiency being very large in April (when it averaged 6° in the Punjab). The monsoon rains were very late in the Peninsula, but were on the whole abundant, and brought the Madras famine of 1876-77 to a close. They were very deficient in the North-Western Provinces, and considerably in defect in the Punjab, Rajputana, Behar, and the Central Provinces. There was, on the other hand, a large excess in Bengal and Burma.

1886.—Moderately heavy snow fell in the months of January, February, and March in the North-Western Himalayas and the mountain area of East Afghanistan. The amount was probably greater than usual, and the depth of snow in the passes was much above the normal at the end of March. April and May were very dry months in North-Western India. Temperature was slightly above the normal in North-Western India and more or less below it in North-Eastern India. Pressure in April and May was locally in moderate excess in the Gangetic Plain, Behar, and Central Bengal, and was in moderate defect in the western half of the Peninsula. The monsoon commenced in the south of the Bay during the fourth week of May with a cyclonic storm which gave heavy rain to Southern India. The Bombay current set in over the West Coast districts in the first week of June, and the Bengal current advanced across Bengal into the Gangetic plain at the beginning of the third week of that month. The rainfall of the South-West monsoon period was normal in Burma and in excess over the whole of India, with the exception of Central India, the Central Provinces, and North Deccan and Malabar. The excess was greatest in Behar and Mysore and the Carnatic.

Probable character of the south-west monsoon of 1893.

The present year is the third of a series of years characterized by very abnormal and marked meteorological features. The conditions have been very unusual in character during the past winter and spring in Central Asia and a large portion of Europe, and it would hence appear possible that the abnormal conditions of the present year in India may be a phase of the more general abnormal conditions over a large portion of the northern hemisphere, and not due to local peculiarities in the Indian monsoon area. Whether these have any general connection with the unusual solar intensity as measured by the number of sunspots of the past twelve months is as yet a matter of conjecture.

The peculiar features of the meteorology of the past five months in India are:

(1) The unusual severity of the winter and the low temperature in the Himalayan hill districts and in Afghanistan in January, February, and March.
(2) Excessive snowfall in these months in Baluchistan and the Himalayan region (more especially in Garhwal and Kumaon), and perhaps in the Assam Himalayas.
(3) Excessive rain in February and March over the whole of India, but more especially in certain districts where the rainfall is usually very small in amount in those months, *e.g.*, the Central Provinces and the Deccan and Southern India.

The snow accumulation at the beginning of the winter was unusually small. The data establish that although the snowfall was very heavy in the outer ranges of the Himalayas and in Baluchistan, it was probably only normal in

amount in Afghanistan and on the interior ranges of the Himalayas, except, perhaps, in Kumaon and Garhwal. The cessation of the heavy snowfall at the end of March has given practically normal pressure and temperature features in North-Western India in April and May It is hence very probable that the snowfall during the past winter and the present accumulation is not such as will affect the rainfall of the south-west monsoon of 1893 to any large extent. The facts that pressure was in local excess in the North-Western Provinces and that temperature was in moderate defect at Ranikhet and Chakrata in April and May support the inference from the reports that snowfall was locally excessive in Kumaon. These local conditions may modify the rainfall in the Gangetic plain and the Punjab, but will have little influence on the general strength of the monsoon currents. They will probably determine the Bay current more to Burma and Bengal than usual, and the Bombay current more to the Central Provinces and Deccan and less to Upper India than usual. The mean position of the trough of low pressure will probably be between Orissa and Central and Upper Sind, and the westward and central portions be displaced to some distance south from their normal position.

The conditions in India during the past cold and hot weather appear to indicate that the monsoon currents may probably be normal or slightly below their normal strength. On the other hand, the fact of their early advance and the information received up to date from ships indicate that the currents have set in strongly and steadily over the Arabian Sea and Bay areas. If, as appears probable, these conditions in the equatorial belt which have determined the early advance of the monsoon currents in the last fortnight of May continue, they will be much stronger and steadier than usual.

It hence appears to be most probable that the currents will be at least of normal strength, and that there is a slight probability they may be stronger than usual. An early advance of the monsoon winds is almost invariably (in at least two cases out of three) followed by a short period of feeble monsoon winds in June; and the permanent and strong advance on such occasions generally occurs in the third or fourth week of June. Assuming that the present conditions continue in the south of the sea areas, it is probable that this period will not be so prolonged as the period of weakness last June after the first advance of the monsoon winds. It is on the whole slightly more probable that the Bay current will be above its normal strength than the Bombay current.

The following is a statement of the chief inferences respecting the character of the monsoon rains of the present year from the known antecedent conditions:

(1) Snowfall conditions in the Western Himalayas and Afghan mountains and the pressure conditions in India are not unfavourable to the establishment of an early and strong monsoon on the Bombay Coast. It is probable that the early advance of monsoon winds at the end of May will be followed by a period of feeble monsoon winds and light rainfall for a short time, and that the monsoon will be established in full strength in the second or third week of June. It will probably withdraw earlier than usual from Upper India in September.

(2) Conditions are on the whole favourable for a strong monsoon in the Bay of Bengal. The first advance in the last week of May may be followed by a short period of weakness; but the rains will probably be fully established about the normal period in Bengal.

(3) Pressure and other conditions are favourable in Bengal and to a less extent in Burma. It is hence probable that Bengal will as a whole receive normal to abundant rain, and that the rainfall in Burma and Assam will be normal or in slight defect.

(4) Conditions are to some extent unfavourable in the North-Western Provinces and Punjab in consequence of the excess of pressure

in that area and the local conditions in the Kumaon Himalayas. The rainfall in the Gangetic plain will probably be at least normal in Behar and the eastern districts of the North-Western Provinces, and in slight to moderate defect in the western districts of the North-Western Provinces and South-East Punjab.

(5) Conditions are slightly unfavourable in Rajputana and favourable in Central India.

(6) Conditions are favourable in the Central Provinces and North Deccan, including Hyderabad, which will hence probably receive at least normal rainfall.

(7) Conditions in Southern India and the Carnatic are very difficult to forecast, as the rainfall in those areas depends chiefly upon the occurrence of short breaks in the rains in Northern India. It appears to be on the whole probable that the Madras Deccan and Mysore will receive at least normal rain. There is also a slight probability from the known conditions that the rainfall will be at least normal in amount in the Carnatic.

It should be carefully noted that the preceding probabilities are obtained on the assumption that the currents will be approximately normal in strength.

The general conclusion is that the rainfall may be deficient to a moderate extent in North-Western India, will very probably be at least normal in amount in the Peninsula, Bengal, and perhaps Burma, and may be in moderate to largish excess in Bengal and the Central Provinces.

It is too early to estimate the probability of a longish break in the rains in July or August, but there are no indications as yet of such an event.

It should be noted that in the preceding statement, when it is stated that an event is probable, the chances in its favour are at least 5 to 2, and when very probable at least 5 to 1.

JOHN ELIOT,

SIMLA, *1st June, 1893.* *Meteorological Reporter to the Government of India.*

E. C. BUCK,

Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on Saturday, May 27th, 1893.

During the week under review the principal feature in the weather has been the cyclonic storm which has passed from the Bay into Bengal. The storm was not only the most severe of recent years, but it followed a course which at this season of the year was very unusual. Apparently the first indication of the disturbance was afforded by the observatories in Lower Burma; Diamond Island on the 21st reporting a south-westerly wind of 24 miles per hour, a rainfall of 1·84 inches, and a very rough sea. The disturbance was lost sight of during the 22nd, but apparently it reappeared on the Orissa Coast on the 23rd. It remained almost stationary in this position during the 23rd and 24th, and then slowly curved round and through north and north-east into Lower Bengal. It passed Balasore on the 25th, passed between Midnapur and Calcutta on the 26th, and to the north of Calcutta on the 27th, after which it continued to move in an easterly direction into East Bengal. Up to the morning of the 23rd the storm was apparently of only moderate intensity, but it subsequently developed quickly, and from that date to the close of the week was a very severe cyclone. Hurricane winds surrounded it, and the rainfall in its neighbourhood was exceedingly heavy. Over the western half of India steep gradients for westerly and north-westerly winds have prevailed, and strong winds from these quarters have been generally recorded. Their temperature has been high, and over North-West and Central India during the early part of the week the heat was greater than usual. On the West Coast the week has been marked by the appearance of the monsoon, which, however, set in very much less boisterously than is normally the case in this region.

The chart of the 21st showed that pressure was low over the north of the Bay; over Bengal, over the Circars, and over the east of the North-West and Central Provinces, and equally low over the north of the Punjab. On the other hand, it was high in Tenasserim, Ceylon, and the west of the Peninsula. Gradients were steep and the winds strong. The direction was between west and north-west over North-Western and Central India and the Peninsula, southerly in Lower Burma, north-easterly in Arakan, and variable in Bengal. Showers of rain had fallen over the central parts of the Peninsula and general rain over Burma. Moulmein had received over 3, Bassein over 2, and Tavoy, Rangoon, and Diamond Island over 1 inch. On the morning of the 22nd pressure was increasing over Burma and Bengal and was decreasing elsewhere, but the general distribution of pressure and the winds were unchanged. Showers were reported from several stations in the Peninsula, from one or two stations in North-West India and in Assam, and general rain from Burma. Tavoy and Moulmein had received over 3 inches and Rangoon and Fort Stedman over 1 inch. On the 23rd pressure was falling over a large part of the Peninsula and around the head of the Bay and was rising elsewhere. A well defined depression had appeared off the Orissa Coast, the barometer at False Point marking 29·346″, which was 0·32″ below the normal. Except over the Bay area the distribution of pressure was unchanged. Gradients were very steep over the Bay, and a strong cyclonic circulation of the winds prevailed over that region. North-Westerly and westerly winds prevailed over North-Western and Central India and the Peninsula, easterly winds over Bengal, and southerly winds over Burma. Rain had fallen generally in Burma and over the north-west side of the Bay, while showers were reported from some other parts of India. False Point and Akyab had received over 4 inches, Cuttack and Moulmein over 2 inches, and Rangoon, Toungoo, Thayetmyo, Minbu, Yamethin, Fort Stedman, Balasore, Wellington, Calicut, and Gopalpur over 1 inch. The chart of the 24th showed that the cyclonic storm was apparently stationary off the Orissa Coast. The storm had, however, become much more intense, the pressure at False Point having fallen to 29·03″, or 0·641″ below the normal average. The cyclonic circulation of the winds was hence much stronger; the force of the north-north-easterly wind at False Point at 8 A.M. was 82 miles per hour. In

sympathy with the development of the cyclone, the barometer had fallen over nearly the whole of the Indian region, but away from the storm area the distribution of pressure and the winds were but little changed. Rain had fallen generally in Burma, Lower Bengal, and the Circars, and showers had occurred over the south-west and centre of the Peninsula and at some central stations. Akyab had received 11 inches, Balasore over 5, False Point over 4, and Cuttack over 3 inches. On the Malabar Coast the rainfall was becoming heavier and the weather monsoonish. The chart of the 25th showed that the cyclone had commenced to move northward, or even a little to the east of north. The centre lay between False Point and Saugor Island. The barometer at the former station stood at 8 A.M. at 28·875 inches and was 0·79″ below the normal, while the wind was west-north-west, and blowing a severe gale. Cyclonic hurricanes prevailed at the head of the Bay, and the wind was strong all over the Bay area. Pressure was decreasing in all parts of the Indian region except Burma. Rain had been general over Burma and Lower Bengal, and fairly general over the west of the Peninsula and North-West India. False Point had received 14·99 inches, Akyab 9·46 inches, Saugor Island 6·08 inches, and Balasore 5·89 inches. On the morning of the 26th the cyclone lay to the north-west of Saugor Island and was advancing north-eastward. Pressure at Saugor Island at 8 A.M. was 28·95 inches, and was 0·70 inch below the normal. Excessively strong cyclonic winds prevailed within the storm area. In parts of India outside the area affected by the storm, pressure, though generally falling, was changing by irregular amounts, and the weather was generally unsettled. Rain had fallen very generally, except in Madras, Sind, and the south of the Punjab. The fall of rain was still very heavy over North-East India, and was becoming heavier over Malabar. False Point reported 11 inches, Calcutta 6 inches, and Jessore and Balasore over 3 inches. On the morning of the 27th the cyclone lay just to the north of Calcutta, where the barometer marked 29·084 inches, and was 0·56 inch below the normal. A rapid recovery of pressure was taking place in the rear of the storm, but elsewhere pressure still fell. Around the cyclone very strong cyclonic winds continued. On the West Coast the wind was shifting to south-east and south-west. Heavy rain continued to fall within the storm area, and showery unsettled weather prevailed in other parts of India On the Malabar Coast the monsoon had set in decidedly. Burdwan reported 9·62 inches of rain, Dacca 4·35 inches, and Mymensingh, Berhampore, Bogra, Mangalore, and Karwar over 3 inches.

Temperature:—The mean temperature of the week has changed with the amount and extent of the rainfall. In the early part of the week over a large part of the country, and during nearly the whole week in the Punjab, hot north-westerly and westerly winds prevailed, and the weather was hotter than usual; but at the close of the week, when showers became very general, there occurred a great fall of temperature. In Burma, where rain was general throughout the week, the temperature was uniformly low during the whole period.

The following table shows the variation or the mean temperature from the normal on each day of the week for the principal provinces of India:

Province.	May.							Mean variation of week.
	21st.	22nd.	23rd.	24th.	25th.	26th.	27th.	
	°	°	°	°	°	°	°	°
Burma	−3·6	−4·2	−4·2	−3·2	−3·8	−2·9	−2·9	−3·5
Bengal and Assam	+2·6	+2·6	+0·7	−1·3	−2·2	−4·8	−6·4	−1·3
North-Western Provinces and Oudh.	+2·5	+3·1	+3·2	+4·4	+2·4	−4·0	−5·5	+0·9
Punjab	+4·0	+6·2	+7·0	+3·6	+8·2	+3·0	−1·0	+4·4
Bombay	−1·7	−1·1	−0·7	−0·7	−1·7	−1·9	−2·9	−1·5
Central Provinces and Berar	+0·1	+0·4	+1·0	+0·7	−0·8	−3·6	−4·2	−0·9
Central India and Guzerat	−1·9	−1·0	−0·6	−1·0	+0·4	−2·8	−2·8	−1·4
Sind and Rajputana	−1·2	−1·1	−0·6	+1·0	+1·3	−1·0	−1·1	−0·4
Madras	−0·8	−1·9	−0·7	+0·1	−0·1	−0·8	−1·0	−0·7
Mean for whole India	0	+0·3	+0·6	+0·4	+0·4	−2·1	−3·1	−0·5

The mean temperature of the whole of India for the week was 0·5° below the normal. In the Punjab, where on the 23rd and 25th the weather was very hot, the mean temperature of the week was considerably and in the North-Western Provinces slightly excessive, but in all the other provinces it was below the normal.

Rain.—During the week under review rain has fallen throughout almost the whole of the Indian region. Of the fifty-one rainfall divisions, only two, *viz.*, Kathiawar and Rajputana (west), had absolutely no rain. In Guzerat and Sind the average actual rainfall for each division was less than one-tenth of an inch, but in all the remaining divisions the rainfall was effective, and in several divisions was excessive. The rainfall of the north-east of India, including the Burma, Assam, and Bengal (excepting Behar) divisions, was due to, and fell during the existence of, the cyclone noticed above; that of the West Coast was due to a slight advance of monsoon winds; and that of the other parts of India was due to showers falling generally during dust and thunder-storms. The heaviest average actual rainfall was received in Orissa, where the average fall for the division was 21·75 inches. This was followed by 13·82 inches in Tenasserim, by 11·88 inches in Arakan, and by 8·11 inches in East Bengal. In normal years the heaviest fall during the week under review is received by Arakan, and amounts to 8·65 inches. This is followed by 6·70 inches in Tenasserim and by 4·24 inches in Assam (Surma). The influence of the cyclone is thus shown not only in the increased heaviness of the actual as compared with the normal fall, but also in the change of the area of heaviest rainfall from Arakan to the opposite side of the Bay. The excessive showeriness of the weather in Northern India is also unusual, but the rainfall on the West Coast is about normal. The third column of the concluding table shows that of the fifty-one rainfall divisions, twenty-six had more and twenty-five had less than the normal amount.

The regions of excessive fall included the following divisions:—All the Burma divisions, all the Bengal divisions, except North Bengal and the Behar divisions, all the North-Western Provinces divisions, all the Punjab divisions and Malabar, the Konkan, the Deccan, and the Central Provinces (west and central). The excess was as much as 20·69 inches in Orissa, 7·12 inches in Tenasserim, and over 6 inches in East Bengal and Deltaic Bengal. On the West Coast and in Northern India the excess was moderate or small. In Assam the deficiency for the week was considerable, but in the other parts of the country, where the rainfall was lighter than usual, the difference was not large.

The three concluding columns of the table show the average actual and average normal rainfall for the period February 26th to May 27th, and the difference of the former from the latter expressed as a percentage. In Assam, Guzerat, Kathiawar, and Sind the rainfall for the whole period has been deficient; in Arakan, North Bengal, North Behar, the Punjab (South, Hill districts, and North-West), Coorg, Rajputana, and Central India (west) it has been approximately normal, and in all the other divisions it has been excessive. In Orissa and the central parts of the country the excess has been very large.

Most of the heavy falls of the week have fallen in the path of the cyclone. In Upper India none of the thunderstorms, though frequent, have been heavy, while the advance of monsoon winds over the West Coast has only given moderate amounts of rain. The following gives the largest total amounts received during the week as reported in the rainfall telegrams of the week:

Division.	District.	Station.	Amount.
Tenasserim	Amherst	Sudder	13·82 inches.
Lower Burma	Pegu	Ditto	12·12 ,,
Arakan	Akyab	Ditto	29·58 ,,
East Bengal	Backerganj	Patuakhali	16·27 ,,
Deltaic Bengal	Midnapur	Contai	16·12 ,,
Central Bengal	Burdwan	Sudder	11·81 ,,
Orissa	Cuttack	False Point	36·19 ,,
Central Nagpur	Singhbhoom	Ghatsila	7·35 ,,
Malabar	South Kanara	Kasaragod	8·47 ,,
Konkan	North Kanara	Ankola	6·89 ,,

SIMLA, *1st June, 1893.*

W. L. DALLAS,
Asst. Meteorological Reporter to the Government of India.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the state of the Season and Prospects of the Crops.

Madras.—*For week ending 27th May.*—Rainfall heavy on the West Coast and in two Northern districts; fair showers in most other districts, but scattered in parts of Central and Southern districts. Cultivation progressing. Standing crops fair, but more rain is required in parts of Madura and Tinnevelly. Pasture, fodder, and drinking water supply generally sufficient. Condition of cattle good. Prices generally steady. General prospects favourable.

Bombay.—*For week ending 31st. May.*—Rain almost throughout the Presidency. Standing crops in good condition. Harvesting of late crops continues in one district. Preparations for next season progressing generally. Sowing continues in parts of five districts. Transplanting operations commenced in one district. Prices steady, except in parts of two districts. Agricultural stock good and fodder sufficient.

Bengal.—*For week ending 27th May.*—There was heavy rain attended with strong winds during the week. Except in Behar and parts of North Bengal, all agricultural work has been suspended, and the recent sowings of rice and jute injured in many places. Sugarcane and other standing crops, however, continue to be reported well in Behar. Cultivation for the autumn crops is well forward, and indigo and millets are doing well. The spring rice harvest is almost over. Prices are steady. Fodder and water supplies are sufficient, and cattle are generally in good condition.

North-Western Provinces and Oudh.—*For week ending 31st May.*—Weather unsettled with rain in almost all districts. The fall was heaviest in Lucknow and Jhansi. Summer crops are doing well, and fields are being prepared for the autumn crop sowings. Supplies are ample, and prices generally steady. Locusts have appeared in the Banda, Agra, Jhansi, and Meerut districts, but no damage has been reported. The broods of young locusts in the Saharanpur district are being destroyed as fast as possible.

Punjab.—*For week ending 31st May.*—Rain has fallen in all but two districts. Threshing of spring crops going on. Extra spring crops doing well. Cotton sowings finished. Standing crops are generally in good condition; their prospects are said to be fair. Locusts appeared in the Delhi and Shahpur districts, but no damage was done. Wheat on the threshing floors has been damaged by rain in Sialkot and in parts of the Dera Ismail Khan district by river inundation. Cattle are generally in good condition. Fodder sufficient throughout the Province. Outturn of opium is reported good. Prices stationary in four districts; falling in others.

Central Provinces.—*For week ending 31st May.*—Weather continues hot and cloudy. Heavy rain has fallen in three districts; light showers elsewhere. Preparation of land for autumn sowings continues. Locusts appeared in Saugor, Chhindwara, Bhandara, and Balaghat, but did no damage. Prices falling in two districts, rising in one, and elsewhere steady.

Burma.—*For week ending 27th May.*—The rainfall was heavy throughout the Province. In Upper Burma reaping of dry-weather paddy and ploughing for wet-weather crops is progressing. In Lower Burma ploughing has commenced in parts. In Upper Burma the standing crops are in good condition. The price of paddy has risen in five districts and has fallen in one. The number on relief works in the Meiktila district was 215.

Assam.—*For week ending 30th May.*—Weather wet. Sowing of early rice continues. Condition of cattle normal. Fodder and water sufficient.

Mysore and Coorg.—*For week ending 31st May.*—MYSORE: Rainfall general, but slight. Crops and prospects good. Agricultural operations in progress. Prices slightly risen in one district.

COORG.—Rainfall good. Ploughing of rice fields and making of nurseries in progress. Prices stationary. Fodder and water-supply sufficient for cattle.

Berar and Hyderabad.—*For week ending 31st May.*—BERAR: Rainfall moderate. Weather hot. Preparation of land continues. Fodder deficient in one taluk. Water sufficient. Cattle healthy. Prices almost steady.

HYDERABAD: Rainfall moderate. Harvesting of hot-weather crops continues. Prices fallen.

Central India.—*For week ending 31st May.*—Rain throughout Central India during the week. Land being prepared in some parts for autumn sowings. The outturn of the spring crops has been fairly good, though the crops were damaged in parts by rain and hail. Agricultural stock is generally in good condition. Prices falling slightly in two States, fluctuating in one, and steady in other parts. Pasturage sufficient.

Rajputana.—*For week ending 31st May.*—Rainfall good in Bhurtpore and slight in a few other parts. Spring crops being reaped and removed in two States. Land being prepared for the autumn crops in Ajmere, Jeypore, and Ulwar. Harvest prospects good, except in Dholpur, where the outturn is below average. Agricultural stock generally good. Pasturage or fodder sufficient, except in Dholpur, where fodder is reported scarce. Prices falling in two States, rising in four others, and steady elsewhere.

Nepal.—*For week ending 27th May.*—Weather unsettled. Wheat harvest nearly finished.

E. C. BUCK,

Secretary to the Government of India.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

RAILWAY STATISTICS.

No. VII OF 1893-94.

STATEMENT OF APPROXIMATE GROSS EARNINGS OF INDIAN RAILWAYS.

N.B.—As regards the figures in column *Total Receipts from 1st April 1893*, audited figures have been used as far as possible.

Railway.	Average earnings per mile per week in 1891-92.	Week ending 21st May 1892. Mean mileage worked.	Earnings. Total.	Earnings. Per mile open per week.	Week ending 20th May 1893. Mean mileage worked.	Earnings. Total.	Earnings. Per mile open per week.	Earnings from 1st April to 21st May 1892.	Earnings from 1st April to 20th May 1893.	Increases in 1893-94.	Decreases in 1893-94.

The Gazette of India.

No. 23.] SIMLA, SATURDAY, JUNE 10, 1893.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in* PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on Saturday, June 3rd, 1893.

During the week under review the weather has been very unsettled over nearly the whole of the Indian region. The cyclone which entered Bengal from the Bay at the close of the previous week passed eastward across Central Bengal into Assam during the 28th, 29th, and 30th of May, and gave very heavy rain to the districts over which it passed. During the same time a well marked advance of monsoon winds occurred on the West Coast of the Peninsula, and rain in greater or less amount fell at all the stations in the west of the Peninsula. This advance of monsoon winds ceased on the 1st of June, and from that date till the close of the week the weather was fine over Western India. The cyclone in North-Eastern India and the advance of the monsoon in the west occasioned a great increase of moisture over Central and Northern India, and showery weather prevailed during the greater part of the week over both these regions. At the end of the week, however, the effects of both these influences were disappearing, and the temperature was rising with generally finer weather. This rise of temperature was first observable in Burma, where on the two closing days of the week the mean temperature exceeded the normal average, but in all other parts of India there was a steady continuous deficiency of heat compared with the normal In consequence the mean temperature of the whole of India for the week was 3·7° below the average.

On the morning of the 28th pressure was rising moderately or slowly over the Peninsula and Lower Burma and briskly to rapidly over Western and South-Western Bengal and Ganjam, and falling elsewhere. The centre of the Bengal cyclone lay near Dacca, and the disturbance was moving eastward. Cyclonic strong winds and gales prevailed around the storm, and the rainfall in its neighbourhood was very heavy. Thus Akyab received 2·50 inches, Bogra 4·50 inches, Mymensingh 3·41 inches, Calcutta 2·28 inches, and Burdwan 2·19 inches. On the West Coast the winds blew from monsoon directions, and moderate to heavy rain was falling at the western stations. Over Upper and Central India the wind was westerly generally, and the weather was rather cloudy with showers in many places. On the 29th the barometer was rising over the Gangetic plain,

West and Central Bengal, and Burma, and falling elsewhere. The cyclone lay between Mymensingh and Silchar. Strong cyclonic winds continued to prevail around it, and the rainfall was moderately heavy. On the West Coast monsoon winds continued. Over 4 inches of rain had been received at Bombay, over 3 inches at Ratnagiri, and over 2 inches at Poona. Westerly winds continued over the head of the Peninsula and easterly winds up the north side of the Gangetic plain, and showery weather was reported in both regions. The chart of the 30th showed that the cyclone had disappeared eastward into Manipur. Eleven inches of rain had been received at Silchar and moderate rain all over Burma. The monsoon had begun to fall off along the West Coast, and the rainfall at the West Coast stations was generally between ½ and 1 inch. In the central parts of the country, the Gangetic plain, and the east of Rajputana and of the Punjab showers had fallen. In the east of the Peninsula and Lower Bengal rain had ceased. On the 31st pressure was increasing almost everywhere. Readings were highest over Burma and relatively high over the south of the Peninsula and the north of the Punjab, while they were lowest over the western desert. The winds were southerly over a large part of the Peninsula and over Lower Bengal, easterly up the north side of the Gangetic plain, north-north-easterly over the Punjab, and westerly elsewhere. There had been no rain of importance over the centre and east of the Peninsula or Lower Bengal or Sind and Guzerat, but elsewhere showers had been very general. The amounts were small, except in North-Eastern India, where between 1 and 2 inches were received. The chart of the 1st showed a further rise of pressure over the greater part of the country. The general distribution was the same as on the previous day, except that the high pressure area over the North Punjab had disappeared. The winds were also little changed. Rain had ceased over the west of the Peninsula, and there was little or no rain reported from the western desert, the East Coast of the Peninsula, Lower Bengal, or Burma. Elsewhere showers continued, the amounts in some cases—for example, Cawnpore, Berhampore, and Bangalore—being considerable. On the 2nd the barometric changes at the majority of stations were small. Pressure was high over the west of the Peninsula, the Bay, and Tenasserim, and low over the western desert and along the foot of the Himalayas. Gradients were moderate. The winds varied very considerably in direction. Showery weather prevailed over the south and part of the east of the Peninsula, over Burma, over Bengal and Assam, over the Gangetic plain, and over part of the North-Western Himalayas and of the Central Provinces. At several stations the amounts exceeded 1 inch, and at Jalpaiguri over 4 inches was received. On the following day, the 3rd, the barometric changes were again generally moderate or small, and the general distribution little changed. The winds were light, and the rainfall, with the exception of a few scattered showers, was confined to the south of the Peninsula, North Bengal, and Lower Burma.

Temperature.—The showery, rainy, cloudy weather which prevailed over the greater part of the country during the greater part of the week depressed temperature throughout the whole Indian region, and the mean temperature of the whole country for the week was 3·7° below the normal.

The following table shows the variation of the mean temperature from the normal on each day of the week for the principal Provinces of India:

Province.	May.				June.			Mean variation of week.
	28th.	29th.	30th.	31st.	1st.	2nd.	3rd.	
	°	°	°	°	°	°	°	°
Burma	−2·0	−3·5	−3·5	−2·7	−0·3	+1·0	+2·3	−1·2
Bengal and Assam	−6·2	−4·5	−2·0	−2·4	−2·7	−3·8	−1·3	−3·3
North-Western Provinces and Oudh.	−1·6	+0·4	−1·8	−4·0	−10·3	−7·8	−7·8	−4·7
Punjab	−3·9	−3·6	−3·2	−4·4	−7·5	−7·0	−6·3	−5·1
Bombay	−3·5	−5·5	−5·8	−4·5	−3·0	−2·6	−1·8	−3·8
Central Provinces and Berar	−3·2	−5·5	−7·4	−6·8	−7·4	−8·6	−6·4	−6·5
Central India and Guzerat	−1·8	−1·3	−2·5	−3·9	−5·1	−6·5	−5·5	−3·8
Sind and Rajputana	−1·9	−1·1	−1·7	−2·6	−4·2	−3·1	−4·8	−2·8
Madras	−2·1	−1·8	−1·4	−1·0	−2·8	−3·1	−2·9	−2·2
Mean for whole India	−2·9	−2·9	−3·3	−3·6	−4·8	−4·6	−3·8	−3·7

On each day of the week the mean temperature was below the normal. The coldest days were June 1st and 2nd, when there was a deficiency for the whole of India of nearly 5·0°, and when in the North-Western Provinces, the Punjab, and the Central Provinces the deficiency was between 7·5° and 10·0°. In Burma at the close of the week the mean temperature rose above the normal, while in several of the other Provinces on the 3rd there was a marked diminution in the amount of the abnormal deficiency.

Rain.—During the week under review rain has fallen in all parts of the Indian region, except the divisions of Kathiawar and Rajputana (West), where the weather was fine throughout. The average actual rainfalls of the different divisions showed a large range. The heaviest average actual fall was 19·98 inches in the Surma division of Assam. This was followed by 14·17 inches in Arakan and by 9·49 inches in North Bengal. The lightest average actual fall was 0·11 inch in Sind.

The rainfall of the week was largely due in North-Eastern India to the action of the cyclonic storm which passed through Bengal into Assam, in the west of the Peninsula to an early and, as it appears, temporary advance of the monsoon, and in the Gangetic plain and North-Western and Central India to the exceptionally showeriness of the weather.

The third column of the concluding table shows how under these conditions the actual rainfall of the week varied from the normal. In Tenasserim and Lower Burma, where the influence of the cyclone was not felt, the rainfall was lighter than usual; but in Central Burma, Arakan, both the Assam divisions, and all the Bengal divisions, except North Behar, the rainfall was in excess of the normal. In the North-Western Provinces, the Punjab, and the central parts of the country the weather was abnormally showery, and in all the divisions the actual rainfall exceeded the normal, in many cases by considerable amounts. Over the southern half of North-Western India conditions were less regular: thus Kathiawar and Rajputana (West) received no rain instead of the 0·12 inch and 0·18 inch which is ordinarily measured, while Rajputana (East) and Central India (West) had only 0·44 inch instead of 0·58 inch of rain. Over the Peninsula, although the monsoon retreated again very shortly after its arrival, the rainfall of the week was generally heavier than usual, more particularly on the West Coast.

The greatest excess was 13·27 inches in Assam (Surma). This was followed by 5·91 inches in North Bengal and by 5·52 inches in Arakan. The only region where the rainfall was short to any important extent was the southern divisions of Burma, Tenasserim having received only about half and Lower Burma about three-fourths of the normal amount.

With the present week a fresh rainfall period, that of the south-west monsoon, commences, and the information contained in the three concluding columns of the table is exactly the same as that in the first three.

The following gives the largest total amounts received during the week as reported in the rainfall telegrams of the week:

Division.	District.	Station.	Amount.
Central Burma	Shwegyin	Kyaikto	12·63 inches.
Arakan	Akyab	Minhla	20·02 „
East Bengal	Chittagong	Sudder	15·36 „
Assam	Sylhet	Ditto	39·24 „
Ditto	Khasia Hills	Cherra	51·93 „
Central Bengal	Pubna	Serajganj	11·57 „
North Bengal	Jalpaiguri	Bhagatpur	23·79 „
North-Western Provinces.	Orai	Kunch	7·53 „
Malabar	South Kanara	Coondapur	7·74 „
Konkan	Ratnagiri	Guhagar	15·80 „
Deccan	Kolhapur	Bawda	13·38 „

Asst. Meteorological Reporter to the Government of India.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the state of the Season and Prospects of the Crops.

Madras.—*For week ending 3rd June.*—Rainfall good on the West Coast and in parts of the Circars, Deccan, and Central districts; some scattered showers elsewhere. The rainfall to date is up to or over the average, except in the Carnatic and Tinnevelly. In the Carnatic the deficiency is moderate, but in Tinnevelly it is considerable. Cultivation proceeding generally, and sowing in progress in many parts. Standing crops generally good, but rain is wanted in parts of the Southern districts. Pasture generally, and fodder everywhere, sufficient. General prospects fair. Prices steady, but slightly easier in the Carnatic and Southern districts, and rather dearer in the Deccan.

Bombay.—*For week ending 7th June.*—Rain almost throughout the Presidency. Standing crops injured by locusts in the Upper Sind frontier districts; otherwise good. Preparations for next season progressing generally. Sowing continues in parts of ten districts. Prices steady. Agricultural stock good, except in parts of two districts. Fodder sufficient.

Bengal.—*For week ending 3rd June.*—There was general rain during the week. Agricultural prospects are generally favourable, but in Orissa and parts of Central and Eastern Bengal cultivation is still somewhat retarded, and some damage to early rice and jute is reported owing to excessive rain. In Behar the autumn sowings are making good progress. Indigo and sugarcane crops promise well. Spring rice is still being harvested and millets are being gathered. No important change in prices of common rice. Cattle are generally reported well, and there is plenty of fodder and water in all districts.

North-Western Provinces and Oudh.—*For week ending 7th June.*—The weather is still unsettled and rain has been general. The fall has been heaviest in the Eastern and Central districts. The sugarcane and indigo crops have benefited by the rain. Preparations for the autumn crops sowings are in active progress. Markets are well supplied and prices are fairly steady. Locusts have again appeared in Jhansi, but no damage has been done. In Saharanpur they have almost disappeared.

Punjab.—*For week ending 7th June.*—Rain has fallen in all districts except Sialkot. Threshing of spring crops in progress; outturn is generally good. Extra spring crops are doing well. Sowings of autumn crops commenced. Weeding of sugarcane and cotton crops going on. Standing crops are in good condition. Locusts appeared in Amritsar and Dera Ismail Khan, and stormy weather has done some damage to unthreshed wheat lying in fields in Shahpur, and insects are destroying the germinated cotton seed in the Dera Ismail Khan district. Condition of cattle is generally good. Fodder sufficient throughout the Province. Outturn of the poppy crop is good. Prices unsettled in one district, falling in five others, and stationary elsewhere.

Central Provinces.—*For week ending 7th June.*—Rainfall heavy in one district; moderate elsewhere. Weather hot and cloudy. Preparation of land for autumn sowings continues. A flight of locusts alighted in the Jubbulpore district. Prices risen in one district; elsewhere steady.

Burma.—*For week ending 3rd June.*—Rain fell throughout the Province, except in Myingyan. In Upper Burma reaping of dry-weather paddy is nearly completed, and ploughing for wet-weather crops is progressing. In Lower Burma ploughing is progressing. Standing crops are flourishing in Upper Burma. The price of paddy has risen in two districts and has fallen in four others. The number on relief works in the Meiktila district was 227.

Assam.—*For week ending 6th June.*—Rain wanted in Lower Assam, but has been excessive in the Surma Valley. Planting of late rice continues. Fodder scarce in the Surma Valley, but sufficient elsewhere.

Mysore and Coorg.—*For week ending 7th June.*—MYSORE: Rainfall good in parts. Standing crops in good condition. Sowings commenced in four districts. Prospects generally favourable. Prices fallen in two districts.

COORG: Ploughing of rice fields in progress. Rain favourable for standing crops. Prices stationary. Water and fodder sufficient for cattle

Berar and Hyderabad.—*For week ending 7th June.*—BERAR: Rainfall good. Weather hot. Preparation of land continues. Sowings commenced in parts. Water sufficient, but fodder deficient in one taluk. Cattle healthy. Prices almost steady.

HYDERABAD: Rainfall heavy during the week. Harvesting of hot-weather crops continues. Prices stationary.

Central India.—*For week ending 7th June.*—Rain fell throughout Central India during the week, the fall being insufficient in Bhopal. Ploughing commenced in three Agencies. Sowing in progress in parts of Bhopawar. Condition of cattle generally good. Pasturage good and sufficient. Prices steady in Bhopal, fluctuating in Gwalior, and high elsewhere.

Rajputana.—*For week ending 7th June.*—Rainfall good in parts. Spring crops reaped. Harvest outturn good. Considerable amount of threshed grain blown away by high winds in Kishengarh. Agricultural stock generally good. Pasturage or fodder sufficient, except in Dholpur, where fodder is reported to be failing. Prices rising in three States, falling in three others, and steady elsewhere.

Nepal.—*For week ending 3rd June.*—Weather seasonable. Prospects good.

E. C. BUCK,
Secretary to the Government of India.

SUPPLEMENT TO

The Gazette of India.

No. 24.} CALCUTTA, SATURDAY, JUNE 17, 1893.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in* PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

ACCOUNT.

General.

REVIEW OF THE REVENUE AND EXPENDITURE RECORDED UNDER THE HEAD "CIVIL WORKS" IN THE ACCOUNTS OF THE GOVERNMENT OF INDIA FOR 1891-92.

No. 90-A. G., Simla, the 3rd June 1892,

RESOLUTION—By the Government of India, Public Works Department.

Read—

Note by R. G. MACDONALD, Esq., Officiating Accountant General, Public Works Department, upon the accounts of Revenue and Expenditure recorded under the head "Civil Works" in the accounts of the Government of India for 1891-92.

RESOLUTION.—The main points requiring notice are :—

I.—The increase in rent and the net return from buildings occupied as residences—*vide* paragraph 4.

II.—The relative outlay on civil buildings and communications—*vide* paragraphs 13, 14, 16 to 18, 22, 23, 29, and 30.

III.—The percentages of estabilshment charges on the outlay on works and repairs—*vide* paragraph 15.

IV.—The net charge to the State on account of the Royal Indian Civil Engineering College at Coopers Hill and the Thomason College at Roorkee—*vide* paragraphs 5 and 11.

2. The net return on the capital cost of buildings occupied as residences, excluding those allotted rent-free, is 1·72 per cent. against 1·50 per cent. in 1890-91. The small return is mainly due to the cost of buildings constructed in past years for officials not having been regulated with reference to the salaries of occupants as is now done under the rules laid down in Public Works Department Code, Vol I, Chapter XI, paragraph 17.

3. Although the outlay on civil buildings and communications appears disproportionate in some Provinces, yet the total outlay on buildings and roads by departmental and civil officers shows no very marked disproportion. The total outlay on new buildings during the year under review amounted to Rx. 1,139,469 against an expenditure of Rx. 902,759 on new roads. The Government of India hope that the remarks in paragraph 5 of Public Works Department Resolution No. 96-A. G., dated 20th April 1892, regarding the construction of feeder roads to railways, will be borne in mind when the grants available for expenditure on Provincial Public Works are being distributed by Local Governments and Administrations.

4. The percentages of establishment given in paragraph 15 of the note are calculated on the total outlay by departmental officers exclusive of establishment. The ratio which the establishment charges bear to the outlay on works and repairs only are :—

1887-88	28·07 per cent.
1888-89	26·30 „ „
1889-90	26·80 „ „
1890-91	25·97 „ „
1891-92	22·44 „ „

or an average of 25·79 for the five years ending 1891-92.

5. It is observed that the net direct charge to the State in 1891-92, on account of the Royal Indian Engineering College, amounted to £820, exclusive of charges on account of salaries of passed students detained in England and passages of officers on appointment. The net charge on account of the Thomason College was Rx. 15,450.

ORDER.—Ordered, that the foregoing, with a copy of the note, be forwarded to the Local Governments, Administrations and officers noted in the margin, for information.

Ordered also, that a copy of the Resolution and note be forwarded to the Finance Department, and that the papers be published in the *Gazette of India*.

The Governments of Madras and Bombay (General), Bengal, the North-Western Provinces and Oudh, and the Punjab.
The Chief Commissioners of the Central Provinces, Burma, Assam, and Coorg.
The Resident at Hyderabad.
The Agents to the Governor-General for Central India, Rajputana, and Baluchistan.
The Superintendent of Port Blair and Chief Commissioner, Andaman and Nicobar Islands.
The Accountant General, Public Works Department.
The Director General of Military Works.

F. L. O'CALLAGHAN,
Secretary to the Government of India.

Document accompanying.

Note by Accountant General, Public Works Department, with accompaniment.

Note by R. G. Macdonald, Esq., Officiating Accountant General, Public Works Department, upon the accounts of Revenue and Expenditure recorded under the head "Civil Works" in the accounts of the Government of India for 1891-92.

The amount of *Revenue and Expenditure* exhibited in these accounts and reviewed in the following paragraphs is :—

	Collected or expended by		Collected or expended in England.	Total.
	Public Works Officers.	Officers of other Departments.		
	Rx.	Rx.	Rx.	Rx.
Revenue	157,592	380,731	39,007	577,330
Expenditure	3,975,101	1,252,752	118,115	5,345,968*

* Includes outlay amounting to Rx. 350,763 from Excluded Local Fund and Contributions, and Rx. 971 spent by the Public Works Department, Bombay, for the Indo-European Telegraph Department.

REVENUE.

1. The *Revenue* credited in the accounts of the Government of India for 1891-92 under the head "Civil Works" amounts to Rx. 577,330. Of this sum—

Rx.	
157,592	were realized by Public Works Officers in India,
380,731	by Officers of other Departments in India, and
39,007	in England.
577,330	TOTAL

2. The sources of revenue and the amounts collected are :—

3. A comparison of the actual revenue derived from "Civil Works" with the Budget and Revised Estimates is given below :—

Year.	Budget Estimate.	Revised Estimate.	Actuals.
	Rx.	Rx.	Rx.
1891-92	553,600	568,200	577,330

The increase Rx. 23,730 over Budget Estimate is chiefly due to the receipts from tolls and ferries having been under-estimated and of Rx. 9,130 over Revised Estimate to the sale of machinery and appliances of the Gauhati workshops to the Bengal-Assam Railway and to larger receipts from the Roorkee workshops.

4. *Rents of buildings, Rx. 42,974.*—The receipts from this source compare as follows with the realizations in the four preceding years :—

Years.	By Public Works Officers.	By Officers of other Departments.	Total.
	Rx.	Rx.	Rx.
1887-88	29,730	3,817	33,547
1888-89	33,245	3,691	36,936
1889-90	36,875	4,061	40,936
1890-91	37,888	4,028	41,916
1891-92	38,908	4,066	42,974

The net return on capital cost of buildings set apart as residences, excluding those allotted rent-free, is 1·72 per cent. as shown below. The realizations fell short of the maintenance charges by Rx. 18.

		CAPITAL COST OF BUILDINGS FROM EXAMINERS' ACCOUNTS.				Cost of Repairs.			
			Amount.						
	Year of the Account.	*Rent-free buildings.	Other buildings.	Total.	Rents realized.	Rent-free buildings.	Other buildings.	Net return excluding repairs to rent-free buildings.	Percentage of net return on Capital cost excluding rent-free buildings.

Total	...	737,340	699,964	1,437,304	27,862	27,880		12,052	1·72

* Excluding buildings occupied as residences by Heads of Local Governments and Administrations.

5. *Receipts from the Thomason Civil Engineering College, Roorkee, Rx. 2,374.*—The financial results of the working of this college were—

	Rx.
Income	2,374
Outlay—	
Salaries, Office establishment, Book Depôt and Press	15,999
Repairs of buildings	1,825
Total	17,824
Net debit	15,450

6. *Ferry Receipts, Rx. 306,402.*—This is the largest source of revenue credited under the head "Civil Works," the major portion of it, amounting to Rx. 301,581, has been realized by Civil Officers.

The realizations under this head during the last 4 years are shewn in the following table :—

Years.	By Public Works Officers.	By Civil Officers.	Total.
	Rx.	Rx.	Rx.
1888-89	3,458	307,902	311,360
1889-90	2,511	306,707	309,218
1890-91	3,815	295,593	299,408
1891-92	4,821	301,581	306,402

EXPENDITURE.

7. The *Expenditure* recorded in the accounts for 1891-92, under the head "Civil Works," amounts to Rx. 5,345,968. Of this sum—

Rx. 3,975,101 were expended by Officers of the Public Works Department;
" 1,252,752 by Officers of other Departments;
" 5,227,853
and " 118,115 in England including exchange; but exclusive of the value of supplies to India which are included in the outlay upon the works concerned;
" 5,345,968 in all.

8. The following compares the actuals of the year (exclusive of outlay from Excluded Local Funds and Contributions) with the Budget and Revised Estimates :—

Funds.	Budget Estimate.	Revised Estimate.	Actuals.
	Rx.	Rx.	Rx.
Imperial	788,200	863,000	882,329*
Provincial	2,574,200	2,490,800	2,461,115
Local	1,616,400	1,679,700	1,651,761
Total	4,978,800	5,033,500	4,995,205*

* Inclusive of Rx. 971 spent by the Public Works Department, Bombay, for the Indo-European Telegraph Department.

Imperial outlay Rx. 882,329.

The outlay as compared with the Budget Estimate shows an increase of Rx. 94,129. Of this sum Rx. 8,440 represents English outlay and Rx. 85,689 Indian outlay. The increase in Indian outlay by Departmental Officers is chiefly due to outlay on famine relief works in Rajputana and Upper Burma,

and in Assam to expenditure on the Nichuguard-Manipur Road. On the other hand there was a lapse of about Rx. 7,400 on works carried out by the agency of Civil Officers, due to no outlay having taken place against the grants for constructing Consulate houses at Meshed and Basrah. The excess of Rx. 19,329 over the Revised Estimate is due to lapses anticipated at the time the estimate was framed not having occurred.

Provincial outlay, Rx. 2,461,115.

The lapses on the Budget and Revised Estimates, amount to Rx. 113,085 and Rx. 29,685, respectively. The lapse on the Budget Estimate is mainly due to expenditure by Departmental Officers on Civil Works in Madras having been restricted, and that on the Revised Estimate to the same cause as well as to the expenditure on certain works in Bombay having been over-estimated. In the case of Civil Officers the lapse on the Budget Estimate is principally due to the postponement of payments on account of contributions to certain Municipalities for drainage and water-supply projects in Madras. The following table shews the lapses distributed under Departmental and Civil Officers:—

	Departmental Officers.	Civil Officers.	Total.
	Rx.	Rx.	Rx.
Budget Estimate	2,415,200	159,000	2,574,200
Actuals	2,325,279	135,836	2,461,115
Lapse	89,921	23,164	113,085
Revised Estimate	2,351,300	139,500	2,490,800
Actuals	2,325,279	135,836	2,461,115
Lapse	26,021	3,664	29,685

Local outlay, Rx. 1,651,761.

The outlay by Departmental Officers exceeds the Budget Estimate by Rx. 18,995 and that by Civil Officers by Rx. 16,366. In the former case the increase occurs chiefly in Bombay and is due to additional works having been commenced by District Local Boards, which were not foreseen when the Budget Estimate was prepared. Under Civil Officers the increase is mainly due to the outlay on roads in Madras having been under-estimated.

The lapse of Rx. 27,939 on the Revised Estimate is due to an over-estimate of requirements, chiefly in Bombay, Assam and Lower Burma.

The actual outlay by Departmental and Civil Officers is compared with the Budget and Revised Estimates in the following table:—

	Departmental Officers.	Civil Officers.	Total.
	Rx.	Rx.	Rx.
Budget Estimate	523,200	1,093,200	1,616,400
Actuals	542,195	1,109,566	1,651,761
Increase	18,995	16,366	35,361
Revised Estimate	570,300	1,109,400	1,679,700
Actuals	542,195	1,109,566	1,651,761
Lapse	28,105	—166	27,939

The total expenditure of the year has been charged in the accounts in the following manner:—

	Rx.
New works	2,485,929
Repairs	1,748,403
Tools and Plant	59,726
Increase of stores, etc.	33,551
Miscellaneous (contributions to Municipalities, etc.)	69,561
Establishment	830,683
	5,227,853
Add—	
In England	118,115
Total	5,345,968

9. The following table exhibits the services on which this sum was spent and the funds out of which it came. The outlay from Excluded Local Funds and Contributions, Rx. 350,763, represents money expended by the agency of the Public Works Department for local bodies and institutions:—

* The expenditure by Officers of other Departments was not detailed in the accounts by service heads till the year 1890-91.

14. The preceding table shews that the outlay by Public Works agency on Buildings has been steadily increasing since 1887-88, the outlay of 1891-92 exceeds that of 1887-88 by Rx. 392,533. The expenditure on Roads has increased gradually during the last two years.

15. The expenditure on Establishment bears the following ratio to the total outlay by Public Works Officers exclusive of Establishment.

1887-88	28·15 per cent.
1888-89	26·12 „
1889-90	26·97 „
1890-91	25·51 „
1891-92	21·83 „

16. The following table shews the percentages of the total money expended in each Province under the different heads of service :—

I.—By Public Works Officers.

Percentage of all Provinces	3	2	18	47	7	3	13	1	...	...	6	100

17. Of the total outlay under Public Works Officers—

28 per cent. was expended on *new Buildings.*
18 „ „ „ *Roads.*
5 „ „ „ Works of *Miscellaneous Public Improvement.*
8 „ was spent in repairs of *Buildings.*
20 „ „ „ *Roads.*
1 „ „ „ Works of *Miscellaneous Public Improvement.*

Establishment absorbed 18 per cent. of the total outlay, Tools and Plant 1 per cent., and Suspense 1 per cent.

Similarly, of the total outlay under Officers of other Departments—

3 per cent. was expended on *new Buildings,*
18 „ „ „ *Roads.*
7 „ „ „ Works of *Miscellaneous Public Improvement.*
2 „ „ on repairs to *Buildings.*
47 „ „ „ *Roads.*
3 „ „ „ Works of *Miscellaneous Public Improvement.*
13 „ of the total outlay was recorded under Establishment,
6 „ under Miscellaneous, and
1 „ of the outlay on Tools and Plant.

18. The outlay under the different heads of service vary considerably in the several Provinces. Rather more than one-fourth, or 28 per cent., of the total outlay by Public Works Officers has been spent on new buildings against 18 per cent. on new roads. The Provinces spending large sums on new buildings are Bombay, Madras, Bengal, Punjab, Upper and Lower Burma.

The largest expenditure on new roads has taken place in Upper Burma, North-Western Provinces and Oudh, Bombay, Central Provinces and Assam.

It is noticeable that in Madras and Bengal a comparatively small proportion of the outlay on the construction and maintenance of roads, is incurred through the agency of Public Works Officers, the bulk of the expenditure under these heads being accounted for by Civil Officers. Central India maintains a high percentage for establishment; the percentage is lowest in Rajputana, and is due to additional grants having been given for works owing to famine.

The major portion of the outlay by Civil Officers was incurred in Madras, Bengal and Bombay, and it will be observed that repairs to roads have taken up nearly half of the total outlay of 47 per cent. Of the remainder 18 per cent. was expended on new roads, chiefly in Bengal and Madras; establishment took up 13 per cent., and the balance was expended on other heads of service.

19. The *Imperial* outlay was incurred in the under-noted Provinces upon the objects detailed: —

	Military Works.	Rajputana.	Central India.	Coorg.	Mysore.	Hyderabad.	Port Blair.	Baluchistan Agency.	Central Provinces.	Burma. Upper.	Burma. Lower.	Assam.	Bengal.	North-Western Provinces and Oudh.	Punjab.	Madras.	Bombay.	Total.

20. In Upper Burma the large outlay of Rx. 330,076 is due to the opening out of the Province generally and to some extent to the commencement of new roads undertaken in the interests of labourers seeking relief on account of scarcity. The other provinces showing large outlay are Baluchistan and Bengal. The principal works on which outlay was incurred were—

In Military Works Department—

New Protestant Churches at Multan and Quetta.

In Rajputana and Central India—

Road—Bhim-Barakhan Sujat.

In Coorg—

Road from Veerarajendrapett to Periapatam.
Bridge across the Cauvery at Siddapur.

In Baluchistan Agency—

New block of Public Offices, Quetta.
Roads—Hindu Bagh, Fort Sandeman.
Mir Ali Khel-Khajuri Kuch.
Viala-Mir Ali Khel.
Flood Protective Works, Quetta.

In Upper Burma—

Buildings—Jails at Mandalay, Katha, Bhamo, Minbu, Kindat, Myingyan, Meiktila and Shwebo.
Roads—Myingyan-Fort Stedman.
Maymyo-Lashio.
Tillin-Gangaw.
Taungdwingyi.
Ye-u to Kin-u Railway Station.
Ye-u-Chindwin.
Thabrikin-Mogôk.

In Lower Burma—

Masonry tower—Savage Island Light-house.
Light-house at Oyster Island.

In Assam—

Hill cart-road from Nichuguard to Kohima.
,, ,, from Mao to Manipur.

In Bengal—

New offices for the Home, Revenue and Agricultural and Public Works Departments of the Government of India.

In Punjab—

Roads—Dera Ghazi Khan-Loralai.
Latammar-Dera Ismail Khan.

On repairs of buildings Baluchistan shows the largest outlay, *viz.*, Rx. 18,620, or nearly one-fourth of the whole sum expended. This is due to the special repairs necessitated by the unusually heavy rains having caused considerable damage to buildings.

Nearly half of the total outlay on the up-keep of roads has been incurred in Upper Burma, Rajputana, Baluchistan, Central India and Coorg absorb most of the remainder.

21. The *Provincial* outlay was incurred in the undernoted Provinces upon the objects specified below :—

23. The outlay by Officers of the Public Works Department has been expended in the following proportions :—

32 per cent. on new *Buildings*.
12 „ „ „ *Roads*.
6 „ „ „ *Miscellaneous Improvements*.
8 „ „ „ repairs to *Buildings*.
20 „ „ „ „ to *Roads*.
1 „ „ „ „ of *Miscellaneous Improvements*.
19 „ of the total outlay has gone in payments to *Establishment*.
1 „ on *Tools and Plant*.
1 „ is held in suspense.

Attention is invited to the outlay by Public Works Officers on new buildings, on which over Rx. 700,000 were spent compared with about Rx. 290,000 on new roads. The variations in the percentages are very marked, especially in Madras and Lower Burma. In Madras the outlay on new buildings is 56 per cent. against 12 per cent. on new roads, and in Lower Burma 42 per cent. on new buildings against 7 per cent. on roads. Punjab, Bombay, and Bengal also show considerably larger outlay on new buildings than on new roads, ranging from 35 to 28 per cent. on new buildings against 9 to 14 on roads.

In Assam the Provincial Establishment supervises works paid for from incorporated local funds without charge: this accounts to some extent for the high percentage shown against Provincial Establishment in the foregoing table, *viz.*, 30 per cent. The percentage in other Provinces for Establishment is normal.

The outlay by Officers of other Departments is comparatively small: this agency is chiefly made use of in Madras, Lower Burma, and the North-Western Provinces and Oudh.

In Lower Burma the whole outlay appears under Miscellaneous; 24 per cent. of the total outlay in the North-Western Provinces and Oudh is devoted to Miscellaneous Public Improvement works and 23 per cent. to repair works of the same class; repairs to buildings and roads absorb 15 per cent. and 11 per cent. respectively.

In Madras, 75 per cent. of the total outlay has been spent upon Miscellaneous Public Improvement works, 8 per cent. on new buildings, and 12 per cent. on up-keep of roads.

24. *Repairs* of Buildings and Roads have taken up the under-noted percentages of the total outlay:—

Provinces.	Percentage of total outlay incurred on repairs.		
	Buildings.	Roads.	Miscellaneous Public Improvements.
Public Works Officers.			
Central Provinces	3	20	...
Upper Burma	*Nil*	*Nil*	*Nil*

25. The principal works on which outlay was incurred were—

In Central Provinces—

Buildings—

New Residency at Nagpur.
Hospital in Central Jail, Jabalpur.

Roads—

Nagpur-Umrer.
Mull-Umrer.
Lamptha-Paraswara.
Saonair-Chhindwara.
Seoni-Chhindwara.
Arang-Kharial, Raipur-Kalahandy.
Bilaspur-Mandla border.
Budnur-Itarsi.
Chhindwara-Singanama.
Mandla-Bilaspur.
Mandla-Dindari.
Raipur-Dhamtari.

In Lower Burma—

Buildings—

Central Jail at Insein.
New Public Offices, Rangoon.
Deputy Commissioner's Court-house with Thanna and Treasury at Sandoway.

Road—

Prome and Shwegun-Hlinebwe.

In Assam—

Roads—

Nowerband-Changsil.
Completing Goramur road.
Improving and bridging the Northern Trunk.
Bridge over Digha river at Burnihat.
Bridge over Singra river, Assam Trunk road.
Completing iron bridge over Krishnai river, Assam Trunk road.

In Bengal—

Buildings—

Collectorate and Income Tax Office, Calcutta.
Additions and extensions of the Small Cause Court Building, Calcutta.
New Police Court Building, Lalbazar, Calcutta.
School of Art and Art Gallery, Calcutta.
Out-offices of the Medical College and Eden Hospitals, Calcutta.
Deputy Commissioner's Court, Jalpaiguri.
Revenue and Judicial Building, Chittagong.
Judge's Court, Noakhali.

Roads—

Darjeeling bazar-Lebong spur.
Matighora-Noxalbari.
Bridge over Suburnoneikha river.
Sangai bridge.
Mahanadi bridge.
Renewing permanent bridges on the Darjeeling hill cart-road.

In North-Western Provinces and Oudh—

Buildings—

Additions and alterations to Thomason Hospital, Agra.
Reformatory School, Central Prison, Bareilly.
Re-roofing barracks in Gorakpur Jail.

Roads—

Altering alignment of road to the Gogra ferry at Balwaghat.
New cart-road from Brewery to Naini Tal.
Bridge over Hindun river.

Miscellaneous Public Improvements—

Water-supply, Cawnpore.
" " Benares.
" " Huldwani.
Drainage works, Naini Tal.

In Punjab—

Buildings—

Boarding-house, Government College, Lahore.
Jubilee Museum, Lahore.
Central Jail, Montgomery.
Additional accommodation in Civil Court at Delhi.
New Police Lines at Delhi.
New Jail at Amballa.
Restoration of Lawrence Military Asylum, Sanawar.

Roads—

Gomal Pass.
Improvement to Mall, Lahore.
Bridge over Chukki torrent.
Bridges along Kangra Valley cart-road.

Miscellaneous Public Improvements—

Protective works at Dera Ghazi Khan.

In Madras—

Buildings—

Collector's Office at Calicut.
Cutcherries at Bellary.
District Jail, Cuddapah.
Government House, Ootacamund.
New Law Courts, Madras.
Technical Institute and Public Library, Madras.
General Hospital, Madras.
Lunatic Asylum, Madras.

Roads—

Potinghi-Koraput, Potinghi ghât and Ayitri-Gudalur.
Bridges on Potinghi ghât, Ponniar river, and Godilum river.

In Bombay—

Buildings—

New Revenue Offices at Broach.
Record Office, Poona.
New Distillery Buildings, Surat and Dhulia.
New Central Jails, Ahmedabad and Hyderabad.
Anjuman-i-Islam School, Bombay.
Elphinstone Middle School, Bombay.
St. George's Hospital, Bombay.
European General Hospital, Aden.

Roads—

Bridge over Sabarmati river to connect Bavla road.
" over Vatenk river on Bibipula road.

26. The money obtained from *Incorporated Local Funds* has been expended on the undernoted objects:—

27. The bulk of the outlay by Public Works Officers has been incurred on "Communications"—Works 32 per cent., of which the outlay in the North-Western Provinces and Oudh was by far the largest portion—and Repairs 39 per cent., chiefly in the North-Western Provinces and Oudh, Punjab and Bombay. The outlay on "New Buildings" by this agency is comparatively small, or about 6 per cent. of the total outlay, and the largest expenditure under this head occurred in the North-Western Provinces and Oudh, Punjab, and Bombay, chiefly under "Medical" and "Educational."

About 45 per cent. of the total outlay under "Miscellaneous Public Improvements" has been spent on "water-supply," principally in the Punjab.

A little over two-thirds of the total outlay from Incorporated Local Funds has been administered by Officers of other Departments.

28. The outlay on repairs to "Communications" under Officers of other Departments amounted to Rx. 567,578, principally in Bengal Rx. 221,781 and Madras Rx. 254,604.

29. The money assigned to public works from Incorporated Local Funds was expended in the following proportions upon Buildings and Communications and other works of Miscellaneous Public Improvements :—

PERCENTAGE ON TOTAL OUTLAY.

	Civil Buildings.		Communications.		Miscellaneous Public Improvements.		Establishment.	Tools and Plant.	Suspense.	Profit and Loss and Miscellaneous.	Total.
	Works.	Repairs.	Works.	Repairs.	Works.	Repairs.

30. The money assigned for outlay by Officers of the Public Works Department has been incurred in the following proportions :—

6 per cent. on new *Buildings.*
32 „ „ „ *Roads.*
3 „ „ „ *Miscellaneous Improvements.*
3 „ „ repairs to *Buildings.*
39 „ „ „ to *Roads.*
2 „ „ „ *Miscellaneous Improvements.*

Establishment has absorbed 14 per cent. and Tools and Plant 1 per cent.

The following are the percentages with respect to outlay by Officers of other Departments :—

New Buildings	3 per cent.
„ Roads	80 „
Miscellaneous Improvements	5 „
Repairs to Buildings	2 „
„ to Roads	51 „
„ to Miscellaneous Improvements	3 „
Establishment	14 „
Tools and Plant	1 „
Miscellaneous	1 „

31. Repairs have taken up the under-noted percentages of the total outlay :—

Provinces.	Percentage expended on repairs.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

ACCOUNT.

Railway.

REVIEW OF THE REVENUE AND EXPENDITURE OF THE RAILWAY BRANCH OF THE PUBLIC WORKS DEPARTMENT FOR 1891-92.

No. 447-A.—R., dated Simla, the 9th June 1893.

RESOLUTION.—By the Government of India, Public Works Department.

Read—

Note by R. G. Macdonald, Esq., Officiating Accountant General, Public Works Department, upon the Capital and Revenue Accounts of Railways in India for 1891-92.

RESOLUTION.—The note* above referred to exhibits in a concise and comprehensive form the transactions of the Public Works Department with regard to railways during the year 1891-92. It contains much valuable and useful information not readily obtainable elsewhere, and brings out clearly the profitable nature of the State's investments in railways.

* Copy appended.

2. The principal points of interest brought forward by the Accountant General in his note are as follows:—

I.—The financial results to the State of the working of State and Guaranteed Railways.

II.—The Capital transactions of Guaranteed Railways.

III.—The Capital accounts of Indian Railway Companies.

IV.—The transactions with regard to the construction of State Railways.

3. It will be observed from paragraph 7 of the note, that the Revenue Account of "State Railways" has during 1891-92 resulted in a gain; but that including the transactions of Guaranteed Railways and Subsidised Companies and the expenditure on surveys, the net result to the State is a loss of Rx. 315,864. For this small charge upon the general tax-payer the country possessed in 1891-92, 15,694 miles of open railway with all the indirect advantages accruing therefrom. The loss in the year is directly attributable to the low rate of exchange. The traffic was exceptionally good.

4. The revenues of India were liable during the year to a total sterling charge for interest and annuities of £5,653,176, or in Indian currency of Rx. 8,108,138, the exchange amounting to Rx. 2,454,962.

5. The net receipts accruing to Government from State lines gave a return of 6·13 per cent. on the total Capital outlay at the close of the year. The Capital outlay, however, includes the outlay on lines under construction or abandoned, and the outlay on lines which have been constructed for defensive purposes, which do not pay their working expenses. To obtain a fair estimate of the return from railways on the capital expended on them, the outlay on the above lines should be excluded. Excluding such outlay, the result would be as follows:—

	Rx.	Rx.
Capital outlay on State lines to 31st March 1892		133,764,954
Deduct—Outlay on lines under construction or abandoned	4,156,742	
„ —Outlay on construction of Frontier lines not included in sum above deducted	11,573,318	
Total deductions		15,730,060
Remainder		118,034,894

This sum includes a sterling outlay of £33,553,451 on account of debt created in the purchase of railways which were constructed by Companies (since reduced by a sinking fund to £32,877,093), but it excludes the portion undischarged

at the end of 1891-92 of the liabilities of Government in connection with the purchase of the undermentioned lines, which are being extinguished by annuities charged upon the Revenue Account, to the extent shown below :—

	£
East Indian Railway (including £6,550,000 Deferred Annuities)	24,662,249
Eastern Bengal Railway	2,790,908
North Western Railway	8,942,152
TOTAL	36,395,309

In stating the Capital which earned Rx. 8,197,454 during 1891-92 it seems fair to include in it the rupee equivalent of these amounts, applying the average rate of exchange of the year under review.

Adopting this method, the Capital outlay rises from Rx. 118,034,894 to Rx.183,836,257, and the return to Government becomes 4·46 per cent.

6. The railways referred to above as frontier (or defensive) lines are the following :—

Open lines.	Capital outlay. Rx.
1. Sind-Pishin main line	6,493,297
2. Bolan temporary line	268,651
3. Bolan High Level line	137,870
4. Chenab Bridge, Ramuwalla	398,282
5. Sind-Sagar, Eastern and Western Sections	2,352,296
6. Mianwali-Mari Branch	116,027
7. Chaman Extension	1,510,890
8. North Western Railway, Gradient Improvements	266,005
TOTAL	11,573,318
Lines under construction and Stores in Reserve.	
9. Frontier Railways, Reserve Material	391,888
10. Mari-Attock	68,114
11. Mushkaf-Bolan	184,032
12. Peshawar Railway Reserve	35,750
TOTAL	679,784
GRAND TOTAL	12,253,102

7. The working of Guaranteed Railways resulted in a loss to the State of Rx. 299,366. The Madras Railway was worked during the year at a loss of Rx. 359,428, whilst the Great Indian Peninsula and Bombay, Baroda and Central India Railways gave a profit of Rx. 20,680 and Rx. 39,382, respectively.

8. The net amount of guaranteed interest advanced by the State to 31st March 1892, on account of the three Guaranteed Railways, after taking as a set-off the aggregate of the net revenue balances for the several half-years to 31st December 1891, is £13,952,380.

The Governments of Madras and Bombay (Railway), Bengal, the North-Western Provinces and Oudh, and the Punjab.
The Chief Commissioners of the Central Provinces, Burma, and Assam.
The Resident at Hyderabad.
The Agents to the Governor General for Central India, Rajputana, and Baluchistan.
The Accountant General, Public Works Department.
The Director General of Railways.
The Consulting Engineers to the Government of India for Railways, Calcutta, Lucknow, Central Division, and Assam.

ORDER.—Ordered, that the foregoing, with a copy of the note referred to, be forwarded to the Local Governments and Administrations noted on the margin, for information.

ORDERED also, that a copy of the Resolution and note be forwarded to the Finance Department, and that the papers be published in the *Gazette of India*.

F. L. O'CALLAGHAN,
Secy. to the Govt. of India.

Documents accompanying.

Note by the Accountant General, Public Works Department, No. 383 R., dated 21st April 1893, with accompaniment.

Accompaniment to P. W. D. Resolution No. 447 A.—R., dated 9th June 1893.

Note by R. G. Macdonald, Esq., Officiating Accountant General, Public Works Department, upon the Capital and Revenue Finance Accounts of Railways in India for 1891-92.

1. The Revenue and Expenditure of the Railway Branch of the Public Works Department is recorded under the following major heads :—

Revenue—

XXVI.—State Railways (Gross Traffic Receipts).
XXVII.—Guaranteed Companies (Net Traffic Receipts).
XXVIII.—Subsidized Companies (Repayment of advances of interest).

Expenditure—

34.—Construction of Protective Railways (charged against Famine Insurance).
37.—Construction of Railways (charged against Revenue in addition to that under Famine Insurance).
38.—State Railways—Working Expenses, Interest charges, etc.
39.—Guaranteed Companies—Surplus Profits, Land, Supervision, and Interest.
40.—Subsidized Companies—Land, Subsidies, and Advances of Interest.
41.—Miscellaneous Railway Expenditure (Surveys, etc.).
48.—State Railways—Construction.
50.—State Railways—Capital charge involved in Redemption of Liabilities.

2. In addition to the foregoing, this note and the accounts attached to it embrace the transactions recorded in the Finance and Revenue Accounts under the head "Capital Account of Indian Railway Companies," as well as the transactions of the following Native States Railways, the accounts of which are dealt with in this Department :—

Bhopal State Railway (Bhopal Section).
Amraoti Railway.
Khamgaon Railway.

3. The Warora and Umaria Collieries, both as regards Capital and Revenue transactions, are classed under State Railways.

4. For convenience, this note is divided into the following sections :—

Section A.—State Railways—Revenue transactions (Major heads XXVI and 38).
" *B.*—Guaranteed Railways—
(*i*) Revenue transactions (Major head XXVII).
(*ii*) Surplus Profits, Land, etc. (Major head 39).
" *C.*—Subsidized Companies (Major heads XXVIII and 40).
" *D.*—Miscellaneous Railway Expenditure (Major head 41).
" *E.*—Construction Expenditure (Major heads 34, 37, 48, and 50).
" *F.*—Capital account of Guaranteed Companies.
" *G.*—Capital Account of Indian Railway Companies (exclusive of the three old Guaranteed Companies).
" *H.*— Railways belonging to Native States.

General results of the year.

5. An account is submitted with this review exhibiting in abstract by funds and Finance heads the Revenue and Expenditure on account of State and

Guaranteed Railways during the year, and affording a comparison of the results of the year with the Budget and Revised Estimates and the actuals of 1890-91.

6. The outlay on construction was as follows:—

	Rx.	£
34.—Construction of Protective Railways (Famine Insurance)	484,795	
37.—Construction of Railways (charged against Revenue) .	163,233	
48.—Construction of Railways (not charged to Revenue) .	2,770,336	
Capital outlay by the old Guaranteed Companies .	50,064 =	45,891
State lines constructed by the agency of Companies .	1,166,211 =	915,798
TOTAL .	4,634,639	961,689

7. The results shown by the Railway Revenue Account are as follows:—

	State Railways.	Guaranteed Railways.	Subsidized Companies.	Miscellaneous.	Total.
	Rx.	Rx.	Rx.	Rx.	Rx.
Gross Receipts . . .	16,411,934	6,846,421	32,994	...	23,291,349

Surplus profits and shares of net earnings, etc., paid to Companies	698,189	737,659	...	...	1,435,848
Interest on debt incurred for Capital	4,427,960	...	...	...	4,427,960
Annuities, charged upon Revenue Account*	2,428,763	...	...	...	2,428,763
Interest on advances of Capital by the Secretary of State .	226,497	...	...	...	226,497
Interest on Capital deposited by Companies . . .	1,004,674	...	...	...	1,004,674
Guaranteed interest of the old Companies . . .	...	3,069,430	...	...	3,069,430
Land charges, supervision and subsidies . . .	...	19,257	32,265	...	51,522
Advances of interest to certain Companies . . .	...	...	865	...	865
Miscellaneous Railway Expenditure	...	...	...	92,060	92,060
Total Expenditure .	16,302,374	7,179,649	33,130	92,060	23,607,213
Net gain + or loss — to Government	+109,560	—333,228	—136	—92,060	—315,864
Compared with—					
in 1890-91 . . .	—387,297	—145,989	—4,808	—149,197	—687,291
in 1889-90 . . .	—983,920	—699,530	—20,027	—149,124	—1,852,601
in 1888-89 . . .	—1,254,616	—922,839	+14,697	—70,634	—2,233,392
in 1887-88 . . .	—1,121,343	—930,333	—18,863	—51,847	—2,122,386

8. From the foregoing statement it will be seen that after meeting all charges for annuities and interest (including interest on capital expended on lines not opened for traffic), charges for land for Companies' lines, and miscellaneous expenditure on surveys, etc., the result for the year is a net charge to the State of Rx. 315,864 only. The traffic was exceptionally good, and this loss may be directly attributed to the unfavourable rate of exchange during the year. The interest and annuities paid in England amounted to £5,653,176, which, at the exchange of 1s. 4·73333812*d.* the rupee, aggregated Rx. 8,106,138, the loss by exchange being no less than Rx. 2,454,962.

* These annuities are terminable between the years 1953 and 1958.

SECTION A.

STATE RAILWAYS.

(i)—Gross Receipts and Working Expenses.

9. At the beginning of the year under review, 12,757 miles of State Railway were open for traffic‡ *viz.*:—

	Miles.
State lines worked by the State—	
Standard gauge	3,532½*
Metre gauge	1,084½
Special gauges	63½
	4,680
State lines worked by the Companies—	
Standard gauge	3,319½
Metre gauge	4,757½†
	8,077

10. During the year 1891-92 the following lengths of line were opened for traffic:—

	Miles.
Bengal and North-Western Railway—	
Tirhoot Section	12½
Company's Section	38½
Rohilkhand-Kumaon Railway—	
Lucknow-Bareilly Section	58
Mysore State Railway	15
South Indian Railway	204½
North-Western Railway	65½
Toungoo-Mandalay Railway	21½
Mu Valley Railway	52½
TOTAL .	456

These figures give a total open mileage of 13,213, from which should, however, be deducted the Quetta loop-line (97½ miles) under reconstruction. With this deduction, and allowing for corrections in mileages, the mileage open at end of the year 1891-92 was 13,105½‡ miles. The mileage of railways classed respectively as Imperial and Provincial was as under—

	Miles.
Imperial	10,908½*
Provincial	2,197 †
TOTAL .	13,105½

11. The gross receipts of the year amounted to Rx. 16,411,934, the working expenses amounted to Rx. 7,516,291, the shares of net earnings, surplus profits and contributions to Provident Funds paid to Companies amounted to Rx. 698,189, raising the total charges to Rx. 8,214,480, and leaving Rx. 8,197,454 as the net receipts accruing to Government from all the State lines during 1891-92.

12. The Capital expenditure incurred by, or on the direct responsibility of, the State, including the Capital charge involved by incurring a specific amount of debt in purchase or redemption of liabilities in connection with lines for-

* Includes Bengal Central Railway.

† Includes Bengal and North-Western Railway.

} Both these railways are the property of Companies, but for convenience are classified as State Railways.

‡ Administration Report on the Railways in India for 1891-92—Part I, Appendix C.

merly belonging to Guaranteed Companies and acquired by the State is as under; *vide* details in Schedules A, Rx. 129,608,212, and H, Rx. 4,156,742 :—

	Rx.	Rx.
(i) On State lines—		
(*a*) Direct Capital outlay	71,845,506	
(*b*) Redemption of liabilities . . .	33,553,451	
		105,398,957
(ii) On State lines leased to Companies (Capital raised wholly, or in part, by Companies under guarantee)		28,365,997*
TOTAL . .		133,764,954

13. This sum, however, includes expenditure on lines not opened for traffic at the close of the year under review, on materials held in reserve on the North-West Frontier and with storekeepers at ports, on projects abandoned or in abeyance, and inefficient expenditure incurred in connection with lines transferred to Companies, aggregating Rx. 4,156,742 (*vide* Schedule H). Excluding such expenditure, the open line Capital outlay at the close of 1891-92 may be stated at Rx. 129,608,212 (*vide* Schedule A).

14. The net receipts accruing to Government for the year, Rx. 8,197,454, give a return on the total Capital outlay at the close of the year at the rate of 6·13 per cent. and on the *Open line* Capital outlay at the rate of 6·33 per cent.

15. The above results, although representing correctly the return on the Capital outlay actually incurred by the State, cannot be taken as correctly representing the true returns from the State Railways considered from a commercial point of view on the actual money sunk in the various undertakings. The old Guaranteed Railways, which have been purchased by the State, were for the most part acquired by the payment of annuities, including the establishment of sinking funds, which will redeem the capital at the expiry of the period for which the annuities are to run. These charges are met from current revenues, and in respect of the capital thus to be redeemed, no charge appears in the Government account of Capital outlay. On the other hand, when the line was purchased outright, as in the case of the Oudh and Rohilkhand Railway, the outlay as shown in the Government books includes the premium paid on the Company's share Capital. The actual outlay incurred on the State Railways—taking in the case of the Guaranteed Railways purchased by Government, the amounts expended by the several Companies *plus* the expenditure since incurred on construction—may‡ be stated at Rx. 163,764,031,† and on open lines at Rx. 159,607,289, on which amounts the net receipts for 1891-92 give a return at the rate of 5·005 and 5·135 per cent., respectively.

16. The receipts and charges, the Capital outlay, and the return per cent. on Capital outlay of each line will be found in the statement attached to this review as Schedule A. The following is a general summary:—

	Receipts.	Expenditure.	Net Receipts.	Percentage of charges on Receipts.		Capital outlay to 31st March 1892.	Percentage of net receipts on Capital outlay to 31st March 1892.
				Including payments to Companies.	Excluding payments to Companies.		
	Rx.	Rx.	Rx.			Rx.	
Imperial . .	14,324,059	6,896,440	7,427,619	48·14	44·78	114,816,607	6·50
Provincial . .	2,087,875	1,318,040	769,835	63·12	52·77	15,291,605	5·03
TOTAL .	16,411,934	8,214,480	8,197,454	50·05	45·80	129,608,212	6·33

* Excludes the outlay on the Bengal and North-Western Railway not guaranteed by the State.

† Outlay as recorded in Finance and Revenue Accounts (*vide* para. 12) . . . Rx. 133,764,954

Add—Difference between outlay included above and actual rupee expenditure on lines purchased from Companies (*vide* Schedule A.)—

	Rx.
East Indian	21,643,501
Eastern Bengal	1,970,053
Sind, Punjab and Delhi	7,175,806
South Indian	277,955
	31,066,315
Deduct—Premium on Oudh and Rohilkhand Railway	1,067,738
	29,999,077
TOTAL . .	163,764,031

‡ Sterling figures in the old Companies' accounts were converted at fixed contract rates. The difference between contract and actual average rates cannot be stated.

17. It will be seen from the above that the railways classed as Imperial yielded a return of 6·50 per cent. on the Capital outlay as recorded in the Government accounts, while those classed as Provincial yielded a return of 5·03 per cent. The year 1891-92 was, however, unusually favourable for railways generally. There was a satisfactory improvement in coaching traffic due to steady progress on most of the lines, assisted by special fairs at Hardwar and elsewhere, and to the opening out of new lines through districts not hitherto served by any railway. But the favourable results were chiefly due to a large and unexpected increase in goods traffic, which was remarkable for the largely increased exports of wheat and seeds from Bombay, Calcutta, and Karachi; coal traffic on the East Indian Railway was brisk, and the scarcity in Rajputana and high prices in Hyderabad and the Southern Mahratta country caused a considerable movement in food-grains.

18. The net receipts from the following Railways exceeded the interest charges for the year :—

Railway.	Net Receipts (less surplus profits paid to Companies).	Interest and annuities, etc.	Surplus to State.
IMPERIAL.	Rx.	Rx.	Rx.
East Indian	3,314,624	2,357,511	957,113
Rajputana-Malwa	1,117,231	525,602	591,629
Tounghoo-Mandalay*	99,861	84,628	15,233
Patna-Gya	34,788	17,394	17,394
Oudh and Rohilkhand	497,814	484,838	12,976
Warora Colliery	11,276	6,192	5,084
PROVINCIAL.			
Burma	177,910	121,937	55,973
Nalhati	4,417	1,427	2,990

The Eastern Bengal Railway yielded a return of 6·26 per cent. on the Capital outlay as recorded in the Government books, and 5·06 per cent. on the actual rupee outlay, but the net receipts fell short of the interest and annuity charges by Rx. 2,717, due to the heavy loss by exchange on the sterling payments. The North-Western Railway gave a return of 3·26 per cent. on the actual outlay incurred on the line, although the Capital Account is burdened with the very heavy expenditure incurred on the Frontier Sections, amounting to over Rx. 11,500,000, which sections did not cover their working expenses during the year. Owing to this cause and the heavy loss by exchange on the sterling payments of interest and annuities, the net receipts fell short of interest and annuity charges by Rx. 574,890. The true results of the year's working of the Tirhoot State Railway are better than they appear from Schedule A, in which the return on Capital outlay is shown as 3·01 per cent. The Bengal and North-Western Company's share of the earnings of the combined undertaking for the half-year ended 31st December 1890 was not paid until 1891-92, and the amount appears as a charge during that year, thus reducing the net receipts of the State. Excluding this special charge, the State share of the net earnings of the year would more than cover the interest charges. The financial results to the State of the working of the Companies' lines classed as State Railways are shown more fully in Schedule I.

Comparison with Budget and Revised Estimates.

19. The actual gross receipts and working expenses of State Railways for the year 1891-92 compare with the actuals of 1890-91, and with the Budget and Revised Estimates as under :—

	Actuals, 1891-92.	Revised Estimate.		Budget Estimate.		Actuals, 1890-91.
		Estimate.	Actuals, more or less.	Estimate.	Actuals, more or less.	
	Rx.	Rx.	Rx.	Rx.	Rx.	Rx.
Gross receipts .	16,411,934	16,168,050	+243,884	14,660,000	+1,751,934	13,703,224
Working expenses (including surplus profits, etc.)	8,214,480	8,143,200	+ 71,280	7,654,200	+ 560,280	6,771,940
Net earnings . .	8,197,454	8,024,850	+172,604	7,005,800	+1,191,654	6,931,284

* Excludes Net Receipts (Rx. 1,575) of open section of Mu Valley State Railway.

20. The great improvement over the actuals of the previous year and the Budget Estimate is due chiefly to the very favourable goods traffic during the year. The traffic on the East Indian Railway was exceptionally brisk, due to large exports of wheat, rice, seeds, and coal, and to some important religious festivals that occurred during the year. On the Rajputana-Malwa Railway uniformly brisk traffic was maintained throughout the year, due to scarcity in different parts of the country and to larger exports of wheat and seeds to Europe. The pilgrims to and from the fairs at Hardwar also influenced the traffic to a smaller extent. On the Oudh and Rohilkhand Railway heavy export traffic in grain, and fairs held at the commencement and close of the year, increased the receipts considerably. Traffic on the Bengal-Nagpur Railway was very favourable owing to large exports of wheat and seeds. On the North-Western there was a large increase due chiefly to exports of wheat *viâ* Karachi, frontier expeditions and the Hardwar fair. Other lines were also favourably affected by generally similar causes.

21. The actuals compare favourably with the revised estimate; the actual net earnings approximating closely to the figure in the revised estimate, there being an improvement of about 2 per cent. only. Traffic continued very favourable up to the close of the year.

22. The increase in working expenses over the actuals of the previous year and over the Budget and Revised Estimates is due to the greatly enhanced traffic, which necessarily involves an increase in cost of working, and to the larger payments of surplus profits and shares of net earnings to Companies in proportion to the increase in net receipts.

(*ii*)—*Interest and Annuities.*

23. The charges for interest and annuities on account of State Railways for 1891-92 amounted to Rx. 8,087,894, as under :—

	England.		India.	Total.
	Sterling.	Rupee equivalent.		
	Rx.	Rx.	Rx.	Rx.
Interest charged in India on debt incurred for direct outlay by the State	...	...	2,810,454	2,810,454

On debentures since discharged	...	...	174,494	174,494
On debentures, debenture stock and on Indian stock issued in redemption of annuities, debentures and debenture stock and for purchase of undertakings	1,005,952	1,442,799	818	1,443,012
Annuities in purchase of Companies' lines	1,693,388	2,428,763	...	2,428,763
Interest on Capital deposited by Companies	681,758	977,820	26,854	1,004,674
Interest chargeable against Companies on advances by Secretary of State	157,919	226,497	...	226,497
Total	3,539,017	5,075,879	3,012,015	8,087,894

24. The interest charged in India on debt incurred for direct outlay by the State, with the exception of a loan of Rx. 1,000,000 from His Highness the Maharaja Holkar for the Holkar State Railway, which bears interest at 4½ per cent., is charged at the rate of 4 per cent. per annum. The interest is calculated at 4 per cent. on outlay to the end of the previous year and at 2 per cent. on outlay during the year in which incurred.

25. The debt taken over, or incurred in connection with lines acquired, by the State from Companies, relates to the East Indian, Eastern Bengal, Sind, Punjab and Delhi (incorporated in the North-Western Railway), Oudh and Rohilkhand and South Indian Railways, and consists of debentures and debenture stocks of

the Companies of which the State assumed the liability on the transfer; of India stock issued in purchase of the Oudh and Rohilkhand and South Indian Railways; and of stock issued from time to time in redemption of portions of annuities or of debentures and debenture stocks, which are bought up as opportunity offers. The details of the interest charges and the charge on account of each line are as follows :—

	East Indian.	Eastern Bengal.	Sind, Punjab and Delhi.	Oudh and Rohilkhand.	South Indian.
	Rx.	Rx.	Rx.	Rx.	Rx.
On debentures discharged	141,867	32,627	...	...	...
On debenture stock	92,659	20,004	...	...	...
On debentures and debenture stock	...	...	...	148,893	77,857
On India 3½ per cent. stock issued in redemption of portion of annuity and debenture stock	348,715	29,520	238,990	—291	...
On India 3 per cent. stock issued in redemption of portion of annuity, debenture stock and debentures, and for purchase of undertakings from Railway Companies	10,664	30	...	332,468	140,592
On 4 per cent. rupee debt issued in redemption of portion of annuity	213	...	...	...	...
Discount Sinking Fund in redemption of debt incurred in excess of money raised	...	...	...	2,698	...
Total	594,118	82,181	238,990	483,768	218,449

26. The East Indian, the Eastern Bengal and the Sind, Punjab and Delhi Railways were purchased by annuities: the East Indian Railway annuity, terminating in 1953, at the rate of £5-12-6 for every £100 stock of the Company, the Eastern Bengal, terminating in 1957, at £6-3-4·79 per £100 stock, and the Sind, Punjab and Delhi, terminating in 1958, at the rate of £5-8-3·141 per £100 stock. In the case of the East Indian Railway a portion of the annuity equivalent to ¼ of the commuted value of the capital stock, or £6,550,000, has been deferred, on which interest at 4 per cent. is allowed. The holders of this portion of the stock participate in the surplus profits. The charges in respect of each line were as follows :—

	East Indian.	Eastern Bengal.	Sind, Punjab and Delhi (North-Western).	Total.
	Rx.	Rx.	Rx.	Rx.
Annuity	1,217,654	167,593	532,616	1,917,862
Interest in lieu of deferred annuity	375,777	...	..	375,777
Sinking Fund	78,576	5,859	48,161	132,596
Contribution towards management of Sinking Funds, etc.	1,971	185	372	2,528
Total	1,673,978	173,636	581,149	2,428,763

27. The charges under "Interest on capital deposited by Companies" and "Interest chargeable against Companies on advances" relate to the newer Companies' lines, which are classed under State Railways. The share capital and debentures raised by the Companies are guaranteed by the Secretary of State, and the interest on the Companies' share and debenture capital appears under the heading "Interest on capital deposited by Companies." During later years, the funds required for additional Capital works have been provided by advances made to the Companies from funds raised by the Secretary of State under the provisions of Act 51, Vict., Cap. 5. The charges for interest on these advances appear under the heading "Interest chargeable against Companies on advances."

28. The charges incurred in connection with each line are given in the following table:—

Railways.	Interest on Capital deposited by Companies.			Interest chargeable against Companies on Advances.	Grand Total.
	India.	England.	Total.	England.	
	Rx.	Rx.	Rx.	Rx.	Rx.
Bengal-Nagpur . .	19,415	245,617	265,032	111,872	376,904
Bengal Central . .	...	25,100	25,100	23,307	48,407
Indian Midland . .	...	304,075	304,075	53,439	357,514
Lucknow-Bareilly . .	7,439	...	7,439	...	7,439
South Indian . .	...	43,028	43,028	...	43,028
Southern Mahratta* .	...	360,000	360,000	37,879	397,879
Total .	26,854	977,820	1,004,674	226,497	1,231,171

* Including Mysore.

29. The charge in India against the Bengal-Nagpur Railway represents interest on capital expended by Government on the Katni-Umaria State Railway, which was subsequently taken over by the Bengal-Nagpur Railway Company as a part of its undertaking. This expenditure has not been refunded by the Company, but the State ranks as a shareholder to the extent of the capital contributed by it. Interest on the Lucknow-Bareilly Railway Capital —though a sterling Capital—is paid in India.

SECTION B.

Guaranteed Railways.

30. This section deals with (i) the revenue transactions of the Great Indian Peninsula, the Bombay Baroda and Central India, and the Madras Railways; and (ii) the charges incurred by the State in the payment of surplus profits and contributions to provident funds; on land, which under the several contracts is supplied free of charge to the companies; on Government controlling establishments (offices of Consulting Engineers and Government Examiners); and on interest on capital. The Government controlling establishments also exercise, in some instances, supervision over State lines leased to companies, and perform certain duties in connection with State Railways, but the entire cost is included under this head. Recoveries are, however, made from State lines leased to companies on account of Government supervision, and the amount of such recoveries is credited to this head.

I.—Revenue Transactions.

XXVII.—Net Traffic Receipts.

31. At the close of the year under review, the open mileage of the Guaranteed Railways was as follows*:—

	Total length open.	Length laid with two or more tracks.
	Miles.	Miles.
Great Indian Peninsula	1,288¼	459
Bombay, Baroda and Central India	460¾	60
Madras	839¼	42½
Total .	2,588¼	561½

32. The results of the working of the Guaranteed Railways appearing in the Finance and Revenue Accounts of the Government of India, are based on the payments into, and withdrawals from, Government Treasuries, the net receipts (*i.e.*, net payments into Treasury) appearing under head XXVII.—Guaranteed Railways as *net traffic receipts*. The gross receipts do not represent the earnings of the Railway, nor do the charges represent the cost of working. In through traffic transactions each Railway collects large sums of money on behalf of other lines, which are ultimately transferred to the credit of those lines. Such collections, on guaranteed lines, appear on both sides of the accounts as receipts and payments, and as the settlement of through traffic transactions is necessarily somewhat in arrears, a final settlement being made up at the close of each calendar half-year only, the net payments into treasury during any one official year may be more or less than the net earnings. There are other transactions also relating to moneys held temporarily, which are paid in to the credit of Government for the time being, which may similarly affect the results for any year. Transactions of the nature here referred to are called 'Suspense' receipts and payments, and this expression is used in the following table to distinguish them from the actual earnings and working expenses which are termed 'Administrative' figures.

33. The net receipts of the Guaranteed Railways during 1891-92 amounted

* Administration Report on the Railways in India for 1891-92, Part I, Appendix C.

to Rx. 3,493,118. The transactions of each Railway for the year were as follows:—

	Great Indian Peninsula.	Bombay, Baroda and Central India.	Madras.
	Rx.	Rx.	Rx.
Receipts—			
Administrative	4,434,551	1,413,901	945,556
Suspense	273,246	1,059,168	85,404
Total	4,707,797	2,473,069	1,030,960
Payments—			
Administrative	2,204,413	599,949	548,941
Suspense	230,521	1,050,776	84,108
Total	2,434,934	1,650,725	633,049
Net Receipts—			
Administrative	2,230,138	813,952	396,615
Suspense	42,725	8,392	1,296
Total	2,272,863	822,344	397,911
Percentage of working expenses to earnings	49·71	42·43	58·05
Average earnings per mile per week	65·84	58·69	21·54

34. Taking the capital expenditure as stated in rupees in the Indian Accounts (in which sterling figures have been converted at the fixed contract rates of 1*s.* 10*d.* the rupee) the return per cent. on capital outlay incurred to the end of the year was as under:—

	Capital Outlay to 31st March 1892.	Net Receipts, 1891-92.	Percentage on Capital Outlay.
	Rx.	Rx.	
Great Indian Peninsula	27,680,666	2,272,863	8·21
Bombay, Baroda and Central India	9,582,300	822,344	8·58
Madras	11,977,567	397,911	3·32

35. During the year 1891-92, traffic on the Great Indian Peninsula and Bombay Baroda Railways was very favourable. The gross earnings showed a considerable advance over the transactions of previous years, due chiefly to large demands for wheat and seeds for export to Europe, and for districts in Southern India suffering from, or threatened with scarcity. On the Madras Railway the results were not very favourable, owing to the prevalence of cholera and general scarcity. The working expenses were generally high, due for the most part to the heavy traffic; but on the Great Indian Peninsula Railway there was special expenditure due to extensive renewals of engines and coaching and goods stock, on the Bombay Baroda Railway on repairing damages caused by floods in 1891, and on the Madras Railway on renewals of locomotives.

Comparison with Budget and Revised Estimates.

36. A statement attached to this review, as Schedule B, compares in detail the transactions of the year with the actuals of 1890-91 and with the Budget and Revised Estimates. The following is a summary of the net results:—

Railway.	Actuals, 1891-92.	Revised Estimate.		Budget Estimate.		Actuals, 1890-91.
		Estimate.	Actuals, more or less.	Estimate.	Actuals, more or less.	
	Rx.	Rx.	Rx.	Rx.	Rx.	Rx.
Great Indian Peninsula	2,272,863	2,258,000	+14,863	2,000,000	+272,863	2,060,862
Bombay, Baroda and Central India	822,344	815,000	+7,344	760,000	+62,344	788,404
Madras	397,911	390,000	+7,911	420,000	−22,089	465,254
Total	3,493,118	3,463,000	+30,118	3,180,000	+313,118	3,314,520

37. The improvement over the actuals of 1890-91 and the Budget Estimate was due principally to the heavy traffic on the Great Indian Peninsula and Bombay, Baroda and Central India Railways in connection with the export of wheat and seeds to Europe, and edible grains to districts suffering from scarcity.

38. The improvement over the Revised Estimate is comparatively small, and is due to the very favourable traffic at the close of the year.

II.—Surplus Profits, etc., Land, Supervision and Interest.

Surplus Profits and Contribution to Provident Funds.

39. Under the contracts with the Guaranteed Railway Companies, a moiety of the excess of net earnings over interest charges for each half-year ending 30th June and 31st December, considered separately, is paid to the Company. In calculating the surplus, however, the interest paid in England is converted into Indian currency at the contract rates of exchange of 1*s.* 10*d.* the rupee. The amounts paid to the companies are, therefore, more than a moiety of the true surplus after meeting interest charges, since the loss by exchange, *i.e.*, the difference between 1*s.* 10*d.* and actual rates of exchange, is not taken into account, the whole of this loss falling against Government. In any half-year during which the net earnings fall short of the interest charges, the deficiency is borne wholly by Government.

40. A contribution from net earnings is made in aid of provident funds established on the Great Indian Peninsula and Bombay, Baroda and Central India Railways for the benefit of the Companies' employés, when the return of net earnings on Capital exceeds 6 per cent. per annum on the Bombay, Baroda and Central India, and 3 per cent. half-yearly on the Great Indian Peninsula Railway. A Provident Fund was established during 1891-92 on the Madras Railway, but on a different basis, the contribution forming a charge to working expenses.

41. The payments to the Companies during the ear 1891-92 on account of surplus profits and contributions to Provident Funds were as follows:—

	Surplus profits.	Contribution to Provident Funds.	Total.
	Rx.	Rx.	Rx.
Great Indian Peninsula	518,726	17,004	535,730
Bombay, Baroda and Central India	179,826	7,498	187,324
South Indian	14,605	...	14,605
Total	713,157	24,502	737,659

42. The surplus profits paid to the South Indian Railway represent a share of profits for the half-year ended 31st December 1890. That line was taken over by the State on the 1st January 1891.

Land.

43. The charges for land for Guaranteed Railways during the year were comparatively small. They were as follows:—

	Rx.
Great Indian Peninsula	266
Bombay, Baroda and Central India	19
Madras	1,968
	2,253
Less—Sale-proceeds of land relinquished by the Madras Railway	27
TOTAL	2,226

Supervision.

44. The charges falling under this head represent the cost of the establishments of the Consulting Engineers and Government Examiners employed on the supervision, audit and control of the transactions of Companies' lines, and a moiety of the cost of the office of the Director General of Railways. The amounts recovered from Railway Companies are credited to this head. The charges during the year under review were as follows:—

	Control. Rx.	Audit. Rx.
Bombay	11,517	9,491
Madras	7,394	4,347
Calcutta	8,056	2,748
Central Division	6,832	3,902
North-Western Provinces and Oudh	7,044	3,372
Director General of Railways	14,748	...
	55,591	23,860
TOTAL	79,451	
Less—Recoveries from Companies	62,420	
Net Charge	17,031	

45. The contributions for Government supervision, audit and control, recovered from the several Railway Companies were as follows:—

	Rx.
East Indian Railway	10,000
Rajputana-Malwa System	13,375
Bengal and North-Western and Tirhoot	2,959
Bengal-Nagpur	6,708
Bengal Central	1,002
Indian Midland	5,419
Southern Mahratta (including Mysore)	10,840
Rohilkhand-Kumaon (including Lucknow-Bareilly)	1,013
South Indian	9,289
Delhi-Umballa-Kalka	1,815
TOTAL	62,420

46. The contribution payable by the East Indian Railway has been fixed under the contract at Rs. 50,000 half-yearly. In the case of the Delhi-Umballa-Kalka line, the State retains 2 per cent. of the net earnings, and this sum is taken as equivalent to the usual contribution to cover the cost of Government supervision, audit and control. But from this has to be met a proportionate share of interest on cost of joint works at Umballa and Delhi, provided by Government free of cost to the Company. No adjustment on this account was, however, made in 1891-92. With the exception of the Bengal and North-Western and the Rohilkhand-Kumaon Railways, the contributions paid by other Railway Companies are calculated in accordance with the terms of the several contracts at the rate of Rs. 40 per half-year per mile of line constructed

or under construction. The contributions by the Bengal and North-Western and Rohilkhand-Kumaon Railways are, under their contracts, calculated at the rate of Rs. 20 per mile half-yearly.

47. It will be observed that no contribution is made by the old Guaranteed Railways towards the cost of Government audit and control.

Interest.

48. The charges for Interest during the year 1891-92 were as under:—

	On Capital held in England. Amount. £	On Capital held in England. Equivalent. Rx.	On Capital held in India. Rx.	On overdrawals on Capital Account. Rx.	Total. Rx.
Great Indian Peninsula	1,185,439	1,700,231	2,271	13,951	1,716,453
Bombay, Baroda and Central India	401,289	575,554	298	19,786	595,638
Madras	527,431	756,474	...	865	757,339
TOTAL	2,114,159	3,032,259	2,569	34,602	3,069,430

The above figures represent the interest paid during the year, and not the liability for interest *for* the year 1891-92. Interest on share capital and debentures is almost invariably paid half-yearly on 1st July and 1st January: the charges appearing in the accounts for the official year, therefore, may be said generally to represent the interest due for the calendar year. The payments during the official year differ from the liability for interest owing to additions to, or conversions of debentures. Considerable additional Capital was raised during the year under review, the bulk of it in December 1891, and consequently the liability for interest for the year 1891-92 would be somewhat higher than the actual payments. The interest on overdrawn Capital represents interest charged by Government at the rate of 4½ per cent. per annum on advances to the Companies in excess of their paid-up Capital.

Comparison with Budget and Revised Estimates.

49. In the statement attached to this review, as Schedule C, will be found a comparison in detail of the actual charges for Surplus Profits, etc., Land and Supervision, and Interest, with the Revised and Budget Estimates and with the Actuals of 1890-91, of which the following is a summary:—

	Actuals, 1891-92.	Revised Estimate. Estimate.	Revised Estimate. Actuals, more or less.	Budget Estimate. Estimate.	Budget Estimate. Actuals, more or less.	Actuals, 1890-91.
	Rx.	Rx.	Rx.	Rx.	Rx.	Rx.
Surplus Profits, etc.	737,659	732,800	+4,859	571,500	+166,159	473,334
Land and Supervision.	19,257	17,710	+1,547	27,500	− 8,243	42,988
Interest	3,069,430	3,074,510	−5,080	2,989,510	+ 79,920	3,130,941
TOTAL	3,826,346	3,825,020	1,326	3,588,510	237,836	3,647,263

50. The large increase in surplus profits over actuals of the previous year and the Budget Estimate, is due to the great improvement in net revenue already referred to, on the Great Indian Peninsula, and the Bombay, Baroda and Central India Railways, the Companies sharing with Government in the enhanced profits. The decrease in the interest charges as compared with the actuals of 1890-91 is due to the removal of the South Indian Railway form the category of Guaranteed Railways on its acquisition by the State on 1st January 1891. The increase over the Budget Estimate is due to the fall in

the rate of exchange during the year, as compared with the estimated rate adopted for Budget purposes. The actuals and the Revised Estimate are in close accord.

Effect on State revenues.

51. The following table shews the direct results to the State of the *working* of the Guaranteed Railways for the year:—

	Net Traffic Receipts.	Charges.				Gain or loss (+ or −).
		Interest.	Surplus Profits.	Contributions to Provident Funds.	Total.	
	Rx.	Rx.	Rx.	Rx.	Rx.	Rx.
Great Indian Peninsula . .	2,272,863	1,716,453	518,726	17,004	2,252,183	+ 20,680
Bombay, Baroda and Central India	822,344	595,638	179,826	7,498	782,962	+ 39,382
Madras . .	397,911	757,339	—	—	757,339	−359,428
TOTAL .	3,493,118	3,069,430	698,552	24,502	3,792,484	−299,366

52. In addition to the above, the cost of land provided at the expense of the State and a proportionate share of the cost of the Government controlling establishments has to be taken into consideration, in order to arrive at the real financial results to the State of the connection with Guaranteed Railways. The above table, however, shows prominently the effects of the provisions in the contracts under which surplus profits are declared half-yearly, and the sterling interest for such purposes is converted at the fixed contract rate of 1*s.* 10*d.* (*vide* para. 39). Thus the Great Indian Peninsula Railway received as surplus profits during the year the sum of Rx. 518,726, while Government (although nominally entitled to share equally with the Company) received a clear surplus of Rx. 20,680 only. During the second-half of 1891 the net earnings fell short of the guaranteed interest and Government had to make good the deficiency, and to bear also the loss by exchange on interest paid in England, from its share of the surplus of the first-half of the year. The Bombay, Baroda and Central India Railway Company received Rx. 179,826 as surplus profits, while the actual surplus accruing to the State was only Rx. 39,382.

53. The following statement shows the total amount advanced on account of guaranteed interest to each of the Guaranteed Railways to 31st March 1892, the net revenue of the several lines to the 31st of December 1891, appropriated towards the repayment of that amount, and the balance. For the purposes of this statement, the net revenue and the guaranteed interest paid in India are converted at the contract rates of exchange. The amounts shown as guaranteed interest paid in England represent true sterling:—

Railway.	Guaranteed interest advanced to 31st March 1892.			Aggregate of net revenue balances for the several half-years to 31st December 1891, inclusive—less moieties of surplus profits repaid to Companies.	Net amount advanced.
	In England.	In India.	Total.		
	£	£	£	£	£
Great Indian Peninsula .	32,262,228	470,140	32,732,368	28,834,287	3,898,081
Bombay, Baroda and Central India	11,283,895	87,335	11,371,230	9,333,790	2,037,440
Madras	15,477,725	2,142	15,479,867	7,463,008	8,016,859
TOTAL .	59,023,848	559,617	59,583,465	45,631,085	13,952,380

SECTION C.

SUBSIDIZED COMPANIES.

(Major Heads XXVIII and 40.)

54. The transactions in connection with subsidized railways which in the Government accounts appear under the heading Subsidized Companies represent—

Under *Revenue*, Head XXVIII.—Repayments of advances of interest.

Under *Expenditure*, Head 40.—Cost of land supplied free, subsidies, and advances of interest.

REPAYMENTS OF ADVANCES OF INTEREST.

55. The amounts credited as Revenue under this head comprise repayments to Government on account of advances of interest by the Rohilkhand and Kumaon Railway Company and by the Mysore Durbar on account of the Mysore Railway.

56. In the case of the Rohilkhand and Kumaon Railway, the State advanced interest at the rate of 4 per cent. per annum on the Company's share capital while the line was under construction. In consideration of this payment the State is entitled, under the terms of the contract, to a moiety of any surplus earnings, after meeting working expenses, interest on borrowed capital, if any, and a sum sufficient to pay a dividend at the rate of 5 per cent. per annum on the Company's share capital, until such time as the interest advanced by the Secretary of State, together with interest thereon at the rate of 4 per cent. per annum, shall have been repaid. The amount repaid to the Secretary of State during 1891-92 was £995, equivalent at the average rate of exchange of the year to Rx. 1,427. The following is a summary of the advances and repayments of interest to the close of 1891-92:—

Year.	Advances.	Repayments.	
		England.	India.
	Rx.	Rx.	Rx.
1882-83	432	...	...
1883-84	4,667	...	...
1884-85	7,986*	...	...
1885-86	...	...	119
1886-87	...	...	32
1889-90	...	91	...
1890-91	...	975	...
1891-92	...	1,427	...
TOTAL .	13,085	2,493	151

* Interest (£295) realized from investment of funds deposited by the Company for a fixed period taken in reduction of advances of interest.

57. The payment by the Mysore Durbar on account of the Mysore State Railway, represents the net charge for interest paid by Government to the Southern Mahratta Railway Company, in connection with the Mysore Railway. The Secretary of State, acting on behalf of the Mysore State, has guaranteed the interest on the capital raised by the Southern Mahratta Railway Company for the construction of the Mysore Railway, and the Durbar makes good the excess of interest over net revenue, and will receive any excess of net revenue over interest charges. The receipts and working expenses and interest charges of the Mysore Railway are recorded in the Government accounts under their respective Railway heads, and the net charge for interest only (*i.e.*, interest on Capital expended *minus* net receipts), which is recoverable from the Mysore Durbar, is credited under this head. The amount recovered from the Mysore Durbar during 1891-92 was Rx. 31,567 arrived at as under:—

	Rx.
Interest on Capital	68,845
Less—Charge for interest on the unexpended balance of the Capital retained in its hands, borne by Government	5,854
Remainder	62,991
Net Receipts	31,424
Net charge for interest recovered from the Mysore Durbar	31,567

Land, Subsidies and Advances of Interest.

58. The charges for land, subsidy and advances of interest are borne partly by Imperial and partly by Provincial Revenues. The items falling on the Imperial Government are charges for land, provided free of cost under the terms of the contracts, in connection with the Bengal and North-Western, Delhi-Umballa-Kalka and Nilgiri Railways. The Nilgiri Railway is also entitled, under the terms of its contract, to interest at 3 per cent. on its capital deposited in a Government Treasury for three years, or until the line is opened throughout for traffic, if earlier.

59. The charges debited to Imperial Funds during 1891-92 on account of subsidized railways were:—

		Rx.
Bengal and North-Western Railway	(Land charges)	11,947
Delhi-Umballa-Kalka Railway	(„)	3,574
Bengal Central Railway	(„)	—13
Nilgiri Railway	(„)	2,551
Ditto	(Interest)	865
	Total	18,924

60. The credit appearing against the Bengal Central Railway represents the sale proceeds of certain land relinquished by the Company. This land was made over to the Company prior to 1st July 1885, up to which date land was supplied free to that Company, and the cost was charged to this head. Under the new contract, land supplied after the 1st July 1885 is paid for by that Company.

61. The charges borne by the Provincial Governments in connection with subsidized railways are—

Assam.—An annual subsidy, payable to the Assam Railways and Trading Company, Limited, on account of the Dibru-Sadiya Railway, of such amount—subject to a maximum of Rs. 1,00,000—as, together with the net earnings of the Railway, shall be sufficient to yield a return of 5 per cent. per annum on Capital outlay, and a share of the pay and allowances of the Examiner of Public Works Accounts, Assam.

Bengal.—Charges for land which, under the terms of the contracts, has to be provided free of cost to the Tarkessur, Dooars, and Deoghur Railways.

North-Western Provinces and Oudh.—An annual subsidy of Rs. 40,000 payable to the Rohilkhand-Kumaon Railway Company up to 31st December 1894.

62. The amounts debited against Provincial Revenues during 1891-92 were—

	Rx.
Dibru-Sadiya Railway (Subsidy, etc.)	10,070
Dooars Railway (Land)	136
Rohilkhand-Kumaon Railway (Subsidy)	4,000
Total	14,206

The maximum amount of the subsidy payable in respect of the Dibru-Sadiya Railway, was paid to the Company during the year.

63. The total charges in connection with each line to the close of 1891-92, will be found in the statement attached to this review as Schedule D.

Comparison with Budget and Revised Estimates.

64. The actual receipts during the year under Head XXVIII compare with the Budget and Revised Estimates as under:—

XXVIII.—Subsidized Companies.	Actuals.	Revised Estimate.		Budget Estimate.	
		Estimate.	Actuals, more or less.	Estimate.	Actuals, more or less.
	Rx.	Rx.	Rx.	Rx.	Rx.
Rohilkhand-Kumaon	1,427	1,400	+27	...	+1,427
Mysore	31,567	22,400	+9,167	32,400	—833
	32,994	23,800	+9,194	32,400	+594

65. When the Budget Estimate was framed it was not anticipated that any refund would be realized from the Rohilkhand-Kumaon Railway Company. The difference between actuals and the Revised Estimate of the repayment by the Mysore Durbar is due to the net revenue of the railway having fallen below the estimate and to a wrong calculation of the interest on the unexpended balance of capital in hands of Government.

66. The actual expenditure during the year under Head 40, compares with the Budget and Revised Estimates as under:—

40.—Subsidized Companies—	Actuals.	Revised Estimate.		Budget Estimate.	
		Estimate.	Actuals, more or less.	Estimate.	Actuals, more or less.
	Rx.	Rx.	Rx.	Rx.	Rx.
Imperial	18,924	23,300	—4,376	35,000	—16,076
Provincial	14,206	14,400	—194	15,100	—894
Total	33,130	37,700	—4,570	50,100	—16,970

67. The above lapses are due to some land acquisition cases on the Bengal and North-Western Railway not having been finally settled during the year, and to delay in settlement of disputed claims in connection with land for the Nilgiri Railway.

SECTION D.

41.—Miscellaneous Railway Expenditure.

68. The following expenditure is recorded under this head :—

(*a*) Outlay on surveys.
(*b*) Surplus Establishment and Miscellaneous charges.
(*c*) Director General of Railways' Establishment (share of).
(*d*) Port Storekeepers' Establishments.
(*e*) Abt material and engine suspense account.
(*f*) Share of Bengal Public Works Establishment charges.
(*g*) Land charges in connection with Native States' Railways.

69. At the commencement of the year 1891-92 the following surveys were in hand :—

Imperial.

Meiktila-Myingyan Survey.
Kawlin-Mogoung „
Mogul Serai-Howrah „
Kashmir Railway „
Zhob Valley „
Frontier Railway „
Bolan High Level Line „

Provincial.

Lucknow-Rai Bareli-Jaunpur Survey.
Surveys in Madras and Bombay.

70. During the course of the year the under-mentioned surveys were undertaken by the Imperial Government :—

Sambalpur-Khurda Survey.—A complete detailed survey of the proposed route for a line of railway from Sambalpur to Khurda, or some other convenient station on the East Coast Railway, at an estimated cost of Rs. 1,98,374.

Wazirabad-Multan Survey.—A survey for a line of railway from Wazirabad to Multan, intended to form portion of a system of feeder lines for the North-Western Railway, at an estimated cost of Rs. 35,321.

Kurnool Branch Survey.—A survey for a branch railway from the Kurnool road station on the Bellary-Kistna State Railway to the town of Kurnool, at an estimated cost of Rs. 8,697.

Kalka-Simla Railway Survey.—A fresh project for the construction of a railway from Kalka to Simla, to be quite independent of the existing cart-road, at an estimated cost of Rs. 1,07,980.

Jangshai-Tatta Railway Survey.—A survey for a feeder line to the North-Western Railway from Jangshai station to Tatta in the Karachi Collectorate, at an estimated cost of Rs. 7,124.

Nusseerabad-Kekri Survey.—A survey for a project which had been put forward, for the construction of a branch railway on the metre-guage from Nusseerabad Station on the Rajputana-Malwa Railway to Kekri, at an estimated cost of Rs. 2,000. This project was prepared in view of the possibility of relief works being necessary in Ajmere.

71. The Madras Government also ordered the re-alignment of the East Coast Railway in the Ellore and Rajahmundry divisions and a reconnaissance to Bimlipatam at the expense of Provincial revenues.

72. On the commencement of construction of the Mushkaf-Bolan Railway, it was decided to charge the expenditure incurred during the year to that date on the Bolan High Level Line Survey against the construction grant of the line. Similarly, the outlay during 1891-92 on the Kawlin-Mogoung Survey was debited to the construction grant of the Mu Valley State Railway, and consequently the outlay on these two surveys during the year did not fall against the major head "41."

73. The expenditure incurred during the year 1891-92 amounted to Rx. 92,060, as under :—

	Rx.
Imperial	80,223
Provincial	11,837
Total	92,060

74. The Imperial outlay includes the following :—

	Rx.
Outlay on surveys	56,325
Surplus Establishment and Miscellaneous charges	7,090
Director General of Railways' Establishment (share of)	14,747
Port Storekeepers' Establishments	2,213
Abt material and engine suspense account	—662
Land charges in connection with Native States' Railways	510
Total	80,223

75. The details of outlay on surveys will be found in the statement attached to this review as Schedule E. The items debited during 1891-92 to the account "Surplus Establishment and Miscellaneous charges" were—

	Rx.
Leave allowances of pensionable employés on the Rajputana-Malwa Railway	1,260
Technical Section of Director General of Railways' Office	1,009
Railway Accounts Committee charges	17
Leave allowances of officers on foreign service	1,321
Bonus to Clerks' Provident Fund	63
Passage and outfit allowance to Mr. Lawson, late Supervisor, Public Works Department	52
Arrear furlough allowances of Mr. Finney	37
Repairs to Commander-in-Chief's carriage	73
Furlough allowances paid in India	295
Furlough allowances of Mr. G. M. Drury, Traffic Superintendent, East Coast Railway	351
Salary of K. C. Chowdhury, Assistant Surgeon, Eastern Bengal Railway	257
Salary, deputation allowance, etc., to Major Temple for the period he was employed in visiting railway stations in Burma in connection with the subject of local railway taxation	185
Leave allowances of officers attached to Zhob Valley Railway Survey	872
Surplus employés on the North-Western and Eastern Bengal State Railways	446
Furlough allowances of Sree Nath Roy, Honorary Assistant Examiner	270
Privilege leave allowances of Mr. C. J. Baker, Executive Engineer, from 13th June to 21st August 1891, after officiating as Assistant Secretary, Public Works Department	321
Salary of Mr. C. S. Harris while employed on the verification of stores on the Bengal and North-Western Railway	61
Salary and deputation allowance to Mr. R. K. Biernacki, Assistant Locomotive Superintendent	197
Cost of photographs of the Lartigue system of railways	3
	7,090

76. The amount debited to this head on account of the Establishment of the Director General of Railways, represents half the fixed monthly charge of Rs. 21,000 debited by the Civil Department, under the authority of Public Works Department Resolution No. 6125, dated 9th November 1888, and half the salary and travelling allowances of the Consulting Engineer to the Government of India for State Railways. The other moiety of these charges is debited to the major head "39—Guaranteed Companies—Land and Supervision."

77. The amount debited as Port Storekeepers' Establishments represents—

	Rx.
(1) The cost of the Port Storekeeper's office at Calcutta . .	2,154
(2) Establishment entertained by the Marine Storekeeper, Bombay, in connection with the local purchase of stores for State Railways	175
(3) Central Office stores contingencies	115
(4) Credits on account of sale of stores buildings at Bombay, and receipts on Capital account	—231
	2,213

78. The expenditure recorded under Provincial represents—

	Rx.
Share of Bengal Public Works Secretariat Establishment charges	7,616
Lucknow-Rai Bareli-Jaunpur Survey	703
East Coast Railway Survey	1,817
Provincial Surveys in Madras	1,793
Ditto Bombay	—92
TOTAL .	11,837

79. The first item represents the share of the Bengal Public Works Secretariat Establishment charges debitable to the Provincial State Railways in Bengal. As under the terms of the Provincial contract which came into operation with effect from 1st April 1892, the control of the State Railways in Bengal has been transferred to the Imperial Government, a charge of this nature will no longer appear in the accounts.

Comparison with Budget and Revised Estimates.

80. The actual outlay on "41—Miscellaneous Railway Expenditure" during the year compares with the provision in the Budget and Revised Estimates as under :—

Head of Account.	Actuals.	Revised Estimate.		Budget Estimate.	
		Estimate.	Actuals, more or less.	Estimate.	Actuals, more or less.
	Rx.	Rx.	Rx.	Rx.	Rx.
41.—Imperial . . .	80,223	78,800	+1,423	120,000	—39,777
41.—Provincial . . .	11,837	10,160	+1,677	8,750	+ 3,087
TOTAL .	92,060	88,960	+3,100	128,750	+36,690

81. The lapse on the Budget Estimate is mainly due to smaller outlay than was anticipated on the Mogul Serai-Howrah Survey, and to the outlay on the Kawlin-Mogoung and Bolan High Level Line Surveys having been transferred to the construction head, as work was commenced on the lines during the year.

82. The excess over the Revised Estimate appears chiefly against the East Coast Railway Survey. Expenditure to the extent of Rs. 18,166 was incurred during the year chargeable against Provincial Revenues. It is believed that provision on this account was made in the Local Government's estimate, but owing to intimation not having been received in time by the Government of India, the amount was not incorporated in the estimates of the Public Works Department.

SECTION E.

STATE RAILWAYS—CONSTRUCTION EXPENDITURE.

(Major heads 34, 37, 48 and 50.)

83. At the beginning of the year under review the following railways or sections were under construction by funds provided by the State :—

	Miles.
By State agency—	
North-Western, Mianwali-Mari Extension	36
Chaman Extension	29¼
East Coast	516
Mu Valley	183½
By agency of Companies—	
Godhra-Rutlam	113
Tirhoot (Riga to Dhang)	9
South Indian (Pakala to Guntakal)	200½
Dharmavaram-Hindupur	46
Mayavaram-Mutupet (Tiruvalur to Mutupet)	29

84. The Mayavaram-Mutupet Railway is being constructed by the agency of the South Indian Railway Company, partly from funds provided by the Tanjore Local Board and partly from the Provincial balances of the Madras Government, on the condition that the profits to be derived from the undertaking be shared between the Government of Madras and the Local Board in proportion to the capital contributed by each.

85. During the course of the year, construction operations were commenced on the following new lines and extensions :—

	Miles.
Assam-Bengal (Gauhati-Lumding Section)	154
Lucknow-Rae Bareli-Benares (Lucknow-Rai Bareli Section)	49
Bareilly-Rampur-Moradabad	54¾
Mushkaf-Bolan	56¾
Mari-Attock	104
Hyderabad-Umarkot (to Sadipalli)	58½
Eastern Bengal, Barsoi-Kissengunj Extension	36
Mayavaram-Mutupet (Mayaveram to Tiruvalur)	24¾
Mu Valley (Gyodoung to Mogoung)	131¼
Burma, Meiktilla Branch	13
Tirhoot (Dhang to Bairagnia)	3½

86. Work was begun in 1891-92 on the Gauhati-Lumding Section of the Assam-Bengal Railway in anticipation of the formation of the Company for its construction. The Company have since taken over the works.

87. The Lucknow-Rai Bareli-Benares Railway, 152 miles in length, was approved, but for the present operations have been confined to the construction of the Lucknow-Rae Bareli section. This section is estimated to cost Rs. 29,89,390.

88. The Bareli-Rampur-Moradabad Railway is estimated to cost Rs. 73,19,252, of which sum the Rampur State has agreed to contribute Rs. 47,00,000, as a special loan to Government, carrying interest at the rate of 4 per cent. per annum from the date of payment.

89. The Mushkaf-Bolan Railway, which is being constructed to provide permanent communication with Quetta, which shall be safe from injury by floods or otherwise was commenced in November 1891. The new line runs through the Mushkaf Valley, from near Sibi to Kolapur on the Quetta Loop of the North-Western Railway, a distance of 56¾ miles. It is estimated to cost Rs. 1,39,32,948.

90. The commencement of construction on the Kamalpur section of the Mari-Attock Extension of the Sind-Sagar Section of the North-Western Railway at an estimated cost of Rs. 54,24,553, for 25 miles of line, was sanctioned in September 1891.

91. The construction of the Barsoe-Kissengunge extension of the Eastern Bengal State Railway, at an estimated cost of Rs. 13,95,059, was sanctioned in July 1891.

92. Sanction was accorded in December 1890 to the construction of a branch line of Railway from Meiktila Road Station on the Tounghoo-Mandalay Extension of the Burma Railway, to the town of Meiktila, a distance of about 13 miles, at an estimated cost of Rs. 3,03,415, but work was not commenced until 1891-92.

93. Sanction was accorded in March 1891 to the construction of the Hyderabad-Umarkot Railway as a provincial work. The complete project is for a line from Giddu Bundar on the Indus to the Nara River, a distance of 77½ miles. Estimates have been framed and provisionally sanctioned for Rs. 18,71,294 for the whole line, but at present it has been resolved to complete the line only as far as Sadipalli near the Mithrao Canal, 58¼ miles.

94. In the Budget Estimate a sum of Rx. 4,135,500 was provided for Capital expenditure on State Railways as under:—

	Rx.
34.—Construction of Protective Railways	975,000
37.—Construction of Railways (charged against Revenue in addition to that under Famine Insurance)	210,500
48.—State Railways—Construction	2,950,000
TOTAL	4,135,500

and this sum was distributed for expenditure as follows:—

	Rx.
For outlay in England (treated as final charges in the Home accounts)	1,192,000
„ „ „ India	2,477,100
„ Exchange	466,400
TOTAL	4,135,500

95. The allotments to lines were as below:—

	Rx.
By State agency—	
Mu Valley	516,400
Chaman Extension	28,000
Frontier Railway Reserve	11,000
North-Western, Mianwali-Mari Branch	27,000
Hyderabad-Umarkot	115,000
East Coast	1,100,000
Open lines	540,260
Stores (Fluctuations in reserves and stores in transit)	13,340
TOTAL	2,351,000

	Rx.
By agency of Companies—	
Tirhoot, Durbhunga-Bairagnia Branch	45,000
Dharmavaram-Hindupur	80,000
South Indian (Villupuram-Guntakal)	380,000
Godhra-Rutlam	250,000
Mayavaram-Mutupet	93,100
Open lines	74,100
TOTAL	922,200
Reserve	862,300
GRAND TOTAL	4,135,500

96. It will be observed that the large sum of Rx. 862,300 was held in reserve at the beginning of the year, the bulk of which was retained for new projects under contemplation at the time. The sum held in reserve was set aside for—

	Rx.
Moghal Serai-Sone-Palamow Project	300,000
Sumbulpur Branch	250,000
New Frontier Railways	234,000
Unforeseen requirements	78,300
TOTAL	862,300

97. The Moghal Serai-Sone-Palamow project was placed in abeyance, and the Sumbulpur Branch was undertaken by the Bengal Nagpur Railway Company as a part of its undertaking. The sum of Rx. 550,000 reserved for these two projects was thus set free for other schemes. The new frontier lines commenced during the year were the Mushkaf-Bolan and a section of the Mari-Attock line. The expenditure charged against these projects during the year exceeded the reserve set aside for new frontier lines, but this was, to a considerable extent, due to the utilization of surplus plant and stores from other lines, which did not involve any actual outlay. A reserve of permanent-way material was also collected for the Peshawar Railway, but as this material was almost entirely drawn from the stock of the North-Western Railway, the establishment of this reserve did not involve any appreciable charge against the grant. The other new lines undertaken by the Imperial Government were the Gauhati-Lumding Section of the Assam-Bengal Railway, the Lucknow-Rai Bareli Section of the Lucknow-Rai Bareli-Benares Railway, the Bareilly-Rampur-Moradabad Railway, the Barsoe-Kissengunj extension of the Eastern Bengal Railway, and later in the year the Meiktila Branch Railway. But owing to the comparatively late date on which these projects were matured and sanctioned, the expenditure fell far short of the funds at the disposal of Government originally reserved for the Moghal Serai-Sone-Palamow line and the Sumbulpur Branch of the Bengal-Nagpur Railway. Indents for stores required from England were sent forward as early as possible, but could not be complied with to any large extent.

98. From different causes, which will be stated hereafter, other lines were unable to fully utilize the grants allotted to them, and although additional funds to a considerable extent were allotted to the East Coast Railway and other minor extra grants were sanctioned, it became apparent towards the close of the year that a considerable lapse was inevitable. A sum of Rx. 170,400 was transferred to "49.—Irrigation Works," and the Revised Estimate was finally submitted for Rx. 3,257,100 or Rx. 708,000 less than the amount available after the transfer of Rx. 170,400 just referred to. In submitting the Revised Estimate for this reduced amount, it was assumed that there would be considerable

lapses on the final allotments for several lines, which might amount to Rx. 200,000, and allowance was made accordingly, but, as the results shewed, the lapses were comparatively small.

99. The amount of the Revised Estimate, *viz.*, Rx. 3,257,110 was provided as follows:—

	Rx.
34.—Construction of Protective Railways	294,900
37.—Construction of Railways (charged against Revenue in addition to that under Famine Insurance)	182,610
48.—State Railways—Construction	2,779,600
TOTAL	3,257,110

and was distributed for expenditure as under:—

	Rx.
For outlay in England	870,000
„ „ in India	2,007,810
„ Exchange	379,300
TOTAL	3,257,110

100. The actual outlay amounted to Rx. 3,418,364 as under:—

	Rx.
In England	864,309
„ India	2,178,718
Exchange	375,337
	3,418,364

resulting in a lapse of Rx. 717,136 on the Budget Estimate and an excess of Rx. 161,254 over the Revised Estimate of the year. Compared with the Revised Estimate the actuals in India and in England stand as follows:—

	Revised Estimate.	Actuals.	Actuals. More.	Actuals. Less.
	Rx.	Rx.	Rx.	Rx.
India	2,007,810	2,178,718	170,908	...
England	870,000	864,309	...	5,691
Exchange	379,300	375,337	...	3,963
TOTAL	3,257,110	3,418,364	161,254	

101. The distribution of the outlay during the year by finance heads is as under:—

	Rx.
34.—Construction of Protective Railways	484,795
37.— „ of Railways (charged against Revenue in addition to that under Famine Insurance)	163,233
48.—State Railways—Construction	2,770,336
	3,418,364

No expenditure was incurred during the year in connection with the redemption of liabilities.

102. In the statement attached to this review as Schedule F will be found full details of the expenditure of the year compared with Budget and Revised

Estimates and shewing the details of classification by Fund heads. The following is a general abstract:—

RAILWAYS.	Actuals, 1891-92.	Budget Estimate. Estimate.	Budget Estimate. Actuals + more or − less.	Revised Estimate. Estimate.	Revised Estimate. Actuals + more or − less.

* Includes Nagpur-Chhattisgarh Depreciation account.

103. *Budget Estimate.*—The more important variations from the Budget Estimate, materially affecting the results, and excluding the new projects taken in hand during the year, are due chiefly to the following causes:—

State Agency.

Open Lines.—The lapse occurs chiefly on the Oudh and Rohilkhand Railway and on the Wardha Coal Railway and on the Warora Colliery. On the Oudh and Rohilkhand Railway the authorities failed to work up to the budget programme, the expenditure on final heads amounting to Rx. 6,722 only, as compared with Rx. 61,450 entered in the budget. There were also larger credits for sales of stores than were anticipated and the supplies of English stores fell short of estimate. The lapse on the Wardha Coal Railway is due to credits for rolling stock sold during the year, and that on the Warora Colliery to the postponement of work on new pits. These lapses were to some extent counterbalanced by increased outlay on the Burma and Eastern Bengal Railways.

Chaman Extension.—The reduction is due to the transfer of plant and stores to the Mushkaf-Bolan Railway.

Frontier Railway Reserve.—The increase is due to the supply of additional material to complete the reserve as finally decided on.

East Coast.—The grant was increased during the year as funds were available, and work was pushed on.

Stores transactions.—The increase is due to payments being made for English stores uninvoiced, or received too late to be adjusted in the line accounts for the year.

Companies Agency.

Open Lines.—There was a large lapse of Rx. 360,131, the principal lapses being South Indian, Rx. 202,508, Rajputana-Malwa, Rx. 89,113, East Indian, Rx. 38,361, and Tirhoot, Rx. 20,937. The lapse on the South Indian is attributed to over-estimates of requirements of stores, both English and Indian, excessive provision for construction, and increased credits for sales of material to branch lines. The lapse on the Rajputana-Malwa Railway is chiefly due to large sales of stores to the Godhra-Rutlam Railway, but the expenditure on construction was considerably below the estimate. The lapse on the East Indian Railway is due to certain works provided for in the Budget Estimate having been abandoned or postponed, and to delay in the receipt of stores from England. The lapse on the Tirhoot Railway is due to the sale of engines to the Rohilkhand-Kumaon Railway, and to a failure to work up to the budget programme of construction.

Godhra-Rutlam.—The very considerable lapse is attributed to a serious outbreak of sickness which caused an interruption of work for a considerable period.

Dharmavaram-Hindupur.—Additional grants were allotted during the year, on funds becoming available, and work was pushed on.

Mayavaram-Mutupet.—It was expected that considerable progress would be made with construction, but owing to the land required being under cultivation, this was found to be impracticable. The expenditure incurred was on acquisition of land and collection of material.

104. *Revised Estimate.*—Compared with the Revised Estimate, the principal variations, and the reasons assigned, are briefly as follows:—

State Agency.

Open lines.—The lapse occurs chiefly on the North Western and Oudh and Rohilkhand Railways. On the former line, the lapse was due to short supplies of English stores, and transfer of plant and stores to the Mushkaf-Bolan Railway. On the Oudh and Rohilkhand Railway, the lapse is due to short supplies of stores from England, to larger credits for sales, and to some extent to smaller progress on works.

Mu Valley.—The lapse is due to short supplies of English stores and to reduced outlay on erection of rolling stock.

Assam-Bengal.—The lapse is due chiefly to short supplies of English stores.

Lucknow-Rai Bareli-Benares.—The lapse is due to an excessive estimate for earthwork, the failure of a contract for supply of sleepers, and short outlay on establishment.

Bareilly-Rampur-Moradabad.—The lapse was due to delay in acquisition of land and savings on the provision for establishment.

Chaman Extension.—The lapse is due to the transfer of plant and stores to the Mushkaf-Bolan Railway.

Mushkaf-Bolan.—The excess is due to the transfer of plant and stores from the North Western Railway and Chaman Extension, authorized after the Revised Estimate was passed.

East Coast Railway.—A reduction was made by the Government of India in the Revised Estimate, but the outlay was in excess.

Hyderabad-Umarkot.—The lapse is due to the failure of contractors for the supply of sleepers to keep to their engagements.

Stores transactions.—The excess is due to payments in England towards the close of the year for stores uninvoiced, or received too late for issue to lines in time for adjustment in the accounts of the year. This excess counterbalances lapses on other estimates.

Companies Agency.

Open Lines.—The lapse is chiefly on the South Indian, due to excessive estimates under final heads and stores, and on the East Indian Railway due to delay in supply of stores from England.

Godhra-Rutlam.—The lapse is apparently due to short supplies of stores from England.

Mayavaram-Mutupet.—The lapse is attributed to delay in the acquisition of land and difficulty in collecting labour and materials.

105. *Total Capital outlay.*—The total outlay incurred on State Railways up to the end of the year has amounted to Rx. 105,398,957 as under—

	Rx.
Indian outlay	53,108,066
Debits to the Indian Books by credits to "Expenditure in England" for value of English stores received and other items charged off in England	52,290,891
TOTAL	105,398,957

the distribution by finance heads being as follows:—

	Rx.
34.—Construction of Protective Railways	3,418,774
37.—Construction of Railways (charged against Revenue in addition to that under Famine Insurance)	6,065,044
48.—Capital Expenditure on State Railways not charged against Revenue	62,361,688
50.—Capital charges involved in redemption of liabilities	33,553,451
TOTAL	105,398,957

106. Full details of the above will be found in the statement attached to this review as Schedule G.

SECTION F.

Capital Account of Guaranteed Companies.

107. Each of the Guaranteed Railway Companies has a sterling Capital. Under the respective contracts, funds required to meet expenditure in India are advanced at a fixed rate of exchange of 1*s.* 10*d.* the rupee, and, on the other hand, advances in England when converted into Indian currency are converted at the same rate of 1*s.* 10*d.* the rupee. The figures relating to Capital expenditure in this section, where stated in sterling, represent as regards withdrawals by the Companies in England true sterling, and as regards withdrawals in India the equivalent in rupees at the rate of 1*s.* 10*d.*; where stated in Rx. sterling has been converted into rupees at the same rate.

108. The following table shows the amount of Capital raised to the 31st March 1892:—

	Share Capital.		Debentures.		Debenture Stock.		Capital not bearing interest.		Total.
	India.	England.	Nominal amount.	Cash received.	Stock represented.	Cash received.	India.	England.	
	£	£	£	£	£	£	£	£	£
Great Indian Peninsula .	496,897	19,503,103	2,711,300	2,711,300	2,701,450	2,475,559	74,929	215,145	25,476,933
Bombay, Baroda and Central India.	21,672	7,528,628	1,238,500	1,238,500	...	...	...	18,419	8,807,219
Madras	...	10,257,630	700,000	700,000	...	...	...	12,014	10,969,644
Total .	518,569	37,289,361	4,649,800	4,649,800	2,701,450	2,475,559	74,929	245,578	45,253,796

109. Interest on the Share Capital, Debentures, and Debenture Stock is guaranteed by the Secretary of State, the rates of interest being as under:—

	Great Indian Peninsula.	Bombay, Baroda and Central India.	Madras.	Total.
	£	£	£	£
Share Capital at 5 per cent. .	20,000,000	7,550,300	8,757,670	36,307,970
„ „ 4¾ „ .	...	...	999,960	999,960
„ „ 4½ „ .	...	...	500,000	500,000
Debenture Stock at 4 „ .	2,701,450	...	...	2,701,450
Debentures at 3½ „ .	845,200	...	237,800	1,083,000
„ „ 3¼ „ .	1,866,100	1,238,500	462,200	3,566,800
Total .	25,412,750	8,788,800	10,957,630	45,159,180

110. The average rate of interest payable in gold on the Capital of these Guaranteed Companies is a little under 4·75 per cent. Under the contracts, the State must continue to pay interest on the Share Capital at the rates guaranteed until the contracts terminate, and it is consequently unable to obtain any advantage from the increasingly easy condition of the money market. The State can now raise money at a little over 3 per cent., but it has to continue to pay 5 per cent. on the bulk of the Share Capital, which, with the low exchange, at the average rate for 1891-92, is equivalent to a payment of interest at a rate of over 7 per cent. on the sterling Capital converted at par.

111. During the year 1891-92, debentures were issued in England to the extent of £979,700, but as debentures to the extent of £68,000 were discharged during the year, the net addition to the guaranteed Capital was £911,700. The amount raised by each Company was as follows:—

		£	£
Great Indian Peninsula			331,300
Bombay, Baroda and Central India	Amount raised . . .	536,000	468,000
	„ discharged . .	68,000	
Madras			112,400
	Total .		911,700

112. The following table shows the amounts withdrawn by the several Companies on Capital account up to the 31st March 1892, and the balances of Capital at their credit, or amount of overdrafts, on that date:—

	Paid-up Capital.	Capital withdrawn.			Balance at	
		India.	England.	Total.	Credit.	Debit.
	£	£	£	£	£	£
Great Indian Peninsula . .	25,476,933	7,191,356	18,182,588	25,373,944	102,989	...
Bombay, Baroda and Central India	8,807,219	2,488,068	6,295,707	8,783,775	23,444	...
Madras	10,969,644	4,209,378	6,770,058	10,979,436	...	9,792
Total .	45,253,796	13,888,802	31,248,353	45,137,155	126,433	9,792

or, as stated in the Indian accounts, sterling being converted into rupees at the contract rates of exchange, the figures stand as under:—

	Paid-up Capital.	Capital withdrawn.			Balance at	
		India.	England.	Total.	Credit.	Debit.
	Rx.	Rx.	Rx.	Rx.	Rx.	Rx.
Great Indian Peninsula . .	27,798,018	7,845,116	19,835,550	27,680,666	112,352	..
Bombay, Baroda and Central India.	9,607,875	2,714,256	6,868,044	9,582,300	25,575	...
Madras	11,966,884	4,592,049	7,385,518	11,977,567	...	10,683
Total .	49,367,777	15,151,421	34,089,112	49,240,533	137,927	10,683

113. The net Capital expenditure during the year on the Guaranteed Railways amounted to £45,891 as below:—

	Withdrawals.			Refunds.			Net withdrawals.
	In India.	In England.	Total.	In India.	In England.	Total.	
	£	£	£	£	£	£	£
Great Indian Peninsula .	335,990	307,144	643,134	733,148	5,414	738,562	−95,428
Bombay, Baroda and Central India	123,068	156,170	279,238	254,538	542	255,080	24,158
Madras	190,677	140,176	330,853	213,275	417	213,692	117,161
Total .	649,735	603,490	1,253,225	1,200,961	6,373	1,207,334	45,891

114. The large refunds in India represent chiefly the value of stores issued to Revenue for working and maintenance which in the first instance are paid for from Capital funds.

Comparison with Budget and Revised Estimates.

115. The following table compares the actual transactions during the year with the actuals of 1890-91, and with the Budget and Revised Estimates of 1891-92:—

	Actuals, 1891-92.	Revised Estimate.		Budget Estimate.		Actuals, 1890-91.
		Estimate.	Actuals, more or less.	Estimate.	Actuals, more or less.	
	Rx.	Rx.	Rx.	Rx.	Rx.	Rx.
Great Indian Peninsula . . .	—104,103	—91,700	—12,403	463,800	—567,903	301,347
Bombay, Baroda and Central India .	26,354	38,000	—11,646	58,600	— 32,246	35,663
Madras . .	127,813	123,400	4,413	125,300	2,513	167,971
Total .	50,064	69,700	—19,636	647,700	—597,636	504,981

116. The difference between the actuals of 1890-91 and 1891-92 is due, for the most part, to larger refunds for value of stores issued on account of Revenue and sold. The actuals fall short of the Budget Estimate by Rx. 597,636. This great difference appears chiefly against the Great Indian Peninsula Railway, and was due partly to a lapse on the provision for stores from England, and partly to larger refunds than were anticipated from Revenue owing to a heavier consumption of stores in working the enhanced traffic during the year. The Bombay-Baroda Railway also shows a considerable saving, due chiefly to larger issues to Revenue, but to some extent to an excessive estimate of construction outlay. The differences between actuals and the Revised Estimate are not large.

SECTION G.

Capital of Indian Railway Companies.

(Exclusive of the old Guaranteed Companies.)

117. The accounts reviewed in this section represent the capital transaction of the following Railway Companies:—

Bengal Central.

Bengal Nagpur.

Indian Midland.

Southern Mahratta.

Mysore.

Rohilkhund-Kumaon (Lucknow-Bareilly Section).

Assam-Bengal.

118. Each of these Companies has a sterling capital, consisting partly of share capital and debentures raised by the Companies direct on guarantees by the Secretary of State, and partly of advances made by the Secretary of State from funds raised by him under the provisions of Act 51, Vict., Chap. 5. This latter arrangement is found more economical than allowing the Companies to raise funds direct, but the sums thus raised and advanced to the Companies are considered as part of the Companies' capital. Interest on such advances is charged against the Railway Revenue Account and has to be met before surplus profits can be declared.

119. The financial terms of the contracts, the rates of interest guaranteed, and the rates of exchange at which the capital is converted into Indian currency vary in each case. These points are briefly stated below.

120. *Bengal Central Railway.*—Although for convenience classed among State Railways, the line is the property of the Bengal Central Railway Company. This Railway was originally constructed under a limited guarantee of interest at the rate of 4 per cent. per annum, while the line was under construction, such interest, together with interest thereon, being repayable out of surplus profits. But a revised contract was entered into with effect from the 1st July 1885, under which the Company receives a guarantee of $3\frac{1}{2}$ per cent. on share capital and a quarter of *net earnings* paid half-yearly, the claim to the repayment of interest advanced under the original contract being at the same time waived. The capital when stated in Indian currency is converted at the rate of 1*s.* 5·262*d.* the rupee.

121. *Bengal-Nagpur Railway.*—This Company receives a guarantee at the rate of 4 per cent. per annum on share capital, and is entitled to a quarter share of surplus profits,—*i.e.*, of the excess of net earnings over interest—calculated annually. The rate of exchange for the conversion of sterling capital into Indian currency is £1 = Rs. 13.

122. *Indian Midland Railway.*—This Company also receives a guarantee of 4 per cent. per annum on its share capital, and is entitled to a quarter share of surplus profits, calculated annually. The rate of exchange for the conversion of sterling capital into Indian currency is £1 = Rs. $12\frac{1}{2}$.

123. *Southern Mahratta Railway.*—This Company now receives a guarantee of $3\frac{1}{2}$ per cent. (4 per cent. up to 31st December 1890) and a quarter of *net earnings*. The rate of exchange for the conversion of sterling Capital into rupees is, as regards the Capital (£500,034) specially raised for the completion of the Bellary-Kistna Railway, which was taken over by the Company, £1 = Rs. 14, and for the remainder of the Capital, £1 = Rs. 12.

124. *Mysore Railway.*—This line was completed and is worked by the Southern Mahratta Railway Company. That Company raised sufficient funds by the issue of debenture stock to repay to the Mysore Durbar the outlay previously

incurred by that State and to complete the extension to link in with the Southern Mahratta system. Acting on behalf of the Mysore Durbar, the Secretary of State has guaranteed interest at 4 per cent. on the nominal amount of the debenture stock issued. The Southern Mahratta Railway Company also receives a quarter of net earnings. The rate of exchange for conversion of the sterling capital into Indian currency is 1s. 5·931*d.* the rupee.

125. *Rohilkhand-Kumaon (Lucknow-Bareilly Section).*—The Rohilkhand-Kumaon Railway Company took over, with effect from the 1st January 1891, the Bareilly-Pilibhit and the Lucknow-Sitapur State Railways, undertaking to complete the link between these lines, and to work the whole with their own line of Railway. The Company agreed to raise capital to the extent of £160,000 by the issue of debentures, with the power to discharge this obligation by the payment of rupees in India, the amount so paid being deemed the equivalent of sterling money at the average rate of exchange during the half-year immediately preceding the date of such payment. The Company subsequently issued sterling debentures for £147,000, which sold for Rs. 20,34,105. This sum was paid into the Calcutta treasury, and at the rate fixed by the contract is deemed to be equivalent to a sterling payment of £160,837. The debentures were issued under a guarantee of the Secretary of State at the rate of 3¼ per cent. per annum. The previous outlay incurred by the State has not been refunded to Government, and it has been further agreed that any additional capital required shall be provided by the Secretary of State. Any surplus profits after paying the debenture interest, and interest at 4 per cent. on the outlay by the State, are to be divided between Government and the Company in the ratio of their respective shares of capital.

126. *Assam-Bengal Company.*—This Company was formed and paid in a small portion of its share capital before the close of the year; but no expenditure was incurred within the year by the Company.

127. The following table shows the amount of capital raised to the 31st March 1892:—

	Bengal Central.	Bengal Nagpur.	Indian Midland.	Southern Mahratta.	Mysore.	Rohilkhand-Kumaon.	Assam-Bengal.
	£	£	£	£	£	£	£
Share Capital—							
India (at contract rates)	...	...	...	8,460	...	...	...

* The cash received in this case was £ 1,224,000, of which the sum of £ 24,000 is included under "Capital not bearing interest."
† Rs. 20,34,195 were actually paid into the Treasury, and this, under the contract, is taken as equivalent to £ 160,837.
‡ At the average rate for the half-year ending December 1891.

128. The following abstract shows the different rates of interest guaranteed in the case of each line on the share and debenture capital:—

	Bengal Central.	Bengal Nagpur.	Indian Midland.	Southern Mahratta.	Mysore.	Rohilkhand-Kumaon.	Assam-Bengal.	Total.
	£	£	£	£	£	£	£	£
Share Capital at 4 per cent.	...	3,000,000	3,000,000	...	...	...	...	6,000,000
Share Capital at 3¼ per cent.	500,000	...	...	3,500,000	...	...	102,905	4,102,905
Debenture stock at 4 per cent.	...	...	...	...	1,200,000	...	...	1,200,000
Debentures at 3¼ per cent.	...	1,000,000	1,000,000	855,000	...	...	...	2,855,000
Debentures at 3¼ per cent.	...	500,000	1,754,100	88,100	...	147,000	...	2,489,200
TOTAL	500,000	4,500,000	5,754,100	4,443,100	1,200,000	147,000	102,905	16,647,105

129. During the year 1891-92, the only capital raised by Companies direct was the sum of £102,905 subscribed on account of share Capital by the Assam-Bengal Railway Company, and the debentures issued by the Rohilkhand-Kumaon Railway Company, amounting to £147,000, but which has been credited to the Company as £160,837. Advances were made from moneys raised under Act 51, Vict., Cap. 5, to the Indian Midland Railway Company, £100,000, and to the Southern Mahratta Railway Company, £1,356,900. The latter was, however, utilized to meet the discharge of debentures falling due during the year. The net addition to the Companies' capital was therefore only £363,742 as under:—

		£	£
Assam-Bengal—	Share capital		102,905
Rohilkhand-Kumaon—	Debentures		160,837
Indian Midland—	Advances under Act 51, Vict.		100,000
Southern Mahratta	Advances under Act 51, Vict.	1,356,900	...
	Less—Debentures discharged	1,356,900	
TOTAL			363,742

130. The following table shows the amounts of capital withdrawn by the several companies up to the 31st March 1892, and the balances of capital at their credit, or the amounts of overdrafts, on that date. In this table, the amounts shown as withdrawn in England represent true sterling, the amounts shown as withdrawn in India represent rupees converted at contract rates, and also take into account the differences between remittances from England converted at contract rates and the average rates of exchange at which they are incorporated in the Indian books:—

	Paid-up Capital (including advances).	Capital withdrawn.			Balance at	
		India.	England.	Total.	Credit.	Debit.
	£	£	£	£	£	£
Bengal Central	1,000,000	325,925	487,404	813,329	186,671	...
Bengal Nagpur	6,905,781	4,826,692	2,298,184	7,124,876	...	219,095
Indian Midland	6,986,116	4,692,353	2,159,974	6,852,327	133,789	...
Southern Mahratta	6,453,957	5,787,896	1,704,388	7,492,284	185,673	...
Mysore	1,224,000					
Rohilkhand-Kumaon	160,837	161,663	65,029	226,692	...	65,855
Assam-Bengal	102,905	...	...	...	102,905	...
TOTAL	22,833,596	15,794,529	6,714,979	22,509,508	609,038	284,950

or as stated in the Indian accounts, the sterling capital being converted at the contract rates, and the withdrawals in England being converted at the average rates of exchange applicable under the contract, the figures stand as under:—

	Paid-up Capital.	Capital withdrawn.	Balance at	
			Credit.	Debit.
	Rx.	Rx.	Rx.	Rx.
Bengal Central	1,390,337	995,990	394,347	...
Bengal Nagpur	8,977,515	9,262,339	...	284,824
Indian Midland	8,732,645	8,563,823	168,822	...
Southern Mahratta	7,844,755	7,750,592	94,163	...
Mysore	1,638,280	1,501,967	136,313	...
Rohilkhand-Kumaon	203,419	291,286	...	87,867
Assam-Bengal	144,835	...	144,835	...
Total	28,931,786	28,365,997	938,480	372,691

131. The overdraft shown against the Bengal Nagpur Railway is due to the inclusion in the Capital account of the sum of Rx. 485,383* expended by the State on the Katni-Umaria State Railway, which was subsequently taken over by the Company (*vide* para. 29 above). It should also be mentioned that a sum of Rx. 1,657,058 was expended by Government on the Bellary-Kistna State Railway, now incorporated in the Southern Mahratta Railway system, and that this amount has not been included in the foregoing tables of expenditure. Similarly, a sum of Rx. 512,114 expended by Government on the Bareilly-Pilibhit and Lucknow-Sitapur Railways, prior to their transfer to the Rohilkhand-Kumaon Railway Company, has not been included in those statements. These items are classed, as originally charged, under 48—*State Railways—Construction* and are included in the expenditure dealt with in Section E.

Comparison with Budget and Revised Estimates.

132. In the following table the actual expenditure during the year is compared with the Revised and Budget Estimates, and with the actuals during 1890-91 :—

Railway.	Actuals, 1891-92.	Revised Estimate.		Budget Estimate.		Actuals, 1890-91.
		Estimate.	Actuals, more or less.	Estimate.	Actuals, more or less.	
	Rx.	Rx.	Rx.	Rx.	Rx.	Rx.
Bengal Central	22,596	26,300	—3,704	38,100	—15,504	21,443
Bengal Nagpur	816,849	846,500	—29,651	740,000	+76,849	1,029,202
Indian Midland	194,557	211,000	—16,443	305,000	—110,443	395,254
Southern Mahratta	51,734	61,100	—9,366	86,100	—34,366	105,306
Mysore	11,908	25,000	—13,092	73,800	—61,892	45,266
Rohilkhand-Kumaon (Lucknow-Bareilly)	68,567	71,900	—3,333	80,000	—11,433	186,792
Total	1,166,211	1,241,800	—75,589	1,323,000	—156,789	1,783,263

* Equivalent at contract rate to £373,372.

133. The large decrease in the expenditure during 1891-92, as compared with the outlay during 1890-91, is due to the more advanced stage of construction and gradual completion of works generally.

134. As compared with the Budget Estimate, the excess in the case of the Bengal Nagpur Railway is due chiefly to the commencement of construction on the Sumbalpur Branch and to the supply of additional rolling stock found necessary owing to development of traffic. The lapses have been attributed chiefly to the following causes :—

Bengal Central.—To short outlay on ballasting, the provision for which appears to have been excessive, and to delay in arrival of girders from England.

Indian Midland.—To a too sanguine estimate in regard to the receipt from England of material for the locomotive workshops, etc.

Southern Mahratta.—To reduced payments for land and the postponement of certain construction works and alterations to rolling stock.

Mysore.—To the postponement of works originally contemplated and delay in the settlement of claims for compensation for land.

Rohilhand-Kumaon (*Lucknow-Bareilly.*)—To delay in the supply of material from England.

135. Compared with the Revised Estimate, the lapse on the Bengal Central Railway is attributed to the causes assigned for the short outlay as compared with Budget; the lapses on the Bengal Nagpur, Indian Midland and Rohilkhand-Kumaon Railways are attributed to short outlay in England or delay in the supply of English stores ; that on the Southern Mahratta to delay in settlement of claims for land and other liabilities, and that on the Mysore Railway to the sale of a large quantity of permanent way and other material at the close of the year, which transaction was not settled when the estimate was submitted.

SECTION H.

NATIVE STATE RAILWAYS.

Capital and Revenue Transactions.

136. The accounts reviewed in this section represent the transactions of the following Railways belonging to Native States, the accounts of which are dealt with in this Department:—

Bhopal State Railway (Bhopal Section).
Khamgaon Railway.
Amraoti Railway.

137. It may be mentioned that the transactions of the following Foreign Railways, with the accounts of which this Department has no concern, are not dealt with in this review:—

* The Gaekwar's.
* Jodhpore-Bickaneer.
Nizam's Guaranteed.
Morvi.
* Rajpura-Bhatinda.
Bhavnagar-Gondal-Junagad-Porbundar.
* Jammu-Kashmir (Kashmir Section).
* Kolhapur.
* Cooch Behar.
Bina-Guna.
West of India Portuguese.
* Pondicherry.

138. An officer of the Public Works Accounts Department is lent to the Native States for the purpose of keeping the accounts of the Bhavnagar-Gondal-Junagad-Porbundar Railway, and the accounts of the lines marked with an asterisk are either kept or supervised by Public Works Accounts officers. It has been proposed that the accounts of the Bina-Guna Railway should be audited by a Public Works Accounts Officer.

BHOPAL STATE RAILWAY.

139. *Capital.*—The Bhopal State Railway is the joint property of the Imperial Government and the Bhopal Durbar. This line connects Itarsi on the Great Indian Peninsula Railway with Bhopal, crossing the river Nerbudda in the neighbourhood of Hoshungabad. The line runs for 13 miles through British territory and for 44 miles through the Native State of Bhopal.

140. Funds for the construction of this line were at first provided as follows:—

	Rx.
By the British Government	125,000
By the Bhopal State	500,000

But as further funds were required to meet the cost of additional works and alterations necessary to bring the line up to the required standard to carry the heavy traffic anticipated on the opening of the Indian Midland Railway, and as Her Highness the Begum of Bhopal was not prepared to advance more than the sum of 50 lakhs already contributed, it was decided to provide the necessary money from Imperial resources. The contribution made by the Durbar was fully utilized before the end of 1890-91, so that the expenditure incurred subsequently was met from grants under the head "48—State Railways—Construction," and as such is reviewed in the section pertaining thereto.

141. The capital expended on the line to the close of 1891-92 has amounted to Rx. 667,623, and has been charged as follows:—

	Rx.
To British Government	167,622
To Bhopal State	500,000

142. *Revenue.*—During the period to which these accounts relate, the line was worked by the Indian Midland Railway on the following terms: on payment of such sum as shall bear the same rate per cent. to the gross receipts of the Bhopal State Railway for any half-year, as the aggregate working expenses (excluding cost of maintenance) of the amalgamated undertaking shall bear to the aggregate gross receipts of the amalgamated undertaking for the same half-year, *plus* the actual expenditure incurred on the maintenance of way and works, *plus* 5 per cent. of the gross earnings for supply of rolling stock. The earnings and expenses are adjusted by the calendar half-year, and the amounts included in the accounts for the official year 1891-92 represent the results of working during the calendar year 1891.

143. The revenue receipts and charges of the year are, under the terms of the agreement with the Durbar, divided between the British Government and the Bhopal State in the proportion of the capital contributed by each, and on this basis the division of the transactions of the year 1891-92 was made as shown in the following table:—

	Government.	Bhopal State.	Total.
	Rx.	Rx.	Rx.
Receipts	13,088	46,043	59,131
Expenditure	8,228	28,728	36,956
Net Receipts	4,860	17,315	22,175

144. The revenue account appertaining to the Durbar is, however, liable for its proportion of the loss on working the Railway to end of the previous year, to the extent of Rx. 7,444. This amount was in previous years debited as a temporary measure to the Capital account of the line, pending recovery from the surplus revenue accruing to the Durbar. Allowing, therefore, for the refund to Capital from the surplus earnings accruing to the Durbar during the year 1891-92, the actual receipts and charges relating to the Bhopal State stand as under:—

	Rx.
Receipts	46,043
Expenditure	36,172
Net Receipts	9,871

145. This sum was paid to the Durbar under the instructions conveyed in Public Works Department letter No. 383 A.—R., dated 9th September 1889, and is equivalent to a return of 1·97 per cent. per annum on the capital provided by the Durbar. The Durbar share of the net earnings for the year is equivalent to a return of 3·46 per cent.

KHAMGAON AND AMRAOTI RAILWAYS.

146. *Capital.*—These railways have been constructed from funds provided from the surplus revenues of Berar. The Khamgaon Railway, 7½ miles in length, runs from Jalamb Station on the Great Indian Peninsula Railway to Khamgaon, and the Amraoti Railway, 5½ miles in length, connects Budnera with Amraoti.

147. The capital expended on these lines to the end of 1891-92 is as under:—

	To end of 1890-91.	During 1891-92.	Total to date.
	Rx.	Rx.	Rx.
Khamgaon Railway	49,052	—69	48,983
Amraoti "	44,734	201	44,935

148. *Revenue.*—Both these lines are worked by the Great Indian Peninsula Railway Company, on the following terms: the payment to the Company of the same percentage of the gross receipts of the State line, that the working expenses of the Great Indian Peninsula Railway and branch lines, taken together, bear to the earnings of the Great Indian Peninsula Railway and branch lines, *plus* five per cent. of the gross receipts of the State line for the use of rolling stock. The transactions are adjusted by the calendar half-year, and the results incorporated in the accounts of the year 1891-92 represent the transactions of the calendar year 1891.

149. The receipts and charges of the year under review are shown in the following table:—

	Receipts.	Expenditure.	Net receipts.
	Rx.	Rx.	Rx.
Khamgaon Railway	6,667	3,405	3,262
Amraoti „	11,291	5,952	5,339

150. The net receipts represent returns of 6·66 and 11·88 per cent. per annum on the total capital expended on the Khamgaon and Amraoti Railways, respectively.

Comparison with Budget and Revised Estimates.

151. The actual Capital outlay on the lines dealt with in this section compares with the Budget and Revised Estimates as under :—

Railway.	Actuals, 1891-92.	Revised Estimate.		Budget Estimate.	
		Estimate.	Actuals, more or less.	Estimate.	Actuals, more or less.
	Rx.	Rx.	Rx.	Rx.	Rx.
Khamgaon	—69	—70	+1	—30	—39
Amraoti	201	210	—9	—30	+231
Total .	132	140	—8	—60	+192

152. The credits represent the value of stores issued on Revenue Account. The excess over the Budget Estimate of the Amraoti Railway is due to certain petty construction works, not anticipated when the estimate was framed, having been found necessary and put in hand during the year.

153. The actual revenue transactions compare with the Budget and Revised Estimates as under:—

	Actuals.	Revised Estimate.		Budget Estimate.	
		Estimate.	Actuals, more or less.	Estimate.	Actuals, more or less.
	Rx.	Rx.	Rx.	Rx.	Rx.
Bhopal—					
Receipts . . .	46,043	44,700	+1,343	34,700	+11,343
Expenditure . . .	28,728	29,500	—772	32,700	—3,972
Net Receipts .	17,315	15,200	+2,115	2,000	+15,315
Khamgaon—					
Receipts . . .	6,667	6,500	+167	5,700	+967
Expenditure . . .	3,405	3,300	+105	3,000	+405
Net Receipts .	3,262	3,200	+62	2,700	+562
Amraoti—					
Receipts . . .	11,291	11,100	+191	10,000	+1,291
Expenditure . . .	5,952	5,900	+52	5,500	+452
Net Receipts .	5,339	5,200	+139	4,500	+839

154. There was an improvement in earnings on all three lines and especially on the Bhopal Railway, the latter due to the increase in traffic from the North-Western Provinces carried over the line. The cessation of special renewals on the Bhopal Railway accounts for the fall in expenditure on that line. On the other lines the differences are unimportant.

Simla: *The 21st April 1893.*

R. G. MACDONALD,
Offg. Accott. Genl., P. W. Dept.

Acctt. Genl., P. W. D.'s Memorandum No. 383 R., dated 21st April 1893. / 1st May „

Submitted to the Secretary to the Government of India, Public Works Department.

Documents accompanying.

Abstract and Detailed Accounts of Revenue and Expenditure on Railways in India during and to the end of 1891-92.

Accompaniment to Accountant General's, P. W. Dept., Note No. 383 R., dated 21st April 1893.

Abstract by Fund and Finance Heads of the Revenue and Expenditure on Railways in India during 1891-92, compared with the Budget and Revised Estimates of the year and the accounts of 1890-91.

* In the case of lines worked by Companies two percentages have been entered, the first including, and the second excluding, surplus profits paid to the Companies.

(a) This figure represents the Capital outlay recorded in the Finance and Revenue accounts of the Government of India. The actual rupee outlay, expressed in Rx., is as follows:—

	Rx.
By Company to date of purchase	33,686,941
„ Government after purchase	2,197,830
	35,884,771 on which the net receipts would give a return of 9·24 per cent.

(b) Approximate cost of portion open at close of 1891-92, exclusive of share of suspense.

* In the case of lines worked by Companies two percentages have been entered, the first including, and the second excluding, surplus profits paid to the Company.

(c) This figure represents the Capital outlay recorded in the Finance and Revenue Accounts of the Government of India. The actual rupee outlay on the line is as follows:—

	Rx.
By Company to date of purchase	9,268,311
By Government after purchase	27,815
Total	9,296,126 on which the net receipts would give a return of 5·36 per cent.

(d) This figure represents the Capital outlay recorded in the Finance and Revenue Accounts of the Government of India. Taking the actual rupee outlay on the old Sind, Punjab and Delhi Railway by the Company to date of purchase, the outlay is as follows:—

	Rx.
By Company to date of purchase	12,086,927
By Government after purchase and on system before and after acquisition	29,545,417
	41,632,344 on which the net receipts would give a return of 3·26 per cent.

(e) This figure represents the Capital outlay recorded in the Finance and Revenue Accounts of the Government of India. The actual rupee outlay on the line is as follows:—

	Rx.
By Company to date of purchase	4,970,512
By State to end of 1891-92	2,720,387
	7,690,899 on which the net receipts would give a return of 2·97 per cent.

(f) Substituting the actual rupee outlay in the case of purchased lines, the net receipts give a return of 5·22 per cent.

* Percentages calculated on total receipts and net receipts including Imperial share.

(a) This figure represents the Capital outlay recorded in the Finance and Revenue Accounts of the Government of India. The actual rupee outlay expressed in Rx. is as follows :—

	Rx.
By Company to date of purchase	3,539,837
„ Government after purchase and on other sections constructed by the State	6,739,705
	10,279,542

on which the net receipts (including the Imperial share) give a return of 5·06 per cent.

(b) Capital expended on Tirhoot State Railway.

(c) Substituting the actual rupee outlay in the case of purchased lines the net receipts give a return of 5·68 per cent.

(d) Excluding surplus profits to Companies for working State lines and net earnings of their own concern paid to the Bengal and North-Western Railway Company.

The difference between the net receipts and interest *on the actual Capital expenditure incurred on the line* is recovered from the Mysore Durbar, and the balance, representing interest on the unexpended balance of capital retained in its hands, is borne by the State. The amounts so recovered from the Mysore Durbar are as follows :—

	Rs.
1886-87	15,840
1887-88	2,47,642
1888-89	4,27,681
1889-90	4,90,122
1890-91	3,05,052
1891-92	3,15,668

and deducting these amounts from the net charge for interest shown in the last column of the preceding statement, the balance will represent the charge borne by Government, as shown below :—

	Rs.
1886-87	4,72,097
1887-88	3,43,508
1888-89	1,62,962
1889-90	99,697
1890-91	68,567
1891-92	58,546
	12,05,377

LUCKNOW-BAREILLY.

	INTEREST				Net Receipts.	Net charge to the State.
	On outlay incurred by Government prior to transfer to Company.	On Company's Capital.	On advances by Government.	Total.

Secretary to the Government of India.

FINANCE AND COMMERCE DEPARTMENT
(Statistical Branch);
Calcutta, 15th June 1893.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on Saturday, June 10th, 1893.

The unsettled weather which prevailed over nearly the whole of India during the previous week ceased over a large part of the country during the week under review. Intermittent and generally feeble advances of monsoon winds gave rain during the week to the west of the Peninsula, to Burma, and to North Bengal, but in other parts of the Indian region the weather was generally fine. The general distribution of pressure was fairly steady and fairly normal throughout the week, but readings were unusually uniform over the Peninsula. Owing to the cessation of rain over a large part of India, the weather became very generally and very decidedly warmer than it was last week, and the mean temperature of the whole of India for the whole week was only 0·3° below the normal average as compared with 3·7° in the previous week.

On the 4th pressure was rising over North-Eastern India and the Peninsula and falling elsewhere. Readings were lowest along the foot of the Himalayas and highest over the Peninsula and the Bay. The wind was westerly and west-south-westerly over the greater part of the country, and was abnormally light at most stations. Showers of rain were reported from several southern stations and from a few central and north-eastern stations. The only heavy fall was 3·56 inches at Silchar. The chart of the 5th showed that pressure was falling, except in West Bengal and the adjoining districts. Pressure was low over the Punjab and the Gangetic plain and high over the west of the Peninsula and the Bay. Readings were very uniform over the Peninsula, and the pressure differences were generally small. Moderate winds of somewhat variable directions prevailed generally, and the weather was showery over the south-west of the Peninsula and over Burma and Bengal. The heaviest falls of rain were 2·70 inches at Calicut and 1·32 inches at Tinnevelly. On the morning of the 6th the barometer was rising briskly along the foot of the hills and changing by small amounts elsewhere. Pressure remained low over the Punjab and the Gangetic plain and high over the west of the Peninsula, the Bay, and Burma. The pressure differences remained abnormally small for the time of year, and the barometer read above the normal average, except in the extreme south and south-east. Light or moderate winds, rather variable in direction, prevailed over the greater part of the country. In the north of the Gangetic plain easterly winds were extending. Rain had been fairly general over the west of the Peninsula, and a few scattered showers had occurred in North-Eastern India. The heaviest amounts were Chitaldroog 2·48 inches, and Colombo, Mangalore, Mercara, Mysore, Bangalore, and Bellary about 1¼ inch. The chart of the 7th showed that pressure had decreased briskly over the Peninsula, but had continued to change by small amounts elsewhere. The distribution of pressure was again very little changed, and the abnormal excess of pressure in all parts of India, except the south of the Peninsula, was nearly as marked as on the previous day. The wind was unusually northerly over parts of Western and Central India, but blew from about normal directions elsewhere. The force remained moderate. Scattered rainfall had occurred over the west of the Peninsula and in North-Eastern India. The amounts were generally small, but Moulmein and Minbu received

over 2 and Mandalay, Trivandrum, and Cochin over 1 inch. On the 8th the barometer was falling over a considerable part of North-Western India and of the Gangetic plain and was rising elsewhere. Consequently, while the relative positions of the areas of high and of low pressure were generally unaltered, the barometric gradient over a large part of the country had increased. Over the Peninsula, however, pressure remained very uniform. The winds blew from about normal directions, and the force was increasing over the Bay and in parts of Western India. Rain had fallen over the west of the Peninsula as well as at several central and north-eastern stations and at one or two places in the Punjab. Cochin and Calicut received over two and Poona, Ahmednagar, Bellary, Tavoy, and Mymensing over one inch. On the 9th pressure was rising almost everywhere. Pressure was low over North-Western and Central India; high over Assam and Burma. Pressure differences were generally small, but particularly over the Peninsula. The winds varied very considerably in direction over a large part of the country, but over the north of the Bay the southerly and over the north of the Gangetic plain the easterly current held steadily. On Saturday, the 10th, except that pressure was unusually uniform over Bombay, the general distribution was fairly normal, readings being highest in the extreme south and lowest over the Punjab and the Gangetic plain, with moderate intervening gradients The wind directions also, except on the Bombay Coast, were fairly normal. Rain had fallen over the west of the Peninsula, at a few central stations, and at several places in Burma and Bengal. The fall was not heavy, except on the West Coast, where 4·50 inches were reported at Cochin, 3·19 inches at Calicut, 2·58 inches at Trevandrum, and 2·47 inches at Bombay.

Temperature.—Owing to the cessation of the rain over a considerable portion of India and the lightness of the fall in other parts, there has occurred a marked rise of temperature as compared with that recorded last week over India.

The following table shows the variation of the mean temperature from the normal on each day of the week for the principal Provinces of India:

Province.	June.							Mean variation of week.
	4th.	5th.	6th.	7th.	8th.	9th.	10th.	
	°	°	°	°	°	°	°	°
Burma	+2·7	+2·6	+3·4	+1·5	+0·9	+0·8	+2·6	+2·1
Bengal and Assam . .	−0·2	−1·2	−0·1	−0·4	+0·2	−1·0	−1·3	−0·6
North-Western Provinces and Oudh.	−5·0	−2·4	−0·9	+0·8	+1·9	−1·8	−1·6	−1·3
Punjab	−4·2	−1·9	+0·5	+1·9	+2·0	+0·9	+0·5	0
Bombay	−0·9	+0·4	+1·5	+1·2	+0·9	+1·1	+0·8	+0·7
Central Provinces and Berar	−4·2	−3·5	−2·1	−0·5	+0·9	0	+1·1	−1·2
Central India and Guzerat .	−3·8	−2·6	−1·7	+0·4	+1·4	+0·6	+3·3	−0·3
Sind and Rajputana . .	−2·9	−0·7	+0·6	+0·6	+0·7	−1·6	+0·9	−0·3
Madras	−2·3	−1·4	−1·2	−0·6	−1·2	−1·8	−1·1	−1·4
Mean for whole India .	−2·3	−1·2	0	+0·5	+0·9	−0·3	+0·6	−0·3

From the above it will be seen that the mean temperature of the whole of India for the week was only 0·3° below the normal, and that on three days of the week, *viz.*, the 7th, 8th, and 10th, the mean exceeded the normal. In Burma the mean temperature of the week was 2·1° and in Bombay 0·7° above the average,

but in all the other Provinces the mean showed a deficiency, though in most cases the variation was only trifling.

Rain.—During the week under review there has been no rain in the western division of the North-Western Provinces, in the central and western division of the Punjab, in Sind, in the Rajputana divisions, or in Central India (West); while in the Oudh divisions, in the North-Western Provinces (Central), in the remaining Punjab divisions, in Kathiawar, and in the East Coast (North *a*) the average actual rainfall of each division has been less than one-tenth of an inch. In all the other divisions into which India is divided the rainfall has been effective, the average actual rainfall per division ranging from 5·82 inches in Assam (Surma) and 5·72 inches in Malabar to 0·12 inch in the North-Western Provinces (East). The above shows that there was generally very little rain over Northern India and moderate rain over North-Eastern India, the Central Provinces, and the Peninsula. The third column of the rainfall table shows that it was only in the central parts of the Peninsula, comprising the following divisions, *viz.*, Mysore, the Bombay Deccan, Hyderabad (South), Madras (Central, South-Central, and South), and the East Coast (South) that there was any excess. This excess amounted to 1·56 inch in Mysore, to 0·78 inch in Madras (Central), to 0·70 inch in Madras (South), and to less than ½ an inch elsewhere. In all other parts of the country the average actual rainfall of the week was deficient. In Burma this deficiency was large, on the West Coast it was considerable, in Bengal and Assam moderate, and elsewhere only slight. Tenasserim received only an average fall of 1·66 inches instead of 9·42 inches, Arakan only 4·91 inches instead of 12·30 inches, Malabar 5·72 inches instead of 10·03 inches, and the Konkan 1·20 inches instead of 5·63 inches. This deficiency of rainfall was attributable to the weakness of the monsoon currents resulting from the premature advances which accompanied the severe cyclone which passed from the Bay into Bengal at the end of May. This cyclone produced abnormally steep barometric gradients and a strong flow of monsoon winds to both sides of India abnormally early in the season; but with its disappearance there occurred a very rapid recovery of the barometer, which resulted in the establishment of a large area of excessive pressure over Northern India. This excessive pressure prevented the free flow northward of monsoon winds, and hence there occurred at the time, when in ordinary years the first burst of the monsoon takes place, a period of feeble air movement and of partial and light rainfall.

The three concluding columns of the table show that during the fortnight May 28th to June 10th, 1893, the total rainfall received has been excessive in twenty-three divisions, deficient in nineteen divisions, and about normal in nine divisions. The deficiency is generally in Burma and parts of North-Western India. In the Gangetic plain there has been a large excess.

The following gives the largest total amounts received during the week as reported in the rainfall telegrams of the week:

Division.	District.	Station.	Amount.
Lower Burma . .	Maubin . .	Pyapon . .	6·05 inches.
Arakan . .	Sandoway . .	Sudder . .	7·07 ,,
Assam . .	Sylhet . .	Ditto . .	11·51 ,,
North Bengal . .	Jalpaiguri . .	Debiganj . .	17·19 ,,
Malabar . .	Calicut . .	Trichur . .	16·72 ,,
Mysore . .	Mysore . .	Seringapatam .	8·25 ,,
Deccan . .	Dharwar . .	Mugud . .	6·30 ,,
Madras . .	Anantapur . .	Hindupur . .	5·50 ,,
East Coast . .	Trichinopoly. .	Pudukotah . .	4·96 ,,

SIMLA, *15th June, 1893.*

W. L. DALLAS,
Asst. Meteorological Reporter to the Government of India.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the state of the Season and Prospects of the Crops.

Madras.—*For week ending 10th June.*—Rainfall good in the Deccan, Central, West Coast, and most of the Southern districts, and showers elsewhere. Cultivation and sowing proceeding actively where rain has fallen. Standing crops generally thriving. Pasture, fodder, and drinking water sufficient, and condition of cattle good. General prospects favourable. Prices almost stationary at former high rates.

Bombay.—*For week ending 14th June.*—Rain almost throughout the Presidency Proper. Standing crops in good condition. Preparations for next season progressing in parts of twelve, and sowing in parts of fifteen, districts. Prices steady, except in parts of two districts. Agricultural stock in good condition and fodder adequate, but water deficient in two districts of Sind.

Bengal.—*For week ending 10th June.*—There were occasional showers of rain over the whole Province during the week, except in and around Calcutta and in parts of Behar and Orissa; but the total falls for the week were below the normal in all districts. Cultivation is generally well forward, but in Behar some more rain is now required in places. All standing crops, including autumn rice and jute, are doing well. Spring rice, sesamum, and millets are being harvested with good results. Prices are generally steady. Cattle are in good condition, and there is sufficient supply of fodder and water in all districts. There was a flight of locusts in Gya during the week.

North-Western Provinces and Oudh.—*For week ending 14th June.*—Showers have fallen in places and somewhat heavy rain in the Oudh districts and Moradabad. Fields are being prepared for the autumn crop sowings. Sugarcane flourishing. Irrigation of summer crops in progress. Supplies sufficient. Prices generally steady. Locusts appeared in the Banda district, but no damage was done.

Punjab.—*For week ending 14th June.*—Slight rain has fallen in four districts. Threshing of spring crops in progress; outturn generally good. Extra spring crops doing well. Ploughings for and sowings of autumn crops going on. Cotton and sugarcane crops are thriving. Locusts appeared in parts of the Hissar, Ferozepore, and Dera Ismail Khan districts, but no damage was done, except to the canal crops in the first named district. Condition of cattle is generally good. Fodder sufficient throughout the Province. Poppy outturn is said to be good. Prices rising in one district, falling in three others, unsettled in one, and stationary elsewhere.

Central Provinces.—*For week ending 14th June.*—Report not received.

Burma.—*For week ending 10th June.*—Rain fell in all districts. Ploughing for wet-weather crops is progressing favourably throughout Upper Burma. Transplanting of wet-weather paddy has begun, while in two districts sowing of cotton and sesamum is progressing. The price of paddy has fallen in five districts and has risen in only one. The number on relief works in the Meiktila district was 247.

Assam.—*For week ending 13th June.*—Rain wanted in parts of the Assam Valley. Planting of late rice progressing. Fodder sufficient.

Mysore and Coorg.—*For week ending 14th June.*—MYSORE: Rainfall general and good. Crops and prospects favourable. Sowing operations in progress. Prices fallen in one district.

COORG: Rainfall good. The south-west monsoon has set in. Ploughing of rice fields and preparing of nurseries in progress. Planting of coffee commenced. Prices stationary. Fodder and water-supply for cattle sufficient.

Berar and Hyderabad.—*For week ending 14th June.*—BERAR: Rainfall good. Weather hot and cloudy. Preparation of land continues. Sowing of cotton commenced in parts. Water sufficient, but fodder inadequate in two talukas. Cattle healthy. Prices almost steady.

HYDERABAD: Rainfall moderate. Harvesting of spring crops continues. Prices stationary.

Central India.—*For week ending 14th June.*—Rain fell in most parts of Central India. Weather cloudy and warm. More rain wanted in Bhopal. Agricultural operations are in progress in some parts and commenced in others. Stock in fairly good condition. Pasturage sufficient. Prices of food-grains still fluctuating in Gwalior, rising in Goona, and steady or high elsewhere.

Rajputana.—*For week ending 14th June.*—Rainfall good in part of Bikanir and showers reported in four other States. Spring crops being reaped in Bikanir. Harvest outturn and agricultural stock generally good. Pasturage or fodder sufficient, except in Dholpur, where fodder is reported to be failing. Prices rising in three States, falling in two, fluctuating in one, and steady elsewhere.

Kashmir.—*For week ending 13th June.*—Standing crops generally in good condition. Threshing of spring crops going on in the Muzaffarabad district. Reaping commenced in Uri and Rampur. Prices falling.

Nepal.—*For week ending 10th June.*—Occasional showers. Prospects normal.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

No. $\frac{1896}{47}$.

Extract from the Proceedings of the Government of India, in the Revenue and Agricultural Department (Exhibitions),—dated Simla, the 16th June, 1893.

Read the following:—

Prospectus of the International Exhibition of Industry, Science, and Art, Queen's Domain, Hobart, Tasmania, 1894-95.

INTERNATIONAL EXHIBITION OF INDUSTRY, SCIENCE, AND ART, QUEEN'S DOMAIN, HOBART, TASMANIA, 1894-95, UNDER THE IMMEDIATE PATRONAGE OF THE GOVERNMENT OF TASMANIA.

PUBLIC BUILDINGS, MACQUARIE STREET, HOBART.

PROSPECTUS.

It has been decided to hold an International Exhibition in Hobart during the summer of 1894-95, and the Government of Tasmania has been pleased to grant their official patronage to the undertaking.

The proposal has been taken up by the people of Tasmania and the adjacent Colonies with such general approval that the necessary capital has been most readily subscribed.

The City of Hobart is most favourably situated. The Colony of Tasmania has a population of 150,000, and with the neighbouring Colonies the total population numbers about 4,000,000 inhabitants. Launceston and other centres are within a few hours by rail. The Australian Colonies are easy of access by steam, and the tourists' routes to all places of interest radiate from Hobart.

The objects of the Exhibition are to promote and foster industry, science, and art by inciting the inventive genius of our people to a further improvement in arts and manufactures, as well as to stimulate commercial enterprise by inviting all nations to exhibit their products both in the raw and finished state. Samples of the products, for which this and the other Australasian Colonies have become famous, will be exhibited with a view to increase the development of their natural resources.

Similar and more varied exhibits may be expected from Great Britain, the Continent of Europe, America, India, Canada, the Cape, and other Colonies, to which the Government of Tasmania have forwarded an official invitation to grant their substantial support to the undertaking.

A Fine Art Section will form an important and attractive department of the Exhibition. For the accommodation of the art treasures and historical objects a special block of the building will be reserved, and the most ample precautions will be taken for the security of valuable property lent for the purposes of the Exhibition.

Two sections, *viz.*, the Women's Industrial and the Artisan Section, will be particular features. Special arrangements will be made for the management of these.

The site which has been granted by the Government for the Exhibition buildings covers about eleven acres. It is one of exceptional beauty and convenience, being that portion of the Queen's Domain adjoining the Battery and the Central Railway Station.

The buildings which it is proposed to erect will be constructed according to plans prepared by competent architects. The ornamental flower plots, shrubberies, fountains, etc., will be enclosed in the Exhibition grounds, where musical promenades and other entertainments will be provided for the enjoyment of visitors.

The situation of the Exhibition buildings is specially convenient of access for Exhibitors by means of the lines of rail which can be made use of day or night for the passage of railway trucks. Heavy goods can be delivered at a minimum cost and with the least possible amount of risk. In addition to this, the port of Hobart offers a cheap and ready means for the receiving and delivery of all sea-borne goods.

It is intended to afford full postal, telephonic, telegraphic, and banking facilities within the Exhibition buildings, so that all necessary business may be conducted by Exhibitors and others without leaving the premises.

The whole arrangements are in the hands of a powerful Directorate, and everything will be done to facilitate the work of Exhibitors, and minimise their outlay.

REGULATIONS FOR EXHIBITORS.

1. An International Exhibition of Industry, Science, and Art, under the immediate patronage of the Government of Tasmania, will be held in Hobart in 1894-95.

2. The Exhibition will be opened on the 15th day of November 1894, and will continue open during the day and evening for a period of about six months.

3. The principal objects to be exhibited are comprised in the accompanying classification, which must not be considered to be exhaustive.

4. Certificates of Merit will be awarded by competent juries in every section, special certificates being given for exhibits showing superlative merit.

5. Charge will be made for space, except in special cases, to be determined by the Directors. The charge for space inside the building will be 2*s.* per square foot, with a minimum charge of £2 10*s.* Space in main avenues will be charged extra according to position; and wall space, which must be mentioned when making application, will be charged according to location. In all cases the amount of space money must accompany the Application Form, and no exhibits can be admitted unless all payments for space have been made. Spaces not occupied within fourteen days previous to the opening of the Exhibition will be otherwise allotted, and all payments made in respect thereof absolutely forfeited. Exhibitors will have to pay all expenses of conveying, delivering, arranging, fixing, and removing their exhibits, and also the cost of the erection of all fixtures, screens, and

counters when required; and they must personally, or by a representative, superintend the transmission, reception, unpacking, installation, and (at the close of the Exhibition) the removal of their goods. The Executive Committee reserve to themselves the right of doing whatever may be considered necessary at the expense of the Exhibitor, unless this regulation is strictly complied with. Should any goods be deposited in the Exhibition premises during the absence of the Exhibitor or his representative, the Directors will not be responsible for any loss or damage from whatsoever cause arising.

6. Motive power, steam, gas, or water, will be supplied by the Directors at cost price and subject to certain regulations. Exhibitors requiring such motive power must fill up the Special Application Form which has been prepared for that section, and which will be supplied on application. Exhibitors requiring counters, shafting, pulleys, and belting must supply them at their own expense.

7. Schedules and Applications for Space may be had from the Secretary or any of the Official Agents. These must be filled up and returned on or before the 1st of September 1894 to ensure the exhibits being entered in the Official Catalogue.

8. The nature of the articles which it is proposed to exhibit must be fully specified in the Form of Application for Space, and no article which is not clearly described in the Application Form will be allowed in the Exhibition without the special permission of the Directors.

9. The Directors reserve the right to refuse any exhibit without stating any reason for so doing.

10. Foreign and Colonial Commissioners or Official Agents are invited to communicate with the Secretary. The Directors will place at their disposal all information, plans, or documents that may be useful to them.

11. Applicants for space from countries in which no Commissioner or Official Agents have been appointed will correspond direct with the Secretary.

12. The Directors will endeavour to obtain from the various railways, carriers, and steamship companies special terms for the conveyance of Exhibitors' goods to and from the Exhibition, and these arrangements will be communicated to intending Exhibitors.

13. All packages containing goods for the Exhibition must have painted on two sides the distinctive mark 

with the name and address of the Exhibitor. Labels for this purpose will be supplied to each Exhibitor applying for same.

14. Packages from foreign countries must likewise have painted on two sides the distinctive mark 

They must also be marked in such a way as to show distinctly the name of the Exhibitor and the country from whence they came.

15. No case, counter, platform, screen, or partition, must (without special permission) exceed the following dimensions:—

Show cases and partitions	10ft. above the floor.
Counters	2ft. 6in. „ „
Platforms	1ft. „ „

16. Exhibitors may erect railings around their stands, and provide canopies, subject to approval; in every instance these railings and canopies must be within the area of the space allotted. In the case of machinery in motion, it is imperative that it be sufficiently railed.

17. The flooring must not be cut, altered, removed, or strengthened, except by sanction of the Executive Committee, and at the expense of the Exhibitor.

18. No Exhibitor will be permitted to display exhibits in such a manner as to obstruct the light, or project beyond the space allotted, or impede the view along the open spaces, or occasion injury or inconvenience to other Exhibitors.

19. In order to ensure uniformity of decoration, no exhibitor will be allowed to put up flags, banners, or other kind of decoration without permission; and for covering counters, screens, or partitions a uniform material will be selected, which may be bought by Exhibitors at the building.

20. All signs or name boards, which must be new and clean and of approved size, must be placed to the satisfaction of the Executive Committee, and must in no case interfere with the lighting. They must be black or maroon with gold letters.

21. All hand-bills, circulars, etc., connected with exhibits, and intended for gratuitous distribution in the Exhibition, must be printed at the Exhibition by the party to whom that special privilege has been granted by the Directors.

22. Cases must be unpacked immediately on arrival, under the supervision of the officers of Her Majesty's Customs, and all empty cases removed by the Exhibitors or their Agents. The Directors cannot accept any responsibility with reference to empty cases, which must be at once removed from the buildings at the expense of the Exhibitors.

23. Exhibitors will be required to provide all necessary attendance, and to keep their stands and exhibits properly cleaned and in good order during the whole period of the Exhibition. The Directors reserve the right to impose a penalty for a breach of this regulation, and to order the removal of any attendant whose behaviour they consider unseemly.

24. No Exhibitor will be allowed to transfer any portion of the space allotted to him, or to allow any other than his own duly admitted exhibits to be placed thereon, except by permission of the Directors.

25. All goods must be exhibited in the name of the individual or firm signing the Application Form.

26. Exhibitors are requested to mark the selling price of all articles exhibited for the information of visitors, to whom they may explain their exhibits; but they will in all cases be forbidden, unless special permission in writing has been obtained from the Directors, to invite or to allow visitors to purchase goods for removal at the time of purchase, the Exhibition being intended for the purpose of display. Orders can be taken within the Exhibition, but goods must be delivered from establishments outside. Special regulations will be made for perishable articles or goods manufactured in the Exhibition.

27. No exhibit, or part thereof, can be removed before the close of the Exhibition without the special permission of the Executive Committee. Exhibits not removed within fifteen days after the close of the Exhibition will be warehoused at the cost and risk of the owners, and whatever may remain after three months will be sold by auction, and the proceeds applied to defray expenses.

28. No goods will be received prior to the 1st of September 1894 without the special permission of the Directors, nor after the 1st of November, but arrangements may be made for motors, heavy machinery, boilers, or any exhibit requiring under-building.

29. Special care will be required in cases where fire or gas is used by Exhibitors, and a responsible officer will be appointed to carry out the injunctions of the management in this respect. Exhibitors will require to effect their own insurance on their exhibits.

30. No explosives, or any substance which, in the judgment of the Directors, are dangerous, will be admitted, but they may be represented by models.

31. Spirits, oils, corrosive substances, and generally all substances which might spoil other articles or inconvenience the public, can only be exhibited in solid and suitable vessels.

32. The Directors reserve to themselves the right of examining or testing any of the exhibits. If any damage or injury shall be occasioned during the Exhibition by any exhibited machine, implement, or article to any visitor or other person, then the Exhibitor to whom such machine, implement, or article may belong shall be responsible for in the first instance, and shall besides indemnify and hold harmless the said Directors from or against all actions, suits, expenses, and claims on account or in respect of any such damage or injury which may be so caused.

33. No article exhibited may be copied, photographed, drawn, or reproduced in any manner without the special permission of the Exhibitor and of the Directors.

34. Photo. passes will be issued to Exhibitors whose exhibits will need daily personal attention, and to a reasonable number of attendants. If these passes be used by any but those to whom they are issued, they will be immediately cancelled.

35. The Directors reserve to themselves the sole right of compiling and printing a Catalogue of Exhibits under regulations which will be duly notified.

36. The Directors do not undertake any responsibility for damage or loss, however caused.

37. The right to alter, amend, add to, or cancel any of these rules is reserved by the Directors.

38. All who become Exhibitors shall be held by so doing to signify their compliance with the whole of these regulations, together with such other regulations as the Directors may issue from time to time.

39 The Directors reserve the right to remove the exhibits and cancel the admission ticket of anyone who does not conform with the regulations.

40 The Directors reserve the power to remove any exhibit from one part of the buildings to another should it in their judgment be incongruous or out of place.

CLASSIFICATION OF EXHIBITS.

The following are the headings of the Classification :—

GROUP I.—Fine Arts (including Photography, Engravings, etc.)
" II.—Music and Musical Instruments.
" III.—Education and Apparatus for Physical Training.
" IV.—Furniture, Decoration, Fancy Goods.
" V.—Pottery and Glass.
" VI.—Jewellery, Clocks, Watches, and other Time-keepers.
" VII.—Paper, Printing, Bookbinding, and Stationery.
" VIII.—Textile Fabrics, Leather, India-rubber Goods, Clothing.
" IX.—Food, including Drinks.
" X.—Chemistry, Apparatus and Processes, Philosophical Instruments.
" XI.—Electricity.
" XII.—Gas and Lighting other than Electricity.
" XIII.—Heating and Cooking Apparatus.
" XIV.—Cutlery, Ironmongery, Firearms, Military Weapons.
" XV.—Road Carriages, Bicycles, Tricycles, Ambulance.
" XVI.—Machinery, Machine Tools, Hydraulic Machines, and Machines for raising Heavy Weights; Elements of Machines; Furnaces.
" XVII.—Prime Movers, and means of distributing their Power; Railway Plant.
" XVIII.—Naval Architecture and Engineering.
" XIX.—Civil Engineering, Construction, and Architecture, Sanitary Appliances, Aeronautics, etc.
" XX.—Mining and Metallurgy, Minerals, Quarrying, and Fuel.
" XXI.—Agriculture, Horticulture, Arboriculture.
" XXII.—Fisheries.
" XXIII.—Women's Industries.
" XXIV.—Artisan Section.

N.B.—In Groups I, XXIII, and XXIV the space will be free. In all other groups the charge will be at the minimum rate of 2*s.* per foot.

GROUP I.

FINE ARTS.

Class 1.—Sculpture.
Class 2.—Oil paintings.
Class 3.—Water-colour drawings.
Class 4.—Etchings and engravings.
Class 5.—Works in black and white.
Class 6.—Architectural drawings.
Class 7.—Photographs.
Class 8.—Archæology.
Class 8½.—Philatology.

GROUP II.

MUSIC AND MUSICAL INSTRUMENTS.

Class 9.—Organs, harmoniums.
Class 10.—Pianofortes.
Class 11.—Harps.
Class 12.—Ancient, rare, and valuable instruments.
Class 13.—Solo, orchestral, and military instruments.
Class 14.—Musical apparatus and instruments.
Class 15.—Books on methods of teaching music.
Class 16.—Music, engraving, and printing.

GROUP III.

EDUCATION AND APPARATUS FOR PHYSICAL TRAINING.

Class 17.—*Crèches and Infant Schools*—Apparatus and fittings; games, toys, Kindergarten amusements; models and appliances for teaching; examples of school work.

Class 18.—*Primary and Secondary Schools*—Apparatus and fittings; models and appliances for teaching; text-books, diagrams, and examples; specimens of school work.

Class 19.—*Science and Technical School Appliances*—Apparatus and fittings for elementary trade teaching in schools; apparatus and models for science instruction in schools; diagrams, copies, text-books, apparatus, and examples used in schools for teaching handicrafts; models, plans, and designs for the fitting-up of workshops and technical schools; specimens of work done in schools.

Class 20.—*Art Teaching*—Apparatus, models, and fittings for art instruction; diagrams, copies, text-books; specimens of drawing, painting, modelling, designing.

Class 21.—*Schools for the Blind, Deaf, and Dumb*—Books, apparatus, and examples of teaching; specimens of work.

Class 22.—*Physical Training and Sports*—Gymnastic apparatus for exercise, drill, etc.; apparatus for cricket, football, tennis, golf, curling, etc.

GROUP IV.

FURNITURE, DECORATION, FANCY GOODS.

Class 23.—*Furniture and Upholstery*—Household furniture; office and library furniture; church furniture; inlaid and carved furniture; upholstery; the nursery and accessories.

Class 24.—*House Decoration applied to Rooms*—Decorated and furnished rooms; japanned-ware; cornices, brackets, screens, picture-frames, mirrors, parquet flooring, and wood-panelling; wooden overmantels.

Class 25.—*Wall Coverings*—Wall papers; leather and canvas embossed wall coverings; wall tapestry.

Class 26.—*Artistic and Ornamental Metal Work*—Artistic and ornamental metal work for house decorations and furnishings; ornamental overmantels.

Class 27.—*Marble Furniture*—Marble furniture, staircases, overmantels; marble wall decoration.

Class 28.—*Basket Work and Basket Furniture*—Basket chairs, tables, and sofas; baskets for travelling purposes; baskets for house use; clothes baskets; and all other basket-ware

Class 29.—*Umbrellas, Parasols, and Walking-sticks.*

Class 30.—*Stained Glass for Window Decoration*—Stained and enamelled, cut and engraved, window glass.

Class 31.—*Fancy Articles for House Decoration.*

Class 32.—*Brushes and Combs*—Toilet brushes; combs of all kinds; toilet cases and bags; brushes for household use; stable and horse brushes; brooms; boot-brushing machines.

Class 33.—*Trunks and Portmanteaux*—Trunks and portmanteaux of all kinds; bags for travelling, outdoor, and household use; patent fastenings for trunks and bags.

GROUP V.

POTTERY AND GLASS.

Class 34.—*Bricks, Tiles, Earthenware, Terra Cotta and Stoneware, Architectural Pottery*—Fireclay goods, crucibles, pots, furnaces, chemical stoneware, plain and enamelled encaustic tiles, stoneware.

Class 35.—*Porcelain, Majolica, Artistic Pottery*—Pottery, porcelain, china, earthenware for table or toilet use and for decorations; Majolica, Wedgwood, and Palissy ware; artistic pottery of all kinds.

Class 36.—*Crown, Sheet, and Plate Glass*—Glass used in construction and for mirrors; window glass; plate glass.

Class 37.—*Bottle and Table Glass*—Bottles and bottle glass; patent stoppers and patent bottles for aërated waters; chemical and pharmaceutical glassware, vials, and bottles; table glass of all kinds; cut and engraved glass.

Class 38.—*Artistic Glass for House Decoration, Plaques, etc.*—Decorative glass of all kinds; painted glass; cameo and intaglio in glass.

GROUP VI.

JEWELLERY, CLOCKS, WATCHES, ETC.

Class 39.—*Jewellery and Personal Ornaments*—Gold and silver jewellery and ornaments, inlaid, filigree; diamond jewellery; gems and precious stones; rings and chains.

Class 40.—*Gold and Silver Work*—Goldsmiths' and silversmiths' work, both ancient and modern; shields, trophies, flasks, and cups, and other samples of work; medals, dies, gold leaf.

Class 41.—*Clocks*—Chronometers, astronomical clocks, church and turret clocks, clocks of ancient design, clocks for household and general use; hour glasses, sun dials, metronomes, watchmen's clocks.

Class 42.—*Time Signals*—Methods of controlling clocks; apparatus for the distribution and signalling of time.

Class 43.—*Watches and Chronometers*—Machine and hand-made watches; examples illustrative of the stages of manufacture of watches and chronometers; keyless chronographs; repeating, calendar, and other forms of watches.

GROUP VII.

PAPER, PRINTING, AND STATIONERY.

Class 44.—*Paper, and Materials for Manufacture of Paper*—Paper of all kinds, wrapping, writing, drawing, printing; mounting boards, millboards, papier maché, imitation of leather and wood, etc.; tracing paper, tracing cloth.

Class 45.—*Letter-press and other Printing*—Specimens of printed and illustrated books; samples of type-printing by hand and machine; lithographic printing, colour printing, copper-plate printing; specimens of ruling; specimens of commercial book printing and billheads; posters and printing of same.

Class 46.—*Bookbinding*—Bookbinding in every form; samples of special designs for bindings; bound books, account books, etc.

Class 47.—*Artists' Materials and Instruments*—Easels, stools, palettes, palette knives, drawing boards, drawing instruments, pencils, brushes, colours and varnishes, water-bottles; new inventions in connection with the same.

Class 48.—*Writing Materials and Stationery*—Stationery for the desk; stationers' articles, pens, pencils, inkstands; playing cards; typewriters, manifold writers, copying presses, sealing wax.

GROUP VIII.

TEXTILE FABRICS, LEATHER, INDIA-RUBBER GOODS, CLOTHING.

Class 49.—*Raw Materials*—Cotton, flax, jute, hemp, wool, silk.

Class 50.—*Textile Materials*—Woven fabrics, wire cloth, sieve cloth, asbestos fibre (spun and woven), mats and matting, cotton yarns, sheetings and shirtings, cotton fabrics, dyed and printed cottons and muslins, linen yarns and threads, linen fabrics manufactured from jute, yarns, bagging, carpeting, rugs.

Floorcloth, oilcloth, linoleum, yarns and worsteds, wool fabrics, broadcloth, coatings, flannel, blankets, rugs and shawls, merinoes, cashmere, serges, dress goods of wool and cotton mixture, tweeds and other woollen materials.

Carpets of all kinds; felted goods; printed and embossed woollen cloths; silk and silk fabrics of all kinds.

Class 51.—*Gutta-percha, India-rubber*—Gutta-percha and India-rubber goods and manufactures; waterproof clothing.

Class 52.—*Leather and Shoe-making*—Leather of all kinds (except driving bands for engines); boots and shoes; trunks and bags; fancy leather work.

Class 53.—*Dyeing and Tanning Materials.*

Class 54.—*Felt-making and Hat-making*—Materials used in manufacture of straw, felt, and silk hat-making; process of hat-making shown in operation; manufactured hats or caps of all kinds.

Class 55.—*Lace-making*—Laces of all kinds; manufactures of lace by machinery or hand.

Class 56.—*Costumes for all Ages and Climates*—Costumes of all kinds; clothing, ladies' mantles, caps, gloves, millinery, furs, and skins; men's and youths' clothing of all kinds.

Class 57.—*Sewing Machines, Knitting Machines, Weaving Machines not requiring power.*

GROUP IX.

FOOD, INCLUDING DRINKS.

Class 58.—*Grain and Raw Materials*—Samples of grain of all kinds; casts of vegetables, grass seeds, and other seeds; flour, oatflour, oatmeal, and all other meals; pearl barley, etc.

Class 59.—*Manufactured Articles of Food*—Bread, biscuits, cakes, and confectionery; mustard, gelatine, isinglass, starch, arrowroot, sugar, syrups.

Class 60.—*Preserved Food, including Fish Products*—Tinned meat; smoked, salted, compressed animal food; honey; tinned, dried, and compressed fruit and vegetables; food for infants; food for invalids; concentrated foods of all kinds.

Class 61.—*Beer, Wines, and Spirits*—Beer, ale, and porter in casks or bottled; colonial, foreign, and English wines, whisky, brandy, liqueurs, gin, rum, cordials, bitters, cider, perry; other fruit wines; apparatus for manufacture of same in coopers' works, stills, etc.

Class 62.—*Aërated Waters, Mineral Waters*—Soda and aërated waters; natural mineral water; manufactured mineral waters.

Class 63.—*Coffee, Chocolate, Tea, Apparatus used in the Process of Infusion.*

Class 64.—*Tobacco, Cigars, Cigarettes; Machinery and Appliances for Manufacture of same.*

GROUP X.

CHEMISTRY AND APPARATUS; PROCESSES AND APPLIANCES CONNECTED WITH APPLIED CHEMISTRY AND PHYSICS; PHILOSOPHICAL INSTRUMENTS AND APPARATUS.

Class 65.—*Inorganic Products, Acids, and Alkalies*—Mineral, sulphuric, nitric, hydrochloric acids; ammonia and other alkalies, potassium, sodium, magnesium; printing, and writing inks; bleaching agents, salts, white lead; paints and pigments, phosphorus, sulphur, selenium, bromine, iodine, kelp, charcoal; disinfectants; yeast and baking powders.

Class 66.—*Organic Products, Coal and Wood, Tar Products, Oils, Soaps, Varnishes*—Creosote, wood spirit, pyroligneous acids; oils from mineral, animal, and vegetable sources; refined oils; lubricating oils; candles, soaps, and detergents; varnishes, resins, dyes and colours, yellow, red prussiate of potash, Prussian blue, cyanide of potassium.

Class 67.—*Chemical Apparatus*—Chemical apparatus of all kinds; balances, scales, and graduated beams; laboratory fittings and instruments and apparatus.

Class 68.—*Pharmaceutical Products*, including perfumes of all kinds.

Class 69.—*Optical Apparatus*—Optical and thermotic instruments and apparatus; lenses and prisms; spectacles and eye glasses; field and opera glasses.

Class 70.—*Instruments (except Naval)*—Astronomical instruments and accessories, transits, equatorials, etc.; instruments for surveying; levelling instruments and apparatus; meteorological instruments; thermometers, barometers, hygrometers; rain gauges, maps, weather bulletins; mathematical machines, calculating machines, viameters, pedometers; weights, measures, and weighing machines; biological instruments; spectroscopes and accessories for spectrum analysis.

Class 71.—*Photographic Apparatus*—Processes, gelatine, bromide, plate-making; printing processes, silver, carbon, woodbury-type, platinotype, etc.; cameras, shutters, changing boxes, slides, tents, lamps, etc.

GROUP XI.

ELECTRICITY.

Class 72.—*Generators*—Dynamos, primary and secondary batteries; thermo-electric battery.

Class 73.—*Conductors*—Submarine cables and apparatus for laying them; äerial wires and underground cables, insulators, and poles; insulating and coating materials; joints and connections, pipes, tubes, troughs, electric light leads.

Class 74.—*Testing and Measuring Apparatus*—Galvanometers, magnetometers, dynamometers, voltmeters, current meters.

Class 75.—*Telegraphic and Telephonic Apparatus*—Needle instruments, A. B. C. instruments, sound instruments, Morse instruments, type printers, relays, duplex and quadruplex apparatus, keys, recording instruments, automatic transmitters, electric bells, indicators, telephones and fittings, microphones, lightning conductors and protectors.

Class 76.—*Electric Lighting Apparatus*—Lamps, resistance coils, cutouts, safety catches, switches, fittings for lamps.

Class 77.—*Distribution or Utilisation of Power*—Electric railways, electric motors, boats, tricycles, and other conveyances driven by electricity; systems of distribution; domestic electric lighting applied to apartments.

Class 78.—*Electric Signalling*—Fire and burglar alarm; railway, ship, and time tables; water level and wind indicators; tell-tales, electric clocks, and chronoscopes.

Class 79.—*Electro-Thermic Apparatus.*

GROUP XII.

GAS AND LIGHTING (OTHER THAN ELECTRICITY.)

Class 80.—*Coal and other Gas*—Manufacture, purification, storage, and distillation of coal gas; treatment of residue; water gas, oil gas, carburetted air.

Class 81.—*Tests and Photometrical Apparatus*—Chemical tests, standards of light, measurement of light.

Class 82.—*Burners and Fittings*—Gas fittings; burners for illuminating gas, globes and brackets, reflectors, and other methods of imparting greater light; gas meters, regulators, governors; methods of lighting gas.

Class 83.—*Candle Holders* and fittings of all kinds.

Class 84.—*Lamps for Oil and Spirits*—Lamps for burning oil; safety lamps, firemen's lamps, railway lamps.

GROUP XIII.

HEATING AND COOKING APPARATUS.

Class 85.—*Stoves for Coal, Gas, or Oil; Grates, Ranges, Heating Apparatus, etc.*

Class 86.—*Cooking and Pantry Utensils*—Tinware and enamel-ware used in cooking and storing food.

GROUP XIV.

CUTLERY AND IRONMONGERY, FIREARMS, MILITARY WEAPONS.

Class 87.—*Cutlery and Hand-tools*—Hand-tools and instruments of every description used by artificers; cutlery for table use; knives, penknives, scissors, razors, and implements sold by cutlers.

Class 88.—*Surgical Instruments and Appliances.*

Class 89.—*Hardware and Hollow-ware*—Metal hollow-ware, screws, nails, spikes, bolts, locks, and latches; hinges; pulleys for house fittings; window and door furniture; plumbers' and gasfitters' hardware; ship's hardware; saddler's hardware; harness fittings.

Class 90.—*Galvanised Ironwork and Wirework.*

Class 91.—*Pewter and Britannia Metal, German Silver, Nickel-wares, Bronze, Solder.*

Class 92.—*Ordnance, Small-Arms and Weapons; also Sporting Guns*—Heavy guns and means of working them; gun carriages and accessories; siege, field, and mountain guns; machine and automatic guns; shell and shot, fuses and detonators; guns, rifles, and pistols; swords, bayonets, gunpowder, and ammunition.

GROUP XV.

ROAD CARRIAGES, BICYCLES, TRICYLES, AMBULANCE.

Class 93.—*Road Carriages and Accessories*—Pleasure and travelling carriages; cabs, omnibuses, hearses, trucks, and carts; carriage lamps; carriage fittings; methods and means of propulsion; perambulators.

Class 94.—*Bicycles, Tricycles, and Accessories*—Cycles of every description, and fittings for same.

Class 95.—*Saddlery and Harness*—Horse clothing, whips, spurs; means and methods of breaking-in horses; disengaging appliances for run-away horses; horse-shoes; methods of roughing horses; horse clippers; grooming apparatus.

Class 96.—*Ambulance*—Ambulance carriages, stretchers; aid to sick and wounded in war; aid to sick and wounded in peace; furniture and fittings for sick-room; bath chairs.

GROUP XVI.

MACHINERY, MACHINE TOOLS, HYDRAULIC MACHINES, AND MACHINES FOR RAISING WEIGHTS; ELEMENTS OF MACHINES; FURNACES.

Class 97.—*Metal-working Machines*—Machinery for the manufacture of rivets, nails, bolts, screws, tacks, pins, and needles; machines for planing, drilling, slotting, turning, shaping, boring, punching, stamping, and cutting-metal; wheel cutting and dividing machines; emery wheels, drills, gauges, and dies.

Class 98.—*Steam Hammers*—Steam, trip, and other hammers; anvils, forges, bellows.

Class 99.—*Wood-working Machines*—Machines for planing, sawing, turning, veneering, and grooving; machines for tonguing, cutting, moulding, stamping, carving, cask-making, cask-cutting.

Class 100.—*Stone-working Machines*—Machines for sawing, planing, dressing, shaping, and polishing stones; sand blast, grindstones.

Class 101.—*Watch-making Machinery.*—Lathes and mandrils; wheel-cutting engines; machine tools used in the manufacture of watches and watch cases; also hand-tools and gauges.

Class 102.—*Machines for Coining Metals.*—Drop-die and stamping machines.

Class 103.—*Textile Machinery*—Machines for the manufacture of silk goods, cotton goods, woollen goods, carpets, tapestry, jute, linen goods; lace machines; embroidery, hair, and ribbon machines; leather, boot, and shoe-making machines; machines for making buttons, rope, twine, and miscellaneous fibrous materials; floorcloth, kemptulicon, wire cloth, and netting machines; India-rubber and asbestos machines.

Class 104.—*Washing Machines*—Machines for washing, scouring, ironing, drying, cleaning, and dyeing.

Class 105.—*Paper-making Machinery*—Washing, beating, and bleaching machines; agitators, strainers, moulds.

Class 106.—*Printing Machinery*—Type-casting machines and apparatus for stereotyping and electrotyping; type-setting, printing, stamping, embossing, and lithographic machines; bookbinding machines; paper-folding machines; paper and card-cutting machines; paper-box machines; envelope machines; wall-paper printing machines; steel pen and pencil machines.

Class 107.—*Machinery used in the Manufacture of Glass and Pottery*—Bricks, pottery, drain-pipes, tiles, and artificial stone machines; furnaces, moulds, and blow-pipes for making glass and glassware; machines for grinding, cutting, and polishing glass.

Class 108.—*Cranes and Other Lifting Apparatus; Hydraulic Machines and Presses*—Pumps and apparatus for lifting and moving liquids (air or gas); blowers and ventilators; hydraulic engines, accumulators, cranes, jacks, presses, elevators, lifts; pile-driving machines.

Class 109.—*Sugar and Sweetmeat Machinery*—Sugar-refining machinery; sweetmeat-making machines.

Class 110.—*Baking and Machinery*—Bread and biscuit or pie machinery of all kinds.

Class 111.—*Machines for the Manufacture of Aërated Waters.*—Machinery of all kinds for the manufacture of soda and aërated waters; bottling and corking apparatus; ice-making machines.

Class 112.—*Fire Engines and Fire Apparatus*—Steam fire-engines; hand, chemical, compressed air fire-engines; hose, ladders, fire escapes.

Class 113.—*Weighing Machines for Commercial Purposes*—Beam and scale machines; machines for weighing trucks and carts; weighing machines of all kinds (other than chemical and other scientific balances).

Class 114.—*Furnaces for Manufacturing Purposes*—Furnaces and moulding machines; bloom-squeezers; blowing fans; apparatus for casting metal, Bessimer, Siemens, Martin, and other processes.

Class 115.—*Machine, Tools, and Apparatus for Mining and Extractive Arts*—Rock drills; well and shaft boring machines; machines and apparatus for working and hauling coal; coal-washing machines; machines used for crushing, grinding, sorting, and dressing; breakers, stamps, mills, pans, screens, sieves, gigs, amalgamators, and concentrators.

Class 116.—*Machines and Apparatus for Chemical Manufactures*—Electroplating; paint and powder mills; soap and candle making machinery; plant for manufacturing sulphuric and other acids.

GROUP XVII.

PRIME MOVERS AND MEANS OF DISTRIBUTING THEIR POWER; RAILWAY PLANT.

Class 117.—*Steam Engines and Boilers*—Boilers; fixed and portable steam engines; methods and means of preventing corrosion and incrustation.

Class 118.—*Gas and Hot Air Engines; Compressed Air Engines*—Gas engines; hot air engines; air compressors; compressed air engines; vapour engines.

Class 119.—*Turbines, Water-wheels, Hydraulic Rams, Windmills*—Means of utilising wave power, hydraulic rams, water pressure engines, windmills, solar engines.

Class 120.—*Means of Transmitting Power and Accessories of Engines and Boilers*—Belting, pulleys, shafts, gearing, clutches, fire feeders, smoke-consuming apparatus, valves and valve gear, steam joints, governors, injectors, pumps, bearings, lubricators, indicators, gauges.

Class 121.—*Rails, Switches, Signalling Apparatus for Rail or Tramways*—Crossings, turntables, communications in trams and with trams, modes of water-supply, signals and points, fixed and rolling stock for tramways.

Class 122.—*Brakes, Hand and Automatic*—Screw, chain, compressed air, vacuum, steam, electrical.

Class 123.—*Atmospheric Railways and Portable Railways*—Rope railways and tramways; pneumatic railways.

GROUP XVIII.

NAVAL ARCHITECTURE AND ENGINEERING.

Class 124.—*Ship and Boat building*—Models of ships and vessels of all kinds; also of boats for commerce or pleasure.

Class 125.—*Construction*—Materials used in the construction of wood, iron, or steel vessels, armour plating, submarine armour, sternpost, etc.

Class 126.—*Ship's Fittings*—Masts, sails, canvas and rope, wire rigging, anchors and chains, boat-lowering apparatus, pumping and ventilating apparatus, winches and capstans, steering gear, indicators and engine-room telegraphs, compasses, sextants, quadrants, repeating circles, ships' logs, instruments connected with ships and machinery.

Class 127.—*Marine Propulsion*—Marine engines, full size and in models, from their first introduction to the present time; propellers, paddles, hydraulic propulsion, shafting, and gear.

Class 128.—*Life-saving Apparatus*—Life-boats, life-rafts, deck-seats, belts, and life-saving clothing of all kinds.

Class 129.—*Armament*—Heavy guns and fittings; torpedoes, torpedo catchers, machine guns.

GROUP XIX.

CIVIL ENGINEERING, CONSTRUCTION AND ARCHITECTURE, SANITARY APPLIANCES, AERONAUTICS.

Class 130.—*Road-sweeping Machines*—Rollers; apparatus for removing mud or snow; water-carts, etc.; construction and maintenance of roads and streets.

Class 131.—*Bridges and Viaducts*—Models, plans, apparatus used in construction; submarine construction.

Class 132.—*Docks and Harbours*—Plans and designs, diving apparatus, dredging machines, pile drivers, caissons; hydraulic apparatus for working docks.

Class 133.—*Lighthouses*—Models and plans of lighthouses.

Class 134.—*House Construction and Building Materials (other than Stone)*—Fire-proof structures; materials for sanitary house construction, roofs, walls, damp courses, solid floors, cements, damp-proof wall coverings.

Class 135.—*Water Supply and Sewerage*—Meters, filters, water fittings, house drains; their construction and ventilation; water and earth closets; ventilators, lavatories, baths, and bath fittings.

Class 136.—*Military Engineering*—Models of bridges and fortifications, intrenching tools, field kitchens, field telegraphs, camp and bivouacking appliances, military clothing and accoutrements, transport arrangements, explosives for demolitions, submarine mine cases, and relative electrical apparatus, aeronautics.

GROUP XX.

MINING AND METALLURGY, MINERALS, QUARRYING, AND FUEL.

Class 137.—*Coal*—Anthracite and bituminous, with samples showing thickness of seam; bitumen, kerosene, and other oil shales; pressed coal and coke.

Class 138.—*Building and other Stone*—Rough, hewn, sawn, or polished stones; white, black, or coloured marbles, granite, and other ornamental stones in blocks or slabs; lithographic stones; hones, grindstones, whetstones.

Class 139.—*Iron, Lead, Copper Ore, etc.*—Iron ores; copper and lead ores.

Class 140.—*Pig-iron, Wrought-iron, and Steel*—Iron and steel in pig, ingot, bars, plates, and sheets.

Class 141.—*Lead, Copper, Zinc, Tin, and Brass in Process of Manufacture*—Lead, graphite, copper in cakes, tiles, ingots, bars; tin, zinc, antimony, bismuth, brass, gun metal.

Class 142.—*Gold, Silver, Platinum*—Samples of reef and alluvial gold and silver ores; gems and precious stones; collections of minerals.

N.B.—Machinery and appliances used in the production or manufacture of the above will be placed in the Machinery Section.

GROUP XXI.

AGRICULTURE, HORTICULTURE, AND ARBORICULTURE.

Class 143.—*Field Implements*—Ploughs, cultivators, harrows, rollers, presses, spades, forks, hoes, draining tools, sowing machines for grain and other farm seeds, manual distributors, reapers, mowers, binders, root thinners and raisers, potato planters.

Class 144.—*Barn and Farmyard Implements*—Traction and other agricultural engines; threshing machines, winnowers, grain and seed cleaners and dressers; hay and straw elevators; trussers, compressors, root and chaffcutters; grist mills, crop dryers, sheep dippers; barn requisites.

Class 145.—*Dairy and Poultry Farm Appliances and Bee-keeping*—Complete working dairies; dairy appliances, implements and utensils, cream separators, churns, cheesemaking apparatus, incubators, apiarian appliances.

Class 146.—*Farm and Dairy Produce*—All grain, roots and seeds; dairy produce, butter, cheese, preservatives, colouring.

Class 147.—*Agricultural Construction*—Models, plans, and designs for farm buildings; silos, rick stands, byre and stable fittings and requisites; field and other gates, hurdles, fencings, etc.

Class 148.—*Manures, Cattle Food, etc.*—Artificial manures, cattle and poultry foods, sheep dips, materials, processes, etc.

Class 149.—*Horticulture and Floriculture*—Ornamental trees, shrubs, coniferæ, flowers, ferns; illustrations of and materials used in floral designs, etc.; hothouses, conservatories, vineries, garden implements, vases, flower pots, etc.; borderings for walks and flower beds, park seats, chairs, garden statuary, fountains, rustic arbours, houses, chairs, bridges, etc.

Class 150.—*Arboriculture*—Timber and trunks of trees, abnormal growths; specimens of barks, leaves, flowers, and seeds; ship timber, shingles, laths, staves; wood for street paving; ornamental woods used in design and furniture; dye woods; preservation of timber; illustrations of planting and protecting forests; collections, illustrations, and descriptions of destructive insects.

GROUP XXII.

FISHERIES, INCLUDING NATURAL HISTORY BEARNING THEREON.

Class 151.—Nets, rods, tackles, weirs, dams, passes; fish-breeding ponds and sluices; vessels for transporting ova and spawn; fish culture.

GROUP XXIII.

WOMEN'S INDUSTRY.

Class 152.—*Needlework and Knitting.*—Plain needlework; ladies' and children's underclothing; white embroidery on muslin and linen; plain knitting, fancy knitting, art embroidery.

Class 153.—*Mechanical Work.*—Straw and basket work; brush making; filigree work; feather dressing; spinning, glove making, flower making, toy making; fishing tackle and fly dressing; bookbinding.

Class 154.—*Decorative Work and Furnishings, Carving on Wood, etc.*—Wall decorations; curtains, furniture screens, carved fret or painted work, brass work.

Class 155.—*Painting, Drawing, and Engraving.*—Painting on fabrics, china, glass; missal painting; Christmas card and fan painting; wood and steel engraving; lithography; designs for wall and floor coverings; designs for art embroidery, etc.

GROUP XXIV.

ARTISAN SECTION.

Class 156.—Specimens of handicraft of all kinds of work executed by artisans, apprentices, and pupils of Technical schools; models, drawings, carvings, castings, etc., etc.

Ordered, that the Prospectus be published for general information in the Supplement to the *Gazette of India*.

E. C. BUCK,

Secretary to the Government of India.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

RAILWAY STATISTICS.

No. IX of 1893-94.

STATEMENT OF APPROXIMATE GROSS EARNINGS OF INDIAN RAILWAYS.

N.B.—As regards the figures in column *Total Receipts from 1st April 1893*, audited figures have been used as far as possible.

Railway.	Average earnings per mile per week in 1892-93.	Week ending 4th June 1892. Mean mileage worked.	Earnings. Total.	Per mile open per week.	Week ending 3rd June 1893. Mean mileage worked.	Earnings. Total.	Per mile open per week.	Earnings from 1st April to 4th June 1892.	Earnings from 1st April to 3rd June 1893.	Increases in 1893-94.	Decreases in 1893-94.
State lines worked by companies.	*Rs.*	*Miles.*	*Rs.*	*Rs.*	*Miles.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs*

(*a*) Includes the Bezváda-Godaveri section of the East Coast (state) railway.
(*b*) Includes the Godhra-Rutlam railway.
(*c*) Includes the Guntakal-Mysore frontier section from 1st April 1893.
(*d*) Includes the Tirhoot state railway. Although for convenience classed amongst the state railways, the company's section of this line is the property of the Bengal and North Western railway company.
(*e*) Includes the Jammu and Kashmir and the Hyderabad-Umarkot railways.
(*f*) Although for convenience classed amongst the state railways, this line is the property of the Bengal Central railway company.
(*g*) Includes the Wardha Coal, Dhond-Manmád, Khámgaon, and Amráoti railways.
(*h*) Includes the Bangalore-Nanjangúd and the Bangalore-Mysore frontier sections.
(*i*) Total receipts from 12th April to 3rd June 1893.

F. B. HEBBERT,
Under-Secretary.

SUPPLEMENT TO

The Gazette of India.

No. 25.} CALCUTTA, SATURDAY, JUNE 24, 1893.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in* PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on Saturday, June 17th, 1893.

The present week has been marked by the appearance of a moderate cyclone over the Bay and by the extension of monsoon winds and rain over a very large part of the Indian region. This general rainfall has been accompanied with low temperatures throughout the greater portion of the country.

The chart of Sunday, June 11th, showed that the barometer was falling, except at a few places in the south of the Peninsula. A slight depression apparently lay over the east of the Bay in the neighbourhood of the Andaman Islands, and a second slight depression existed off the Konkan Coast. Pressure was highest in the extreme south and lowest over the Punjab and the Gangetic plain. Monsoon winds prevailed over the greater part of the country, but in Lower Burma the general direction was easterly and on the Konkan Coast south-south-easterly. Rain had fallen over the west and south of the Peninsula, the Central Provinces, Bengal, and Burma. The fall was not heavy, except along the west coast of the Peninsula. The observations on the morning of the 12th showed that the depression which lay near the Andaman Isles on the 11th was crossing the Bay in a west-north-west direction, while that off the Konkan Coast had moved only very slightly. Steepish gradients prevailed along the West Coast and over the south of the Bay, and the winds which blew from about the normal monsoon directions in most places were increasing in force. On the east side of the Peninsula the winds were veering towards north-west under the influence of the advancing depression. Rain was reported from the greater part of the Peninsula, from several central stations, from Burma, from Bengal, and from the north of the Gangetic plain. The amounts had increased in several parts of Eastern India, but were generally unchanged in Western India. Cuddapah received over 5 inches, Berhampore over 4 inches, and Dinajpur, Balasore, Dhubri, Ratnagiri, and Mormugao over 2 inches. On the 13th the depression over the Bay was advancing towards the Ganjam Coast, while that over the Arabian Sea was passing away north-westward, and lay off the Kathiawar Coast. The barometer had fallen over the east of the Peninsula and risen elsewhere. The winds were cyclonic over the Bay, but blew from the ordinary monsoon directions elsewhere. There was little or no rain over the centre and east of the Peninsula, the Indus Valley, and Rajputana, but elsewhere the fall was more or less general. The amounts were moderate on the West Coast and at some central stations and light elsewhere. Ahmedabad reported over 4 inches and Lucknow, Mangalore, Ratnagiri, Saugor, Pachmarhi, and Indore over 2 inches. On the 14th the cyclonic storm over the Bay was close to the Madras Coast, while that over the Arabian Sea was still passing away north-westward. The barometer was rising, except over the east of the Peninsula and the Central Provinces. Gradients were steep over the Bay. A fresh to strong monsoon was blowing along the West Coast, moderate easterly winds up the Gangetic plain, and variable winds over the Central Provinces. Over the Bay the directions were cyclonic, and in the south and east of the Bay the force was strong. On the 15th the barometer was falling, except over parts

of North-Western India. At Vizagapatam the fall was about one quarter of an inch, and the centre of the storm over the Bay was close to the mouth of the Godavari. Strong cyclonic winds and gales prevailed over the Bay, while elsewhere the winds were from the normal monsoon directions. Rain was falling, except over parts of North-West and Central India. The amounts were heaviest along the west coast of the Peninsula, but they were also large in Ganjam. Mormugao, Goa, and Karwar received over 4 inches, and Mandalay, Ratnagiri, and Gopalpur over 3 inches. During the night of the 15th the cyclonic storm over the Bay crossed the Coast on a north-west track, and the observations of the morning of the 16th showed the centre close to Chanda (Central Provinces). Steep gradients prevailed over the Peninsula and the Bay and moderate gradients over the Gangetic plain, but over the central parts of the country, Guzerat, and Sind pressure was uniform. Strong monsoon winds were blowing over the Peninsula and up the Bay into Bengal, while a steady easterly current prevailed over Northern India. Rainfall was scattered and light over Northern and Central India and the Carnatic, but was general and fairly heavy elsewhere. Ratnagiri reported 7½ inches, Mercara and Calicut over 3 inches, and Cochin, Mangalore, Sholapur, and Cocanada over 2 inches. On the 17th the barometer was rising over the Peninsula and Burma and falling elsewhere. The depression over the Central Provinces was moving slowly north-westward, but otherwise there was little change in the general distribution. Steep gradients and a strong monsoon prevailed over the Peninsula and the Bay, and there was still a steady easterly current up the Gangetic plain. There was again comparatively little rain over Upper India, Rajputana, Sind, and the Carnatic, but elsewhere the fall continued general. The amounts were not, however, heavy, the largest being over 3 inches at Ratnagiri, Mercara, and Nagpur, and over 2 inches at Dehra Dun.

Temperature.—As noticed above, the rainfall during the week was light and partial over Sind, Rajputana, Central India, and Guzerat, while it was steadily light over Burma. Hence the temperature of those districts was comparatively high, but in all other parts of the Indian region, where the rainfall was general and more or less heavy, the heat was less than usual.

The following table shows the variations of the mean temperature from the normal on each day of the week for the different Provinces of India :

Province.	June.							Mean variation of week.
	11th.	12th.	13th.	14th.	15th.	16th.	17th.

Mean for whole of India .	+0·7	—0·3	—1·5	—1·6	—1·5	—2·1	—1·9	—1·2

The mean temperature of the whole of India for the week was 1·2 lower than usual, and on all days of the week, except the 11th, the mean temperature of the whole country was in defect. In Burma the heat was from 2° to 3° greater than usual throughout the week, and in Guzerat, Central India, Sind, and Rajputana the mean temperature of the week was higher than usual, but in all the other Provinces the mean was low. The greatest abnormal defect was in the North-Western Provinces and Madras.

Rain.—The rainfall table at the close of the summary shows that during the week under review there has been absolutely no rain in Sind and an average fall of a tenth of an inch or less of rain in Madras (South) and the Punjab, (West), but that in all the other divisions there has been effective rain. The average actual rainfall was heaviest (14·31 inches) in the Malabar division; this was followed by 11·84 inches in the Konkan and by 9·46 inches in Coorg, while, as mentioned above, the fall was lightest in the extreme north-west of India and in the extreme south-east of the Peninsula. According to the normal distribution, the heaviest rainfall during this week should be 14·35 inches in Arakan, followed by 10·66 inches in Tenasserim, by 9·50 inches in Assam (Surma), and by 9·18 inches in Malabar. The area of heaviest rainfall was thus transferred from Burma and North-Eastern India to the south-west of the Peninsula. This change was due, on the one hand, to the very strong advance of the monsoon which occurred along the West Coast during the week, and, on the other, to the fact that the monsoon current of the Bay was interrupted and diverted from the Eastern Peninsula by the action of the cyclonic storm which crossed the Bay. The third column of the table shows that in the case of twenty-eight of the rainfall divisions the rainfall of the week was excessive, in the case of twenty-two it was deficient, and in the case of one it exactly equalled the average. The regions of excessive rain included the following divisions, *viz.*, Central Bengal, Orissa, Chota Nagpur, Oudh (North), the North-Western Provinces (Submontane), the Punjab (South and Central and Hill districts), Malabar, Coorg, the Konkan, the Deccan, Khandeish, all the Central Provinces divisions, Guzerat, Kathiawar, all the East Coast divisions, Hyderabad (South), and Madras (Central and South-Central), while the North-Western Provinces (Central) showed no variation from the normal. In all the other divisions the rainfall was deficient. The deficiency was large in Burma, East Bengal, and Assam, but was more or less unimportant elsewhere. The excess was large over the west and centre of the Peninsula and in parts of the central districts of India.

The three concluding columns of the table show the average actual and average normal rainfall of the period May 28th to June 17th. In the case of eleven divisions, *viz.*, East Bengal, Deltaic Bengal, Orissa, Behar (North), the North-Western Provinces (West), the Punjab (South Hill districts and West), Malabar, Coorg, Berar, and the East Coast (North *a*), the average and normal rainfall are approximately the same, while in all the Burma divisions, in Assam (Brahmaputra), the Punjab (Submontane), Kathiawar, Central India, and Rajputana the actual rainfall for the period is less than the normal. In all other parts of India the rainfall has been excessive. The excess is large in the North-Western Provinces, the Central Provinces, and parts of the Peninsula.

The following gives the largest total amounts received during the week as reported in the rainfall telegrams of the week:

Division.	District.	Station.	Amount.
East Bengal	Mymensing	Jamalpur	8·75 inches.
Assam	Khasia Hills	Cherra	8·95 ,,
North Bengal	Dinajpur	Thakurgaon	9·67 ,,
North-Western Provinces.	Pilibhit	Puranpur	9·90 ,,
Malabar	South Kanara	Udipi	27·58 ,,
Madras (South-Central.)	Nilgiris	Devala	14·70 ,,
Coorg	Mercara	Sudder	11·80 ,,
Mysore	Shimoga	Nagar	8·27 ,,
Konkan	North Kanara	Kumta	26·12 ,,
Deccan	Kolhapur	Bavda	22·32 ,,
Central Provinces	Jubbulpore	Sudder	9·86 ,,
Guzerat	Broach	Hansot	9·35 ,,
East Coast	Vizagapatam	Stringavarapukota	9·60 ,,

SIMLA, *22nd June, 1893.*

W. L. DALLAS,
Asst. Meteorological Reporter to the Government of India.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the state of the Season and Prospects of the Crops.

Madras.—*For week ending 17th June.*—Rain general, except in the Southern districts; very heavy on the West Coast, and heavy in Circars. Cultivation proceeding actively, and sowing begun in many places. Standing crops generally flourishing, but require rain in parts of the Southern districts. Pasture rapidly improving and fodder generally available. Condition of cattle good. Water-supply generally sufficient and freshets in larger rivers. Prices remain almost stationary, though slightly easier in the Central districts.

Bombay.—*For week ending 21st June.*—Rain throughout the Presidency Proper; heavy in four districts and slight in one district of Sind. Standing crops good, except in one district, where they have been damaged by crickets. Preparations for next season progressing in parts of eight districts and sowing throughout the Presidency, except in parts of three districts, where it is retarded owing to excessive rain. Prices steady, except in parts of two districts. Agricultural stock good and fodder sufficient.

Bengal.—*For week ending 17th June.*—The weather has been of ordinary monsoon character throughout the week, and there has been fairly general rain in all districts. General agricultural prospects are favourable, but in parts of South-West Bengal and Orissa cultivation is retarded owing to the excessive rainfall; elsewhere rice and autumn crop sowings are making good progress, and in some places the transplanting of seedlings has begun. All standing crops, including sugarcane, jute, early rice, and indigo, are doing well. Indigo is being cut in two districts. The spring rice harvest is nearly over, and the outturn is generally satisfactory. No important change in prices of food-grains. Cattle are generally healthy, and supplies of fodder and water are plentiful. There were flights of locusts in Patna and Gya, but they did no damage.

North-Western Provinces and Oudh.—*For week ending 21st June.*—Rain has been general during the week, and the monsoon appears to have set in. Agricultural operations are in active progress. Standing crops doing well. Supplies ample and prices generally steady. Flights of locusts appeared in parts of Benares, Banda, Ballia, Cawnpore, and Almora, but no damage has been reported in any of these districts.

Punjab.—*For week ending 21st June.*—Rain has fallen in six districts. Threshing of spring crops nearly over, and ploughings for and sowings of autumn crops in progress. Weeding of sugarcane and cotton commenced in some districts. Condition of standing crops is generally good, and prospects are fair. Wheat still lying on the threshing floors is receiving some damage from rain. Straw has been considerably damaged in most districts. Cattle are generally in good condition. Fodder is sufficient throughout the Province. Prices rising in one district, falling in three others, and generally stationary elsewhere.

Central Provinces.—*For week ending 21st June.*—Weather cloudy with occasional heavy showers. The monsoon appears to have fairly set in over the greater part of the Provinces. Sowing of autumn crops commenced in four districts and in progress elsewhere. Prices falling in one district.

Burma.—*For week ending 17th June.*—Ploughing for and sowing and transplanting of wet-weather crops are progressing generally. Sowing of sesamum and cotton in progress in some districts of Upper Burma. Except for a slight increase in Thongwa, the price of paddy remains unchanged. In Upper Burma the price has risen slightly in the Southern Shan States and considerably in the Northern Shan States, and has fallen slightly in Mandalay and Minbu. Relief works in Meiktila closed from the 15th June.

Assam.—*For week ending 20th June.*—Weather seasonable. Planting of winter paddy progressing. Fodder and water sufficient.

Mysore and Coorg.—*For week ending 21st June.*—MYSORE: Rainfall good in one district and slight in other parts. Standing crops in good condition. Sowing operations being completed. Prospects generally favourable. Prices risen in one district and fallen in two others.

COORG: Rainfall good. Ploughing of rice fields and planting of coffee in progress. Prices stationary. Fodder and water sufficient for cattle.

Berar and Hyderabad.—*For week ending 21st June.*—BERAR: Rainfall good. Weather warm and cloudy. Sowing of cotton and *juar* (*sorghum vulgare*) commenced in all districts. Water sufficient, but fodder inadequate in one taluk. Cattle healthy. Prices almost steady.

HYDERABAD: Rainfall good. Sowing of autumn crops commenced. Prices stationary.

Central India.—*For week ending 21st June.*—The monsoon appears to have commenced all over Central India. Heavy rain in the Bhopawar Agency; more rain wanted in Bhopal. Ploughing and sowing commenced, and in progress in all parts. Cattle in fairly good condition. Pasturage good. Prices of food-grains fluctuating in Gwalior; steady elsewhere.

Rajputana.—*For week ending 21st June.*—Rainfall fairly general and good in parts. Agricultural operations commenced in some States. Harvest outturn and agricultural stock good. Pasturage or fodder sufficient, except in parts of Kotah. Prices falling in two States, fluctuating in one, and steady elsewhere.

Kashmir.—*For week ending 20th June.*—Weather fine. Spring crops in Kashmir Proper excellent. Rice crop promising well. Irrigation ample. Prices easy in Srinagar.

Nepal.—*For week ending 17th June.*—Weather dull; rain impending. State and prospects of crops normal.

E. C. BUCK,

Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

STATISTICS.

IMPORTS OF COTTON, WHEAT, LINSEED, AND INDIGO.

Statement showing in maunds the imports of Cotton, Wheat, Linseed, and Indigo by rail and river into Calcutta, Bombay Town, and Karachi during the month of April 1893, and from 1st January 1893 to 30th April 1893, compared with the corresponding periods of the years 1891 and 1892.

FINANCE AND COMMERCE DEPARTMENT.

Proposals for Changes in the Indian Currency System.

No. 2665, dated the 26th June, 1893.

Ordered, that the papers mentioned in the following list relating to proposals for changes in the Indian Currency system be published for general information in the Supplement to the *Gazette of India*:

J. F. FINLAY,
Secretary to the Government of India.

No. — *List of Papers.* — *Page.*

1. From the Bengal Chamber of Commerce, No. 83, dated the 4th February 1892, referring to the telegraphic announcement that the United States had invited the Powers to a Monetary Conference, and enquiring whether the Government of India proposed to take any action with reference to the position of silver in India if the Conference should be a failure, and America should be forced to repeal the Act providing for purchases of silver by the Treasury 867

2. Reply from the Government of India, No. 571, dated the 10th February 1892, stating that Government were unable to offer any assurances as to the course they might take in a hypothetical case, and asking for any recommendations which the Chamber might desire to make ... ... *ib.*

3. From the Bengal Chamber of Commerce, No. 113, dated the 18th February 1892, suggesting that the Government should promote the holding of an International Conference and offer inducements to bring about agreement thereat; and, if the attempt should fail, that Government should cause the question of the introduction of a gold standard in India to be considered by competent authorities ... ...867—868

4. From the Government of India to Her Majesty's Secretary of State for India, No. 68, dated the 23rd March 1892, forwarding the foregoing correspondence recommending that His Lordship should lend his strongest support to any proposals for an International Conference, and that Her Majesty's Government should carefully consider beforehand the measures required to protect India against future oscillations in the relative value of gold and silver in view to the possible future action of the United States if international agreement should not be arrived at ... ...868—869

5. Telegram from the Government of India to the Secretary of State for India, No. 2138, dated the 19th May 1892, expressing the hope that as the invitation of the United States to an International Monetary Conference had been accepted by Her Majesty's Government, an adequate representation of Indian interests would be secured, and that a determined effort would be made to settle the question by the adoption of practical measures 869

6. Reply from the Secretary of State, dated the 20th May 1892, agreeing in the importance of a proper representation of Indian interests ... ... *ib.*

7. From the Government of India to the Secretary of State for India, No. 160, dated the 21st June 1892, expressing the opinion that if the International Conference should not arrive at a satisfactory conclusion in the adoption of a system of double legal tender by international agreement and a direct agreement between India and the United States should be unattainable, the Government of India should at once close their mints to the free coinage of silver and arrange for the introduction of a gold standard ...869—871

8. Minute by the Honourable Sir David Barbour, dated the 21st June 1892, appended to the foregoing despatch, stating the outlines of a plan for the introduction of a gold standard ... ...871—875

No.		*Page.*
9.	From the Secretary of State for India, No. 92, dated the 2nd June 1892, intimating the acceptance by Her Majesty's Government of the invitation from the United States to an International Monetary Conference ...	876
10.	Letter from the India Office to the Treasury, No. 1420-F., dated the 13th May 1892, enclosed in the foregoing despatch, pointing out the necessity of encouraging any measures which might bring about a comparatively stable rate of exchange	...876—877
11.	From the Hon'ble J. L. Mackay, C.I.E., President of the Indian Currency Association, dated the 24th June 1892, forwarding a memorial of the Association to the House of Commons, praying that the Government of India might be vested with power to introduce a gold standard if international concert should not be arrived at	...877—878
12.	The memorial referred to	...878—882
13.	From the Government of India to the Secretary of State for India, No. 183, dated the 12th July 1892, forwarding Mr. Mackay's letter and the memorial	882
14.	From the Government of India to the Hon'ble J. L. Mackay, No. 2843-A., dated the 8th July 1892, informing him of the transmission to the India Office of his letter and of the memorial of the Association	*ib.*
15.	From the Government of India to the Secretary of State for India, No. 205, dated 2nd August 1892, answering a telegram from the Secretary of State in which information was requested as to the probable effect of a gold standard on prices, the import and export trade, industry, the land revenue, opium, gold and silver debt, and the claims of the officials for compensation	...882—885
16.	From the Government of Bombay to the Government of India, No. 3083, dated the 28th July 1892, transmitting a letter from the Commissioner in Sind and a memorial from the native merchants of Karachi urging the essential need of steps being taken to put a stop to the intolerable uncertainty of the value of the rupee	885
17.	The letter from the Commissioner in Sind referred to, No. 2730, dated the 2nd July 1892	*ib.*
18.	The memorial of the native traders of Karachi referred to, dated the 27th June 1892	...886—887
19.	From the Government of India to the Secretary of State for India, No. 217, dated the 16th August 1892, forwarding the letter from the Government of Bombay and the memorial received with it	887
20.	From the Hon'ble J. L. Mackay, C.I.E., President, Indian Currency Association, dated the 9th August 1892, stating that the memorial of the Association had already more than eight thousand signatures, including two-thirds of the members of the Bengal Chamber of Commerce, and urging prompt consideration of the question by Government	...887—888
21.	From the Government of India to Mr. Mackay, No. 3373, dated the 15th August 1892, intimating that no public declaration of the views of the Government of India on the subject could be made	888
22.	From the Government of India to the Secretary of State for India, No. 228, dated the 16th August 1892, enclosing Mr. Mackay's letter	*ib.*
23.	Telegram from the Honorary Secretary, Indian Currency Association, Madras, dated the 17th August 1892, embodying a resolution passed at a public meeting calling on the Government of India to say what steps they proposed to take to allay the panic feeling in the country	*ib.*
24.	From the Government of India to the Secretary of the Madras Association, No. 3500-A., dated the 29th August 1892, expressing regret that no public declaration could be made	889
25.	From the Honorary Secretary, Indian Currency Association, Ootacamund, dated the 21st August 1892, embodying a resolution passed at a public meeting to the effect that the Government of India should urge on the Secretary of State the importance of obtaining by international agreement a fixed ratio between gold and silver, and, failing such agreement, that the Government should be given a free hand for the adoption of measures to remedy the existing evils	*ib.*

No.		*Page.*
26.	From the Government of India to the Secretary of State for India, No. 231, dated the 30th August 1892, transmitting the communications received from Madras and Ootacamund	889
27.	From the Honorary Secretary, Indian Currency Association, Ootacamund, to the Government of India, dated the 22nd August 1892, forwarding resolutions passed at a public meeting held on the 19th instant	...889—890
28.	From the Government of India to the Honorary Secretary of the Indian Currency Association, Ootacamund, No. 3721-A., dated the 3rd September 1892, acknowledging receipt of the letter	890
29	From H. A. Acworth, Esq., Vice-President of the Bombay Branch, Indian Currency Association, to the Government of India, dated the 8th September 1892, forwarding a resolution passed by the Association requesting that the Secretary of State should be urged to allow the Government of India to adopt some speedy remedy for the depreciation and fluctuation of the rupee	...890—891
30.	From the Government of India to the Secretary of State for India, No. 254, dated the 21st September 1892, forwarding the foregoing letter ...	891
31.	From the Government of India to Mr. Acworth, No. 3838-A., dated the 21st September 1892, informing him of the transmission of the resolution to the India Office	*ib.*
32.	From the Government of India to the Secretary of State for India, No. 272, dated the 5th October 1892, forwarding a paper by Mr. J. E. O'Conor on the range of prices in India	...891—893
33.	Mr. O'Conor's paper and appended tables	...893—912
34	From the Government of Bombay to the Government of India, No. 3768, dated the 22nd September 1892, forwarding a letter from the Bombay Chamber of Commerce on the subject of the fluctuations in the sterling value of the rupee	912
35.	The letter from the Chamber referred to, dated the 15th September 1892, transmitting a resolution on the difficulty and danger to commerce resulting from the fluctuations of the rupee, and suggesting that the subject should be referred to a Committee of experts	*ib.*
36.	From the Government of India to the Secretary of State for India, No. 271, dated the 5th October 1892, transmitting the letter and resolution of the Bombay Chamber of Commerce	913
37.	From the Government of India, No. 4124-A., dated the 7th October 1892, informing the Government of Bombay of the transmission of the papers to the India Office	*ib.*
38.	From the Secretary of State for India, No. 159, dated the 25th August 1892, to the Government of India, commenting on the memorial to the House of Commons of the Indian Currency Association	*ib.*
39.	From the Hon'ble J. L. Mackay, C.I.E., President of the Indian Currency Association, dated the 28th September 1892, asking for a copy of the foregoing despatch	914
40.	Reply from the Government of India, No. 3998-A., dated the 29th September 1892, sending the despatch	*ib.*
41.	From the Hon'ble J. L. Mackay, C.I.E., President of the Indian Currency Association, dated the 1st October 1892, replying to the remarks made by the Secretary of State for India, and enclosing copy of Proceedings of a General Meeting of the Association held at Calcutta on the 25th August	...914—915
42.	The Proceedings of the Meeting	...915—922
43.	Report of the Central Committee of the Association presented to the Meeting	...922—925
44.	From the Government of India to the Secretary of State for India, No. 279, dated the 12th October 1892, forwarding Mr. Mackay's letter and its enclosures	925

No.		Page.
45.	From the Honorary Secretary, Darjeeling Tea Planters' Association, No. 279, dated the 24th September 1892, forwarding a memorial from the Association predicting the collapse of the Indian tea industry if the proposals contained in the memorial of the Indian Currency Association should be acted upon	925
46.	The memorial of the Darjeeling Tea Planters' Association	925—927
47.	From the Government of India, No. 4189-A., dated the 12th October 1892, replying to the abovementioned memorial	927—929
48.	From the Government of India to the Secretary of State for India, No. 286, dated the 19th October 1892, forwarding the memorial and the reply thereto	929
49.	Telegram from the Secretary of State for India, dated the 30th September 1892, announcing the appointment of a Committee under the presidency of Lord Herschell to consider whether it is expedient to modify the Indian Currency laws	930
50.	Telegram from the Indian Currency Association, Bombay, urging that Mr. Mackay be requested to proceed to England to give evidence before Lord Herschell's Committee, and that the evidence of certain other gentlemen should also be taken	*ib.*
51.	Telegram from the Government of India to the Secretary of State, No. 4235-A., dated the 14th October 1892, repeating the foregoing telegram ...	*ib.*
52.	Telegram from the Indian Currency Association, Calcutta, dated the 14th October 1892, urging the deputation of Mr. Mackay to give evidence before Lord Herschell's Committee	*ib.*
53.	From the Indian Currency Association, Calcutta, dated the 15th October 1892, repeating the resolution telegraphed as above	*ib.*
54.	Telegram from the Indian Currency Association, Madras, dated the 19th October 1892, urging the deputation of Mr. Mackay to give evidence before Lord Herschell's Committee	931
55.	Similar telegram, dated the 22nd October 1892, from the Ootacamund Branch of the Association	*ib.*
56.	From the Government of India, No. 4416-A., dated the 28th October 1892, informing the senders of the foregoing communications of Mr. Mackay's departure for England for the purpose of giving evidence	*ib.*
57.	From the Secretary of State for India to the Government of India, No. 219, dated the 3rd November 1892, enclosing copy of a letter addressed to the Lord High Chancellor regarding the constitution of the Indian Currency Committee	931—932
58.	The letter to the Lord High Chancellor, No. 4641-F., dated the 21st October 1892	932
59.	From Damodhur Gokaldas Munjie, Bombay, forwarding a memorial signed by 674 Native import traders of the City of Bombay praying that steps may be taken to fix the exchange value of the rupee	932—934
60.	From the Government of India to the Secretary of State for India, No. 4541-A., dated the 4th November 1892, requesting that Lord Herschell's Committee should be informed of the receipt of the aforementioned memorial ...	934
61.	Memorial from the Karachi Chamber of Commerce to the House of Commons, dated the 1st September 1892, praying that means may be obtained through the International Monetary Conference by which the mercantile community might be afforded the benefit of a stable par of exchange ...	934—935
62.	From the Government of India to the Secretary of State, No. 317, dated the 10th November 1892, forwarding copy of the memorial from the native traders of Bombay [No. 59] and the abovementioned memorial from the Karachi Chamber of Commerce	935
63.	From the Government of India to Mr. Damodhur Gokaldas Munjie, No. 4706-A., dated the 22nd November 1892, informing him of the transmission to the India Office of the memorial of the native import traders of Bombay	*ib.*

No.		Page.
64.	From H. A. Acworth, Esq., Vice-President, Bombay Branch of the Indian Currency Association, dated the 28th October 1892, forwarding a resolution expressing satisfaction at the appointment of the Indian Currency Committee, and urging expedition in the decision of the question ...	935
65.	From the Government of India to the Secretary of State, No. 313, dated the 9th November 1892, forwarding the abovementioned letter ...	936
66.	From the Government of India to Mr. Acworth, informing him of the transmittal of his letter and the resolution to the India Office ...	*ib.*
67.	Telegram from the Secretary of State for India, dated the 21st November 1892, stating that the Currency Committee desired to have the views of the Government of India on Sir John Lubbock's proposal for a seignorage on silver	*ib.*
68.	From the Government of India to the Secretary of State, No. 328, dated the 7th December 1892, stating their opinion on Sir John Lubbock's proposal	936—938
69.	From J. A. Anderson, Esq., Vice-President, Indian Currency Association, dated the 7th December 1892, suggesting that the public anxiety would be allayed by an assurance that, in the event of the failure of the International Conference, Government would take measures to protect the Indian Currency, and asking Government, if such an assurance could not be given, to recommend the cessation of sales of Council bills below the current rates, pending the decision of Lord Herschell's Committee ...	938
70.	From the Government of India to the Vice-President, Indian Currency Association, No. 4927-A., dated the 9th December 1892, declining to give the assurance asked for or to recommend the cessation of sales of Council bills below a fixed rate	*ib.*
71.	Telegram from the Government of India to the Secretary of State, No. 4939-A., dated the 9th December 1892, reporting the foregoing correspondence ...	939
72.	Telegram from Honorary Secretary, Indian Currency Association, Madras, dated the 9th December 1892, urging Government to declare their intentions or stop the sale of Council bills pending report of Lord Herschell's Committee	*ib*
73.	From the Exchange Banks Association to the Government of India, dated the 10th December 1892, asking for an assurance that any silver contracted for before the issue of an order to close the mints to free coinage of silver would be admitted for coinage	*ib.*
74.	From the Government of India to the Agent, Chartered Mercantile Bank of India, London, and China, No. 4985, dated the 13th December 1892, declining to give the assurance asked for in the abovementioned letter ...	*ib.*
75.	From the Government of India to the Honorary Secretary, Indian Currency Association, Madras, No. 5039, dated the 16th December 1892, declining to comply with the request made in No. 72. ...	940
76.	From the Hon'ble J. L. Mackay, C.I.E., President, Indian Currency Association, dated the 21st December 1892, urging a speedy decision on the question	*ib.*
77.	Telegram from the Government of India to the Secretary of State, dated the 23rd December 1892, communicating the substance of the abovementioned letter	941
78.	From the Government of India to Mr. Mackay, No. 5169-A., dated the 23rd December 1892, informing him of the communication made to the Secretary of State	*ib.*
79.	Telegram from the Secretary of State to the Government of India, dated the 31st December 1892, replying to the telegram of the 23rd [No. 77] ...	*ib.*
80.	From the President, Bombay Branch of the Indian Currency Association, dated the 7th January 1893, forwarding a resolution passed by the Committee of the Branch on the 6th January urging the immediate closing of the mints against the free coinage of silver and the stoppage of the sale of Council bills under a certain fixed rate	941—942
81.	From the Government of India to the Secretary of State, No. 25, dated the 18th January 1893, forwarding the abovementioned telegram ...	942

No.		*Page.*
82.	From the Government of India to the President, Bombay Branch, Indian Currency Association, No. 306-A., dated the 21st January 1893, informing him of the transmittal of his letter to the Secretary of State	942
83.	Telegram from His Excellency the Viceroy to the Secretary of State, dated the 3rd February 1893, reporting an interview with a deputation from the Indian Currency Association	943
84.	Report of the deputation	943—953
85.	From the Chairman, Karachi Chamber of Commerce, dated the 10th February 1893, forwarding a resolution of the Chamber adopting the views expressed in a circular letter of the Chairman in favour of the closure of the mints to the free coinage of silver	953
86.	The resolution referred to	*ib.*
87.	The circular letter referred to	954
88.	From the Government of India to the Secretary of State, No. 91, dated the 8th March 1893, forwarding the papers received from the Karachi Chamber of Commerce	*ib.*
89.	From the Government of India to the Chairman, Karachi Chamber of Commerce, No. 906-A., dated the 2nd March 1892, informing him of the transmittal of the papers to the India Office	*ib.*
90.	From the Government of Madras, No. 202, dated the 24th February 1893, forwarding a letter from the Honorary Secretary of the Wynaad Planters' Association, and of a memorandum received therewith, opposing the proposals of the Indian Currency Association	955
91.	The letter and memorandum referred to	955—959
92.	From J. M. Dick, Esq., Karachi, dated the 24th February 1893, forwarding a protest from certain Karachi firms against the resolution of the local Chamber of Commerce mentioned in No. 86	959
93.	The protest referred to	959—960
94.	From Messrs. H. E. Abbott & Co., and certain other firms in Calcutta, dated the 9th February 1893, objecting to the proposals of the Indian Currency Association	960—961
95.	From Messrs. Allana Munjee and others, Bombay, dated the 25th February 1893, supporting the objections taken in the abovementioned letter	961
96.	From the Private Secretary to His Excellency the Viceroy, dated the 23rd February 1893, to the signatories of the letter of the 9th February 1893 [No. 94]	*ib.*
97.	From the Government of India to the Secretary of State, No. 103, dated the 22nd March 1893, forwarding the papers mentioned in Nos. 92, 93, and 95	*ib.*
98.	Telegram from His Excellency the Viceroy to Her Majesty's Secretary of State, dated the 15th June 1893, stating the opinion of the Government of India on the recommendations in the report of the Indian Currency Committee	962
99.	Telegram from Her Majesty's Secretary of State for India to His Excellency the Viceroy, dated the 20th June 1893, announcing the decision of Her Majesty's Government on the questions discussed by the Indian Currency Committee, and empowering the Government of India to act upon the decision	*ib.*
100.	Report of the Indian Currency Committee, dated the 31st May 1893	963—1006

1.] No. 83—92, dated 4th February 1892.

From—S. E. J. CLARKE, Esq., Secretary to the Bengal Chamber of Commerce,

To—The Secretary to the Government of India, Finance and Commerce Department.

I am desired by the Committee of the Chamber of Commerce to state that their attention has been directed to the telegrams recently received from Europe to the effect that America had invited the different Powers to a conference for the purpose of considering the silver question.

I am also directed to enquire whether, in the event of the proposed conference being unable to fix a ratio between silver and gold, and America being forced to abandon her present Bill dealing with the purchase of silver, the Government of India propose to take any action with reference to the position of silver in this country.

2.] No. 571, dated 10th February 1892.

From—J. F. FINLAY, Esq., Secretary to the Government of India, Finance and Commerce Department,

To—The Secretary to the Bengal Chamber of Commerce.

I am directed to acknowledge receipt of your letter No. 83—92 of 4th February 1892 stating that the attention of the Chamber has been directed to the telegrams recently received from Europe to the effect that America had invited the different Powers to a conference for the purpose of considering the silver question, and enquiring whether, in the event of the proposed conference being unable to fix a ratio between silver and gold, and America being forced to abandon her present Bill dealing with the purchase of silver, the Government of India propose to take any action with reference to the position of silver in this country.

2. In reply, I am to say that it would be impossible for the Government of India to offer any assurance as to the course which they might take in a hypothetical case, which would only arise upon the assumption (i) that the conference referred to in Reuter's telegrams is held; (ii) that it is unable to fix a ratio between the two metals; and (iii) that America thereupon determines to abandon the legislation under which the State is at present compelled to purchase certain amounts of silver.

3. I am, however, to add that the Government of India recognises the great importance of the subject to which you have invited their attention, and will be glad to be favoured with any recommendations which, in view of the possibilities referred to, the Chamber may desire to make.

3.] No. 113—92, dated 18th February 1892.

From—S. E. J. CLARKE, Esq., Secretary to the Bengal Chamber of Commerce,

To—The Secretary to the Government of India, Finance and Commerce Department.

I am directed by the Committee of the Chamber of Commerce to acknowledge receipt of your No. 571 of the 10th instant on the subject of the recent fluctuations in the relative value of gold and silver, and the inconvenience to legitimate trade which has resulted therefrom, and the uncertainty which exists as to the future exchange value of the rupee.

2. The fluctuations in the Indian exchanges to which the Committee desire to invite special attention are the great rise which took place in 1890 and the great fall which has taken place in 1891 and the first month of the present year 1892.

In 1890 Demand Bills on London rose from 1·47/8 to 1·9, and since then have fallen to 1·33/4.

It is, in the opinion of the Chamber, impossible for men of business to feel any confidence in the future value of the rupee, and they believe that such a state of things restricts the investment of capital in this country and seriously hampers legitimate enterprise.

3. It appears to the Committee that there is no complete remedy for these great and rapid fluctuations in the exchange between India and England, except either the establishment by international agreement of a system of free coinage of both metals at a fixed ratio, or the adoption of a gold standard by India.

Some hold that a partial remedy would be found in the adoption of a silver standard by the United States of America, which would have the effect of steadying the value of silver in relation to gold, and of preventing so great a fall in the price of silver as would otherwise occur; while others hold a contrary opinion.

4. Failing these remedies, the Committee see nothing in the future except the gradual demonetization of silver by one country after another, violent and endless fluctuations in the relative value of gold and silver, and a fall in the value of the rupee relatively to gold, the extent of which it is impossible to predict. The recent decision of the Austro-Hungarian Government to adopt a gold standard indicates very clearly what is likely to happen if special measures are not adopted to settle the question.

5. Under these circumstances the Committee experiences considerable difficulty in making definite recommendations, as it is necessarily not so well informed as to the probable action of Foreign Governments as the Government of India must be.

6. The remedy which would be attended with least risk appears to the Committee to be an international agreement for the free coinage of gold and silver at a fixed ratio, and the nearer such ratio might be to the market rate of the day, the less would be the immediate disturbance of trade.

7. The Government of India will no doubt be able to form its own opinion as to the probability of any such agreement being arrived at either in the present day or at some future time.

8. While the Committee are of opinion that the adoption of free coinage of silver in America might not have the effect expected by many, still it appears to them that the Government of India would be following a safe policy in promoting the holding of an International Conference on the subject, and in offering such inducements as it reasonably can to bring about an international agreement.

9. If success cannot be secured in this way, there appears to be nothing before us but the prospect of endless fluctuations in the relative values of silver and gold, attended with a fall in the value of silver of indefinite amount; and the Committee think that in such case the Government of India should take steps to have the question of the advisability of introducing a gold standard into India carefully and seriously considered by competent authorities.

4.] No. 68, dated 23rd March 1892.

From—The Government of India,
To—The Secretary of State for India.

We have the honour to forward, for Your Lordship's information, a copy of the correspondence noted on the annexed schedule with the Bengal Chamber of Commerce, in which the Chamber enquires what we propose to do with reference to the heavy fall in the value of the rupee which has followed on the fall in the price of silver in the United States.

2. Your Lordship is aware of the anxiety with which we regard this question, and of its high importance in our estimation as affecting the interests of India. We have at various times—for instance, in our letters No. 45 of the 2nd February 1886 and No. 277 of the 4th September 1886—fully expressed our views on the subject, and it is unnecessary to repeat them here. But we desire to say that the violent oscillations in the price of silver since 1890 and its rapid decline during the last year to the lowest point yet reached cause us, as they have caused the mercantile community, the gravest anxiety for the future.

3. We are desirous, as we have always been, of aiding in the settlement of the silver question by international agreement, and, if proposals should be made

by the United States or by any other Government for the holding of an International Conference, we trust that Your Lordship will lend those proposals your strongest support.

4. In our opinion it is not open to question that, if an international agreement is not arrived at, the United States Government will sooner or later be driven either to the adoption of a silver standard or to the abandonment of its purchases of silver. It is certain that the cessation of the purchases of silver by the United States could not fail to depress still further the price of that metal, and the policy to be followed by India in that event deserves the most serious consideration on an early date.

5. The stoppage of the coinage of silver by the United States will probably, if it should come, come suddenly; and if we defer until it has taken place the consideration of the measures which in that event it may be expedient to adopt, we shall find ourselves unprepared and left with no time for due consideration.

6. We are, therefore, of opinion that the subject should be considered in all its bearings beforehand, and we recommend that, in view of the possible action of the United States in the future, Her Majesty's Government should now take into consideration the question whether any, and if so what, measures can be adopted for the protection of Indian interests against the further decline in the gold value of the rupee to which, for the reasons which we have given, we may be at any moment exposed, and the violent fluctuations in the relative value of gold and silver to which under present circumstances we cannot assign any limit either in time or in amount.

5.] No. 2138, dated 19th May 1892.

Telegram from—The Government of India,
To—The Secretary of State for India.

As Her Majesty's Government have accepted invitation of United States to International Conference on currency question, we earnestly trust that steps will be taken to secure an adequate representation of Indian interests at the Conference.

We desire to call Your Lordship's attention to paragraph 133 of Part II of the Final Report of the Gold and Silver Commission, and to suggest that, failing a general international agreement, it may be possible for India and the United States to come to a direct agreement as to coinage of silver.

We are deeply impressed with the dangers to which we shall be exposed if the proposed International Conference makes no progress towards a settlement of the question—a result which must weaken the silver party in America, and might lead to the cessation of the purchases of silver by that country.

We are of opinion that the time for a merely academic discussion of the problem is past, and urge that a determined effort be made to settle the question by the adoption of practical measures.

The present may be the last opportunity of settling the question by agreement among the nations concerned.

6.] Dated 20th May 1892.

Telegram from—The Secretary of State for India,
To—The Government of India.

Your telegram of 19th May—Silver Conference. I agree in the importance of proper representation of Indian interests. Whom would you suggest as delegate? I will bear in mind your observations.

7.] No. 160 (Confidential), dated 21st June 1892.

From—The Government of India,
To—The Secretary of State for India.

In our Financial despatch No. 68, dated 23rd March 1892, we requested Your Lordship to lend your support to any proposals that might be made by

the United States of America or by any other country for the settlement of the silver question by international agreement. At the same time we called attention to the probability that, failing an international agreement, the United States would be forced to stop the purchase and coinage of silver, and we requested that Her Majesty's Government, in view of this contingency, should now take into consideration whether any, and if so what, measures could be adopted for the protection of Indian interests.

2. Since that despatch was written we have learnt with satisfaction that Her Majesty's Government have accepted the invitation of the United States to take part in an International Conference to consider measures having for their object the more extended use of silver as currency, and that Your Lordship agrees with us in the importance of Indian interests being properly represented.

At the same time we cannot overlook the strong opposition to the introduction of the system of double legal tender into Great Britain that has been manifested in certain quarters, and we observe with regret that the Conference has been summoned to consider the question of the more extended use of silver as currency, and not for the purpose of considering the adoption of an international agreement for the free coinage of gold and silver, and the making of both gold and silver coins legal tender at a definite and uniform ratio.

3 We fear that a refusal on the part of Great Britain to adopt the system of double legal tender may be fatal to an international agreement for the free coinage of both gold and silver on a sufficiently wide basis, and we believe that a limited increase of the quantity of silver used as currency will exercise a very trifling influence (if any) in raising, or preventing a fall in, the gold price of silver, while it will be wholly without effect in the far more important matter of preventing fluctuations in the relative value of the two metals. We greatly regret this state of affairs, both because we believe that no other country is so deeply interested in, or would benefit so greatly by, a uniform standard of value throughout the civilised world as Great Britain, with her vast system of trade and the great extent of her finance, and because the final rejection of an international agreement for free coinage of both gold and silver will leave this country face to face with a problem of the greatest difficulty.

4. If the forthcoming International Conference fails to arrive at a satisfactory decision regarding the silver question, we apprehend that it will very soon be necessary for the United States to decide either to accept a silver standard, or to abandon the purchase and coinage of silver on a scale in excess of what is required to keep up the necessary subsidiary coinage.

If the United States abandon the attempt to maintain the use of silver as standard money, there must be an immediate and very great fall in the price of silver, which would re-act on the Indian exchanges and increase indefinitely the rupee burden of our sterling obligations.

The recent fall in the rate of exchange has already imposed upon our finances a burden which we shall have some difficulty in meeting, and we cannot contemplate without dismay the prospect of another fall of indefinite amount, attended no doubt with great and sudden fluctuations in the gold price of silver, and to be followed possibly by further falls in the future.

It must also be remembered that, if the present conditions continue, the pecuniary difficulties of the Government of India will not be limited to the loss by exchange. The fall in silver causes distress to a very large number of our European officers of all services, but especially of the army, who have to remit money to their families in England. This distress is rapidly becoming acute. It has been borne hitherto with great patience. But, in the case we have just supposed, we shall, unless the efficiency of the services is to suffer, find it necessary to satisfy in a reasonable manner claims involving compensation to a large amount.

5. We have carefully reviewed all the circumstances of the case, and we desire to place on record, for Your Lordship's information, our deliberate opinion that if it becomes evident that the International Conference is unlikely to arrive at a satisfactory conclusion, and if a direct agreement between India and the United States is found to be unattainable, the Government of India should at once close its mints to the free coinage of silver, and make arrangements for the introduction of a gold standard.

In arriving at this conclusion we have been mainly influenced by a consideration of the fact that the abandonment of silver by the United States of America would involve the perpetuation of all the evils from which we have suffered during the last twenty years, and possibly their perpetuation in an aggravated form, unless steps are taken for the establishment in India of a gold standard.

We believe that public opinion in India is ripe for the adoption of decisive measures; that the stoppage of the free coinage of silver would be generally approved; and that we might safely count on receiving every reasonable assistance from the commercial and banking classes in the attempt to introduce a gold standard.

6. We forward as an enclosure to this despatch a Minute by our Honourable Colleague Sir David Barbour, which gives an outline of the method he would propose to adopt for the introduction of a gold standard into India, if such a measure should become necessary. It will be seen that he does not support the proposal to stop the free coinage of silver if the Conference fails and a direct agreement between India and the United States is found to be unattainable; but that he would adopt that measure as soon as it is evident that the United States will not adopt the free coinage of silver.

7. Our Honourable Colleague Sir A. Miller fears that if all action be deferred until it is known to what conclusion the Conference will probably come, the effect of such knowledge on the silver market will be such as to make it then too late to act with effect. Failure on the part of the Conference to arrive at a satisfactory conclusion will find the Government of India in a very much worse position for introducing a gold standard, if it has not in the meantime taken steps to prepare the way by an alteration in the terms on which it coins silver for the public, than it is at the present moment. He thinks that measures ought to be taken at once which would enable the Government of India to close its mints against silver at any moment, and to introduce a gold standard if and whenever, from the course of proceedings at the Conference or otherwise, they may deem it desirable to do so.

8. It may, perhaps, be desirable to make known at some stage of the proceedings of the Conference our views regarding the introduction of a gold standard into India. But this question, as well as the question of the expediency of India negotiating directly with the United States of America, as suggested in our telegram * of 19th May, may stand over until the Conference has assembled and the Representatives of India are in a position to report what the prospects are of a satisfactory solution being attained.

* . . . We desire to call Your Lordship's attention to paragraph 133 of Part II of the Final Report of the Gold and Silver Commission, and to suggest that, failing an international agreement, it may be possible for India and the United States to come to a direct agreement as to coinage of silver . . . . We are of opinion that the time for a merely academic discussion of the problem is past, and urge that a determined effort be made to settle the question by the adoption of practical measures.

8.] Minute by the Hon'ble Sir David Barbour, K.C.S.I., dated 21st June 1892.

In dealing with the currency of British India it is necessary to draw a distinction between the active rupee circulation and the total number of rupees in existence. A large proportion of the rupees issued from the mints and not melted down are kept as permanent hoards and fulfil none of the functions of money. This distinction cannot, however, be sharply drawn, as rupees are always liable to pass from hoards into the active circulation, and *vice versâ*. What I call the active rupee circulation may be held to include all the rupees which at some period of each year are used as money.

The total active rupee circulation has recently been estimated at Rx. 115,000,000.

Without accepting these figures as more than an approximation to the truth, they are sufficient to show that a gold standard, with a purely gold currency, is impossible in India. To establish a gold standard in India, with a full legal tender currency composed entirely of gold, it would be necessary to withdraw from circulation about 1,150 millions of rupees, to melt them down

and sell them for what they would fetch as silver bullion, and then to replace them by about £77,000,000 worth of gold.

In the present conditions of India and of the silver and gold markets this would be an impossible operation.

Moreover, a gold standard with a purely gold currency of full legal tender coins would not suit India (even if it were possible to introduce it), because the gold coins would in practice be of too great value to suit the vast majority of Indian transactions.

2. It follows from what has been stated in the preceding paragraph that if we are to have a gold standard in India, a large proportion of the circulation must consist of silver coins, and these coins must be a legal tender to any amount The example of France and other countries shows that it is possible to have a gold standard, although a large percentage of the circulation consists of overvalued silver coins which are legal tender to any amount.

In order that the gold standard may be effective, a limit must, however, be placed to the number of such coins, and they must be convertible into gold coins either without payment of premium or on payment of a trifling premium whenever any person wishes for gold coins in exchange for silver coins.

So long as the silver coins are freely exchangeable for gold coins in accordance with their face values, the gold standard is effectively maintained.

3. I have no doubt that even with a gold standard the people of India would in almost all their transactions prefer to employ silver rupees. It is improbable that a gold coin of less than Rs. 10 in value would be issued in India, and such a coin would be quite unsuited for ordinary Indian transactions. Rs. 10 represents generally much more than a cooly's wages for a month; and if a cooly received his wages in the form of a single coin, he would immediately exchange it for smaller coins. We could not pay our soldiers or police in gold coins. Payments to the opium cultivators could not be made in gold; neither could the ryots pay their rents in gold.

There would also be a not unreasonable dread among the common people that gold coins might be of light weight; they would generally be unwilling to accept them; and for monetary purposes in ordinary life gold coins would hardly be used. This would be the case, I believe, even if gold coins of the value of only Rs. 5 each were issued.

4. It may then be taken for granted that with a gold standard the great bulk of the Indian currency must continue to be silver rupees, and that for monetary purposes there would ordinarily be no considerable demand for gold coins in exchange for silver. On the contrary, the demand for monetary purposes would rather be for silver coins in exchange for gold coins. Gold coins would only as a rule be required in exchange for silver coins when gold was required for hoarding, for export, or to be melted down for ornaments.

It follows that with a gold standard India would require and would use a very large amount of silver rupees, and would neither require nor use a large number of gold coins.

Any gold coins that were put into circulation and were not melted down or hoarded would very quickly find their way into the hands of bankers and dealers in bullion, into the Government treasuries, and into the Paper Currency reserve.

5. For the purpose of introducing a gold standard into India we might stop the free coinage of silver, adopt measures for accumulating a store of gold, and when what was considered a sufficient stock of gold had been obtained, we might open the mints to the free coinage of gold, make gold coins a legal tender, and guarantee by means of our accumulated stock of gold the exchangeability of silver for gold coins according to their face values. I do not recommend this plan; the accumulation of a sufficient store of gold would be a measure too expensive for a country situated as India is, and when it had been accumulated, and the exchangeability of the silver coins for gold coins had been guaranteed by means of it, there would be a very great risk of the whole stock of gold being drawn away in exchange for silver rupees. If this should happen—and I think it would happen unless our stock of gold was very large indeed,—

the gold standard would cease to exist, and we should find ourselves exactly where we started.

6. The only measures for the introduction of a gold standard into India which seem to me feasible are the following:—

(1) The first measure would be the stoppage of the free coinage of silver. Government would retain the right of purchasing silver and coining it into rupees.

(2) The next measure would be to open the mints to the free coinage of gold. Any man bringing gold to the mints would be entitled to have it coined into gold coins, which would be legal tender, to any amount. It would be desirable to stop the free coinage of silver some time before opening the mints to the free coinage of gold. It would be a valuable guide to us in subsequent proceedings to know exactly what effect the stoppage of the free coinage of silver had on the gold value of the rupee.

The new gold coins might be a 10-rupee piece and a 20-rupee piece.

7. The weight and fineness of the gold coins to be issued from the mint would be such that the par of exchange between them and the sovereign would be the exchange which it was desired to establish between India and England.

For example, if we wished the rupee to be worth 1*s.* 4*d.*, the 10-rupee coin would contain as much gold as was worth (1*s.* 4*d.*) × 10 = 160 pence.

The quantity of fine gold in the 10-rupee piece would be $\frac{160}{240}$ths, or $\frac{2}{3}$rds of the quantity contained in the sovereign.

8. The question of the ratio at which we should change from the silver to the gold standard would require careful consideration.

We ought not to think of going back to the old ratio of 1 to 15$\frac{1}{2}$. Neither ought we to adopt the very lowest price to which silver may have fallen at any time, or to consider ourselves bound to accept the market ratio of the very moment at which the change was made. A ratio based on the average price of silver during a limited period before the introduction of the gold standard would probably be both the safest and the most equitable.

9. We may be quite sure that on the introduction of the gold standard bankers and bullion dealers away from the Presidency towns, and perhaps in the Presidency towns, would charge something for changing silver coins for gold ones. The general public, however, would very seldom require to make such exchanges, and if all Government treasuries were required to give gold coins for silver coins whenever it was possible for them to do so, there could not be any considerable premium on gold coins so long as there were such coins in the public treasuries or in the Paper Currency reserve, and the gold standard would, subject to the above condition, be effectively maintained.

10. After the above measures had been carried out, it might happen that no gold was brought to the mints to be coined and put into circulation, and that the rupee fell in value below 1*s.* 4*d.*

Or it might happen that though gold was brought to the mints for a time and the rupee was worth 1*s.* 4*d.*, yet subsequently gold ceased to be brought to the mints, the gold coins disappeared from circulation, and the rupee fell below 1*s.* 4*d.*

If gold were not brought to the mint to be coined and put into circulation, or if gold coins disappeared and gold ceased to be brought to the mints, it would be a sign that the rupee currency was redundant, or, in other words, that there were too many silver rupees in circulation; that consequently their value had fallen below 1*s.* 4*d.* each; that gold coins had been driven out of circulation; and that the gold standard was no longer effectively maintained.

The remedy in such case would be to contract the rupee currency, and to adopt any feasible measures for improving the general financial position of the country. An improvement in the general financial position would give increased confidence, and the reduction of the rupee currency, if carried far enough, must ultimately restore the value of that coin.

11. The greatest danger from the cause just indicated would arise immediately after the first introduction of the gold standard, and would be brought

about by silver rupees being returned into India from foreign countries, and by their being thrown into active circulation from Indian hoards. I think that Indian rupees would certainly be returned to India from abroad when their value in India became greater than their bullion value; but I now doubt very much if Indian rupees would be largely brought out of hoards. It is more likely that existing hoards of rupees would practically remain unaffected. I formerly held a different opinion on this point, and believed that rupees would be largely brought out of hoards when they were given a value exceeding that of the metal contained in them.

12. The reduction of the rupee currency in the manner just indicated, if it became necessary, might or might not prove a very expensive measure. It could, of course, be spread over a number of years; but, until it had been carried out to a sufficient extent, the gold standard would not be effectively maintained. When the rupee currency had once been sufficiently reduced, I should not expect any serious difficulty in the future.

Looking to the increase of population in India, to the rapid opening out of the country, and to the comparatively small part which credit plays in Indian trade, it may fairly be held that even with a gold standard an increase of the rupee currency would be required every year, and that increase I place at not less than Rx. 1,000,000 yearly. It might be considerably more—twice or three times as much. When the coinage of rupees was stopped, any redundancy of the silver currency would be diminished yearly by this amount without any action on our part. It is also not impossible that rupees would continue to be withdrawn from the active circulation to be hoarded as at present; they would certainly be hoarded by persons whose savings were small. This cause would still further reduce any temporary redundancy of the silver currency at first starting. Of course, while the reduction of the rupee currency was in progress, we would not have an effective gold standard; but even during that period of uncertainty I should expect the exchange with England to remain much steadier than it has been during the last few years. It would cease to be blown up and down by every breath of speculation, and if we could establish confidence in our measures, the rate of exchange would tend strongly towards the rate we had decided to maintain, and would only diverge from it under the pressure of real economic forces.

A nation that possessed a fairly satisfactory standard of value might well hesitate to expose itself, even temporarily, to the evils of an inconvertible standard; but no such argument applies in the case of India. We already labour under difficulties which are quite as great as those to which an inconvertible paper standard would expose us. The prospect of being unable for a time to effectively establish the gold standard need not, therefore, deter us from the attempt to do so if we see a prospect of success in the future.

13. It is also possible that under certain conditions of trade there might be more gold brought to the mint and put into circulation than was required for ordinary use as currency.

In that case the public would get rid of the gold coins by paying them into the Government treasuries. Gold might accumulate in these treasuries, and the Government could not in practice relieve the treasuries by forcing gold coins on persons who preferred to receive payment in silver.

The proper remedy for any such accumulation of gold would be for the treasuries to pass the gold coins into the Paper Currency reserve, which could absorb several millions without difficulty, and the Paper Currency reserve could be relieved, when necessary, by remitting the gold to England in payment of debts, its place being taken by silver rupees.

No serious difficulty arising from an over-supply of gold coins need, therefore, be feared.

14. It is important to consider what the additional demand for gold would be owing to the establishment of a gold standard in India.

Taking the active circulation at Rx. 115,000,000, I think that gold coins to the value of one-fifth of that amount would be an ample proportion of the active circulation for the purpose of maintaining the gold standard. This would be Rx. 23,000,000 worth of gold, or, say, £15,000,000 sterling. I believe that

the gold standard would be maintained effectively with a smaller amount of gold, and that gold in excess of £15,000,000 in the active circulation would be unnecessary, and might be a source of postive inconvenience. When we had arrived at normal conditions, the yearly additions of gold required for the active currency would be small, and would probably not exceed £200,000 yearly.

15. It is more than probable, however, that the substitution of a gold standard for a silver standard would lead to an increased use of gold instead of silver for hoarding. On the question of the extent to which this substitution of gold for silver would ultimately be carried I am unable to offer any opinion.

Silver is at present used for hoarding (as a store of value) and for ornament. When it ceased to be the monetary standard of India, it would be less suitable for hoarding, but it might continue to be largely hoarded in the form of rupees; and, on the other hand, silver bullion would fall considerably in value and price, and its greater cheapness would tend to increase its use for purposes of ornament. It must be uncertain to what extent gold would begin to take the place of silver for hoarding and ornaments after the establishment of a gold standard; but in the first instance at any rate the extent of the change would probably not be considerable.

It is held by some that if a gold standard were established in India, a great deal of the gold that is now hoarded or held in the form of ornaments would be brought to the mints, coined, and put into circulation. I have never been able to accept this theory. Why should a native of India give up his habit of hoarding, or an Indian lady cease to take a pleasure in the wearing or possession of gold ornaments, merely because the Government of India had established a gold standard?

There is, however, a large amount of gold imported into this country every year, and there must always be a considerable amount of gold in the hands of bullion dealers. I think that if we had an effective gold standard, it is very likely that all this gold, which is, as it were, waiting till the time for absorption arrives, would be coined and become part of the circulation for the time. To facilitate this result, I would propose not to charge any seignorage on gold coins.

16. In this paper I have dealt with the question of a gold standard for India from a practical point of view. Many objections, founded on considerations not of an immediately practical nature, may be raised to the introduction of a gold standard into India. Some of these objections appear to me to possess weight; others I believe to be imaginary. I have no hesitation in saying that an international agreement for the free coinage of both silver and gold, and for the making of them full legal tender at a fixed ratio, would be far better for India and all other countries than the establishment of the single gold standard, even if the latter course be possible.

Under the former system the worst result that could happen would be the disappearance of one of the metals from circulation; but this would only happen by the other metal taking its place and gradually driving it out, and under such circumstances all countries would have the same standard.

The general adoption of the system of double legal tender would be a perfectly safe measure, and would be a final settlement of the question. The attempt to establish a general gold standard is not free from risk. History affords instances of the establishment of a gold standard in one or more countries; but sooner or later the standard was changed. It may, however, be that the conditions of gold mining have so greatly changed that a gold standard can now be maintained for an indefinite period.

17. With regard to the question of the expediency of attempting to introduce a gold standard into India, I do not go further than saying that if a general agreement for the free coinage of both silver and gold at a ratio cannot be obtained, and if the United States does not adopt free coinage of silver, I think an attempt should be made to establish a gold standard in this country.

I believe that a perpetuation of the difference of monetary standards between England and her Indian Empire would be a source of incalculable mischief to both England and India, and that such a state of things should not be accepted until it has been proved by actual experiment to be absolutely unavoidable.

9.] No. 92 (Financial), dated India Office, London, 2nd June 1892.

From—The Secretary of State for India,

To—The Government of India.

On the receipt of Your Excellency's letter dated the 23rd of March, No. 68, respecting the fall in the gold value of the rupee which has followed on the fall in the price of silver in the United States of America, I caused copies thereof to be laid before Her Majesty's Government in order that they might be fully aware of the importance of the question to the interests of India.

2. Your Excellency will have observed with satisfaction from a reply given by the Chancellor of the Exchequer on the 11th ultimo to a deputation which had an interview with him and the Prime Minister on the subject that Her Majesty's Government have decided to accept an invitation from the President of the United States to take part in a Conference which is about to be assembled in order to consider by what means, if any, the use of silver can be increased in the currency system of the nations.

3. A copy of a letter addressed to the Treasury on the 13th of May is enclosed for your information.

10.] No. 1420-F., dated India Office, 13th May 1892.

From—A. GODLEY, Esq., C.B., Under-Secretary of State for India,

To—The Secretary, Her Majesty's Treasury.

I am directed by the Secretary of State for India in Council to transmit, for the information of the Lords Commissioners of Her Majesty's Treasury, a copy of a letter* received from the Government of India on the subject of the very heavy fall which has recently occurred in the value of the rupee as measured in gold.

* 23rd March 1892, No. 68, with enclosures.

Their Lordships are well aware of the extreme importance of this question to the Government of India, whose views have been from time to time expressed in despatches published in the documents mentioned in the margin.† Viscount Cross does not desire at the present moment to discuss the question of the measures that it may become necessary to adopt, but he feels sure that the Government of India will peruse with satisfaction the report of the Chancellor of the Exchequer's speech on the 11th instant, in which he stated that Her Majesty's Government had decided to accept an invitation to take part in a Conference assembled to consider whether any means can be adopted for increasing the use of silver in the currency of the nations.

† Parliamentary Papers, No. 449 of 1881; Command Paper, No. 4868; Royal Commission on Gold and Silver, 1887; 1st Report, Appendix No. 12.

As illustrating the enormous difficulty in adjusting the taxation in India to the expenditure which arises from the great fluctuations in exchange, I am desired to mention the following facts:—In December 1890 the rate of exchange was, with the concurrence of the Treasury, fixed for 1891-92 at 1*s.* 6½*d.* the rupee in agreement with the gold value of silver at that date; in about four months the rate for selling bills on India had fallen to 1*s.* 4¾*d.* the rupee, causing an increased charge in the remittances from India, estimated for the year then commencing, of Rx. 2,168,000. From the middle of February to the 18th March last, when the Budget for 1892-93 was under consideration, the value of the rupee ranged between 1*s.* 4*d.* and 1*s.* 3¾*d.*, and the Government of India adopted the higher of those two rates; within 11 days from the publication of the Budget, the market rate in India had fallen below 1*s.* 3*d.*, at which rate the drop of a penny in the rupee would cause an additional charge for remittance in 1892-93 exceeding Rx. 1,700,000.

Thus, within a few weeks the Government of India is liable to find itself exposed to the necessity of providing a sum greater than the whole of its receipts from either the customs duties or the assessed taxes, or from the recent increase of the duty on salt; and this result ensues from causes over which neither the Government nor the people of India have any control, but which arise for the most part from legislation, either actual or threatened, by other nations.

Nor is it only to the Government that this most serious inconvenience is caused. The disadvantage to trade in India is shown by the letter from the Bengal Chamber of Commerce, which the Government of India have forwarded; and there can be no doubt that it is equally felt by the merchants in the United Kingdom who have transactions with India. Any measures, therefore, which can bring about a comparatively stable rate of exchange are to be cordially encouraged in the interests of the people of India and of the mercantile community trading between this country and our Eastern possessions.

11.] Dated 24th June 1892.

From—The HON'BLE J. L. MACKAY, C.I.E., President, Indian Currency Association,

To—The Secretary to the Government of India, Finance and Commerce Department.

I have the honour, on behalf of the Indian Currency Association, to enclose, for the information of His Excellency the Governor General in Council, copy of a memorial which is now in course of circulation for signature throughout India.

2. Although this Association was founded only last month, its branches have already spread all over the country, and its views and objects, as stated in the memorial, are endorsed and supported by all classes of educated and influential residents and inhabitants in India, native as well as European.

3. The process of obtaining signatures to the memorial will necessarily occupy some little time, as distances in India are so great. Meanwhile the International Conference proposed by the United States is about to meet and Parliament is about to be dissolved. It becomes necessary, therefore, that Her Majesty's Government should be promptly made acquainted with the state of public opinion in India on the question of the Indian currency and the necessity of imparting stability to the Indian monetary standard; and I beg respectfully to express the hope that the Government of India will transmit the memorial to Her Majesty's Government, and that His Excellency in Council will be pleased to give his warm support to the proposals put forth therein. The Association has learnt with great satisfaction from the recently published despatch of the 23rd March last to the Secretary of State for India that the Government of India, at the instance of the Bengal Chamber of Commerce, has already strongly represented to Her Majesty's Government the need for immediate consideration of the measures to be adopted in the event of the withdrawal of the United States from its present policy in regard to the currency; and I have therefore no doubt that the expression of Indian public opinion on this vital question will be cordially supported by the Government.

4. That the present system is an evil of great and growing magnitude admits of no doubt, and it is equally undoubted that a remedy should have long since been applied and is now urgently needed.

5. In considering the question of a remedy three courses present themselves—

(*a*) An international concert for the free use of silver as full legal tender money by all the nations represented in the Conference about to be held.

(*b*) Failing such international concert, an arrangement between the United States and India for the free coinage of silver in both countries.

(*c*) The adoption of a gold standard for India.

6. In regard to the first of these three courses, the Association has stated in its memorial that an international concert is impossible unless England adheres to it, and has urged that England should become a party to any such concert. Here I would respectfully observe that any arrangement short of an agreement for the introduction of silver as full legal tender money would be practically of no use as a remedy for the evils from which we suffer.

7. If the Conference should fail by reason of the abstention of England, as other Conferences have failed, to have any useful effect, the question occurs

whether an agreement between India and the United States could be effected. This question may, however, be dismissed without argument, for it is highly improbable that the United States would consent to enter into any agreement which would practically involve the displacement of gold by silver in that country, and the party opposed to even the present limited coinage of silver is so increasingly powerful that it is almost certain that the failure of the International Conference will be promptly followed by a repeal of the law under which the State Treasury now makes large purchases of silver. It is, moreover, very questionable, even if such an arrangement could be made, whether it would have the effect desired of ensuring stability in the exchange value of the rupee.

8. There remains only the third course, the adoption of a gold standard for India, and the memorial contains the prayer of its subscribers that the Government of India may be vested with full authority for the adoption of that course failing the only other feasible remedy, namely, international concert.

9. As international concert would in all probability be attainable if England did not consider it opposed to her own interests, it would only be fair and just that India in seeking a remedy should be allowed to do so with regard exclusively to the interests of India. This view was emphatically stated by those members of the Royal Commission on Gold and Silver who considered that a change in the English currency system would be to the disadvantage of England. They wrote:

"We think, however, that in the consideration of this [the proposal to establish a gold standard in India] or any other proposal of Indian legislation for removing the difficulties of that Government the interests of India should alone be considered. While we cannot recommend that the mother country should run any serious risk in altering its system of currency to assist the dependency, we think that the Government of the latter should be allowed a free hand to deal with the problem as it considers best in its own interests." (Final Report, Part II, paragraph 133.)

The justice and fairness of this view are manifest, and, on behalf of the Association, I respectfully trust that it would be strongly impressed upon Her Majesty's Government by the Government of India.

12.] Dated 13th June 1890.

To—The Honourable the Commons of Great Britain and Ireland in Parliament Assembled.

The petition of the Indian Currency Association, comprising all classes of the inhabitants of the Indian Empire.

HUMBLY SHEWETH,—That your petitioners suffer severe and increasing loss and distress in consequence of the present condition of the Indian Currency system, and that some remedy is urgently required.

That the condition of the system and its results to the people of India are described in the subjoined paragraphs of this memorial:

(1) In 1835, by a law passed by the Government of India, gold was demonetised and the silver rupee established as the monetary standard of value. From 1835 until 1872 the rupee exchanged with but slight variation for about two shillings, and so trifling indeed was the variation that in the official accounts for all purposes the rupee was invariably reckoned as equivalent to two shillings.

(2) During all this period silver was freely in use for currency and as a standard of value by all the European nations but England; and it is undoubtedly the truth that the maintenance of the par of exchange during this period, and even during the large production of gold following the discoveries of that metal in California and Australia, was due, firstly, to the free use of silver as current full legal tender money by the European nations; and, secondly, to its unrestricted coinage by them.

(3) At the end of 1871 Germany demonetised silver and established a gold standard. To prevent an overwhelming influx of the demonetised German silver France restricted the coinage of silver, and every other nation speedily adopted the same course. Many of the European nations have adopted gold as the standard of value as Germany did; and, though some have retained silver as full legal tender, they have either greatly restricted or absolutely ceased the coinage of the metal. Those who have retained silver as the standard have no active circulation of metallic money, whether gold or silver, the currency consisting of inconvertible notes.

(4) The result of this ejection of silver from use as currency is seen in the fall in the price of silver. From 60 pence per ounce the price has now fallen to between 39 and 40 pence, a decline of about 35 per cent; and the exchange value of the rupee has similarly declined from 24 pence to 15·25 pence, a fall over 36 per cent.

(5) This heavy fall has been a cause of great concern to all interested in the maintenance of stability in the ratio of value between gold and silver, and the subject has been repeatedly discussed in view to the application of a remedy.

(6) On every occasion the discussions have been fruitless, because England declined to join in the concerted action which alone could provide a remedy.

(7) An International Monetary Conference was held in 1867 with the object of increasing the number of countries comprised in the Latin Union and establishing an international monetary system on the basis of the free coinage of both gold and silver. England refused to adhere to the Union on any terms but the abolition of the double standard and the adoption of gold as the single standard. No practical results, therefore, followed this Conference.

(8) Another International Monetary Conference was held in 1878 on the proposal of the United States, its object being to maintain the employment of silver with that of gold as a standard. England was represented in this Conference only on the condition that she was not to be bound by its decisions, because she was determined not to permit the adoption of silver as a standard in her currency.

(9) A third International Monetary Conference was convened by France and the United States in 1881 to concert measures for the full use of silver as a standard of value in conjunction with gold. England was represented at this Conference also, but declined to promise more than that Her Majesty's Government would recommend to the Bank of England that one-fifth of the reserve held against the note circulation of the Issue Department of the Bank should consist of silver. This proposal was insufficient in itself, and it was also doubtful whether the Bank would consent to carry it into effect. The Conference therefore adjourned to meet the following year, but never met again.

(10) In 1876 the question was discussed with no practical result by a Select Committee of your Honourable House.

(11) It was again further discussed in 1885 by a similar Select Committee on the depression of trade and industry, and finally the question was considered by a Royal Commission in 1886. The members of that Commission were unanimously agreed that a double standard was practicable, but were equally divided as to the necessity of its adoption. They were further unanimously of opinion that in the circumstances the Government of India should be left free to adjust matters in the way that seemed to it best. No action was taken on their report.

(12) Meanwhile the price of silver has fallen still further, and the exchange value of the rupee is at present only 15⅞ pence, and it is

probable that, if left to itself, it will fall further and more heavily. It has been repeatedly prophesied by eminent economists that the rupee could not fall below 20 pence; then that it could not fall below 18 pence; then that it could not fall below 16 pence. All these prophecies have been signally falsified, and, from the best information available, it is clearly useless to prophesy that there is any limit approaching its present value below which the price of silver cannot fall. There appears to be no reason, when silver is abandoned as regards its principal function—to serve as a material for currency—why the rupee should not fall to a shilling and still lower.

(13) The consequences of this persistent depreciation of the metal which still remains the standard of value for the Indian Empire, and of the violent fluctuations which are constantly, indeed daily, occurring in the exchange value of the rupee, have been of the gravest kind.

(14) The loss to the Government in paying its sterling obligations in England may be reckoned at eight hundred millions of rupees, or eighty million pounds sterling at par of exchange, since the commencement of the depression, and at the present rate of exchange the loss is upwards of eighty millions of rupees, or eight million pounds sterling at par of exchange annually. Each fall of a penny in the exchange value of the rupee aggravates this heavy burden by the addition of more than ten millions of rupees, or one million sterling at par.

(15) It is evident that the payment of sums of from eight to one hundred millions of rupees annually on account of exchange is a burden which would tax the financial resources of the most flourishing country in the world. The Government must find the money, and to find it additional taxation must be levied of a grievous and harassing character.

(16) The people of India are content to pay to the State in taxation all the money that is required for the due and orderly administration of the Empire, for its defence from foreign enemies, for the maintenance of internal peace and tranquillity, and for the progressive development of communications, public works, and the general resources of the country.

(17) But the taxation of eighty millions of rupees now annually taken from the people of India is applied to none of these objects; it serves no useful purpose; and it is wrung from the people merely because the Government of India has not been permitted to regulate the currency system of the Empire with reference to the interests of the country.

(18) If the currency had been so regulated there would either have been no necessity for such heavy taxation, or, if the money had been raised, it would have been applied to the reduction of debt, the more rapid extension of railways, of irrigation works, or other permanently useful objects.

(19) While all classes of the people suffer from the imposition on them of a load of taxation, the receipts from which are not applied to any useful or necessary purpose, each class suffers in its own particular way from the condition of the currency.

(20) The trading community are harassed by the uncertainty and the fluctuations of exchange to such an extent that legitimate trade is often replaced by speculative and gambling transactions; the importer is at a loss how to meet his engagements when exchange falls day by day; and the exporter is no gainer, for each fall in exchange is followed by an equivalent fall in the gold price of the commodities he exports.

(21) It may be said, indeed, that but for the fortunate accident that the Suez Canal was opened just as the depreciation commenced, enabling Indian goods to be taken expeditiously and cheaply to Europe, and but for the development of railway communications, which has enabled goods to be taken expeditiously and cheaply to the seaports, the trade of India would have been paralysed by these fluctuations, and this depreciation and the Empire would now have been in hopeless financial disorder and embarrassment.

(22) The investment of English capital in the development of the material resources of the Empire is discouraged; for, both as regards the remittance of interest and the final transfer of invested profits and economies, the continuous fall in exchange imparts to the investment of capital in this country a speculative character and a risk which the capitalist is naturally unwilling to face.

(23) The credit of the State is heavily injured by the depreciation in value of the rupee securities of the Government of India held in England and the uncertainty in the amount of interest in gold which may be obtained by their holders. English capitalists are naturally as reluctant to invest their money in these securities as they are to invest it in India.

(24) To the European officers of the Government, civil and military, and to all Europeans on rupee incomes, the depreciation of the standard has brought severe distress.

(25) To the European who has retired, whether from the service or from business, and whose pension or income is paid in rupees, the continued depreciation has brought the greatest hardship.

(26) It may be said generally that the retention of the silver standard, while it has been rejected by the Western nations, has been productive of nothing but evil to every class of the population in India, the only persons who may have benefited from time to time being those who have speculated for the fall.

(27) It is not urged that the silver standard is in itself unsuitable to India. If the silver standard was employed by other nations, its retention in India would be desirable. But it is entirely undesirable to retain the silver standard in a great Empire such as this, whose annual revenues amount to nine hundred millions of rupees, while its foreign trade amounts to nearly two thousand millions of rupees, when the standard has been rejected and repudiated by most of the nations of the world. For it must be borne in mind that a considerable proportion of the revenues is raised to meet obligations incurred in England, a country with a gold standard, and much the largest part of the trade is conducted with England and other countries with a gold standard.

(28) The people of India have long desired a re-establishment of the gold standard. Proposals for the introduction of that metal as the standard of value were pressed upon the Government of India as far back as 1859, and from that time onwards were repeated with persistence by the Chambers of Commerce and other public bodies for about fourteen years. Since 1873 the Government of India has repeatedly urged the acceptance of the double standard (gold and silver) by international arrangement in view to its introduction into India.

(29) None of these proposals were accepted, Her Majesty's Government having consistently declined, first to permit the introduction of a gold standard, and afterwards to aid in the international arrangements required for the effective introduction and maintenance of the double standard.

(30) The result is that India is still compelled to retain as her monetary standard a metal which during the last twenty years has been rapidly and continuously losing the characters that should attach to a standard of value, and which now possesses them no longer in any degree. Indeed, silver is now hardly more fit than tin or copper to be a standard and measure of value, and it is unjust to

the inhabitants of this Empire that its retention in that character should be insisted on.

Your petitioners, therefore, humbly pray that, in view of the considerations set forth above, your Honourable House will be pleased to direct the application of a remedy for their grievances by the introduction of a speedy reform in the Indian currency system.

Your petitioners represent that the introduction of the double standard can only be effected by international arrangement, but that international concert has hitherto been found impossible; that another International Conference is now about to meet; that it is of the most vital importance to the interests of the Government and people of this Empire that an arrangement should be arrived at; and that, therefore, every effort should be used on behalf of India to secure its success. If, however, the Conference should fail, like its predecessors, to arrive at a satisfactory solution of the questions referred to it, your petitioners pray that the Government of India may be fully empowered to take such measures as may to it seem fit for the adoption of the only remaining effectual remedy, namely, a gold standard; and your petitioners, having regard to the probability that the Conference will, like its predecessors, reach no practical issue, and that the price of silver will then be still more and incalculably depressed, further pray that the grant of power to the Government of India may be made now in view to its exercise without delay after the termination of the Conference.

And your petitioners, as in duty bound, will ever pray, etc., etc.

(*Here follow* *signatures.*)

13.] No. 183, dated the 12th July 1892.

From—The Government of India,

To—The Secretary of State for India.

We have the honour to forward copy of a letter from the President of the Indian Currency Association, dated the 24th June 1892, and of the memorial therein enclosed, which the Association proposes, when it has been fully signed, to present to the House of Commons. The President of the Association asks for the support of the Government of India and of Your Lordship to the prayer of the memorial that power should be conferred on the Government of India for the introduction, in the event of the failure of the International Conference about to be held, of such changes in the Indian Currency system as will give stability to the exchange value of the rupee.

2. Our views on this subject have been stated in our confidential despatch No. 160 (Financial), dated the 21st June 1892.

14.] No. 2843-A., dated 8th July 1892.

From—J. E. O'Conor, Esq., Assistant Secretary to the Government of India, Finance and Commerce Department,

To—The President of the Indian Currency Association.

I am directed to acknowledge the receipt of your letter, dated the 24th June 1892, forwarding copies of a memorial to Parliament, and asking for the support of the Government of India and the Secretary of State for India to the prayer of the memorial.

2. I am to say that the letter, with its enclosure, has been forwarded to Her Majesty's Secretary of State for India.

15.] No. 205 (Confidential), dated 2nd August 1892.

From—The Government of India,

To—The Secretary of State for India.

We have the honour to acknowledge the receipt of Your Lordship's telegram of 24th July, quoted in the margin, requesting our opinion as to the probable effects of the introduction of a gold standard into India.

Your Financial despatch No. 160—Gold standard. To enable me to form an opinion on your proposal, I require information as to the effect which change of standard would seem to have on prices in India as well as on import and export trade, industry, railways, land revenue, opium, gold and silver debt, etc. How would your proposal affect proposed claim for compensation?

Any discussion of the probable effects of such a change must, from the very nature of the subject, be of a somewhat speculative character; and we would suggest, for Your Lordship's consideration, that a more satisfactory judgment on the general question of the probable effects of a change from a silver to a gold standard can be formed by examining the actual working of the gold standard in England, France, Germany, and other countries where that standard prevails, rather than by a consideration of any theoretical arguments which we may be able to bring forward.

From the fact that Roumania has recently adopted a gold standard, and that the Austro-Hungarian Empire is making arrangements to follow the same course, we infer that the working of the gold standard has been found by experience to be not unsatisfactory in Europe; and, if we are right in this view, we see no reason to doubt that gold would prove to be equally satisfactory as a monetary standard in India. In Java also we understand that the system we propose has not been injurious to the interests of that country. Six years ago it was held by a few persons that Java had suffered by comparison with the neighbouring countries which have a silver standard, but we believe that fuller experience has demonstrated this view to be erroneous, and that the change of standard has in no way arrested the development of trade and industry. Your Lordship, however, is in a position to obtain much fuller and more accurate information on these points than is at our disposal, and we will confine ourselves to stating the views which we hold on the specific questions which have been put to us in the telegram of 24th July.

2. It is generally recognised that money is required to perform four separate and important functions according as it is employed as (1) a medium of exchange; (2) a store of value; (3) a common measure of value; and (4) a standard of value for deferred payments.

We see no reason to doubt that as a medium of exchange gold supplemented by silver coins and notes would prove thoroughly satisfactory in India, while it is well suited for the purpose of storing value, since it possesses great value in little bulk, and appears less likely to depreciate than any other metal which could be adopted as the standard.

As a common measure of value gold would possess the inestimable advantage of giving India the same measure of value as England; the existence of a common monetary standard in England and in India would facilitate both the import and export trade by preventing excessive fluctuations in exchange; would encourage the flow of English capital to India, and would consequently facilitate the construction of railways by private enterprise and stimulate all industries; with gold as the Indian standard, the rate of interest payable on the present silver debt of India could also be largely reduced.

3. It is only with regard to the possible results of adopting gold as the standard of value for deferred payments that there can be any room for doubt regarding the expediency of the introduction of a gold standard into India.

On this point we have already said that Your Lordship is in the best position to form a judgment. If gold has proved to be a satisfactory standard of value for deferred payments in Europe, we see no reason why it should not be equally satisfactory in India.

It is, of course, possible for those who hold that there has hitherto been no appreciation of gold to argue that there might now be appreciation if India adopted a gold standard. We are not disposed to attach much force to this argument unless it can be shown that there has already been an injurious appreciation of gold in Western countries. If the adoption of a gold standard by Germany and the United States, and other countries of less importance, and the closing of the mints of the Latin Union to the free coinage of silver have not caused an injurious appreciation of gold, we do not apprehend that the adoption of a gold standard by India would be attended with serious results. We understand that the Austro-Hungarian Empire is preparing to adopt a gold standard, and that this example will probably be followed by other nations; and we see no reason to suppose that worse results would attend the adoption of a gold standard by India than have followed the change of standard in Germany or the United States, or than would now follow in the case of the adoption of a

gold standard by Austria-Hungary or any other country of equal extent. It will be obvious to Your Lordship that if the gold standard is to be universally adopted, India will be placed at a disadvantage if she is not allowed to make the change until every other country has supplied itself with the gold which it requires for this purpose.

4. Apprehensions have been expressed in many quarters that the introduction of a gold standard in India would involve a serious disturbance of existing contracts and financial obligations and a dangerous derangement of the course of trade. We desire, however, to have it clearly understood that if it were decided to adopt a gold standard in India, we should propose a rate for the transfer from silver to gold which did not greatly differ from the market ratio of the day. We are of opinion that in such case the adoption of a gold standard would not have any serious effect in lowering prices or reducing the rate of growth of the land revenue, and that it would not materially affect either the opium revenue or the burden of our gold or silver debt.

5. Even if we assume that there has been, or may hereafter be, some appreciation of gold, Your Lordship will not fail to observe that India, after substituting a gold standard for a silver one, will be in a better position to withstand the possible effects of any future appreciation than the countries which have always had a gold standard, or which have adopted a gold standard at the old ratio of 1 to $15\frac{1}{2}$ or 1 to 16. In the present day we should propose a ratio for conversion probably not greatly differing from 1 to 20, and India would consequently escape the effects of any appreciation of gold which may have wholly or partially led to the alteration of the ratio of value from 1 to $15\frac{1}{2}$ to 1 to 20. Such countries as England, Germany, France, and the United States would have to bear the cumulative effects of both the past and the future appreciation of gold; and if the prospect of a possible appreciation of gold does not afford sufficient reason to justify any modification of their standard, *à fortiori* such possibility of appreciation does not afford a valid excuse for preventing a change of standard in India on the conditions we have proposed.

6. In the telegram which we have quoted in the opening paragraph of this despatch Your Lordship enquires how our proposal would affect the proposed claim for compensation. We understand Your Lordship to refer to the remark in paragraph 4 of our despatch No. 160, dated 21st June last, in which we stated that the distress of large numbers of officers of our European services, owing to the fall in exchange, is rapidly becoming acute, and that, unless the efficiency of the services is to suffer, we may be compelled to satisfy claims involving compensation to a large amount. In reference to this matter, we desire to explain that if the ratio at which we pass from the silver to the gold standard approximates to the ratio now prevailing, the question of compensation will stand approximately where it stands at this moment, and that in any case there could be no further fall after the gold standard was effectively established, and consequently no claim for compensation on account of future falls in the exchange value of the rupee could arise such as we must expect if the exchange value is not fixed.

7. We take this opportunity of again calling Your Lordship's special attention to the extreme gravity of the present position—a position so fraught with danger that inaction involves at least as great risk and as much responsibility as would the undertaking of an enterprise even more hazardous than the introduction of a gold standard into India.

A great fall has already taken place in the value of the rupee as compared with the pound sterling, and sudden and violent fluctuations have been far from unfrequent. Nevertheless we have neither as yet seen the end of the fall, nor are we able to look forward to any time at which the fluctuations may be expected to cease.

On the contrary, if the approaching International Conference does not arrive at a satisfactory settlement of the question, we shall probably experience very shortly a still greater fall in value and more violent fluctuations than any that have occurred in the past. Without a change of standard, we can never hope to secure any guarantee against further falls and continual fluctuations.

It is under these circumstances that we have after full consideration proposed to Your Lordship that, on the occurrence of a certain contingency, immediate steps should be taken to introduce a gold standard into India, and we trust that our proposals will obtain Your Lordship's full support, and will be pressed on Her Majesty's Government in view to a prompt and final settlement of the question.

8. It would, we submit, be wholly unreasonable if, in face of the calamities which we are now experiencing, and of the still greater calamities which are likely to come upon us in the future, and of the fact that our difficulties must continue until England and India have the same standard of value, Her Majesty's Government were to prevent the Government of India from making an attempt to introduce a gold standard into this country on the ground of the actual or possible appreciation of gold, and were at the same time to refuse to support the proposal for a general system of double legal tender on the ground that there had been no appreciation of gold in the past, and that there was no likelihood of any such appreciation in the future. If Her Majesty's Government are not prepared to accept the proposals which we have advocated for more than ten years as the best remedy for our difficulties, we consider that they ought not now to refuse to let us adopt the only other remedy open to us, namely, the adoption of the same monetary standard as that of the country with which we have our most intimate financial and commercial relations, that standard being, as we understand, considered by Her Majesty's Government to have worked so satisfactorily in England that they are not prepared to encourage any hope of a departure from it being approved by them.

16.] No. 3083, dated 28th July 1892.

From—T. D. MACKENZIE, Esq., Chief Secretary to the Government of Bombay Financial Department,

To—The Secretary to the Government of India, Finance and Commerce Department.

I am directed to forward herewith copy of a letter No. 2730, dated 2nd instant, from the Commissioner in Sind, together with a memorial from the leading native merchants in Karachi complaining of the injury done to their business and trade by constant fluctuations in exchange, for the favourable consideration of the Government of India and for such steps as they may be able and see fit to take in order to further the object of the petitioners.

2. I am to state that the Commissioner in Sind has been informed of the transmission to the Government of India of the papers submitted by him, and of the fact that the Supreme Government has already addressed Her Majesty's Secretary of State for India in March last on the subject of the debased value of the rupee.

17.] No. 2730, dated 2nd July 1892.

From—H. E. M. JAMES, Esq., Acting Commissioner in Sind,

To—His Excellency the Governor and President in Council, Bombay.

Yesterday evening a deputation of six of the leading native merchants in Karachi, representing the most influential trading communities, waited upon me with the enclosed memorial, in which they complain of the injury done to their business and trade by the constant fluctuations in exchange. Mr. Currie, the President of the Chamber of Commerce, accompanied the deputation, the spokesman of which, Mr. Yusuf Ali, presented me with the memorial. Your Lordship will observe that it bears the signatures of all the leading native firms in Karachi.

2. I informed the deputation that I would lose no time in submitting the memorial to Your Excellency, and that I was sure Your Excellency would forward it in turn to the Government of India. It would be entirely superfluous in me to comment upon it or to suggest a remedy for evils which, I am aware, have for many years engaged the serious attention of the Supreme Government.

But from what the members of the deputation personally told me, I am justified in stating that their losses have been unquestionably heavy, and that the instability of the rupee is felt by them as a serious impediment to trade. A low exchange, enabling gold to purchase a larger quantity of produce than when exchange was higher, may be a benefit to India; but when we find the native merchants of a great port like Karachi coming forward spontaneously to complain of the serious damage to their own trade by the uncertain value of silver, it is proof that a remedy, if one be practicable, is needed. The testimony afforded by this memorial may therefore, though in ever so small a way, afford an additional inducement to the Supreme Government to persevere in its efforts to obtain a fixed ratio between silver and gold.

18.] Dated 27th June 1892.

To—H. E. M. JAMES, Esq.,
Commissioner in Sind.

The humble memorial of HOTCHAND KHUSHALRAI and others, Native Traders of Karachi—

SHEWETH,—We, native traders of Karachi, born and bred to trade exclusively and having no other calling, are now in process of discovering that our occupation is likely to vanish altogether, unless something can be done to make the value of the money, by which our trade is carried on, permanent, or at least to free it from the violent and unintelligible fluctuations to which it is now apparently always subject.

You are aware that for the last three months we have in self-defence been compelled to combine to cease purchasing European commodities in our customary way. For this reason, that the moderate profit which we look to make we have found altogether inadequate to cover the risks and losses to which we are subjected by the constant change in the value of the rupee.

When we bought Manchester grey cloth two years ago on a basis of 1/4 ¼ exchange, we could have no idea that a loss of about 15 per cent. by the sudden rise in exchange would be inflicted upon us by causes altogether outside the normal fluctuations of our local market, and over which we had no control; nor could we have anticipated the causes which brought ruin to us through contracts we had entered into with exporting firms for wheat and seeds when the rupee was valued at 1/8 in English money. Then, as we say, the value of the rupee stood at *1s. 8d.*, but when we came to carry out these contracts its value had fallen to *1s. 6d.*, and we found that in consequence we had to provide more rupees with which to buy the produce to fulfil our contracts than we had agreed to take from the exporting firms.

To illustrate the risk we are subjected to, we have only to draw your attention to the fluctuations of the present month—

On the 2nd exchange was 1/3$\frac{7}{16}$.
On the 9th exchange was 1/3$\frac{15}{16}$½, giving a rise of 4½ per cent.
On the 16th exchange was 1/3$\frac{15}{16}$, giving a fall of 1¾ per cent.
On the 23rd exchange was 1/3$\frac{7}{17}$, giving a further fall of 2¾ per cent.

What it will be to-morrow, and whether for loss or profit to us, we cannot say.

The hardship of our position is intensified by the fact that we can in no way protect ourselves from these losses, because, while we may sell with the knowledge we have of up-country supplies to exporting firms, it is impossible for us to buy against our contracts till the produce collected in small quantities in the districts is brought to market, and it is in this interval that the constant changing in the value of the rupee turns our legitimate trading transactions from safe business to purely speculative gambling.

It is this which makes us fear that, unless some means can be found to give steadiness of value to the rupee, let it be high or low, but steady, which will enable us, as in days gone by, to calculate with some certainty the result of our transactions, an absolute destruction of our trade must sooner or later overtake us.

We therefore beg that you will be graciously pleased to make a representation to Government urging the essential need of some steps being taken to put a stop to the intolerable uncertainty as to the value of the rupee.

And we will, as in duty bound, ever pray.

(*Here follow 77 signatures.*)

19.] No. 217, dated 16th August 1892.

From—The Government of India,
To—The Secretary of State for India.

In continuation of our despatch No. 183 of the 12th July last, we have the honour to forward, for Your Lordship's consideration, copy of a letter from the Government of Bombay, No. 3083, dated the 28th July 1892, and of the memorial therein enclosed, addressed to the Commissioner in Sind by the leading native merchants in Karachi, complaining of the injury done to their business and trade by the constant fluctuations in exchange.

20.] Dated 9th August 1892.

From—The HON'BLE J. L. MACKAY, C.I.E. President, Indian Currency Association,

To—The Secretary to the Government of India, Finance and Commerce Department.

In continuation of my letter of 24th June last, I have now the honour to inform you that branches of this Association have been formed in every town of any importance in India, and that the petition to the House of Commons, copy of which was forwarded to you with my letter above quoted, has already been signed by over eight thousand persons.

2. The petition will shortly be sent home for presentation to Parliament at the earliest opportunity, and a printed list of those who have signed the petition will be prepared for the information of the Government of India. Meantime I sent for your information and inspection the signatures in original, which kindly return at your convenience. It will be observed that the petition has been signed by natives as well as by Europeans, the occupations of the signatories comprising amongst others the following:

Native noblemen and gentlemen.	Vakils.
Landholders.	Manufacturers.
Zemindars.	Employés of manufacturers.
Bankers.	Shipowners.
Merchants.	Employés of shipowners.
Brokers.	Railway managers.
Tradesmen.	Railway employés.
Tea, indigo, and coffee planters.	Employés of merchants.
Barristers.	Employés of tradesmen.
Solicitors.	Officers of the Army.
Pleaders.	Government servants.

Two-thirds of the members of the Bengal Chamber of Commerce, the most important commercial body in India, have signed the petition, as also have the Trades Association unanimously.

3. Since I had the honour of addressing you on 24th June last, the sterling value of the rupee has dropped from 1-3⅜ to 1-2¾, and there is every prospect that it will still further fall.

4. The petition of the Currency Association unfortunately cannot be presented to, and considered by, Parliament probably for another three, possibly for another five, months; and, if no action is taken until Parliament re-assembles, the condition of affairs in this country may in the interval become very serious.

5. In your letter No. 2843-A. of 8th July you were good enough to state that my letter of 24th June, with copy of the petition of the Currency Association, had been forwarded to Her Majesty's Secretary of State for India for his consideration.

6. If a burning question of this nature had been agitating the public mind in England as the currency question has lately been agitating the public mind in India, opportunities would have arisen or would have been made to give the public an indication of Government's view on the subject. But so far there has

been no indication given of the views of the Government of India on this important question. It is believed, however, that Government cannot fail to be alive to the gravity of the situation, and in these circumstances I would venture to suggest that the feeling in India, as portrayed by the support which the petition to Parliament has received, should be communicated to the Secretary of State by wire in the hope that he may thereby be induced to give speedy consideration to the prayer of the petition that the Government of India be empowered to take such measures as they may think fit to adopt gold instead of silver as the standard for the currency of this country.

7. I believe it will not be overstating the case to add that the present condition and prospects of the country's currency and the apparent supineness on the part of the Government in regard to it are creating grave dissatisfaction in the minds of the intelligent classes in India.

21.] No. 3373, dated 15th August 1892.

From—J. F. FINLAY, Esq., Secretary to the Government of India, Finance and Commerce Department,

To—The President, Indian Currency Association.

I am directed to acknowledge the receipt of your letter of the 9th instant, and of the lists received therewith (since returned) of signatures to the petition of the Indian Currency Association to the House of Commons. Your letter has been transmitted to Her Majesty's Secretary of State for India for consideration.

2. I am to express the regret of the Governor General in Council that the suggestion contained in paragraph 6 of your letter cannot at present be complied with. The subject referred to being, as you are already aware, under reference to the Secretary of State, it would not be in accordance with practice or with the orders of the Secretary of State to make public now an expression of the views of the Government of India on it.

22.] No. 228, dated 16th August 1892.

From—The Government of India,

To—The Secretary of State for India.

With our letter of the 12th July 1892, No. 183, we transmitted to Your Lordship copy of a letter from the Honourable Mr. J. L. Mackay, C.I.E., President of the Indian Currency Association, and copy of a petition to the House of Commons adopted by the Association.

2. We now have the honour to enclose a further letter from Mr. Mackay, dated the 9th instant, informing us that the petition has already been numerously signed by all classes of the educated community, and that branches of the Association have been established in every town in India of any importance.

3. We have not considered it expedient to comply with the request made by Mr. Mackay for an indication of the views held and action proposed by the Government of India on the question of an alteration in our currency system; but we commend this letter to Your Lordship's consideration. The fact that the petition of the Association has been signed by two-thirds of the members of the Bengal Chamber of Commerce shews that the importance of the question is fully appreciated by the mercantile community, and confirms the belief expressed in the 5th paragraph of our despatch of the 21st June last, No. 160 (Confidential), "that we might safely count on receiving every reasonable assistance from the commercial and banking classes in the attempt to introduce a gold standard."

23.] Dated 17th August 1892.

Telegram from—The Secretary, Indian Currency Association, Madras,

To—The Secretary to the Government of India, Finance and Commerce Department.

At public meeting held last night, Town Hall, the following resolution was passed *nem con*:—That this meeting, in view of the alarming condition into which the currency of India has drifted, and fearing a grave crisis imminent, calls upon the Government of India to say at once what steps they propose to take to allay the panic feeling which exists throughout the country.

24.] No. 3500-A., dated 25th August 1892.

From—J. F. FINLAY, Esq., Secretary to the Government of India, Finance and Commerce Department,

To—The Honorary Secretary to the Indian Currency Association, Madras.

I am directed to acknowledge the receipt of your telegram of the 17th instant, embodying the following resolution passed at a public meeting held in furtherance of the objects of the Association at the Town Hall, Madras, on the 16th instant:—

"That this meeting, in view of the alarming condition into which the currency of India has drifted, and fearing that a grave crisis is imminent, calls upon the Government of India to say at once what steps they propose to take to allay the panic feeling which exists throughout the country."

2. In reply, I am to state that the Government of India fully recognize the gravity of the situation to which attention is called by the resolution. They have already addressed the Secretary of State on the subject, and regret that they are unable at present to communicate any further information to the public for the reasons stated in the recent letter* to the Honourable Mr. Mackay, President of the Association, of which copy is enclosed.

* *Vide* Accounts and Finance Proceedings for August 1892, Nos. 899 to 901 (Confidential).

25.] Dated 21st August 1892.

Telegram from—The Secretary, Indian Currency Association, Ootacamund,

To—The Secretary to the Government of India, Finance and Commerce Department.

At public meeting held here Friday following resolution carried large majority:—That in opinion this meeting desirable that Government India should press on Home Government importance of obtaining by international agreement fixed ratio between gold silver; and, failing establishment such fixed ratio, necessity giving Government India free hand to adopt such measures as may to it seem fit for remedying the existing evils.

26.] No. 231, dated 30th August 1892.

From—The Government of India,

To—The Secretary of State for India.

In continuation of our Financial despatch No. 228, dated the 16th August 1892, we have the honour to forward copy of correspondence with the Secretary to the Indian Currency Association at Madras on the subject of the present condition of the currency of India.

2. We also forward copy of a telegram received from the Secretary of the branch of the same Association at Ootacamund.

27.] Dated 22nd August 1892.

From—G. D. KER, Esq., Honorary Secretary, Indian Currency Association, Ootacamund,

To—The Secretary to the Government of India, Finance and Commerce Department.

I have the honour to inform you that a public meeting of the inhabitants of Ootacamund and neighbourhood was held here on Friday, the 19th instant, the Honourable Mr. Hamnett, C.I.E., presiding, when the following resolution was passed by a very large majority:—

"That, in the opinion of this meeting, it is desirable that the Government of India should press on the Home Government the importance of obtaining by international agreement a fixed ratio between gold and silver; and, failing the establishment of such fixed ratio, the necessity of giving the Government of India a free hand to adopt such measures as may to it seem fit for remedying the existing evils."

I wired you yesterday to this effect, and now beg to confirm my telegram.

I enclose for your information a copy of the resolutions passed at this meeting.

Indian Currency Association.

A public meeting of the inhabitants of Ootacamund and the neighbourhood will be held on Friday, the 19th instant, at 5 P.M., at the Assembly Rooms, for the purpose of considering the proposal to form a branch of this Association in Ootacamund.

The following proposals will be submitted to the meeting:

(1) That a branch of the Indian Currency Association be formed in Ootacamund, the subscription for membership being Re. 1 to cover expenses;

(2) that, in the opinion of this meeting, it is desirable that the Government of India should press on the Home Government the importance of obtaining by international agreement a fixed ratio between gold and silver; and, failing the establishment of such fixed ratio, the necessity of giving the Government of India a free hand to adopt such measures as may to it seem fit for remedying the existing evils;

(3) that inasmuch as it is of the greatest importance to arouse public interest in England at once to the serious condition into which the currency of India has already drifted, and to the still more serious outlook, this meeting, while not committing itself to all the statements in the memorial, still approves of its general tenor, and therefore recommends all interested in the matter to support with their signatures the prayer of the petition to the House of Commons;

(4) that a permanent Committee consisting of the undermentioned members of the Indian Currency Association* (with power to add to their number) be formed for the purpose of carrying into effect the objects of the Association :—

* The names of the permanent Committee will be submitted to the meeting.

Signed on behalf of the Provincial Committee—

G. D. KER.

HONOURABLE MR. HAMNETT, C.I.E.
SURGEON-GENERAL HOYSTED.
MR. J. W. MINCHIN.
COLONEL HUGHES HALLETT.
MR. J. F. DAVIES.
MR. J. D. REES, C.I.E.
MR. DADABHOY EDULJEE.
BRIGADIER-GENERAL PEARSON, C.B.
MR. HAROLD STUART, C.S.

28.] No. 3621-A., dated 3rd September 1892.

From—J. E. O'CONOR, Esq., Assistant Secretary to the Government of India, Finance and Commerce Department,

To—The Honorary Secretary to the Indian Currency Association, Ootacamund.

I am directed to acknowledge the receipt of your letter, dated the 22nd August 1892, on the subject of the present condition of the currency of India, and to say that a copy of the telegram referred to therein was sent to the Secretary of State by last mail.

29.] Dated 8th September 1892.

From—H. A. ACWORTH, Esq., Vice-President, Bombay Branch of the Indian Currency Association,

To—The Secretary to the Government of India, Finance and Commerce Department.

I have the honour to forward copy of a resolution passed yesterday by the Committee of the Bombay Branch of the above Association with a request that it may be laid before the Government of India.

RESOLUTION.

"That the Vice-President (the President being in Europe) be requested to address the Government of India, informing them that the petition of the Indian Currency Association has already been signed by a large number of the leading European and Native residents of this city, representing all classes of the community, and notably by native firms trading with England.

"2. That this Committee is persuaded that a widespread feeling exists throughout the country that the unchecked depreciation and constant fluctuation in value of the rupee have caused serious injury to India, and are likely to cause still more serious injury unless speedy steps be taken to avert the danger.

"3. That this Committee suggests that this general feeling among the intelligent classes of the Bombay Presidency may be communicated to Her Majesty's Secretary of State with a request that the Government of India may be allowed to adopt some speedy remedy for the evil in accordance with the recommendations made to Her Majesty by the Royal Commissioners appointed in 1886 to consider the recent changes in the relative values of the precious metals.

"4. That this Committee is strongly of opinion that present and probable future exigencies demand immediate attention, and that action cannot safely be deferred pending the results of the coming International Conference."

30.] No. 254, dated 21st September 1892.

From—The Government of India,

To—The Secretary of State for India.

In continuation of our Financial despatch No. 231, dated the 30th August 1892, we have the honour to forward, for Your Lordship's consideration, copy of a letter from the Vice-President of the Bombay Branch of the Indian Currency Association, and of the resolution therein referred to, on the subject of the depreciation and constant fluctuation in the value of the rupee.

31.] No. 3838-A., dated 21st September 1892.

From—J. E. O'CONOR, Esq., Assistant Secretary to the Government of India, Finance and Commerce Department,

To—The Vice-President, Bombay Branch, Indian Currency Association.

I am directed to acknowledge the receipt of your letter of the 8th instant, forwarding copy of a resolution passed by the Bombay Branch of the Indian Currency Association on the subject of the unchecked depreciation and constant fluctuation in the value of the rupee, and in reply to state that the resolution has been transmitted to Her Majesty's Secretary of State for India.

32.] No. 272, dated 5th October 1892.

From—The Government of India,

To—The Secretary of State for India.

In continuation of our despatch of the 2nd August 1892, No. 205 (Confidential), we have the honour to enclose a short paper by Mr. J. E. O'Conor, Assistant Secretary in the Department of Finance and Commerce, on the range of prices in India. The wholesale prices of imports have fallen materially, the fall on the whole approximating to, and in some cases exceeding, the fall in exchange.

2. The wholesale prices of Indian commodities have not fallen generally as imports have. Some have fallen and others have risen. Broadly, they may be divided into two great classes. Those which have risen in price are rice, wheat, linseed, and jute (raw and manufactured).

These articles may be taken to represent the following classes of goods in the export trade:

Average value, last five years.

	Rx.
Grain and pulse	19,249,000
Seeds	10,225,000
Jute, raw	7,405,000
„ manufactured	2,121,000
TOTAL ...	39,300,000

being about 41 per cent. of the average value of the exports of Indian goods for the last five years.

On examining the figures it will be seen that there was no rise of price in wheat and but little in linseed until the present year, and in both cases the rise may be regarded as caused by the temporary operation of the failure of the Russian harvests of wheat and linseed and the demand on India suddenly resulting therefrom. In rice and jute, however, it is apparent that the level of prices has been permanently raised. Both these articles are practically Indian monopolies; for, though there is competition with Indian rice, it certainly rules the European market in so far that India can supply the whole requirements of that market.

3. The articles which have fallen in price are cotton, opium (this has since risen rapidly, but the increase may be speculative and temporary), cotton yarns and cloth, indigo, tea, and hides. They have all, with the exception of opium, fallen in price in more or less the same proportion as the fall in exchange, and tea has fallen in nearly double that ratio.

The average value of these goods in the last five years has been—

	Rx.
Cotton, raw	15,077,000
Opium	9,903,000
Cotton yarns and cloth	6,619,000
Indigo	3,598,000
Tea	5,381,000
Hides and skins	4,800,000
TOTAL ...	45,378,000

being about 47 per cent of the average value of the exports of Indian merchandise in the last five years.

4. When we turn to the retail prices of food-grains we find that there has been a general rise throughout the country which may be said to have commenced about 1886. The returns of the prices paid for atta (flour), wheat, rice, pulses, and ghi by the Commissariat Department confirm the fact that prices have largely risen from about that year. To some extent this rise in the last two years is due to drought and scarcity in various regions of the Empire, and it has been intensified by the demand for export of wheat and rice.

5. We do not anticipate that a permanently lower level of prices will be established. The country is now intersected by railways through its length and breadth, and numerous steamers on the coasts also afford facilities for exchange which were absent twenty years ago. In consequence we are not likely to see prices rule as low as they did formerly in seasons of plenty, when the demand to be supplied from any particular place was purely local and ordinarily smaller than the supply available, and when, therefore, prices were more or less regulated by custom and tradition. In the present day there are

comparatively few districts from which grain cannot easily be exported to distant tracts, where the supply is smaller than the demand, or to foreign countries, and the means of intercourse have so multiplied that traders will not part with their stock locally at low prices when they possess the knowledge that it will fetch a higher price if exported or sold elsewhere in India. Prices are therefore regulated by competition and by a greatly increased demand, and the level will remain high in the future.

6. In the case of wheat and rice, the only two grains of which the exports bear a material proportion to the local consumption, the wholesale prices will be largely determined by the gold prices in Europe and the rate of exchange for the time being. As regards the retail prices of food-grains, it is worthy of notice that there have been loud and persistent complaints during the last three or four years of the high range of prices of the articles of food which are in common use by the people at large.

7. Your Lordship is no doubt aware that, although there must be a connection between the range of prices and the standard of value, it is in practice extremely difficult, if not impossible, to trace the connection. The extent to which fluctuations of price are due on the one hand to causes primarily affecting the standard of value, and on the other to such causes as the failure of crops or the apprehension of scarcity, can never be determined with accuracy. The figures we have just given confirm this conclusion.

8. Information of an unofficial character which we have recently received regarding Java, in which country a change from the silver to the gold standard was made in the year 1875 at the ratio of 1 to 15·625, shows that little or no difficulty was encountered in substituting a gold for a silver standard; that, although a gold standard is now in force there, the currency employed is to all intents and purposes a silver currency; and that great prosperity prevails under the gold standard.

We strongly recommend that Your Lordship should ask the Government of Holland for further information on this point.

33.] LEVELS OF PRICES.

The ten tables attached to this note give a general and summary view of the course of wholesale prices of imports and exports and of retail prices of food-grains since 1861, with some exceptions where prices are not available as far back as that year.

The variations in wholesale prices in tables Nos. I and II are taken from tables No. 14 and 17 in the ninth issue of the Tables of Prices and Wages annually published by this Department. There are two exceptions: the variations in the price of rice at Rangoon have been computed from a statement of prices specially obtained from the Collector of Customs, and the variations in the price of opium have been computed from the tables in Part III of the Finance and Revenue Accounts.

The variations in retail prices in tables Nos. III—IX have been computed from table No. 12 in the ninth issue of Prices and Wages. The stations selected for each grain represent each tract of the whole area over which the grain is largely grown and consumed.

Table No. X is a summary of tables Nos. III to IX.

In all the tables the years have been grouped in quinquennial periods.

In the tables of wholesale prices the price of March 1873 has been taken to represent 100, and the figures represent in most cases the prices in January of each year; where no quotation existed for that month, the next nearest month has been taken. Opium is an exception, all the figures being averages for the year based on monthly returns. Rangoon rice is also an exception as above mentioned.

In the tables of retail prices the average price for the year 1873 represents 100, and all the figures are averages for the year deduced from returns received and published twice a month.

Wholesale Prices.

The variations in the prices of imports and exports in tables I and II are based on the price in March 1873, which was taken to represent 100.

Imports.—The articles selected represent in themselves about one-third of the total import trade, but they may really be taken to represent a great deal more, for the variations in the prices of grey shirtings not only represent the variations in the trade in unbleached, but also in bleached and coloured goods; and the variations in the prices of iron represent also the variations in the prices of hardware, machinery and millwork, and railway material. The selected articles may probably be taken as representative of at least half of the import trade, the half in question being the portion which most nearly concerns the people at large. For the remaining half largely consists of articles which are either not primary necessities, or do not enter into general consumption except by the European population, or are consumed in such small quantities as to have no material importance in the domestic economy of the people.

It may be taken then that imports generally have fallen since 1873 in rupee price 26 per cent. in the case of cotton goods, from 36 to 43 per cent. in the case of cotton yarns, 36 per cent. in the case of iron, and 28 per cent. in the case of copper. Another article—kerosine oil—for which we have no figures before 1888 has fallen since that year by 24 per cent. in the case of American oil and 19 per cent. in the case of Russian oil. This article is now assuming some importance in native domestic economy.

It should be noted as regards cotton goods and yarns that the high level of price recorded in the periods 1861—1865 and 1866—1870 was caused by the immense inflation in the price of cotton which took place during the civil war in the United States.

Exports.—In the list of exports we find that the undermentioned articles, which are all of importance, have fallen in price:

Cotton, raw.	Indigo.
„ yarn.	Opium.
Hides.	Tea.

Cotton cloth has remained stationary.

The course of the prices of these articles since 1887 is shewn below (prices in January of each year, except for opium, for which the average of the year is taken):

	1887.	1888.	1889.	1890.	1891.	1892.
Cotton, Broach	85	95	93	95	84	75
Cotton yarns, 20s. ...	69	74	79	74	70	65
Cotton T-cloth	76	77	77	77	77	77
Hides, cow	87	76	76	72	65	66
Indigo, good	70	82	93	76	86	74
Opium, Bengal	84	85	91	83	81	89
„ Malwa	90	100	98	88	87	88
Tea, good Souchong ...	55	50	52	50	50	41

It may be noted as regards hides and skins that they fluctuate in price with seasonal vicissitudes. In a bad season, when prices of food-grains rise high, the prices of hides fall, the mortality being large or cultivators being compelled by distress to sell their cattle. In good seasons hides are scarcer and prices rise.

Three articles of minor importance—saltpetre, shell-lac, and raw silk—have also fallen. Shell-lac has risen in price in the present year, but it is a highly speculative trade with great fluctuations in prices. The variations for these three articles are as follow:

	1861-65.	1866-70.	1871-75.	1876-80.	1881-85.	1886-90.	1891.	1892.
Saltpetre ...	104	76	91	83	82	83	89	85
Shell-lac, middling	87	46	114	83	83	65	67	95
Silk, raw, Sardah ...	107	88	74	71	82	73	64	

The articles which have risen in price are rice, wheat, linseed, jute, and gunny bags. The course of prices of these articles in the last six years is set out in the statement below:

	1887.	1888.	1889.	1890.	1891.	1892.
Wheat (Bombay) ...	97	100	103	90	93	118
„ (Calcutta) ...	83	88	89	81	87	103
Rice (Moonghy) ...	103	110	131	144	147	162
„ (Ballam) ...	106	115	141	154	143	169
Linseed (Bombay) ...	97	104	112	111	103	110
„ (Calcutta) ...	101	95	112	109	97	113
Jute (picked) ...	137	153	192	197	126	226
„ (ordinary) ...	118	141	203	186	115	231
Gunny bags	98	125	126	118	93	132

The general rise of price of these articles in 1892 is due to special and exceptional reasons, and, except as regards rice, it cannot be said that prices shew any distinct tendency to a permanent rise. Generally it may be said that, with the exception of rice (which has shewn a distinct upward tendency since 1887) and jute, all the important staples of the export trade have either not increased or have fallen in price.

Retail Prices.

If we take the course of the wholesale prices at Calcutta and Bombay to fairly represent the course of the prices obtained by the producer, it seems clear that, with the exception of the rice-grower and jute-grower, the producer does not receive an increasing price for his goods. But while this is the case, the consumer has certainly good reason to complain in recent years of the increasing price of food-grains. From table No. X it will be seen that there is a marked correspondence between the fluctuations in periods and in degree of the different food-grains. Ragi is an exception only as regards the degree of fluctuation, the rise and fall being greater than in the case of other food-grains. This grain is produced on a relatively small area confined mainly to the Nizam's territory and the northern and central parts of Madras. When the crop fails, there is no ragi to be imported from elsewhere, and the price at once flies up to a great height as in 1866, and again in 1877 and 1878. On the other hand, the consumption being as local as the production, a good harvest following a bad one sends the price down as fast as it rose. With other grains the case is different. Each of them being of fairly general consumption over large areas, when the crop of a grain fails in one place it can generally be supplemented by

the importation of stocks of the same grain from other places, and thus prices do not rise or fall so rapidly, nor are the limits of the fluctuations so wide as is the case with ragi. A diagram of the prices of rice, wheat, jawar, and bajra shows a remarkable coincidence between the periods and the degree of their fluctuations, and this is also the case, though in not quite the same degree, with gram and barley.

In all these grains we find as the result of seasonal vicissitudes a low level of price in the periods 1861-65, 1871-75, 1881-85, and a high level of price in the periods intervening, namely, 1866-70, 1876-80, 1886-90, and again in 1891. The last three years, 1889, 1890, and 1891, have been years of high prices. The year 1891 was a good wheat year, but the abnormal demand in Europe caused an export of upwards of 50 per cent. more than the average in the course of a few months, and the rise of prices in Europe was reflected in India retail prices. There was also a large demand for rice in India owing to scarcity as well as in Europe and elsewhere. Prices still continue high (July 1892) for wheat and rice all over India. In Northern India the prices of jawar, bajra, gram, and barley have fallen somewhat, but in Penin-ular India the prices of jawar, bajra, and ragi, as well as of wheat and rice, continue very high.

September 6, 1892. J. E. O'CONOR.

34.] No. 3768, dated 22nd September 1892.

From—T. D. MACKENZIE, Esq., Chief Secretary to the Government of Bombay, Financial Department,

To—The Secretary to the Government of India, Finance and Commerce Department,

I am directed to forward herewith a copy of a letter, dated the 15th instant, from the Chairman, Chamber of Commerce, Bombay, communicating a resolution passed at a Special General Meeting of the Members of the Chamber on the subject of the fluctuations in the sterling value of the rupee, and requesting its transmission through the Government of India to Her Majesty's Secretary of State for India.

35.] Dated 15th September 1892.

From—J. L. SYMONS, Esq., Chairman, Chamber of Commerce, Bombay,

To—The Secretary to the Government of Bombay, Financial Department.

I have the honour, by direction of the Committee of the Bombay Chamber of Commerce, to communicate the following resolution passed at a Special General Meeting of the Members of the Chamber held yesterday, and to ask that you will be good enough to forward the same to the Government of India for transmission to Her Majesty's Secretary of State for India :

"That this Chamber considers that serious difficulty and danger to commerce have arisen from the violent fluctuations in the sterling value of the rupee—fluctuations which do not arise from the incidents of Eastern trade, and are not such as can be foreseen by the most prudent traders. That the development of the resources of the country by the assistance of European capital is thereby seriously checked, and the execution of public works and construction of railways calculated to add to the prosperity of the country much hampered. The Chamber therefore considers that the importance of the subject demands that it should be referred to a Committee of Experts, who should be instructed to express an opinion as to what, if any, remedy they can propose in the interests of India.

"That a copy of this resolution be forwarded to the Government of India for transmission to Her Majesty's Secretary of State for India."

36.] No. 271, dated 5th October 1892.

From—The Government of India,

To—The Secretary of State for India.

In continuation of our despatch of the 21st September 1892, No. 254, we have the honour to transmit, for Your Lordship's consideration, copy of a letter from the Bombay Chamber of Commerce, which we have received from the Government of Bombay, embodying a resolution passed by the Chamber to the effect that the violent fluctuations in exchange are a serious difficulty and danger to trade and an obstacle to the material development of the country, and that in the interests of India a remedy should be sought for.

2. This resolution indicates a change of opinion on the part of the Chamber. In 1886, when discussing the same question, they adopted the following resolution :

"That they deprecate any interference with the currency. While admitting the inconveniences of constant fluctuations in exchange, they are of opinion, after considering the question from all sides, that the fall in exchange leaves a balance of benefit to the commerce and people of India, and are in favour of allowing things to run their natural course."

Your Lordship will find on reference to the evidence given before the Royal Commission on gold and silver in July 1887 that the resolution just quoted was produced before the Commission by Mr. T. Comber as an important expression of opinion from a body specially conversant with and interested in the matter (Q. 6519 *et seq.*).

3. The Bombay Chamber of Commerce represents a very important section of mercantile opinion in India, and the change in its views indicated by the resolution which we transmit must be regarded as possessing much significance.

37.] No. 4124-A., dated 7th October 1892.

From—J. E. O'CONOR, Esq., Assistant Secretary to the Government of India, Finance and Commerce Department,

To—The Chief Secretary to the Government of Bombay, Financial Department.

I am directed to acknowledge the receipt of your letter No. 3768, dated 22nd September 1892, and to state, for the information of the Bombay Chamber of Commerce, that a copy of the letter from the Chairman sent therewith has been forwarded to the Secretary of State for India.

38.] No. 159 (Financial), dated 25th August 1892.

From—The Secretary of State for India,

To—The Government of India.

I have considered in Council Your Excellency's letter, dated the 12th of July, No. 183, forwarding a copy of a letter from the President of the Indian Currency Association, with a memorial which that body proposes to present to the House of Commons, praying that, in the event of the forthcoming International Conference failing to arrive at a satisfactory solution of the questions to be submitted to it regarding the more extended use of silver as currency, the Government of India may be empowered to take such measures as it may see fit for the adoption of a gold standard. The memorial further begs that, in view of the probable failure of the Conference to arrive at any practical issue, such power may be now given to your Government as will admit of its exercise without delay after the termination of the Conference.

2. The currency system of India is regulated by Act XXIII of 1870; and it is open to Your Excellency's Council when assembled for the purpose of making laws and regulations to repeal or modify this Act, provided that the previous consent of Her Majesty's Government shall have been given to the proposed measure, so that there is no necessity for an application to Parliament on the subject.

3. It would have been interesting to me if the Indian Currency Association had expressed its views more fully on the probable results of the measure

which they advocate, and more particularly as to its effect on trade and prices in India.

39.] Dated 28th September 1892.

From—The HON'BLE J. L. MACKAY, C.I.E., President, Indian Currency Association,
To—The Secretary to the Government of India, Finance and Commerce Department.

With reference to annexed telegram from London through Reuter's Agency, I have the honour to request that a copy of the reply from the Secretary of State to my letter of 25th June last may be sent to me, if there is no objection, for the information of the members of the Indian Currency Association.

Reuter's telegram, dated 27th September 1892.

An official Government reply to the petition of the Indian Currency Association states that the Government of India can deal with the currency question without applying for authority of Parliament in the matter.

40.] No. 3998-A., dated 29th September 1892.

From—J. E. O'CONOR, Esq., Assistant Secretary to the Government of India, Finance and Commerce Department.
To—The President, Indian Currency Association.

In compliance with the request made in your letter of 28th September 1892, I am directed to transmit, for the information of the members of the Indian Currency Association, copy of the despatch from the Secretary of State for India, No. 159 (Financial), dated the 25th August 1892.

41.] Dated 1st October 1892.

From—The HON'BLE J. L. MACKAY, C.I.E., President, Indian Currency Association,
To—The Secretary to the Government of India, Finance and Commerce Department.

I have the honour to acknowledge receipt of your No. 3998-A. of 29th ultimo, enclosing a despatch from the Secretary of State replying to my letter which accompanied copy of the petition of this Association addressed to the House of Commons, which you were good enough to transmit to the Secretary of State for his information.

2. In the third paragraph of His Lordship's despatch a regret is expressed that the Currency Association did not state its views generally on the possible effects on trade and prices of "the measure it proposes."

3. I would respectfully point out that the petition suggests two alternative courses, either bimetallism or a gold standard for India.

4. Bimetallsm has already been so amply discussed in all its bearings that it was considered unnecessary to repeat the statements of fact and theory connected therewith, as they must be familiar to His Lordship and his advisers.

5. As to the possible effect on trade and prices which would follow the introduction of a gold standard, I would venture to suggest that if His Lordship desires to secure further expert opinion on the subject, the same may be readily obtained at home; and I would add that the various questions involved have already been largely discussed in the report of the Royal Commission of 1886. A section of that Commission expressed the opinion that the fall in prices in England was "mainly due to circumstances independent of changes in the production of, or demand for, the precious metals or the altered relation of silver to gold;" and, as Her Majesty's Government have taken no steps to introduce bimetallism, it may be concluded that they adopted this view. They can have no reason, therefore, to fear that the introduction of a gold standard into India will injuriously affect prices, as the change from silver to gold could be made at approximately the market rate of the day, and the additional demand for gold would be much less than the additional demand caused by the measures for the demonetization of silver which began in 1873.

6. I would add that those who favour a gold standard hold that to retain as a standard of value a metal which in its relation to gold is constantly fluctuating and persistently depreciating is opposed to the principles on which the theory and practice of currency are based. Even if most of our commercial relations and all our financial obligations were not with England, which has a gold standard, no good arguments can be found for the retention of the silver standard unless it can be restored to the stable position which it formerly occupied. The retention of the silver standard in India under existing circumstances is politically inexpedient and unjustifiable. There is no reason to believe that the change in the standard of value from silver to gold will injuriously affect trade or prices in India any more than the change injuriously affected trade and prices in the countries of the Latin Union, in Germany, and in Java. On the contrary, if the ordinary course of prices has not been violently interfered with in those countries, where the silver coinage is retained at a ratio to gold considerably higher than that proposed for India, it seems clear that there is greater reason for holding that Indian prices will not be affected. In India rupees will remain rupees, and the producer and consumer will regulate the prices asked and paid, as hitherto, by supply and demand.

7. In a previous letter I had the honour to inform you that the petition of this Association had received 8,000 signatures, and I have to state that it has now received 16,868, more than half being those of educated natives. I take this opportunity to send you, for the information of Government and the Secretary of State, thirty copies of the Proceedings of a General Meeting of the Association held at Calcutta on 25th August last, at which the following resolution was unanimously carried:

"That this meeting views with alarm the condition into which the currency of this country is drifting in relation to gold, and the crisis which appears to be approaching; and it desires to place on record its opinion that the Government of India should take such steps as they may think expedient, in the general interests of the country, to arrest further depreciation pending the result of the deliberations of the Conference about to sit in Europe."

In view of the statement made by the Secretary of State that it is open to the Government of India to repeal or modify the currency system of this country without Parliamentary sanction, provided the previous sanction of Her Majesty's Government shall have been given to the proposed measure, I venture to hope that His Excellency the Viceroy in Council may without delay apply for the permission of Her Majesty's Government to introduce a measure which will have the effect of arresting further depreciation in the gold value of the currency of India pending the result of the deliberations of the Conference about to sit in Europe.

8. Since writing the foregoing paragraphs, I have been informed that a Committee will be appointed in London to consider the expediency of modifying the Indian Currency Act. I trust this means that the proposal for introducing a gold standard into India will now receive a thorough examination. If so, the announcement will be received with satisfaction throughout the country, and it will tend to allay the feeling of despair which was taking possession of all classes in regard to the currency prospects of India.

42.] *Proceedings of a General Meeting of the Indian Currency Association held at Calcutta on 25th August 1892.*

MR. MACKAY, in opening the proceedings, said:

Gentlemen,—I have to present to you the first report of the Central Committee of the Indian Currency Association. Our object in putting forward this report now is to acquaint the members of the Association throughout the country with what has been done, what is being done, and what it is intended to do to carry out their aims.

I am sorry that it has not been possible to publish the report earlier, but you are aware that in a country like India it is difficult to get public meetings arranged and to collect signatures as quickly as at home; and to this I must ask you to attribute the delay.

Gentlemen, I will not detain you by entering upon another lengthy discussion of the currency question. Almost all that it is possible to say on the

subject has already been said, and I think every argument against our views has been satisfactorily answered. But there are one or two proposals which have lately been put forward as likely to effect a better remedy than the one we propose, to which I will refer.

Burst up the Land Settlements.

One gentleman told me the other day that Government's proper course now was to break up the permanent settlement in Bengal to greatly reduce the length of the settlements in other parts of the country, and as silver falls in value to increase the land rents. Gentlemen, that such proposals should be seriously made in a country like India serves to demonstrate the severe nature of the disease from which we are suffering.

The same gentleman said : " Look how India will gain if the rupee falls to six pence. She has borrowed a hundred crores in silver, and the cheaper silver becomes, the less she has got to pay." But, gentlemen, when we consider that our revenue is raised in silver, it is difficult to see where the advantage will accrue or how the people's impoverishment will be the country's gain, and I deny the advantage of ruining the public creditor by depreciating the standard of value.

Another gentleman, who would still cling to silver, says : "Abolish pensions, or pay them as well as furlough allowances in rupees." In other words, gentlemen, go through the Insolvency Court, get a discharge, and start afresh !

The " Standard" and the " Economist."

Gentlemen, we have got so far that our proposals and our petition have been noticed at home. The *Standard* and the *Economist* have had articles upon us. As these papers are among the strongest supporters of the gold standard for England and other Western nations, one would naturally expect that they would give their support in advocating a gold standard for India ; but it is not so. They deny to a great extent the existence of the alleged evils ; they pour cold water on the idea of a gold standard for India ; they expatiate on the merits and compensations of a depreciating standard ; and as I read through their articles I expected every moment to find them advocating a silver standard for England and urging the English people to secure without delay the unmixed blessing of a pound sterling which is worth only ten shillings ! But they do not take this plunge. Silver would ruin England ; but as for India that is a different thing !

Lombard Street.

Gentlemen, it is not difficult to see what is at the bottom of this inconsistency. Lombard Street fears for her gold. The gold reserve in England is extremely small ; if India adopts a gold standard, there will undoubtedly be demands of some importance from time to time on that reserve, and Lombard Street fears the temporary rise of the rate of discount and disturbance of the London money market that will follow. I blame no man and no class of men for advocating measures which they believe will advance their own interests, but I think the advocacy should be open and above board.

If the gold standard is good for England, France, Germany, Austro-Hungary, and the United States, why must it bring ruin to India ; I have as yet seen no answer to that question which would hold water for a moment, because, gentlemen, there *is* none. If the silver standard of value is the best, let us all have silver ; if gold is the best, let us all have gold ; if bimetallism is the best, let us all be bimetallists. But don't let us follow the policy of Mr. Facing-both-ways, and declare that the gold standard means prosperity in the West and ruin in the East. Gentlemen, I will not waste my words or your time in arguing with those who deny or seek to minimize the evils from which we suffer. They are obvious to all of us who are present here to-day, and these evils are only a foretaste of what we must experience if the Conference comes to no agreement and the United States ceases to purchase silver. This is no

time for compromise or for mincing our words, and we must force the Government of India and the Home Government to act before it is too late.

The *Economist* accuses me of holding that the Government of India can fix the gold value of the rupee by a stroke of the pen. Gentlemen, I hold no such opinion. What I do hold is that if the free coinage of silver is stopped, the gold value of the rupee will tend to rise, and I am not ashamed of that opinion. It is within my experience that if the supply of an article is cut off or reduced, the value of that article will tend to rise, and I have not come across any authority who teaches a different doctrine. The *Economist* dwells upon the evils of the painful process by which the rupee would be raised in value. Gentlemen, we have had experience of the nature of that painful process, and we have had experience of another painful process by which the rupee falls in value, and it is because we are tired of these rises and falls that, failing other relief, we demand a gold standard. Nobody denies that there will be a disturbance when we pass from the silver to the gold standard, but we have had half a dozen such disturbances already ; and if we do not secure either bimetallism or a gold standard, we shall go on experiencing these disturbances from time to time till the day of judgment. I should like the *Economist* to study the arguments that were used in the beginning of this century when England had a depreciated paper currency, and when attempts were made to prevent England from going back to a sound metallic standard. Lombard Street came to the front on that occasion, as she is doing now, and declared that the Bank of England notes had not depreciated ; that it was gold that had appreciated, and she induced a Committee of the House of Commons to put its name to a report which will remain a monument of folly till the end of time ! The *Economist* trots out the old and exploded fallacy that the rates of interest will rise if the rupee increases in gold value. Theory and experience are both opposed to this condition. Our opponents sometimes say that they learned their political economy long ago, and are not going back to school again. Gentlemen, there is such a thing as forgetting what you have learned at school ; and when a man tells me that an increase of the value of the standard is accompanied by a rise in the rate of interest and discount, I must ask him to go back, not necessarily to the bullion reports and to the writings of Ricardo, but to some elementary treatise on political economy such as he will find in the hands of the school boys of the present day.

Natives and Europeans, officials and non-officials, combined together.

This Association is neither Anglo-Indian nor native : it includes men of every class and of every creed who can frame an idea on the subject, and who pay their share of taxation to the State, and whose interests are affected by the conditions of the currency. For the first time perhaps in the history of the country we find Native and European, the non-official and the official, united in demanding the reform of our currency system. Some hesitate to go so far as to propound a remedy ; some have doubts as to the remedies proposed ; but all alike are united in denouncing the existing system and in desiring the change which we desire, however that change may be effected.

" Standard's" Proposal to effect remedy by reducing Home charges.

The *Standard* tells us that the proposal for a reform of the currency is a nostrum, and that the real thing is the reduction of the Home charges. No doubt it would be a good thing to reduce the Home charges, but how are they to be reduced ? Let us look a little into these charges. They are estimated to amount to just under £16,000,000 this year Of this sum I find that more than half (£8,138,000) represents the interest on ordinary and railway debt.

Of course we could reduce that as Portugal has done by repudiating, but you may be sure that Lombard Street would object ! The next item in the charges is over 4½ millions (£4,594,500) on account of the Army and £229,000 for Special Defence Works, altogether over £4,800,000. If we felt inclined to reduce the Army charge, England would not allow it. Here we have in these items £13,000,000 out of the estimated £16,000,000. There remain then £3,000,000. Of this sum £2,000,000 represent leave allowances and pensions.

Native instead of European Administration.

It is clear that these cannot be reduced except by a radical change in the *personnel* of the administration, namely, the substitution of Native for European officials. If that is a thing desirable in itself, let the change be effected by all means, but at least twenty years must pass before any appreciable impression is made on that £23,000,000 and after twenty years we might possibly save half the two millions annually. Of the million remaining more than half is absorbed in salaries and expenses in England which it will be difficult to touch. We may often wish that we had no India Office, and could manage our own affairs; but while we have one it must be paid for, and I don't think you are likely to get the Secretary of State himself or any of his establishment to accept 1s. 2*d.*, or less, instead of two shillings.

Apathy in England.

Such articles as we have had in the *Economist* and *Standard* illustrate in a remarkable degree the apparent apathy with which our struggles and sufferings are regarded in England. We must fight this matter out for ourselves, and we must insist on the Government of India taking action before it is too late.

Opposition to the Movement done good.

Gentlemen, it has been a fortunate thing for our movement that it has not had universal support, because had such been the case the currency question would have attracted less attention than it is doing to-day. I don't say we have had any really serious opposition, but we have had enough to keep us alive. We have seen a good deal written and have heard a good deal said of the difficulties and dangers which will surround a gold standard for India. Gentlemen, none of us deny that there may be trouble, and that it may take some time after the transfer from silver to gold is effected till things adjust themselves; but putting aside universal bimetallism or an agreement between India and America in regard to silver, neither of which is likely to come about, will those who condemn the proposed gold standard propound a better scheme? If so, let them bring it forward as we have brought forward ours. They have given us a sample of their destructive criticism; let them now show us something of their constructive ability.

Gentlemen, I think you will agree with me that an honest desire to arrive at a solution of our difficulties has been manifested throughout the discussion to which our proposals have led. We could not expect that a proposal to change India's standard of value from silver to gold would be universally accepted without demur or without some expression of misgiving. To begin with, there are without doubt a number of people who have done very well for themselves in this country despite the fluctuating standard of value, and there are others who more or less live by the fluctuations in silver. There are also a number of people engaged in enterprises which have probably gained to some extent by the depreciation of silver, and who, while admitting that a day of reckoning must come, would be prepared to see it postponed a little longer. But while those of us who are engaged in jute and cotton manufacturing, in tea planting, and other like industries may see advantages in still being able to pay our labour in the depreciated white metal, we feel that there must be a limit to the gullability of the coolie, and that the impossibility of filling his stomach with his wages must eventually lead to a readjustment. From a purely selfish standpoint, therefore, we think the time has come when the depreciation of our currency should be arrested; and as this is impossible while we retain a silver basis, we are determined, failing an international agreement, to rehabilitate silver to seek the standard of every other civilised country, namely, gold.

Support of the Movement.

Gentlemen, the petition was signed by more non-officials than officials, and by more Natives than Europeans. A large number of the Madras mercantile community signed the petition; fifty-eight members of the Calcutta Chamber signed it, besides four partners in other firms which are members of the Chamber as well as the representatives of three companies which are members

of the Chamber, thus making a total of 65 out of 102, or as nearly as possible two-thirds. The petition was also signed by members of the mercantile community in Calcutta who are not members of the Chamber of Commerce.

In Rangoon almost all the merchants signed, but in Bombay very few. All over the country the tradespeople signed the petition. I must say I was hopeful that all the mercantile firms and banks in Calcutta without exception would have supported you, and I must admit I have been a little disappointed. Some of those who did not sign told us that they sympathized with the movement, but desired for reasons which we are bound to respect to remain entirely neutral, while others had referred the matter to their home friends.

But there are also a few members of the mercantile community here, very important members too, who strongly oppose your views, and who honestly think so badly of your proposals that they will lose no opportunity to discredit and thwart you. Your fight, therefore, is not over, although your petition has gone home, for even yet you may see attempts made to injure your movement, and you may even find people trying to induce you to withdraw from the Association. I need scarcely ask you, however, to strenuously resist the wiles of the charmer and to show your determination to stand fast.

Gloomy Financial outlook.

Gentlemen, no good end would be served by drawing a portentous picture of a probable financial panic; but, knowing what we do, I think you will agree with me when I say that it is the duty of the Government to institute enquiries for themselves with a view to ascertaining what is likely to result in business circles in the East from their allowing our currency to continue to depreciate. I think you will also agree with me when I say that the public will hold the Government responsible for the consequences of their apparent inaction.

Imperial Federation.

We have heard a good deal in recent years of Imperial Federation, of a cementing together of the different parts of the British Empire. We have even seen a magnificent monument erected in London, the Imperial Institute, as evidence that England is the centre of the United British Empire. Gentlemen, if this federation is to be anything more than a mere hollow mockery, it is essential that the Empire should be bound together by a common standard of value.

The "Times."

Some time ago Reuter rather misled us by his telegrams as to the views of the *Times* on this currency question. When the papers reached India, we found it was not the *Times*, but a retired Indian official writing in the *Times*, who had advocated impracticable remedies. Now, however, the great Thunderer himself has spoken, and spoken very much to the point. The *Times* declares that as bimetallism will not suit England, the only complete remedy for your currency troubles is the adoption of a gold standard. The Indian Press is unanimously with you; and now that the *Times*, after having heard your case, has had the courage and the fairness, in the very nest of the gold bugs, to pronounce for your proposals, you may reasonably expect to see them carried through.

I now beg to propose the following resolution: "That the report of the Central Committee, dated 20th August 1892, be adopted, and that the Committee be authorized to give effect to their proposals."

His Highness the Maharaja of Bettiah had much pleasure in seconding the resolution, which was put to the vote and carried unanimously.

MR. J. A. ANDERSON, in proposing the next resolution, said:

Mr. Mackay has called your attention to the fact that certain of our oldest and most respected mercantile firms are standing aloof from the currency movement; indeed, some few are in active opposition, affirming that the industries with which they are connected were never more flourishing, and that the lower exchange goes, the better they like it. Well then, gentlemen, if nothing

is done, and we are allowed to drift after America has ceased her purchases of silver, we will have to face a deficit on the Home charges which may amount to 25 crores ; and it is only reasonable that those who profit by the depreciated rupee should step into the breach and relieve us of this incubus. If tea and jute mills and cotton mills are flourishing on what is a general misfortune to the rest of the community, then let them bear their share of the burden. Why does not the pamphlet writer on the currency question who advocates allowing things to take their course come forward to assist Government in assessing the various industries that profit by the depreciation of our currency? This would be a sensible course, but to advocate a policy that must bring about a huge deficit without showing how that deficit is to be met would not even commend itself to a financier of the Micawber type.

If, gentlemen, the machinations of those who oppose us, added to the obstructive influence of Lombard Street, shall for a time nonplus all our efforts, we must make a resolute stand as regards how this fresh enormous taxation is to be met, and stoutly resist any attempt to foist it on to the poor in the shape of increased salt tax or renewal of the duties on Manchester goods. We must see that the saddle is put on the right horse. If necessary, gentlemen, we will hold another public meeting, and it will not be to petition anybody, but to insist that our Government shall place the increased taxation on the proper shoulders. That meeting will not be in the Town Hall, because the Town Hall won't hold the masses that will crowd to it. We shall then have not only the educated natives with us as now, but also the entire native population at our backs. Though the latter have been unable to follow the jumble that has been placed before them in the shape of discussions about the exchange question, they are quite able to understand when increased taxation is the subject-matter.

The Indian Currency Association has so far brought forward the only scheme by which the Government can be carried on with "honest money ;" and until our opponents draw up a budget showing how the deficit is to be met when America ceases to buy silver, their ideas are not worthy of consideration.

We are now paying the penalty of our callous neglect of our poorer brethren. We have seen rice steadily rise as the rupee fell in value till it is now in good season quite 100 per cent. over what was its ordinary price 20 years ago. In the cheaper classes of food used by the very poorest classes we have seen rates go up from 8 annas to 10 annas per maund to Rs. 2, and all this without any equivalent increase in wages. Tea gardens and mills may think they have grown fat upon it, and their proprietors may have chuckled over the reduction, in wages which the depreciated rupee gave them without a strike—indeed, without the unfortunate sufferers knowing the cause ; but the deficit has grown too big to be paid for the poor, so at length our Government tardily hints that it has now awakened to the necessity of doing something.

The fight in which we have engaged has had for its object the giving to this country a currency basis the same as is enjoyed by other civilised nations. We advocated a money that we could either give to or receive back from the rest of the world. We demanded "honest money," and "honest money" we shall get in spite of all opposition. In furtherance of this I have much pleasure in proposing the second resolution, *viz.* :

"That this meeting views with alarm the condition into which the currency of this country is drifting in relation to gold, and the crisis which appears to be approaching ; and it desires to place on record its opinion that the Government of India should take such steps as they may think expedient, in the general interests of the country, to arrest further depreciation pending the result of the deliberations of the 'Conference about to sit in Europe.'"

Baboo Jodoo Lall Mullick had much pleasure in seconding this resolution. He had heard with great concern what fell from the lips of the President, and did not think it would be well for either the Europeans or the natives of this country to stand quiet when there was such imminent danger staring them in the face. He would just say a few words from a native standpoint. (Hear, hear.) As to the other side, they were well represented by those who were members of the Currency Association. As far as he could see, the real ground of opposition among the merchants was this. There was a great question of

self-interest underlying the whole thing. It had been said that the natives of this country were supremely indifferent about this question, but the speaker emphatically denied this. The thinking part of the native community had for some time given this matter their serious consideration. These saw clearly and were well aware, if there was a large deficit which had to be met, the bulk of it would be met by the people of this country. There was a very large proportion of his fellow-countrymen who were dumb and voiceless, but would they continue so when they came to pay more to meet this deficit? The Europeans who came to this country were strong enough to resist any undue attempts on the part of the Government to tax them disproportionately. It was true that they tolerated the present income tax, but this was because the question of the frontier defence had reconciled them to it. Of course the Government of India, as far as he could understand, were very anxious to come to some correct solution of the problem, but there was some difficulty in their way. The Government of this country were unable to get sympathy from the Government at home, and for obvious reasons. That being the case, the natives of this country should, in the speaker's humble opinion, in every possible way support this Association in order to arrive at a speedy adjustment of the currency question. (Applause). He thought it was incumbent upon every section of the native community to be members of this Association, and to force the Government both here and in England to come to an early adjustment of this vexed question.

A welcome to criticism.

MR. W. J. M. MCCAW said :

Gentlemen, the resolution which falls to my lot to propose is a very pleasing one ; it is "that a vote of thanks be given to the Honourable Mr. Mackay for presiding on this occasion." I feel assured that this will commend itself at once to the approbation of the meeting without any words of mine of a laudatory nature ; but my personal feelings will not permit me to put the resolution forward without an expression of the deep sense of gratitude which, I think, we all owe to our friend, Mr. Mackay, for the unwearied application, the exhaustive research, and the valuable gift of his by no means free time, which he has conferred during the past two or three months for the furtherance of the object which we all have so much at heart. I am only stating what is very generally recognised when I say that it is probable that this currency question, which has for so long past slumbered in its quiescent stage of academic discussion, would in all likelihood have continued to do so had it not been taken in hand by such an active-minded and energetic man as Mr. Mackay ; and should the outcome of the present agitation be the stirring up of the Home Government and the Government of India to an attentive and reasonable consideration of the disabilities under which the country is labouring, our thanks will be due in the main to our worthy President for having brought this about.

I need only point, gentlemen, to his speech at the inauguration meeting of this Association at Simla, to his still more detailed and elaborate discussion of all the varied elements in this very complex problem in his address delivered in this Hall only a few weeks ago, and to the multiplicity of correspondence which has appeared above his signature in the columns of the daily press ever since that meeting was held, to bring at once prominently before you the laborious task which he has undertaken, and the unflinching manner in which he has carried it to its present satisfactory stage.

It was with feelings of regret, which I am sure you will all share, that I was made aware a day or two ago that excessive work had told upon his physical strength, and that he is obliged to take a short period of rest from his arduous duties. I can only express a sincere hope that he will be able to return to us ere long with his loins well girded to aid us with his counsel and advice and to again take the lead in this movement, which only requires proper direction and watchful care to make it appeal to the whole of the educated population of India in such a forcible manner as to make the demand for an alteration in the Currency laws of this country so irresistible that no Government can withstand it. Since our last meeting here our Association and its object have been subjected to some very severe criticism in the columns of some of the leading London journals.

Now I welcome this criticism most warmly. Some of the opponents of this Association (though why the majority of them style themselves opponents I have never yet from their talk or writings been able to discover) express themselves jubilantly over the recent article in the London *Economist*. I must say that I myself was rather pleased than otherwise after having read that article, for it was to be expected that the *Economist* would take up a strong antagonistic position with regard to the proposed settlement of this question; and if the arguments put forward by that paper are the most powerful that can be used, I think there is a great hope for us yet.

The main object of this Association is to call attention first of all to the grave nature of the present condition of affairs, and, secondly, to try to devise some means by which the situation will be improved, and which will prevent a recurrence of the evils which we have all so much cause to dread. This can only be done by the fullest and freest discussion and ventilation; and it is for this reason that I welcome the interest which is being taken by the well-recognised and widely-read organs of public opinion at home in this subject. I have confidence in the strength of our case; and the more clearly it is understood, the more certain will we be of getting justice done. What the exact nature of the best remedy for the present disease may be is quite a matter for open discussion; we grant this freely in our memorial to Parliament; but that some remedy is required admits of no doubt, and the remedy which we have put forward has yet to be proved to be unworkable, and has yet to be supplanted by a better. I have great pleasure, gentlemen, in proposing a vote of thanks to Mr. Mackay. (Cheers.)

Mr. David Lyall, C.S.I., said he had much pleasure in seconding the vote of thanks which had been proposed by Mr. McCaw. In fact, it was a vote of thanks to Mr. Mackay for presiding that evening, but in reality Mr. Lyall thought that all agreed it was a vote of thanks for all the trouble Mr. Mackay had taken, and for all he had done for this Association from the beginning to the end. (Cheers.) He thought they were all bound to show their sense of gratitude for favours to come, and for what they all hoped he would do in the future for them.

MR. MACKAY said:

Gentlemen, I am very much obliged to you for your vote of thanks. In acknowledging it, I would just like to say that if any of those persons who think that our petition was too strongly worded, and who refused in consequence to sign it, will draw up a milder document to suit their views, so long as it urges upon "the powers that be" the necessity for the adoption of a stable standard for our currency, I shall be happy to place my services at their disposal, and will undertake to help them. I think I can safely offer them the benefit of our widespread organisation, and I think I may also promise that they will receive not only your support, but the support of the Indian Currency Association throughout the length and breadth of India.

In acknowledging the vote of thanks which you have been good enough to accord to me, I on my part would take this opportunity to thank the Members of the Central Committee in Calcutta and the Chairman and Members of all the branch Committees for the great amount of trouble they have taken to ensure the success of this movement. My thanks are also due to all the eleven thousand members of the Association. Every one has worked with a will in the common cause, and no one has grudged either time or trouble. When we secure a stable standard of value for India, we shall have our reward.

This closed the proceedings.

43.] Report of Central Committee, Indian Currency Association, dated Calcutta, 25th August 1892.

CENTRAL COMMITTEE.

Hon'ble Sir Comer Petheram, KT., Q.C.
„ Sir Griffith Evans, K.C.I.E.

Numerous public meetings have been held throughout the country, and the petition to the House of Commons, praying that the Government of India may be empowered to take such measures as may seem to it fit to adopt gold instead of silver as the standard for the currency of this country, has been signed by upwards of 11,778 persons, of whom 5,289 are Europeans and 6,489 are natives. The signatures embrace all sections of the community, all races, all creeds, the following being a rough analysis of the signatures :—

Native Princes, noblemen and gentlemen	56
Government servants	2,523
Zemindars	153
Planters	216
Merchants	861
Bankers	406
Brokers	145
Tradesmen	1,268
Solicitors	33
Pleaders	127
Vakils	26
Barristers	97
Bank Agents	32
Medical men	218
Engineers	119
Railway Managers	12
Railway employés	441
Officers of the Army	883
Manufacturers	32
Employés of manufacturers	252
Shipowners	5
Employés of shipowners	208
Employés of merchants	338
Employés of tradesmen	198
Others	3,129
TOTAL	11,778

The Committee have already forwarded the petition along with a large number of signatures to England, so that it may be ready for presentation to Parliament as soon as the House of Commons re-assembles. Additional signatures received after despatch of the petition will be sent forward separately.

The Committee also propose to send a copy of the petition, with a copy of this report and a copy of the Proceedings of the General Meeting to be held on 25th August 1892 to each Member of both Houses of Parliament, and to the Chambers of Commerce in Britain.

They also propose to send thirty copies of the petition to the Government of India with a respectful request that a number of copies may be sent to the Secretary of State for India, together with a number of copies of this report and copies of the report of the Proceedings of the General Meeting to be held on 25th August 1892.

The Committee also propose to supply to the various branches of the Association as many copies as may be required of the following papers :

Copies of this report.

Copies of the Proceedings of the General Meeting of the Association to be held on 25th August 1892.

The work of the Association in Calcutta will now be carried on by a small Sub-Committee of the General Central Committee, and Mr. H. M. Ross, of Messrs. Ernsthausen & Co., No. 7, Loudon Street, has kindly consented to become Honorary Secretary ; and to him all communications should in future be addressed.

JAS. L. MACKAY,
President.

44.] No. 279, dated 12th October 1892.

From—The Government of India,
To—The Secretary of State for India.

We have the honour to acknowledge the receipt of Your Lordship's despatch No. 159 (Financial), dated 25th August 1892, on the subject of the memorial of the Indian Currency Association.

2. A copy of the despatch was supplied to the President of the Association, and we now transmit, for Your Lordship's consideration, copy of a further communication which Mr. Mackay has addressed to us.

45.] No. 279, dated 24th September 1892.

From—R. J. HARRISON, Esq., Honorary Secretary, Darjeeling Planters' Association,
To—The Secretary to the Government of India, Finance and Commerce Department.

I have the honour to forward herewith a memorial addressed to His Excellency the Viceroy in Council from the Darjeeling and Terai Planters' Association on the subject of the Indian currency question, and to request that you will be good enough to lay it before him in due course.

46.] Dated 24th September 1892.

To—His Excellency the Most Honourable HENRY CHARLES KEITH, PETTY FITZMAURICE, MARQUIS OF LANSDOWNE, G.M.S.I., G.C.M.G., G.M.I.E., Viceroy and Governor General of India in Council.

The humble memorial of the Darjeeling Planters' Association—

SHEWETH,—That your memorialists are an association representative not only of the European and Indian capital which for the last thirty years has been so largely invested in the development of the staple industry, *viz.*, the tea industry, carried on in the hill districts of Darjeeling and Kurseong and in the

district of the Terai, but also of the important resident community of skilled Europeans who for a like period have been similarly engaged.

2. To that capital and to the efforts of that community is almost entirely attributable the degree of prosperity at present enjoyed by the districts named.

3. Your memorialists have read with concern the petition of the Indian Currency Association addressed to the Honourable the House of Commons, praying that the Government of India be fully empowered to take such immediate measures as to it may seem fit for the purpose of remedying the evils attending on the present condition of the Indian currency system, for instance, by the prohibition of the free coinage of silver and by the adoption of gold as the monetary standard of value.

4. Your memorialists submit that if that prayer be granted and acted upon, there is every probability that the Indian tea industry will collapse.

5. In clause 20 of the petition above referred to it is stated that, under the present conditions of the currency system, "the exporter is no gainer, for each fall in exchange is followed by an equivalent fall in the gold price of the commodities he exports." Your memorialists submit that this statement, besides being an insufficient representation of the facts, is one which it is extremely difficult, if not impossible, to verify. On the other hand, it is a fact well within the experience of your memorialists that the fall in gold prices at home, which has been going on steadily for the last twenty years, is attributable to *over production of tea*. That it has nothing to do with the fluctuations of exchange is obvious from the fact that within recent years, whenever the gold value of the silver rupee has risen in England, that rise has not been followed by an equivalent rise in gold prices.

6. In clause 22 of the same petition it is stated that "the investment of English capital in the development of the material resources of the Empire is discouraged; for, both as regards the remittance of interests and the final transfer of invested profits and economies, the continuous fall in exchange imparts to the investment of capital in this country a speculative character and a risk which the capitalist is unwilling to face." Your memorialists submit that, apart from the fact that many of the capitalists engaged in the development of the Indian tea industry are resident in India, thus eliminating to a great extent the question of remitting interest home, and also apart from the fact that the idea of finality is a very indeterminate one to attach to the operations of the English capitalist, which are continuous operations, and therefore postulate the return to India under advantageous conditions of exchange, and in the shape of further capital of the interest previously remitted home; it is within the experience of your memorialists that whatever difficulties they meet with in procuring financial assistance from capitalists resident in England are also, like the fall in gold prices at home, attributable to *over production of tea* and not to any deterrent effects produced upon English capitalists by the fluctuations in exchange.

7. Those countries which still retain silver as their monetary standard of value have hitherto entered into no international agreement under which they shall all combine (1) to check the present continuous fall in the value of silver, or (2) to impart a character of stability to any rate of exchange upon which they may fix for the rupee or dollar, or (3) to adopt gold as the common monetary standard of value.

8. China is a country with a silver standard, and the rise and fall of the price of her silver *tael* is regulated by the same conditions that govern the fluctuations in the price of India's silver rupee. She is also a tea-producing country, and thus enters into competition with the community who are engaged in developing the tea industry of this country. In days gone by China exported as much as 170 millions of pounds of tea to the London market. Since then, however, the superior quality of the tea exported to the same market from India has precluded China from exporting more than 50 millions of pounds, and thus the ascendency in this respect, once belonging to China, has been transferred to, and now rests with, India.

9. Your memorialists submit that any interference, such as that prayed for in the petition of the Indian Currency Association, with the natural course of exchange between India and the country where both she and China find a market for their teas would inevitably cause the price of the Indian rupee either to be stationary or to rise gradually or suddenly, whilst at the same time the price of the Chinese *tael* would be falling; and your memorialists are therefore apprehensive not only lest China should in consequence of that interference regain the ascendency which has been wrested from her, but even lest the tea industry of India should be entirely and irretrievably ruined.

Your memorialists, therefore, pray that, until such time as an international agreement is entered into by all countries having a silver standard, the Government of India, even if empowered by Her Majesty's Government in the way prayed for in the petition of the Indian Currency Association, will stay its hand and not interfere with the present condition of the currency system; for under it those engaged in the Indian tea industry enjoy a considerable degree of prosperity, and this to the best of their ability they endeavour to share with all with whom they are connected, thus making the surrounding regions what they are, a happy district for the natives, with busy factories and an enormous population of industrious, contented coolies—a prospect which will immediately vanish should the prayer of the petition above alluded to be granted, and Your Excellency's Government act upon the powers conferred on it.

And your memorialists, etc.

47.] No. 4189-A., dated 12th October 1892.

From—J. F. FINLAY, Esq., Secretary to the Government of India, Finance and Commerce Department,

To—The Honorary Secretary, Darjeeling Planters' Association.

I am directed by the Governor General in Council to acknowledge receipt of your letter No. 279, dated 24th September 1892, forwarding a memorial to His Excellency the Viceroy in Council from the Darjeeling Planters' Association on the subject of the Indian currency question.

The Government of India understand that the memorialists object, in the interests of the Indian tea industry, to any change in the Indian standard of value whereby the rupee would be given a fixed value in relation to gold, while at the same time the silver standard of China might continue to depreciate relatively to gold and to the Indian rupee under the new condition of things.

2. The prosperity of the tea industry of India is necessarily a matter of concern to the Government of India, and the arguments contained in the memorial have been carefully considered. The Governor General in Council will not offer any opinion at the present time on the expediency of attempting to introduce a gold standard into India; the question has often been discussed and the arguments *pro* and *con* are doubtless familiar to the memorialists. There is one matter contained in the memorial, however, which appears to the Government of India to require careful examination.

The memorialists apprehend that if the value of the rupee were fixed with reference to gold, while the gold value of the Chinese *tael* continued to fall, China would obtain such an advantage over India in the production of tea that she would regain the ascendency which she has lost, and that the tea industry of India might be entirely and irretrievably injured. In other words, the memorialists contend that if two countries compete in the production of the same article, the country of which the standard of value is depreciating relatively to the standard of the other country must prove successful in the competition.

It is this proposition which in the opinion of the Government of India requires examination.

3. It is unnecessary to remind the memorialists that international trade is regulated by, and dependent upon, the comparative cost of production of commodities. India, for example, grows tea and exports it to England in exchange for (say) cotton goods, because it is found that by devoting a certain amount of labour and capital to the production of tea, and exchanging that tea for cotton goods, a larger quantity of cotton goods is obtained than could be secured by devoting the same amount of labour and capital to the direct production of cotton goods in India.

It is obvious that the real cost or amount of labour and capital required to produce tea, piece goods, and all other commodities must remain precisely the same whatever the standard of value may be, and a change of standard cannot possibly, therefore, have any effect on the fundamental conditions which regulate international trade. Accordingly, if a change in the value of the monetary stand injuriously or beneficially affects the production of any commodity, it must do so by impeding or facilitating (as the case may be) the operations of production and trade rather than by modifying the essential conditions on which production and trade depend. Is it then the case that the depreciation of the standard of value necessarily stimulates the production of articles of export; if so, is such stimulus permanent, and is it attended with any drawback?

4. A mere alteration in the relative value of gold and silver, leading to an alteration in the exchange between two countries, confers no advantage on the one country over the other in so far as regards the exchange of commodities for commodities. For example, if a certain number of pounds of tea sell for Rs. 100 and a certain number of yards of calico sell for £10, and if Rs. 100 are worth £10, India will receive Rs. 100 for her tea and pay £10 or Rs. 100 for her piece goods. Assuming that the relative value of gold and silver alters, so that it takes Rs. 120 to equal £10 in value, India will, other conditions remaining the same, receive Rs. 20 more for her tea than she did before, but she will have to pay Rs. 20 more for her piece goods, and consequently the country *as a whole* in that exchange of commodities for commodities which constitutes international trade neither gains nor loses by a fall in the gold value of silver.

Since the country *as a whole* neither gains nor loses in the international trade by the fall in the value of silver; it follows that, if the tea industry gains by the fall, such gain must be made at the expense of other members of the community; in other words, for every additional rupee which the producer of tea receives, owing to the fall in exchange, on account of tea exported, some other person in India has to pay a rupee more as the price of articles imported.

5. It may now be considered what is the nature of the gain made at the expense of other members of the community by the producer of goods for export when silver falls relatively to gold, whether this gain is permanent or not, and whether it is attended with corresponding drawbacks. The gain (if any) made by the producers of tea when silver falls relatively to gold arises solely from the fact that the alteration in the value of silver affects the exchange with England and the wholesale price of tea before it acts on other prices and on wages. If all the expenses of the tea producer rose simultaneously with, and to the same extent as, the rise in the wholesale price of his tea, due to a depreciation of the standard, he could derive no benefit from depreciation. It is the fact that all prices and wages do not rise simultaneously to the full extent that enables him to make a slight and temporary profit at the expense of the persons whom he employs, and of all other persons to whom he has to make fixed money payments.

This profit is usually only temporary, since with the depreciation of the standard all wages and prices tend to rise, and when the rise is completed the profit disappears. If the profit should happen to be considerable, and should last for some time, it supplies an unnatural and temporary stimulus to the trade, which leads to overproduction and consequent reaction.

Moreover, large and sudden falls in the value of the standard necessarily imply the possibility of large and sudden rises, and fluctuations in the price of a commodity due to alterations in the value of the standard cannot fail to have an injurious effect on the trade as a whole.

6. The Government of India feel sure that the memorialists will admit that international trade must be considered as a whole; that trade and production are extended and improved by everything that adds to the welfare of the country at large; and that illegitimate and temporary gain made by one section of the community at the expense of another can only prove injurious in the long run.

In this view of the case it cannot be doubted that the possession of the same standard of value by two countries must, other things being equal, increase not only the total trade between the two countries, but the trade in each particular article, while the existence of two standards fluctuating in relative value constitutes a grave impediment to business, and not only reduces the aggregate

of business, but injuriously affects every industry which contributes to make up that aggregate. It appears, therefore, to the Government of India that if India possessed the same standard of value as England, always assuming that that standard of value was in itself a good one, trade between the two countries would be stimulated instead of checked, and every industry in both countries contributing to that trade would be benefited instead of injured.

7. To sum up, the Government of India are of opinion—

(1) That a country as a whole makes no gain in its international trade by a depreciation of its standard, since the extra price received for its exports is balanced by the extra price paid for its imports.

(2) That the producer of an article of export may make a temporary and unfair gain from depreciation of the standard at the expense of his employés and of other persons to whom he makes fixed payments.

(3) But that this gain, while not permanent, is counterbalanced by a tendency to overproduction, and consequent reaction and depression, by a liability to sudden falls in price as well as to rises, and by the check to the general increase of international trade which necessarily results from the want of a common standard of value between countries which have intimate commercial and financial relations.

If the Government of India are right in the views they have just expressed, and they entertain no doubt as to their correctness, it will follow that the adoption of the same standard of value by England and India, always assuming that standard to be in itself a good standard, would facilitate international trade, stimulate production in both countries, and place China at a disadvantage as compared with India in the production of tea, as well as of all other commodities, for sale in the English market.

8. In conclusion, I am to say that a copy of the memorial will be forwarded for the information of Her Majesty's Secretary of State for India.

48.] No. 286, dated 19th October 1892.

From—The Government of India,

To—The Secretary of State for India.

We have the honour, in continuation of the papers already transmitted to Your Lordship on the subject of the Indian currency, to forward herewith copy of a memorial from the Darjeeling and Terai Tea Planters' Association, praying that no change may be made in the existing currency system until an international agreement can be entered into by all the countries which have a silver standard.

2. We also enclose copy of a letter which has been sent to the Association dealing with the main argument on which the memorial is based.

49.] Dated 30th September 1892.

Telegram from—The Secretary of State for India,
To—The Government of India.

The appointment of a Committee under the presidency of Lord Herschell has been decided upon for the purpose of advising as to whether it is expedient that any steps should be taken to modify the Currency Act.

50.] Dated 13th October 1892.

Telegram from—The Secretary, Indian Currency Association, Bombay,
To—The Secretary to the Government of India, Finance and Commerce Department.

Following resolution passed yesterday by this branch of Association: *Resolution begins*—"Carried unanimously that the Government of India be moved to request Mr. Mackay to proceed to England to give evidence before Lord Herschell's Committee, and that it be suggested that the evidence of Mr. J. Sleigh, Secretary, Bank of Bombay, 11, Dryden Place, Newington, Edinburgh, Mr. Beith and Mr. Charles MacDonald of Manchester, and Mr. James Thorburn of Forbes, Forbes & Co., London, be also taken."—*Resolution ends.* Respectfully requested that this resolution may be laid before Supreme Government.

51.] No. 4235-A., dated 14th October 1892.

Telegram from—The Government of India,
To—The Secretary of State for India.

Bombay Currency Association unanimously passed following resolution: *Begins*—"That the Government of India be moved to request Mr. Mackay to proceed to England to give evidence before Lord Herschell's Committee, and that it be suggested that the evidence of Mr. Sleigh, Secretary, Bank of Bombay, 11, Dryden Place, Newington, Edinburgh, Mr. Beith and Mr. Charles MacDonald of Manchester, and Mr. James Thorburn of Forbes, Forbes & Co., London, be also taken."—*Resolution ends.* We will enquire whether Mr. Mackay is willing to go.

52.] Dated 14th October 1892.

Telegram from—The Honorary Secretary, Currency Association, Calcutta,
To—The Secretary to the Government of India, Finance and Commerce Department.

Am instructed to forward following resolution passed at to-day's meeting, Central Committee:

"This Committee is of opinion that at present juncture the interests of India require special and adequate representation at home, and would urge upon Government the desirability of deputing the Honourable Mr. Mackay to proceed to England to give evidence before Lord Herschell's Committee."

53.] Dated 15th October 1892.

From—H. M. Ross, Esq., Honorary Secretary, Central Committee, Indian Currency Association,
To—The Secretary to the Government of India, Finance and Commerce Department.

I have the honour to inform you that at a meeting of the Central Committee of this Association held yesterday the following resolution was passed:

"That the Committee is of opinion that at the present juncture the interests of India require special and adequate representation at home, and would urge upon the Government the desirability of deputing the Honourable Mr. Mackay to proceed to England to give evidence before Lord Herschell's Committee."

In view of the probable early meeting of Lord Herschell's Committee, it was thought desirable that no time should be lost in communicating to the Government of India the foregoing resolution, and I therefore telegraphed to you last evening as per enclosed copy.

54.] Dated 19th October 1892.

Telegram from—The Honorary Secretary, Indian Currency Association, Madras,
To—The Secretary to the Government of India, Finance and Commerce Department.

The Committee of the Madras Branch, Indian Currency Association, respectfully urge upon Government the advisability of sending the Honourable Mr. Mackay to England to give evidence before Lord Herschell's Committee, and to fully represent the views of the Association and the grave position in which India is placed by its depreciated and uncertain currency.

55.] Dated 22nd October 1892.

Telegram from—The Honorary Secretary, Indian Currency Association, Ootacamund,
To—The Secretary to the Government of India, Finance and Commerce Department.

At meeting held here to-day Local Committee, Indian Currency Association, passed following resolution:—Unanimously this Committee is of opinion that the deputation of the Honourable Mr. Mackay to give evidence before Lord Herschell's Committee is most desirable, and hope that Government of India will take steps to this end.

56.] No. 4416-A., dated 28th October 1892.

From—J. E. O'Conor, Esq., Assistant Secretary to the Government of India, Finance and Commerce Department,
To—The Honorary Secretary, Currency Association, Bombay.
The Honorary Secretary, Central Committee, Indian Currency Association, Calcutta.
The Honorary Secretary, Currency Association, Madras.
The Honorary Secretary, Currency Association, Ootacamund.

I am directed to acknowledge the receipt of your telegram dated the 13th, 14th, 19th and 22nd October 1892, and in reply to say, for the information of the Members of the Currency Association, that the Government of India has been informed by Her Majesty's Secretary of State for India that the Committee appointed under the presidency of Lord Herschell will receive evidence, and Mr. Mackay has accordingly proceeded to London to lay his views before it, but he has not been deputed for the purpose by the Government of India as suggested by the Association.

[*2. I am to add that your telegram having been sent to the Secretary of State, the Government of India has been informed by His Lordship that the suggestion of the Association for the reception of evidence from gentlemen now in England will be placed before Lord Herschell's Committee.]

57.] No. 219 (Financial), dated India Office, London, 3rd November 1892.

From—The Secretary of State for India,
To—The Government of India.

Your Excellency was informed by my telegram of the 30th of September that it had been decided to appoint a Committee, over which the Lord Chancellor would preside, to advise whether it is expedient that any steps should be taken to modify the Indian Currency Act; and by my subsequent telegram of the 21st of October you will have learned that the other members of the Committee are the Right Honourable Leonard Henry Courtney, M.P., Sir Thomas Henry Farrer, Bart., Sir Reginald Earle Welby, G.C.B., Mr. Arthur Godley, C.B., Lieutenant-General Richard Strachey, C.S.I., and Mr. Bertram Wodehouse Currie.

2. A copy of my letter to the Lord Chancellor of the 21st of October appointing the Committee is enclosed for Your Excellency's information.

* To Bombay only.

3. The letters from your Government which have up to the present date been laid before the Committee, with their enclosures, are those in the Financial Department numbered as in the margin.

Nos. 68, 160, 183, 205, 217, 228, 236, 231, 254, 255, 261, 271 and 272.

58.] No. 4641-F., dated India Office, London, 21st October 1892.

From—The Secretary of State for India,

To—The Lord High Chancellor.

I enclose, for Your Lordship's perusal, a copy of a correspondence which has recently passed between the Secretary of State for India in Council and the Government of India, in which, as you will observe, that Government submits proposals for stopping the free coinage of silver in India with a view to the introduction of a gold standard.

It is unnecessary for me to dwell upon the grave difficulties with which the Government of India are confronted in consequence of the heavy fall in the gold value of silver or upon the serious nature of the measures which they propose.

It is on account of the great importance of these measures, the effect of which, if they are adopted, will by no means be confined to India, that I have decided to request Your Lordship to preside over a Committee for the purpose of considering the proposals of the Government of India as contained in this correspondence, and to advise whether it is expedient that Her Majesty's Government should allow them to be carried into effect.

In case the Committee should be of opinion that there is no sufficient ground for overruling the Government of India, but that the measures by which they propose to attain the object which they have in view require modification, I shall be glad to receive any suggestions which the Committee may have to offer.

The Committee will meet at this office, and its proceedings must for obvious reasons not be open to the public; but, subject to this condition, the Committee will proceed in the manner which they think best.

Your Lordship having already intimated to me that you will accede to my request, the Committee will be constituted as follows:

The Lord High Chancellor.
The Right Honourable Leonard H. Courtney, M.P.
Sir Thomas Henry Farrer, BART.
Sir Reginald Earle Welby, G.C.B.
Arthur Godley, Esq., C.B.
Lieutenant-General Richard Strachey, C.S.I.
Bertram Wodehouse Currie, Esq.

I trust that as the matter is urgent, and as the inquiry will be confined to the points which I have mentioned, the Committee may be able to report upon an early day, and that their meetings may be arranged accordingly.

It is now understood that the Monetary Conference will meet at Brussels on the 22nd of November, and it would be very advantageous if I could receive the report of the Committee before that date.

59.] Dated 24th October 1892.

From—DAMODUR GOCULDAS MUNJEE, Bombay,

To—The Secretary to the Government of India, Finance and Commerce Department.

I beg to inform you that at the request of the Native leading traders (Import) of the City of Bombay, I have to-day forwarded to you six copies of a memorial, with 4 lists of signatures, addressed to His Excellency the Most Honourable the Marquis of Lansdowne, Viceroy and Governor General of India, the receipt of which kindly acknowledge to me.

To—HIS EXCELLENCY THE MOST HONOURABLE THE MARQUIS OF LANSDOWNE,

Viceroy and Governor General of India.

The humble memorial of the Native Import Traders of the City of Bombay—

RESPECTFULLY SHEWETH,—That your memorialists have gladly availed themselves of an opportunity recently afforded of signing a petition addressed by the Indian Currency Association to the House of Commons of Great Britain and Ireland upon the present condition of the currency of this country, but they desire to address Your Excellency separately upon the subject of the great loss and anxiety to which they are subjected by reason of the uncertain exchange value of the rupee.

That your memorialists, though possessed of long experience in the import trade, have of late found that, owing to the fluctuations in exchange, they, as well as the European merchants of this city, have incurred very serious risks and losses in their business.

That, in consequence of these losses, a large majority of the members of the Bombay Chamber of Commerce, once indifferent upon the question, have now come to recognise that it also affects them injuriously, and accordingly within the last few days have greatly to your memorialists' satisfaction passed a resolution calling upon Your Excellency's Government to take advice whether some remedy cannot be applied to the evils from which they, as well as your memorialists, have been and now are suffering.

That until some 8 or 10 years ago your memorialists were generally able to enter into contracts with European agency firms based upon rupee prices, but this system has now gone out of vogue, and the risk of exchange has to be borne by your memorialists; and this risk is so materially heightened by the recent heavy fall and violent fluctuations in exchange that your memorialists find it simply impossible to carry on their trade any longer with any degree of safety.

That your memorialists are thus much perplexed and uncertain in respect of continuing their business. That they have been in the habit, when placing their orders, of calculating upon a moderate profit of from $\frac{1}{4}$ to $\frac{3}{4}$ per cent., but have found that even a small movement in exchange has been sufficient to convert this expected profit into a loss.

That if they seek to avoid the risk by fixing exchange at the time of placing an order, they incur another risk of being undersold by others who have not fixed exchange and have benefited by a rise; that some among them do one thing and some another; and that thus their business has been changed from legitimate trading into speculation and gambling.

That your memorialists understand that further troubles may arise in future; that Your Excellency's Government may be forced to impose additional taxation upon this country to meet Government losses by exchange, which taxation your memorialists most humbly urge the country is utterly unable to bear, and would create a most widespread dissatisfaction amongst the masses.

That they understand that a conference between America and the nations of Europe is about to take place, which is likely to result in one of two things, both harmful to your memorialists,—that it may lead to the sudden fixing of exchange at so high a figure as to produce widespread ruin in this city, or may cause a sudden fall which would be equally disastrous.

Your memorialists, though ignorant of the laws which govern questions of international currency, possess a confident hope and expectation that Your Excellency and Your Excellency's Councillors will in their wisdom be able to devise some means of averting these dangers and of preventing the constant fluctuations in exchange which now so greatly harass them. They therefore pray that steps may be taken to fix the exchange value of the rupee at a rate which, in Your Excellency's judgment, may be best suited to the interests of your memorialists.

That your memorialists urgently, but respectfully, request that Your Excellency's Government will give earnest heed to this humble representation

of their case, and will take speedy steps towards securing the ends which they desire.

And your memorialists, as in duty bound, will ever pray.

(*Here follow 674 signatures.*)

60.] No. 4541-A., dated 4th November 1892.

Telegram from—The Government of India,
To—The Secretary of State for India.

We have received memorial from 674 native import traders, Bombay City, complaining that fluctuations exchange have reduced their business to speculation and gambling; asking steps be taken to fix exchange value of rupee. Please inform Lord Herschell's Committee. Copy by post.

61.] Dated 1st September 1892.

To—The Honourable the Commons of Great Britain and Ireland in Parliament assembled.

The petition of the Karachi Chamber of Commerce.—

HUMBLY SHEWETH,—That your petitioners suffer inconvenience and loss in consequence of the continuous fluctuations in the exchangeable value of the money of this Empire with that of gold-using countries, and that a remedy is urgently required.

2. From 1835 to 1872 the rupee, the monetary standard of value in India, exchanged with little variation. In 1872 Germany demonetized silver. France, to avoid an influx of the German silver, restricted the coinage of that metal. Since then other European nations have also demonetized silver. The result has been a fall in the value of silver measured by gold from 60 pence per ounce to between 38 and 39 pence, a decline of over 35 per cent., and the exchange value of the rupee has consequently fallen from 24 pence to 14·65 pence.

3. The maintenance of some stability in the ratio of value between gold and silver is of the greatest importance to trade, continual and violent fluctuations in that ratio tending to falsify the calculations of merchants, and to check trading operations by increasing the uncertainties attending them.

4. Various remedies have been suggested and International Monetary Conferences have been held in 1867, in 1878, and in 1881. In 1886 the question was the subject of investigation by a Royal Commission The members of this Commission reported that they were unanimously of opinion that the Government of India should be left free to adjust matters in the way that seemed best, but no action was taken on that report, and practically nothing has been done to arrest the progressive fall in the value of silver since 1872.

5. The investment of English capital in the development of the material resources of the Empire is discouraged, for both as regards the remittance of interest and the final transfer of invested profits and economies, the uncertainty in exchange imparts to the investment of capital in this country a speculative character and a risk which the capitalist is naturally unwilling to face.

6. Then, too, the credit of the State is heavily injured by the fluctuating value of the rupee securities of the Government of India held in England and the uncertainty in the amount of interest in gold which may be obtained by their holders. English capitalists are naturally as reluctant to invest their money in these securities as they are to invest it in India.

7. But it is of the harassment to which the trading community are constantly subjected by the uncertainty and the fluctuations of exchange that we bitterly complain. We submit that with a continuance of the present state of things legitimate trade in India is in great danger of being replaced by pure speculations.

8. Your petitioners, therefore, humbly pray that, in view of the considerations set forth above, your Honourable House will be pleased to endeavour to secure through the International Conference about to be held means by which the mercantile community may be accorded the benefit of a stable par of exchange, thus granting a relief from the disadvantages under which trading in India has been suffering in consequence of the heavy and sudden fluctuations of the rupee for many years past.

And your petitioners, as in duty bound, will ever pray.

62.] No. 317, dated 16th November 1892.

From—The Government of India,
To—The Secretary of State for India.

In continuation of our despatch No. 217 (Financial), dated the 16th August 1892, forwarding a memorial from the native traders of Karachi complaining of the injury done to their business and trade by the constant fluctuations in exchange, we have the honour to forward a memorial signed by six hundred and seventy-four native import traders of the City of Bombay in which a similar complaint is made. On the 4th instant we telegraphed informing Your Lordship of the receipt of the memorial, and requesting that Lord Herschell's Committee might be informed of the fact.

2. We attach importance to this memorial, as the number of signatures indicates that it represents the practically unanimous opinion of the native import traders of Bombay.

3. We take the opportunity of enclosing copy of a memorial received by us from the Karachi Chamber of Commerce, which the Chamber has taken steps to present to Parliament.

63.] No. 4706-A., dated 22nd November 1892.

From—J. E. O'CONOR, Esq., Assistant Secretary to the Government of India, Finance and Commerce Department,
To—MR. DAMODUR GOCULDASS MUNJIE, care of MESSRS. SIR CHARLES FORBES & Co., Bombay.

I am directed to acknowledge the receipt of your letter dated the 24th October 1892, and of the memorial sent therewith, complaining of the injury done to the import trade of Bombay by the constant fluctuations in exchange.

2. I am to state that the memorial and the signatures have been transmitted to the Secretary of State for India.

64.] Dated 28th October 1892.

From—H. A. ACWORTH, Esq., Vice-President of the Bombay Branch of the Indian Currency Association,
To—The Secretary to the Government of India, Finance and Commerce Department.

I have the honour to forward herewith copy of a resolution passed by the members of the Bombay Branch of the above Association at a meeting held here on 26th instant with a request that it may be laid before the Government of India.

Resolution passed by the Members of the Bombay Branch of the Indian Currency Association at a Meeting held on 26th October 1892.

Proposed by MR. ACWORTH.
Seconded by MR. C. H. B. FORBES.

That this meeting records its satisfaction at the appointment of Lord Herschell's Committee as an indication of interest on the part of Home Government, and is glad to learn that the Honourable Mr. Mackay is on his way to England to give evidence before it. At the same time the members of the Association in Bombay earnestly trust that the Committee will record the result of its deliberations with the least possible delay, as they feel that the emergency is one of a pressing character, and that the questions at issue having been the subjects of consideration for many years are ripe for decision.

65.] No. 313, dated 9th November 1892.

From—The Government of India,

To—The Secretary of State for India.

In continuation of our Financial despatch No. 254, dated the 21st September 1892, we have the honour to transmit, for Your Lordship's information, copy of a letter from the Vice-President of the Bombay Branch of the Indian Currency Association, and of the resolution therein referred to, on the appointment of Lord Herschell's Committee.

66.] No. 4778-A., dated 29th November 1892.

From—J. E. O'Conor, Esq, Assistant Secretary to the Government of India, Finance and Commerce Department,

To—The Vice-President of the Bombay Branch of the Indian Currency Association.

I am directed to acknowledge the receipt of your letter of the 28th October 1892, forwarding copy of a resolution passed by the Bombay Branch of the Indian Currency Association on the appointment of Lord Herschell's Committee, and to state that copy of your letter and of the resolution has been transmitted to Her Majesty's Secretary of State for India.

67.] Dated 21st November 1892.

Telegram from—The Secretary of State for India,

To—The Government of India.

The Indian Currency Committee desire to have your views regarding Sir John Lubbock's proposal for the imposition of a seignorage on silver. Refer to his speech before the London Chamber of Commerce published in the *Times* of 27th October. They also want your opinion as to the levy of a heavy duty on import of silver.

68.] No. 328, dated 7th December 1892.

From—The Government of India,

To—The Secretary of State for India.

We have the honour to acknowledge receipt of your telegram dated 21st November 1892, quoted in the margin,* regarding a proposal to charge a high seignorage on the coinage of silver at the Indian mints or to impose an import duty on all silver imported into India.

* See above No. 67.

To this telegram we caused the following telegraphic reply to be sent on the 5th :

The revenue obtained from the coinage of silver would be increased by the levy of a 10 per cent seignorage, but the quantity of silver coined would probably be reduced in consequence of the imposition of so heavy a seignorage. The rupee would be kept eventually nearly 10 per cent higher in value than if no seignorage were levied, but the measure might not produce its full effect immediately, because doubtless rupees would be returned from foreign countries. By reducing the demand for silver a 10 per cent seignorage would have some slight effect in lowering the value of the metal.

The plan is suggested as one which would have a tendency to check the fluctuations in exchange, but we cannot see that it would have any such effect. The Indian exchange might not, with a 10 per cent seignorage, fall so low as otherwise, but any rise would be proportionately higher. With a high seignorage the fluctuations would be quite as frequent and serious as without a seignorage. In effect the rupee would under this proposal become a taken coin, while the principal evil under which we suffer would not be mitigated by the plan. We are consequently unable to accept it.

The proposal to levy an import duty on silver is open to a similar objection.

Practically, under such a duty, the rupee might in British Indian limits have the same value as the metal contained in it, but exchange fluctuations would be as great and frequent as ever, and there would be danger of smuggling.

It has been proposed to impose a seignorage or levy an import duty varying in such a way as to maintain the coined rupee at a fixed gold value, but a varying charge would occasion so much complaint and be open to so many objections that we do not think it practicable.

2. The above telegram dealt so fully with the question referred to us by Your Lordship that we feel it unnecessary to do more than give a brief summary of our arguments in the present despatch. It will suffice to say that a high seignorage on the coinage of silver or a high import duty on silver brought into India would improve our financial position both by adding to the public revenue and by preventing the gold value of the rupee from falling as low as it might otherwise have done. As soon as the rupee was given a materially higher value than that of the silver contained in it, rupees would doubtless be returned to India from foreign countries and from Native States, and possibly some hoarded rupees might be thrown into circulation. The full effect of such a duty might not therefore be obtained at once, but to the above extent the difficulties of the financial position would no doubt be alleviated for a time by such a measure as that proposed by Sir John Lubbock.

On the other hand, while the silver rupee would, by the imposition of a 10 per cent seignorage, be practically reduced to the position of a token coin, the evils arising from excessive fluctuations in the exchange would be neither removed nor alleviated.

3. We have caused the exchange value of the rupee to be calculated on the hypothesis of a 2 per cent seignorage, as at present, and of a 10 per cent seignorage, as proposed, at prices in London of a standard ounce of silver varying 60*d.* to 30*d.*, allowing for melting charge, mint loss, cost of remittance to India, and interest. The following table gives the results of this calculation :

Price per ounce of standard silver in pence.	Exchange value of a rupee in pence (seignorage 2%).	Exchange value of a rupee in pence (seignorage 10%).	Price per ounce of standard silver in pence.	Exchange value of a rupee in pence (seignorage 2%).	Exchange value of a rupee in pence (seignorage 10%).
60	23·04	25·09	44	16·89	18·40
59	22·65	24·67	43	16·51	18·00
58	22·27	24·25	42	16·13	17·56
57	21·89	23·83	41	15·74	17·14
56	21·50	23·42	40	15·36	16·72
55	21·12	23·00	39	14·97	16·31
54	20·73	22·58	38	14·59	15·90
53	20·35	22·16	37	14·20	15·47
52	19·97	21·74	36	13·82	15·05
51	19·58	21·32	35	13·44	14·64
50	19·20	20·90	34	13·05	14·22
49	18·81	20·49	33	12·67	13·80
48	18·43	20·07	32	12·28	13·38
47	18·05	19·65	31	11·90	13·96
46	17·66	19·23	30	11·52	12·54
45	17·28	18·81			

It will be observed that when silver falls from 50*d.* per oz. to 40*d.* per oz., the gold cost of the rupee with a 2 per cent seignorage falls from 19·20*d.* to 15·36*d.*—a difference of 3·84*d.*, or exactly 20 per cent. With a seignorage of 10 per cent, the fall is from 20·90*d.* to 16·72*d.*—a fall of 4·18*d.*, or 20 per cent, as before; in other words, with a 10 per cent seignorage instead of a seignorage of 2 per cent, the amount of fall measured in pence would be greater, but the percentage of fall would be exactly the same. The measure would therefore have no effect whatever in putting a stop to fluctuations.

4. As the adoption of a high rate of seignorage would have no effect on the chief evil from which we now suffer, would merely tend to improve in some degree the present financial position of the Government, and would afford no guarantee against depreciation in the future, we are of opinion that the objections to reducing the rupee to a token coin, and indefinitely deferring the complete solution which we believe must be arrived at some day, outweigh any advantages which the measure might produce. If it be decided that the rupee must, sooner or later, be converted into a token coin, it seems to us that it would be better to adopt a gold standard at once—a course which would equally improve the financial position, and would also afford some prospect of a final and satisfactory remedy. This course is in our opinion clearly preferable to a

half measure, involving the main disadvantage of a gold standard, but leaving our greatest difficulty untouched, and affording no guarantee against fall of value in the future.

5. With regard to the proposal referred to in the last sentence of our telegram, we may remark that the objections to a currency system which depended on its success on a rate of seignorage or import duty fluctuating in accordance with the rise and fall in the market price of silver are so obvious and so serious that we refrain from discussing the question.

69.] Dated 7th December 1892.

From—J. A. ANDERSON, Esq., Vice-President, Indian Currency Association,

To—The Secretary to the Government of India, Finance and Commerce Department.

The probable failure of the Brussels International Monetary Conference, combined with the declaration of the American delegates that its dissolution may be followed by the cessation of silver purchases by the United States Treasury, has created a state of uncertainty regarding the future of exchange which might any day develope into a serious panic.

At the present time certain important branches of Indian commerce are in a highly critical position, and can ill bear the additional danger of wild fluctuations in the sterling value of the rupee. As no immediate change can occur in the statistical position of silver, the public anxiety and alarm are largely sentimental, and would be at once allayed by an assurance from the Government that, in the event of the anticipated failure of the Brussels Conference, it will take whatever measures may be necessary and advisable for the protection of the Indian currency.

Should the Government not be prepared to give such an assurance, my Association would respectfully ask whether it will recommend the Secretary of State for India to stop all sales of Council bills below the rate now current, pending the decision of Lord Herschell's Committee.

70.] No. 4927-A., dated 9th December 1892.

From—S. JACOB, Esq., Officiating Secretary to the Government of India, Finance and Commerce Department,

To—The Vice-President, Indian Currency Association.

I am directed to acknowledge the receipt of your letter dated 7th December 1892, and in reply am to state that the Government of India, while fully alive to the serious inconvenience which is felt in various branches of Indian commerce owing to the uncertainty which now exists regarding the course of exchange, regrets that it is unable to give you an assurance that, in the event of the failure of the Brussels Conference to arrive at a satisfactory solution of the monetary question, measures will be taken for the protection of the Indian currency.

Such an assurance, while it would be too vague and general in its terms to be of any real value, might hamper the action of Government under circumstances which cannot from the nature of the case be clearly foreseen, and might thus produce unfortunate results. Nor does the Government of India consider that it would be justified in recommending the Secretary of State to stop for an indefinite time all sales of Council bills below any fixed rate. It will probably be clear to your Association on reconsideration that, whatever may be the result of the Brussels Conference, or the outcome of the enquiry by the Committee of which the Lord High Chancellor is President, the Government of India will be in a better position to deal with any circumstances that may arise hereafter if it reserves to itself complete freedom of action and refrains from giving assurances which might fetter its course of procedure in the future.

71.] No. 4939-A., dated 9th December 1892.

Telegram from—The Government of India,

To—The Secretary of State for India.

The alarm felt in consequence of the uncertainty of exchange prospects has been represented to us by the Indian Currency Association, which requests us to give an assurance that, if the International Monetary Conference should be a failure, we will adopt the measures necessary for the protection of the Indian currency, or that we will recommend to Your Lordship to cease, pending decision on the report of Lord Herschell's Committee, the sale of bills below the rate now current. We have declined to adopt either course because future action might possibly be embarrassed.

72.] Dated 9th December 1892.

Telegram from—The Honorary Secretary, Indian Currency Association, Madras,

To—The Secretary to the Government of India, Finance and Commerce Department.

Committee, Madras Branch, Indian Currency Association, respectfully urge Government, in view of the failure which seems to have attended the International Monetary Conference, to declare its intentions or stop sales of Council bills pending report in Lord Herschell's enquiry.

73.] Dated 10th December 1892.

From—The Exchange Banks Association,

To—The Secretary to the Government of India, Finance and Commerce Department.

We, the undersigned Agents and Managers of the Exchange Banks, desire to draw the attention of His Excellency the Viceroy to a serious difficulty which may arise in regard to contracts for the purchase of silver should any law be passed without due notice closing the Indian mints to free coinage of silver. For should such a law come into operation at any time before the banks had received delivery of the silver they had purchased under forward contracts, they would run the risk of having to resell at a loss in London.

In the face of such a risk, the banks will naturally avoid such contracts, but in doing so they cannot avoid contracting the finance of the seaborne trade, and may possibly thereby hamper the operations of that trade. We beg, therefore, respectfully to suggest that His Excellency should at once give us some assurance that any silver contracted for before the issue of an order to close the mints to free coinage of silver shall be admitted for coinage.

Our reason for taking the present opportunity for tendering this suggestion is that the speeches of Mr. Bertram Currie and of others representing England at the International Conference appear to indicate that, in the event of no agreement being come to thereat, the closure of the Indian mints to free coinage of silver will almost certainly result.

74.] No. 4985, dated 13th December 1892.

From—S. JACOB, Esq., Officiating Secretary to the Government of India, Finance and Commerce Department,

To—The Agent, Chartered Mercantile Bank of India, London, and China, Calcutta.

I am directed to acknowledge receipt of the letter of 10th instant, signed by you and by the Managers of some other Exchange Banks, suggesting that the Government of India should give an assurance that, in the event of the Indian mints being closed to the free coinage of silver, all silver contracted for before the issue of an order to close the mints to free coinage of silver shall be admitted for coinage.

2. In reply, I am to say that the Government of India is of opinion that it would not be in the public interest to enter on a discussion at the present moment of the measures which might be adopted if it were decided to close the Indian mints to the free coinage of silver, and the Governor General in Council fears, therefore, that it is impossible to give the assurance for which you ask.

75.] No. 5039-A., dated 16th December 1892.

From—S. JACOB, Esq., Officiating Secretary to the Government of India, Finance and Commerce Department,

To—The Honorary Secretary, Indian Currency Association, Madras.

I am directed to acknowledge the receipt of your telegram dated the 9th December 1892, and in reply to say that (as stated in the letter of the 9th instant, No. 4927, to the Vice-President of the Association, of which copy is enclosed) the Government of India regrets that it is unable to recommend the Secretary of State to stop the sale of Council bills, pending the report of the Committee of which the Lord High Chancellor is President.

76.] Dated 21st December 1892.

From—The HON'BLE J. L. MACKAY, C.I.E., President, Indian Currency Association,

To—The Secretary to the Government of India, Finance and Commerce Department.

The course of the proceedings at the International Monetary Conference, and the adjournment of the Conference, subject to the approval of the Governments represented as to the expediency of meeting again, must be taken to mean that it is hopeless to expect any international agreement either as to the adoption of the bimetallic system or as to the more limited proposals placed before the Conference for an extension of the use of silver and a restriction of the use of gold. It is indeed universally admitted that what was foreseen in the final paragraph of the petition of this Association to the House of Commons and in my letter of the 24th June last with which the petition was placed before the Government of India has actually been realised.

2. There now remains no method of relieving India from the effects of its depreciated currency except as pointed out in the letter to which reference has just been made, namely, the closing of the mints to the unlimited coinage of silver for the public and the adoption of gold as the standard. In the position which we have now reached it is generally admitted that action in this direction is essential, and that the change should be made without further delay.

3. In the expectation which prevails on all sides, by some that action will be taken, by others that it is unavoidable, the course of business is greatly impeded. The country is being inundated with silver to an extent only equalled in the very exceptional year 1890, the shipments from London since the failure of the International Conference was recognised having been on an enormous scale. In the last four weeks silver to the value of about a million sterling has been shipped from London for India, where there is no present demand for it. It is generally inferred that these shipments have been made in view of a further fall in the price of the metal. On the other hand, the exports of gold from India during the present year have been made on an unusual scale. It is easy to see that a large inflow of silver and a large outflow of gold, even if they are not the result of the expectation of a change in the Indian currency, will aggravate the difficulty of making the change in the standard, and that the longer the change is deferred, the more will the difficulties be enhanced.

4. The Government of India recently refused in reply to representations from this Association and from the Associated Exchange Banks of this city to give the public any indication of the policy it proposed to pursue. On behalf of the Association I take no exception to this refusal if, as may be presumed, the report of the Committee presided over by the Lord High Chancellor and the conclusions thereon of the Secretary of State for India have not yet reached the Government of India. But the Governor General in Council will, I am sure, recognise that it is desirable to terminate the tension which in the existing uncertainty prevails in business circles, and that it is also expedient not to prolong an uncertainty which gives occasion for an unnecessary inflow of silver and outflow of gold, which must interfere with the smooth working of any plan of reform which may be entered upon.

5. I have the honour, therefore, respectfully to suggest that it is expedient that the Secretary of State for India should be informed by telegraph of the position, and that His Lordship should be requested to communicate to His Excellency the Viceroy as speedily as possible and by telegraph the decision on the question placed before Lord Herschell's Committee. In case His Lordship should see fit to comply with this request, it would be a source of great satisfaction if the decision of His Lordship were made public without delay.

77.] Dated 23rd December 1892.

Telegram from—The Government of India,

To—The Secretary of State for India.

The attention of the Government of India has been drawn by the Indian Currency Association to the abnormally large quantity of silver being shipped to India, to the export of gold from India, and to the interruption of trade and business occasioned by the existing uncertainty. We are urged by the Association to ask Your Lordship to announce by telegraph as soon as may be your decision on the proposals under consideration by the Indian Currency Committee. We are confident that the evils which must be occasioned by delay are fully recognised by Your Lordship, and that the present state of suspense will not be unnecessarily prolonged before the decision is given. Many of our European officers are seriously embarrassed, and if the present condition of affairs, which has already generated a very uneasy feeling, is indefinitely prolonged, we are afraid that it may give rise to a regrettable agitation.

78.] No. 5169-A., dated 23rd December 1892.

From—S. JACOB, Esq., Officiating Secretary to the Government of India, Finance and Commerce Department,

To—The President, Indian Currency Association.

I am directed to acknowledge the receipt of your letter of the 21st instant drawing attention to the large shipments of silver from London and net exports of gold from India during the past few months, and to the serious impediments to business which result from the present state of uncertainty as to whether any, and if so what, action may be taken by Government for "relieving India from the effects of its depreciated currency," and suggesting that the Secretary of State should be informed by telegraph of the position and requested to communicate to His Excellency the Viceroy as speedily as possible and by telegraph the decision on the question placed before Lord Herschell's Committee.

2. In reply, I am directed to say that the Government of India has informed Her Majesty's Secretary of State for India that the Currency Association has addressed it on the subject to which your letter refers, and has communicated to His Lordship by telegram the recommendations which the Association has made. The Government of India has no doubt that the Secretary of State is fully alive to the serious evils which result from the uncertainty which at present prevails in the silver market.

79.] Dated 31st December 1892.

Telegram from—The Secretary of State for India,

To—The Government of India.

Your telegram of the 23rd. I am fully aware of the importance of avoiding all unnecessary prolongation of the existing state of suspense, but I cannot decide without full consideration. The questions raised before Lord Herschell's Committee are of very great gravity.

80.] Dated 7th January 1893.

From—The President, Indian Currency Association, Bombay Branch,

To—The Secretary to the Government of India, Finance and Commerce Department.

I have the honour to forward copy of a resolution passed yesterday by the Committee of the Bombay Branch of the above Association with a request that it may be forwarded to the Secretary of State for India.

Resolution passed by the Committee of the Bombay Branch of the Indian Currency Association at a Meeting held yesterday, the 6th January 1893.

"As it seems certain that the deliberations of the International Monetary Conference will end without any practical result being arrived at, and that in consequence as the statements of the American delegates leave no room to doubt America will shortly suspend State purchases of silver, the gold price of that metal must necessarily continue to fall. The Secretary of State for India should, therefore, be urged by Government to sanction the immediate closing of the mints against the free coinage of silver, reserving that privilege for Government alone, and to refuse the sale of Council Bills under a certain fixed rate.

"Unless these protective measures be speedily adopted, it is anticipated that the Government of India will soon be involved in deeper financial troubles; that the present disorganised condition of trade will be intensely aggravated, and the financial and commercial relations with gold-using countries reduced to absolute confusion.

"This branch of the Indian Currency Association is distinctly of opinion that no insurmountable difficulty can arise from the immediate closing of the mints to the public, and that to do so is the only rational remedy for the present ruinous position. The longer this action is delayed, the greater the difficulties that will arise. Already the abnormally large shipments of silver in transit to India and the large contracts reported to have been made in London for the delivery of silver some months forward at rates considerably under the existing market rate unmistakably indicate that practical authoritative opinion views the future of silver with grave alarm, and that the closing of India's mints is considered inevitable.

"India is believed to be the only country whose mints are now open to the unrestricted coinage of silver; and as the markets for the metal are notoriously in the hands of bold speculators, the disturbing fluctuations are not likely to be less frequent and violent than hitherto, and are certain to be maintained so long as India continues to keep her mints open as at present.

"By adopting the course proposed, India will be able to wait composedly till Western nations make up their minds as to what course they mean to permanently follow."

81.] No. 25, dated 18th January 1893.

From—The Government of India,

To—The Secretary of State for India.

In continuation of our telegram of the 13th instant, quoted in the margin, we have the honour to forward, for Your Lordship's consideration, copy of a letter, dated the 7th January 1893, from the Bombay Branch of the Indian Currency Association, together with copy of the resolution referred to, advocating that our mints should be immediately closed against the free coinage of silver, and that Council bills should be sold at fixed rates.

"Bombay Branch, Currency Association, submits resolution, which we are forwarding, drawing attention to reported forward contracts delivery silver at lower rates than present, and urges immediate closing mints and sale Council bills at fixed rates, anticipating that delay will aggravate difficulties of Government and trade."

2. We take this opportunity to transmit copy of the letter, dated the 21st December 1892, from Mr. Mackay, the President of the Indian Currency Association, the substance of which was communicated to Your Lordship in our telegram dated the 23rd December 1892, to which Your Lordship replied by telegram dated the 31st December 1892.

82.] No. 306-A., dated 21st January 1893.

From—J. E. O'Conor, Esq., Assistant Secretary to the Government of India, Finance and Commerce Department,

To—The President, Indian Currency Association, Bombay Branch.

I am directed to acknowledge the receipt of your letter dated the 7th January 1893, and to say that a copy of the letter and of the resolution referred to therein has been transmitted to Her Majesty's Secretary of State for India.

83.] Dated 3rd February 1893.

Telegram from—His Excellency the Viceroy,

To—The Secretary of State for India.

I received to-day a strong deputation from the Currency Association. Representatives of the following interests were present:

Merchants, traders, ship-owners, importers, exporters, manufacturers, producers, bankers, and land.

The deputation urged the stoppage of free coinage of silver and supported its proposal by evidence showing that all the above interests are now injuriously affected. The statements of the deputation seem to me to have strengthened the case in favour of closing the mints, and this will, I think, be the impression here. I expressed my own belief that not only Government and its officers, but the whole country, suffered under the existing state of things. But I dwelt on the need of caution, and of proving conclusively that the remedy contemplated involved neither political nor economical risks.

Finally, I told the deputation that they seemed to me to make out a *primâ facie* case in favour of a standard uniform with that of the countries with which India does most of its business, and that as the Association had now for seven months fearlessly advocated such a standard, it rested with the opponents of the Association to show authoritatively that the country disagreed with its conclusions.

84.] DEPUTATION FROM THE INDIAN CURRENCY ASSOCIATION.

Address of the Hon'ble MR. J. L. MACKAY, C.I.E., *and others, and His Excellency's reply thereto.*

After having introduced the deputation, Mr. Mackay said:—May it please Your Excellency,—We have the honour to come before you as a deputation appointed at a meeting held in the Town Hall, Calcutta, under the auspices of the Indian Currency Association, on 27th January 1893. The meeting referred to consisted of about 700 people, comprising representatives of all branches of trade and commerce and manufactures in this city, and representative also of the landed interest in the country, and of all the branches of the public service.

At that meeting the following resolution was proposed by the President of the Indian Currency Association, seconded by Mr. R. D. Mehta, Sheriff of Calcutta, Member of the firm of Messrs. D. B. Mehta & Co., merchants and cotton spinners in this city, and carried unanimously:

"It is now generally recognised that, with the dispersion of the International Monetary Conference, the hope of united action has disappeared, and that further argument and delay merely mean waste of time.

"The United States are preparing to cease their purchases of silver, and it may be anticipated that the gold value of the rupee, which has within the last twelve months fallen from 1*s.* 5*d.* to 1*s.* 2¾*d.*, will soon further rapidly decline.

"It is known that for years past it has not been possible for the Government of India to meet the increasing cost of its sterling obligations except by the imposition of new and objectionable taxes, and that the heavy fall of the rupee in 1892 has brought the finances of the country into a critical position, making further oppressive taxation apparently inevitable.

"Moreover, the impecunious position of the Government is retarding the development of the country, and the uncertainty regarding the Indian standard of value deters capitalists in England from investing their funds in India enterprises.

"The present tension and uncertainty and the prospect of the immediate future have a most injurious effect on all merchants and traders by paralysing the legitimate commerce of the country in all its branches, and trade as a consequence is almost at a standstill.

"It is therefore resolved that this meeting is of opinion:

"'1. That no justification exists for the continuance of the policy of inactivity in regard to the Indian currency system which has unfortunately for so many years guided the Government of India.

"'2. That the International Monetary Conference having failed in its objects, the Government of India should at once close the mints to the free coinage of silver as the first step towards establishing the gold standard and putting the currency on a stable basis, and this meeting therefore strongly urges upon the Government of India the necessity for adopting this course without further delay."'

That resolution having been passed, it was felt that its importance was too great to admit of its being sent to the Government of India in the ordinary way, and the following further resolution proposed by Mr. N. H. T. Becker, of Messrs. Ernsthausen & Co., and seconded by Mr. W. O. Bell-Irving, of Messrs. Jardine, Skinner & Co., was carried unanimously:

"That the following gentlemen be appointed a deputation to present the resolution just passed to His Excellency the Viceroy:

"His Highness the Maharaja of Bettiah, K.C.I.E.
"Maharaja Sir Narendra Krishna Bahadur, K.C.I.E.
"Hon'ble Syed Amir Hussein, C.I.E.
"Babu Ramanath Ghose.
"Nawab Abdul Lutif, Khan Bahadur, C.I.E.
"Nawab Mir Muhammad Ali.
"Prince Muhammad Bakhtyar Shah.
"Mr. R. D. Mehta, of Messrs. D. B. Mehta & Co.
"Babu Nolin Behari Sircar, of Messrs. Kerr, Tarruck & Co.
"Mr. W. T. Spink, of Messrs. Thacker, Spink & Co.
"Mr. Reginald Murray, Chartered Mercantile Bank.
"Hon'ble A. H. Wallis, of Messrs. Manton & Co.
"Mr. L. Pugh, Barrister-at-Law.
"Mr. G. Irving, of Messrs. T. E. Thomson & Co.
"Mr. W. J. M. McCaw, of Messrs. Kettlewell, Bullen & Co.
"Mr. S. Keith Douglas, of Messrs. Carlisles, Nephews & Co.
"Mr. D. W. P. King, Delhi and London Bank.
"Mr. E. Henry, of Messrs. Blackwood, Blackwood & Co.
"Mr. N. H. T. Becker, of Messrs. Ernsthausen & Co.
"Mr. W. O. Bell-Irving, of Messrs. Jardine, Skinner & Co.
"Mr. J. A. Anderson, of Messrs. Anderson, Wright & Co.
"Mr. J. F. McNair, of Messrs. Begg, Dunlop & Co.
"Mr. A. G. Apcar, of Messrs. Apcar & Co.
"Mr. J. L. Mackay, of Messrs. Mackinnon, Mackenzie & Co."

In the first place, we have to thank Your Excellency for having graciously consented to receive this deputation and to hear what we have to urge in support of the reform of the currency system of India which we advocate.

This deputation represents merchants, traders, ship-owners, bankers, land-owners, producers, manufacturers, importers, and exporters. The merchants represent those who are engaged not only in trade with gold-using countries, but also in trade with silver-using countries and in local trade.

The proposal to change the standard of value in India is not a new one. Precisely what we propose was strongly urged upon the Government of India as far back as 1878, when it was found that the link between gold and silver had apparently been irrevocably severed. The Government of India at that time threw out the proposal because it clung to the hope that international bimetallism would be adopted, and that thereby India would be extricated from her difficulties.

The Government of India have therefore had ample time to consider this question, not only with reference to India, but also with reference to other countries. What we propose is no leap in the dark, because it has been adopted by numerous other countries whose object was to save themselves from the embarrassments and dangers which have overtaken India. I would here mention that France, Spain, Italy, Switzerland, Belgium, Greece, and Holland closed their mints to the free coinage of silver in 1873. The United States had done so previously, and the gold standard was adopted by them all, and

by Germany, Sweden, Norway, and Denmark, while Austria-Hungary has lately passed a law following this example. In 1878 the gold standard was also adopted by Java.

The Government of India have had the experience of all these countries to contrast with their own bitter experience of the past fifteen years, and must be in a position to form their conclusions as to whether it would not have been to the advantage of India in the past, and whether it is not likely to be to the advantage of India in the future, to change its standard of value from silver to gold.

We approach Your Excellency at this time, in the first place, because the Brussels Conference has hopelessly failed, not only to bring about bimetallism, but even to secure international agreement on subsidiary measures for the increased use of silver as money; in the second place, because Lord Herschell's Committee has now had ample time to consider the question in all its bearings; in the third place, because the fall in silver, which has already taken place, has brought the finances of the Government into a perilous position, and has restricted and embarrassed the trade of the country to such an extent as to create an almost unparalleled state of commercial depression; and, lastly, because it is clear from the course of events in America that the decline in the value of silver which has taken place in the past twelve months will be followed by a still further fall which cannot but aggravate the dangers already facing us.

In March 1892 the Budget estimated for a small surplus for the current year. The fall in exchange must have swept away this amount and added at least 150 lakhs to the expenditure of the Government of India.

This additional expenditure must be met either by increased taxation or by the restriction of railway construction and other public works, thus hampering and checking the country's progress, or by both; and the mercantile community will regard the adoption of either of these courses at such a juncture with the greatest dissatisfaction.

In the meantime we observe that the European servants of the Government of India are not unnaturally pressing for an adjustment of their emoluments owing to the depreciation in silver which, if granted even in a limited degree, must considerably increase the already heavy burden now imposed on the general tax-paying community.

My Lord, we freely confess to a strong feeling of sympathy with the servants of Government who find their incomes daily dwindling, and who in consequence are in some cases put to severe straits, such as are calculated to do serious injury to the efficiency of the administration. We realise, in fact, that it will be absolutely impossible for Government to carry on the administration on the present terms. We are strongly convinced, however, that the adjustment of salaries and all other adjustments can only be properly effected by the reform of a currency system which has gradually, but with increasing rapidity, brought the country to the present pass.

The demand for a reform of our currency system is now made by the producing, commercial, trading, and non-official classes in India with as unanimous a voice as it is possible to get on such a subject. When the remedy was first proposed a certain number of people expressed indifference, while others expressed disapproval. It may be safely said that some of those who were formerly indifferent are now with us, while a number of those who were previously in opposition would now be glad to see something done. No better evidence of this need be looked for than is to be found in the words which the Chairman of the Bombay Chamber of Commerce is reported to have addressed to the members at the annual meeting held this week. The Chairman said: "I have taken an unpopular line, and belong to the minority who do not approve of action—not because I would not like to see the value and stability of the rupee improved, but because I think no remedy has yet been suggested which, if tried, would not probably land us and the country generally in much greater trouble than we are in now. Our opponents taunt us with being content to pursue the policy of drift and other evil courses, but we cannot help this, and I am sure, if any of their suggestions are tried and prove successful in accomplishing the end desired, we shall be quite ready to own ourselves wrong and to congratulate them."

My Lord, we feel that, without any agitation for the reform of the currency system of India, the change which we advocate must, by the sheer force of circumstances, sooner or later, be introduced. We feel assured that, without any outside pressure, the mints of India must eventually be closed to the free coinage of silver. All that we hope to do is to expedite the measure, relieve ourselves from the present highly unsatisfactory state of affairs as speedily as possible, and induce the Government to adopt the change without waiting for the financial crash which will eventually force the reform.

Mr. W. O. Bell-Irving, of Messrs. Jardine, Skinner & Co., said:—May it please Your Excellency,—The currency question has been so fully discussed of late in all its bearings that I feel it would be a mere waste of time on my part to do more than touch very briefly on a few points on which, as one directly interested, I can speak with a certain amount of authority.

It has been contended that the closing of the Indian mints to the free coinage of silver will seriously curtail trade between India and China; that such is not the opinion of Mr. Apcar and myself, who represent the only existing direct lines of steamers between Calcutta and China, and are otherwise interested in the trade between the two countries, will be apparent from the fact that we are both members of the deputation now before you.

A petition was recently presented to Your Excellency by various parties interested in tea in the Darjeeling district in favour of a continuation of masterly inactivity as regards the currency question. In reply it was very properly pointed out that, in an important matter of this kind, Government had to consider the general weal of the country, and not merely individual interests. Whatever policy in connection with the currency may be adopted in India must, I take it, of necessity come into force in Ceylon, so that the issue, as far as tea is concerned, is virtually India and Ceylon *versus* China. No doubt exists in my mind with which side victory will eventually rest. In this connection figures, dry though they generally are, and misleading as they sometimes prove, are instructive. In 1881 the export of tea to the United Kingdom was—

	£
China	112,706,457
India	47,413,576
Ceylon	697,268

while in 1891 it stood thus:

China	69,394,523
India	111,168,895
Ceylon	63,744,987

The tea-drinking public at home have got accustomed to the strong pungent liquor of the Indian teas, and it is very improbable that the comparatively weak, flavourless China teas will again come into favour.

These later teas are, moreover, handicapped by having to pay leaking and other recognised duty in China to the extent of about 4¼ taels per picul, equivalent to, say, 1½*d.* per lb. It is notorious besides that various squeezes—if I may be allowed to use the term—exist, as to the extent of which the petty officials in China are in a better position to express an opinion than I am.

There is yet another side of the question, and a very important one too, that the said petitioners appear to have overlooked. Investments in tea in this country have, almost without exception, sooner or later to be realised and remitted to Europe. Will the holder of a share in a tea garden, or an investor in tea scrip, appreciate a policy of drift if it result in his having to remit the proceeds of his investment at an exchange of, say, 10*d.*? I trow not! It may be argued that the rupee is never likely to decline to 10*d.*, but not so many years ago most people would as confidently have affirmed that there was no chance of the rupee touching 1*s.* 2½*d.*

If any class have benefited from the depreciation of a rupee, it ought to be the ryots, and through them the zemindars, and I am not prepared to contend that in certain respects they have not; but, as representing over 3,300 square miles of land in Lower Bengal, held by my firm directly or as agents, mainly in putnee or perpetual lease, I feel very strongly that, at the time the perpetual

settlement was made, it was never contemplated by Government that the land revenue should be paid in such an unstable coin as the rupee has proved to be, and that, if action be not taken to arrest the downward tendency, increased taxation is inevitable. My Lord, what is wanted to develop India is capital; to open out railways, start industries throughout the breadth and length of the country, and bring the large tracts of virgin waste land which still exist into cultivation. So long as the value of the rupee is an unknown quantity, the flow of capital into India will be checked. Let the value of the rupee be fixed, and money, which is a drug in the London market at 3½ per cent., will be available in India in abundance; and if this country with cheap labour, and in many cases raw material on the spot, and markets at the door, cannot with exchange, say, at 1*s.* 6*d.* hold its own, then the outlook from a commercial point of view is indeed gloomy.

Mr. J. A. Anderson, of Messrs. Anderson, Wright & Co., said:—Your Excellency,—Two years ago there was a vague, general idea amongst our merchants that India was greatly benefited by the depreciation of the rupee, and that the lower it went, the more prosperous it would be. There was one little difficulty that at times made people doubt whether they were quite right, and that was when they followed the argument to the end, and found that, if the rupee became of no value at all, then we should have reached the height of prosperity. As we have grown wiser, the absurdity of the whole theory has become too apparent, and I doubt if it now finds a single honest supporter. Those few who oppose the reform of our currency, do so under the plea of believing in universal bimetallism, and thinking that India would benefit more by this than by any independent action. They avoid all details of their objections, and have no suggestions as to the means by which the deficit in the financial position of Government is to be met. They only say they prefer to see the ills we are suffering from continue rather than that their own pet scheme should fail.

An admirable letter in the *Englishman* of 30th ultimo, under the well-known initials "A.M.L.," most effectually disposes of the obsolete argument that Indian exports benefited greatly by a depreciating currency. The writer says: "The average exports of the years 1866 to 1870 are compared with the averages of 1886 to 1889, all values being expressed in sterling. The result is as follows:

Indian trade shows an increase in the 20 years of only	...	24 per cent.
Mauritius, a decrease of	...	6 „
Ceylon, another rupee-using colony, a decrease of	...	21 „

Whereas the gold standard countries in a position to be compared with India show all substantial increases, *e.g.*:—

Canada	...	90 per cent.
The United States	...	161 „
Australia	...	174 „
Cape of Good Hope	...	227 „

It may be said that the East is more lethargic than the West or South, so I have looked up the trade statistics of Netherlands India in the *Statesman's* Year Book. I have taken the aggregate foreign trade of British India and Netherlands India for the years 1868 to 1871 and 1886 to 1889, and converting guilders into sterling for both periods at the fixed rate of 12 per £1 and rupees into sterling at the rate of 1*s.* 1*d.* for the first period and 1*s.* 4½*d.* (the average rate) for the second period, I find that whereas British India shows an increase of 21 per cent only, Netherlands India shows an increase of 174 per cent."

Another favourite fallacy is that silver values have not altered in India. The largest crop in India is the Bengal rice crop. It is estimated by Dr. Watt at 15 millions of tons; and as only some 300,000 to 500,000 tons are exported, it is evident that it constitutes the chief food of the people of this province. If we take as a basis of price the description called ballam, we find that whereas, before the rupee began to fall, the value ran from Rs 1-10 to Rs. 2 per maund in an ordinary season in the past two years with fairly good crops, the price has been Rs. 3-8 to Rs. 4-4 per maund; while kasarie and similar cheap grains used by the very poorest people have gone up from 8 annas to 12 annas per

maund to Rs. 1-8 and even Rs. 2 per maund. That incredible hardship is thus caused to the wage-earning classes cannot be doubted, and, if a further fall in the value of the rupee takes place, the price of food must be forced up still further. It is doubtful if any other people on the face of the earth would have remained quiet under such an enormous rise in the price of food, coupled with a steadily increasing taxation; but Government must know that there is a limit beyond which this *laisez faire* policy must be disastrous, and it will do well to make an end of the situation before trouble does come.

The Indian Currency Association advocates a plan for putting the finances of the country on a safe basis and allowing the adjustment of wages and food prices. These matters are essential to the well-being of the country, and to disregard them any longer will be to lose our reputation for honestly governing this mighty Empire.

The Honourable Mr. Wallis, of Messrs. Manton & Co., said:—Your Excellency,—The statement just made by the Honourable Mr Mackay leaves me but little further to say on the general question of the urgent need felt by all classes and sections of the community in India for the prompt reform of our currency system. Your Excellency will not doubt, I am sure, after all that has just been stated by Mr. Mackay, that the fall in exchange affects most detrimentally every interest in the country, and not the least so, I would urge, the interest of the retail traders whom I am allowed on this occasion to represent. It is generally believed that the retail trader is able to protect himself by an increase of prices, and in point of fact an increase of rates and prices has been unavoidable, but it would be unfair to say that this could be done to any material extent, or to the extent of rendering trade either safe or prosperous: any such result, I may safely state, has been impossible in the face of the constant prevailing fluctuations in exchange; and its almost uninterrupted downward tendency during the last twelve months or more has brought it to a point at which anything like safe trading in imported goods becomes an utter impossibility. It should be remembered that traders as a rule have to work upon stated tariffs which cannot be altered to meet every fluctuation in the rate of exchange, and anything like a sudden or seemingly arbitrary increase of prices would necessarily defeat its own end by the further inevitable restriction of business which would be sure to follow the adoption of such a course. As it is, business is considerably reduced in volume in all branches of retail trade, which is easily comprehensible when it is considered that the fall in exchange must necessarily have the effect of considerably reducing the spending power of those who are the main supporters of the trade in imported goods. Thus, Your Excellency, the retail trader in the present day feels himself placed in a position of considerable embarrassment and difficulty; and as this section of trade does not embrace any reciprocity of business with the mother country in exports, it follows that there is in the present day an entire absence of successful retail trading in the country, nor, in the face of the prevailing apprehension of a further fall in the value of silver, can this be regarded as the worst stage of affairs, unless such fall be promptly arrested.

Under these circumstances, I would join most earnestly on behalf of the retail traders, whom I represent, in pressing on Your Excellency's attention the suggestions for a currency reform submitted to Your Excellency in the resolutions passed at the meeting held at the Town Hall on the 27th ultimo, and which have just been read out by the Honourable Mr. Mackay. In fact the closing of the mints to the free coinage of silver and the adoption of the gold standard appear to us to afford the only chance now left for securing the trade of the country from passing into a state of utter disorganisation and ruin.

Mr. A. G. Apcar, of Messrs. Apcar & Co., said:—I have but little to add to what has been so well and clearly said by Mr. Mackay and the other members of this deputation, and I should not now trouble Your Excellency with any remarks if I did not think that a useful purpose might be served by a short statement of my own experience. I am a member of a firm who are producers and manufacturers, producing coal and manufacturing jute. We are the owners of zemindaries in the mofussil, engineering workshops in Calcutta, and are also the owners of steam-vessels engaged in the general trade of the country,

particularly in the carriage of opium, and plying in the trade between Calcutta, the Straits, and China. I may, therefore, say that I represent all the important trades and industries which the opponents of a stable currency in India declare would be ruined if the exchange value of the rupee were to cease from fluctuating and falling. But we, who are deeply interested in local enterprise and industry, and in trade with other silver-using countries, beg to assure Your Excellency that our opponents who prophesy ruin are not concerned personally as I am, and when they speak thus, I deny their right to speak and regard their prophecies as vain words. I am not merely a "Foreign sojourner" in this land, anticipating the day of retirement and desirous of carrying my money away after conversion into gold. My firm was established here in the early days of the century, and I myself have been a member of it and living and trading in this city for more than 40 years. All my interests are bound up with the prosperity of this city and this Empire, and will so continue to be. Such being the position which enables me to claim to speak with some authority on this important question, I desire to assure Your Excellency that I shall welcome with the most lively satisfaction a decision that shall prevent for the future such fluctuations in the exchange value of the rupee as have marked our commercial history for twenty years, and shall arrest its further fall. It is impossible to overrate the difficulties and embarrassments which are caused to trade and industry by an ever-varying and declining standard of value. Trade is harassed and impeded to such a degree that it is almost reduced to the primitive condition of barter, unhealthy speculation is rife, and legitimate transactions are entered upon with hesitation and anxiety. Industry is checked in the advance it should make for want of capital, which is carefully kept out of it, and, instead of marching confidently forward with operations which are beneficial alike to India and to the countries with which we carry on trade, we either feel our way slowly and cautiously as men who walk in the dark, not knowing where the next step may land them, or we plunge recklessly forward as does a gambler, losing as often as we win, or oftener, and the fever of excitement is followed by a reaction resembling paralysis. Such has frequently been our experience since 1873, and such at this moment is our experience in connection with the trade in India. I trust that Your Excellency's Government will no longer delay to introduce a reform in our currency system which will enable us to see what we are about when we are proposing to enter upon mercantile transactions or industrial enterprises, to calculate with some certainty what will be the future prospects of the transaction or the enterprise, and will remove all risks other than those which are incidental to trade and industry—risk which we are quite content and prepared to face. It is the unforeseen risks of fluctuations and depreciation of our monetary standard which we are not prepared to face, and which paralyses our energies and resources.

The Honourable Fuzilbhoy Visram, of Messrs. Visram Ebrahim & Co., of Calcutta and Bombay, said:—Your Excellency,—Although this subject of our currency has been thoroughly threshed out, and there remains nothing new to be said about it, I would, with Your Lordship's permission merely observe that, as one largely interested in the internal and local trade of India, I can say from personal experience how disastrous has been the result of the fluctuating state of our exchange with Europe. I have no doubt that this is also the experience of other merchants whose name is legion. I am not one of those who advocate the gold standard simply for the sake of bringing about a higher value of the rupee, but what I am keen about is its stability. It must be admitted that it is on this that the prosperity of our commerce, and for the matter of that of our country, and of the Government itself, mainly depends, and I consider it is the duty of everyone to co-operate towards this desirable end, and I have, therefore, ventured to offer these few words to Your Excellency on the aspect of the question as is appears to me.

Mr. R. D. Mehta, of Messrs. D. B. Mehta & Co., said:—May it please Your Excellency,—As a native of the country, and as one deeply interested in the development of commerce and the manufacturing industry of the country, I do not feel the least hesitation in supporting the objects of this deputation, and the movement which it seeks to promote. With Your Excellency's permission, I desire to call attention to a misapprehension which, I am afraid, prevails to some extent in England.

It is believed that the appreciation of the rupee will mean the depreciation of uncoined silver and the reduction in value of property which is hoarded in the shape of silver ornaments. Now, as a matter of fact, there is very little hoarding in the shape of ornaments. Ornaments constitute a finery, and it is well understood that gold and silversmiths themselves retain a large share of the metal which is placed at their disposal for such purposes. The truth is that whatever hoarding takes place takes place in the shape of coined money. It stands to reason that anyone desiring to hoard silver would not turn it into ornaments, because, in the first place, he has to pay to the silversmith at least a fourth to a half of the value of the silver for workmanship, which expenditure and more he would immediately sacrifice if he desired to turn the ornaments again into coin. If the rupee is given a fixed gold value, then obviously the money hoardings of the people will be improved and remain a constant quantity; and will anybody deny that this is a distinct advantage to the fortunate possessors of money investments? I may add that being a cotton spinner, and largely interested in various other industries, I will not hesitate to affirm—and this in the august presence of Your Excellency—that I anticipate no harm, no injury of any kind to the manufacturing industry of India by the adoption of the course which this deputation desires respectfully, but firmly, to press upon the attention of the Government of this country. It is a matter of general notoriety and of painful experience that matters have gone from bad to worse, because the Government have chosen to adopt what I may be permitted to style a policy of masterly inactivity in this connection. It is our respectful request and humble prayer that some action may be taken, and without further delay, upon the lines which we have ventured to recommend.

Mr. Reginald Murray, Agent, Chartered Mercantile Bank of India, London, and China, said:—Your Excellency,—I have been invited to make a few remarks from a banker's point of view. The meaning and object of a standard of value are necessarily that such value shall be fixed. Otherwise it cannot be a true measure for the purposes of trade, or for the general revenue and expenditure of the Government.

For the purposes of the trade in India it is abundantly evident that the silver standard has no such fixity of value. It is impossible to dissociate internal from external trade. The imports and exports are just as much a part of the trade of a country as articles bartered internally, and it is quite as important for the security of good credit and sound trade that the standard of value for exports and imports should not fluctuate, as that internal trade should rest on a fixed basis. Banks are the guardians of credit. On their stability depends whether credit is good or bad. But on what principle can banks negotiate the finance of India's foreign trade when exchange exerts such a dominating influence on all transactions to the extent that calculations of premiums and discount rest on a quicksand of speculation?

Such conditions defy principle.

We believe, too, that the depreciation of silver cannot fail to affect the value of savings in India; for as the trade and finance of India are inevitably connected and mixed up with those of gold standard countries, so must the value of savings bear comparison.

Therefore it appears to us clear that savings in India, which are to a large extent represented by bank deposits, are adversely affected by the incidence of a silver standard.

Mr. D. W. P. King, of the Delhi and London Bank, said:—Your Excellency,—Speaking as a banker whose interests are intimately bound up in the financial prosperity of India, it is to my mind impossible to conceive on what ground the country is justified in accepting, year by year and day by day, payment of its surplus profits in a metal which as soon as it has been received becomes of less value: if business were carried on generally on this principle, it is not difficult to see that it would ultimately result in serious failure.

As regards the effect on the capital brought into this country in the past, it is patent that, while it may have been invested in profitable industries of which we have many, a considerable portion of the capital has been absolutely

lost judged by its original sterling value: this does not apply to banks alone, but to every merchant, trader, and capitalist who has sunk his money in India.

The present position is even worse, because, with all the openings there are for the investment of British money in railways, coal mines, and other undertakings in India, the uncertainty as to the future value of the rupee is so impressed upon the British public by the English press that scarcely any fresh capital is brought into the country.

With the necessity there is for opening out the country this is a most serious matter. It is a fact that all new enterprises, in the first instance, in India, are undertaken with British or European capital, and nobody will admit that we have reached a stage when no further capital is required; and surely a state of affairs which absolutely hinders any extension of enterprise needs immediate attention.

It is possible that a gold standard for India might have a disturbing effect upon the European money market, and the prices of commodities there; but is it just or reasonable to continue a state of affairs here which absolutely debars the country from making the progress it should make?

The year 1892 has been, taking it all round, a disastrous one for Indian trade and traders; and if no effort is made to remedy the present state of affairs, it is absolutely certain that we shall have to face a crisis that has not been equalled.

I therefore submit, for the urgent consideration of Your Excellency, the absolute necessity, in the interest of the country, the trade, the officials, and all concerned, of putting a stop to this competition between Council drafts and silver by closing the mints to the free coinage of silver, and meeting the trade demand by the sale of the Secretary of State's Council drafts on India at a fixed minimum rate.

The Viceroy's Reply.

His Excellency the Viceroy, in reply to the deputation, said:—I am much obliged to this deputation for the clearness with which it has laid its views before me. It is extremely important that the Government of India should be made aware of the manner in which these questions are regarded by all classes of the community. The gentlemen present here this morning present a great variety of interests. You have told me that merchants, traders, ship-owners, importers as well as exporters, manufacturers and producers, the banking interest, and last, but not least, the landed interest, are all represented here, and that among the mercantile members of the deputation are representatives of our trade with silver as well as with gold-using countries, and of our local as well as our foreign trade. Such an expression of opinion, proceeding, as it does, from independent and unofficial sources, cannot fail to carry weight both with the Government of India and with the country, which we earnestly desire to carry with us, whatever course we may determine to adopt in view of the serious state of things with which we are confronted.

Now, gentlemen, it is an open secret that the Government of India regard that state of things with the greatest concern. It is, I think, also an open secret that we have ideas of our own as to the steps which might be taken in order to deal with the difficulties which are daily pressing themselves upon us. It it, however, of no use to conceal from ourselves that the remedial measures which have been under discussion are regarded in some quarters with genuine alarm and with a good deal of suspicion. The latter feeling is perhaps not difficult to account for, and it is, I believe, to be explained by the fact that many persons have assumed that the advocates of such measures are actuated by selfish rather than patriotic motives. We are constantly told for example, that the Government of India have been too much influenced by the distress of the officials in their employment, and that our main object is, on the one hand, to mitigate the hardship of the services which have, as we are well aware, suffered cruelly by the recent fall in exchange, and, on the other, to extricate ourselves from the constant embarrassment to which our finances are exposed by the fluctuation in the gold value of the rupee.

Now, gentlemen, as to the employés of the Government of India, they are entitled to the most abundant measure of our sympathy, and I am glad to

notice that yours is extended to them ; but I think that those critics must have a very mean opinion of our intelligence who think that, merely in order to elude our obligations to the services, we should be ready to deal light-heartedly with so serious a question as that of the currency of the Indian Empire, or to tamper, in opposition to our better judgment, with the monetary basis upon which our financial and commercial system is founded.

Again, although the inconveniences which the Government of India encounters from the fluctuations in exchange are no doubt extremely irksome and exasperating ; although it is very annoying to us never to know whether a surplus may not be converted into a deficit, or a deficit into a surplus, by speculative movements which we are wholly unable to control ; although it is unpleasant to us to be roundly abused because our forecasts are so frequently discredited, we should surely not be so imprudent, merely because we are suffering from inconveniences of this sort, as to contemplate the possibility of altering the standard of value.

Gentlemen, we are well aware that, before any project so serious and so far-reaching can be entertained, it is necessary to prove a great deal more than that the Government of India is exposed to annoyance or its employés to hardship of a special kind. It is to much stronger reasons than these that we must appeal if we are to address ourselves to the question of currency reform, and it is for this reason that I regard it as highly satisfactory that gentlemen in your position, representing, as I have said, the unofficial and independent opinion of all classes of the community, should come forward in order to make us aware of the manner in which their interests are affected by the wide divergence in value which has arisen between gold and silver.

I therefore take note with the utmost attention of your emphatic statement that the present condition of things is disadvantageous to the commerce of India generally, to importers as well as to exporters, to local as well as to foreign traders, to the wage-earning classes as well as to the producer of commodities.

I also take note of your statement that you regard with the gravest apprehension the possibility that we may be driven by the recent fall in exchange to impose additional taxation on the people of this country—a contingency which we certainly cannot exclude from consideration, but which, having regard to the restricted sources from which taxation can be drawn, I for one should regard with the utmost concern. The fact that we may not improbably find ourselves face to face with the necessity of resorting to additional taxation in order to extricate ourselves from our difficulties seems to me by itself to be a sufficient answer to the assertion that our troubles are of a kind which affect, not the people of India as a whole, but the foreign sojourners, represented, it is said, chiefly by the British officers of the Government of India.

I note again the declaration of your belief that, owing to the fall in the gold value of the rupee and the uncertainty with regard to the future of exchange, capitalists are deterred from investing their money in this country, the development of which is in this manner most seriously retarded. You have reminded me, on the other hand, that, owing to the embarrassment of our finances, the Government of India is itself obliged to curtail its expenditure on useful public works, so that the stream of public as well as of private enterprise is being dried up. This, gentlemen, is surely a consideration to which no class of the community, whether official or unofficial, can afford to be indifferent.

But, gentlemen, it is not enough to show that the disease exists. You have also to convince us, and to convince the public, that the remedy which you have recommended is the proper remedy, and to show that its effects may not be worse than those of the disease itself. Your Association has addressed itself earnestly and with considerable skill to this task. We feel that, in dealing with this part of the case, we cannot approach the subject with too great caution. We must be persuaded not only that the remedy proposed is defensible upon strict economical grounds, but that, considered as a political measure, it is safe and expedient, and will not do violence to public sentiment or give rise to grave and disquieting apprehensions in the mind of a people prone to regard public questions from a sentimental standpoint. In order to disarm hostility of this kind, nothing is so useful as public discussion, and a debt of gratitude is, in

my opinion, due to the Currency Association for the manner in which it has during the past few months ventilated this intricate question and helped to render it intelligible to the public mind.

I can promise you, in the name of the Government of India, that both your statement of the facts and the proposal which you have laid before me shall receive our earnest attention. They will be duly laid before the Secretary of State, and I trust that we may before long be able to make you aware of the decision which has been arrived at. For the moment I cannot say more. You have reminded me that the Brussels Conference has separated without coming to any conclusion, but the other, and to my mind more important, enquiry which is being conducted by Lord Herschell's Committee is, so far as we are aware, not yet concluded. We have not yet heard that the Committee has reported, nor can we anticipate the effect which the report may produce upon the judgment of the Secretary of State. Until we have received further information upon these points, the question must remain in suspense.

There are, however, two admissions which I am ready to make to you. My first admission is this, that you have, I think, strengthened your case by, for the present, restricting your proposals to that for the closing of the mints to the free coinage of silver, leaving for further consideration those ulterior proposals for changing the standard of value from silver to gold, which were embodied in your project when it first took shape six months ago. In the next place, you are, I think, justified in holding that the proposal for introducing a standard of value which shall be common to India and to the gold-using countries is *primâ facie* a reasonable proposal. The burden of proof certainly seems to me to lie with those who desire to convince us that it is for the good of any given country that it should use for commercial purposes a currency of which the standard differs, and differs in a constantly fluctuating degree, from the standard of value obtaining in those countries with which the greater part of its commercial business is transacted. You have pointed out in your address that other nations have deserted the silver for the gold standard, and have found advantage in doing so. It is, I think, for your opponents in this country to show that there are special reasons why a similar change should produce different results in the case of India. The Association which you represent has now for some seven months openly and fearlessly advocated the policy which you first formulated at the Simla meeting in May of last year. That policy, so to speak, holds the field, and I think you may fairly say that your opponents will have no one to blame but themselves if owing to their failure to prove that the general opinion of this country disagrees with you, and to refute the facts and figures which the Currency Association has placed before the public, your conclusions are accepted as an authoritative statement of the interests which this deputation claims to represent.

85.] Dated 10th February 1893.

From—JAMES CURRIE, Esq., Chairman, Karachi Chamber of Commerce,

To—The Secretary to the Government of India, Home Department.

I have the honour to forward herewith, for the information of His Excellency the Viceroy in Council, a resolution passed by this Chamber on the subject of the accompanying circular letter I had addressed to the members of the Chamber, dated 26th ultimo, referring to the closing of the Indian mints to the public for the coinage of silver.

86.]

At a Special General Meeting of the Karachi Chamber of Commerce held at the Chamber Buildings on the 10th February 1893, at 2-30 P.M., the following resolution was passed :

RESOLUTION.—That the views expressed in the circular letter of the Chairman, dated 26th January 1893, are adopted by the Chamber, and that a copy of that letter be forwarded to Government with the intimation that the Chamber concurs with the opinion expressed therein.

87.] Dated 26th January 1893.

From—JAMES CURRIE, Esq., Chairman, Karachi Chamber of Commerce,

To—The Members of the Karachi Chamber of Commerce.

In view of the present agitation for the closing of the Indian mints to the public for the coinage of silver, it is desirable that the Chamber should consider the probable consequences of that measure.

Assuming that the Government take that course, the first result would be an advance in the value of the coined metal now in circulation, and that advance would continue in proportion to the contraction of the currency; such contraction would follow unless the Government took up the task of coining silver on their own account and kept the mints at work.

It would be obviously to the advantage of the Government to do this, and the manner of doing it could be easily and profitably effected by the Secretary of State taking into his own hands the purchase of silver in London for shipment to India for minting purposes. Much would, however, depend on the method adopted by him in regulating these purchases.

The following suggests itself as one such method which would have the advantage of being simple, and would regulate the supply according to the requirements of the country.

Over and above the sales of Council bills necessary to defray the current charges, the Secretary of State should be always prepared to give at his fixed rate to the public additional Council bills, with the proceeds of which he should buy bar silver in London for the Indian mints.

Following this method, strengthened as his hands would be, he would be able to control the rate of exchange so long as the balance of trade was in favour of India; at the same time the risk would be avoided of India suffering for any length of time from any abnormal dearness or scarcity of money.

There is no reason to doubt if the mints were closed to-morrow to the public and the Secretary of State fixed the rate of his Council bills, say, at 1*s.* 4*d.* per rupee, as he could do, holding the command of over 20 millions worth of bills on India, including the probable requirements for the mints, that this level could be maintained without fluctuations until the price of bar silver rose to near the same level.

Failing universal bi-metallism, it appears to us that the closing of the mints, together with the action of the Secretary of State, similar to that described for the purchase and coinage of silver, would be a wise and politic move—

First, because it does not depreciate silver;

Secondly, it may reasonably be expected to attain the object merchants have at heart, *viz.*, the maintenance of the exchange value of the rupee unsubjected to undue and violent fluctuations; and

Thirdly, it would ensure the currency being supplemented automatically according to the requirements of trade.

88.] No. 91, dated 8th March 1893.

From—The Government of India,

To—The Secretary of State for India.

In continuation of our despatches noted in the margin, we have the honour to forward, for Your Lordship's consideration, copy of a letter, dated the 10th February 1893, from the Chairman of the Karachi Chamber of Commerce, and enclosures, referring to the closing of the Indian mints to the public for the coinage of silver.

No. 317, dated the 16th November 1892, and No. 25, dated the 18th January 1893.

89.] No. 906-A., dated 2nd March 1893.

From—J. E. O'CONOR, Esq., Assistant Secretary to the Government of India, Finance and Commerce Department,

To—The Chairman, Karachi Chamber of Commerce.

I am directed to acknowledge the receipt of your letter, dated the 10th February 1893, addressed to the Home Department, and to say that a copy of

the letter, and of its enclosures, has been transmitted to Her Majesty's Secretary of State for India.

90.] No. 202, dated 24th February 1893.

From—The HON'BLE C. A. GALTON, Chief Secretary to the Government of Madras,

To—The Secretary to the Government of India, Finance and Commerce Department.

I am directed to forward the accompanying copy of a letter received from the Honorary Secretary to the Wynaad Planters' Association, together with the memorandum on the currency question referred to therein.

91.] Dated 10th February 1893.

From—The Honorary Secretary, Planters' Association, Wynaad,

To—The Chief Secretary to the Government of Madras.

I have the honour to forward, for the consideration of the Government of India, a memorandum that was drawn up by this Association in November last, and published in the local press as an answer to the reply given by the Government in India to the Darjeeling planters on the currency question. We wished at the time to get the co-operation of all planting Associations in Southern India and to send the memorandum home to Lord Herschell's Committee as the expression of the unanimous opinion of the Planting Committee. Unfortunately, there has been so much delay in getting answers from other districts that it was only on the 25th January that we were in a position to say that our memorandum was endorsed by all other Associations. As the sittings of Lord Herschell's Committee are now over, I am instructed to forward the memorandum to you with a request that the Government of Madras will be good enough to forward it to the Government of India as the unanimous opinion of the following Planting Associations representing Southern India:—North and South Mysore, Coorg, Travancore, Shevaroys, Nilgiris, and ourselves. South Mysore do not endorse the paragraph respecting wages, as wages have risen there owing to increased cultivation.

A Memorandum on the Currency question drawn up by the Wynaad Planters' Association, and endorsed by the North Mysore, Coorg, Shevaroys, Nilgiris, Travancore Associations, and by the South Mysore Planting Association, with the exception to the paragraph respecting wages.

We maintain that the agitation of the Indian Currency Association is not for the advantage of India as a country. It was got up, and is chiefly supported by Government officials, and such classes as professional men, middlemen, and salaried employés, who form a very small fraction of the population of India. The agitation has experienced considerable opposition among the merchants of Bombay, Calcutta, and Madras. Government officials are doubtless suffering from a severe grievance, inasmuch as they lose a considerable portion of the pay they contracted to receive, and if they had confined their agitation to their own particular grievance, public sympathy would have been entirely with them. We maintain that Government officials and their supporters in this agitation are not in as close touch as we are with the lower classes of India, nor are they by their training and position as competent to arrive at true opinions on matters affecting the trade of the country. We, on the other hand, by the frequent sales of our produce, are in touch with the markets of the world, and are forced to study the general course of the world's trade as a guide in our business. We also contend that we represent the ryot class; their interests and ours are identical; we are in daily personal communication with our labourers, and through that most delicate of tests, our labour pay sheets, can realise their actual condition over a long term of years. It is for these reasons that we venture to publish an opinion in opposition to that of the governing class.

The Government of India, in summing up its reply to a petition from the tea planters of Darjeeling, says :—

(1) That the country as a whole makes no gain in its international trade by a depreciation of its standard since the extra price received for its exports is balanced by the extra price paid for its imports.

(2) That the producer of an article may make a temporary and unfair gain from the depreciation of the standard, at the expense of his employés and others to whom he makes fixed payments.

(3) But this gain, while not permanent, is counterbalanced by a tendency to over-production, and consequent reaction and depression ; by a liability to sudden falls in prices as well as rises, and by the general check to the increase of international trade, which necessarily results from the want of a common standard of value between countries which have intimate commercial and financial relations.

(4) That the adoption of one standard of value by England and India would facilitate trade, stimulate production, and place other silver-using countries, such as China, at a disadvantage.

(5) That international trade must be considered as a whole; that trade and production are extended by everything that adds to the welfare of the country at large ; and that illegitimate and temporary gain by one section of the community at the expense of another can only prove injurious in the long run.

We would respectfully point out that the strength of the first of these arguments obviously depends on the import trade being of as much value to India as the export trade. We maintain that the intrinsic value to India of the export trade far exceeds that of the import, even as it does in actual volume and money value. The ryots are by far the most numerous class in India, and we are constantly being reminded that the problem of the future is the over-population of the country likely to result if new industries cannot be found for the employment of this ever-increasing mass, unchecked by war or famine. They are also the chief payers of revenue to Government. They are absolutely independent of the import trade, for they can still, as they did formerly supply all their wants from the produce of the country. The practical outlets of this surplus population are local manufactures and the growth of produce for export; and the low rate of exchange has fostered both, and enabled industries such as wheat, tea, hides, etc., to hold their own in the face of an enormous increase of production in other parts of the world. On the other hand, we would point out that, while the fall in exchange has prevented the export trade feeling the fall in gold values (which has so seriously affected industries in gold-using countries), the fall in gold prices has prevented any rise in the rupee-prices of imported goods in India. This is proved by a comparison of prices in 1892 and in 1871-75. Cotton goods of all sorts are one anna in the rupee cheaper ; English coal is Rs. 3 per ton cheaper; steel rails are Rs. 13 a ton cheaper than iron rails were, and other metals are cheaper in proportion; oilman's stores and all sorts of wearing apparel are at the same price or cheaper now than they were. The only loss, therefore, that the import trade has suffered is, that it has not been unduly stimulated by the fall in gold values. It is not, however, to the interests of India as a country that local manufactures should be destroyed by an inrush of cheap European goods. The Government of India has for years recognised the policy of fostering local manufactures, and they have prospered so as to excite the jealousy of Manchester. However inconvenient it may be to Lancashire, the Government of India cannot consistently maintain that the absence of an extra stimulus to the import trade is anything but a wholesome check on the over-production of European imports. More especially is this the case when the low value of the rupee outside India, as compared with its value in the country, is inducing those who have their savings in rupees to invest them locally. We would also point out that the interests of the import and export trade are not opposed as the first argument of the Government of India would seem to imply. Imports are of the nature of purchases made out of surplus income, which can be curtailed if the income of the country cannot do more than provide bare means for subsistence. The export trade and local manufactures are the only industries in which there is room for any material growth of the income of the country, and if these are checked by fixing the rate of exchange, the import trade must suffer with them.

The Government of India admits that the producer of an article for export makes a gain by the depreciation of the standard; but asserts that the gain is only temporary, and it is unfair because it is made at the expense of his employés to whom he makes fixed payments. In this contention Government apparently only contemplates producers on a large scale, and quite overlooks the masses of poor ryots who cultivate exportable produce in their own fields; but even in the case of producers on a large scale, employing large gangs of day labourers, we deny the gain is unfair and at the expense of the employé. The planters of Southern India employ labour from every part of Southern India and Mysore; they keep books showing the rates of wages, the amounts advanced for subsistence allowances, and the balances paid on the conclusion of the various terms of labour. It is shown there that wages are the same now as in 1875. The subsistence allowances and amounts saved by the ryot cooly are the same now as then. A correspondence in the Madras Press elicited the fact that, excluding the last three years as affected by scarcity and fears of famine, common country grains were 20 per cent. cheaper in 1889 than in 1875, while exchange had fallen from 1*s.* 11*d.* to 1*s.* 4*d.* Twice in this period of fifteen years grain had risen 25 per cent and gradually fallen again, while exchange steadily fell. The experience of the tea planters of Darjeeling is evidently the same as ours. Mr. Mackay, in his speech in Calcutta, admitted that wages had not risen in the indigo, tea, and jute districts. As the cooly in Southern India gets as many rupees as formerly, and finds that, allowing for the fluctuation of prices due to good and bad season, his rupees buy as much food and clothing as formerly, we fail to see that the charge of an unfair gain is substantiated.

That the gain is temporary, and counterbalanced by a tendency to over-production, and consequent re-action and depression, by a liability to sudden falls in prices as well as rises. This statement supposes the trades of India to be monopolies and not a part of the great trade of the world. By following the course of prices of the chief articles of export during recent years, it will be seen that they, without exception, have followed the universal law of supply and demand, irrespective of the fluctuating relations of value between silver and gold. Over-production and the reduction of profits to a minimum is the tendency of all modern trade, and is not affected by Indian Exchange, except in so much as it enables India to compete with other countries more favourably circumstanced. Thus, the price of sugar has fallen owing to the creation of the beet industry ; that of wheat from the expansion of American cultivation and the new Bombay trade ; that of cotton from the same causes ; that of tea from the growth of the India and Ceylon industries causing a glut in the China market. Pepper, one of the most ancient, and for centuries the most lucrative of the industries of Malabar, has been rendered almost unprofitable owing to the competition of the Straits. In the case of hides, the price has fallen owing to enormous tracts in America and Australia having been stocked with cattle. The price of coffee has risen because blights have checked production. The cinchona bark trade exemplifies the law still more clearly. In 1877 sulphate of quinine was selling at 10*s.* per oz. and common cinchona bark from 3*s.* to 4*s.* per pound. It was discovered that the tree would thrive in India and Ceylon. Enormous profits were to be made, although exchange was then high, and capital rushed into the enterprise. In a very few years the island of Ceylon alone was supplying the annual consumption of the world. Stocks increased, and the price of bark fell below 2*d.* per pound, the minimum cost of production. In Ceylon the trees were uprooted to make way for tea. In India disease supervened on want of cultivation, and at last the consumption is again overtaking the production, and the market has felt the first vibration of an upward movement. We do not suppose that merchants in Europe need to have these facts brought to their notice, but we mention them to show how able men in India, under the pressure of loss from low exchange, shut their eyes

to the invariable laws of supply and demand and the evident tendency of modern trade, and think they can affect the world's trade through Indian exchange. It can hardly be contended that the increased production of such of the above articles as are produced in Europe, America, and Australia is due to low exchange. In Ceylon the rush into tea and cinchona was due to the blights of coffee, which left a large and energetic population without the means of subsistence, and the capital sunk in the island without dividends. The supporters of the Indian Currency Association rightly maintain that the rise of the Bombay wheat trade is due more to the opening up of the country by railways and cheap steamer freight than to low exchange. Such facilities could not, however, create a trade unless there was a surplus population feeling the want of fresh outlets for its energies, and we know the population of India has increased one-third in the last twenty years. The same causes are in active operation all over the world, and over-production is likely to be the law of the future, irrespective of Indian exchange. As to the liability to sudden falls in price as well as rises, we, the producers, in common with all *boná fide* merchants, deplore violent fluctuations. In part these are due to the inevitable rush into over-production that is sure to take place if the price of any article rules high now that capital and labour are so abundant and means of communication so easy. They are also due to the unfortunate spirit of gambling which pervades all modern markets. We would point out that the most violent fluctuations of late have been due to attempts made by America to artificially raise the value of silver.

"That the adoption of one standard of trade value by England and India would facilitate trade, stimulate production, and place other silver-using countries, such as China, at a disadvantage." We venture to point out that the Government of India gives no reason for this conclusion beyond the statement that general prosperity would result from such a standard, and its belief that its previous propositions are indisputable. It is the answer to the argument of the Darjeeling planters that if the value of the rupee was fixed while the Chinese tael followed the fall in silver, the tea trade of China would again regain the ascendency which had been wrested from her, and might even irretrievably ruin the trade of India. These arguments seem to us based on general principles of political economy, regardless of the special circumstances of Indian trade, and again assume that the import trade equals the export trade in value to the country. The Government of India "recognises that the interest of the tea trade is necessarily a matter of concern to it," but it goes on to imply that if tea can be more economically produced in China, the capital now invested in tea in India should be shifted to some more profitable industry. Those, however, who are experienced in commercial enterprise know too well that the capital invested in an industry that has to be abandoned is lost The producer cannot shift his capital from one industry to another as the market changes, and finds that the falling exchange alone enables him to continue working at a profit in competition with other silver-using countries. It was urged at a meeting of the Indian Currency Association that it is not low exchange, but falling exchange that is needed to stimulate the export trade, and that as exchange must touch the bottom sooner or later, the stimulus is only temporary, and will be followed by reaction and depression. We maintain that when once the bottom is touched, no further stimulus will be needed, as Indian produce will then compete on a level with that of other silver-using countries. This, for instance, has not been the case lately in the coffee industry. Brazil, the greatest grower of coffee in the world, has recently had its exchange as low as 10*d*. If Indian exchange is to be fixed and not allowed to follow the fluctuating relations of silver and gold, Brazillian exchange may again fall to an extreme, and her planters receive double the price in silver that we do for coffee of an equal gold value. Java has already practically illustrated the truth of the above statement. Her exchange was fixed at a high rate some years ago, and it is stated that in consequence no cultivation is very profitable there, and tea is being uprooted as unremunerative, though it flourishes in India and Ceylon in spite of low prices. As regards industries, such as wheat and hides, which compete with gold-using countries, the supporters of the Indian Currency Association maintained that low exchange did not benefit them, as every fall in exchange was followed by a corresponding fall in gold prices, and, with the lowest exchange and freights ever known, last monsoon was the worst season for the export trade on record. We have shown above that any general rise in gold prices is improbable, as production is likely for the present to increase faster than consumption. We do not forget that consumption in its turn will from time to time overtake production, but only those trades which can tide over a period of depression will be able to benefit by the following reaction. However unprofitable the wheat and hide trade may now be, this is due to the competition of other countries over which no action of India can have any control, while her depreciating standard saves her from having to submit to such a low range of prices as their appreciating gold standard inflicts on them. To sum up, we maintain:

(1) That the gain on exports is not balanced by the loss on imports because the export trade is essential to India and the import trade is not. Moreover, the prosperity of the import trade depends on the prosperity of the export trade.

(2) An experience of fifteen years shows us that the gain on exports is neither temporary nor unfair, as the purchasing power of the rupee in India is as great now as it ever was.

(3) That over-production is inevitable from the constant increase of capital and labour in the world, and cannot be affected by the rate of exchange in India. That the effect of a depreciating standard on India's trade is entirely beneficial in that it enables her to tide over the depression that results from this over-production and to benefit by the prosperity that will ensue when reaction comes. That violent fluctuations are due to the spirit of gambling, and would only be intensified by any further attempts to raise the value of silver.

(.) That any attempts on the part of the Government of India to fix one standard of value for England and India can only result in ruining India's trades which compete both with gold-using and silver-using countries, unless a scheme of universal bimetallism is adopted, which will have the effect of raising gold values in the great markets of the world.

(5) That the artificial enhancement of the value of the rupee would not add to the welfare of the country as a whole, because any gain obtained by reducing home charges and interest on the gold debt would be more than counterbalanced by the loss inflicted on the trade and revenue of India; that this gain would be also illegitimate and injurious as benefiting only the small class of non-producers at the expense of the producers, who form the mass of the country.

J. WILLIAMS HOCKIN,
GEORGE ROMILLY,
Committee for the Wynaad Planters' Association.

92.] Dated 24th February 1893.

From—J. M. DICK, Esq., Karachi,

To—The Private Secretary to His Excellency the Viceroy and Governor General of India.

I have the honour to forward the accompanying original document with six spare copies.

93.] Dated 23rd February 1893.

From—MESSRS. DONALD GRAHAM & Co., RALLI BROTHERS' AGENCY, FINLAY, MUIR & Co., SANDAY, PATRICK & Co., EWART, RYRIE & Co., BRYAN, DURANT & Co., RITCHIE, STEUART & Co., Merchants and Agents of Karachi,

To—The Private Secretary to His Excellency the Viceroy and Governor General of India.

With reference to the resolution of the Karachi Chamber of Commerce on the subject of the currency question, dated 10th February, recently forwarded to His Excellency the Viceroy, we have the honour to beg His Excellency's gracious attention to this our protest against the view set forward in that resolution.

As the signatures to this document testify, we have the honour to represent a preponderance of the import and export trade of this port, and our opinion submitted with all due deference is fully expressed in the letter addressed to you, under date 9th February 1893, by several members of the Calcutta mercantile and banking community.

94.] Dated 9th February 1893.

From—MESSRS. H. E. ABBOTT & Co. and others,

To—The Private Secretary to His Excellency the Viceroy and Governor General of India.

We have observed with the utmost concern and regret from the published reports of the interview recently graciously accorded by His Excellency to a deputation from the Indian Currency Association that His Excellency seems to have adopted the conclusion that the representations which were then addressed to him formed an authoritative statement on behalf of the banking, trading, commercial, and industrial interests of this port.

It is with some surprise also that we find His Excellency telling the Indian Currency Association that their policy so to speak holds the field, and that we and others in this country who think with us shall have no one but ourselves to blame if the Association's facts and figures are accepted as an authoritative statement of the interests which they claim to present.

We beg most respectfully to assure His Excellency that he is under a misapprehension. As the signatures to this document testify, we have the honour to represent a large proportion of the business of Calcutta, and we have good reasons for believing that we have behind us in support a similar proportion of those interested in the planting, manufacturing, and other productive industries of the Presidency.

Our opinion, which we submit with all due deference, is that the measures being urged upon the Government of India by the Currency Association for steadying and raising the rupee are uncertain, unsound, and mischievous, fraught with danger to the financial credit of the Government, and to the commercial prosperity and development of the country.

We do not favour a fluctuating or depreciating rupee, but we are more averse to a fictitious, artificial sterling value being placed upon the rupee, and we believe that any proposals yet submitted by the Currency Association would have much worse effects than those of the state of things which these proposals are intended to remedy.

As practical experienced business men, we do not hold with the assertion of the President of the Currency Association that the fall in silver has restricted and embarrassed the trade of the country to such an extent as to create an almost unparalleled state of depression. We believe that the causes of the depression, such as it is, are to be found elsewhere.

On the other hand, we desire to make known that we are not insensible to the embarrassment of the Government as regards the present state of its finances or wanting in sympathy for the employés of the Government who have suffered by the recent fall in exchange, but we submit that, in order to make these matters right, it does not appear to us to be necessary or desirable for the Government to resort to the desperate expedient of tampering with the monetary basis upon which the financial and commercial system of the country is founded, and under which the country has hitherto been most prosperous.

We have noted with satisfaction His Excellency's reference to the importance of the report to be presented by Lord Herschell's Commitee, because our views have been fully placed before that Committee by some of our senior representatives, and we beg to crave His Excellency's kind reference to a letter which some of our number addressed to the Bengal Chamber of Commerce in September last, and of which a copy is attached.

Dated 3rd September 1892.

Demi-official from—MESSRS. GEORGE HENDERSON & Co. and others,

To—The Secretary to the Bengal Chamber of Commerce.

An active canvas has been carried on for some time past for signatures to the memorial of the Indian Currency Association by the President of the Association and others, and it appears that many members of the Chamber have subscribed the document. We learn from your letter No. 751-92 of 26th ultimo that the Committee of the Chamber have not discussed the memorial,

and under these circumstances, having regard to the importance to the mercantile community of the question involved, we desire to record the following short protest:

The memorial is based upon a highly incorrect representation of facts, and its prayer to Parliament to empower the Government of India to deal with the currency as it may deem fit is one which, in our opinion, should on no account be granted.

95.] Dated 25th February 1893.

From—MESSRS. ALLANA MUNJEE & Co. and others, Bombay,

To—The Private Secretary to His Excellency the Viceroy and Governor General of India.

We wish to take the opportunity of cordially endorsing the views expressed in a letter from a number of the leading bankers and merchants of Calcutta, under date 9th instant, to yourself for submission to His Excellency the Viceroy.

We are firmly of opinion that the proposals of the Indian Currency Association, if entertained, are fraught with danger to the commerce of the Empire, and certain to fail in their object of securing stability in the sterling value of the rupee.

96.] Dated 23rd February 1893.

From—COLONEL J. C. ARDAGH, C.B., R.E., Private Secretary to the Viceroy,

To—The Signatories of the letter dated the 9th February 1893, [No. 94.]

I am desired by His Excellency the Viceroy to acknowledge the receipt of your communication upon the subject of the statements made by His Excellency upon a recent occasion to a deputation from the Indian Currency Association. Your letter, although dated the 9th February, did not reach my office until the 19th.

I am to say that a copy of the letter has been forwarded to the Secretary of State by this week's mail, and will, no doubt, be considered by Lord Kimberley together with the statements submitted to the Viceroy by the deputation referred to above.

In reference to your remark that you have "observed with the utmost concern and regret" that His Excellency "seems to have adopted the conclusion that the representations" addressed to him by the deputation "formed an authoritative statement on behalf of the banking, trading, commercial, and industrial interests" of Calcutta, I am to point out to you that the tenor of the Viceroy's reply, and particularly the concluding portion of it, showed clearly that he was aware that the views of the Currency Association did not find universal acceptance. The closing words of the Viceroy's speech, upon which you have specially commented, were intended to call attention to the fact that, although the Currency Association had repeatedly placed before the public the arguments by which its proposals were supported, no similar statement had, to the best of the Viceroy's belief, ever been made on behalf of those who were in disagreement with the Association. Under these circumstances His Excellency described the policy of the Association as, "so to speak, holding the field," a description which, in the sense indicated by His Excellency, does not seem to him to be an inaccurate or unreasonable one.

The Viceroy observes that your letter under reply and that addressed by Messrs. Henderson and others to the Bengal Chamber of Commerce in September last contain little more than an expression of opinion on the part of those who have signed them. He understands, however, from the last paragraph of your letter that you consider your views to have been already fully placed before Lord Herschell's Committee by your representatives in England, and that you do not desire to submit any further statement of the grounds on which your opinion is based.

97.] No. 103, dated 22nd March 1893.

From—The Government of India,

To—The Secretary of State for India.

In continuation of our despatch No. 91 (Financial), dated the 8th March 1893, we have the honour to forward copy of a memorandum submitted by the Wynaad Planters' Association and of letters signed by certain merchants in Karachi and Bombay on the subject of the Indian currency.

98.] Dated the 15th June 1893.

Telegram from—His Excellency the Viceroy,

To—The Secretary of State for India.

The Report of the Indian Currency Committee has been received and considered by us. The proposals made by us, as described in our telegram of 22nd January 1893 and embodied in the draft Bill, were that the Indian mints should be closed to the free coinage of silver, power being retained to coin rupees on account of Government, and that power should be taken to declare by notification English gold coins legal tender in India at a rate of not less than 13⅓ rupees to the sovereign.

From paragraph 155 of the report we understand that our proposals are accepted by the Committee with the further recommendation to accompany the closing of the mints to the free coinage of silver by an announcement that gold will be received until further notice at the mints in exchange for rupees at a ratio of 1*s.* 4*d.* the rupee, and that sovereigns will be received at the same rate in payments of sums due to the Government.

We consider that on the whole sufficient reasons have been shown for preferring this modification, which we accept, to our original proposal to stop free coinage and await course of events before dealing at all with the question of ratio of exchange.

In paragraph 135 the Committee express the opinion that the closure of the mints should be resorted to rather for the purpose of preventing a further fall than of raising the gold value of the rupee. We concur in this opinion, and Your Lordship will have understood that the proposal contained in our telegram of 22nd January had for its object to fix a maximum limit above which exchange should not under any circumstances be allowed to rise, and that we should have been ready to adopt a lower ratio if the results following the closure of the mints showed that course to be expedient. We consider, therefore, that the Committee were judicious in recommending the announcement suggested in paragraph 155. We attach great weight to the arguments adduced in paragraph 150 in support of the proposal. Commercial interests will probably be occasioned less apprehension and inconvenience by its adoption than by our own proposal. Compared with the fluctuations experienced by trade during recent years, a rise to 1*s.* 4*d.* from the present rate will not be serious.

We could bring into effect by executive orders the arrangement for the receipt of gold in exchange for rupees and for the acceptance of sovereigns in payment of Government dues, or we could insert the required provision in the Bill. We think the former course preferable.

If Your Lordship concurs with the Committee, we trust that, as soon as you have come to a decision, you will empower us to take immediate action. If the proposals are supported not only by the weighty authority of the Committee, but also by the concurrence of Her Majesty's Government, the Government of India, and the influential commercial interests which have declared themselves in favour of this policy, we submit that they should be carried into effect forthwith without further discussion. No information to be compared as value with that already in Your Lordship's possession is likely to be elicited in India, and the effects of further suspense would be injurious.

Our original proposal is preferred by our colleagues Sir Philip Hutchins and Sir Alexander Miller, but they are willing to accept the modifications proposed in the Report.

99.] Dated the 20th June 1893.

Telegram from—The Secretary of State for India,

To—His Excellency the Viceroy.

With reference to your despatch, dated 21st June 1892, and your telegram of the 15th instant, Her Majesty's Government have come to the decision to approve the proposal made by you to close the mints to free coinage and to arrange to adopt a gold standard with the modifications suggested by the Indian Currency Committee which you have accepted. I accordingly empower Your Lordship's Government to take forthwith the measures required to give effect to this decision.

100.] REPORT OF THE INDIAN CURRENCY COMMITTEE.

ANALYSIS OF THE REPORT.

Recommendations of the Committee	155—157	—

Report of the Indian Currency Committee.

To the Right Honourable the Earl of Kimberley, K.G.,
Secretary of State for India.

India Office,
31st May 1893.

Statement of the Question.

Question referred to the Committee.

1. The question referred to the Committee by Your Lordship is whether, having regard to the grave difficulties with which the Government of India are confronted through the heavy fall in the gold value of silver, it is expedient that Her Majesty's Government should allow them to carry into effect the proposals which they have made for stopping the free coinage of silver in India with a view to the introduction of a gold standard. And, if we are of opinion that there is no sufficient ground for overruling the Government of India, but that the measures by which they propose to attain their object require modification, we are asked to offer any suggestion that we think fit for the purpose.

Points to be considered.

2. The expediency of allowing the Government of India to carry into effect the proposals which they have made must depend on the view of the present and future situation of that Government as regards their revenue and expenditure as well as upon a just estimate of the effect of a varying and possibly much lower exchange upon the commerce and people of India.

Financial difficulties of the Government of India.

Increase in number of rupees needed to discharge gold obligations.

3. There can be no doubt that the Government of India have experienced serious difficulty owing to the fall of exchange which has been going on for many years. The Government have yearly to remit a very large sum to this country in discharge of their gold obligations. In 1873-74, before the fall commenced, the amount remitted was 13,285,678*l.*, which, at a rate of exchange of 1*s.* 10·351*d.*, was represented by Rx. 14,265,700. During last year (1892-93) the amount remitted was 16,532,215*l.*, which, the average rate of exchange in that year, *viz.*, 1*s.* 2·985*d.*, required a payment of Rx. 26,478,415. If this could have been remitted at the exchange of 1873-74, it would have needed only Rx. 17,751,920. The whole of this difference of Rx. 8,726,495 cannot properly be regarded as a loss to the Government of India arising from the difference in exchange. It is certain, however, that India had actually to remit in 1892-93 upwards of Rx. 8,700,000 more than if the exchange had been at its former point.

Consequent present deficit.

4. At an estimated exchange of 1*s.* 4*d.* per rupee for the past year, a surplus of revenue over expenditure was shown of Rx. 146,600; the exchange having fallen to an average of rather less than 1*s.* 3*d.*, this surplus has been converted into an estimated deficit of Rx. 1,081,900, notwithstanding the improvement of the revenue by Rx. 1,653,300 over the Budget Estimate.

Prospect of further fall in exchange.

5. Nor is this all. The Government are compelled to contemplate a further fall, the effect of which cannot be forecast. There has been for some years past an almost continuous fall in exchange, though it was varied by a sharp rise in the year 1890. The average rate in 1889-90 was 1*s.* 4·566*d.* In 1890-91 the average rate was 1*s.* 6·089*d.* But in 1891-92 it fell to 1*s.* 4·733*d.*, in 1892-93 to 1*s* 2·985*d.*, and exchange has been of late scarcely maintained at 1*s.* 2$\frac{5}{8}$*d.* by the refusal to sell bills on India below that rate. The extent to which the financial position of the Government of India is affected by exchange is emphasised in the following passages of the recently published statement of Sir David Barbour:

Sir D. Barbour on the situation.

"The immediate cause of our financial difficulties, and the cause which, by comparison and for the time being, dwarfs all others, is the fall in the gold value of silver, which, as I have already shown, has added to the Indian expenditure in two years more than four crores of rupees. If that fall could be stayed and the rate of exchange with England fixed permanently at even its present low figure, the difficulty of dealing with the present deficit would be comparatively light. The revenue continues to grow in a satisfactory manner; even under the influence of indifferent seasons and poor harvests, it has made fair progress. If we could feel assured that there would be no further fall in exchange, I have little doubt that increase of revenue, restriction and reduction of expenditure, with possibly some taxation of a temporary nature, would in a very short time re-establish equilibrium. A serious effort would no doubt be required in the first instance, but with a fixed rate of exchange we would have a definite task before us, and our measures could be regulated accordingly. But it unfortunately happens that, unless some settlement of the currency question is obtained, there is no prospect of even the most moderate degree of stability in the rate of exchange.

* * * * *

"Our financial position for the coming year is at the mercy of exchange, and of those who have it in their power to affect in any way the price of silver. If we budget for the present deficit of Rx. 1,595,100, and exchange rises one penny, we shall have a surplus; if it falls a penny, we shall have a deficit of more than three crores; if we impose taxation to the extent of one and a half crores of rupees, a turn of the wheel may require us to impose further taxation of not less magnitude; another turn, and we may find that no taxation at all was required. It will be obvious from what I have just said that what we have got to consider in making our arrangements for next year, is not so much the question of increasing the public revenue or restricting that portion of the public expenditure which is under our control, but the chances of a settlement of the currency question."

Value of Silver.

Recent production of silver.

6. The production of silver has largely increased of late years, as will be seen from the following table, based as regards the earlier years on the statistics compiled by Professor Soetbeer, and as to the more recent years on the reports of the Director of the Mint in the United States:

Average annual production of silver.	Kilos.	Approximate equivalent in ounces at 32·15 to the kilogramme.
1876 to 1880	2,450,252	78,776,000
1881 to 1885	2,812,908	90,435,000
1886 to 1890	3,459,201	111,213,000
1890	4,144,233	133,237,000
1891	4,493,100	144,453,000
1892	4,731,000 to 4,900,000	152,102,000 to 157,535,000

Bland Act in United States.

7. In the year 1878 what is known as "the Bland Act" was passed by the Legislature of the United States, which required the Government of that country to purchase not less than 24,000,000 and not more than 48,000,000 dollars' worth of silver per annum, which would be equal to a consumption varying from 20,625,000 to 41,250,000 ounces (641,000 to 1,283,000 kilos.) in the year. Under the authority of that Act the Government purchased yearly the minimum amount required. Notwithstanding these purchases, the price of silver fell from 52$\frac{9}{16}$*d.* per ounce, the average of 1878, to 43$\frac{11}{16}$*d.* in February 1890.

Sherman Act.

8. In that year what is known as "The Sherman Act" was passed by the United States Legislature, under which the duty was imposed on the Government of purchasing no less than 54,000,000 ounces (1,680,000 kilos.) a year in lieu of the amount required to be purchased under the Bland Act.

9. The effect of this obligation to purchase silver to the value of about six millions sterling beyond the purchases required under the earlier law, coupled probably with the anticipation that further legislation, and perhaps free coinage of silver, would follow, was a sudden and considerable rise in the value of silver, which culminated in the month of September 1890, when it reached the price of $54\frac{5}{8}d.$ per ounce. There was, however, a speedy decline from this price, and since July 1892 silver has realised not more than an average of $38\frac{1}{2}d.$ per ounce, the present price being $37\frac{1}{16}d.$

Rise in value of silver in 1890.

10. Even if the increased production is kept in view, it is not easy to understand why, with the increased purchasing by the United States to the amount of six millions sterling per annum, and the simultaneous large increase of the Indian imports of silver, which averaged from August 1890, when the Sherman Act come into force, to March 1893, upwards of 46,500,000 ounces, the price should be sixpence per ounce lower than it was in the beginning of 1890. It has, indeed, been argued that the recent fall in the price of silver was due to the blow which the passing of that Act gave to the hopes of those who desired the free coinage of silver. But against this it is to be observed that the price of silver in London rose during the time that the Sherman Act was passing through Congress, and continued to rise for some weeks after it became law. Whatever be the cause, the fact that, although the United States Government have under that Act made purchases varying from 34 to 42 per cent of the estimated production of the world, and India has increased and not diminished her imports of the metal, the price of silver has fallen to its present low level is beyond question and of grave moment.

Effect of American legislation and Indian imports on value.

11. Supposing even that no change were made in the currency arrangements of the United States, the experience of the past would forbid the conclusion that the price of silver would be stationary at its present level. It would be imprudent to act on the assumption that no further fall is possible or even probable.

Further fall in value of silver to be expected.

12. The International Monetary Conference which recently assembled at Brussels has not led to any change in the situation, and, although it adjourned to a future day, that day is now past, and it seems uncertain whether there will be any further meeting.

Brussels Conference.

13. Moreover, a strong agitation exists in the United States with respect to the law now in force providing for the purchase of silver. Fears have been, and are, entertained that there may come to be a premium on gold, and strong pressure has been brought to bear upon the Government of that country with a view to bring about an alteration of that law.

Agitation in United States.

14. In December last a Bill was introduced in the Senate to repeal the Sherman Act, and another to suspend purchases under it. Whether any such measure will pass into law it is impossible to foretell, but it must be regarded as possible; and although in the light of past experience predictions on such a subject must be made with caution, it is certainly probable that the repeal of the Sherman Act would be followed by a heavy fall in the price of silver.

Possible repeal of Sherman Act.

15. Opinions differ as to the fall in price which would be effectual largely to check the production of silver. From time to time, as the price of silver has continued to fall, the opinion has been expressed that the point had been reached at which production must be checked. Experience has, however, falsified all these predictions. It is, of course, true that the fact that the working of a mine has become unprofitable does not ensure that the output shall be at once diminished or the mine closed. But, if this state of things were long to continue, and owing to a progressive fall in the price of silver mining operations could only be carried out at an increasing loss, one would expect to find the working abandoned before any very long period had elapsed. It is, however, remarkable

Increase in production notwithstanding fall in price.

that a period of continually increasing fall in the price of silver has been coincident with a large increase in the production of that metal. In the quinquennium 1876—1880, the annual average price of silver ranged from $54\frac{13}{16}d.$ to $51\frac{1}{4}d.$, the average for the quinquennium being $52\frac{3}{4}d.$ In the next quinquennium, 1880—1885, the range was from $5\frac{11}{16}d.$ to $48\frac{5}{8}d.$, the average for the quinquennium being $50\frac{5}{8}d.$, whilst from 1886 to 1890 the price ranged from $47\frac{11}{16}d.$ to $42\frac{11}{16}d.$, the average for the quinquennium being $44\frac{5}{8}d.$ And yet the annual average production of silver at the last quinquennium was 3,459,201 kilos (111,213,000 ounces) as compared with 2,450, 52 kilos. (78,776,000 ounces) in the quinquennium 1876—1880, being an increase of 41 per cent. And with an average price in 1891 of $45\frac{1}{16}d.$ and in 1892 of $39\frac{13}{16}d.$, or an average for the two years of $42\frac{7}{16}d.$, the production of 1891 has been estimated at 4,493,100 kilos. (144,453,000 ounces) and that of 1892 at 4,731,000 to 4,900,000 kilos. (152,102,000 to 157,535,000 ounces). This may show that, even at the present price, the production of silver is still profitable in a large proportion of the mines, and that in some it is sufficiently so to stimulate increased development, and that even a further fall would not necessarily diminish the total output. The phenomena may, indeed, be partly accounted for by the circumstance pointed out in the Report of the Gold and Silver Commission that investments in the mines of precious metals are largely of a speculative character, and that many such mines may be opened out and worked for a considerable time at a loss in the hope that such rich deposits of the ore will be found, or that altered circumstances may so change the value of the metal that great gains will be reaped in the future.

16. A review of the changes in the price and production of silver which have characterised the last 12 years certainly forbids our entertaining any confidence that, if a further heavy fall in the price of silver were to take place, it would be at any point capable of estimation checked or counteracted by diminished production. It must be remembered, as pointed out by the Gold and Silver Commission, that the effect of throwing a large quantity of silver upon the silver market is not to be measured by the proportion which that quantity bears to the whole stock of silver in the world, but by the proportion which it bears to the stock of silver in the world after deducting from that stock the very large amount of silver money now kept in circulation by countries which have a silver token currency, since all of this money circulates at an artificial value, and none of it is subject to the fluctuations of the market. It cannot be regarded then as otherwise than within the reasonable bounds of possibility that a repeal of the Sherman Act might lead to a fall in the price of silver of even 6*d.* per ounce or more, and that there might be no substantial reaction from the level thus reached. Such a fall would, it may be said with practical certainty, reduce the exchange to about 1*s.* 0*d.* per rupee, and involve the necessity of raising at least Rx. 6,612,000 more than would be required by the Government of India to effect, even at the rate of exchange of 1*s.* 3*d.* per rupee, a remittance of the amount drawn last year, namely, 16,530,000*l*, while the payment of 19,370,000*l.*, which is the present estimate of the drawings for 1893-94, would, at 1*s.* 3*d.* per rupee, require Rx. 30,992,000 and at 1*s.* 0*d.* per rupee Rx. 38,740,000, involving an increase of Rx. 7,748,000.

Effect of further fall on remittances of Government of India.

Claims of Indian officials.

17. The difficulties which the Indian Government have in meeting the Home charges are aggravated by the fact that the fall in exchange has led to claims on the part of their officers, civil and military, who receive salaries in rupees, to some compensation for the loss which they sustain owing to the fall in exchange. Many of those officials are under the necessity of remitting a considerable portion of their income to this country for the support of their families and the education of their children. It has been said that prices have fallen in this country during the last 15 years, and that a smaller sterling remittance will now purchase more than formerly. This is no doubt to some extent true, but it does not apply to all prices. It is a matter of dispute how far the fall of prices in this country compensates for the smaller sterling remittance

Servants of Government.

which the same number of rupees will procure; but it is certain that, when due allowance has been made for this, the purchasing power of the incomes of Indian officials has been largely reduced.

Practice of private employers.

18. It appears that some European employers have felt themselves bound to make an allowance to the Europeans in their service in India sufficient to counterbalance to some extent the loss which they experience owing to the fall of the rupee; and there can be little doubt that even in existing circumstances, and still more if the fall of exchange continues, the Government of India cannot turn a deaf ear to the appeals of their servants for similar treatment without the danger of engendering serious discontent, apart from the question whether such appeals are just and reasonable.

Expansion of Revenue.

Expansion of revenue hitherto.

19. Hitherto the expansion of the revenue has largely provided for the additional calls which the fall of exchange has made on the Government of India. There has been, in spite of these additional calls, an average surplus during the last 10 years of Rx. 261,550. It is true that, but for the expenditure rendered necessary by the fall in exchange, there might have been further remissions of taxation, and more might profitably have been spent upon public works. Though upon the whole the Government have not been compelled to impose increased taxation in order to discharge their liabilities whilst the fall in exchange has been in progress, certain alterations have been made in the taxation of the country—some in the direction of remission, others of an increase—with the net result that the amount of the increase has not greatly exceeded the amount of the remission. But it is noteworthy that, whilst the remissions were all prior to 1882, the increased taxation has for the most part been imposed since that date. The addition to the salt tax, which was the principal source of increased revenue, produced a sum of Rx. 1,725,000.

Cannot be relied upon to meet future deficiencies.

20. In the past year the fall in exchange of about one penny has added Rx. 1,635,300 to the expenditure with the result of an expected deficit of Rx. 1,081,900 instead of the anticipated surplus; and the rate in 1893-94 being estimated at 1*s.* 2¾*d.* per rupee, an addition of Rx. 2,229,400 is caused to the expenditure beyond the charge for exchange entered in the Budget of March 1892. If a further heavy fall in exchange were to take place, it is impossible to expect that a financial equilibrium would be brought about by an expansion of the revenue alone.

Effect of fall in Exchange on the people of India and its Commerce.

Effect of fall in Exchange on the people of India.

21. Before considering how the Government of India can meet the difficulties which they experience, and which they feel compelled to anticipate, it will be well to enquire what effect the variations in exchange to which attention has been called have produced upon the commerce of India and the prosperity and condition of its people.

Effect on the remittance of produce.

22. In estimating the effect upon the people of India of its being necessary to raise an increased number of rupees to meet the sterling remittances of the Government of that country, it must be borne in mind that the extent of the burthen imposed upon the people of India by these remittances is measured by the quantity of produce which they represent, for it is by the export of the produce that the debt is in reality discharged. In so far as the necessity of exporting more produce arises from the circumstance that gold prices are lower, the people of India are in the same position as those of Australia or any other country which has to export produce for the purpose of paying the interest on its gold debt. The question to be considered is, what effect has the fall in exchange upon the amount of produce which must be exported to meet a given gold liability? To determine this, the gold price of the produce must be assumed to be stationary. When silver falls in relation to gold, the greater number of rupees which is

required to meet a given gold payment will not represent a greater quantity of produce than before if the silver price in India of the produce exported responds to the changed value of silver in relation to gold, *i.e.*, if it has risen, or has been prevented from falling. Silver prices must ultimately thus respond, although an interval may elapse before the correspondence is complete; and during this time, whilst more produce is exported, the Indian ryot is getting proportionately less in silver for his produce. It has indeed been alleged that the fall in the gold price of certain Indian products is to be attributed to the fall in the value of the rupee, but this allegation is strongly controverted; and, having regard to the phenomena presented in the case of Indian products not greatly open to competition, and to the necessary effect of competition in the case of those which are within the sphere of its influence, it seems far from clear that the fall in the gold price of Indian products would have been materially less if the exchange had not fallen.

Transfer of burdens from one class to another.

23. Even if the burden upon the people of India as a whole, has not been increased by the fall in exchange, there can be no doubt that it has been to some extent shifted from one class to another. The burden of those who pay a fixed land revenue under a permanent settlement has been lightened, and the same may be said of all those whose land revenue has not been re-settled in recent years, or re-settled with adjustment to meet the most recent conditions. On the other hand, the increased salt tax presses upon the people at large, and renders more heavy the taxation of those who for the most part have suffered rather than benefited from the higher rupee prices due to the fall in the gold value of silver.

Effect on commerce.

24. We pass now to consider the manner in which the commerce of India is alleged to have been injuriously affected by the variations in exchange.

Harassment of trade by fluctuations.

25. It is said that legitimate trade is replaced by mere speculation and gambling. There seems to be a common agreement amongst those who differ in their views upon almost all other points that trade is seriously harassed by these fluctuations, though the estimates do not all agree as to the character and the extent of the inconvenience arising from this cause. It does not appear to be certain, even in the view of those who are most strongly sensible of the mischievous effect of fluctuations of exchange, that the volume of trade over a series of years has been diminished from this cause, though there seems a common agreement that any sudden or violent fluctuation almost paralyses business for a time. It is to be observed that it is not so much the fall of exchange which is complained of as the fluctuations, whether in one direction or the other. Some of those who admit the mischief to trade of exchange fluctuations allege that the extent of the mischief is not serious, since provision can be largely made against the effect of those fluctuations through the medium of banks; but it is clear that the traders cannot completely safeguard themselves in this way, and that such security as they obtain in this respect must be paid for. It must be remembered that before the fall in the price of silver began, and the fluctuations in the rate of exchange dependent upon it, the rates of exchange varied very considerably during particular years, though, no doubt, the fluctuations have been much more frequent and considerable since that time.

Fluctuations add to the risks of trade.

26. Upon the whole, it cannot be doubted that it would be well if commerce were free from the inconveniences of fluctuations which arise from a change in the relation between the standard of value in India and in countries with which her commerce is transacted. It must not be assumed that the adoption of the same standard for the United Kingdom and India would remove all the disquieting causes of the disturbance of trade of which complaint is made. If the commodity which lies behind the exchange transaction is one that continues to fall in relation to gold, the risk which arises from bargains in a falling market will still be present. The liability of the standard of the one country to fall in relation to the other causes, however, an additional risk, and consequently increased disturbance to trade.

27. It is said that the tendency of a falling exchange is to stimulate exports; that, inasmuch as more silver, *i.e.*, a higher silver price, is received in respect of the same gold price, whilst wages and the other factors in the cost of production do not increase in the same proportion, production becomes more profitable, and is therefore stimulated. Assuming this to be true, the effect of each successive fall must be transitory, and can continue only until circumstances have brought about the inevitable adjustment. Although one may be inclined, regarding the matter theoretically, to accept the proposition that the suggested stimulus would be the result of a falling exchange, an examination of the statistics of exported produce does not appear to afford any substantial foundation for the view that in practice this stimulus, assuming it to have existed, has had any prevailing effect on the course of trade; on the contrary, the progress of the export trade has been less with a rapidly falling than with a steady exchange. For example, from 1871-72 to 1876-77 the gold value of the rupee fell constantly from 23·126*d.* to 20·508*d.*, or about 11¼ per cent; the exports of merchandise were actually less in the latter year than in the former, although in 1876-77 their rupee value exceeded by about 10 per cent. that of the exports of either 1870-71 or 1872-73. From 1878-79 to 1884-85 exchange was fairly steady, the average rates varying only between 19·961*d.* and 19·308*d.* per rupee, or about 3¼ per cent; and during those six years the exports rose by no less than 36½ per cent. Again, between 1884-85 and 1888-89 the fall of the rupee was very rapid, from 19·308*d* to 16·379*d.*, or over 15 per cent, and the exports increased during those four years by 16½ per cent; but in the single year 1889-90, when there was a slight improvement in the exchange, the exports increased by more than 6½ per cent. It is said, too, that, whilst a falling exchange tends to stimulate exports, there is a corresponding tendency to check imports. Here again statistics do not seem to show that diminished imports have been coincident with a lower exchange. Taking the same periods as before, from 1871-72 to 1876-77, when exchange fell 11¼ per cent, imports of merchandise into India increased by 17 per cent; from 1878-79 to 1884-85, when exchange was steady, the increase of imports exceeded 47 per cent; between 1884-85 and 1888-89, when the rupee fell about 15 per cent, the imports were augmented by nearly 25 per cent; while in 1889-90, when exchange slightly rose, the imports were rather less than in the previous year. Upon the whole we cannot see any evidence that the effect of a falling exchange on the country at large in influencing either exports or imports has over a series of years been very considerable. Some trains of *a priori* reasoning would seem to lead to the same conclusions, and also to the further conclusion that, even if a fall in the gold value of the rupee does stimulate exports, the result is not necessarily to the benefit of India as a whole, though it may temporarily benefit the employer at the expense of the wage-earner, because wages rise more slowly than prices.

Alleged stimulation of exports by fall in exchange.

28. The want of a stable exchange between England and India, and the fact that it has fallen so heavily, has, it is alleged, greatly checked the investment of British capital in India and the development of the country which would have been the fruit of such investments. London is the lending market, and London thinks in gold. London is ready enough to lend upon contracts for repayment in gold, but hesitates to enter upon silver transactions, or to engage in industrial enterprises in a silver country. There can be no doubt that uncertainty as to the interest which would be received for the investment, and as to the diminution which the invested capital might suffer if it were desired to retransfer it to this country, tends to check British investments in India. This is a real evil, the importance of which we do not desire to underrate. It has been pointed out, however, that a great number of industrial enterprises have been established in India during recent years, such as collieries, cotton mills, jute mills, woollen mills, and paper mills, in which much capital has been invested; and that large sums have been spent upon tea plantations is evidenced by the enormous increase in the quantity of tea grown in and exported from

Check to investments in India.

India. And it must be remembered that the adoption by India of the same standard which exists in England might not remove all obstacles to the investment of capital in that country. Capitalists have of late been slow to invest in many kinds of industrial enterprise owing to the fact that prices are falling, or have fallen very generally. If a gold standard were adopted for India, and similar phenomena of falling prices ensued there, capitalists might still be unwilling to provide capital for industrial enterprises. In connection with the point under discussion, it may be well to observe that a falling exchange, owing to its effects upon their salaries, savings, and pensions, renders it more difficult to procure and arrange for the services of the European employés required for the carrying on of industrial undertakings in India.

29. There is another point which ought not to be passed over in silence. It is said that by making silver the standard, and keeping the Indian mints open to silver, the Anglo-Indian Government have attracted to India that depreciating metal, and have thus made India purchase at a comparatively high cost an enormous quantity of it, which is now of less value than when it was bought. In this there is some truth, but also much exaggeration. There can be no doubt that an open mint in India offers a market into which silver could be continuously poured without regard to the currency requirements of India until such an alteration in prices of commodities was brought about as to make its importation no longer profitable. It is only when and so far as the opening of the mints to silver has led to the importation and coinage or hoarding of useless and now depreciating silver that the free coinage of silver can be considered to have inflicted a loss upon India. What this loss amounts to we cannot determine, but we are not without indications that India is becoming surfeited with silver.

Attraction of open mints for depreciating silver.

30. The net imports of silver into India in the 23 years from 1870-71 to 1892-93 have been Rx. 165,226,000, or an average of Rx. 7,184,000 a year, and the coinage demands have amounted to upwards of Rx. 6,500,000 annually, so that we may infer that nearly the whole of the newly imported silver has during these years passed through the mint. Since 1877-78 the net yearly imports ranged from about 4 to 11 millions Rx.; but in 1890-91 there was an abnormal rise to more than 14 millions. Much of this silver appears to have remained in the Currency Department, causing at the same time a great and sudden inflation of the paper currency. Between March and December 1890 the note issue increased from about 15¾ crores of rupees to 27 crores, an increase of 71 per cent. The inflation was yet further aggravated, and at the end of August 1892 the notes issued stood at more than 29 crores; but, according to recent returns, there has been some contraction, and the amount in circulation is now about 26 crores. With this sudden expansion of the issue of notes a corresponding increase in the silver coin and bullion reserve took place, *viz.*, from Rx. 9,771,782 at the end of March 1890 to Rx. 21,440,022 at the end of January 1891, an addition of more than 11½ crores of rupees. It deserves notice in connection with this subject that throughout 1892 the import of gold not only ceased to be in excess of the exports, but the current was reversed. During the five years ending with March 1890 the average net import was about Rx. 3,000,000. In 1890-91 it was Rx. 5,636,172, in 1891-92 it was Rx. 2,413,792, whilst in 1892-93 the net import ceased, and the excess of exports was upwards of Rx. 2,800,000.

Recent imports and coinage of silver.

Export of gold.

31. Down to a comparatively late date it was generally believed that, notwithstanding a fall in the gold value of silver, prices in India had been practically unaltered; but the evidence before us points to the conclusion that during recent years the silver price of Indian produce has risen. If, as experience shows, wages respond more slowly to the alteration in the value of the standard, this rise in the price of produce must have been prejudicial to the wage-earning classes.

Prices in India seem to be rising.

Import of useless silver injurious to India.

32. The above facts give reasons for believing that the recent fall in silver, coupled with the open mint, has led India to import and coin more silver than she needs, and the worst of the evil is that it is a growing one. Every unnecessary ounce of silver which has been, or is being, imported into India is a loss to India so long as silver is depreciating in gold value; for it is, *ex hypothesi*, not needed for present use, and it can be parted with only at a sacrifice. So far as the open mints attract unnecessary silver to India, they are inflicting a loss upon the people of the country, and benefiting the silver-producing countries at the cost of India.

Effects if fall should continue.

33. So far, we have dealt only with the past. We have now to consider the effect to be anticipated from a continued, and not improbably heavy, fall in the exchange between India and England.

Existing evils would be intensified, and increase of taxation become necessary.

34. All the evils to which attention has been called would, of course, be aggravated and intensified. If prices continued to rise, while wages were more slowly advanced, the material condition of the wage-earning class would be continually deteriorating. As respects the Government, we have already pointed out that, if no change be made in the currency arrangements of the country, and a heavy fall were to take place, such as we have referred to as possible, they would, unless they could largely reduce their expenditure, be compelled, in order to meet the increased demands upon them, to impose increased taxation to a very serious extent. It has been suggested that economy in the civil and military administration of India is still possible, a point which does not fall within the scope of our inquiry; but, even assuming that the expenditure of the Indian Government might without impairing efficiency of administration be diminished, it cannot be supposed that this could be done suddenly to a very great extent, so as to meet the anticipated difficulty. The net expenditure of the Government of India is about Rx. 50,000,000. Supposing the deficiency which had to be met should be from Rx. 8,000,000 to Rx. 10,000,000, it is not conceivable that an equilibrium could be brought about by reducing the expenditure. When we pass to consider whether the revenue required to meet the deficiency might be raised by increased taxation, we encounter at once a position of great delicacy. There is no doubt that in several directions increased taxation is possible, but the difficulties connected with it are grave, and its political danger is said to be a matter of serious moment.

Possibility of increasing taxation.

Existing taxes.
Land revenue.

35. Inasmuch as the Indian producer has so far benefited by the fall in exchange that he has received a higher silver price for his produce than would otherwise have been the case, and the burden of the land revenue he has to pay has thus become less, it would be natural to seek in an increase of the land revenue a large contribution towards the deficiency. Nearly one-fourth of the land revenue is, however, permanently settled. Of the remainder the greater part is fixed on assessments for 30 years, most of which are of recent date. It is impracticable, therefore, to derive from this source the revenue required.

Salt tax.

36. An increase of the salt tax has been before now resorted to for the purpose of obtaining additional revenue. But the objections to this tax have long been recognised. It is in the nature of a poll-tax, which falls on all classes, but presses most heavily on the very poor. It is true that the price of salt has been reduced in recent years, but the tax is now about 600 per cent. *ad valorem*, and any increase would chiefly affect those who have suffered rather than benefited by the fall in exchange. It has been strongly pressed upon us, too, that it is the main reserve of taxation in case of war or any other emergency, and that it ought not to be exhausted in order to meet the present difficulty. Even an addition of 20 per cent to the existing tax would not yield more than from Rx. 1,500,000 to Rx. 1,750,000.

Stamp duties.

37. An addition to the stamp duties is deprecated on the ground that they are largely a tax on the administration of justice, and that it would not be right materially to augment taxation of this description.

Excise.

38. Doubts are entertained, and probably with reason, whether it would be possible to raise a largely increased revenue by means of excise. It is said that it would stimulate illicit practices, and any attempt to augment the excise revenue would be attacked, as calculated to increase drinking and to promote intemperance.

Import duties.

39. Of all the suggested methods of adding to the revenue, the reimposition of import duties would, according to the evidence before us, excite the least opposition; indeed, it is said that it would even be popular. The duties on cotton goods have, however, only recently been abolished. They were the subject of vehement attack in this country. Any attempt to reimpose them would meet with great opposition. And it cannnot be denied that the reimposition of such duties would provoke a demand for a countervailing excise upon all cotton goods manufactured in India. Although such an excise duty might be collected without serious difficulty in respect of goods manufactured in the cotton mills of Bombay and elsewhere, it is alleged that it would be wholly impracticable to enforce it generally in view of the extent to which the manufacture of cotton goods on a small scale prevails throughout India.

Export duties.

40. The arguments urged against the reimposition of export duties are strong and sound in principle. The only duty of that description now in force is imposed on the export of rice. Any increase of it is said to be impracticable in view of the competition of other countries; the desire of the Government of India to abolish it has been often expressed; and it is even doubtful whether the existing duty can be maintained.

Income tax.

41. If the income tax were raised to twice its present rate, it would probably produce about Rx. 1,500,000 more than it now does. The minimum income liable to the tax is Rs. 500. An increase in the rate would produce very great discontent amongst those who are capable of appreciating and criticising the actions of the Government, and of promoting agitation when they are prejudicially affected. It must be borne in mind, too, that the class which suffers most from the fall in exchange would be most affected by an increased income tax.

New taxes.
Sugar and tobacco.

42. We have passed in review the means of taxation which have been, or are now, in use in India. It remains to consider the new sources of taxation which have been suggested. The only articles so largely consumed that taxation of them would afford the prospect of any great augmentation of the revenue are tobacco and sugar. These are grown very generally throughout India in small quantities. To procure a revenue from them by means of taxation would involve constant and vexatious interference with the people, and the cost of collecting and enforcing the tax would be enormous in proportion to the sum realised. Those who have given evidence on this subject, and who entertain the gravest objections to an increase of the salt tax, are nevertheless of opinion that with all its evils this would be preferable to an attempt to raise a revenue by a taxation of sugar or tobacco.

Succession duty.

43. Although it is recognised that there is much to be said in principle in favour of imposing a succession duty, the difficulties connected with its imposition are enhanced in India by the many different laws which regulate succession, and by the extent to which the family system affects the distribution of property in case of death. This has hitherto stood in the way of its introduction, and it would take a long time to develop any practical scheme; moreover, whether it would be found possible to add largely to the revenue by means of it must be matter of speculation. For these reasons it could not be adopted in order to meet the present emergency.

Conclusions as to increase of taxation.

44. We are not in a position to determine whether the apprehensions expressed to us that increased taxation cannot be resorted to without grave mischief are to the full extent well founded, or whether they are exaggerated. But it is not easy to see how the burden of the added taxation which would be requisite to counterbalance the fall in exchange could be made to rest on those who might with the most justice be subjected to it, or how the added revenue could be provided except in a manner opposed to sound principles of taxation. Even if it be thought that the political dangers anticipated are the offspring of somewhat exaggerated fears, it is at least possible that they may be under-estimated. Representations that a great increase of taxation was due to what has been erroneously called the "tribute" paid to this country would add sensibly to the danger, and afford an inviting them for agitators. It is of importance to recognise the fact that the public revenues of India, as of most Asiatic countries, largely consist of elements of income which have not the character of taxation as that term is used in Western Europe, and that it has been through the natural growth of these revenues that the increased expenditure of recent years has been met to a considerable extent.

Possibility of reducing Expenditure.

Possibility of reducing expenditure.

45. We have in the foregoing paragraphs indicated the results of the evidence which has been placed before us upon the question whether the deficiency caused by exchange may be met by increase of taxation. There is, as has been already pointed out, another way in which a deficiency may be met, *viz.*, by reduction of expenditure. We are quite alive to the importance of this resource, and to the expediency of urging economy in every practicable way, more especially as there is no such pressure brought to bear on the Government of India as that to which the Chancellor of the Exchequer in this country is subjected by the representatives of the taxpayers. But, difficult as it is for us to form an opinion on the possibility of raising additional revenue, it is still more difficult to estimate the possibility of reducing expenditure. In order to do so, it would be necessary to enter upon an examination of the policy and action of the Government of India both in military and civil matters, a task which is beyond our province. Experience, however, shows, as regards military expenditure, that it is at all times difficult to resist its growth, and that occasionally the circumstances which call for it are beyond the control of any Government; while, as regards civil expenditure, advancing civilisation brings with it constantly increasing demands for Government action and enterprise—demands which are not the less urgent when, as is the case in India, they must originate with the Government rather than, as in Europe, with the people. Although, therefore, we feel strongly the necessity for the utmost care in restricting expenditure, we are certainly not in a position to conclude that any economies are possible which would enable the Indian Government to meet successfully the great and growing deficit caused by falling exchange.

Possibility of reducing deficit by charging more expenditure to capital.

46. It has been suggested that the Government of India might with propriety charge more of its public works expenditure to capital, and thereby reduce the deficit shown in the Revenue Account. On this point we can only say that the Government of India have for a long time acted on the sound principle of charging to capital only such outlay as is incurred for productive works, and that a policy of allowing unproductive expenditure to be so charged is obviously open to serious question.

Proposals of the Government of India.

Proposals of the Government of India. Despatch of 21st June 1892.

47. We have said enough to show that the situation is a very critical one, and the proposals of the Government of India are entitled to the most careful and anxious consideration. We proceed to state the nature of those proposals. In a despatch of the 21st of June 1892, the Government of India expressed their deliberate opinion that, if it became clear that the Brussels Conference was unlikely to arrive at a satisfactory conclusion, and if a direct agreement between India and the United States were found to be unattainable,

the Government of India should at once close their mints to the free coinage of silver, and make arrangements for the introduction of a gold standard. The Government forwarded as an enclosure in this despatch a Minute by Sir David Barbour, the Financial Member of Council, giving an outline of the method he proposed for the introduction of a gold standard into India, if such a measure should become necessary. The nature of the plan will appear from the following extract from that Minute:

Sir D. Barbour's Minute.

"6. The only measures for the introduction of a gold standard into India which seem to me feasible are the following:

"(1) The first measure would be the stoppage of the free coinage of silver. Government would retain the right of purchasing silver and coining it into rupees.

"(2) The next measure would be to open the mints to the free coinage of gold. Any man bringing gold to the mints would be entitled to have it coined into gold coins, which would be legal tender to any amount. It would be desirable to stop the free coinage of silver some time before opening the mints to the free coinage of gold. It would be a valuable guide to us in subsequent proceedings to know exactly what effect the stoppage of the free coinage of silver had on the gold value of the rupee.

"The new gold coins might be a 10-rupee piece and a 20-rupee piece.

"7. The weight and fineness of the gold coins to be issued from the mint would be such that the par of exchange between them and the sovereign would be the exchange which it was desired to establish between India and England.

"For example, if we wished the rupee to be worth 1*s.* 4*d.*, the 10-rupee coin would contain as much gold as was worth (1*s.* 4*d.*) + 10 = 160 pence. The quantity of fine gold in the 10-rupee piece would be $\frac{160}{240}$ths, or two-thirds of the quantity contained in the sovereign.

"8. The question of the ratio at which we should exchange from the silver to the gold standard would require careful consideration.

"We ought not to think of going back to the old ratio of 1 to 15½. Neither ought we to adopt the very lowest price to which silver may have fallen at any time, or to consider ourselves bound to accept the market ratio of the very moment at which the change was made. A ratio based on the average price of silver during a limited period before the introduction of the gold standard would probably be both the safest and the most equitable."

Telegram of 22nd January 1893.

48. In a telegram of the 22nd of January 1893, the Government made this further statement regarding their proposals:

"We propose to take power to declare by notification that English gold coinage shall be legal tender in India at a rate of not less than 13⅓ rupees for one sovereign, and we have provided for that in the draft Bill. We think that an interval of time, the length of which cannot be determined beforehand, should elapse between closure of the mints and any attempt to coin gold here. The power to admit sovereigns as legal tender might be of use as an *ad interim* measure, and need not be used except in case of necessity."

Draft Bill.

49. A copy of the draft Bill for the purpose of stopping free coinage was afterwards forwarded. It proposed to repeal the free coinage provisions of previous legislation, and to enact that the Governor General in Council might, by order notified in the *Gazette of India*, declare that any gold coins, which were for the time being a legal tender in England, should be a legal tender in India in payment or on account at such rate, not being less than 13⅓ rupees for one sovereign, *i.e.*, at the rate of 1*s.* 6*d.* per rupee, and so for any greater or smaller coin, as should be fixed in such order, and might in like manner cancel or vary such orders.

Sir D. Barbour's arguments in support of the proposals.

50. In the Minute of Sir David Barbour forwarded by the Government of India, to which reference has already been made, the arguments in support of the proposals are stated. He observes that, although it is proposed to stop the free coinage of silver and to establish a gold standard, it is no part of the plan to substitute gold for silver as the ordinary currency of the country. It is contemplated that in the vast majority of Indian transactions silver would still be used as the medium of exchange. He refers to the example of France and other nations as showing that it is possible to have a gold standard, though a large percentage of the circulation consists of overvalued silver coins, which are legal tender to any amount. He concedes that, in order that the gold standard may be effective, a limit must be placed on the number of such coins, and they must be convertible into gold coins, either without payment of premium or on payment of a trifling premium, whenever any person wishes

for gold coins in exchange for silver coins. Gold coins would only be required in exchange for silver when they were wanted for hoarding or export, or for melting down into ornaments. It is pointed out that one mode in which the scheme might be carried out would be by adopting measures for accumulating a store of gold, and, when sufficient had been obtained, opening the mints to the free coinage of gold coins, that metal being then made legal tender, and the exchangeability of silver for gold coins, according to their face value, guaranteed by means of the accumulated stock of gold. This, it is said, would be an expensive plan, and there would be a great risk of the whole stock of gold being drained away in exchange for silver rupees. Sir David Barbour, therefore, does not recommend this plan, but the measures which appear to him feasible are those described in the passage from his Minute already quoted. It is said that under the proposed scheme, if the Government treasuries were required to give gold coins for silver, whenever it was possible for them to do so, there could not be any considerable premium on gold coins so long as there were any in the public treasuries or in the Paper Currency reserve, and the gold standard would be effectively maintained. After the proposed measures had been carried out, it might happen that no gold was brought to the mints to be coined and to be put into circulation, and that the rupee fell in value below 1*s.* 4*d.*,—supposing that to have been the ratio fixed,—or it might happen that, though gold was brought to the mints for a time and the rupee was worth 1*s.* 4*d.*, yet subsequently gold ceased to be brought to the mints, gold coins ceased to be found in circulation, and the rupee fell below 1*s.* 4*d.* In either case it would be a sign that the rupee was redundant, or, in other words, that there were too many silver rupees in circulation, and consequently their value had fallen below sixteen pence each, and that the gold standard was no longer effectively maintained. The remedy in such a case, it is said, would be to contract the rupee currency, and to adopt any feasible measures for improving the general financial position of the country. Such an improvement would give increased confidence, and the reduction of the rupee currency, if carried far enough, must ultimately restore the value of that coin. The greatest danger, it is said, would arise immediately after the first introduction of the gold standard, and would be brought about by silver rupees being, as they certainly would be, returned to India from foreign countries, and by their being thrown into the active circulation from Indian hoards. It is thought, however, that the existing hoards in India would practically remain unaffected. The reduction of the rupee currency, it is said, might or might not prove a very expensive measure. It could be spread over a number of years, and, until it had been carried out to a sufficient extent, the gold standard would not be effectively maintained. Of course, while the reduction of the rupee currency was in progress, there would not be an effective gold standard; but even during that period of uncertainty it might be expected that the exchange with England would remain much steadier than it had been during the last few years.

Effect of the proposals.

51. We proceed now to consider the proposal of the Government of India to close the mints, in the first instance, without adopting a gold standard, but coupled with the provision that the Indian Government should have to power of declaring English gold coins to be legal tender in India at a rate to be fixed by proclamation, such that the value of the rupee so fixed shall not exceed 1*s.* 6*d.*

Substance of the proposals.

52. Let us consider what would be the immediate effect of these proposals. First, then, as to their effect on the gold value of uncoined silver, and on the future relation of uncoined silver to the coined rupee.

Effect of closing the mints on uncoined silver.

53. Minting of silver would for the time be at an end, and this use of or demand for uncoined silver would cease to exist. What has been the use or demand? and what would it be likely to be in the future? Some notion may be formed on this point by examining the quantity of rupees coined in the last few years and of silver deposited in the currency reserves against the issue of notes.

Amount of new coinage in India in recent years.

54. The average amount of the new coinage in India has been as follows:

	Rx.
1870-71 to 1874-75 (annual average)	2,931,282
1875-76 „ 1879-80 „ „	8,493,881
1880-81 „ 1884-85 „ „	4,480,108
1885-86 „ 1889-90 „ „	8,310,788
1890-91 ... (one year)	13,163,474
1891-92 ... „ „	5,553,970
1892-93 ... „ „	12,705,210
Yearly average, 1870-71 to 1892-93	6,630,628
„ „ 1875-76 „ 1892-93	7,658,223

Silver bullion in Paper Currency reserve.

55. The annual average of silver bullion in the Paper Currency reserve has been as follows:

	Rx.
1870-71 to 1874-75 (annual average)	1,468,771
1875-76 „ 1879-80 „ „	1,319,060
1880-81 „ 1884-85 „ „	756,894
1885-86 „ 1889-90 „ „	1,019,828
1890-91 ... (one year)	747,974
On the 31st of March 1892 it was	1,775,569
The average for the 22 years being	1,152,105

Total demand of India for currency purposes.

56. Looking to these figures, it will be seen that the absorption by India of silver for currency purposes since 1875 has averaged more than Rx. 7,700,000 a year. The coinage from 1885-86 to 1892-93 was Rx. 72,976,594, making an annual average of about Rx. 9,122,000. This is equivalent to 34,200,000 ounces of silver.

Imports of silver into India.

57. The net imports of silver into India have been as follows:

	Rx.
1870-71 to 1874-75 (annual average)	3,063,082
1875-76 „ 1879-80 „ „	7,054,200
1880-81 „ 1884-85 „ „	6,080,527
1885-86 „ 1889-90 „ „	9,635,134
1890-91 ... (one year)	14,175,136
1891-92 ... „ „	9,022,184
1892-93 ... „ „	12,863,569
Yearly average, 1870-71 to 1892-93	7,183,722
„ „ 1875-76 „ 1892-93	8,328,344

So that nearly the whole of the silver imported into India has been absorbed by currency demands, or has passed through the mints.

United States currency demand.

58. The United States currency demand is 54,000,000 ounces of silver a year.

Production of silver in the world.

59. The production of silver in the world is estimated for 1892 to have been from 152,102,000 to 157,535,000 ounces.

Probable consequence of cessation of American and Indian demands.

60. The currency demands of India, therefore, have during recent years been nearly a quarter, and those of the United States rather more than a third, of the whole world's production. If, therefore, either the one or the other were to cease, there ought, according to general laws, to be a great fall in the value of silver; and, if both were to cease, the fall ought to be very great indeed until the reduction of the demand had produced a similar effect on the supply. We have already explained that this reduction

in supply might not follow for some time the diminution of demand, and the fall might be protracted for a long time.

Possible panic.

61. No safe inference, however, as to the effect of the cessation of the Indian or American demand can be founded exclusively on these figures. Apprehension of the future often operates on the minds of men, and produces an effect on the market greater than the actual circumstances of demand and supply would seem to warrant. The closing of the Indian mints would, no doubt, make it more likely that the United States would give up buying silver; and, if the apprehension of this were added to the cessation of the Indian demand, the effect might be a panic in the silver market. Eventually the price of silver would, no doubt, settle down to the new circumstances of demand and supply.

Possible rise in value of gold.

62. There is still another element to be considered. If the effect of the proposal of the Indian Government were sooner or later to cause a demand for gold in India which does not exist, it might raise the value of gold as against all other things, including silver. In other words, the gold price of silver might be still further diminished.

Effect on value of uncoined silver.

63. All the factors of the problem are so uncertain that it is impossible to predict with any confidence or in numerical terms what the effect of closing the mints would be on the value of uncoined silver. The greater the effect, the greater, of course, would be the difference in value between coined and uncoined silver in India, and the greater the dangers, whatever they may be, which might arise from that source.

Effect on value of coined rupees.

64. Next, as to the effect of simply closing the mints on the future value or gold price of the rupee. If there be already, as there is reason to suppose, a quantity of unused rupees in India, they would have to be absorbed before the closing of the mints produced an effect on the value of the rupee. In that case, there might be some time to wait before there was any increase in its value. The apprehensions of men concerning the future might cause an immediate effect of a serious character; but we cannot venture to say for what length of time this would be maintained. Neither could we trace the progress of the enhancement of the value of the rupee in respect of time or place which we should expect to follow the closing of the mints.

Effect of closing the mints, coupled with making the sovereign a legal tender at 1*s.* 6*d.* the rupee.

65. It is impossible to estimate the extent to which the rupee might be raised if the Indian mints and Indian currency were to remain closed against both precious metals. The Government of India, however, add the proposal to make English sovereigns legal tender at a ratio which is not to exceed 1*s.* 6*d.* to the rupee; and it remains to be considered what would be the effect of stopping the free coinage of silver taken in conjunction with this condition. The proposal would leave it in the discretion of the Indian Government either to fix that ratio at once or to proceed by successive stages. If the higher ratio were adopted, if the Government were not itself to add rupees to the currency, and if in consequence of the closing of the mints exchange rose rapidly to that ratio, the difficulties and evils arising from an appreciation of the currency, to which we shall have to call attention hereafter, would be so much the greater; if a lower ratio were adopted in the first instance, and if exchange were to rise more gradually, these difficulties and evils would be less; but, whichever plan were selected, the Indian Government would probably be deemed by the public to have decided that 1*s.* 6*d.*, was to be the gold value of the rupee, which consequently would be regarded as a limit. When that limit was reached, the currency would again become automatic, since gold sovereigns could be freely exported to India to serve as currency there.

Objections to the proposals: (1) *as to their practicability.*

Practicability of maintaining the rupee at an artificial value.

66. The first objection taken to the scheme of the Indian Government is that it would not be practicable to maintain the rupee in the manner suggested on a ratio to gold much higher than that of the intrinsic value of the silver of which it consists. We have already alluded to the reliance placed by the

Government of India upon the phenomena exhibited in the currency system of France and other nations. It will be important, therefore, to direct attention to the essential features of the present Indian currency, and to consider what light is thrown upon the proposals of the Government of India by the experience derived from the currency arrangements of other countries.

Precedents.

Different Currency Systems of different Nations.

1.—United Kingdom.

Principles of currency of United Kingdom.

67. The present Indian monetary system is substantially modelled on that of the United Kingdom, the essential features of which are—

(1) The standard coin to be of one metal, gold.

(2) The mint to be open to the free coinage of this metal, so that the quantity of current coin shall be regulated automatically, and not be dependent on the action of the Government.

(3) Token coinage to be of a different metal or metals, subsidiary to the standard coin, legal tender only to a limited amount, and its face value and the price in the standard metal at which it can be obtained from the mint being greater than the market value of the metal contained in it.

It may be added that, under the Act of 1844, paper money is convertible on demand into gold, its quantity above a fixed amount varying with the quantity of gold against which it is issued.

Gold formerly considered the principal medium of exchange.

68. Lord Liverpool and other authorities would have added that the standard metal, gold, should be the principal medium of exchange; but this is no longer the fact. Gold is the standard or measure, but for the most part not the medium itself. Though, however, in wholesale transactions, and in a great many retail purchases, gold is no longer the medium of exchange, the use of gold coins is probably greater in the United Kingdom than in most other countries.

69. As regards the stocks of gold and silver (other than mere token money) in the United Kingdom and in India, such information as we have been able to obtain leads to the conclusions contained in the two following paragraphs.

Stocks of legal tender money in the United Kingdom.

70. In the United Kingdom the amount of gold and silver available for the purposes of currency is uncertain; but the Mint estimate of the gold in circulation is 91,000,000*l.*, of which the amount in banks (including that in the Issue Department of the Bank of England and in other banks against which notes are issued) is stated to be 25,000,000*l.*

There is also the fiduciary issue of notes by the Bank of England and other banks, which at the close of 1892 stood at 27,450,000*l.*

It must, however, be remembered that the gold held by the Issue Department of the Bank of England and the gold held by the Scotch and Irish Banks in respect of notes issued beyond the authorised limits cannot be looked up as an integral portion of the currency, since it cannot be used at the same time with the notes which are issued against it; but the amount is included in the sum of 21,000,000*l.* above mentioned in order to facilitate comparison with foreign countries which keep a gold reserve against their notes, though not under conditions so strict and specific as those of the English Act of 1844.

India.

Principles of currency in India; stock of silver.

71. In the Indian currency system, as established in 1835, silver takes the place which gold occupies in the English system. Cheques, bankers' money, and other credit have not in India replaced the metallic currency to the same extent as has been the case in England.

The Indian Mint is open to the free coinage of silver; the rupee and the half-rupee are the only standard coins, and are legal tender to an unlimited

amount It is uncertain what is the stock of rupees in India, but it must be very large; Sir David Barbour says that the amount in active circulation, in which of course the hoards are not included, has been recently estimated at Rx. 115,00,000; and by some writers it has been placed much higher. Mr. F. C. Harrison, who has taken great pains in the investigation, puts it at Rx. 134,170,000, besides Rx. 30,000,000 of the coins of Native States.

Gold is not legal tender, and there are no current gold coins.

There is a subsidiary silver fractional coinage, which is legal tender only to the limit of one rupee.

Paper money may be issued to the amount of 8,00,00,000 rupees against securities; and beyond this only against a reserve of coin or bullion deposited. The amount of notes so issued was Rs. 26,40,18,200 on the 31st of March 1893, and the reserve was constituted as follows:—

	Rs.
Coin	17,53,85,744
Bullion	86,82,456
Securities	8,00,00,000

For the purposes of the Paper Currency India is divided into circles, at present eight in number. The notes are legal tender for five rupees and upwards within the circle for which they are issued, and are convertible at the office of issue, and (except in the case of British Burma) at the principal city of the Presidency to which the circle of issue belongs.

Other countries: principles of currency and stocks.

72. When we proceed to examine the currencies of other countries, we find that many of the conditions which have been considered essential in the English and Indian currencies are either wanting altogether or have been replaced by other conditions. The following is a short statement of the most important features in these currencies, and of the stock of gold, silver, and notes available for currency, so far as we have been able to obtain them, as they stood at the close of 1892; but we must guard ourselves against being supposed implicitly to accept all the figures:

United States.

United States.

73. The standard is gold and the mint is open to gold.

There is little gold coin in circulation, at any rate in the Eastern States, but a large reserve of gold in the banks and in the treasury—

	£
Stock in the Banks	82,250,440
„ „ Treasury	48,852,290
Silver dollars in the Treasury	70,948,080
„ „ in circulation	12,384,490

and these, or the certificates issued against them, circulate at a gold value at the old ratio of 16 to 1.

There was also in the Treasury of silver bullion an amount valued at 17,874,430*l.*, against which paper certificates are issued, which circulate at a gold value at the same ratio.

The aggregate paper currency was about 210,000,000*l.*

The silver currency and paper based on silver are accepted as legal tender to any amount, and there is no premium on the gold and gold certificates in comparison with them.

Silver maintained at ratio of 16 of 1.

74. In this case a very large amount of silver, or certificates representing such silver, has hitherto been kept in circulation at the ratio of 16 to 1. But there is considerable apprehension concerning the difficulties which may arise if the compulsory purchase of silver by the Treasury for currency purposes should continue. Under the Bland Act passed in 1878 these purchases amounted, as above stated, to about 20,600,000 ounces in the year, whilst under the Sherman Act, which was passed in 1890, these purchases have been increased to an annual amount of 54,000,000 ounces.

Canada.

Canada.

75. The standard is gold; but though there is a provision for coining gold dollars at the rate of 4·86⅔ to the British sovereign, that is, at the ratio of 16 to 1, there is no Canadian gold coin, and little or no gold coin in circulation.

Canada has no mint. Fractional silver currency is supplied from England.

The stock of gold is said to be about 2,400,000*l.*

There are about 3,700,000*l.* worth of Dominion notes of various amounts, from 25 cents up to 4 dollars; and the banks may issue notes for 5 dollars or any multiple thereof to an amount not exceeding their "unimpaired paid-up capital," such notes being redeemable in specie or Dominion notes; the present issue is about 7,000,000*l.*

The Dominion notes (unless it be for small amounts) are redeemable in "coin current by law in Canada," that is, in such dollars as above mentioned. The American silver dollar circulates at par at the ratio of 16 to 1, although a Government proclamation was issued in 1870 declaring it to be legal tender up to the amount of 10 dollars, but only at 80 cents per dollar.

Silver is not convertible into gold.

Notes and silver at gold value of United States.

76. This is a very remarkable case, since without any gold currency, and without even a mint for gold, dollar notes and silver dollars circulate at the United States gold dollar value.

West Indies.

West Indies.

77. All the West India Islands and British Guiana have adopted the English currency, gold being the standard, but silver being a legal tender without limit. In practice, British gold is never seen there, but the circulating medium consists of shillings and Colonial bank notes. Except in British Honduras, no silver dollars are legal tender, but gold doubloons remain legal tender at 64 shillings (the rate fixed in 1838) throughout the West Indies.

In Jamaica and Trinidad gold doubloons and United States gold coins are not uncommonly seen; they come from the Isthmus and Venezuela, and go to New Orleans and New York in a steady current.

In the Bahamas the United States gold dollar (worth 4*s.* 1·316*d.*) is popularly over-rated at 4*s.* 2*d.*, and consequently American eagles circulate freely (or did so until notes were introduced).

British Honduras has as its standard the silver dollar of Guatemala, which is a 5-franc piece without any gold behind it.

Silver token currency at gold value.

78. This is an instance of a gold standard without gold and a silver token currency circulating to an unlimited extent at a value based on that gold standard.

Germany.

Germany.

79. Germany in adopting a gold standard in 1873 adopted most of the features of the English currency system. The mint was opened to gold, and a subsidiary silver token coinage was introduced, limited in quantity by reference to population, and legal tender only to a limited amount. The peculiarity of the case of Germany is that 20,000,000*l.* worth of old silver thalers are retained in circulation at a ratio of 15½ to 1, and are legal tender to an unlimited extent. Of the new coinage of gold, the banks hold 34,250,000*l.*, in addition to 6,000,000*l.* stored at the fortress of Spandau, while the amount in circulation is estimated to be from 65,000,000*l.* to 70,000,000*l.*

The amount of paper currency issued is 6,000,000*l.* by the Imperial Government, 53,790,000*l.* by the Reichsbank, and 8,950,000*l.* by other banks, making a total of 68,740,000*l.*

Resembles that of United Kingdom.

80. On the whole, the German system approximates more closely than any other to our own, though it is said that there are not equal facilities for obtaining gold for export.

Scandinavia.

Scandinavia.

81. The standard has been gold since 1873, and the mints appear to be open to gold, but there is little gold in circulation. Bank-notes convertible into gold are the ordinary currency.

Silver is only subsidiary token currency. The stock of gold held by the banks appears to be about 5,500,000*l.*, and of notes about 13,000,000*l.*

Latin Union.

The Latin Union.

(*a*) *France.*

France.

82. The mints are open to gold.

Silver coinage, except of subsidiary coins, has since 1878 been, and is now, prohibited under the rules of the Latin Union.

There is a large quantity of gold coin in actual circulation.

The peculiarity of the French currency is the large amount of 5-franc pieces which circulate at the old ratio of 15½ to 1. They are legal tender to any amount, and are accepted as freely as the gold coin. They are not legally convertible into gold.

The stock of currency appears to be as follows:

	£
Gold, about	171,000,000
Silver	140,000,000
Notes	132,000,000

The notes of the Bank of France are convertible into gold or silver, at the option of the bank. The bank pays gold freely for home use; but, if gold is required in large quantities, especially for exportation, special arrangements must be made.

There is no difficulty in maintaining either the silver or the notes at their gold value.

Gold standard, with much silver circulating at gold value.

83. Here is a currency which for all practical purposes appears to be perfectly sound and satisfactory, but which differs from our own in most important particulars. It is sometimes called "étalon boiteux," or limping standard; but, inasmuch as the mint is open to gold and closed to silver, the standard is really gold, whilst a very large proportion of the currency is either inconvertible silver, or notes payable (at the option of the bank) in silver or gold, maintained without difficulty at the above-mentioned artificial ratio.

(*b*) *Belgium.*

Belgium.

84. The mint is open to gold.

The rules as to 5-franc pieces as to the ratio between gold and silver and as to legal tender are the same as in France.

The stock of currency appears to be as follows:

	£	
Gold, about	5,000,000	or more.
Silver, 5-franc	8,000,000	
Notes	15,000,000	

The notes appear to be convertible into either gold or silver, at the option of the bank.

85. The situation is the same as in France; but inconvenience might be experienced if the Latin Union were to be terminated, and the several members were obliged, under the conditions imposed by that Union, to liquidate in gold their silver currency held by France.

(*c*) *Italy.*

Italy.

86. The mint is open to gold.

The rules as to 5-franc pieces as to the ratio between gold and silver and as to legal tender are the same as in France.

The stock of currency appears to be—

	£
Gold	23,600,000
Silver, 5-franc pieces	4,000,000
Notes	57,000,000

There is very little metallic coin in actual circulation; the paper is at a discount, and the exchange below par.

87. The state of this currency is unsatisfactory, not, however, on account of the artificial ratio between gold and silver, but on account of the want of both metals, owing probably to the state of the finances and credit of the country. The same difficulty would arise as in Belgium if the Latin Union were terminated.

Holland and the Dutch East Indies.

Holland and the Dutch East Indies: History of adoption of gold standard.

88. From 1847 to 1873 Holland and its dependencies had the single silver standard. In consequence of the changes in Germany and other countries in the north of Europe, which adopted the gold standard in 1873, Holland suspended the coinage of silver in that year. Silver could no longer be brought to the Dutch mint, and gold coin could not be issued, because the Dutch Parliament had not agreed on a gold coin or a gold standard. There was a certain quantity of silver coins in circulation, and their value at this period was regulated neither by the market value of gold nor by that of silver. The demand for coin was increasing in the years 1873 to 1875; and the result was that, whilst the value of silver as a metal was going down in the market, Dutch silver coins were appreciated as against gold. The rate of exchange on London, which oscillates now on the gold basis between 12·1 and 12·3 florins to the £ sterling, shrank to 11·12 florins.

In 1875 the gold standard was adopted at a ratio of 15⅝ths to 1, and the Dutch mint was opened to gold; whilst the coinage of silver, except of subsidiary token coins, was prohibited, and remains so at the present time. A considerable quantity of gold coin was minted, which was, however, kept in reserve, and not used for internal circulation. Silver florins at the gold value were legal tender to any amount; and, with paper florin notes, which were also at a gold value, formed the internal circulation of the country. Neither silver nor paper is convertible into gold; but the Netherlands Bank has always been willing to give gold for exportation. In 1881 and 1882 the balance of trade turned against Holland, and the stock of gold ran down to about 600,000*l.* Under these circumstances, an Act was passed in April 1884, which enabled the Government to authorise the bank to sell at market prices a quantity of 25,000,000 silver florins whenever the state of the currency might demand it. This Act has never been brought into operation, but it has restored confidence; the necessary stock of gold, amounting now to upwards of 5,000,000*l.*, has been maintained; the Bank gives gold freely for export; and the exchange has continued steady at from 12·1 to 12·3 florins to the £ sterling. No difficulty has been experienced either in Holland or in her Eastern dependencies. The system of currency has always been, and still is, the same in both. There is no mint and little or no stock of gold in Java; and at the same time the rate of exchange between Java and Europe is always at or about par. It should be added that Java merchants can always do their business with gold countries through Holland.

The stock of currency is as follows:

	In Holland.	In Java.
	£	£
Gold, about	5,200,000	500,000
Silver	11,000,000	2,773,000
Paper	16,000,000	4,250,000

Gold standard, with silver and paper currency.

89. This is a case in which the standard is gold, with little or no gold in circulation. The silver is kept at an artificial ratio much higher than its market value, although neither it nor the paper is convertible into gold except for purposes of export. This artificial exchange is maintained in the Dutch East Indies, where there is little or no gold, as well as in Holland, where there is a limited stock.

Austria-Hungary.

Austria-Hungary: History of adoption of gold standard.

90. Before 1879 the standard coin was the florin, which was equal to $\frac{1}{45}$th part of a pound of fine silver. The mint was open to silver, and silver florins and silver florin notes were legal tender to an unlimited amount. The actual circulation consisted of florin notes, which were inconvertible; their amount was 52,500,000*l.* in 1879 and 69,500,000*l.* at the beginning of 1892. The average exchange on London for 10*l.* sterling was 141·78 in 1861* after the Italian war. It became 109 in 1865, but rose to 125·98 in 1867 after the Austro-Prussian war. It fell to 110·53 in 1872, continued at 111 till 1875, but rose to 122·25 in 1877, 117·89 in 1878, and 116·63 in 1879. It seems that in the earlier years there had been a premium on silver, the paper money being depreciated below its face value, so that no silver was brought to be coined. But silver fell in price from 59¼*d.* per oz. in 1873 to 51¼*d.* per oz. in 1879; the notes ceased to be depreciated; and as the Austrian mint was open to silver, it became worth while to bring silver to the mint to be coined; so that, between August 1878 and November 1879, the silver circulation had increased by 7,000,000*l.* Under these circumstances, the Austro-Hungarian Government in March 1879 stopped the coinage of silver on private account, but continued coining it at their own discretion. The quantity so coined between 1880 and 1891 appears to have amounted to 125½ millions of florins. This state of things continued till 1891, when the Austro-Hungarian Government determined to propose the adoption of a gold standard and to open the mint to gold, for which the necessary measures were passed by the Austrian and Hungarian Legislatures in August 1892. From 1879, when the mints were closed against the private coinage of silver, the average exchange for 10*l.* sterling rose from 117·83 florins in 1880 and 1881 to 126·61 florins in 1887, and then fell to 116·80 in 1891 and 119·29 in 1892. The whole oscillation between 1879, when the mints were closed, down to 1891, when the resolution to adopt a gold standard was taken, was less than 9 per cent, and at the end of the period it stood at nearly the same figure as at the beginning, though in the meantime the price of silver had fallen by nearly 12 per cent, and in 1891 it was more than 6*d.* per oz. lower than in 1879. The basis for conversion to a gold standard, which appears to have been founded on an average of this exchange, is a ratio of 18·22 silver to 1 gold, or 1 gold florin = 2 francs 10 centimes, making 120·1 florins equal to 10*l.* The mint is now open to gold.

* Table given by M. Soetbeer (*see* Appendix to Gold and Silver Commission's Report, page 209), which differs slightly from the figures of exchange on London given in the margin, which have been furnished by the Anglo-Austrian Bank.

The Austrian Government have now at their command a reserve of about 351,000,000 florins (or nearly 30,000,000*l.*) in gold, and it appears to be intended that a certain quantity of paper and of silver florins shall be withdrawn from circulation, and that the paper florins remaining in circulation shall be convertible into gold.

Parity of exchange maintained by closing mints.

91. This is a very remarkable case. The fall in exchange, which would have accompanied or followed the fall in the market value of silver, has been averted by closing the mints against free coinage of silver. Fair steadiness of exchange has been maintained for more than a decade, although the paper currency was inconvertible, and silver was coined on Government account alone; and in the end a law has been passed for the adoption of a gold standard, a gold reserve has been accumulated, and the mint has been opened to gold.

A fractional subsidiary coinage of silver is provided for, but the currency will probably consist in the main of paper notes convertible into gold.

Brazil.

Brazil.

Parity of forced paper currency maintained.

92. The case of Brazil is perhaps the most remarkable of all, as showing that a paper currency without a metallic basis may, if the credit of the country is good, be maintained at a high and fairly steady exchange, although it is absolutely inconvertible and has been increased by the act of the Government out of all proportion to the growth of the population and of its foreign trade. The case, it need hardly be said, is not quoted as a precedent which it is desirable to follow.

The Brazilian standard coin is the milreis, the par gold value of which is 27*d.* A certain number were coined, but have long since left the country, and the currency is and has since 1864 been inconvertible paper. The inconvertible paper was more than doubled between 1865 and 1888, but the exchange was about the same at the two periods, and very little below the par of 27*d.* It had gone down to 14*d.* in 1868, the date of the war with Paraguay, but had risen again, and was in 1875 as high as 28⅝*d.* In 1869, when the quantity of paper money was increased from 12,468,000*l.* to 18,322,000*l.*, the mean rates of exchange showed an advance of about 11¾ per cent. Since the revolution which displaced the Empire and established the Republic, the paper issues of the banks were increased by more than 30,000,000*l.* in less than three years, so that the paper issue in 1892 amounted to 51,372,700*l.*, and as the result of this, and of diminished credit, the exchange in that year ranged from 10¼*d.* to 15¾*d.*

Results of Examination of different systems of currency.

Parity of exchange maintained under various circumstances.

93. It is impossible thus to review foreign systems of currency without feeling that, however admirable may be the precautions of our own currency system, other nations have adopted different systems which appear to have worked without difficulty, and have enabled them to maintain for their respective currencies a gold standard and a substantial parity of exchange with the gold-using countries of the world, which has unfortunately not been the case with India. This has been effected under all the following conditions, *viz.*,—

(*a*) with little or no gold coin, as in Scandinavia, Holland, and Canada;

(*b*) without a mint or gold coinage, as in Canada and the Dutch East Indies;

(*c*) with a circulation consisting partly of gold, partly of overvalued and inconvertible silver, which is legal tender to an unlimited amount, as in France and other countries of the Latin Union, in the United States, and also in Germany, though there the proportion of overvalued silver is more limited, the mints in all these countries being freely open to gold, but not to silver, and in some of them the silver coinage having ceased;

(*d*) with a system under which the banks part with gold freely for export, as in Holland, or refuse it for export, as in France;

(*e*) with mints closed against private coinage of both silver and gold, and with a currency of inconvertible paper, as has been temporarily the case in Austria;

(*f*) with a circulation based on gold, but consisting of token silver, which, however, is legal tender to an unlimited extent, as in the West Indies.

The case of Holland and Java is very remarkable, since in that case the gold standard has been maintained without difficulty in both countries, although there is no mint in the Dutch East Indies, no stock of gold there, and a moderate stock of gold in Holland; whilst the currency consists of silver and paper legally and practically inconvertible into gold, except for purposes of export. The case of Canada, which maintains a gold standard without a gold coinage, is also very remarkable.

94. The case of Austria-Hungary is also interesting, and presents a remarkable contrast to that of India, as will be seen from the following table:

Austria-Hungary compared with India.

Years.	Average value of Florin deduced from the Table of Exchange on London in Vienna given at paragraph 88.	Average value of Rupee in London for Bills on India (for official years 1873-74, &c.)	Comparison of the two tables, taking the first year as equal to 100.	
	d.	*d.*	Austrian Florin.	Indian Rupee.
1873	21·64	22·35	100	100
1874	21·64	22·16	100	99·13
1875	21·47	21·63	99·21	96·76

1888	19·32	16·38	89·28	73·28
1889	20·08	16·57	92·79	74·12
1890	20·68	18·09	95·56	80·93
1891	20·55,	16·73	94·96	74·86
1892	20·12	14·98	92·98	67·04

It will be seen that a country with a silver standard, and a currency consisting partly of overvalued silver, but chiefly of inconvertible paper, has been able by closing its mints against private coinage for a series of years, and whilst still continuing to coin silver on Government account, to maintain a fairly steady rate of exchange with gold-using countries for a considerable period preparatory to adopting a gold standard.

95. Concerning the currency of Russia, we have less information than in the case of other countries. But it appears that there is little or no silver or gold coin in the country, and that the currency consists of inconvertible paper roubles based on silver. The Russian mint is now closed against the coinage of silver on private account. It is an interesting fact that the paper rouble, being in form a promise to pay silver, is now, owing to the fall in silver, exchanged for a higher value in gold than the silver which it promises to pay. Taking silver at 38*d.* per ounce, the silver rouble would be worth 23·774 pence, whilst the paper rouble is quoted at 25 pence. We have already called attention to a similar experience in the case of Austria-Hungary. The phenomenon can, of course, only arise when the amount of the paper currency is limited.

Russia.

96. It would thus appear that it has been found possible to introduce a gold standard without a gold circulation, without a large stock of good currency, and even without legal convertibility of an existing silver currency into gold. Before concluding, however, that these precedents are directly applicable to the condition of things existing in India, it is necessary to examine them carefully. There is no one of the countries above referred to in which silver has been so largely and so exclusively used as in India during the last half-century; and in most of them the people have been for long accustomed to deal with their silver coins on the basis of a double standard. To the Frenchman 5-franc pieces, to the American dollars, have for generations been not only so much silver, but the equivalent of a certain quantity of gold; and it would have been a shock to his habits and mode of thinking to treat them otherwise. It may be easier to maintain an old and well-known silver currency at a gold value in countries which have been bimetallic, and in which large quantities of gold and silver are already in circulation, than to introduce such a system into a mono-metallic silver country such as India. The case of Austria-Hungary again differs from that of India in some important particulars. In Austria-Hungary the standard was silver with an inconvertible paper currency; and the state of this paper currency was probably one of the chief factors which made a fundamental change necessary. In making the change the relation of Austria-Hungary to the neighbouring countries was, no doubt, an important consideration, and the fact that Germany and other States had adopted a gold standard rendered it expedient to take a similar course.

Result of the above precedents.

United States.
France.

Austria Hungary.

97. Even in the case of Holland and its East Indian Colonies, which is *primâ facie* very much in point, there are differences which detract from its value as a precedent for India. At the time the change of standard was adopted, the relative values of silver and gold had not parted as they have since done; and, as regards Java, it must be borne in mind that, although it is an Eastern country dealing largely with silver-using countries, it has always had the same standard and the same currency as Holland, the change being made in the standard of both at the same time.

Holland and her dependencies.

98. On the whole, it seems to us that, whilst the differences we have pointed out prevent the cases of the countries referred to from being applicable in all respects as precedents to the case of India, and the circumstances of each particular country must be studied, yet the experience derived from the currencies of those countries is not without value as bearing on the questions which we have to consider, and is important as showing under what various conditions the exchange value of a currency may be maintained.

General conclusion.

Use of Precious Metals as Currency in India.

99. It has been objected that the natives of India are accustomed to silver; that the transactions are small in amount, so that silver is better suited to their use than gold; and that they will not willingly give up the rupee. The answer to this is that it is not proposed to substitute the gold sovereign for the rupee as currency in ordinary use; and that the case would in this respect resemble that of many of the countries above referred to, where the standard is gold, but the ordinary currency is silver or paper.

Question as to difficulty of getting the people of India to adopt gold.

100. Moreover, gold has never been entirely out of use in India. It is true that in India silver has for the last 30 or 40 years been more exclusively used than in many of the countries referred to. But, though gold coins have not been in use as legal tender, and no fixed ratio has been established between gold and silver coins, there is no part of India in which gold coins are not well known and procurable, and recognised as a form of money, the value of the chief gold coins being regularly entered in the "Prices current." Until 1835 or thereabouts gold coins constituted a recognised part of the Indian currency,

Use of gold in India.

and they were received by the Government in payment of its demands till December 1852; and as late as 1854-55 gold coin to the value of 412,000*l.* was sent by the Government from India to London. The value of the gold imported into India in the eight years from 1862-63 to 1869-70 was no less than 50,000,000*l.*

101. Sir Charles Trevelyan, writing in 1864 in support of a proposal to make sovereigns legal tender in India, referred to the large importation of gold since 1860 as indicating "the determination of the people to have gold," and added that it "shows that the Government would be cordially seconded by "them in any attempt to introduce a gold currency on a sound footing." The Secretary of State, Sir Charles Wood, when replying in the same year, wrote: "It is obvious from the information collected by Sir Charles Trevelyan "that there is a very general desire for the introduction of gold coins in "India," and "that the people, even in the upper and remote parts of India, "are well acquainted with the sovereign." There is little question but that these observations are as applicable at the present time as when originally made.

102. The introduction of gold coins on an important scale would necessarily take place through the banks; and the complete success of the paper currency, as to the acceptance of which by the people of India there had been on the part of many persons serious doubts, shows that there need be no hesitation as to the introduction of a gold legal tender coinage on the ground of its novelty.

103. It may be added that the value of the net imports of gold into India since 1880 has amounted to more than Rx. 44,000,000; and it might be expected that much of the uncoined gold now in India, which must be very considerable, would be brought to the mints if a gold coinage were introduced on a proper basis.

Objections to the proposals: (2) *on the ground of inexpediency.*

Objections to the proposals on the ground of inexpediency.

104. So far we have been considering whether the proposals of the Government of India are practicable. We turn now to consider the objections taken to those proposals, even assuming that they would be effectual to maintain a stable exchange. Some of these objections are equally applicable, whether the exchange is or is not materially raised above its present level. Others are only of force on the assumption that exchange is to be so raised. We will deal first with those which are directed against the scheme generally on the assumption that the rate of exchange is not to be raised, but that a continued fall in the value of silver is likely to create a considerable divergence between the exchange value of the rupee and that of the silver of which it consists.

Objections—(a) Supposing the ratio not to be raised and silver to fall.

Spurious coinage.

105. It is anticipated by some that a serious amount of spurious coinage would result. If spurious coins to a large amount could be put in circulation, the transaction would no doubt be a profitable one; but in countries where silver coins having an intrinsic value much below their nominal value are in circulation, spurious coinage would be an extremely profitable enterprise, and experience shows that the apprehended danger has not been realised in these countries. Against this, however, it is maintained by some persons that this affords no guide as to what would be likely to happen in India, the natives of which country might, in their opinion, be expected to display great skill in the manufacture of spurious coins, while the people who receive them are guided more by the weight of metal in the coin than by its appearance. It is difficult to estimate with precision the real extent of the alleged danger, but when it is borne in mind that, in order to carry out operations on an extended scale, expensive and specially constructed machinery would be requisite, we doubt whether the danger of India being flooded with a large amount of spurious coin would really be a grave one.

Effect on hoards of silver.

106. The effect that on the assumption with which we are now dealing the closing of the mints would have upon the hoards of natives of India and upon their silver ornaments is more free from doubt. Coined rupees, of which it is said that the hoards chiefly consist, would be unaffected, except in so far as any further fall in their gold value would be prevented; but the uncoined silver and silver ornaments would cease to be convertible into rupees, and would certainly be depreciated in value. In times of scarcity and famine a considerable quantity of silver ornaments has found its way to the mints. During the period of the great famine in 1877 and the following years, for example, large quantities of such ornaments were minted. In three years no less than Rx. 4,500,000 were thus turned into money. It is said, however, that the transaction of converting silver ornaments or hoarded silver into money is not at the present time effected by the owner himself taking them or sending them to the mints for conversion into rupees: it is through the intervention of the village money-lender that the transaction is carried out. Uncoined silver would, it is asserted, still be converted into money in the same fashion. This is, no doubt, true, but it is obvious that the ornaments would not be converted on terms as favourable to the seller. It cannot, we think, be doubted that the closing of the mints would in this case depreciate the silver ornaments and the uncoined silver hoarded by the people of India. Such a use of ornaments is, however, said to be rare.

Existing losses would be stereotyped.

107. A further objection is to the effect that the proposal of the Government of India would perpetuate the burden hitherto experienced by India owing to the fall of exchange, and that it would be unfair to stereotype the loss of persons entitled to be paid in rupees, and to deprive them by the act of the Government of the chance of a rise. To this it may be answered that having regard to the future prospects of the silver market, so far as they can be gauged at the present time, all persons concerned would probably be glad to lose their chance of a future rise on the terms of being secured against the effects of a fall.

Inconvertible token currency would be created with a gold standard, but without a gold currency.

108. Another objection is that the proposal of the Indian Government will, if there should in future be a divergence between the value of the rupee and the market price of silver, have the effect of converting the whole of the currency of India into a token currency, which would in no way differ in principle from an inconvertible paper currency. It must, however, be remembered that, although a nation possessed of a fairly satisfactory monetary system might well hesitate to exchange it even temporarily for an inconvertible currency, yet India already labours under difficulties the gravity of which is admitted. One of the greatest risks connected with an inconvertible paper currency is the temptation which it affords to the Government unduly to expand the amount in circulation; the proposal of the Indian Government, however, does not involve this danger. It is to be observed, too, that in the United States, in Germany, in the Latin Union, and in Holland a very large amount of silver coins has, with mints closed against the free coinage of silver, been maintained as full legal tender at a gold value far exceeding that of the silver they contain; whilst in Austria-Hungary during the recent fall in silver a forced paper currency, founded originally on that metal, has in exchange more nearly corresponded with the original gold value of the silver on which it was based than has the silver itself.

Currency would not be automatic.

109. Again, strong objections are urged to the power being placed in the hands of the Government to close the mints to the public, while retaining to itself the power to coin rupees, and thus to its being enabled at will to contract or expand the currency. But the assumption we are now making is that the exchange is not to be materially raised above its present level. If the rise were checked by the reception of gold, as suggested by the Government of India, the discretionary power vested in that Government would be confined within very narrow limits, because, if the rupee were to rise above the fixed ratio to such an extent as to cover the expenses of transmission and of coinage, it would become profitable to take gold to the Indian mint or to

send sovereigns to India, and thus the currency would be rendered automatic on a gold basis.

Burden of taxation would be increased.

110. It is further objected to the proposals of the Indian Government that they would make the value of the rupee greater than it otherwise would be, and that thereby the burden of Indian taxation would be increased. That part of the revenue which consists of fixed payments would remain unaltered in nominal value, whilst each rupee which the ryot pays would be worth more, and the rupee prices of the goods he produces would be less, than they would be if silver continued to fall. The argument is no doubt sound; but there are answers to this objection which have no little weight.

Present prices would not be altered.

111. Whether silver is falling or gold rising in value, or both movements are taking place, and whether an appreciating or a depreciating standard is the less open to objection, are questions of great difficulty. We are dealing with the assumption that the present ratio, or some ratio differing but little from it, is maintained. On the assumption the present level of rupee prices would not be at once altered; and if in future rupee prices became less and the burden of existing fixed taxation became heavier than they would have been if a silver standard had been maintained, this result would not be arbitrarily produced by the action of the Government, but would be due to the fact that the new standard was depreciating less or appreciating more than that for which it was substituted.

Alternative of increased taxation a still more formidable difficulty.

112. In the next place, it must be borne in mind that the alteration in the relative values of gold and silver has so increased the liabilities of the Indian Government in comparison with its revenues as to make it necessary, in the absence of other remedies, to impose fresh taxation. The evidence we have had from men whose experience qualifies them to judge points distinctly to the conclusion that, supposing the choice to be between an indirect increase of taxation arising from arrest of the fall in the value of the rupee, or even from a considerable increase in its value, on the one hand, and the imposition of new taxation on the other, the latter of these courses would be far more likely to lead to popular discontent and political difficulty than the former.

Trade with silver-using countries.

113. The proposal of the Government of India in so far as it rendered the exchange between India and gold-using countries stable would introduce into the trade of India with silver-using countries the same disquieting influences which, it is alleged, at present hamper the trade of India with gold-using countries. It must, however, be observed that the trade of India with silver-using countries only amounts to about half of her trade with gold-using countries.

Trade of India in competition with silver-using countries.

114. Another objection strongly urged is that if the proposal of the Government were carried out, and there should arise a great divergence between the ratio borne to gold by the rupee and by silver respectively, this would seriously affect the trade of India with silver-using countries, and stimulate in those countries the production of commodities which compete with Indian commodities in the markets of the world, and that the effect of such increased competition would be seriously felt by India.

Exports of India to silver-using countries.

115. To deal first with the point as it affects the trade between India and the silver-using countries which now take her commodities. The most important of these is China, which now takes from India a large quantity of manufactured cotton goods. China, it is said, would not give more silver for these cotton goods than it did before; but if the divergence between silver and the rupee were considerable, the same silver price would mean a lower rupee price. It is true this lower rupee price might represent a greater purchasing power than if the rupee had been allowed to fall *pari passu* with silver; but the manufacturer, it is contended, would find a difficulty in diminishing the rupee cost of production. Some of his expenses would consist of fixed payments, and the difficulty of diminishing the number of rupees paid in wages would

be considerable. In the result, the trade would be less profitable, and its volume would be diminished. The reply made to this argument is that the Indian produce imported into China is paid for ultimately by goods exported by China to other countries, and that if the gold price of these commodities does not fall owing to a fall in the gold value of silver, they would realise a higher silver price, and that China would thus be able to pay a higher price for the Indian imports. We have already given our reasons for doubting whether the fall in the gold value of silver does operate, to any considerable extent in reducing the gold price of commodities exported from silver-using countries.

Manufacture in such countries of goods competing with Indian exports.

116. It is suggested further that if the fall of silver should continue to be considerable, it would afford a great inducement to promote the manufacture in China of cotton goods in substitution for those now imported from India, and stress is laid upon the fact that the production of cotton goods in Japan has already become considerable. To this it is answered that China is slow to move, and that the impediments and burdens which are imposed upon industrial enterprise in China are such as to render the fear that the suggested change in the currency system of India would greatly stimulate the production of cotton goods in China unreasonable. Fears have been also expressed lest the production of cotton goods in Japan, where there is practically a silver standard, should be further increased in consequence of the advantage which that country would gain by the fall in the value of silver as compared with India if the exchange there remained stationary. As to this argument we may refer to the remarks in paragraph 27, in which we have expressed our view that the stimulus thus caused to the export trade of a country can only be transitory, and can continue only until circumstances have brought about the inevitable adjustment. In the same paragraph we examined the trade statistics of India, and could not see any evidence that a relation existed between a fall in exchange and the volume of exports.

Opium trade with China.

117. It is, moreover, objected, and for the same reasons, that the opium trade between India and China would be seriously affected if the currency proposals of the Government came into operation, and that India must be content to receive fewer rupees for the opium exported to China. The average annual value of opium so exported is about Rx. 10,000,000, and the greater part of the decrease in its export value, supposing such decrease were realised, would fall upon the Government. It is obvious that in that event the effect upon the revenue would be very serious. In the case of opium, as well as cotton goods, it is argued that there would be a tendency to replace to some extent the use of Indian opium by opium grown in China. The same answer which has been given to this argument in relation to the trade in cotton goods is equally applicable with regard to the opium traffic. It must be remembered, too, that the production of opium in China is at the present time very large. The amount imported from India forms only a small portion of the total consumption. Indian opium is in truth a luxury; its use in preference to Chinese opium is a matter of taste, and depends upon its real or assumed superior qualities. Under these circumstances, it may be doubted whether any considerable diminution in the rupee value of opium exports to China would be likely to result from the adoption of the proposals of the Indian Government.

Competition of silver-using countries with India in other markets.

118. Those who object that the trade of India with other silver-using countries would be diminished in volume and profit by the adoption of the Government proposals lay, perhaps, even greater stress upon the advantage which a great divergence between silver and the rupee would give to those countries in their competition with India. Some of the articles exported by India are also produced in and exported from silver-using countries, and other important articles of Indian trade are, it is said, capable of being produced there—notably in China. If there came to be a great divergence between the value of silver and of the rupee, a considerably lower gold price would in China represent the same amount of silver as before, whilst to India it would give fewer rupees. The Chinese would be content to take the same amount of silver—that is to say, the same silver price—that they have hitherto done, so that the Indian

producer must rest satisfied with a lower rupee price, or perhaps be driven out of the market altogether through the stress of this competition. One reply given to this objection is that it involves the proposition that the continuous depreciation of the currency of a country in relation to that of others is advantageous to the commerce of the country whose currency is thus depreciated, and adds to its prosperity. This answer is not absolutely conclusive, because, even if it be true that the cost of production in wages and otherwise would ultimately adjust itself to the fall in the value of silver, yet it is impossible to deny that, until his adjustment has been brought about, the exporter in the silver-using country, who continues to pay the same nominal wages, and whose nominal expenditure for production otherwise remains the same, has an advantage in competition with the exporter who receives a lower price than before, and who can only retain to himself the same advantages by a reduction of nominal wages; and it must be remembered that in a country whose civilisation is backward, and whose industrial institutions are but little developed, the interval may be considerable before such an adjustment can be effected. But, allowing that the argument of those who raise the objection with which we have been dealing is not without foundation, consideration of the experience derived from a study of the history of Indian exports during the period characterised by a fall in the gold value of silver, as noticed in paragraph 27, leads us to doubt whether the suggested advantage is not much less than those who urge the argument suppose.

Tea plantations.

119. Those who are interested in the tea plantations of India, the produce of which is now exported in large quantities, maintain that their industry might be greatly crippled, if not extinguished, by the competition of China and Ceylon if a gold standard were adopted in India only, and silver continued to fall heavily. It is to be observed, however, that the transfer of the commerce in tea from China to India, which has been going on for some years, has taken place, whilst the two countries have shared alike the changes produced by the fall in the value of silver. But it is stated on behalf of the tea planters that, even though their success may be due to the Indian tea better suiting the wants of the consumers, yet the difference in the relative price in gold-using countries of Chinese and Indian tea might be such as to overbalance any advantages possessed by the Indian products, and cause the competition to be a disastrous one for the Indian producer. It must be added that the qualities of the Ceylon tea are much the same as those of Indian tea. It cannot be denied that, if the proposed currency change were adopted in India alone, its tendency might be for a time to benefit the producer in Ceylon, and perhaps the Chinese in his competition with the Indian. To what extent this tendency would prejudice the Indian producer it is impossible to forecast, and, even so far as it did so, it must be remembered that it would not necessarily entail disadvantage on the country as a whole; and having regard to the history of the Indian tea trade, and to its great progress in recent years under existing conditions, we cannot think it likely that any very serious prejudice would result.

China might produce what she now imports from India.

120. We have already referred to the argument that China might in the altered circumstances anticipated produce for her own consumption commodities which she now imports from India. It is alleged that not only would she do this, but that she would also increase her production of cotton and other articles, for which her soil and climate are said to be suitable, and send them into the market to compete with Indian products. To this it is replied, and we think with force, that the want of railways and other means of communication in China, the heavy and arbitrary imposts to which production is there subjected, and other causes, deprive these apprehensions of any very serious foundation.

Balance of trade and Council bills.

121. It is further objected that the balance of trade would be disturbed; that the export trade of India would be injured by a gold standard, and that India would thus, *pro tanto*, lose her power of paying her debts; that the Indian Government would in consequence be unable to sell their bills in London; and that they would be obliged to send silver from India at a ruinous loss to pay their gold debt.

Export trade.

122. This objection seems to depend on the question whether the export trade of India will be injured by the proposals of the Government of India, with which we have already dealt in paragraphs 27 and 114 to 120. As to the

Council bills.

Council bills, it may be observed that they are only a financial mode adopted as the simplest and best by the Government of India for the purpose of paying a gold debt to England, which in any case they must pay, and which other nations owing gold debts to England pay in other modes. They are orders for the payment of rupees in India, and the same end would be attained if the Government of India bought sterling bills of the exporting merchants in India, and sent them to be cashed on its account in London. Where a country has debts to pay, it must pay them, and it will do so by means of exports, the transaction being effected in whatever methods are found to be most convenient.

India must pay her debts in whatever is the most convenient form.

123. So far as concerns their effect on the import of silver into India, the Council bills now compete with silver; the closing of the mints to silver would relieve the Council bills from this competition, and the immediate effect would be a tendency for the bills to sell at a higher price. The merchant wishing to pay for Indian goods would have to pay more gold for the Council bills. If their price should rise so far as to make the business of buying Indian goods unprofitable, it would no doubt, *pro tanto*, check the export trade of India, and the price of the bills must fall. But it would only fall so far as would be necessary in order to make the trade again profitable. In short, India must pay her debts by exports, and the Indian Government cannot in any way avoid whatever expense is necessary in order to pay them. That these exports should ever consist of silver, depreciated as silver is in the Western world, is highly improbable; but, if this should turn out to be the case, it would be because silver was the article which India could best spare.

Currencies of Native States.

124. Fear has been expressed that the restriction of the coinage of rupees at the British mints would lead to an increase of the use of the coins of Native States in the British provinces. There are numerous Native States in different parts of India which exercise the right of coining, a privilege of which they are most tenacious, regarding it as an indication of sovereign authority. The currencies are very various in their details, the chief silver coin being the rupee, but with many variations in intrinsic value in the different States. In 1835, when the existing system of currency was adopted, a list of the various rupees then existing included no less than 300 different coinages (many, no doubt, obsolete), for the most part showing greater or less variations of value *inter se*.

125. The attempt made to facilitate the adoption of a common currency throughout India by an Act passed in 1876 has had no material effect. It provided that on a Native State agreeing to abstain from coining for at least thirty years, and not to allow coins resembling those of British India to be struck under its authority, the Government of India would coin for the State rupees identical in weight and fineness with those of British India, but with a device differing from that before used by the State. Such coins would be legal tender in British India. Up to the present time only four of the minor States have availed themselves of the provisions of this Act.

126. Sufficient information on the subject of the currencies of the various States is not available to admit of our giving any precise account of them, but there is reason to think that their issues are not on a scale of any considerable magnitude. The coinage of Hyderabad, the largest of the Native States, is stated to have been in 1887-88 816 tolas of gold and 15,051 tolas of silver, and in 1888-89 784 tolas of gold and 17,76,421 tolas of silver, the tola representing the weight of a rupee; the value of the Hyderabad rupee, commonly called the Hálli Sicca rupee, is about 14 per cent less than that of the rupee of British India. The Baroda State coined 8 lakhs of rupees in 1883-84 and 9 lakhs in 1884-85, but in the three following years there was no coinage; new machinery for the mint was supplied in 1891. The Kashmir mint appears to be no longer in operation, and the States of Mysore and Rewah also are said to

have no mints. The coinages of Holkar's Government at Indore, of Bhopal, and of Travancore are reported to be very small in amount.

127. On the whole, it appears that the annual addition to the coinage of the Native States is of little importance. The coins of these States have a free circulation among the population of the border districts of those States and the British provinces, and at times are found at considerable distances from their place of origin. They are, however, always liable to a charge for discount when circulating beyond the State from which they issue, and in no case are received at British treasuries, by the railways, municipalities, or other local bodies, nor are they legal tender in British territory.

128. On this subject the Government of India, in a telegram of the 16th of March 1893, stated their opinion that they could easily overcome any difficulty that might arise in connection with rupees coined under the Native Coinage Act, 1876, before mentioned; and that they did not think that any serious difficulties could arise in connection with the coinages of Native States generally.

Ceylon and Mauritius.

129. We have had evidence from persons interested in the trade of Ceylon expressing apprehensions that if the proposed change of standard were to be made in India, and the present currency arrangements were to be continued in Ceylon, the effect would be prejudicial to the trade of that island. These apprehensions are of the same nature as those we have already examined on the part of the planters in India. It is obvious that independently of these apprehensions, both Ceylon and Mauritius, which have the rupee as their standard coin, which have no mints of their own, and which import their rupees from India, would be affected by the closing of the mints and by the adoption of a gold standard in India. It would in that event be open to the Governments of those Colonies to acquiesce in the action of India, or to establish currencies of their own, with or without local mints. If they should adopt a currency of their own, and if in India the rupee should in consequence of the proposed changes rise above its silver value, it would become profitable to export Indian rupees from those Colonies to India. Such an export would operate in the same way as a release of the hoards of coined rupees in India, and might, so far as it goes, delay the rise in the value of the rupee. But, according to the best information we can obtain, the stock is not so large as to be likely to have any considerable disturbing influence. It is no part of our duty to advise what action should be taken by the Colonial Governments, except to point out that they ought not to allow any coins which they issue to be so similar to the Indian rupee as to be mistaken for it, and thus to become current in India.

Objections (b) supposing the ratio to be raised materially above the present level.

Objections on the assumption that the ratio is raised materially above the present level.

130. We have been hitherto dealing with the proposals of the Indian Government on the assumption that exchange is at once fixed at a point not materially above its present level. The suggestion of the Government of India is that no ratio should be fixed immediately on the closing of the mints. Their proposal to take power to declare that English gold coinage shall be legal tender in India at a rate of *not less than* $13\frac{1}{3}$ rupees to the sovereign would, if acted upon, prevent the exchange from rising to any great extent above 1*s.* 6*d.*—that is, a ratio of silver to gold a little less than 20 to 1. As the present exchange value of the rupee is 1*s.* $2\frac{3}{4}$*d.*, and the ratio of silver to gold about 24 to 1, the Indian Government, though it may be that they would act gradually and tentatively, suggest the possibility of raising the ratio materially above the present level.

131. We have now, therefore, to consider what are the objections to these proposals on the assumption that the exchange were so raised.

The same objections as if the ratio were not raised.

132. All the objections which have been urged as existing in the case of the assumption that the ratio were fixed at a point not materially above the present level are at least equally applicable in the case of that which we have now to consider; but the answers which have been given to them in the former case are not all of equal force where the ratio has been materially raised.

Spurious coinage, trade, inconvertible currency.

133. The dangers of spurious coinage and of depreciation of Indian hoards must increase in proportion to the difference between the value of the rupee and the market value of silver; and the trade difficulties due to a rising exchange, such as they are, would, of course, be the greater the higher the ratio was taken. Moreover, the difficulty of maintaining an inconvertible token coinage as full legal tender at a par value tends to increase with the difference between the legal value of the token coin and the metal it contains; but the cases of foreign currencies quoted above show that difficulties similar to those which are apprehended in the case of India have been successfully encountered.

Objections founded on effect upon rupee prices and fixed burdens.

134. We pass to the objections founded upon the effects on rupee prices, on taxation, and on other fixed burdens. These effects would be such as result from an appreciating currency, namely, first, to make prices lower than they would otherwise have been; then, though more slowly, to lower money wages, and to increase the burden of debts and of all fixed payments. It has been urged in answer to this that, whatever these evils may be, they are not greater than those which have in recent years been experienced from a depreciating currency, namely, prices higher than they would have been but for such depreciation, and debts and other just burdens lightened, to the benefit of the persons who pay, and to the injury of those who receive, including the Government. It has also been urged that if future appreciation were due to the act of the Government, past depreciation has also been due to the adoption by the Government of an unstable and depreciating standard. But, even assuming that these answers are true in point of fact, it is no less true that, since the adoption of the silver standard in 1835, the depreciation of the silver currency has arisen from causes over which the Government have exercised no control, whereas any appreciation resulting from the raising of the rupee would be due to the direct action of the Government.

135. It is impossible in view of these considerations not to come to the conclusion that to close the mints for the purpose of raising the value of the rupee is open to much more serious objection than to do so for the purpose of preventing a further fall.

Injury to Eastern trade.

136. It has been represented to us by the China Association, the Chambers of Commerce at Hong-Kong and Singapore, and others interested in the Eastern trade that a change, such as has been proposed by the Government of India, would be likely to be prejudicial to their interests. Although some of the facts to which we have already drawn attention indicate that the apprehensions expressed are excessive, and although some of the arguments which we have adopted are not inapplicable to their case, we have not thought it within the limits of Your Lordship's reference to enter in detail upon the considerations suggested by these representations.

Alternative Schemes.

Charge on silver.

137. Amongst the suggestions made for preventing a further fall in the value of the rupee, for counteracting the effect of the fall which has already taken place, and for adding to the resources of the Government of India is a proposal to impose a charge on silver, which might take the form either of an increased seignorage on the coinage of the rupee or of a duty on all silver imported. It is claimed for this proposal that it would avoid direct and obvious interference with the standard of value, whilst it would bring in additional revenue to the Government. It is therefore desirable to examine it carefully.

Seignorage.

138. Let us first assume the charge to be a seignorage. In that case, it would be imposed only on the silver brought to be coined. It might take either of two forms, *viz.*, a fixed charge of so much per ounce, or a charge

varying inversely as the gold value of silver, so as to keep the rupee at a certain fixed ratio to gold. A fixed seignorage would be no remedy for a fluctuating exchange, because, whatever might be its present effect, it would fail to maintain a parity of exchange between the rupee and the sovereign if silver should fall further or should rise in value; and, although it might afford some present relief, a continued fall in exchange would leave India subject to the same difficulties as before.

Fixed in amount.

139. A seignorage varying inversely with the gold value of silver is not open to the same objection. If this were adopted so as to make the gold price of a given weight of silver plus the duty always equal to a given weight of gold, it would, no doubt, tend to maintain the rupee at a fixed ratio to the sovereign. But to provide from time to time for the necessary alterations in such a varying seignorage, so as not to embarrass trade or to encourage undesirable speculation, would be an administrative function of some difficulty. An intermediate course might be taken, making the seignorage vary, not with the daily rate of exchange, but at fixed intervals, say, from year to year, so that the annual charge should vary inversely as the annual average gold value of silver for the preceding year. Though, judging by recent experience, this method would lessen considerably without, however, entirely removing the administrative difficulties above mentioned, yet towards the end of the term for which the seignorage had been fixed speculators would be encouraged either to pour silver into India or to abstain from importing it, according as they expected the seignorage to be raised or lowered.

Varying inversely as the gold price of silver.

140. The imposition of a seignorage necessarily enhances in an artificial manner the value of the rupee above the intrinsic value of the silver it contains, and tends to reduce the amount coined. Many of the objections, therefore, which have been urged to the proposals of the Government of India apply equally in principle to such a scheme. It is, in fact, an indirect method of attaining the end which the Indian Government propose to attain by closing the mints.

Indirect method of altering the standard.

141. A 10 per cent seignorage—that is, an addition of 8 per cent to the present rate,—even on the assumption that its imposition had no effect in reducing the amount coined, would only on the average coinage since 1875 produce annually about Rx. 600,000; and therefore, regarded as a mode of raising revenue, the relief afforded to the Indian Exchequer would not be sufficient to meet the difficulties which the Government have to encounter. It is impossible to anticipate that with so heavy a seignorage the amount coined would be as large as on the average of recent years; nor could any fixed amount be relied on, since it would depend on the state of the exchange, and on the quantity of silver brought to the mint. It is, in fact, open to the objection in principle which applies to many other forms of taxation imposed for purposes other than that of revenue, *viz.*, that in proportion as it effects the object of restricting the coinage of silver, it ceases to be profitable as a source of revenue.

Regarded as a mode of raising revenue.

Unsatisfactory.

142. It remains for us to consider the effect of imposing a duty on all silver imported, whether for coinage or otherwise. Such a duty would tend to restrict the supply of uncoined as well as coined silver; but, looking to the fact that nearly all the silver imported in recent years has been coined, this difference is not at the present moment of great importance. Subject to this distinction, the observations we have made on the proposals for a seignorage apply also to the proposal to levy a duty on uncoined silver, with the addition that such a tax would be difficult to enforce, and would be an encouragement to smuggling; and that, if it were made to vary constantly with the gold price of silver, the administrative difficulties would be even greater.

Duty on silver imported.

143. The coinage of a new rupee of greater weight than that at present existing has been suggested as a remedy for the difficulty. If for this purpose the plan were adopted of recoining the existing rupees, it is evident that the expense, which must be calculated on at least 1,000 to 1,500 millions of rupees, would be very heavy, even if the measure did not attract to the mints hoards in excess of the amount in circulation; and, after the recoinage had been completed, there would be no security that it would be effectual, since a further fall in the gold value of the rupee would produce difficulties of the same kind as have now arisen. If, on the other hand, in addition to the existing rupees, heavier rupees were issued, there is the objection that, for some time at any rate, two kinds of coin would be in circulation, of different intrinsic worth, yet professedly of the same value; and there does not appear to be any advantage in this plan over that proposed by the Government of India.

Coinage of heavier rupees.

144. Other plans which have been suggested are the introduction of a gold standard with a gold currency, the ratio of the gold and silver coins being notified from time to time according to the market rates of exchange; the adoption of a gold standard with a very high unit, rupees being made token coins, and currency notes of large denomination being issued for gold alone, but payable in either gold or rupees; the issue of currency notes expressed in gold, but exchangeable only into rupees at the foreign exchange rate of the day; the establishment of a gold standard without a gold coinage based on the credit of a reserve to be held by the Bank of England in India; the gradual introduction of a gold standard by placing the rupee debt on a gold basis, and providing for the discharge of debts partly in gold and partly in silver, the proportion of the former being annually increased until the whole became fixed in gold; the adoption of a given amount of gold bullion as a standard for foreign and wholesale transactions, leaving the coins to be used as tokens for internal trade; the declaration that rupees shall be a legal tender in the United Kingdom; the issue of coins of mixed gold and silver; the basing of the currency system on a certain amount of Government sterling stock; the adoption of independent standards of gold and silver to be in use at the same time.

Various schemes.

145. We deem it unnecessary to do more than indicate in the briefest manner the nature of these proposals. Some of them are not within the power of the Government of India, and others are impracticable for various reasons; while no one of them appears to be so free from objection as to justify us in advising Your Lordship to reject in its favour the proposal of the Government of India.

Possible modifications of the proposals of the Government of India.

146. Your Lordship will observe that we have given most careful and anxious consideration to the objections which have been urged against the scheme of the Government of India; we feel that some of them have weight, and we regret that, in the opinion of that Government, it should be necessary to propose a measure which would undoubtedly be attended with some risks and inconveniences. We proceed to consider whether, in case it were decided to adopt such a proposal as that made by the Government of India, it would be possible by any modifications to remove or diminish the objections to which we have referred.

Possible modifications of proposals.

147. It appears to be desirable that any such scheme should afford security against any sudden and considerable rise of exchange. If the closing of the mints were thought likely to lead to such a rise, the opposition to the measure would, no doubt, be greatly augmented. In all probability the cessation of free coinage of silver would be immediately followed by a fall in the price of that metal. If at the same time exchange rose considerably, the divergence between the rupee and its intrinsic value would become at once very marked. The difficulty of maintaining the rupee at its higher exchange value

Provision against a sudden great rise in exchange.

might be increased, and the apprehensions of disaster which are entertained, even if they be exaggerated or unreal, would be intensified.

148. Moreover, the rise in exchange would be calculated to lead to a fall in the price of Indian produce. And, if this were seen to follow, and believed to be caused by the action of the Government, public opinion might be disturbed and the situation might become critical. The view has been expressed that, even though the native producers might not be likely to be actively hostile to a scheme which left prices unaffected, they would be far from indifferent, and the state of things might become dangerous if prices began to fall very sensibly.

149. What, then, would be the effect of the scheme suggested by the Government of India? Closing the mints, even if the Government of India were to issue the proposed notification that gold coins would be made legal tender at a rate of $13\frac{1}{3}$ rupees to the sovereign, might bring about a rise in exchange to the level thus indicated, *viz.*, 1*s.* 6*d.* per rupee. It is true that those who think that exchange would not for a considerable time rise at all, and that even the existing ratio might not be maintained, may be right in their anticipations. But it must be admitted that on such a point no one can predict with certainty; exchange might rise suddenly and considerably, unless the Government were to interfere actively to prevent it; and the public would not feel any certainty as to the course they would take.

Ratio, for coinage of rupees on tender of gold at the mints.

150. The scheme might, however, be so modified that the exchange could not immediately rise much above its present level. It might be provided that the mints should be closed to the public for the coinage of silver, but should be used by the Government for the coinage of rupees if required by the public in exchange for gold, at a ratio to be fixed in the first instance not much above that now prevailing, say 1*s.* 4*d.* the rupee. Any fear of a considerable rise would thus be allayed, and any evil effects of such a rise would be prevented. Moreover, even if silver fell, the divergence between the nominal and the intrinsic value of the rupee would not be so great as if exchange at the same time rose. There would be these additional advantages: First, the currency would not cease to be automatic. Next, it would be a less violent step than closing the mints altogether. They would practically remain open, subject to certain conditions. It would be the smallest departure from the *status quo* which could accomplish the object the Government of India have in view. Besides these advantages, there would be the further gain, that it would still leave the volume of the rupee coinage dependent on the wants of the people of India; and the fact that rupees might continue to be coined would tend to prevent silver falling as much as would be the case if it were supposed that the coinage of rupees was to cease altogether.

151. The Government of India have expressed the opinion that there would be no practical difficulty in carrying such a modified scheme as this into effect. It would not, of course, be essential to the plan that the ratio should never be fixed above 1*s.* 4*d.*; circumstances might arise rendering it proper, and even necessary, to raise the ratio; and the Indian Government might be empowered to alter it with the sanction of the Secretary of State. Such a scheme would, indeed, in the first instance, be tentative, and would not impede further action if circumstances should render it desirable.

Acceptance of gold coins in payment of public dues.

152. It would be consistent with the scheme, and would serve as a means of familiarizing the public with the use of a gold currency, if the Government were to accept gold coins at the same ratio in payment of all dues.

153. Inasmuch as the course to be pursued in relation to the matter referred to us will come before Her Majesty's Government for decision, the Chairman thinks it right to abstain from taking any part in determining what recommendations should be made to Your Lordship.

154. We desire to express our high appreciation of the benefit conferred upon us by the appointment of Mr. Waterfield to act as Secretary to the Committee. His knowledge, ability, and zeal have been of the greatest assistance to us throughout our protracted deliberations.

Recommendations of the Committee.

Recommendations of the Committee.

155. It remains for us to state the conclusions at which we have arrived. While conscious of the gravity of the suggestion, we cannot, in view of the serious evils with which the Government of India may at any time be confronted if matters are left as they are, advise Your Lordship to overrule the proposals for the closing of the mints and the adoption of a gold standard, which that Government, with their responsibility and deep interest in the success of the measures suggested, have submitted to you.

156. But we consider that the following modifications of these proposals are advisable. The closing of the mints against the free coinage of silver should be accompanied by an announcement that, though closed to the public, they will be used by Government for the coinage of rupees in exchange for gold at a ratio to be then fixed, say 1*s.* 4*d.* per rupee; and that at the Government treasuries gold will be received in satisfaction of public dues at the same ratio.

157. We do not feel ourselves able to indicate any special time or contingency when action should be taken. It has been seen that the difficulties to be dealt with have become continually greater; that a deficit has been already created, and an increase of that deficit is threatened; that there are at the present moment peculiar grounds for apprehension; and that the apprehended dangers may become real with little notice. It may also happen that if action is delayed until these are realized, and if no step is taken by the Indian Government to anticipate them, the difficulty of acting with effect will be made greater by the delay. It is obvious that nothing should be done prematurely or without full deliberation; but, having in view these considerations, we think that it should be in the discretion of the Government of India, with the [illegible] of the Secretary of State, to take the requisite steps if and when it appears to them and to him necessary to do so.

HENRY WATERFIELD,
Secretary.

It seems to me that our judgment of what the Home Government should do in reference to the proposals of the Government of India must depend upon the view we take of the cause of the divergence in value that has arisen between gold and silver. The Indian Government has to make large annual payments in gold, whilst its receipts are in silver. Has gold become more valuable in itself or silver less valuable in itself, or if both movements have happened, which has been relatively greater? If gold has become

more valuable, the burdens of India have become greater than was contemplated or intended, and we must ask ourselves whether they can be in any degree reduced. If silver has become less valuable, the taxation of India is made lighter, and we may freely examine the means, direct or indirect, of raising it. If an intermediate hypothesis is adopted, our way of viewing the problem must be modified accordingly. In our Report we have not examined this preliminary question, but I hold it the first to be determined. For reasons upon which I do not now enter, I have come to the conclusion that the divergence between gold and silver has been to a large extent due to an appreciation of gold; and this opinion necessarily affects my judgment of the policy of the Indian Government, which is to adopt a gold standard instead of one of silver. This is to accept as unalterable, if not to intensify, the aggravated burden thrown upon India. It may be that no other course is possible, but the Home Government should ask itself whether it is through its own action that no other course is possible, and whether the Indian Government might not propose a very different course if there was any chance of its being favourably considered by the Supreme Government. I am myself drawn to the conclusion that the Home Government is the greatest obstacle, perhaps the only substantial obstacle, to the establishment of an international agreement for the use of silver as money, which, without attempting to restore the position of twenty years since, would relieve India from the anxiety of a further depreciation of its revenue in relation to its liabilities. The problem may be thus stated:—The Indian Government asks permission to adopt a certain course, but, as is well understood, not the course it would of its own free will first desire to be adopted. In considering whether the course actually proposed should be sanctioned, we cannot refuse to consider whether there are invincible obstacles to the entertainment of the course which would be the first preference of India.

If I am to put aside the previous question, and confine myself to the proposition whether the Indian Government should be allowed to suspend the free coinage of silver, so as to enhance the value of the coined rupee till it reached a certain relation to the sovereign, such as 1 to 15 (1*s.* 4*d.*) or 1 to 13⅓ (1*s.* 6*d.*), I concur in the report of my colleagues, subject to the following reservation:—In paragraph 139 I think we have overrated the difficulty and delicacy of the administrative function involved in the plan there discussed. I believe action would be fairly simple if the plan were practically tackled. The mints of India are not so numerous as to prevent a daily telegraphic message of the seignorage to be charged, if such frequency should be deemed necessary. The embarrassment to which a person in London wishing to make a remittance in India would be exposed from his uncertainty as to what the seignorage would be when silver reached an Indian mint would be of the same character as his present embarrassment in not knowing what the exchange would be when silver reached India if he sent it out.

LEONARD COURTNEY.

---

1. In the year 1878 the Government of India made a proposal that the mints should be closed against the free coinage of silver until the rupee should rise in value to 2*s.*, or one-tenth of an English sovereign. In making this proposal, and on other occasions, the Indian Government expressed themselves in very strong terms* concerning the dangers and difficulties, present and prospective, caused to India by the fall in silver. A Committee appointed by the Secretary of State, of which we were members, reported unanimously against the abovementioned proposal, and it was rejected by the Home Government.† Further experience shows that, whilst the views expressed by the Government of India concerning the future of silver have been fully justified by the fall which has since taken place, the present condition of India is scarcely such as to justify their estimate of the difficulties and dangers to the country which they believed would arise from it.

* See despatch of 9th November 1878, para. 22, and despatch of 4th September 1886, para. 24.

† See Treasury letter of 24th November 1879.

2. The following facts relating to the recent progress of India are taken from a paper read by Sir W. Hunter (one of the greatest existing authorities on the subject) at the Society of Arts on the 16th February 1892:

"Between 1881 and 1891 the whole number of the army had been raised from 170,000 to 220,000, and the number of British soldiers in it from 60,000 to 71,000, or, including reserves, volunteers, &c., to very much more. Many large and costly defensive works had been constructed both on the North-West frontier and on the coasts. In recent years almost all public buildings have been reconstructed on a large scale.

"Railways, both military and commercial, have been very greatly extended. Notwithstanding these extraordinary expenses, there were during the 25 years which followed 1862, 14 years of surplus and 11 years of deficit, yielding a net surplus of Rx. 4,000,000. In 1889 the public debt of India, exclusive of capital invested in railways, showed a reduction since the mutiny period of Rx. 26,000,000. The rate at which India can borrow has been reduced from 4 or 5 per cent to a little over 3 per cent. The revenue of India, exclusive of railways and municipal funds, has grown between 1856-57 and 1886-87 from Rx. 33,378,000 to Rx. 62,859,000, and in 1891 it had increased to Rx. 64,000,000, or, including railways and irrigation receipts, to Rx. 85,750,000, and this increase is due to the growth of old revenue rather than to new taxation. Further, whilst the rent or land tax paid by the people has increased by one-third, the produce of their fields has more than doubled in consequence partly of higher prices, and partly of increase in cultivation. Further, in 1891 there were nearly 18,000 miles of railway open, carrying 121,000,000 of passengers and 26,000,000 tons of goods, and adding a benefit to the people of India, calculated as far back as 1886, at Rx. 60,000,000. Further, the Indian exports and imports at sea, which in 1858 were about Rx. 40,000,000, amounted in 1891 to about Rx. 200,000,000, and the produce thus exported has increased in quality and variety no less than in amount."

3. Considering facts such as these, we should even now have difficulty in recommending the closing of the Indian mints against the free coinage of silver if it were not for the circumstance that a further heavy fall in silver is possible, and in certain contingencies imminent, and that any such fall may bring with it mischiefs and difficulties much greater than any which have yet been experienced.

4. Under these circumstances, having regard to the part we have already taken in this matter, as well as to the present exigencies of the case, we are anxious to state more fully and explicitly than is done in the report we have signed what is the full effect of the immediate step which we have agreed in recommending, and which recommendations are in our opinion desirable with a view to its ulterior consequences.

The step recommended is that the Indian Government should be empowered to close the Indian mints against the free coinage of silver until the rupee rises in value, so as to stand at a given ratio with the sovereign; such ratio to be little above the ratio which has been current, say 1*s.* 4*d.*, and that they should then be required to give rupees at that ratio for all gold brought to their mints. The immediate effect of this step will be to alter the Indian measure of value. As long as the Indian mint is open, the measure of value is the market value of the weight of silver contained in the rupee; but, as soon as the mint is closed, we can no longer be sure that this will be the case. Further, so soon as the rupee has risen to the given ratio, the fraction of an English gold sovereign represented by 1*s.* 4*d.* will become the measure of value. This is in itself a most important change.

5. To alter the measure of value by substituting one metal for another is at all times a matter of great gravity, and to do so at a time when the relations between the two metals are in a state of constant fluctuation renders the alteration still more serious.

6. It is, however, to be observed that the step which we recommend will produce the least possible immediate change. Its object is not so much to raise the gold value of the rupee as to prevent a further fall. It does not materially alter the present relations between debtor and creditor, but, on the contrary,

prevents those relations being altered in the future by a further fall. Moreover, it provides a means whereby, in case there should be a demand for currency, that demand will be supplied automatically, and not at the discretion of the Indian Government.

7. This closing of the mints, however, is only the first step in the process contemplated by the Indian Government, and that process will not be complete until gold is made full legal tender, and is received into the Indian currency as freely as gold is received in England, or as silver is now received in India. This may be effected either by the free coinage of gold at the Indian mints or by the free reception under arrangement with the Imperial Government of gold sovereigns coined in England or in Australia as legal tender currency of India. When this is done, the change will be complete, and India will then have a gold standard of value, and a gold automatic currency, the quantity of which will depend on the demand for it. What that demand may be is uncertain. Sir D. Barbour estimates the outside of the quantity needed to maintain the gold standard at 15,000,000*l*., or one-fifth in value of the estimated present rupee currency. But, whatever the precise amount, the gold currency is not expected to be more than a small fraction of the actual currency in circulation.

8. This currency will consist of rupees, each of which is intended to circulate, not at the value of the silver contained in it, but at the value of the gold contained in the fraction of the sovereign (1*s*. 4*d*.) which it represents. With the exception of the small quantity of gold in actual circulation, the currency of India will thus become a token currency of unparalleled magnitude; and if the market value of silver should fall considerably, its value would become very much greater than the value of the silver contained in it. Under such circumstances, it will to a great extent resemble a paper currency, and, if it were not made exchangeable for gold on demand, would resemble in many respects an inconvertible paper currency. The question then arises whether it is certain that such a currency will be maintained at its gold value without further precautions.

9. It is no doubt true that, until the rupee has risen in value to this adopted ratio, the scheme will not have come into full operation, and that, when it has come into full operation, the restriction placed upon the issue of silver rupees will tend to keep the rupee currency at the fixed gold value. But it may well be questioned whether this restriction is in itself a sufficient guarantee that this gigantic token currency will under all circumstances, be kept at par value. Sir David Barbour himself holds that ultimately, if the scheme is to be successful, gold when required must be given for the rupee either without a p[illegible] premium.

10. It is, of course, obvious that a great country like India, if she undertakes a token currency, must maintain its value and discharge her obligation by making it reasonably certain that, where gold is needed in exchange for rupees, it will be possible to obtain it at the fixed ratio.

11. It has been argued that this object might possibly be effected without requiring the Government of India to give gold for silver at that ratio, and without the public confidence in their ability to do this which would arise from their accumulating and possessing a stock of gold available for the purpose. Instances may, no doubt, be selected in which Governments have maintained their inconvertible token currency at, or nearly at, par without these precautions. But a silver token currency, though not in form a promise to pay, really implies an obligation to maintain its par value; and prudence as well as experience suggest that this obligation should be supported by the obvious means of fulfilling it.

12. The obligation on the Government to coin silver rupees when the rupee is at 1*s*. 4*d*. does not in itself carry with it a corresponding obligation on the Government to give gold for rupees. It may not therefore be necessary to provide a reserve of gold before that exchange is reached. If it is not reached under the measure proposed, no gold reserve will be needed; but if the measure is operative, gold will probably flow in, and will replace silver as the reserve against the Government paper issue. If gold thus flows in automatically, the Indian Government will be thereby enabled to accumulate a moderate

reserve; but, even if it does not, a reserve should, we contend, be provided before the Indian Government takes the final step of announcing, gold as the standard, coupled with the correlative obligation to give gold for silver.

13. What amount of gold reserve may be necessary it is difficult to say, but in order to have the desired effect, it must be substantial. Nor, considering that it will in all probability be generally resorted to for purposes of export, is it necessary to decide in what form or in what place it should be kept. The circumstances of India are favourable for the accumulation of the necessary stock. India imports more of the precious metals than she exports; her inhabitants no doubt possess already a stock of uncoined gold; and, if the Indian Government receive gold in payment of debts due to them, gold ought to come to their treasuries

14. At any rate, the expense necessary to procure and retain the requisite amount is one that cannot be avoided by any Government which desires to maintain the credit of its currency, and will be insignificant compared to the loss of which the Indian Government now complain.

15. Under these circumstances, we could not join in the recommendation contained in the report without at the same time recommending that the Government of India should, in view of the ultimate adoption of the whole of their plan, be prepared to secure the convertibility of their token silver currency, and should with that object accumulate a sufficient reserve of gold.

16. We think it right to add that the questions whether gold has become more valuable in itself or silver less valuable in itself, or whether both movements have taken place, and to what extent each movement has gone as well as the further question between bimetallism on the one hand and a universal gold standard on the other, are questions of which we have taken no notice, as we do not think that they fall within the scope of the reference to us.

T. H. FARRER.

R. E. WELBY.

While cordially concurring with the views of my colleagues so far as they support the proposals of the Government of India, I should have preferred to approve those proposals without imposing the condition that the closing of the mints should be accompanied by an announcement that rupees will be coined in exchange for gold at the ratio of 1*s*. 4*d*.

It will be admitted that in a matter of this kind the minimum of State interference is desirable.

The only excuse for any action on the part of Government is that the evils from which they are suffering are becoming intolerable, and that, apart from the closing of the mints, no practical remedy has been proposed or is attainable.

In my opinion the proper course for Government to adopt is to issue a proclamation to the effect that,—

Having regard (1) to the redundancy of silver money in India as evidenced by the accumulation of rupees and paper currency in the banks, and (2) considering the uncertain policy of other nations with respect to silver, the Governor General in Council has resolved to suspend for the present the coinage of silver.

One effect of such a measure must necessarily be that the London exchange banks in tendering for Council bills will be compelled to quote the price in sterling which they are willing to pay. Another probable effect will be that gold will be sent to India in increased quantity on private account in order to be exchanged into rupees; and it appears to me that the price in each of these cases, when extended over a considerable period of time, and after a certain degree of stability has been attained, will afford the best guide to Government in estimating the gold value of the rupee, whenever they are called upon to open their mints to the coinage of gold.

The Government of Austria-Hungary closed their mints to the free coinage of silver in 1879, but did not declare a ratio between gold and silver till 1892. It seems likely that an interval of time more or less prolonged may elapse before the Government of India will be in a position to declare a ratio, having regard to the great uncertainty of the effect which its action may produce upon the rate of exchange.

I prefer to leave full discretion to that Government to take such measures as occasion may require and experience may dictate, subject to the consent of the Secretary of State in Council.

I fear that any arbitrary action on the part of Government in a matter respecting which it is impossible that all the facts can be present to their consideration might lead to reclamations both from the public creditor and from others whose interests depend upon Indian exchange, and I am unwilling to take the responsibility of attempting to fix a rate if the object can be practically accomplished by the natural action of the market.

Moreover, I fail to see what advantage would be gained by selecting the ratio of 22·37 to 1 (one and fourpence the rupee) rather than that of 18·22 to 1, which has been adopted with apparent success in Austria, or that which is in use among other nations.

If contrary to expectation exchange should rise suddenly in an inconvenient degree, I would meet the difficulty in the way proposed by the Government of India (quoted at paragraph 47 of the Committee's Report) by declaring that English gold coins shall be legal tender in India at a rate to be fixed by them.

Weather Review of India for the week ending at 8 a.m. on Saturday, June 24th, 1893.

Monsoon conditions have prevailed throughout the Indian region during the week under review. Pressure has been highest in the extreme south and lowest over the Western desert, but with a band of relatively low pressure running south-eastward from the Punjab as far as Lower Bengal. The wind directions have been fairly normal, the wind blowing from the westward across the Peninsula, from south over the Bay, and from east up the Gangetic plain. The pressure difference has been somewhat larger than usual, and the force of the wind has been strong over a large part of the country. Rain has been general over a large part of the country, and the mean temperature has been low.

The chart of the 18th showed the normal distribution of pressure as regards the greater part of the country. Pressure was highest in the extreme south, lowest over Sind, and relatively low over the Gangetic plain, with a small centre of depression near Sutna. Gradients were steeper than usual and the monsoon was fresh to strong very generally. In the neighbourhood of the depression near Sutna the wind was cyclonic, but elsewhere the wind blew from about the normal directions. There was general rain over all parts of the country, except the south and east of the Peninsula, the Gangetic plain, the Punjab plains, Rajputana, and Sind. Ratnagiri reported over 8, Mercara and Indore over 3, and Kindat and Surat over 2 inches. On the 19th pressure was decreasing, except in Bombay and Tenasserim, where there was a trifling rise. The general distribution was the same as on the preceding day, but gradients were slightly steeper. The winds were unaltered, blowing from the normal monsoon directions, except in the neighbourhood of the depression near Sutna, where they remained cyclonic. The force was very generally high. There was no rain reported from the east and centre of the Peninsula or from the extreme north-west of India, but elsewhere the fall was general. Akyab, Tavoy, Mymensingh, Barisal, Dacca, Chittagong, Jhansi, and Jubbulpore reported over 3 inches, and Dera Dun, Surat, and Poona over 2 inches. On the 20th the barometer was rising at some central stations and in Tenasserim and falling elsewhere. The changes were nowhere very large, and there was no practical change in the distribution of pressure or the circulation of the winds. A strong monsoon was blowing generally, and rain was again reported from all places, except the east and centre of the Peninsula and the north-west of India. The amounts were heavier than on the two preceding days. Calcutta and Rajkot reported over 8 inches; Moulmein, Akyab, and Bombay over 5 inches; and Diamond Island over 4 inches. On the 21st the barometer was rising. The rise had been greater in the north than in the south; hence gradients has decreased somewhat, but otherwise conditions were still practically unchanged. There was a well marked cyclonic circulation of the winds around the depression near Sutna, and regular monsoon winds elsewhere. Some showers had occurred over the east of the Peninsula, but there was still no rain over the extreme north-west of India. The heaviest falls were over 5 inches at Surat and Jubbulpore, and over 3 inches at Chittagong, Bombay, Hoshangabad, and Pachmarhi. On the 22nd the barometer was still rising over a large part of the country. Some modifications of the previously existing conditions were shown by the chart. In the first place, gradients for south-east winds had increased very considerably over the Punjab; in the second, the depression near Sutna had disappeared; and in the third, a depression was appearing over Lower Bengal. The relative positions of the areas of highest and of lowest pressures had not changed, and monsoon winds blew very generally. There was no rain of importance over the east of the Peninsula, and only a few showers over the Gangetic plain and the greater part of North-Western India. Elsewhere rain continued general. Chittagong reported over 7 inches, Dacca over

6 inches, Hoshangabad and Saugor over 4 inches, and Silchar over 3 inches. On the 23rd the barometer was falling in most parts of the country. The decrease had been rapid over Bengal, and a well defined depression was shown there with its centre over Calcutta. The wind was cyclonic over Bengal, and blew from normal monsoon directions elsewhere. Rain had extended somewhat to North-Western India, while, on the other hand, it had decreased considerably over the central parts of the country. There was still no rain of importance over the east of the Peninsula. The following were the principal amounts :—Chittagong, Calcutta, Barisal, Berhampore, and Karachi over 3 inches, and Allahabad, Chakrata, Mormugao, Bombay, Karwar, Ratnagiri, and Bhuj over 2 inches. The chart of the 24th showed that the barometer was still falling generally, and that the depression over Bengal had drifted somewhat to the eastward. In other respects there had been no important change. There was still no rain over the centre and west of the Peninsula, and very little over the central parts of the country, while on the West Coast the amounts were falling lighter. In Arakan the rainfall was very heavy. The following were the largest amounts recorded: Akyab over 9 inches, Chittagong over 4 inches, and Karwar, Goa, and Karachi over 3 inches.

Temperature.—Owing to the absence or comparative lightness of the rainfall over the east of the Peninsula and North-Western India, the mean temperature of those two regions shows comparatively little depression as compared with the normal, but in all other parts of the country, where the rainfall was unusually heavy, the mean temperature was much below the average.

The following table shows the variations of the mean temperature from the normal on each day of the week for the different Provinces of India:

Province.	June.							Mean variation of week.
	18th.	19th.	20th.	21st.	22nd.	23rd.	24th.	
	°	°	°	°	°	°	°	°
Burma	+1·2	+0·1	−1·8	−1·8	−1·7	−0·8	−0·2	−0·7
Bengal and Assam	−3·8	−2·6	−3·7	−3·6	−3·6	−3·6	−3·0	−3·4
North-Western Provinces and Oudh.	−5·4	−6·9	−7·5	−5·5	−5·6	−5·2	−5·1	−5·9
Punjab	−4·4	−3·3	−3·0	+0·2	+1·5	−2·3	−2·0	−1·9
Bombay	−3·2	−2·9	−3·0	−3·9	−3·5	−2·9	−1·5	−3·0
Central Provinces and Berar	−7·1	−7·6	−7·7	−7·6	−7·1	−4·2	−3·3	−6·4
Central India and Guzerat	−3·5	−5·6	−5·9	−4·4	−7·2	−8·2	−7·1	−6·0
Sind and Rajputana	+2·0	+1·2	−0·2	−0·3	+0·5	−4·3	−8·0	−1·3
Madras	−2·2	−1·2	−0·8	−1·0	−1·1	−0·4	+0·6	−0·9
Mean for whole of India	−2·9	−3·2	−3·7	−3·1	−3·1	−3·5	−3·3	−3·3

In all the Provinces the mean temperature for the week was low, the average for the whole of India for the week being 3·3° lower than usual.

Rain.—The concluding table shows that during the week under review some rain has fallen in all districts, except Madras (South). In Madras (Central) and the Punjab (South and Central) the average actual fall of each division was less than one-tenth of an inch, but in all the other divisions effective rain was received. The heaviest average actual fall reported was 30·16 inches in Arakan: this was followed by 18·72 inches in the Konkan, by 14·45 inches in East Bengal, and by 13·08 inches in Assam (Surma), while, as stated above, the lightest rainfall was in the south and centre of Madras and of the Punjab. In years of normal rainfall the heaviest rainfall during the present week is 13·69 inches in Arakan, and this is followed by 10·29 inches in Assam (Surma) and by 7·79 inches in Malabar, while the lightest rainfall is normally in Sind. Hence there are two important differences shown between the actual and normal rainfall of the week under review. In the first place, it is shown by the figures quoted above that the general rainfall has been much heavier than usual; and, in the second place, the rainfall has been lightest in parts of the Punjab and of Madras and not in Sind. The third column

of the table shows that the rainfall of the week has been excessive over by far the greater part of the country. Only in nineteen of the rainfall divisions has there been a deficiency of rain, while in thirty-two there has been an excess. The regions of deficient rain included the following divisions, *viz.*, Central Burma, Assam (Brahmaputra), North Bengal, Orissa, North Behar, the North-Western Provinces (West), the Punjab (Central and South), Malabar, Berar, the Central Provinces (East), all the East Coast divisions, Hyderabad (South), and Madras (Central, South, and South-Central). In most of these divisions the deficiency was small. In all other divisions the rainfall was excessive, and in several this excess was very large. Thus it amounted to 16·47 inches in Arakan, to 12·57 inches in the Konkan, and to 9·44 inches in East Bengal.

The three concluding columns of the table show the progress of the rainfall of the whole monsoon period. The first column of the three gives the average actual rainfall from May 28th to date; the second column gives the normal rainfall for the same period; and the third gives the excess or defect expressed as a percentage. In Tenasserim and Lower and Central Burma, in Assam (Brahmaputra), and in the Punjab (South and Central) the rainfall up to date has been deficient; in Arakan, North Bengal, Orissa, North Behar, the North-Western Provinces (West), Malabar, Coorg, Berar, Rajputana (East) and Central India (West), and the East Coast (North *a*) the rainfall of the period has been normal; and in all the remaining divisions it has been excessive. In Guzerat, Kathiawar, Sind, and parts of Upper India the excess has been very large relatively to the average.

The following gives the largest total amounts received during the week as reported in the rainfall telegrams of the week:

Division.	District.	Station.	Amount.
Tenasserim	Amherst	Thaton	14·01 inches.
Arakan	Akyab	Maungdaw	40·00 ,,
East Bengal	Chittagong	Cox's Bazaar	40·75 ,,
Assam	Khasia Hills	Cherra	30·51 ,,
Deltaic Bengal	Alipore	Sudder	16·72 ,,
Central Bengal	Bankura	Khatra	15·00 ,,
North-Western Provinces.	Jaunpur	Mariahu	9·59 ,,
Punjab	Kangra	Sudder	13·94 ,,
Ditto	Jhelum	Ditto	5·39 ,,
Malabar	South Kanara	Beltangadi	15·10 ,,
Coorg	Coorg	Virarajendrapet	15·56 ,,
Konkan	Colaba	Karjat	36·92 ,,
Deccan	Satara	Jauli	30·09 ,,
Khandeish	Nasik	Sudder	14·71 ,,
Central Provinces	Jubbulpore	Sihora	19·89 ,,
Guzerat	Surat	Bardoli	24·12 ,,
Kathiawar	Rajkot	Jetalsar	22·67 ,,
Sind	Karachi	Sudder	3·85 ,,

Simla, *29th June, 1893.*

W. L. DALLAS,
Asst. Meteorological Reporter to the Government of India.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the state of the Season and Prospects of the Crops.

Madras.—*For week ending 24th June.*—Rainfall good on West Coast and in parts of Nilgiris and Circars; light scattered showers or no rain elsewhere. Cultivation and sowing proceeding as usual in most parts, and standing crops generally thriving, but rain is wanted in many districts. Pasture, fodder, and drinking water sufficient. General prospects fair. Prices show but little change, though slightly easier in the Circars, and rather dearer in the Deccan, Central, and Southern districts.

Bombay.—*For week ending 28th June.*—Rain almost throughout the Presidency. Young crops injured by rain, rats, or crickets in parts of five districts; otherwise in good condition. Agricultural operations progressing generally, but sowing is retarded in parts of five districts owing to excessive rain. Transplantation progressing in parts of three districts. Prices steady, except in parts of two districts. Agricultural stock good and fodder sufficient.

Bengal.—*For week ending 24th June.*—There has been general and copious rain during the week, except in Orissa and North Behar, where the falls were scattered and light. The rainfall in Lower Bengal has been exceptionally heavy, and cultivation is retarded in several places. On the other hand, in North Behar more rain is wanted in some parts; elsewhere agricultural operations are being proceeded with satisfactorily, and the state of all standing crops is good. Early rice is being cut in one district, and indigo manufacture has begun in three others. Prices of common rice continue generally steady. Cattle are in good condition, there being sufficient supply of fodder and water in all districts.

North-Western Provinces and Oudh.—*For week ending 28th June.*—General rain has fallen throughout the Provinces. Agricultural operations are in full swing, and weeding has begun in the Eastern districts. Markets are well supplied and fodder ample. Locusts appeared in parts of Fyzabad, Rai Bareli, and Almora, but no damage has been reported. Prices generally steady.

Punjab.—*For week ending 28th June.*—Rain has fallen in nearly all districts. River in flood in the Dera Ismail Khan district. Harvesting of spring crops nearly over. Outturn generally good, though the crops were considerably damaged on the threshing floors by early rain. Ploughing and sowing for autumn crops in progress. Prospects said to be good. Cattle are generally reported in good condition, and fodder is said to be sufficient throughout the Province. Prices unsettled in two districts, falling in three others, and stationary elsewhere.

Central Provinces.—*For week ending 28th June.*—Rain heavy in most of the northern districts and in Sambalpur; elsewhere moderate to light showers have fallen. Ploughing operations progressing, and autumn sowings continue in parts. Sugarcane doing well. Prices steady.

Burma.—*For week ending 24th June.*—In Lower Burma ploughing for wet-weather paddy is progressing in all districts, and sowing has commenced in parts. In Upper Burma reaping of dry-weather paddy nearly completed. Ploughing, sowing, and transplanting of wet-weather paddy progressing, except in parts of Shwebo, where, owing to insufficient rainfall, ploughing and transplanting have been stopped. Sowing of sesamum, cotton, and maize completed in some parts and in progress in others. Standing crops are reported to be good everywhere, except in Minbu, where slight damage has been done. In Lower Burma the price of paddy has fallen slightly in three districts and risen slightly in one; elsewhere prices are stationary. In Upper Burma, except for slight increases in Minbu and the Southern Shan States, prices are unchanged.

Assam.—*For week ending 27th June.*—Rain excessive in the Surma, but scanty in the Brahmaputra Valley. Planting of winter paddy continues. Condition of cattle normal. Fodder sufficient.

Mysore and Coorg.—*For week ending 28th June.*—MYSORE: Good rain in two districts and slight in other parts. Crops and prospects good. Prices fallen in one and risen in two districts.

COORG: Rainfall good. Ploughing of rice fields and planting of coffee in progress. Paddy crop harvested. Prices stationary. Water and fodder for cattle sufficient.

Berar and Hyderabad.—*For week ending 28th June.*—BERAR: Rainfall good. Weather cloudy and warm. Sowing of cotton and other autumn crops in progress. Water sufficient, but fodder inadequate in one taluka. Cattle healthy. Prices almost steady.

HYDERABAD: Rainfall good. Sowing of autumn crops in progress. Prices stationary.

Central India.—*For week ending 28th June.*—Rain throughout Central India during week, except in Gwalior. Sufficient rain has now fallen in Bhopal, and agricultural operations are in progress there and in all other parts of Central India. Pasturage sufficient and good. Cattle in good condition generally. Prices of food-grains low in the Neemuch district, fluctuating in Gwalior and Dhar, slightly fallen in parts of Bhopawar, and steady, but high, elsewhere.

Rajputana.—*For week ending 28th June.*—Rainfall generally good throughout Rajputana. Agricultural operations commenced in some States. Agricultural stock good and pasturage or fodder sufficient. Prices falling in three States, rising in two others, and steady elsewhere.

Kashmir.—*For week ending 27th June.*—Weather fine. Threshing of rapeseed almost finished and reaping of barley commenced. Rice and maize crops healthy and promising well. Water ample. Prices of grain gradually falling.

Nepal.—*For week ending 24th June.*—Rains commenced. Rice planting begun. Prospects good.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Circular No. 11-F.

Extract from the Proceedings of the Government of India, in the Revenue and Agricultural Department (Forests),—dated Simla, the 28th June, 1893.

Read—

(i) Circular Resolution of this Department, No. 25-F., dated 13th October 1891, promulgating rules to regulate appointments and promotions in the Provincial Forest Service.

(ii) Circular of this Department, No. 22-F., dated 25th July 1892, forwarding, for the consideration of Local Governments and Administrations, draft rules for the recruitment of the Provincial Forest Service.

Read also—

(i) Replies from Local Governments and Administrations to the Circular of 25th July 1892.

(ii) Letter from the Inspector-General of Forests, No. 379, dated 10th May 1893, submitting, for the consideration and orders of the Government of India, a copy of Resolution No. 11 passed by the Imperial Forest School Board of Control for 1893-94, containing draft rules to regulate the constitution of, admission to, and studies and discipline at, the Forest School.

RESOLUTION.

The draft rules prepared by the Board of Control have been considered by the Government of India in connection with the opinions expressed by Local Governments and Administrations in response to Circular No. 22-F., dated 25th July 1892, and, after such revision as has been deemed necessary, are now issued in the appendix to this Resolution for adoption, with effect from 1st July 1893, in supersession of those promulgated with Circular No. 25-F., dated 13th October 1891.

2. With reference to Rule 12 (ix), the Government of India desire that Local Governments and Administrations will consider whether the maximum number of stipends to be granted in each year under that rule might not with advantage be notified with the object of inducing competition for them by candidates at the entrance examination of the Forest School and of thus transforming them into actual scholarships.

ORDER.—Ordered, that a copy of this Resolution and of the new rules referred to be forwarded, for information and guidance, to the Government of Madras, the Local Governments and Administrations noted in the margin, the Inspector-General of Forests, and the Comptroller and Auditor General.

Bengal.	Assam.
North-Western Provinces and Oudh.	Coorg.
Punjab.	Ajmere.
Central Provinces.	Andamans.
Burma.	Hyderabad.

Ordered also, that a copy be forwarded to the Foreign Department for communication to the Agent to the Governor General in Baluchistan.

Ordered further, that the Resolution, with its appendix, be published in the Supplement to the *Gazette of India*.

[True Extract.]

E. C. BUCK,
Secretary to the Government of India.

APPENDIX.

RULES TO REGULATE THE CONSTITUTION OF, ADMISSION TO, AND STUDIES AND DISCIPLINE AT, THE IMPERIAL FOREST SCHOOL, DEHRA DUN.

Section I.—Constitution and Studies.

1. The School is under the administrative control of the Inspector General of Forests, who is assisted by a Board consisting of—

1. The Inspector General of Forests, *President;*
2. The Director of Public Instruction, North-Western Provinces and Oudh;
3. The Director of the School;
4. One Conservator from each province (not more than three serving in any given year);

with, as *Secretary*, the Assistant Inspector General of Forests.

2. The Superior Staff of the School consists of—

1. The Director
2. The Deputy Director
3 & 4. Two Instructors
5. The Vernacular Instructor

} assisted by the Forest Officers of the School Circle, North-Western Provinces.

The Conservator of Forests, School Circle, North-Western Provinces, will ordinarily be Director of the School. The Deputy Director and two Instructors are officers of the Indian Forest Service on the Imperial List. The Vernacular Instructor is an officer of the Provincial Forest Service, also on the Imperial List.

3. The Director of the School is charged with (1) the general administration of the institution, including the regulation of the course of study under the arrangements prescribed by the Board of Control, subject to the sanction of the Government of India; (2) the supervision of the School buildings, quarters, and gardens; (3) the control of the accounts, and the conduct of correspondence.

4. *Courses.*—There are two courses—one in English, the other in the Hindustani language. Each course lasts 21 months. The English course is that followed by the "Upper Class"; the Hindustani course that followed by the "Lower Class." The first year's students are called "Juniors"; the second year's students, "Seniors." In the English course, students are prepared for the certificate in Forestry by the "Higher Standard"; in the Hindustani course, for that by the "Lower Standard."

The subjects taught in these courses are the following, described in the School syllabuses:—

1. Forestry, including Sylviculture, Utilisation, and Forest Working-Plans; both theoretical and practical.
2. Mathematics—Elementary Arithmetic, Algebra, Trigonometry, and Mechanics; in their application to Forest questions.
3. Physical Science, including Chemistry, Physics, Physiography, Geology, Mineralogy, and Soils.
4. Botany, both theoretical and practical; including the collection and preservation of plants.
5. Zoology—the classification of animals and the study of useful and dangerous species, especially of insects; including the collection and preservation of specimens.
6. Drawing, Surveying, and Estimating; as required for Forest officers.
7. Forest Engineering, theoretical and practical.
8. Forest Law, the Elements of Criminal Law, and departmental organisation.
9. Forest Accounts and Procedure.

5. *Terms.*—The terms of study are as follows:

1st year—
- Rains term—July 1st to October 31st in Dehra Dún.
- Winter term—November 1st to December 22nd in camp.
- Vacation—December 23rd to January 5th.
- Spring term—January 6th to March 31st in camp.
- Hill tour term—April 1st to May 31st in camp.
- Vacation—June 1st to 30th.

2nd year—
- Rains term—July 1st to October 31st in Dehra Dún.
- Winter term—November 1st to December 22nd in camp.
- Vacation—December 23rd to January 5th.
- Spring term—January 6th to February 15th in camp.
- Examinations, including Survey test—February 16th to March 31st.

6. *Examinations.*—The School Examinations are:

1. Monthly, to test progress and application.
2. Final.

The *Monthly Examinations* are usually held on the last two working days of each month, as the Director may order. The marks obtained at these examinations are counted for one-fourth of the aggregate at the final.

The *Final Examinations* are held in March of the second year, and the marks then obtained count for three-fourths of the aggregate.

7. *Certificates.*—There are two certificates obtainable in each class after the final examinations—a "pass" certificate and a "honour's" certificate. The former is granted to students who obtain over 50 per cent. of the aggregate marks allotted to all subjects, provided this includes 50 per cent. of the marks allowed for each of the subjects of Forestry, Botany, Surveying, and Engineering. The latter is granted to students who obtain over 75 per cent. of the aggregate marks allotted to all subjects, including over 50 per cent. in each individual subject. These certificates are only granted on the orders of the Board of Control, who have authority to exercise their discretion in doubtful cases.

8. *Prizes.*—The School medals are awarded by order of the Board of Control, but only if "honour" marks (75 per cent.) have been obtained. Other prizes, whether given by Government or other donors, are also awarded by the Board of Control.

9. Should any student of the three categories enumerated in Rule 11 be unable (*a*) to appear at the final examinations, or, having appeared, (*b*) fail to pass those examinations, he will not be permitted to appear at any subsequent final examination unless he follows a second time the whole course of instruction at the School, or, at the discretion of the Director, the second year's course.

Section II.—Admission Rules.

10. The total number of students of each class who can be admitted into the School each year will be limited to such number as the Board of Control may decide from time to time can be accommodated in the School. The number of studentships to be allotted each year to the respective provinces, as well as the number of nominations to be made by the Director, will, with due regard to the total prescribed by the Board of Control, be decided by the Director of the School before the 1st of January, after consultation with the Provincial authorities as to their requirements, and communicated to the Local Governments concerned.

A.—Upper Class.

11. There are three categories of students in the Upper Class—

(1) Private Students.
(2) Students already in the Government service.
(3) Students deputed by Native States.

12. *Private Students* comprise all those students who are at present without appointments in any Forest Service, and whose object it is by becoming possessors of Forest School certificates to obtain employment either in the Forest Service of the Government of India or in that of a Native State or some other owner of forest property.

(i) Candidates for admission to the Forest School as private students must not be less than 18 or more than 25 years of age, and their applications must be sent to a Conservator of Forests* through a Divisional Forest Officer of rank not below that of an Assistant Conservator of the 1st grade, or through a Collector or other district officer. Neither the Conservator, the Divisional Forest Officer, nor the Collector need belong to the forest circle or province in which the candidate seeks employment; but Divisional Forest Officers and Collectors may not forward to Conservators applications unsupported by the five certificates enumerated below, namely:

* Conservator of Forests, Bengal Circle, at Darjeeling.
Conservator of Forests, Assam Circle, at Shillong.
Conservators of Forests, North-Western Provinces and Oudh—
- School Circle, at Dehra Dun.
- Central Circle, at Naini Tal.
- Oudh Circle, at Naini Tal.

Conservators of Forests, Central Provinces—
- Southern Circle, at Nagpur.
- Northern Circle, at Jabalpur.

Conservator of Forests, Berar Circle, at Amraoti.
Conservator of Forests, Punjab Circle, at Lahore.
Conservators of Forests, Upper Burma—
- Eastern Circle, at Mandalay.
- Western Circle, at Mandalay.

Conservators of Forests, Lower Burma—
- Pegu Circle, at Rangoon.
- Tenasserim Circle, at Moulmein.

Conservators of Forests, Madras Presidency—
- Northern Circle, at Bezwada.
- Central Circle, at Madras.
- Southern Circle, at Coimbatore.

(*a*) A certificate that the candidate is a "Native of India" within the meaning† assigned to those words by section 6 of 33 Vict., Cap. 3.

† 'Native of India' means any person born and domiciled within the dominions of Her Majesty in India, or within the territories of Indian Princes tributary to or in alliance with Her Majesty, of parents habitually resident in India, and not established there for temporary purposes only. (Article 45, Civil Service Regulations.)

(*b*) A certificate of age.

(*c*) A health certificate, in the form prescribed by Article 61 of the Civil Service Regulations, signed by the Civil Surgeon of the district in which the said Divisional Forest Officer's or Collector's duties lie, and testifying to the candidate's sound constitution, good vision and hearing, and general physical fitness for a rough out-door life in the Forest Department.

(*d*) A certificate of respectability and good moral character from two or more persons whose social or official position can be accepted as a guarantee of reliableness.

(*e*) A certificate from an officer of the Educational Department of a rank not less than that of a Deputy Inspector of Schools or the Head Master of a High School under public management to the effect that the candidate's education appears sufficiently good to give hopes of his being able to pass the entrance examination.

The last three certificates must bear date not further back than the 1st October of the year preceding that in which the candidate proposes to present himself at the entrance examination.

If any person giving certificates as above under (*c*), (*d*) and (*e*) is in a position to mention anything more to the credit of the candidate than the certificates actually call for, he may do so.

(ii) Upon the receipt by the Conservator of any application in respect to which the preceding conditions shall have been observed, that officer may either accept or reject the application without assigning any reason for so doing, or he may require the candidate to produce other or better certificates in person before him.

(iii) Conservators may, at their option, test the fitness of a candidate who desires to enter the service of Government by practical work in the forests.

(iv) Those candidates who have been approved by the Conservator will be permitted under his recommendation to appear at the next entrance examination for the Forest School held in his circle.

(v) The *Entrance Examination* is held early in March each year, on such date as may be fixed by the Director, both at the Imperial Forest School and at such centres as may be fixed from time to time by Local Governments, and under such officers, Educational, Revenue, Forest or other, as may be appointed: provided that the date shall be communicated by the Director to Local Governments and Conservators on or before 1st January. The subjects of examination are:

		Minimum Pass marks.
1. English	Conversation	50 per cent.
	Composition	33 ,,
2. Arithmetic		40 ,,
3. Algebra, up to and including quadratic equations		40 ,,
4. Elements of Euclid, Books I to IV and Book VI		25 ,,
5. Mensuration—lengths, areas and volumes, with examples		25 ,,

The examination papers on the above subjects will be forwarded by the Director in sealed covers to such officials as the Local Governments may direct in the month preceding the examination.

(vi) A Local Government may lay down rules under which the number of candidates allotted under Rule 10 to the province for admission into the School shall be selected from the number of passed candidates. In such rules due regard must be had to the place taken in the examination, but the Local Government shall not be debarred from preferring, for good and sufficient reasons, a passed candidate who may have taken a lower place in the list to one higher on the list: provided that the Director may, after inspection of the papers of the selected candidates, place before the Local Government an objection to the admission of any of such candidates on the ground that he is below the required standard.

(vii) The Local Government may, if it thinks fit, exempt from the entrance examination any candidate who is a Bachelor of Arts, or who has obtained a degree or diploma of about the same standard, at any University in India or in the United Kingdom or in a British Colony, or at any educational institution to which the Government of India may extend the privilege: provided that such degree or diploma shall not give such candidate a preferential claim over any candidates who have passed the entrance examination, and who may appear more eligible for the Forest Service.

(viii) Prior to the admission of a student, his parents or guardians must satisfy the Director that they are willing and able to defray the expenses of the student at the School. These expenses are estimated to be not less than Rs. 735 for each student living in native fashion, and Rs. 945 in the case of those living in European fashion (*vide* Rule 21). Of these sums, parents or guardians must deposit with the Director, before the course commences, a sum of Rs. 126 in the case of native students and Rs. 168 in the case of European students to meet the initial cost of uniform, books, instruments, stationery, and camp-equipage (*vide* Rule 18), and in addition Rs. 50 as caution-money.

(ix) Local Governments may, on the recommendation of a Conservator or of the Director, and in exceptional cases, allow selected private students who have passed the entrance examination a monthly stipend not exceeding Rs. 50 to assist them through the School course; provided that such selected private students previously execute an agreement binding themselves to serve the Local Government concerned (in the event of their obtaining the School certificate) for a period of not less than five years (*vide* Rule 17). Such monthly stipend may, in case of misconduct or unsatisfactory progress at the School, be reduced or altogether withdrawn at the discretion of the Director.

(x) The names of those private students who succeed in obtaining the School certificate will be entered by the Director in a register to be kept for that purpose, and the Conservators of those circles, in which the non-stipendiary private students may severally desire or be willing to serve, will be addressed by him with the view of obtaining appointments for such students. The Conservators concerned will for this purpose be furnished with the original certificates already referred to in clause (i) of this rule, the School certificates, and such other useful information, more especially regarding the physical qualifications of the students, as the Director may be in a position to furnish.

(xi) A list of private students, who may not succeed in obtaining appointments, will be forwarded by the Director to the Inspector General of Forests, who will circulate the list amongst Durbars, Conservators, and other persons likely to be in need of the services of trained forest officials.

(xii) The appointment to the service of Government of passed private students depends on the existence of vacancies in the various circles, and even a stipendiary student has no claim to such appointment.

13. *Candidates in the Government Service*, who may be deputed to the School, will ordinarily be either—

(*a*) members of the Provincial Service (Forest Rangers), who desire to qualify themselves for further promotion in their own or to a higher class; or

(*b*) members of the Subordinate Service (Foresters and other subordinate officials) similarly desirous of qualifying for promotion.

(i) Forest Rangers may be deputed by Local Governments, provided the candidates are certified by the Conservator under whom they are serving to possess sufficient knowledge of English and general education and ability to enable them to profit by the course. Such officers may be above 25 years of age, and need not pass the entrance examination. While at the School, they will draw the pay of their grade and the travelling allowances to which they may be entitled under the Civil Service Regulations.

(ii) Officers of the Subordinate Service may be deputed by Local Governments; provided that—

(*a*) they have been in that service for not less than three years;
(*b*) they have passed the School entrance examination;
(*c*) they are under 25 years of age;
(*d*) they have executed the formal agreement referred to in Rule 17.

Such officers will, while at the School, draw the pay and travelling allowances of their grade in the service; provided that the total amount sanctioned to meet the cost of their training, inclusive of travelling expenses, shall not be less than Rs. 735 in the case of students living in the native style, and Rs. 945 in the case of students living in European fashion (*vide* Rule 21).

14. *Students deputed by Native States* may be admitted on the request of the State concerned; provided that—

(*a*) they have passed the entrance examination of the School;
(*b*) they have produced the certificates required for admission specified in Rule 12 (i).

The Durbars of Native States sending students to the School shall, before the beginning of each term, or of each year if preferred, deposit with the Director a sum sufficient to meet the expenses of the students. This sum for the whole course must not be less than Rs. 735 for students living in native fashion, and Rs. 945 for those living in European fashion (*vide* Rule 21).

B.—Lower Class.

15. There are also three categories of students in the Lower Class—

(*a*) Private students.
(*b*) Students in Government service.
(*c*) Students deputed by Native States.

The rules for admission to the Lower Class are the same as those detailed in Rules 12, 13, and 14 for admission to the Upper Class, with the following exceptions:

(i) Instead of the Entrance Examination, the candidate must furnish a certificate of having passed the Middle Class Examination in the North-Western Provinces and Oudh, or an equivalent standard in another province, as well as a certificate that he possesses a competent knowledge of Hindustani.

(ii) The cost of training will not be less than Rs. 588 (*vide* Rule 21) for the whole course of 21 months.

(iii) The required deposit will be Rs. 84 and the caution-money Rs. 25.

C.—General.

16. No student of European or Eurasian extraction not already in the permanent employment of Government or of a Native State shall be admitted into the Forest School if he is married; nor shall any such student, whether in the permanent employment of Government or of a Native State or not, marry whilst at the School or until he has joined a permanent appointment. A breach of this rule will render the student liable to dismissal from the School, or to forfeiture of any appointment in the Forest Service which may have been promised to him, or to which he may otherwise have a claim.

17. *Agreement and Security Bond.*—Officers of the Subordinate Service deputed to the School by Local Governments under Rules 13 (ii) and 15 shall execute a formal agreement—the sureties for the fulfilment of which should be men of position and means—to continue in the Forest Service of the Local Government concerned for a period of not less than five years after passing out of the Forest School, and on such rates of pay as may be in accordance with the existing organisation of the Department. A breach of this condition will render the defaulter and his sureties liable for the refund of the entire cost of the student's education at the School. The agreement and security bond shall be in the appended forms, and must be executed before the student is admitted to the School. The agreement will be signed by the student and, if he is a minor, by his father or guardian also; the bond by the student and two sureties. The amount of security to be taken will be—

		Rs.
For a Lower Class student	... ...	600
„ an Upper Class student	Native	750
	European	1,090

The agreement and security bond need not be stamped.

The same rule shall apply to private students who may be granted stipends under Rule 12 (ix), subject, however, to the proviso of Rule 12 (xii). Should any such student not be appointed to the Forest Service of Government at the end of his School course, his agreement and security bond will be returned to him.

18. *Uniform, book, and camp allowances.*—The Director is authorised to make deductions from the pay of Forest Ranger students under Rule 13 (i), or of students of the Subordinate Service under Rules 13 (ii) and 15, or from the stipends of private students under Rules 12 (ix) and 15, to the following amounts:

		Rs.		Rs.
Lower Class students	... ...	4	monthly, or	84 in all
Upper Class students	Native ...	6	„ „	126 „
	European ...	8	„ „	168 „

in order to meet the following items of initial expenditure, *viz*,—

	Upper Class.		Lower Class.
	Native.	European.	
	Rs.	Rs.	Rs.
Uniform and equipment	20	30	20
Books and instruments	60	60	24
Camp outfit	46	58	40
TOTAL ...	126	168	84

The Director will charge off in his accounts such portions of the above as may be necessary from time to time to meet expenditure on the items mentioned until the whole of the amounts are exhausted, after which the student will be required to pay in cash for articles supplied.

19. *Travelling allowances of private students in receipt of stipends.*—Students holding stipends from Local Governments under Rule 12 (ix) are not entitled to travelling allowance; but, as the tours entail greater expenditure in some months than in others, the Director is authorised to make a further monthly deduction from their stipends of Rs. 5 from Upper Class Native students and Rs. 7 from Upper Class European students, and to disburse the amounts in the following manner:

		Native Students.	European Students.
		Rs.	Rs.
Monthly travelling allowances	November—May, 1st year November—March, 2nd year	4	8
	Or for 12 months ...	48	96
Special additional allowance for hill tour		22	16
„ „ for Punjab tour		35	35
	TOTAL ...	105	147

20. Should the Conservator of a Circle from which any Government student of the Subordinate Service is deputed to the School under Rule 13 (ii) prefer it, he can, subject to the orders of his Government, authorise the Director to pay travelling allowance to such student at the rates given in Rule 19 instead of at the rates allowed by the Civil Service Regulations. And in the case of Lower Class Government students deputed to the School under Rule 15, he may similarly authorise the payment of travelling allowance at the following rates instead of the rates permissible under the Civil Service Regulations:

	Rs.
Monthly travelling allowance @ Rs. 4	48
Special hill tour allowance	16
„ Punjab tour allowance	20
TOTAL ...	84

which rates are equivalent to a permanent travelling allowance of Rs. 4 per month for the whole course.

21. *Estimated expense of training.*—It has been calculated that, in addition to the amounts specified in Rule 18 for cost of uniform, books, &c., and camp-equipment, and in Rules 19 and 20 for travelling, the minimum monthly subsistence money for students comes to Rs. 20, 24, and 30 respectively, so that the minimum pay and travelling allowances of Government students under Rule 13 (ii) and the minimum stipends for stipendiary students under Rule 12 (ix) should not be less than Rs. 35 and Rs. 45 respectively, nor should the minimum pay and travelling allowances of Lower Class students (Rule 15) be less than Rs. 28. Thus, the minimum cost of training will be as follows:

	Lower Class.	Upper Class.	
		Native.	European.
	Rs.	Rs.	Rs.
...sistence money	20	24	30
...niform, books, and camp outfit	4	6	8
...ravelling allowance	4	5	7
TOTAL PER MENSEM ...	28	35	45
Or for the 21 months of the course ...	588	735	945

The same amounts should be taken as minima in calculating the allowances to be deposited on account of students from Native States under Rules 14 and 15, or provided by parents and guardians for the cost of training of private students.

Section III.—Disciplinary Rules.

22. *Quarters.*—The Director will allot to students on their arrival in Dehra such quarters as may be available in the School buildings or in the houses rented by him for students' accommodation. The School quarters are tenable during the whole period of the students' course, and the rent is Rs. 2 monthly for each student, or Rs. 4 for each room. Students for whom there is no accommodation in quarters or in houses rented by the Director, or who may prefer it, can, with the permission of the Director, reside in the town in lodgings selected by themselves; but in that case the Director will accept no responsibility for the rent.

All students living in quarters or in the rented houses are expected to abide by such orders as the Director may issue from time to time for the purpose of ensuring cleanliness and sanitation.

No dogs are allowed in quarters, nor may dogs or horses be brought inside the School grounds.

Breakages of furniture, etc., in the quarters or School buildings must be paid for by the students. Students are responsible for the acts of their servants.

23. *Uniform.*—All students must wear the School uniform, which consists of a suit of khaki drill with white-metal buttons, and a grey turban of prescribed pattern, for the hot weather, and of khaki serge with similar buttons for the cold weather and camp. Those students who become members of the Dehra Dun Mounted Rifles are, however, permitted to wear the undress uniform of the corps, which also consists of a suit of khaki drill of pattern similar to that of the School. Students who are Volunteers will wear as head-dress a brown shikar hat while at the School, and the regular corps helmet when on parade. Native students may dispense with turbans, or wear other head-dress, only with the Director's special permission. Uniform must always be worn inside the School building. It must also be worn in the School grounds up to 5 P.M.

24. *Uniform and Camp Equipment.*—The uniform of members of the Dehra Dun Mounted Rifles may be obtained through the corps staff; that of other students through the Storekeeper of the School on the Director's order. As camp equipment each student requires—

(1) A small tent, not larger than 10 feet × 8 feet.

(2) A camp bed.

(3) A small camp table.

(4) A camp chair or "morah."

These articles are made at the School and issued at cost price to students.

25. *Books and Instruments.*—The list of books and instruments required by each student will be published by the Director from time to time. The articles must be purchased from the Director, who endeavours to obtain them of the best quality procurable, consistent with cheapness. No article will, however, be issued by the Storekeeper, except (*a*) on order of the Director, or (*b*) on cash payment.

Copies of the Forest Acts and Forest Code, as also surveying instruments and herbarium presses, are issued on loan, and students using them will be responsible for their safe-custody and return.

26. *Leave.*—During the course of instruction, no student may leave Dehra without the written order of the Director. Nor may students, while in camp, leave the camp head-quarters without the written order of the Deputy Director or the Instructor in charge. Subsidiary rules regarding leave will be made by the Director from time to time.

27. *Holidays.*—During the rains term, Saturday will usually be observed as a holiday or devoted to excursions. In camp, it will ordinarily be a half-holiday. Such of the usual gazetted holidays as are allowed will be notified as such from time to time.

28. *Punishments.*—Students are liable to the following punishments:

(1) Reprimand by the teacher in class.

(2) Reprimand by the Director or the Deputy Director at any time.

(3) Reprimand before a meeting convened by the Director of not less than three School officers, one of whom must be either the Director or the Deputy Director. The proceedings of the meeting will be reported to the Conservator or the Native State deputing the student, or to his parents or guardians if he is a private student; and, if the meeting so decides, a note of them will be made on his final certificate.

(4) The Director, acting with the consensus of the meeting referred to under (3), has power to inflict in addition a fine to the extent of one-third of the salary or allowances of the student for a period not exceeding three months.

(5) The Director, acting with the consensus of a full meeting of the School officers presided over by himself, has power to dismiss any student for misconduct; and a student thus dismissed cannot be re-admitted to the School. The Director may remand any student who in his opinion is not sufficiently promising.

29. *Monthly Reports.*—A progress report on the work of each student will be issued monthly by the Director. It will record the number of marks obtained by the student at the last monthly examination, his application to his studies, and his conduct generally. It will be sent for Government students or private students in receipt of stipends to the Conservator of the Circle from which the student is deputed; for Native State students, to such person as the Durbar may direct; and for ordinary private students, to the parent or guardian concerned.

30. *Library.*—The books in the School Library are available for the use of students under such rules as the Director may make from time to time. Books of reference must be consulted in the library itself, and no books may be taken away except after application to the librarian and entry in a register.

31. *Museum.*—The Museum and Herbarium are also available for the use of students; but the objects in the museum may not be handled or removed without the express permission of the Director or the Deputy Director. Permission to consult the herbarium may be obtained from the Director or the Deputy Director, but the plants must be kept in their order as arranged, and no sheets removed or altered without permission.

32. *Athletic Sports.*—The gymnasium and the tennis-courts will be available for the use of students during all recreation hours on week-days. Cricket and football may be played on the old parade ground. Students are recommended to join the School Athletic Club, the subscription to which is Rs. 4 yearly, and half-rates for those who do not play all the games.

Forms of Agreement and Bond to be executed by students already in the service of, or in receipt of stipends from, Government, previous to entry into the Forest School, Dehra Dun.

Articles of Agreement made and entered into this day of 18 BETWEEN of of the first part and son of the said of the second part and the SECRETARY OF STATE FOR INDIA IN COUNCIL hereinafter referred to as the Secretary of State of the third part. Whereby each of the parties hereto so far as the covenants and conditions on his own part are to be observed and performed covenants with the other of them as follows:—

1. The said hereby of his own free will and consent and with the approbation and consent of the said testified by the execution by him of these presents agrees with and to the Secretary of State his successors in office and assigns that he the said shall well and faithfully pursue his studies at the Government Forest School, Dehra Dun, and qualify for the Forest Service of the Government of British India or of any Local Government.

2. The said shall after completing his studies at the said Forest School and if so required to do serve the Secretary of State his successors in office and assigns in the Forest Department of the Government of British India or of any Local Government for a period of not less than five years and shall during the whole of such period diligently and efficiently do all acts and discharge all duties which may be required to be done by him in his capacity as an officer of the said Department.

3. The Secretary of State his successors in office and assigns hereby engages to educate the said at the Dehra Dun Forest School in all matters relating to forest service forest works and forest administration that it may be deemed necessary by the Director of the said School to teach the said

4. The Secretary of State shall pay the said during the whole period of his stay at the said School at and after the rate of Rs. per month and thereafter while the said shall faithfully and diligently serve as an officer of the said Forest Department at and after the rate of not less than Rs. per month and the said shall be entitled to all the rights and privileges in respect of pay pension and promotion accorded to officers of the said Department for the time by the Rules and Regulations of the Department.

5. Lastly it is hereby agreed and declared that the Secretary of State his successors in office or assigns shall be at liberty to rescind this agreement on account of the negligence failure to attend to duty idleness or any insubordination or misconduct on the part of the said and to dismiss him from the said Forest School or the service of the said Department and the said shall not be entitled to any of the privileges hereby imposed on him but the said or shall thereupon refund to the Secretary of State his successors in office and assigns the total cost including the monthly payments made to the said while at the said School incurred by the Secretary of State or his successors in office or assigns in respect of the education of the said at the said School. IN WITNESS whereof the said parties to these presents have hereunto set their respective hands and seals the day and year first above written.

Know all men by these presents that we
of
(principal obligor)
of and
of
(sureties) are jointly and severally bound to the SECRETARY OF STATE FOR INDIA IN COUNCIL in the sum of Rs. to be paid to the said Secretary of State his successors in office or assigns or his or their certain attorney or attorneys for which payment well and truly to be made we bind ourselves our heirs executors administrators and representatives and each of us binds himself his heirs executors administrators and representatives firmly by these presents sealed with our seals and dated this day of 18 .

WHEREAS the Secretary of State for India in Council for himself and his successors in office and assigns has engaged to educate the said at the Dehra Dun Forest School in all matters relating to forest science forest works and forest administration that it may be deemed necessary by the Director of the said School to teach the said and has also agreed to pay him during the whole period of his stay at the said School at and after the rate of rupees per month and whereas the cost per annum of such education without any such allowance being included is estimated to be Rs. which shall be taken to be the actual cost for the purpose of these presents and whereas in consideration of such education and pay to be given to the said as aforesaid by the said Secretary of State and his successors in office and assigns the said has agreed with the said Secretary of State his successors in office and assigns that he will after completing his studies at the said School and if required to do so serve in the Forest Department of the Government of British India for a period of not less than five years during the whole of which time he will diligently and efficiently do all acts and discharge all duties which may be required of him to be done in his capacity as an officer of the said Department. AND WHEREAS the said Secretary of State has also on his part agreed that the said shall be paid for such service at and after the rate of not less than rupees per month and shall be entitled to all the rights and privileges in respect of pay pension and promotion accorded to officers of the said Department for the time being by the Rules and Regulations of the Department. AND WHEREAS for the purpose of securing and indemnifying the said Secretary of State his successors in office and assigns against all loss and damage which he or they might or may in any way suffer by reason of the said leaving without permission the service of the said Secretary of State his successors in office or assigns in less than five years after the completion of his studies at the said School and for the purpose also of securing the refund to the said Secretary of State his successors in office and assigns of the total cost including the monthly payments made to the said while at the said School incurred by the said Secretary of State or his successors in office or assigns in respect of the education of the said at the said School and in consideration of the payment and education so as aforesaid to be made and given to the said at the said School and as one of the conditions of the admission of the said to the said School it has also been agreed that the said and the said and as his sureties should execute the above-written bond subject to the condition hereinafter contained. Now the condition of the above-written bond or obligation is such that if the said shall well and faithfully and diligently pursue his studies at the said School and qualify for the said Forest Service and shall also after completing his studies at the said Forest School and if so required to do serve the said Secretary of State his successors in office and assigns in the Forest Department of the Government of British India or of any Local Government for a period of not less than five years and shall during the whole of such period diligently and efficiently do all acts and discharge all duties which may be required to be done by him in his capacity as an officer of the said Department and if the said and or either of them their or either of their heirs executors administrators and representatives shall well and truly indemnify the said Secretary of State his successors in office and assigns against all loss and

damage which he or they might or may in any way suffer by reason of the said giving cause for dismissal either while at the said School or while in the service of Government thereafter or of his leaving the service of the said Secretary of State his successors in office or assigns without permission in less than five years after the completion of the studies of the said at the said School and if the said and or either of them their or either of their heirs executors administrators or representatives shall also pay to the said Secretary of State his successors in office or assigns all sum or sums in any way expended paid or incurred by the said Secretary of State his successors in office or assigns in respect of the education of the said at the said School then the above-written bond or obligation shall be void otherwise the same shall remain in full force and virtue. PROVIDED ALWAYS and it is hereby expressly agreed and declared that these presents shall be treated and considered as entered into under the orders of the Government of India for the performance by the said and and of a public duty and an act in which the public are interested within the meaning of section 74 of Act IX of 1872 of the Legislative Council of India.

IN WITNESS, &c.

No. 4760 S.-R., dated Calcutta, the 29th November 1892.

NOTIFICATION—By the Government of India, Finance and Commerce Department.

In exercise of the powers conferred by section 8 of the Indian Stamp Act (I of 1879), the Governor General in Council is pleased to remit the duties payable on the agreements and security-bonds required to be executed, under the Rules to regulate appointments and promotions in the Provincial Forest Service, by students and their sureties previous to entry into the Forest School, Dehra Dun.

SUPPLEMENT TO

The Gazette of India.

No. 27.] CALCUTTA, SATURDAY, JULY 8, 1893.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in* PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

FINANCE AND COMMERCE DEPARTMENT.

REPORT UPON THE OPERATIONS OF THE CURRENCY DEPARTMENT FOR THE YEAR 1892-93.

No. 88, dated Calcutta, the 29th June, 1893.

From—The Head Commissioner of Paper Currency, Calcutta,

To—The Secretary to the Government of India, Finance and Commerce Department.

I have the honour to submit the report upon the operations of the Currency Department for the year 1892-93.

Arrangement of Subjects.

PARAS.

Prescribed Statements.

No. I.—Statistics of Circulation during 1892-93.
" II.—Statement of Notes issued, received and cancelled during 1892-93.
" III.—Statement of Receipts and Expenditure.
" IV.—Classification of Treasuries according to encashment of Notes.
" V.—Statistics of Treasury and other Balances on 31st December 1892.

Other Statements.

No. VI.—Issues and Receipts of Home Notes.
" VII.—Issues and Receipts of Coin.
" VIII.—Value of Notes in circulation from 1863-64.
" IX.—Details of ditto ditto 1880.

OFFICERS IN CHARGE.

2. I was Head Commissioner throughout the year, but was absent on leave and deputation from April 19th, 1892, to January 20th, 1893, during

which period Mr. R. Logan officiated as Head Commissioner. The other circle offices were in charge of the officers mentioned below :—

Bombay . . Mr. A. F. Cox was Commissioner during the whole year.
Madras . . Mr. T. W. Rawlins was Commissioner throughout the year.
Rangoon . . Mr. C. E. Crawley officiated as Commissioner from 1st April 1892 to 15th December 1892. Mr. T. H. Biggs resumed charge of the office on 15th December 1892 and continued as Commissioner to the end of the year.

CONSTITUTION OF CIRCLES.

3. A notification (Finance and Commerce Department, No. 803) was issued on 24th February 1893 with the object of bringing Upper Burma within the Rangoon Circle of Issue. No other changes were made during the year.

ACCOUNTS AND AUDIT.

4. The monthly audit of the accounts has been duly reported for each Office to the Comptroller General, and special audits have also been made by the Deputy Auditors General for 1891-92 of the following offices :—

By Mr. Hart—
Calcutta
Allahabad.
Lahore.
Karachi.

By Mr. Cooke—
Bombay.

The accounts of the Calicut office for October 1889 to September 1892 have been audited by the Assistant Accountant General, Madras.

CIRCULATION.

5. The following figures show the gross and net circulation* at the beginning and end of the year :—

	Gross circulation.	Retired by other offices.	Net circulation.
	₹	₹	₹
1st April 1892 . .	24,40,50,575	32,86,490	24,07,64,085
31st March 1893 . .	26,88,12,195	47,93,995	26,40,18,200

The net circulation at the end of the year exceeded that at the commencement by ₹2,32,54,115, or 9·66 per cent. The highest figure in the year, which is also the highest point yet touched by the circulation, was reached in August 1892. The circulation was then upwards of 29 crores of rupees.

6. The average net circulation at the end of each month of the last five years was as follows :—

	₹
1892-93	27,09,95,630
1891-92	25,43,62,371
1890-91	22,88,92,275
1889-90	16,15,14,963
1888-89	16,43,16,288

There was a large and sudden increase in 1890-91; but the figures for the last three years indicate no retrogression from the high figure then attained, but, on the contrary, they show continued and steady progress.

7. The variations in the net circulation of each Circle are shown in the following table :—

Last day of	Calcutta.	Allahabad.	Lahore.	Bombay.	Karachi.	Madras.	Calicut.	Rangoon.	Total.
	(Thousands of Rupees.)								
March 1892	10,30,46	88,55	1,44,83	7,58,94	72,10	2,68,27	9,18	39,31	24,07,64

Average of 1891-92	9,71,76	1,22,57	1,34,17	8,90,04	67,61	2,76,70	22,75	58,02	25,43,62
„ 1890-91	8,72,19	92,38	1,20,46	8,34,53	49,45	2,49,90	20,39	49,62	22,88,92

* A note is in "Gross circulation" when it is not yet returned to the original office of issue; but if it has meantime been paid off by another office of issue, and is held by it pending return to the original office of issue, then it has ceased to be in "net circulation," though it is still part of the "Gross circulation."

8. The figures in the above table for Calcutta, Bombay, and Madras include the amounts in the Reserve Treasuries of Government, which, so far as they consist of notes, are always held in the higher denominations. These balances are excluded in the following table, which gives the monthly net circulation in lakhs of the Calcutta, Bombay, Madras, and other Circles for each of the past three years :—

Last day of	Calcutta.			Bombay.			Madras.			Other Circles.			Total.		
	1890-91.	1891-92.	1892-93.	1890-91.	1891-92.	1892-93.	1890-91.	1891-92.	1892-93.	1890-91.	1891-92.	1892-93.	1890-91.	1891-92.	1892-93.

10. The circulation during the earlier months was below that of 1891-92; but it expanded rapidly from the commencement of the year, and passed that of the previous year in the month of August, after which it remained considerably above the level of the previous year. The expansion of the circulation is, as usual, mainly due to the very large importations of silver, which exceeded by 372 lakhs those of 1891-92, and were considerably above the average; the silver brought to the mint for coinage was even more largely in excess (530 lakhs) of that brought in the previous year. The larger import was partly due to the large net exportation of gold, which amounted to 281 lakhs against

net imports of 564 lakhs and 241 lakhs in 1890-91 and 1891-92 respectively, and which seems to have been due to the appreciation of the value of gold, as evidenced by the further heavy drop in exchange during the year having led holders of gold to bring out their hoards for realization.

11. The expansion of the circulation was general save only in the Calicut Circle; though the average circulation showed the largest increase in Bombay where the bulk of the silver is imported and is immediately exchanged for Currency Notes. It is not, however, of much use to attempt to explain the variations in individual circles, for these depend largely upon transfers made for the temporary convenience of Government or of Banks, which are afforded facilities for transferring funds from one part of India to another through the Government Account or through the Currency Department. All such transfers have an immediate effect upon the circulation reducing that of one circle, while they enhance that of another. Notes of sub-circles are also largely held by Banks, because they can be cashed at either the circle or sub-circle office. Thus the circulation of the Allahabad Circle, for instance, is largely dependent on the amount of its notes held by the Bank of Bengal. The circulation of the Calicut Circle has fallen very low, and it seems doubtful whether it is worth while to retain this currency circle; but the matter can be considered after another year's experience.

12. The figures in the following table show for the last three years the circulation after deducting the notes held in the cash balances at the Head Offices of Presidency Banks. They indicate that the expansion this year has occurred almost entirely in this portion of the circulation which represents what may be considered the real circulation :—

	1890-91.	1891-92.	1892-93.
April	13,71	17,28	18,78
May	13,96	17,41	19,63
June	13,66	17,90	19,97
July	13,73	17,37	20,59
August	14,58	17,61	20,52
September	15,23	17,69	21,66
October	16,05	19,56	22,27
November	15,67	19,50	22,30
December	16,80	19,84	22,66
January	17,07	18,41	21,76
February	17,58	18,46	21,45
March	17,62	18,45	21,68

13. The average circulation at the end of each month, calculated on the figures for five years (excluding Reserve Treasury figures), is given below, and against it I show the actual circulation for 1891-92 and 1892-93:—

(In lakhs of Rupees.)

	Average for five years ending 1892-93.	Actual. 1892-93.	Actual. 1891-92.
April	1,793	2,125	2,231
May	1,848	2,186	2,312
June	1,929	2,333	2,448
July	1,971	2,510	2,515
August	2,006	2,605	2,514
September	2,084	2,706	2,470

December	2,095	2,531	2,372
January	2,004	2,476	2,067
February	1,943	2,403	2,076
March	1,932	2,399	2,064

It will be seen that the circulation during 1892-93 followed very closely the normal course, rising to the highest level in October and November and then falling again for the rest of the year. In 1891-92, as explained in the report for that year, the circulation departed very materially from the normal course.

14. The details of the net circulation of 31st March 1893 for each denomination of notes are as follows :—

	Number of Notes for Rupees								Total.	
	5	10	20	50	100	500	1,000	10,000	Pieces.	Value.
Calcutta	86,851	2,591,146	72,618	54,699	198,881	24,153	29,206	1,575	3,059,129	10,74,53,625
Allahabad	12,687	41,768	20,887	15,753	21,158	3,297	4,071	538	120,159	1,49,01,805
Lahore	25,045	53,123	37,531	25,860	32,665	6,323	3,738	345	184,630	1,63,16,075
Bombay	300,125	959,476	129,514	92,310	117,624	9,570	25,876	1,803	1,636,298	7,87,54,565
Karachi	4,456	79,449	21,864	7,680	9,814	971	1,535	324	126,093	78,79,950
Madras	46 859	151,719	34,293	26,924	167,545	5,121	2,172	560	435,193	3,08,70,545
Calicut	10,525	11,456	4,734	3,647	4,941	143	106	7	35,559	11,85,815
Rangoon	8,908	29,199	8,642	5,609	15,440	1,070	1,277	251	70,396	66,55,820
	495,456	3,917,336	330,083	232,482	568,068	50,648	67,981	5,403	5,667,457	26,40,18,200
Total for 31st March 1892	480,735	3,571,058	318,609	216,135	505,924	45,653	60,032	5,202	5,203,348	24,07,64,085
Total for 31st March 1891	528,768	3,300,390	311,755	205,933	465,6[illegible]5	44,983	58,425	7,724	4,923,663	25,69,04,490

Notes of all values have increased in number, ten-rupee notes, as usual, having increased most of all, and now forming more than 69 per cent. of the total number of notes issued. Five-rupee notes have increased this year; but in Rangoon and Bombay they have not yet completely recovered from the effect of the recent forgeries in those circles.

15. Dividing the net circulation between notes of R500 and upwards and notes below R500, the values at the end of each of the last three years are—

(Thousands of Rupees.)

	Notes of R100 and under. Value.	Percentage of total.	Notes of R500 and upward. Value.	Percentage of total.	Total.
1892-93	11,66,83	44	14,73,35	56	26,40,18
1891-92	10,58,86	44	13,48,78	56	24,07,64
1890-91	9,87,48	38	15,81,56	62	25,69,04

There has been an increase in both classes of notes, as compared with last year, the proportion of low value notes to the whole remaining practically unchanged.

16. Some remarks were made in last year's report as to the varying proportions of notes of each denomination in the different circles. In further illustration of this point the accompanying table shows the percentage of notes of each denomination in the five principal circles, and the percentage for all circles taken together :—

	Calcutta.	Allahabad.	Lahore.	Bombay.	Madras.	Total of all circles.
Five rupee	2·8	10·6	13·6	18·3	10·8	5·8
Ten ,,	84·7	34·8	28·8	58·6	34·9	69·1
Twenty ,,	2·35	17·4	20·3	7·9	7·8	5·8
Fifty ,,	1·8	13·1	14·0	5·7	6·2	4·1
Hundred ,,	6·5	17·6	17·7	7·2	38·5	10·
Five Hundred ,,	·8	2·7	3·4	·6	1·2	·9
One Thousand ,,	1·	3·4	2·0	1·6	·5	1·2
Ten Thousand ,,	·05	·4	·2	·1	·1	·1
	100·	100·	100·	100·	100·	100·

17. In the Calcutta Circle ten-rupee notes so far outstrip all others as to throw them, as far as numbers are concerned, quite into the shade. In Bombay, these notes also form a considerable proportion of the total number of notes in circulation, and its five-rupee notes are also numerous, forming more than 60 per cent. of the notes of that denomination in all circles; five hundred-rupee notes do not, however, find favour there. In Madras one hundred-rupee notes are specially favoured, the proportion being more than double that of any other circle, and more than five times that of Bombay or Calcutta. Between Allahabad and Lahore the differences are mainly in the three lowest denominations; twenty-rupee notes, which are not much used elsewhere, form a fair proportion of the circulation in both these circles.

18. It is impossible to give any explanation of these differences; but the fact remains that the circulation of notes of the lower denominations is steadily increasing in all circles, and that five and ten-rupee notes especially are used more and more extensively each year in the ordinary retail transactions of the people. It is a matter for congratulation that no serious forgery has occurred during the year under report, for it is a successful forgery alone that places any check on the more extended use of these small value notes; even that, however, does not check the expansion of the circulation as a whole, but merely diverts the circulation from one low denomination to another.

19. The gross value of each denomination of notes of small value in circulation at the end of the last three years is compared below:—

	1890-91.	1891-92.	1892-93.	Percentage of increase in 1892-93 over 1891-92.
₹ 5 . . .	26,43	24,04	24,77	+ 2·9
„ 10 . . .	3,30,04	3,57,11	3,91,73	+ 9·7
„ 20 . . .	62,35	63,72	66,02	+ 3·6
„ 50 . . .	1,02,97	1,08,07	1,16,24	+ 7·5
„ 100 . . .	4,65,69	5,05,92	5,68,07	+ 12.4
	9,87,48	10,58,86	11,66,83	

The decrease in the circulation of ₹5 notes in 1891-92 was due to forgeries of these notes in Bombay and in Rangoon. In 1892-93, there has been a partial recovery, but the circulation is still considerably below that of 1891-92.

20. The average value of each note in circulation in each Circle on the last day of the year compared with the past two years was:—

	1892-93.	1891-92.	1890-91.
	₹	₹	₹
Calcutta Circle	35	37	37
Allahabad „	124	84	98
Lahore „	88	84	99
Bombay „	48	50	58
Karachi „	62	60	53
Madras „	71	66	94
Calicut „	33	32	62
Rangoon „	95	68	78
All India	46·6	46·3	52·2

21. The average value for all India is practically the same as in 1891-92, but the fluctuations in the various circles are considerable. In the smaller circles, a few more or less of notes of ₹10,000 materially affect the average value of the whole, but in the Calcutta and Bombay Circles there is a steady tendency towards a reduction in average value; and it seems probable that in a few years the average value in those circles and the general average value will have fallen to the figures prevailing before the sudden rise in the circulation, which took place in 1890-91, and was at first composed of a disproportionately large number of notes of high value, now gradually being displaced by those of lower value.

The largest difference is in the Allahabad Circle, and is due entirely to an increase in the circulation of notes of ₹10,000 from 49 to 538.

ANALYSIS OF CIRCULATION.

22. Very little has been done to remove the small differences which have been found to exist between the ledger balance of notes in circulation and that obtained from the Issue Registers. The differences in all Circles are now so small that it is extremely difficult to trace them out, and any further attempt at reconciliation would cost more than it is worth. The largest difference is in Calcutta where the unregistered cancellations amount to 2,614, an infinitesimally small proportion of the total circulation. The differences have all been ascertained and it is therefore possible to prove all current work, allowing for the known differences.

RESERVE.

23. The Reserve upon 31st March 1893 stood as follows:—

	₹ a. p.	₹ a. p.
Silver Coin—		
At Calcutta . . .	2,74,77,820 0 4	
„ Allahabad . . .	1,65,67,960 0 0	
„ Lahore . . .	2,13,35,250 0 0	
„ Bombay . . .	6,59,09,089 0 0	
„ Karachi . . .	50,08,525 0 0	
„ Madras . . .	2,06,52,805 0 0	
„ Calicut . . .	7,08,450 0 0	
„ Rangoon . . .	1,77,25,845 0 0	
		17,53,85,744 0 4
Deduct amount received at Calcutta but not paid at Bombay		50,000 0 0
		17,53,35,744 0 4
Small Silver Coin . . .	27,000 0 0	27,000 0 0
Silver Bullion—		
At Calcutta . . .	29,92,726 15 8	
„ Bombay . . .	56,62,729 0 0	
		86,55,455 15 8
Invested in Government securities . . .	8,00,00,000 0 0	8,00,00,000 0 0
Total agreeing with net circulation .		26,40,18,200 0 0

The proportion of the Reserve held in coin and bullion to the total net circulation was very nearly 70 per cent.—a percentage which is far in excess of what is generally considered a sufficient reserve. The maximum amount

has, however, now been invested in securities, and no further investment can be made without further legislation.

24. The half-yearly verifications of the Currency balances were held for all Circles and Sub-Circles on 30th September 1891 and 31st March 1892, and the balances of the last working day of each half-year were verified in accordance with the orders issued on the subject. The half-yearly verifications are conducted by a gazetted officer unconnected with the Currency Department and in the larger offices, *e.g.*, Bombay, occupy a very considerable time. The verification of the balances, especially in silver, is a work of time and labour as it is no small task for one officer to satisfy himself regarding the correctness of a rupee balance, which, as in Bombay, amounted to more than 6½ crores closely packed in treasure vaults.

INVESTMENTS.

25. No change was made during the year in the amount of the investments. The full amount allowed under Act XV of 1890 has been invested. The nominal value of the investment is R8,15,95,000 which is held at a book-value of R8,00,00,000. The average rate at which the whole investment is held on the books is thus a little over R98 against a present market-rate of about R107.

PROFITS OF CIRCULATION.

26. The interest realized and credited under the head "Profits on Note circulation" during the year is R32,63,790, being the full interest at 4 per cent. on the nominal amount of the investment of R8,15,95,000 less only R10 which was realized as anticipation interest in 1891-92.

The interest realized is upwards of four lakhs in excess of that drawn in 1891-92 owing to the increase in the Currency Investment from 7 to 8 crores of rupees at the close of that year.

ISSUE AND RECEIPT OF NOTES.

27. The following are the gross issues and receipts of the year, the detail by Circles being shown in Statement VI:—

	R	*R*
Gross circulation, 1st April 1892		24,40,50,575
ISSUES—		
Over the counter	92,80,35,625	
At Agencies	1,65,15,000	
In remittance transactions: Between Head Offices and Agencies	7,10,48,325	
In remittance transactions: Between Circles	13,24,24,700	
In payment of melting fees	97,850	
		1,14,81,21,500
		1,39,21,72,075
RECEIPTS—		
Over the counter	79,27,53,125	
At Agencies	5,11,675	
From other Currency Circles	9,32,61,825	
For Mint Certificates	3,53,53,865	
In remittance transactions: Between Head Offices and Agencies	7,17,94,690	
In remittance transactions: Between Circles	12,96,84,700	
		1,12,33,59,880
Balance, being gross circulation, March 31st, 1893 (*vide* paragraph 5)		26,88,12,195

28. The Agencies deal exclusively with Treasuries and the bulk of the transactions are in the Punjab. The receipts from other Currency Circles represent the receipt in each Circle of notes belonging to that Circle but cashed in other Circles. The receipts for Mint Certificates are, as explained in last year's report, confined to Bombay.

The remittances are for the most part payments and receipts of one Currency Office, in consideration of receipts or payments at another.

29. The issues and receipts for the last three years are as follows:—

	Issues. *R*	Receipts. *R*
1892-93	1,14,81,21,500	1,12,33,59,880
1891-92	97,47,35,540	99,00,29,740
1890-91	1,03,24,77,750	93,35,27,500

The issues have increased by about 1,734 lakhs, and the receipts by about 1,333 lakhs as compared with the previous year, the difference being made up as follows:—

	Issues.	Receipts.
Over the counter	+7,83	+4,02
Remittance transactions	+10,18	+7,44
Securities purchased	−1,00	...
Mint Certificates	...	+92
Other heads	+33	+95
	+17,34	+13,33

The largest increase is under Remittance transactions and is due partly to an increase in the actual amount of the Remittances and partly to a larger proportion of the Remittances having been effected by the issue or receipt of notes, as distinguished from coin, than in the previous year.

Bombay shows the largest portion of the increase both in issues (4,79) and receipts (2,98) over the counter. Some part of the increase on both heads arose,—to quote the Bombay Commissioner's Report,—

"in consequence of a panic which arose in the Presidency town in the month of August after the issue of the Government of India notification against stamping notes with trade advertisements. It is not improbable that alarm was first created by Marwarries, who, it is said, bought up at a discount notes bearing endorsements and stamps. The alarm was aggravated by an unfortunate mistake on the part of the City Police, who in one part of the city announced that after a certain date no notes bearing an endorsement of any kind would be cashed by Government. The consequence was that notes not absolutely free from endorsements were generally refused acceptance in the bazar and the Currency Office was besieged for several days by an excited throng which kept the staff engaged until 7 or 9 P. M., although five extra counters were opened. The panic subsided as rapidly as it had arisen."

30. The aggregate gross issues and receipts of the several denominations of notes at both offices of issue and Agencies during the year were as follows:—

	Number of notes for Rupees								Total.	
	5	10	20	50	100	500	1,000	10,000	Number.	Value.
Issues	210,614	5,164,672	596,558	424,215	1,250,088	163,412	324,337	52,774	8,886,670	1,14,81,33,500
Receipts	595,992	4,821,509	585,574	408,147	1,187,675	158,951	316,865	52,345	8,427,058	1,12,33,71,880
More Issues	14,622	343,163	10,984	16,068	62,413	4,461	7,472	429	459,612	2,47,61,620

31. The average number of notes that passed over the counters at each Head Office on each working day during the past three years, and the daily average of cancellations are given in the following table :—

	Notes cashed.			Notes issued.			Notes cancelled.		
	1890-91.	1891-92.	1892-93.	1890-91.	1891-92.	1892-93.	1890-91.	1891-92.	1892-93.
At Calcutta . .	12,713	13,410	13,328	14,529	15,152	15,076	8,452	8,760	10,827
„ Bombay . .	6,940	8,203	8,102	8,200	8,524	9,037	5,614	5,544	5,785
„ Madras . .	2,457	2,592	3,014	2,657	2,635	3,115	2,331	2,586	2 799
„ Rangoon . .	645	733	888	758	742	982	425	572	793

The proportion of cancellations is high; but the prompt cancellation of soiled notes is considered here, as also by the Bank of England, to afford a special safe guard against forgery.

ENCASHMENT OF FOREIGN NOTES.

32. The following is the Foreign Note account of the Circles in aggregate :—

	₹	₹
Balance held on 1st April 1892		32,86,490
Received over the counter . . .	9,40,12,380	
Otherwise than in exchange . . .	3,00,000	
From other Circles	11,59,700	
Received at Agencies (net) . . .	4,56,950	
	9,59,29,030	
Total	9,92,15,520	
Remitted to Circles concerned	9,44,21,525	
Balance on 31st March 1893	47,93,995	
Total	9,92,15,520	

33. The details by Circles of the amount received over the counter in the above statement are as follows :—

Statement of Foreign Circle Notes cashed during the year 1892-93.

Cashed by	Calcutta.	Allahabd.	Lahore.	Bombay.	Akola.	Nagpore.	Karachi.	Madras.	Calicut.	Cocanada.	Rangoon.	Total.

Rangoon . .	6,425	100	50	1,590	...	...	300	11,125	200	...	...	19,790
Total .	2,38,27,290	80,01,545	1,80,75,110	3,02,85,560	25	25	29,98,185	90,43,415	11,50,580	30	6,24,615	9,40,12,380

The letter (c) indicates the value of foreign notes which were legally encashable, *i.e.*, the amount of Sub-Circle Notes encashed at their respective Head Circles.

And the comparison for the last four years is as follows :—

Other Circle. Notes cashed at—	1889-90. ₹	1890-91. ₹	1891-92. ₹	1892-93.
Calcutta . .	3,54,08,555	4,39,25,700	4,12,97,670	4,89,05,865
Allahabad . .	54,37,460	46,92,205	1,60,84,065	2,07,26,530
Lahore . .	46,62,845	30,55,615	40,22,880	59,23,620
Bombay . .	1,43,02,185	1,32,03,125	1,50,82,435	1,42,01,465
Karachi . .	12,66,840	13,49,405	16,08,185	14,78,480
Madras . .	39,47,085	26,67,480	24,74,010	19,79,850
Calicut . .	22,25,325	19,89,945	7,47,990	7,76,780
Rangoon . .	28,185	5,510	9,630	19,790
	6,72,78,480	7,08,88,985	8,13,26,865	9,40,12,380

34. The total encashment of foreign notes continues to expand; but the expansion in 1892-93 was confined almost entirely to Calcutta and Allahabad. Calcutta cashed in all 77 lakhs in excess of the previous year, the net result of an increase of 74 lakhs in Bombay notes and 53 lakhs in Lahore notes, and of a decrease of 50 lakhs in Allahabad notes. Allahabad cashed on the whole 46 lakhs more of foreign notes than in the previous year, of which 30 lakhs belonged to the Calcutta Circle, 6 to the Lahore and 8 to the Bombay Circle. There was a special demand for money in the North-Western Provinces, which accounts both for the larger encashment of foreign Circle notes there and for the smaller encashment of Allahabad notes in other Circles. The demand for money in the Punjab was on the other hand slack, and on the whole 19 lakhs more of foreign notes were cashed by that Circle, while 51 lakhs more of its notes were cashed elsewhere. A large quantity of Bombay notes find their way to Calcutta, and are utilised to a considerable extent in the payment of Government dues. The amounts cashed at the Calcutta Office during the last four years have been in lakhs—

1889-90	213
1890-91	266
1891-92	184
1892-93	258

It will be seen that the encashments in 1891-92 were unusually low; in 1892-93 they were of the normal amount.

ISSUE AND RECEIPT OF COIN.

35. The transactions in coin are as follows (for details by Circles see statement VII) :—

	Coin. ₹	a.	p.	Small Coin. ₹	a.	p.
Balance, 1st April 1892 . .	14,29,88,394	10	4	20,000	0	0

BALANCE, 31ST MARCH 1893 (see paragraph 23)		17,53,85,744	0	4
				27,000

36. The receipts and issues for the past three years are given below :—

	Receipts. ₹	a.	p.	Issues. ₹	a.	p.
1892-93	42,52,47,054	9	6	39,28,49,705	3	6
1891-92	35,54,83,880	0	0	39,15,16,276	0	0
1890-91	45,12,29,551	0	0	35,57,11,742	0	0

37. The issues did not differ materially from those of last year; but the receipts were on the whole 7 crores in excess. The main differences were an increase of about 6½ crores in the receipts from the Treasury on account of Mint certificates, and of 2¼ crores in the receipts through remittance transactions, and of ¼ crore in the receipts at Agencies, with a decrease of 2 crores in the receipts over the counter.

38. The net result is an increase of 3¼ crores in the coin reserve, against a reduction of 3½ crores in 1891-92, which is, of course, entirely due to the difference in the silver imports. The reserve coin has now nearly regained the high level at which it stood at the close of 1890-91, though a crore has since then been invested in securities.

STATE OF THE COINAGE.

39. The following table shows the withdrawal of shroff-marked coin from circulation during the year and the remittance of such coin to the Mint :—

	SHROFF-MARKED COIN.				
	Opening balance.	Receipts from the public.	TOTAL.	Remitted to Mints.	Closing balance.
	(In Thousands of Rupees.)				
India	52	20	72	63(a)	9
Central Provinces	4	4	8	3	5
Burma	2	...	2	...	2
Assam	11	6	17	10	7
Bengal	9	2	11	9	2
North-Western Provinces	3,63	5,97	9,60	...	9,60
Punjab	5,76	6,30(b)	12,06	...	12,06
Madras	24	8	32	27	5
Bombay	7	39	46	40	6
TOTAL	10,48	13,06	23,54	1,52	22,02

(a) Remitted to Punjab. (b) Includes 63 received from India.

40. The total amounts withdrawn from circulation in the last five years are shown below :—

1888-89	47,18
1889-90	23,44
1890-91	20,68
1891-92	20,43
1892-93	13,06

The withdrawals show a considerable diminution in 1892-93, and it is to be hoped that the habit of shroff-marking prevails less than formerly, and in time may be altogether eradicated.

41. The following statement shows the number of coins cut and broken under the Coinage Act during the calendar year 1892 :—

NAME OF PROVINCE.	Number of treasuries in which coins were cut.	Believed to have lost by reasonable wear more than 2 per cent. in weight.				Believed to be counterfeit.				Believed to have been reduced in weight otherwise than by reasonable wear.				Considered unfit for further circulation by reason of obliteration of device or for other causes.

(a) Erroneously treated as worn coin instead of shroff-marked.

42. The number of counterfeit coin dealt with does not vary much from year to year. The withdrawals of rupees which have lost more than 2 per cent. in weight by reasonable wear are gradually diminishing; and the withdrawals of rupees reduced in weight otherwise than by reasonable wear, which rose last year, have fallen again in 1892-93.

43. I append the usual statements of whole rupees coined and issued from the Indian Mints from 1835 to 1892, and of the proportion of each of those annual issues found on examination in each district Treasury of a bag of rupees of the coin ordinarily current in each district.

The coinage of 1892 was upwards of 4 crores above that of 1891 and exceeded that of any year since 1877, save the very exceptional year 1890. The total coinage from 1835 to 1892 inclusive amounted to 327¾ crores of rupees.

Rupees of the earlier years are gradually diminishing in number, as might be expected, and the drop this year in the proportion of rupees of 1840 and 1862 is rather larger than usual: the former issue, which includes the coinage of 22 years, now forms less than 15 per cent. of the total coinage, and the latter comprising the coinage of 12 years, forms less than 20 per cent.

Statement of whole Rupees coined and issued from the Indian Mints from 1835 to 1892.

EXCHANGE OF SMALL COIN.

41. The receipts and issues of small change at the Currency Offices during the year were as follows:

	Receipts.			Issues.			Net Issues.		
	₹	a.	p.	₹	a.	p.	₹	a.	p.
Half Rupees	8,39,333	0	0	13,40,025	0	0	5,00,692	0	0
Quarter Rupees	6,96,215	0	0	18,14,499	0	0	11,18,284	0	0
One-eighth Rupees	6,62,944	12	0	12,21,445	4	0	5,58,500	8	0
Copper	3,69,166	0	0	5,74,994	2	9	2,05,828	2	9
TOTAL	25,67,658	12	0	49,50,963	6	9	23,83,304	10	9
TOTAL, 1891-92	17,80,461	10	0	48,68,707	8	3	30,88,245	14	3

The receipts were largely, and the issues slightly, in excess of those of the last year. Under Receipts the increase was in half and one-eighth rupees, while the increase in issues was chiefly in copper. The net issues were 7 lakhs less than last year.

BULLION.

45. The following figures show the operations of the Bullion Clauses of the Currency Act, that is, the amount of Bullion received by the Mint Masters on account of the Currency Offices at Calcutta and Bombay, for the issue of certificates payable at the Currency offices in notes of the Circle or coin:—

	Calcutta.			Bombay.		
	₹	a.	p.	₹	a.	p.
Balance of Bullion on 1st April 1892	77,52,619	5	8	1,00,03,071	0	0
Receipts of Bullion—						
April 1892	60,11,461	14	0	1,10,63,746	0	0

46. The receipts of bullion for the last five years have been—

	Calcutta.	Bombay.	TOTAL.
	₹	₹	₹
1892-93	2,52,33,798	8,84,03,766	11,36,37,564
1891-92	1,67,13,180	4,38,64,931	6,05,78,111
1890-91	2,79,94,418	9,24,98,201	12,04,92,619
1889-90	73,22,954	7,07,87,073	7,81,10,027
1888-89	57,28,803	6,10,97,675	6,68,26,478

The receipts were very nearly twice those in the previous year, and did not fall far short of those of 1890-91.

47. The operation of the Bullion Clauses of the Currency Act is also shown in further detail of the transactions between Mint and Currency in the following figures:—

	Transfers to the Mint of bullion from the Currency Department.			Balance at end of month of bullion paid for by the Currency Department and held as part of its reserve.			Balance of bullion held on Treasury account, *i.e.*, the amount by which the deliveries of new coin failed to meet the Mint Certificates payable by Treasury or Currency.

TOTAL RECEIPTS FOR 12 MONTHS	1,94,86	9,59,04	11,53,90						

AGENCIES.

48. The only province, in which the Currency Agency system, properly so called, is at all thoroughly worked, is the Punjab. The issue of notes from the Agencies in that province at Simla, Rawal Pindi, Umballa and Peshawar continues to show development, the total issues of notes from Agencies amounting to 1,58 lakhs against 1,24 lakhs in 1891-92 and 1,03 lakhs in 1890-91. The issues from Agencies form a very large proportion (23 p. c.) of the total issues in this Circle.

49. The other so-called Agencies are really Currency chests, established with a view to more conveniently and rapidly effecting the resource operations of Government, as explained in full detail in last year's report. This system is being developed every year.

At the end of the year, the total number of Currency chests was 105 against 60 in 1891-92, and the total balance of coin deposited in them was upwards of 5,37 lakhs of rupees against R373 in 1891-92 distributed as follows:—

	₹ 1891-92.	₹ 1892-93.
Calcutta Circle	1,28,27,882	1,54,41,000
Allahabad „	95,88,000	76,75,000
Lahore „	63,46,950	96,87,510
Bombay „	73,19,000	44,36,000
Madras „	4,30,000	80,17,000
Rangoon „	8,15,000	84,92,100
	3,73,26,832	5,37,48,610

CLAIMS ON LOST NOTES.

50. The following is a statement of lost and mutilated notes paid during the year on bond of indemnity:—

Nature of loss.	Number of notes for Rupees								Total.	
	5	10	20	50	100	500	1,000	10,000	Number.	Value.
Whole notes, lost or destroyed .	...	3	...	2	16	...	...	...	21	1,730
Half notes { lost by Post .	19	71	42	46	138	24	1	...	341	30,745
Half notes { lost accidentally .	6	104	27	84	268	14	14	...	517	53,610
Mutilated notes . . .	9	72	14	7	22	2	5	...	131	9,595
1892-93 .	34	250	83	139	444	40	20	...	1,010	95,680
1891-92 .	42	306	69	108	404	32	28	...	989	94,450
1890-91 .	57	332	93	89	310	40	21	...	942	81,915

The total value of claims on lost and mutilated notes is infinitesimally small when compared with the value of the notes in circulation. There is a slight increase in both the number and the value of the claims; the increase occurred chiefly in the Punjab where claims to the value of R19,165 were discharged against R7,125 and R1,755 in the preceding two years. The excess was due to the specially large amounts lost in two cases.

FRAUD AND FORGERY.

51. A few cases of attempted fraud occurred during the year; but none of them presented any special features of interest. Four are still under investigation.

52. The forgeries, which came to light during the year, were as follows:—

₹	Number.
5	62
10	34
20	2
500	1
1,000	2
	101

None of the new forgeries were of a serious nature.

53. The number of forged 5-rupee notes presented shows a large reduction as compared with the previous year. Forty of these notes belong to the Bombay forgery of the $\frac{S}{78}$ series mentioned in my Report for 1889-90, for forging which one Husein Mahomed was sentenced to transportation for life.

Thirteen notes belong to the Rangoon forgery, series $\frac{Q}{11}$ mentioned last year; two were presented at Calcutta, two at Bombay, and nine at Rangoon.

Of the remaining notes of this denomination five belong to the Calcutta series $\frac{R}{74}$, three to the Bombay series $\frac{S}{74}$, and one to $\frac{R}{75}$, a new forgery, which is very clumsy.

54. Of the 10-rupee notes, 17 belong to the $\frac{R}{85}$ series mentioned in previous reports, 13 of which were presented at Calcutta.

The following new forgeries in this denomination were brought to light during the year under report:—

$\frac{U}{22}$, a very clumsy imitation; the medallions are like those of 50-rupee notes, the figures are coarse and unequal, and the paper has no watermarks upon it.

$\frac{U}{24}$, a very clumsy forgery; the medallions are unequally made and coloured and the figures and letters are coarse, the paper is ordinary. The note purports to bear Mr. Westland's signature.

$\frac{U}{74}$, $\frac{V}{2}$ } the printing and colouring are both defective.

55. The most curious case was that in connection with 10-rupee notes of the $\frac{D}{16}$ series of the Allahabad Circle, which is thus described by the Commissioner of Paper Currency, Bombay:—

"A singular case of forgery was prosecuted in Sind, in which the forged notes consisted of portions of handkerchiefs on which representations of notes of the Allahabad Circle had been printed. The importation of handkerchiefs of this description was reported by Mr. Tupp to your office in June 1882. The evidence in the Sind case went to show that the possessors of these cloth notes wished to pass them as genuine, and they were convicted by the Assistant Sessions Judge under Section 474, Indian Penal Code. On appeal, however, the Sessions Judge of Shikarpur held that the documents, which showed no signature, could not be legally regarded as forgeries, and that though a charge of attempting to cheat might have succeeded the conviction of the charge as laid must be set aside."

It would seem almost impossible that any one could be deceived by such crude imitations as these; and yet it is clear that some danger may exist even of these imperfect forgeries passing among the ignorant rustic folk in some parts of India.

The law of forgery, which seems to have been correctly interpreted by the Sessions Judge, may possibly require some modification, as far as Currency notes are concerned. But on this point I shall address Government separately.

56. The single R500 note belongs to the forgery mentioned in paragraph 51 of the Annual Report for 1889-90. It was tendered at the Bank of Bengal, Lahore, by one Hashan Din, whose possession does not appear to have been fraudulent, and it was unfortunately found impossible to trace the note farther back.

57. The two thousand-rupee notes were $\frac{U}{78}$ 62726 and $\frac{V}{98}$ 39633 of the Calcutta Circle. Two men, who are described by the Police as belonging to a gang of professional swindlers in Calcutta were arrested while attempting to pass these notes, which they pretended, were stolen notes. The notes have not yet been forwarded to this office, but the Commissioner of Police says that they "were made by hand and could not possibly have been passed off as genuine".

REMITTANCES OF SILVER.

58. The following is the detail of silver remittances:—

	₹
Calcutta to Rangoon	20,00,000
Bombay to Calcutta	1,00,00,000
Bombay to Karachi	56,21,000
Bombay to Madras	73,00,000
Bombay to Rangoon	60,00,000

And the following remittances of silver were made through Agencies:—

Calcutta to Lahore	5,00,000
Allahabad to Lahore	45,00,000

59. The remittances to Rangoon are made to meet the trade demand in the rice season. Bombay always has to send a large amount of coin to Calcutta as the silver, imported for coinage, is tendered to the Bombay Currency Office, while Bombay notes are cashed to a considerable extent by the Calcutta Office, being tendered by the Government Treasury into which they are paid on account of Government dues. Madras also has to be supplied periodically with coin from Bombay. The remittances to Calcutta and Madras were considerably below the normal in 1891-92 owing to dulness of trade.

TREASURY STATISTICS.

60. The transactions in notes at the several Treasuries in India during 1890-91, 1891-92 and 1892-93 have been as follows :—

	1890-91.	1891-92.	1892-93.
	₹	₹	₹
Receipts from the Public in payment of Government dues	11,98,88,748	13,01,84,600	14,66,58,760
Receipts from the Public in exchange for silver	2,91,77,712	3,27,91,825	3,79,30,267
Receipts from the Public for other notes	24,13,810	24,51,975	30,03,963
TOTAL RECEIPTS	15,14,80,270	16,54,28,400	18,75,92,990
Issues to the Public in payment of Government dues	4,42,09,970	5,04,80,910	4,20,91,645
Issues to the Public in exchange for silver	3,68,19,145	4,18,73,290	4,33,08,767
Issues to the Public for other notes	24,13,810	24,51,975	30,03,963
TOTAL ISSUES	8,34,42,925	9,47,56,175	8,84,04,375

The receipts again show a large increase, but the issues are lower than last year.

61. The total treasury transactions in notes during the last three years have been as follows (in lakhs of Rupees) :—

	1890-91.	1891-92.	1892-93.
Government of India	449	368	514
Central Provinces	46	59	58
Burma	34	55	77
Assam	54	59	62
Bengal	530	588	606
North-Western Provinces and Oudh	205	282	346
Punjab	318	386	235
Madras	359	432	474
Bombay	348	366	381
Hyderabad	6	7	7
TOTAL	2,349	2,602	2,760

The figures show curious fluctuations from year to year which do not admit of any general explanations.

62. The following statement gives details regarding the encashment of notes by Treasuries :—

	1890-91.	1891-92.	1892-93.
Where notes were cashed throughout the year to the extent of the public demand	165	164	170
Where notes were ordinarily cashed, but not always	28	48	53
Where notes were not usually cashed	46	31	20
TOTAL	239	243	243

It is satisfactory to observe that the number of Treasuries where notes are not usually cashed has fallen from 46 in 1890-91 to 31 in 1891-92, and again to 20 in 1892-93. Considering the position of many of our Treasuries, and the difficulty experienced in keeping them supplied with silver, it must be admitted that the number of Treasuries not usually able to cash notes is exceedingly small.

63. Statement V shows the proportion of Treasury and Bank balances which in each Province was held in the form of Currency Notes.

Including Reserve Treasuries the percentage of balances held in notes was :—

	1891.	1892.
Calcutta Circle	35 per cent.	45 per cent.
Bombay „	41 „	35 „
Madras „	29 „	23 „

But if Reserve Treasuries were omitted the figures would be :—

	1891. Balance in		1892. Balance in		Percentage of Notes.	
	Notes.	Cash.	Notes.	Cash.	1891.	1892.
	In thousands of rupees.				Per cent.	Per cent.
Calcutta Circle	42,32	1,55,19	53,92	1,06,87	22	33
Bombay „	17,64	94,75	20,46	90,27	16	18
Madras „	21,95	99,97	16,21	78,41	18	17

RECEIPTS AND EXPENDITURE.

64. The figures of receipts and expenditure given in Statement III are only approximate, as the accounts for 1892-93 are not yet closed. The actual receipts in 1891-92 were more by ₹1,230 and the expenditure more by ₹137 than the approximate figures given in last year's report; details of the differ-

ences are given in the foot-note to Statement III. The charges for 1892-93 were more than in the previous year by about ₹15,000 due partly (₹8,000) to increased charges for note forms (these charges having been very low in 1891-92), partly (₹4,000) to larger charges for petty construction and repairs (especially at Lahore), and partly (₹3,000) to larger contingent charges due to the expansion of the circulation and the larger balances of coin held.

STATEMENTS.

FINANCE AND COMMERCE DEPARTMENT
(Statistical Branch)
Calcutta, 13th July 1893.

J. F. FINLAY,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on Saturday, July 8th, 1893.

There has been no important change of weather during the week under review. Strongly marked monsoon conditions have prevailed throughout the country, and the rainfall has been very general, except in parts of the Peninsula and of North-Western India, where the rainfall was scanty and irregularly distributed. The monsoon currents have not, however, been as strong in the present as in the preceding week, and the mail steamer which crossed the Arabian Sea between the 4th and the 9th of July experienced only a moderate to fresh monsoon. The rainfall has been sufficiently general to keep the temperature low, but the abnormal depression was less than in the previous week.

The chart of the 2nd showed that the barometer was falling, except over the Peninsula and the central parts of the country. Pressure was highest in Ceylon and Tenasserim and lowest in the west of the Punjab, the greatest pressure difference being 0·392 inch. The winds varied very considerably in direction, and on the West Coast were remarkably light and variable. Rain had fallen fairly generally, and the principal amounts were—Kurnool, 5·20 inches; Bahraich, 4·80 inches; Dehra Dun, 3·84 inches; Cuddapah, 3·82 inches; Bogra, 2·75 inches; and Bareilly, 2·27 inches. On the following day, the 3rd, the barometric changes were similar to those on the 2nd, and pressure remained highest in Malabar and Ceylon and lowest in the West Punjab. The greatest pressure difference was 0·501 inch, so that the barometric gradient had increased considerably. The winds were still variable and light on the West Coast, but elsewhere strong westerly winds prevailed. The rainfall was again general, except in parts of the Peninsula and of the north-west. The heaviest amounts were 3·15 inches at Mymensingh, 2·85 inches at Bahraich, 2·37 inches at Mangalore, and 2·08 inches at Chanda. On the 4th the barometer was falling everywhere. The fall was rapid over North-Western India, while it was only slow in the south of the Peninsula; hence the barometric gradient had increased, and the pressure difference was as much as 0·592 inch. On the West Coast south of Goa the winds were abnormally light and were variable in direction, but in all other places strong monsoon winds were reported. The distribution of rain was the same as on the preceding day, parts of the Peninsula and of North-Western India reporting little or no rain. The amounts were, however, somewhat larger than on the 3rd. Bhamo and Mainpuri reported over four inches, Purneah over three inches, and Silchar, Jalpaiguri, Roorkee, Rawalpindi, Mangalore, Mormugao, and Bombay over two inches. On the 5th pressure was rising over North-Western India, the Gangetic plain, and part of North-Eastern India and was falling elsewhere. The relative distribution was little changed, but, owing to the changes described above, the pressure difference had been reduced to 0·568 inch. The winds were little changed, and in most places blew from their normal monsoon directions. The force was fairly normal. Rain was very general throughout the country and in places was very heavy: thus Ludhiana reported 6·42 inches; Sutna and Allahabad, 4·27 inches; Cawnpore, 3·33 inches;

and Burdwan and Jalpaiguri, 3·14 inches. On the 6th pressure was still increasing over a large part of Northern India, while it was decreasing over the Peninsula and the central parts of the country. The general distribution remained unaltered, readings being highest in Malabar and lowest over the Indus Valley; but, owing to the changes described above, the pressure difference had continued to decrease, and amounted to only 0·479 inch between Malabar and Sind. Rain was again very general, and in several places the amounts were fairly heavy. Mormugao, Goa, and Bombay reported nearly 4 inches, while Barisal, Mussoorie, Sirsa, Allahabad, Amraoti, Nagpur, Mount Abu, and Khammamett had over 2 inches. On the following day, the 7th, the barometer was still rising, except in the extreme south. In the Indus Valley the rise had been brisk. The chart still showed a depression over Sind, and a high pressure area over Malabar, Ceylon, and the south of the Bay; but the pressure difference between Malabar and Sind had decreased to only to 0·376 inch. Monsoon winds of moderate force prevailed throughout the whole Indian region, and rain was reported from almost everywhere. Over a large part of the country the amounts were smaller than on the preceding day, but Deesa reported 6·79 inches, Patna 3·87 inches, Multan 3·62 inches, and Purneah, Rawalpindi, Mormugao, Ahmedabad, and Mount Abu over 2 inches. Saturday's report showed that the barometer was still rising almost everywhere. There was no change shown in the general distribution, and the pressure difference between Malabar and Sind was practically the same as on the previous day. Monsoon winds and general rain continued, though there were some signs of contraction in the monsoon current. The following were the principal falls of rain: Mount Abu, 8·72 inches; Surat, 3·50 inches; Lahore, 3·32 inches; and over 2 inches at Rangoon, Sialkot, Calicut, Mercara, and Amraoti.

Temperature.—The rainfall having been somewhat less heavy than in the preceding week, the abnormal depression of temperature was also less.

The following table shows the variations of the mean temperature from the normal on each day of the week for the different Provinces of India:

Province.	July.							Mean variation of week.
	2nd.	3rd.	4th.	5th.	6th.	7th.	8th.	
	°	°	°	°	°	°	°	°
Burma	+0·2	+1·4	+2·1	+0·5	+1·1	+0·6	+0·9	+1·0
Bengal and Assam	—0·9	—1·7	—2·9	—2·6	—2·2	—2·1	—1·6	—2·0
North-Western Provinces and Oudh	—2·8	—3·3	—5·0	—2·9	—3·3	—2·8	—2·5	—3·2
Punjab	—3·1	—2·3	—1·0	—5·5	—5·8	—7·5	—8·4	—4·8
Bombay	—0·3	—0·5	—0·5	—1·3	—1·3	—1·0	—1·9	—1·0
Central Provinces and Berar	—0·5	+0·2	—0·1	—1·4	—3·9	—3·5	—2·0	—1·6
Central India and Guzerat	—3·4	—2·8	—3·9	—3·6	—3·5	—3·3	—3·6	—3·4
Sind and Rajputana	—6·1	—3·8	—3·9	—3·6	—3·8	—3·7	—3·9	—4·1
Madras	—2·1	—0·9	—0·1	—1·1	—0·5	+0·1	—0·5	—0·7
Mean for whole of India	—2·1	—1·5	—1·7	—2·4	—2·6	—2·6	—2·6	—2·2

The above shows that the general deficiency of temperature for the whole week for the whole of India was 2·2°, which is 1·0° less than the deficiency of last week. In Burma, where the rainfall has been steadily light, there was an excess of temperature on each day of the week and a mean excess of 1·0°. In all the other Provinces there was a deficiency, which ranged from 0·7° in Madras to

4·8° in the Punjab. The coolest days for the whole of India were the 6th, 7th, and 8th, on each of which dates the abnormal depression of temperature for the whole country amounted to 2·6°.

Rain.—During the week under review effective rain has been received in all the rainfall divisions. The heaviest average actual rainfall was 16·37 inches in Assam (Surma). This is followed by 11·03 inches in the Konkan and by 9·61 inches in North Bengal, while the lightest average fall was 0·2 inch in Madras (South). According to the normal, the heaviest rainfall during this week should be 11·31 inches in the Konkan, followed by 11·21 inches in Tenasserim and 11·11 inches in Arakan, while the lightest rainfall should be 0·19 inch in Madras (South). The points of difference then between the actual and normal rainfall of the present week are mainly the excess of rain in Assam (Surma) and North Bengal and the deficiency in Tenasserim and Arakan. Both actually and normally the rainfall is lightest in South Madras.

The third column of the table shows that the monsoon rainfall of the week has been excessive over by far the greater part of the Indian region. The only important exceptions are Burma and the west of the Indian Peninsula. The Bay current of the monsoon, as was the case in the preceding weeks of the present monsoon period, has to a large extent avoided Burma, and the rainfall of Tenasserim for the week was 4·77 inches short of the average, and that of Arakan was 3·59 inches short. In Malabar, Madras (South Central), Coorg, Mysore, the Konkan, the Central Provinces (East), Kathiawar, and Central India (East) the week's rainfall was also less than usual, but in all the other divisions the fall was excessive. In Assam (Surma) the excess was more than six, and in East Bengal and the Punjab (Submontane) was more than three inches. The greatest deficiency was 5·73 inches in Coorg, followed by 4·77 inches in Tenasserim and 3·59 inches in Arakan. There were thus thirteen divisions which had deficient and thirty-eight which had excessive rain during the week.

The three concluding columns of the table show that in Tenasserim, Lower Burma, and Central Burma the monsoon rainfall up to date has been deficient; that in Arakan, Assam (Brahmaputra), North Bengal, Orissa, North Behar, Malabar, Coorg, Mysore, Berar, the East Coast (North *a*), and Hyderabad (South) it has been approximately normal, while in all the other divisions it has been excessive.

The following gives the largest total amounts received during the week as reported in the rainfall telegrams of the week:

Division.	District.	Station.	Amount.
Arakan	Akyab	Maungdaw	11·12 inches.
East Bengal	Rangamati	Sudder	11·86 ,,
Assam	Khasia Hills	Cherra	53·94 ,,
Central Bengal	Pubna	Serajganj	11·52 ,,
North Bengal	Cooch Behar	Matabhanga	16·61 ,,
Behar	Purneah	Kissengunge	13·43 ,,
Oudh	Bahraich	Sudder	12·92 ,,
North-Western Provinces.	Dehra Dun	Kalsi	12·71 ,,
Punjab	Gurdaspur	Pathankot	14·79 ,,
Ditto	Kangra	Sudder	14·46 ,,
Malabar	South Kanara	Karkul	16·49 ,,
Konkan	North Kanara	Honavar	19·23 ,,
Deccan	Kolhapur	Bawda	21·40 ,,
Guzerat	Surat	Chikhli	15·19 ,,
East Coast	Ganjam	Tekkali	11·59 ,,

Simla, *13th July, 1893.*

W. L. DALLAS,
Asst. Meteorological Reporter to the Government of India.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the state of the Season and Prospects of the Crops.

Madras.—*For week ending 8th July.*—Rainfall heavy or good throughout, except in parts of the Deccan, Central, and Southern districts, where the falls were light. Agricultural operations proceeding briskly almost throughout, and standing crops generally thriving, but rain is wanted in parts of Trichinopoly and Tinnevelly. Water-supply, pasture, and fodder generally ample, and cattle in good condition. General prospects favourable. Prices continue stationary, though slightly easier in Deccan.

Bombay.—*For week ending 12th July.*—Rain throughout the Presidency. Young crops injured by rain, rats, or insects in parts of eight districts. Agricultural operations progressing generally, but sowings retarded in parts of eight districts owing to excessive or deficient rain. Transplantation progressing in parts of seven districts. Prices steady, except in parts of two districts. Agricultural stock good and fodder sufficient.

Bengal.—*For week ending 8th July.*—General and copious rain has fallen during the week, except in Orissa and parts of South-West Bengal, where the falls were light. Cultivation is still retarded, and the crops on low-lands have suffered in many places owing to excessive rainfall. Early rice is being harvested, and jute is also being cut in some places. Indigo manufacture is going on, but the produce is expected to be short in Murshedabad and Purneah. Prices are almost stationary, but common rice has slightly risen in some districts. Cattle are generally healthy. Water is plentiful, and the fodder supply is sufficient in all districts, except Noakhali.

North-Western Provinces and Oudh.—*For week ending 12th July.*—Monsoon weather continues, and a break would be beneficial for agricultural operations. Standing crops are flourishing. Prospects good. Markets sufficiently supplied. Prices generally steady.

Punjab.—*For week ending 12th July.*—Heavy rain has fallen throughout the Province. Harvesting of spring crops nearly over; outturn good, but somewhat affected by excessive rain. Ploughing for autumn crops in progress. Condition of standing crops are generally fair. Cattle are generally in good condition. Fodder sufficient in all districts. Prices unsettled in one district, falling in three others, and stationary elsewhere.

Central Provinces.—*For week ending 12th July.*—Weather cloudy and warm with occasional rain. Rainfall heavy in the Nagpur country. More rain is required in parts of one district. Autumn sowings continue. Prospects favourable.

Burma.—*For week ending 8th July.*—Rain fell throughout Burma, but the fall was insufficient in four districts. In Lower Burma ploughing, sowing,

and transplanting are progressing favourably. In Upper Burma agricultural operations are progressing generally, but the want of rain in Shwebo interferes with the transplanting of paddy. The price of paddy has fallen slightly in Rangoon and Bassein and to a greater extent in Kyaukse, but it has risen in the Ruby Mines, Sagaing, and the Upper Chindwin districts.

Assam.—*For week ending 11th July.*—Report not received.

Mysore and Coorg.—*For week ending 12th July.*—MYSORE: Rainfall general. Standing crops good, except in parts of one district, where more rain is wanted. Prospects favourable. Prices risen in two districts.

COORG: Rainfall good. Ploughing of rice fields and transplanting of paddy in progress. Planting of coffee continues. Slight rise in prices of food-grains. Water and fodder for cattle sufficient.

Berar and Hyderabad.—*For week ending 12th July.*—BERAR: Rainfall good. Weather warm and cloudy. Sowing of cotton and other autumn crops continues. Fodder and water sufficient. Cattle healthy. Prices steady.

HYDERABAD: Rainfall good. Sowing of hot-weather crops in progress and that of irrigated paddy commenced. Prices slightly risen.

Central India.—*For week ending 12th July.*—Rain throughout Central India during the week, and the supply has been sufficient in all parts. Agricultural operations in progress. Weeding of crops commenced in Bundelkhand. Cattle in good condition. Prices still fluctuating in Gwalior; stationary elsewhere.

Rajputana.—*For week ending 12th July.*—Rainfall generally good throughout Rajputana. Agricultural operations going on, except in Kherwara and parts of Meywar, where they are at a standstill owing to excessive rain. Agricultural stock good. Pasturage or fodder sufficient. Prices falling in four States, rising in one, and steady elsewhere.

Kashmir.—*For week ending 11th July.*—River flooded, but no damage done to crops, which are in excellent condition. Prices continue stationary.

Nepal.—*For week ending 8th July.*—Heavy showers. Prospects good.

E. C. BUCK,
Secretary to the Government of India.

(*a*) Includes the Bezváda-Godaveri section of the East Coast (state) railway.
(*b*) Includes the Godhra-Rutlam railway.
(*c*) Includes the Guntakal-Mysore frontier section from 1st April 1893.
(*d*) Includes the Tirhoot state railway. Although for convenience classed amongst the state railways, the company's section of this line is the property of the Bengal and North Western railway company.
(*e*) Includes the Jammu and Kashmir and the Hyderabad-Umarkot railways.
(*f*) Although for convenience classed amongst the state railways, this line is the property of the Bengal Central railway company.
(*g*) Includes the Wardha Coal, Dhond-Manmád, Khámgaon, and Amráoti railways.
(*h*) Includes the Bangalore-Nanjangúd and the Bangalore-Mysore frontier sections.
(*i*) Total receipts from 30th April to 17th June 1893.

F. B. HEBBERT,
Under-Secretary.

SIMLA, *the 13th July 1893.*

Printed and published for the GOVERNMENT OF INDIA *at the* GOVERNMENT CENTRAL PRINTING OFFICE, *Simla.*

SUPPLEMENT TO

The Gazette of India.

No. 29.} CALCUTTA, SATURDAY, JULY 22, 1893.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in* PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on Saturday, July 15th, 1893.

During the week under review widely extended, but moderate, monsoon conditions have prevailed throughout the Indian region. Pressure has been steadily lowest over the Western desert and relatively low over the Gangetic plain, while it has been steadily highest over the south of the Indian region, and on several occasions relatively high along the line of the Himalayas. Normal monsoon winds have accompanied this distribution of pressure, and the rainfall has been characterised rather by general moderate falls than by heavy localised rain. There has been a complete absence of severe storms, and the general monsoon circulation has been practically undisturbed. There has been a slight general depression of temperature.

On the morning of the 9th the chart showed a well marked low pressure area over the Western desert, while readings were highest over Malabar, Ceylon, and Tenasserim. The pressure difference between Malabar and the Indus Valley was 0·311 inch. The winds were westerly across the Peninsula and the central parts of the country, southerly over the Bay area, and irregularly easterly up the Gangetic plain. The rainfall was light or absent over Upper Burma, Lower Bengal, the Western Punjab, and the Bombay Deccan, but was fairly general elsewhere. The amounts received were on the whole not heavy. The following were the more important falls: Mussoorie, 2·88 inches; Sialkot, 1·97 inches; Meerut, 1·95 inches; Chakrata, 1·75 inches; and Mangalore, 1·73 inches. On the morning of the 10th pressure was decreasing in most places, but the changes had not materially altered the general distribution of pressure. Readings were highest over the south-east of the Bay and lowest in the Indus Valley. The pressure difference between Malabar and the Indus Valley was 0·311 inch, which was the same as on the previous day. The winds were generally unaltered, except that there was less easting in the current up the Gangetic plain. The distribution of rain was also approximately the same as on the preceding day. The principal falls were 4·90 inches at Madura, 3·90 inches at Agra, 2·95 inches at Mussoorie, 2·76 inches at Cherat, 2·45 inches at Khammamett, 2·00 inches at Patna, and over 1 inch at several stations. On the 11th the barometer was still falling almost everywhere. The area of lowest pressure had moved northward and lay over the west of the Punjab, and the barometric gradient had increased; but otherwise the pressure conditions were little changed. The pressure difference between Malabar and the Indus Valley had risen to 0·388 inch. The winds were fairly normal, and rain had continued to fall generally, except in parts of Lower Bengal, of the Punjab, of the Bombay Deccan, of the west of the Central Provinces, and of Sind. The following were the principal falls: Gnatong, 2·45 inches; Bareilly, 2·23 inches; and Dehra Dun, 1·84 inches. The chart of the 12th showed that pressure was decreasing over Sind, the Punjab, the Gangetic plain, and North-Eastern India, and increasing elsewhere. The changes were, however, small, and the general distribution was little changed. The pressure difference between Malabar and the Indus Valley was 0·440 inch, so that the barometric gradient over Western India had continued to increase. Westerly and south-westerly winds prevailed over the greater part of the country, and the force over Sind, Kathiawar, and the central parts of the country was high. The rainfall had been light or absent over the west of North-Western India, over Lower Bengal, over the Bombay Deccan, and over Berar, but continued general elsewhere. Moulmein reported 5·29 inches, Akyab 3·21 inches, Tavoy 2·14 inches, and Mymensing 2·12 inches; while several stations reported amounts exceeding 1 inch. On the 13th the barometric changes were generally downward over Burma and the Peninsula and upward elsewhere. The changes were

small and the general distribution of barometric pressure was little altered. The pressure difference between Malabar and the Indus Valley was 0·423 inch, which was slightly less than that recorded on the previous day. The winds were northerly or variable on the West Cost, generally westerly or south-westerly in other parts of India, and between south-west and south-east over Burma. The rainfall was generally light and scattered over the Peninsula and the central parts of the country and also in North-Western India. Elsewhere it continued general. Burdwan reported 4·56 inches, Gorakhpur 4·50 inches, Akyab 3·63 inches, Delhi 3·32 inches, Diamond Island 2·46 inches, Mymensingh 2·08 inches, Dehra Dun 2·60 inches, Chakrata 2·59 inches, and Raichur 2·07 inches. On the 14th the barometer was falling everywhere, and a very small depression had appeared over Lower Bengal, but in other respects the pressure distribution showed no important change. The pressure difference between Malabar and the Indus Valley was 0·470 inch. The wind was north-westerly or north-north-westerly on the West Coast, southerly to south-easterly over Burma, Assam, and East Bengal, and generally westerly or south-westerly elsewhere. The distribution of rainfall was practically the same as on the preceding day. The principal falls were—4·55 inches at Lucknow, 4·39 inches at Dehra Dun, 4·34 inches at Bareilly, 2·70 inches at Bassein, and 2·65 inches at Mainpuri. On the 15th the barometer was rising, except in Bombay. The small depression over Lower Bengal had increased in size, but otherwise there was little change. The winds were feebly cyclonic in Bengal, and easterly winds were reappearing over the north of the Gangetic plain; but elsewhere the directions were similar to those reported on the 14th. Rain was more general over the Peninsula, but was less heavy over the North-Western Provinces. The following were the principal falls: Sambalpur, 3·83 inches; Wellington, 2·97 inches; Hazaribagh, 2·31 inches; Balasore, 2·16 inches; and Ranikhet, 2·12 inches.

Temperature.—The following table shows the variations of the mean temperature from the normal on each day of the week for the different Provinces of India:

Province.	July.							Mean variation of week.

Mean for whole of India	—2·1	—1·6	—1·3	—1·1	—0·9	—1·3	—1·4	—1·4

On each day of the week the mean temperature of the whole of India has been below the normal, the deficiency ranging from 2·1° on the 9th to 0·9° on the 13th. The only Provinces which on any day had any excess of temperature were Burma, Bengal, Bombay, the Central Provinces, and Madras. In Bombay the mean temperature of six days exceeded the normal, in the Central Provinces of five days, and in Burma, Bengal, and Madras of one day each. The mean deficiency of the whole week for the whole of India was only 1·4°.

Rain.—Effective rain has again fallen in every one of the rainfall divisions of India. The average actual rainfall of the divisions ranges from 10·96 inches in Assam (Surma) and 10·55 inches in Arakan to 0·17 inch in the West Punjab, 0·32 inch in Khandeish, and 0·44 inch in the Central Provinces (West). The heaviest rainfall was attributable to the Bay of Bengal branch of the monsoon current. Thus of the divisions the rainfall of which is due to the Bay current two, *viz.*, Arakan and Assam (Surma), had over 10 inches; one, Tenasserim, over 9 inches; one, North Bengal, over 8 inches; and five, North Behar, the North-Western Provinces (Central and Submontane), Oudh South, and the Punjab hill districts, had over 5 inches as the average fall of each division. On the contrary, the heaviest average falls attributable to the Arabian Sea current were 4·16 inches in Malabar and over 3 inches in Coorg, Rajputana (East), and the Nizam's Dominions. According to the normal, the heaviest average falls during the week under review should be 11·41 inches in Tenasserim, followed by 11·31 inches in the Konkan, by 10·88 inches in Arakan, and by 8·03 inches in Malabar, while normally the lightest average fall should be 0·23 inch in Madras (South).

The third column of the table shows that the rainfall of the week was lighter than usual in twenty-four divisions, heavier than usual in twenty-six divisions, and exactly normal in one division. In Burma all the divisions had less rain than usual. The other divisions which had rainfall lighter than the normal were East and Deltaic Bengal, Orissa, the Punjab (West), Malabar, Coorg, Mysore, the Konkan, the Deccan, Khandeish, Berar, the west and centre of the Central Provinces, Guzerat, Kathiawar, Central India (East), Rajputana (West), the East Coast (North *a*), Madras (Central), and East Coast (Central). In all the other divisions there was an excess. The greatest absolute deficiency was 8·34 inches in the Konkan and the greatest absolute excess was 4·50 inches in Assam (Surma).

The three concluding columns of the table show the average actual and average normal rainfall for the period May 28th to July 15th. In Tenasserim, Lower and Central Burma, Orissa, and Coorg the rainfall of the period under review has been below the normal average; elsewhere it has either been normal or excessive. The excess has been greatest over North-Western India.

The following gives the largest total amounts received during the week as reported in the rainfall telegrams of the week:

Division.	District.	Station.	Amount.
Tenasserim	Amherst	Sudder	10·71 inches.
Central Burma	Shwegyin	Pyuntaza	9·73 ,,
Arakan	Akyab	Sudder	12·67 ,,
East Bengal	Mymensingh.	Netrakona	10·76 ,,
Assam	Khasia Hills.	Cherra	36·24 ,,
North Bengal	Cooch Behar.	Matabhanga.	16·79 ,,
Behar	Purneah	Kissengunge	13·24 ,,
Oudh	Unao	Sudder	12·32 ,,
North-Western Provinces.	Dehra Dun	Ditto	12·17 ,,
Punjab	Gurgaon	Ferozepore	8·67 ,,
Ditto	Kangra	Sudder	12·55 ,,
Malabar	South Kanara	Karkul	11·42 ,,
Rajputana	Ulwar	Kishengarh	13·06 ,,
Madras	North Arcot	Vellore	7·28 ,,

SIMLA, *20th July, 1893.*

W. L. DALLAS,
Asst. Meteorological Reporter to the Government of India.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the state of the Season and Prospects of the Crops.

Madras.—*For week ending 15th July.*—Rainfall good or heavy throughout, though scattered showers only in Tinnevelly. Cultivation and sowing proceeding very vigorously. Standing crops thriving, but require rain in Tinnevelly. Pasture and fodder generally sufficient and stock in good condition. General prospects very favourable. Prices, however, continue almost unaltered at exceptionally high rates, but are slightly easier in the Southern districts.

Bombay.—*For week ending 19th July.*—Rain throughout the Presidency, but insufficient in four districts. Young crops injured by rats or insects in parts of six districts. Agricultural operations progressing generally, but sowing retarded in four districts owing to excessive or deficient rain. Transplanting progressing in six districts, but retarded in two owing to insufficient rain. Prices steady, except in parts of two districts. Agricultural stock good and fodder sufficient.

Bengal.—*For week ending 15th July.*—The rainfall during the week has been light and scattered in Orissa and parts of South-West Bengal and Chota Nagpur, moderate in East Bengal, and much heavier than usual in North Bengal and Behar. Cultivation of late rice is now in progress, except in some parts, where the low-lands are still under water. Early rice and jute are being reaped in North and East Bengal. These crops and the autumn crops in Behar have been somewhat damaged by the heavy rain. Indigo manufacture is going on, but the general outturn is not expected to be satisfactory. No important change in prices of common rice. Cattle are healthy, except in two districts. Fodder supply is sufficient in all districts, except Noakhali.

North-Western Provinces and Oudh.—*For week ending 19th July.*—The rainfall has been heavy during the week, and has retarded agricultural operations in some districts. A break would now be beneficial. Autumn sowings are nearly completed, and transplanting of rice is in progress. Prospects good. Supplies are abundant and prices generally steady. Locusts appeared in the northern pargana of Almora, but no damage is reported.

Punjab.—*For week ending 19th July.*—Heavy rain has fallen in all but three districts. Harvesting of spring crops nearly over; outturn good, though it is somewhat affected in several districts by excessive rain. Ploughings and sowings for autumn crops commenced. A break in the rains is required for ploughing and sowing in some districts. Condition of standing crops is generally fair. Cattle generally in good condition. Fodder sufficient throughout the Province. Prices falling in five districts; stationary elsewhere.

Central Provinces.—*For week ending 19th July.*—Rainfall heavy in the Northern districts and in Chhattisgarh. More rain wanted in the Nagpur country,

particularly in Chanda, where transplantation of rice is at a standstill. Sowings of autumn crops in progress, and weeding operations commenced in places. Excessive rain in Sambalpur has somewhat affected sugarcane, and insects have attacked the rice crops.

Burma.—*For week ending 15th July.*—Rain fell in all districts of Burma, except Kyaukse and the Southern Shan States. More rain is required in five districts of Upper Burma. In Lower Burma agricultural operations are progressing favourably, while in Upper Burma ploughing is in progress, paddy is being sown or transplanted, and in the Sagaing and Myingyan districts *juar* (*sorghum vulgare*) and Indian-corn are being sown. Prospects generally are good, but the crops are suffering from want of rain in four districts. The price of paddy has risen in three districts; elsewhere stationary.

Assam.—*For week ending 18th July.*—Weather seasonable. Floods in the Surma valley. Reaping of early and planting of late rice continue. Condition of cattle normal. Fodder sufficient, except where water is excessive.

Mysore and Coorg.—*For week ending 19th July.*—MYSORE: Rainfall general and good. Crops and prospects generally favourable. Sowing operations nearly completed. No material change in prices.

COORG: Rainfall good, but insufficient in parts. Ploughing of rice fields and transplanting of paddy being pushed on. Planting of coffee continues. Prices stationary. Water and fodder for cattle sufficient.

Berar and Hyderabad.—*For week ending 19th July.*—BERAR: Rainfall moderate. Weather warm and cloudy. *Juar* (*sorghum vulgare*) and cotton plants in good condition. Sowing of autumn crops still continues. Fodder and water sufficient. Cattle healthy. Prices steady.

HYDERABAD: Report not received.

Central India.—*For week ending 19th July.*—Rain general throughout Central India. Sowing and weeding in progress, except in parts of Bhopawar, where sowing has been stopped on account of continuous rain. Cattle generally in good condition. Pasturage good and sufficient. Prices of food-grains falling in three Agencies; steady elsewhere.

Rajputana.—*For week ending 19th July.*—Good rainfall generally in Rajputana. Agricultural operations and standing crops satisfactory. Agricultural stock good. Pasturage or fodder sufficient. Prices falling in three States, fluctuating in three others, and steady elsewhere.

Kashmir.—*For week ending 18th July.*—Report not received.

Nepal.—*For week ending 15th July.*—Light rain. Transplanting of rice completed. Prospects of crops good.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

(*a*) Includes the Bezváda-Godaveri section of the East Coast (state) railway.
(*b*) Includes the Godhra-Rutlam railway.
(*c*) Includes the Guntakal-Mysore frontier section from 1st April 1893.
(*d*) Includes the Tirhoot state railway. Although for convenience classed amongst the state railways, the company's section of this line is the property of the Bengal and North Western railway company.
(*e*) Includes the Jammu and Kashmir and the Hyderabad-Umarkot railways.
(*f*) Although for convenience classed amongst the state railways, this line is the property of the Bengal Central railway company.
(*g*) Includes the Wardha Coal, Dhond-Manmád, Khámgaon, and Amráoti railways.
(*h*) Includes the Bangalore-Nanjangúd and the Bangalore-Mysore frontier sections.
(*i*) Total receipts from 12th April to 8th July 1893.

F. B. HEBBERT,
Under-Secretary.

SIMLA, *the 20th July 1893.*

Printed and published for the GOVERNMENT OF INDIA *at the* GOVERNMENT CENTRAL PRINTING OFFICE, *Simla.*

SUPPLEMENT TO

The Gazette of India.

No. 30.} CALCUTTA, SATURDAY, JULY 29, 1893.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in* PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE ***may receive the*** SUPPLEMENT ***separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The*** SUPPLEMENT ***and*** PART VI ***of the*** GAZETTE ***can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.***

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA ***is required by Law, or which it has been customary to publish in the*** CALCUTTA GAZETTE, ***will be included in the*** SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE ***must be looked to.***

GOVERNMENT OF INDIA.

FINANCE AND COMMERCE DEPARTMENT.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on Saturday, July 22nd, 1893.

During the week under review the monsoon current over the Arabian Sea appears to have continued to blow strongly or freshly, and during the greater part of the week well marked monsoon conditions prevailed steadily over the Indian region; but on Friday, the 21st, the wind suddenly went round to the eastward on the Konkan Coast, and the monsoon showed considerable interruption. This was followed by a falling off in the rainfall over a considerable part of the country, and on Saturday, the 22nd, hardly any rain was reported from Central and North-Western India or the east of the Peninsula. Elsewhere rain continued to fall, but the amounts were not heavy. While the rainfall was general, the mean temperature remained low, but on Saturday, when the rainfall decreased decidedly, there occurred a sudden rise of nearly 1° in the mean temperature of the whole of India.

The chart of the 16th showed that pressure was rising almost everywhere. Readings were high in Tenasserim and Malabar and low over the Western desert, the pressure difference between Malabar and the Indus Valley being 0·294 inch. Normal monsoon winds prevailed over the greater part of the country, the force being strong on parts of the West Coast. There was very little rain across the head and over the east of the Peninsula, but elsewhere the fall of rain was general. Akyab and Hazaribagh received over 4 inches and Saugor Island, Mangalore, Seoni, Jeypore, and Mount Abu over 2 inches, while several stations had over 1 inch. On the 17th the changes of pressure were irregular, and the general distribution was little changed. The pressure difference between Malabar and the Indus Valley had, however, increased to 0·325 inch. Normal monsoon winds continued to prevail almost everywhere. The rainfall distribution was unchanged, the fall being very light over a large part of North-Western India and of the east and centre of the Peninsula. Mangalore, Saugor, and Sutna reported over 3 inches, Cherat over 2 inches, and several stations over 1 inch. The chart of the 18th showed that the moderate and irregular barometric changes noticed on the preceding day had continued, and that the general distribution was again practically unaltered. Pressure was highest over Southern and lowest over North-Western India, and the pressure difference between Malabar and the Indus Valley was 0·365 inch. The winds were practically unchanged, and the rainfall distribution was also similar to that reported on the preceding day. The principal falls were over 4 inches at Mount Abu, over 3 inches at Silchar and Bareilly, over 2 inches at Fort Stedman, Ajmere, and Sambhar, and over 1 inch at several stations. On the 19th pressure was falling over North-Western and North-Eastern India and was changing irregularly elsewhere. The pressure difference between Malabar and the Indus Valley had increased to 0·437 inch, and strongly marked monsoon conditions prevailed throughout the country. The rainfall was very general, except in parts of the east and centre of the Peninsula and North-Western India, and the amounts in some places were heavy.

Thus Mount Abu reported over 9 inches, Hazaribagh over 4 inches, Ajmere, Sambhar, and Bhuj over 2 inches, and several places over 1 inch. On the 20th pressure was recovering again, the rise being brisk in the north-west. Consequently the pressure difference between Malabar and the Indus Valley had decreased to 0·386 inch, and the monsoon conditions were less intense than on the 19th. The wind directions remained about normal, but the rainfall was generally lighter and less extended than on the previous day. Hazaribagh, Negapatam, Cuddalore, and Madura had received over 2 inches and several places over 1 inch. On the 21st the barometer was rising over Western India and generally falling in the east. The rise had been brisk over North-Western India, and the pressure difference between Malabar and the Indus Valley had still further decreased to 0·316 inch. The winds had shifted to east and north on the West Coast of the Peninsula, and calms were reported from several stations in Northern India. Elsewhere monsoon winds continued. The rainfall had still further decreased, and over a large part of North-Western India and of the Peninsula was altogether absent. The heaviest amounts reported were 6 inches at Balasore, 4 inches at Rangoon, and 2 inches at Chanda. On the 22nd the barometer was rising, except in parts of Bombay. The changes were uniform, and the pressure difference between Malabar and the Indus Valley was 0·319 inch, which was the same as on the 21st. Easterly and northerly winds continued on the West Coast, and numerous calms were again reported from Northern India. Rain had still further decreased, and over a large part of North-Western and Central India was altogether absent. Rangoon reported 5 inches and Darbhanga and Ratnagiri over 2 inches; but these were the only important falls.

Temperature.—The following table shows the variations of the mean temperature from the normal on each day of the week for the different Provinces of India:

Province.	July.							Mean variation of week.
	16th.	17th.	18th.	19th.	20th.	21st.	22nd.	
	°	°	°	°	°	°	°	°
Burma	—1·5	+0·7	+1·1	+0·7	+1·9	+1·7	+1·2	+0·8
Bengal and Assam	—1·5	—2·4	—1·7	—1·4	—1·2	—1·0	—0·7	—1·4
North-Western Provinces and Oudh.	—3·6	—2·9	—3·7	—3·2	—3·4	—1·9	—1·5	—2·9
Punjab	—4·3	—3·9	—5·0	—7·1	—7·6	—7·8	—3·9	—5·7
Bombay	+1·0	+1·1	+0·8	+1·2	+0·6	+0·8	+0·2	+0·8
Central Provinces and Berar	—0·5	—0·4	—0·7	—0·5	+0·8	+0·7	+1·7	+0·2
Central India and Guzerat	—2·0	—2·3	—2·8	—3·2	—2·3	—1·2	+0·2	—1·9
Sind and Rajputana	—3·9	—1·4	—2·3	—2·9	—4·6	—2·9	—2·0	—2·9
Madras	—1·0	+0·1	+0·9	+1·4	+0·3	+0·3	+1·1	+0·4
Mean for whole of India	—1·9	—1·3	—1·5	—1·7	—1·7	—1·3	—0·4	—1·4

The mean temperature of the whole of India for the week was 1·4° below the normal, which is the same variation as was reported last week. On each day of the week the mean was below the average, though on the 22nd, when rainfall partially ceased, the abnormal deficiency was very small. In Burma, Bombay, the Central Provinces, and Madras the mean temperature was slightly excessive, while in the other Provinces it was considerably in defect.

Rain.—The rainfall table at the close of the summary shows that rain has been received during the week under review in effective amounts in all the

rainfall divisions of India. The heaviest average actual rainfall reported was 7·70 inches in Assam (Surma). This was followed by 7·64 inches in Tenasserim, by 6·47 inches in the Punjab (North-West), by 6·34 inches in Arakan, by 6·22 inches in Rajputana (West), and by 6·14 inches in Chota Nagpur. The lightest average actual rainfall was 0·24 inch in the East Coast (Central). The average normal distribution of rainfall is somewhat different from the actual. Thus the heaviest normal rainfall is 12·60 inches in Arakan, followed by 10·00 inches in Tenasserim, by 9·59 inches in Coorg, and by 9·15 inches in the Konkan, while the lightest average normal rainfall is 0·20 inch in Madras (South). There is thus comparatively little difference between the actual and normal in the position of the area of lightest rainfall, but the heaviest rainfall is normally on the Burma Coast and the west of the Peninsula, and not as in the week under review in Assam. The heavy rain in the north-west of the Punjab and the west of Rajputana is very unusual. The third column of the table shows that in twenty-seven divisions the rainfall of the week has exceeded, and in twenty-four divisions has been in defect of the normal. The divisions which show an excess are as follows: Lower Burma, both the Assam divisions, Deltaic and Central Bengal, Chota Nagpur, both the Behar divisions, all the North-Western Provinces divisions (except the Centre and West), all the Punjab divisions, the Central Provinces (East), Sind, both the Rajputana divisions, Central India (West), the East Coast (North and South), and Madras (South, Central, and South). In all the other divisions there was a deficiency. From the above it will be seen that the districts reporting an excess are chiefly those under the influence of the Bay of Bengal current of the monsoon. The greatest actual excess was 5·53 inches in Rajputana (West) and 5·22 inches in the Punjab (North-West), while the greatest actual deficiency was 7·58 inches in Coorg and 6·26 inches in Arakan.

The three concluding columns of the table show the state of the rainfall from May 28th to date. In Tenasserim, Lower and Central Burma, in Coorg, and in the East Coast (North *a*) the total rainfall for that period has been in defect; in Arakan, Assam (Brahmaputra), North Bengal, Orissa, the Punjab (West), Malabar, Mysore, the Konkan, Berar, the Central Provinces (West and Central), Central India (East), and the East Coast (Central) the rainfall for the period has been approximately normal; and in all the other divisions there has been an excess. Relatively to the normal the excess has been greatest in the north-west of the Punjab.

The following gives the largest total amounts received during the week as reported in the rainfall telegrams of the week:

Division.	District.	Station.	Amount.
Tenasserim	Amherst	Thaton	10·16 inches.
Lower Burma	Maubin	Danubyn	13·87 ,,
Central Burma	Shwegyin	Kyauktaw	11·13 ,,
Assam	Khasia Hills	Cherra	18·38 ,,
North Bengal	Jalpaiguri	Bhagatpur	10·21 ,,
Chota Nagpur	Hazaribagh	Sudder	12·97 ,,
Behar	Gya	Jahanabad	15·07 ,,
Punjab	Ferozepore	Nathana	10·95 ,,
Ditto	Kangra	Sudder	13·53 ,,
Ditto	Hazara	Ditto	16·71 ,,
Malabar	South Kanara	Udipi	13·74 ,,

Simla, *27th July, 1893.*

W. L. DALLAS,
Asst. Meteorological Reporter to the Government of India.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the state of the Season and Prospects of the Crops.

Madras.—*For week ending 22nd July.*—Rainfall heavy in two Northern districts, on West Coast, and in parts of Southern districts; good in Central districts, and light elsewhere. Agricultural operations progressing vigorously, except in parts of Tinnevelly, where more rain is wanted. Standing crops generally thriving. Water-supply, pasture, and fodder sufficient. Cattle in good condition. Prospects favourable. Prices continue high, though slightly easier, except in Southern districts.

Bombay.—*For week ending 26th July.*—Rain throughout the Presidency, but insufficient in five districts. Young crops injured by rats or insects in parts of five and withering for want of moisture in parts of three districts. Agricultural operations progressing generally, but sowing retarded in seven districts owing to excessive or deficient rain. Transplanting progressing in five districts, but retarded in four others for want of rain. Prices steady, except in two districts. Agricultural stock good and fodder sufficient.

Bengal.—*For week ending 22nd July.*—There was general rain during the week, the falls being heavier in Chota Nagpur and South Behar than in other parts of the Province. Cultivation of winter rice is generally going on, except on some low-lying tracts in South-West Bengal, which are still flooded. Early rice and jute are being reaped in North and East Bengal. Both these crops and the autumn crops in Behar and Chota Nagpur have been damaged in many places by heavy rain, and the loss of early rice in some of the Eastern districts is reported to be considerable. Indigo prospects are not favourable and sugarcane is also suffering in some places. Prices are almost stationary. Cattle are generally reported well. Fodder scarce in Noakhali.

North-Western Provinces and Oudh.—*For week ending 26th July.*—The rainfall has been generally heavy, damaging the crops somewhat in four districts. But occasional breaks during the week have benefited the standing crops and allowed of agricultural operations being resumed. Transplanting of rice is in progress. Prospects good. Prices fairly steady. Locusts appeared in one pargana of Almora, but no damage is reported.

Punjab.—*For week ending 26th July.*—Rain throughout the Province. Break in the rains and fine weather urgently needed for sowing purposes.

Harvesting of spring crops nearly over. Ploughings and sowings for autumn crops in progress. Condition of standing crops generally good. Cattle in good condition. Fodder sufficient in all districts. Prices unsteady in one district, rising in two others, falling in another, and stationary elsewhere.

Central Provinces.—*For week ending 26th July.*—Weather cloudy with occasional slight showers. More rain needed for rice in some districts. Cotton and *juar* (*sorghum vulgare*) said to be withering in Wardha from want of rain, while in Sambalpur the prospects of the sugarcane crops are said to be gloomy owing to excessive rain. Autumn sowings approaching completion. Prices unchanged.

Burma.—*For week ending 22nd July.*—The rainfall throughout Lower Burma was sufficient. In Upper Burma rain fell in all but two districts, but the fall was moderate in five districts. In Lower Burma agricultural operations are progressing and the crop prospects are good. In Upper Burma ploughing and sowing generally are progressing, but are delayed in two districts owing to want of rain. Crop prospects in most districts in Upper Burma are good, but in some districts the crops are to a great extent withering for want of rain.

Assam.—*For week ending 25th July.*—Weather seasonable. Reaping of early and transplanting of late rice continue. Condition of cattle normal. Fodder insufficient in the Surma Valley owing to floods.

Mysore and Coorg.—*For week ending 26th July.*—MYSORE: Rainfall general and good. Standing crops good, except in parts of one district, where more rain is needed. Sowing operations still continue in parts. Prospects favourable. No change in prices.

COORG: Rainfall good; more rain required. Ploughing of rice fields and transplanting of paddy still in progress. Planting of coffee continues. Water and fodder for cattle sufficient. Prices stationary.

Berar and Hyderabad.—*For week ending 26th July.*—BERAR: Rainfall moderate. Weather warm. Standing crops in good condition, but more rain is wanted. Sowing of autumn crops continues. Land under preparation for next spring season. Weeding in progress. Fodder and water sufficient. Cattle healthy. Prices steady.

HYDERABAD: Rainfall moderate. Sowing of autumn crops and irrigated paddy in progress. Prices steady.

Central India.—*For week ending 26th July.*—Rain throughout Central India during the week. Sowings in Bhopawar, though delayed by continuous rain, almost completed. Ploughing and weeding in progress elsewhere. A good

outturn is expected. Cattle in good condition. Pasturage good and sufficient. Prices of food-grains falling in Bundelkhand, rising in Bhopal, and steady elsewhere.

Rajputana.—*For week ending 26th July.*—Rainfall generally good throughout Rajputana. Agricultural operations and standing crops satisfactory. Agricultural stock good. Pasturage or fodder sufficient. Prices falling in four States, fluctuating in one, and steady elsewhere.

Kashmir.—*For week ending 25th July.*—Report not received.

Nepal.—*For week ending 22nd July.*—Frequent showers. Weather close and steamy. Prospects good.

E. C. BUCK,
Secretary to the Government of India.

SUPPLEMENT TO

The Gazette of India.

No. 31.} SIMLA, SATURDAY, AUGUST 5, 1893.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in* PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on Saturday, July 29th, 1893.

The partial break in the rains which commenced over India on Friday, July 21st, continued in force throughout the week under review. The Southern limit of the area affected by the break was Lat. 20° N., and the eastern limit Long. 84° E. Even within the area bounded by these limits the break was not altogether general, as on several occasions showers were experienced over the Central Provinces as well as at the stations on the Himalayas and at their foot. Over Bengal, Burma, and the Peninsula rain fell daily during the week, but the amounts were not heavy. The cause of the break, so far as can be judged, lay not so much in any general lightness of the monsoon, but rather in an irregularity in the distribution of pressure. Ordinarily a trough of low pressure overlies the Gangetic plain, and to the northward of this trough easterly winds from the Bay prevail. Both within the trough and within the easterly current rainfall is very frequent. During the week under review the trough lay over the Himalayas instead of over the Gangetic plain, and in consequence the wind was westerly and north-westerly over Northern India instead of easterly and south-easterly, and the rainfall was very light. In consequence of this temperature rose briskly, and the mean temperature of the whole of India for the week was ½° above the average.

On Sunday, 23rd July, pressure was lowest over the hills to the northward of the Punjab and highest in Malabar, the pressure difference being 0·359 inch. Northerly winds prevailed down the West Coast of the Peninsula, and westerly winds in most other parts of the country, except Burma and Bengal, where the direction was southerly. Rain was fairly general over the Peninsula and North-Eastern India, but in Central and North-Western India only a few scattered showers were reported. The amounts were not large, except in parts of Burma. Tavoy reported 7·02 inches, while Rangoon, Purneah, Gorakhpur, and Karwar had over 2 inches. On the 24th pressure was falling everywhere, but the general distribution was unchanged, readings being highest in the extreme south and lowest in the extreme north of the Indian region. The pressure difference was as much as 0·469 inch between Malabar and the Indus Valley. The winds were

practically unchanged, and the rainfall distribution was very similar to that reported on the previous day. Silchar reported 4½ inches of rain, but this was the only heavy fall, though Toungoo, Moulmein, Tavoy, Gnatong, Durbhanga, Darjeeling, Mormugao, Trivandrum, and Cocanada had between 1 and 2 inches. The chart of Tuesday, the 25th, showed a fall of pressure over the central parts of the country and a rise elsewhere. The pressure difference between Malabar and the Indus Valley had decreased slightly to 0·482 inch, but otherwise there was very little change. The winds were southerly to easterly over the Punjab, southerly to south-easterly over Burma and Bengal, and westerly in other parts of the country. Rain was very general again over the Peninsula and North-Eastern India, and there were showers over the North-Western Himalayas, but elsewhere there was practically no rain. The heaviest amounts were 3·13 inches at Tavoy and over 2 inches at Akyab, Saugor Island, Calicut, Cuddapah, and Masulipatam. On the 26th the barometer was rising everywhere. The rise was greater in the north-west than elsewhere, and the pressure difference between Malabar and the Indus Valley had decreased to 0·461 inch. In other respects there was no change in the pressure distribution. The wind had gone back to south-west again on the West Coast, but elsewhere the directions were little altered. Rain had fallen on and near the North-Western Himalayas, but generally the whole of North-Western India and of the Gangetic plain was without rain. Saugor Island reported over 3 inches, but there were no other heavy falls. On the 27th the barometer was still rising, but the general distribution was unaltered. The rise had again been greatest in the north-west, and the pressure difference between Malabar and the Indus Valley was only 0·349 inch. The wind was variable and light on the West Coast, southerly in Burma and Bengal, and generally westerly in other parts of the country. The distribution of rain was similar to that reported on the 26th. Over 2 inches were reported from Toungoo, Bhamo, Dehra Dun, and Rajahmundry, and over 1 inch at several stations. On the 28th pressure was decreasing over Northern and North-Eastern India and rising over the Peninsula. In consequence the barometric gradient had increased, and the pressure difference between Malabar and the Indus Valley had risen to 0·392 inch. The winds and the distribution of rainfall were the same as those reported on the 27th. The principal amounts of rain were over 3 inches at Dhubri and over 1 inch at Bhamo, Bassein, Gnatong, Silchar, Mormugao, Mercara, and Khammamett. On the 29th pressure was giving way over Bengal and the head of the Bay, and a slight depression had appeared over Orissa and the north-west angle of the Bay. Gradients were steep over the Bay, and the pressure difference between Malabar and the Indus Valley was again 0·392 inch. The winds were cyclonic in the neighbourhood of the depression noticed above—southerly in Burma and westerly elsewhere. The force was fresh in Southern, Western, and Central India. Rain had extended somewhat, and scattered showers were reported from several places in Central and North-Western India, but the fall was general only in the Peninsula and Burma. The principal amounts were 4 inches at Moulmein, 2½ inches at Mymensingh and Berhampore, and over 1 inch at Akyab, Gnatong, Barisal, Ratnagiri, Karwar, and Hyderabad.

Temperature.—The following table shows the variations of the mean temperature from the normal on each day of the week for the different Provinces of India:

Province.	July.							Mean variation of week.
	23rd.	24th.	25th.	26th.	27th.	28th.	29th.	
	°	°	°	°	°	°	°	°
Burma	+0·6	—1·0	—2·0	+0·5	+1·6	+2·2	—0·9	+0·1
Bengal and Assam	—0·2	—0·3	—0·5	—1·0	+0·5	+1·8	+1·4	+0·3
North-Western Provinces and Oudh.	—0·8	—0·6	—0·1	—0·1	+0·7	+2·0	+2·9	+0·6
Punjab	—2·1	—1·1	—0·1	—0·7	—1·2	—0·6	—1·1	—1·0
Bombay	+1·5	+1·4	+0·6	0	—0·4	—0·3	—0·2	+0·4
Central Provinces and Berar	+3·5	+3·5	+3·6	+2·3	+3·7	+3·9	+3·7	+3·5
Central India and Guzerat	+0·3	+1·0	+0·1	+0·4	+1·2	+1·7	+2·1	+1·0
Sind and Rajputana	—0·7	—0·6	—1·2	—1·3	—1·4	0	—0·2	—0·8
Madras	+1·0	+1·0	+0·5	—1·8	—3·3	—1·9	—1·7	—0·9
Mean for whole of India	+0·4	+0·4	+0·1	—0·2	+0·2	+1·0	+0·7	+0·4

The principal feature in the above table is the general rise of temperature which is shown accompanying the decrease in the rainfall. On each day of the week, except the 26th, the mean temperature of the whole of India was above the normal, and the variation for the whole week was + 0·4°. The warmest part of the country relatively to the average was the Central Provinces, where the mean temperature was 3½° above the normal.

Rainfall.—The concluding table shows that the rainfall of the past week has been distinctly lighter than that of the past few weeks. In the Punjab (South), in Sind, and in Rajputana there has been absolutely no rain, and in the North-West Provinces (Central and West), in the Punjab (Central), in Kathiawar, and in Central India (East) the average actual rainfall of each division has been less than one-tenth of an inch. In all the other divisions effective rain was received. The heaviest average actual rainfall of any division was 21·56 inches in Assam (Surma). This was followed by 10·38 inches in Tenasserim, by 8·25 inches in North Bengal, by 6·49 inches in Arakan, and by 5·15 inches in Malabar, while the lightest falls were in the divisions noticed above. In ordinary years the heaviest rainfall during the week under review is 10·68 inches in Tenasserim, followed by 9·72 inches in Arakan and by 9·59 inches in Coorg, while the lightest rainfall normally is 0·29 inch in Madras (South). From the above comparison it will be seen that the distribution of rainfall has been irregular both as regards the position of the area of heaviest and of lightest rainfall. The heavy rainfall in Assam (Surma) was due to the excessively heavy rain at Cherrapungi, where over 73 inches fell during the week.

The third column of the table shows that the rainfall was heavier than usual in only eleven divisions, *viz.*, Assam (Surma and Brahmaputra), Central and North Bengal, North Behar, Madras (South-Central), the East Coast (North and North *a*), Hyderabad, Madras (Central), and the East Coast (Central). In all the other forty divisions the average rainfall of the week was deficient. The principal cases of absolute excess were 15·09 inches in Assam (Surma), 4·14 inches in North Bengal, and 2·96 inches in Hyderabad. The largest absolute deficiencies were 5·17 inches in Coorg, 4·19 inches in the Central Provinces (Central), and 3·68 inches in Guzerat.

The three concluding columns of the table giving the state of the rainfall of the monsoon period, May 28th to date, show that in Tenasserim, Lower and Central Burma, Orissa, Coorg, Berar, and the Central Provinces (West) the rainfall of the period has been deficient; in Arakan, Assam (Brahmaputra), the North-Western Provinces (Submontane *a*), the Punjab Hill Districts, Malabar, Madras (South-Central), Mysore, the Konkan, the Central Provinces (Central and East), Central India (East), and the East Coast (North *a*) the fall has been approximately normal, and in the other divisions has been excessive. The greatest excess relatively to the average has been in the north-west of the Punjab, where nearly three times the average amount of rain has been received.

The following gives the largest total amounts received during the week as reported in the rainfall telegrams of the week:

Division.	District.	Station.	Amount.
Tenasserim	Amherst	Thaton	10·82 inches.
East Bengal	Mymensingh	Sudder	10·14 ,,
Assam	Khasia Hills	Cherra	73·51 ,,
North Bengal	Cooch Behar	Dinhata	15·50 ,,
Bihar	Motihari	Bagaha	9·86 ,,
North-Western Provinces.	Gorakhpur	Parauna	9·11 ,,
Punjab	Kangra	Sudder	7·73 ,,
Malabar	South Kanara	Karikal	9·32 ,,
Madras (South-Central)	Nilgiris	Devala	14·37 ,,
Konkan	North Kanara	Honavar	11·60 ,,
Deccan	Kolhapur	Bavda	7·57 ,,
East Coast	Jeypur	Koraput	9·20 ,,

W. L. DALLAS,
Asst. Meteorological Reporter to the Government of India.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the state of the Season and Prospects of the Crops.

Madras.—*For week ending 29th July.*—Rainfall heavy on West Coast, in Circars, and in parts of Deccan; considerable rain elsewhere, except in parts of the Central and Southern districts. Rainfall to date has attained or exceeded the average, except at Madras, in Tinnevelly, and Malabar, but deficiency nowhere very serious. Cultivation and sowings going on briskly and standing crops generally thriving, though in parts the rain has been rather excessive, and in Tinnevelly more rain is required. Pasturage generally abundant and cattle in good condition. General prospects favourable. Prices still almost stationary, though falling very slightly in the Central and Southern districts.

Bombay.—*For week ending 2nd August.*—Rain throughout the Presidency, but insufficient in eight districts. Young crops injured by rats, locusts, or other insects in parts of nine districts, and withering for want of moisture or rain in parts of three districts. Agricultural operations progressing generally, but sowing retarded in three districts owing to deficient rain. Transplanting progressing in five, but retarded in two, districts. Prices steady, except in two districts. Agricultural stock good and fodder sufficient.

Bengal.—*For week ending 29th July.*—Rainfall was abundant in North Bengal, East Bengal, South-West Bengal, and North Behar; moderate in Chota Nagpur and South Behar. Rain still wanted in parts of Orissa. Transplantation of winter rice is going on well, though some damage is reported to have been done to crops lying in low-lands in some districts of Bengal Proper. Jute and early rice are being reaped in North and East Bengal. Harvesting of autumn crops has commenced in some districts of the Patna and Bhagalpur divisions, and their outturn is on the whole good. Sugarcane and indigo have suffered in some places owing to heavy rains, and the outturn of indigo is reported to be very poor in Midnapur. Prices of common rice remain unchanged. Condition of cattle is generally good. Fodder and water-supply sufficient in all districts.

North-Western Provinces and Oudh.—*For week ending 2nd August.*—With the exception of a few districts in which rain has fallen during the week, there has been a general break, and prospects have much improved. More rain, however, is needed in some places. The autumn crops are flourishing and weeding is in progress. Transplantation of rice is going on. Supplies and fodder sufficient. Prices generally steady.

Punjab.—*For week ending 2nd August.*—Rain has fallen in five districts. Harvesting of spring crops almost over. Sowings of autumn crops in progress. Condition of standing crops is generally reported fair, but some damage has been done by excessive rain in parts of Umballa and by floods in parts of Lahore, Mooltan, and Shahpur. Condition of cattle is generally reported good. Pasturage and fodder are said to be sufficient throughout the Province. Prices rising in three districts; stationary elsewhere.

Central Provinces.—*For week ending 2nd August.*—Rainfall heavy in seven districts, but insufficient in the Northern districts and the Nagpur country, where the long break is causing damage to the autumn sowings. Fodder ample. Agricultural stock good. Prices easy.

Burma.—*For week ending 29th July.*— In Lower Burma the rainfall was sufficient. Agricultural operations are progressing satisfactorily and crop prospects are good. Rainfall general in Upper Burma, but very light in three districts. Agricultural operations in Upper Burma are progressing favourably, but are retarded in parts of Shwebo, where the rainfall is not yet sufficient. The crop prospect generally is good, and in Meiktila the sesamum is improving; but rain is much required for the crops in three other districts. Merchants are paying higher prices for paddy in Rangoon. Prices have also risen in five other districts, but have fallen in one.

Assam.—*For week ending 1st August.*—Floods in the Surma Valley. Rain wanted in two districts. Transplanting of winter paddy continues. Fodder insufficient in flooded districts.

Mysore and Coorg.—*For week ending 2nd August.*—MYSORE: Rainfall general and good. Standing crops in good condition. Sowing operations in progress. Prospects good. No marked change in prices.

COORG: Rainfall good. Ploughing of rice fields and transplanting of paddy in progress. Coffee planting continues. Prices stationary. Water and fodder for cattle sufficient.

Berar and Hyderabad.—*For week ending 2nd August.*—BERAR: Rainfall moderate, and more is wanted. Standing crops in good condition. Land under preparation for ensuing spring crops in three districts Sowing of autumn crops retarded in two talukas for want of rain. Weeding operations in progress. Fodder and water sufficient. Prices almost stationary.

HYDERABAD: Rainfall good. Weeding of autumn crops commenced and sowing of irrigated paddy crops continues. Standing crops in good condition. Prices steady.

Central India.—*For week ending 2nd August.*—There has been a break in the rains throughout Central India generally, which appears to have affected the crops in the Neemuch district. In other parts the crops are in good condition. Pasturage good and sufficient. Prices of food-grains steady in all parts.

Rajputana.—*For week ending 2nd August.*—Slight rain in parts of Bickaneer; no rain elsewhere. Agricultural operations and standing crops generally satisfactory. Cattle in good condition. Pasturage or fodder sufficient. Prices rising in two States, falling in one, and steady elsewhere.

Kashmir.—*For week ending 1st August.*—Weather fine. The recent flood has done considerable damage to the autumn crops in riverain villages; also to irrigation works. Prices stationary.

Nepal.—*For week ending 29th July.*—Heavy showers. Weather cloudy and cool. Prospects good.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

No. $\frac{2634}{51}$.

Extract from the Proceedings of the Government of India, in the Revenue and Agricultural Department (Museums and Exhibitions),—dated Simla, the 4th August, 1893.

Read—

Letter, dated 21st June 1893, from the Consul-General for Belgium, Bombay, intimating that an International Exhibition will be held at Antwerp between the months of May and November in 1894, and inviting the co-operation of the Government of India.

RESOLUTION.

The Consul-General has been informed that the Governor General in Council regrets that financial considerations prevent any extensive contributions being furnished by the Government of India itself. Arrangements will, however, be made by the Reporter on Economic Products to contribute a collection of products either likely to be useful to Indo-Belgian trade or calculated to attract Belgian capital to India. A small grant of money will be allowed for the freight of this collection and of such articles as may be provided by private exhibitors and approved by the Reporter on Economic Products. The Inspector General of Forests has also been instructed to arrange for a collection of forest products and timbers which are likely to find a demand on the Continent. As regards the representation of artware, one of the leading dealers in Indian art manufactures has been informed that if he is prepared to exhibit a collection of such manufactures the space required at the Exhibition will be provided at the cost of Government.

Mr. E. Thurston, Officiating Reporter on Economic Products, has been placed in charge of arrangements so far as the participation by the Government of India in the Exhibition is concerned. But the general conduct of arrangements for representation of Indian exhibitors will be undertaken by the Consul-General, Bombay, and by the Indian Consular Agents for Belgium at Calcutta, Bombay, Madras, Karachi and Rangoon, and intending exhibitors should apply to them for any information which they may require.

ORDER.—Ordered, that the Resolution be published in the Supplement to the *Gazette of India* for general information, and that copies be forwarded to all Local Governments and Administrations with a request that the above information regarding the Exhibition may be notified in the local Gazettes.

[True Extract.]

E. D. MACLAGAN,
Under-Secretary to the Government of India.

Irrigation.

REVIEW OF THE REVENUE AND EXPENDITURE RECORDED UNDER THE HEAD "IRRIGATION WORKS" IN THE ACCOUNTS OF THE GOVERNMENT OF INDIA FOR 1891-92.

No. 177 I., dated Simla, the 2nd August 1893.

Read—

Note by R. G. Macdonald, Esq., Officiating Accountant General, Public Works Department, upon the accounts of Revenue and Expenditure recorded under the head "Irrigation Works" in the accounts of the Government of India for 1891-92.

RESOLUTION.—This is the second year for which the Accountant General, Public Works Department, has submitted a note upon the accounts of Revenue and Expenditure of Irrigation works in India. In reviewing the figures for the previous year, the Government of India took the opportunity of stating in a brief and general form (1) the classification of the works for purposes of account; (2) the sources from which funds for construction and maintenance are provided; and (3) the classes into which the works may be divided from an

engineering point of view. It is not necessary to repeat this information on the present occasion, and this review will accordingly be confined to an examination and summary of the figures given in the Accountant General's note, supplemented by some details of interest taken from the Irrigation Revenue Reports of the different Provinces, all of which have now been reviewed by the Government of India.

2. The first point to be noticed is that the figures for 1891-92 relating to works for which Capital and Revenue accounts are kept differ in one important respect from those for 1890-91. The indirect outlay under capital on account of (1) leave and pension allowances, and (2) the capitalised abatement of land revenue on land taken up for the projects, has now been included in the capital cost of the different works. Similarly, the indirect outlay under revenue on account of leave and pension has now been included in the working expenses. This change in form has been made in order to bring into accord the figures in this note and review, those in the statement of Financial Results submitted annually to the Secretary of State, and those in the Revenue Reports of the different Provinces and the reviews thereon by the Government of India. The result of course is to increase the capital outlay and to diminish the net revenue, with the effect, as observed in para. 6 of the Accountant General's note, of lowering the percentage of return derived from the works.

3. The following statement shows in the same form as that in para. 11 of the review for the previous year the return derived from the irrigation systems for which Capital and Revenue accounts are kept:—

Class of Work.	Number of Works.	Direct and Indirect capital outlay to end of 1891-92.	Gross Revenue.	Working expenses including Indirect charges.	Net Revenue.	Irrigated area.	Percentage of net Revenue on Capital outlay.
IRRIGATION.		Rx.	Rx.	Rx.	Rx.	Acres.	
I.—Major works—							
(*a*) Productive . . .	35	27,585,682	2,068,849	809,674	1,259,175	7,393,361	4·56
Add—on account of old Irrigation in Madras	...	...	289,700	37,775	251,925	...	...
TOTAL PRODUCTIVE .	35	27,585,682	2,358,549	847,449	1,511,100	7,393,361	5·48
(*b*) Protective . . .	8	1,821,726	36,823	26,252	10,571	167,123	0·58
II.—Minor Works—							
Works for which Capital and Revenue accounts are kept	67	2,860,091	431,278*	253,263	178,015	2,123,659	6·22
GRAND TOTAL .	110	32,267,499	2,826,650	1,126,964	1,699,686	9,684,143	5·27

* Includes share due to old irrigation in Madras.

The percentage derived from the Productive and Protective works is affected by the procedure referred to in the last paragraph. The return derived from the Minor works for which Capital and Revenue accounts are kept is further reduced by the omission of the revenue figures for certain works in Madras, which were not received in time. If these figures were included, the net return from these works would be increased by Rx. 67,078(*a*), as shown in the margin, raising the percentage to 8·75.

4. It must further be repeated, as was pointed out in paragraph 12 of the review for 1890-91, that the above figures include a considerable unproductive outlay on works that are in progress and have not yet begun to earn

revenue. Among the productive works there are two—the Sirsa branch of the Western Jumna Canal in the Punjab and the Periyar Project in Madras, which as yet earn no revenue, and the capital outlay on which, amounting to Rx. 122,228 and Rx. 386,509 respectively, might be excluded in calculating the precentage of return. Among the Protective works the Rushikulya Project in Madras, the capital outlay on which has amounted to Rx.273,719, is in the same category.

5. The following figures exhibit the areas irrigated by and the gross revenue derived from the Major and Minor works during the last five years:—

YEAR.	MAJOR WORKS.		MINOR WORKS.		TOTAL.	
	Area irrigated.	Gross Revenue.	Area irrigated.	Gross Revenue.	Area irrigated.	Gross Revenue.
	Acres.	Rx.	Acres.	Rx.	Acres.	Rx.
1887-88	5,806,043	1,852,298	1,540,373	331,829	7,346,416	2,184,127
1888-89	6,583,548	2,045,825	1,703,271	376,187	8,286,819	2,422,012
1889-90	7,047,553	2,137,441	1,829,312	377,972	8,876,865	2,515,413
1890-91	7,172,468	2,312,787	2,101,586	483,127	9,274,054	2,795,914
1891-92	7,560,484	2,395,372	2,123,659	*431,279	9,684,143	2,826,651

* Exclusive of figures for certain works in Madras which were not given in the Revenue Report for 1891-92.

These figures show a steady and progressive improvement that is extremely satisfactory, the increase in both acreage and revenue during the five-year period having amounted to about 30 per cent.

6. The estimated value of the irrigated crops under the Major and Minor works during 1891-92 amounted to Rx. 30,402,976, giving an average, value of over Rx. 4 per acre irrigated. As was observed in last year's review, the estimated value of the crops in one year is thus very nearly equal to the whole capital outlay incurred on these works. This affords perhaps the most striking proof of the indirect benefits conferred on the country by these irrigation systems.

7. The average rate per acre of assessed revenue is given in paragraphs 22 and 41 of the Accountant General's note for Major and Minor works respectively. For the former the average rate amounts to Rx. 0·31 per acre, being highest in the North-Western Provinces and lowest in Bengal.

The average rate of assessment under Minor works in Rajputana, which is shown as amounting to the large sum of Rx. 0·72 per acre, is due to exceptional causes. The monsoon in Rajputana was practically a failure both in 1890-91 and 1891-92, so that most of the tanks were dry, and the assessments had to be very largely reduced after the accounts for the year had been closed.

8. The principal crops irrigated during 1891-92 are shown in the following statement:—

PROVINCE.	Rice.	Wheat.	Jowar (Sorghum Vulgare).	Bajra (Pani cillaria Spicata).	Sugarcane.	Cotton.	Barley.	Indigo.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
Bombay (including Sind) .	658,263	297,460	425,563	360,461	9,694	...	...	...
Punjab	184,637	1,120,982	157,146	114,879	91,238	188,072	...	...
Bengal	505,904	76,845	...	...	20,139	...	44,369	...
Madras	2,402,797	...	...	56,290	...	...	...	...
North-Western Provinces .	149,045	755,786	...	...	245,367	88,647	108,821	174,546
TOTAL .	3,900,646	2,251,073	582,709	531,630	366,738	276,719	153,190	174,546

The variations between these figures and those for the previous year are not very important. The increases are mainly under wheat (about 300,000 acres), sugarcane (66,000 acres), rice (47,000 acres), and barley (35,000 acres).

The decreases are principally in cotton (153,000 acres) and indigo (50,000 acres).

9. The following figures exhibit for the different Provinces the percentage on the gross revenue of the cost of revenue management including collection charges and of the ordinary up-keep of the Major works :—

Province.	Revenue management, per cent.	Up-keep, per cent.	Total, per cent.
Madras	8·8	14·2	23·0
Punjab	12·1	25·1	37·2
North-Western Provinces	12·7	25·2	37·9
Bombay, excluding Sind	15·2	32·8	48·0
Sind	11·4	35·3	46·7
Bengal	28·1	61·8	89·9

10. The following figures show the total cost of working per acre irrigated by the Major works :—

	1891-92. Rx.	
Sind	·07	
Madras	·08	Including old maintenance charges.
Punjab	·11	
North-Western Provinces	·14	
Bengal	·19	Excluding maintenance of Tidal canal.
Bombay, excluding Sind	·28	

Madras again heads the list for economy in working, but the fact that distribution in Madras is more largely in the hands of cultivators instead of being at the charge of the Public Works Department as in Northern India has to be remembered. In Bengal the cost of working is very high, but this is partly accounted for by the exceptional conditions obtaining on the Sone and Orissa systems.

11. The following statement gives for the principal canals of each province, including some for which capital accounts are not kept, particulars of the length of completed main canal and distributary; the maximum discharge at head; the average discharge during the two seasons into which the year is divided for purposes of cultivation; the area irrigated by each canal during each of these two seasons, and also by flow and lift; and, finally, the duty of the water calculated according to the discharge at the head of the canal and the average number of irrigating days during each season. Speaking generally, the kharif may be taken as the summer season lasting from April to October, and the rabi as the winter season lasting from October to March. But as regards some parts of India, and especially Madras, the distiction thus drawn is

somewhat arbitrary, the division between the summer and winter crops being not at all clearly defined :—

Province.	Canals.	Length of completed main and branch canal (miles).	Length of completed distributaries (miles).	Maximum discharge at head of canals (cubic feet per second).	Average discharge at head of canals (cubic feet per second).		Area irrigated (Acres).					Area irrigated per cubic foot per second of average discharge at head (acres).	
					Kharif.	Rabi.	Kharif.	Rabi.	Total.	Flow.	Lift.	Kharif.	Rabi.

	Total	6,810	19,202	...	...	...	4,965,043	3,310,778	8,275,821	7,171,643	946,664	...	...

N.B.—The figures in brackets in columns 13 and 14 denote the number of days on which the irrigating duty is calculated.

12. So far only Irrigation works, or works in which irrigation is combined with navigation have been dealt with in this review. The following figures give for the Navigation works proper particulars similar to those already given in paragraph 3 for the former class of works :—

Class of Works.	Number of works.	Direct and indirect capital outlay to end of 1891-92.	Gross revenue.	Working expenses including indirect.	Net Revenue.	Percentage of net Revenue on Capital outlay.
	Rx.	Rx.	Rx.	Rx.	Rx.	Rx.
Navigation—						
I.—Major works—						
(a) Productive .	1	228,921	3,691	5,068	—1,377	...
II.—Minor Works .	6	1,776,560	68,679	60,453	8,226	0·46
Total .	7	2,005,481	72,370	65,521	6,849	0·34

The capital outlay and the working expenses have been increased by the inclusion of indirect charges, in the manner referred to in paragraph 2, as compared with the figures given in last year's review. The receipts only show a small increase over those for 1890-91, and inland navigation in India will never, it may be feared, give a productive return on the capital outlay incurred, though the indirect benefits are very considerable.

13. The following figures give some details of the navigation operations of the year, the canals in which navigation is combined with irrigation being included :—

Provinces.	Length of canal open for navigation.	Ton-mileage.	Estimated value of cargoes.	Estimated value of rafts.	Number of passengers carried.
1	2	3	4	5	6
	Miles.	Millions.	Thousands of Rx.	Thousands of Rx.	
Punjab	432	...	...	242	...
Bengal	673	52·460	10,590	60	457,701
Madras	1,232	39·450	5,817	452	465,578
North-Western Provinces .	535	7·004	257	24	3,896
Total .	2,872	98·914	16,664	778	927,175

14. In addition to the Irrigation and Navigation works for which Capital and Revenue accounts are kept, which have been dealt with in the preceding paragraphs, there are a very large number of small works scattered over the country for which only revenue accounts are kept or for which no revenue account even is kept. The majority of these works are maintained by the Public Works Department, and the cost of maintenance appears therefore in the Public Works accounts, the figures for 1891-92 amounting to Rx. 711,704 being given in paragraph 43 of the Accountant General's note. As regards Revenue, however, only the direct receipts realised by the Public Works Department are credited in the Public Works accounts, the revenue due to irrigation, which is assessed and collected with the land revenue, not being separated and credited as an indirect receipt. The immense importance of these works can, however,

hardly be exaggerated. The figures in the following statement relating to them are taken from the Revenue reports of the different Provinces. These figures must be accepted as approximate only, but they are quite sufficiently accurate for all practical purposes; agricultural works are excluded :—

Province.	Gross Revenue.	Working expenses including collection charges.	Net Revenue.	Area irrigated.
	Rx.	Rx.	Rx.	Acres.
Bombay, excluding Sind	52,797	16,965	35,832	145,597
Sind	217,356	97,456	119,900	936,760
Punjab	42,293	23,375	18,918	304,056
Bengal	20,295	14,944	5,351	...
Madras	621,107	230,811	390,296	2,720,872
Total .	953,848	383,551	570,297	4,107,285

It will be seen that collectively these works irrigate an area nearly half as large as the area under the Major and Minor works included in the statement in paragraph 3. Combining the results in these two statements, it would appear that the area under irrigation in India excluding Burma amounts approximately to 13,800,000 acres, or 21,562 square miles, bringing in a net revenue of about Rx. 2,272,000. If the value of the irrigated crops be taken at Rx. 4 per acre on the average, the resultant value of the produce is not less than Rx. 55,200,000.

15. Of the four works under contemplation but on which work had not been begun, referred to in paragraph 26 of the review for 1890-91, the Chenab Canal extension is now in active progress, and the estimate for the Cawnpore extension of the Lower Ganges Canal has been sanctioned by the Secretary of State. The Jhelum Canal and the Kalingaroyen Channel projects are still awaiting the completion of works in hand before being begun.

16. The report of the Committee on the improvement and extension of irrigation in Sind referred to in paragraph 27 of last year's review has been received and considered by the Government of India. Action is now being taken thereon by the Bombay Government and important developments of irrigation are likely to result. Detailed instructions have been issued regarding the preparation of irrigation projects in Burma, and the correct apportionment of revenue therefrom. The receipt of definite proposals for irrigation in Burma is still awaited.

17. In reviewing the Revenue Reports of the different Provinces the Government of India have expressed satisfaction of the manner in which irrigation officers have conducted their duties, and in concluding this general review of irrigation operations throughout India in 1891-92 the Governor General in Council desires to record his appreciation of the substantial progress made during the year, as evidenced by the figures in the Accountant General's note and in this Review.

Order.—Ordered, that the foregoing, with a copy of the note by the Officiating Accountant General, Public Works Department, be forwarded to the Local Governments and Administrations in the Public Works Department noted on the margin for information.

The Governments of Madras, Bombay, Bengal, the North-Western Provinces and Oudh, and the Punjab.
The Chief Commissioners of the Central Provinces, Burma, Assam, and Coorg.
The Resident at Hyderabad.
The Agents to the Governor General for Central India, Rajputana, and Baluchistan.
The Accountant General, Public Works Department.

Ordered also, that a copy of the Review and note be forwarded to the Revenue and Agricultural and Finance Departments, and that the papers be published in the Supplement to the *Gazette of India*.

Ordered further, that a copy of the Review and note be forwarded to Her Majesty's Secretary of State for India for information.

F. L. O'CALLAGHAN,
Secretary to the Government of India.

Document accompanying.

Note by the Officiating Accountant General, Public Works Department, dated 6th May 1893.

Note by R. G. Macdonald, Esq., Officiating Accountant General, Public Works Department, upon the accounts of Revenue and Expenditure of Irrigation Works in India for 1891-92.

The figures in the accounts submitted herewith agree with the Finance and Revenue accounts of the Government of India, but in this note certain figures are added from the Administrative accounts of the Public Works Department, Irrigation Branch, the Revenue reports of Irrigation Works and the Annual Statement of the Financial Results of Irrigation Operations in India, prepared for submission to the Secretary of State for India.

2. The irrigation works in India are divided into two main classes, *viz.*, Major Works and Minor Works.

Major Works are sub-divided into—

(*a*) Productive Works, the Capital of which has been provided from borrowed money; and

(*b*) Protective Works, the Capital of which has been provided out of the general revenues of India.

Minor Works are sub-divided into—

(*a*) Works for which Capital and Revenue accounts are kept; and

(*b*) Works for which Capital accounts are not kept.

3. Capital and Revenue accounts are kept for all Major Irrigation Works. There are 44 projects falling under this category—*vide* statement given in paragraph 10 below.

Of these, 36 were sanctioned as works expected to be remunerative, *i.e.*, to pay the cost of up-keep and interest on the Capital outlay. They were or are being constructed from funds provided outside the general revenues. The remaining 8 projects* were sanctioned as works of protection against famine, and the cost of their construction has been or is being paid for out of the annual grants under famine insurance.

* *North-Western Provinces and Oudh.*
1. Betwa Canal.
Punjab.
2. Swat River Canal.
Madras.
3. Rushikulya Project.
Bombay, Deccan and Gujarat.
4. Nira Canal.
5. Mhaswad Tank.
6. Chankapur Tank.
7. Maladevi Tank.
8. † Gokak Canal, 1st section.

† Now classed as a minor work and combined with Gokak Storage Works.

4. The works classed as Minor Irrigation Works are numerous. Capital and Revenue accounts are kept for 73 projects falling under this category; for the others one account only of receipts and charges for each work or group of works is kept. The two works in Baluchistan, *viz.*, Zara Karez and Nari Canal, shown last year under the head "Works for which Capital and Revenue accounts are kept," have been removed from this class and are included this year in the table given in para. 43 of this note, *i.e.*, "Works for which Capital accounts are not kept." It has been decided that in future Capital and Revenue accounts should be kept of all new Minor Irrigation Works, the estimated Capital outlay on which is more than Rx. 5,000 inclusive of Establishment and Tools and Plant charges, provided there is good reason to anticipate that the revenue derived therefrom will more than cover the working expenses.

5. The general results of works for which Capital and Revenue accounts are kept are as follows:—

	Major Works. Rx.	Minor Works. Rx.	Total. Rx.
Capital outlay.			
During 1891-92	859,239	75,333	934,572
To end of 1891-92	29,636,329	4,636,651	34,272,980
Revenue Account, 1891-92.			
Gross Revenue	2,109,363	452,037	2,561,400
Maintenance and Working	840,994	312,141	1,153,135
Net Revenue	1,268,369	139,896	1,408,265
Interest	1,109,673	...	...
Net profit	158,696	...	...
Percentage of net Revenue of the year on the Capital outlay to end of the year.	4·28	3·02	4·11

6. The figures of Capital outlay and working expenses shown in the above table include indirect charges on account of leave and pension allowances and capitalization of abatement of land revenue, which were not taken into account in my note on the accounts of revenue and expenditure of Irrigation Works for 1890-91. This chiefly accounts for the decrease in the percentage of net revenue of the year from Major Works compared with that of the previous year. The decrease under Minor Works is due partly to this cause and partly to the irrigation revenue from some works in Madras having been omitted from the gross revenue for the year owing to the necessary figures not having been received from the Board of Revenue as explained in paragraph 35 of this note.

7. The Capital outlay on Major Works includes the outlay on the projects noted in the margin, which were under construction in 1891-92, and have not yet commenced to earn revenue. When these projects are completed, and the full amount of revenue is realized from them and the Chenab and other canals which have been recently opened for irrigation, the net profit from this class of works will be considerably larger than at present.

Sirsa Branch of the Western Jumna Canal.
Periyar project.
Rushikulya project.

8. The receipts and charges of the year 1891-92 on Revenue account, exclusive of the figures relating to Minor Works for which Capital accounts are not kept, are detailed in the following statement by funds and provinces.

1891-92.

	Imperial.				Provincial.				Local.				Total.

9. From the above table it will be seen that after paying interest on borrowed money expended in the construction of Major Irrigation Works, the highest net profits are obtained from Madras. Next follow the North-Western Provinces and Oudh and the Punjab.

Major Works.

10. The following statement shows in detail the financial results of individual Major Irrigation Works during and to the end of 1891-92.

Number of works.	Major Works.	Capital outlay to end of 1891-92.			Revenue Account for 1891-92.					Revenue Account to end of 1891-92.			
		Direct.	Indirect.	Total.	Gross revenue.	Maintenance and working.	Net revenue.	Interest.	Net profit.	Percentage of net revenue on the Capital outlay.	Gross revenue.	Maintenance and working.	Net revenue.	Interest.	Net profit.

(b) This is now classed as a minor work and combined with Gokak Storage works.

11. Taken collectively by provinces the percentage of net revenue on the Capital outlay of Major Works is as follows for 1891-92:—

1. Madras	6·19
2. Punjab	5·65
3. North-Western Provinces and Oudh	5·53
4. Bombay—Sind	4·53
5. Bombay—Deccan and Gujarat	1·16
6. Bengal	·25
Total	4·28

12. The systems which in 1891-92 paid over 4 per cent. are arranged below in the order of the rate paid:—

1. Cauvery Delta System	36·70
2. Eastern Jumna Canal	21·84
3. Godavari Delta System	13·39
4. Kistna „ „	12·83
5. Sidhnai Canal	11·10
6. Begari „	10·25
7. Western Jumna Canal	8·90
8. Ganges Canal	7·61
9. Bari Doab „	7·16
10. Sirhind „	6·06
11. Srivaikuntham Anicut System	5·74
12. Eastern Nara Works	5·68

13. The systems that have, up to the end of 1891-92, paid off the accumulated interest on the capital expended on them are noted below:—

	Surplus. Rx.
1. Western Jumna Canal	3,053,407
2. Godavari Delta System	2,580,488
3. Cauvery „ „	1,815,905
4. Eastern Jumna Canal	1,482,185
5. Kistna Delta System	1,248,187
6. Bari Doab Canal	183,280
7. Begari „	144,951
8. Desert „	73,424
9. Penner Anicut System	67,684
10. Sidhnai Canal	32,525
11. Unharwah	10,623
12. Srivaikuntham Anicut System	1,825

Assuming that the works are still worth the amount charged in each case to the Capital account, this represents to end of 1891-92 a net profit to the State on these systems of . 10,694,484

The charge to the State on other Major Works is . . 7,945,589

Leaving a net profit to date on all Major Works of . . 2,748,895

14. The following statement shows to the end of each year for the last five years the net charge to the State on projects which are expected eventually to pay off the accumulated interest on their Capital cost:—

	Date of completion.	1887-88.	1888-89.	1889-90.	1890-91.	1891-92.
North-Western Provinces and Oudh.		Rx.	Rx.	Rx.	Rx.	Rx.
Ganges Canal	1854	358,656	305,832	260,670	163,977	53,047
Lower Ganges Canal	1878	43,932	120,835	184,877	241,950	257,544
Agra Canal	1874	219,053	231,636	236,294	233,674	233,051
Punjab.						
Sirhind Canal	1887	819,862	852,100	871,825	854,540	800,557

Madras.						
Sangam Anicut Project	1885	33,902	41,094	45,797	50,059	64,784
Barur Tank	1887	3,742	5,053	6,566	8,015	9,866
Bombay—Sind.						
Eastern Nara Works	...	85,728	78,129	62,227	51,227	41,222
TOTAL	...	1,571,218	1,643,310	1,677,452	1,616,914	1,478,688

NOTE.—The difference between these figures and those in the previous year's note is due to the addition of indirect charges.

15. The total loss to the State on account of works mentioned in the above table was reduced by Rx. 138,226 during 1891-92. This is due to larger collections on the Ganges and Sirhind canals and the Eastern Nara Works, owing to expansion of irrigation. The net revenue earned by the Sirhind canal during 1891-92 after paying off interest charges amounted to Rx. 53,983, against Rx. 17,285 in the previous year.

16. The Chenab canal, though not entered in the foregoing table, was opened for irrigation in 1887; but the works on the canal were not completed till 1892-93. The revenue realized from this canal up to the end of 1891-92 was less than the working expenses by Rx. 13,053, and the accumulated interest charges amounted to Rx. 93,889, thus raising the total charges to the canal to Rx. 106,942. As an ample supply of water is now assured to the canal by the completion of the permanent head works, a rapid increase of revenue is expected, which will soon clear off these charges.

17. The under-noted works, which were allowed to be constructed from borrowed money prior to the introduction of the rules laying down conditions which must be fulfilled before a work may be classed as Productive, are not expected to repay the accumulated interest charges on the capital invested in them.

	Total outlay to 31st March 1892. Rx.

19. It will be observed from the foregoing statement that taken collectively the revenue from all Major Irrigation Works is steadily increasing. The average increase during the four years ending 1891-92 is Rx. 132,553.

20. The increase in Bengal in 1891-92 was principally due to the recovery of old outstandings on the Midnapore canal and the Sone project, and to a greater demand for water, especially from the Orissa canals. In the North-Western Provinces and Oudh and Punjab the increase was due to an expansion of irrigation. The decrease in Madras was due to large remissions granted on the Penner and Sangam anicut systems, while that in Bombay was due to the supply of water in the canals in Sind being insufficient to meet demands and to damage to crops by locusts.

21. The following statement shows for each Major Work during the five years ending 1891-92 the gross revenue and the irrigated area, and the mileage of canals completed at the end of each year.

Major Works.	Gross Revenue.					Irrigated area in acres.					Mileage in operation (including distributaries).

22. In the following table, which gives the rate per acre irrigated during 1891-92, the irrigation revenue is the share of enhanced land revenue due to irrigation *plus* water rates, and owners' rates :—

Province.	Irrigation revenue. (Assessed.)	Irrigated acreage.	Rate of revenue per acre.
	Rx.	Acres.	Rx.
North-Western Provinces and Oudh .	648,413	1,912,851	·34
Madras	799,412	2,413,591	·33
Punjab	617,087	1,963,041	·31
Bombay	108,979	534,620	·20
Bengal	137,786	736,381	·19
TOTAL .	2,311,677	7,560,484	·31

23. The charges for maintenance and working for the year 1891-92 are detailed in the following statement and compared with the outlay of the previous four years. Large sums have in the past been charged to Revenue in connection with extensions and improvements, a portion of which would, in the case of Railways, be charged to Capital; the total amount so charged in 1891-92 being Rx. 58,127. Under Public Works Department Code, Volume II, Chapter XV, paras. 156 A and B, as introduced by Standing Order No. 261 of the 3rd October 1892, the greater portion of such outlay on extensions and improvements of canals, whose construction estimates are closed, will in future be charged to the Capital account of the canals.

	Extensions and improvements.	Maintenance and repairs.	Establishment.	Tools and plant.	Profit and loss.	Suspense.	Total Direct charges.	Indirect charges.	Total.	Totals of previous four years.

24. The foregoing table shows that the expenditure in the Punjab is annually increasing. This is due chiefly to the maintenance and repairs of additional lengths of canals opened for irrigation.

25. The decrease in Madras during 1891-92, as compared with the previous year, is due to the outlay in 1890-91 being very large owing to the write-back from the Capital to the Revenue account of the value of the old lock at Vijeshweram in the Godavari Western Division.

26. The increase in Bombay is due to the widening of the Begari canal.

27. The expenditure under this head is being specially considered by the Government of India, with the object of seeing whether it can be reduced without injuring the efficiency of the canals.

28. The cost of maintenance and working per irrigated acre in the different provinces during the past five years and the percentages of maintenance and working on gross revenue are as follows :—

Cost of maintenance and working per irrigated acre.

* This is not an irrigation project, but a workshop established for the service of the canals in the Punjab generally and the Bari Doab canal especially.

(a) Excludes Rx. 47,920, share due to old irrigation.

31. The net revenue derived in 1891-92 from the works constructed for irrigation purposes taken collectively amounted to 4·60 per cent. on the Capital outlay, though many projects are still worked at a loss. The net revenue earned by these works to the end of 1891-92 is about $1\frac{1}{2}$ times the amount of Capital outlay upon them. The best paying works under this class are the inundation canals in the Panjab and the works in Sind.

It must be held to be very satisfactory that these works, which were constructed chiefly for the general improvement of the country, are paying upwards of 4 per cent. on the Capital invested in them.

32. The revenue realized from the navigation canals has also exceeded the working expenses by Rx. 8,226.

33. Certain feeder roads are now being constructed in connection with the Orissa Coast Canal; on their completion an increased amount of traffic will, it is expected, be brought to the southern portions of the canal.

34. The revenue derived from Minor Works for which Capital and Revenue accounts are kept during 1891-92 is detailed in the following statement, and compared with the revenue of the previous four years.

Irrigation Revenue.														Totals of previous four years.			
	Share of enhanced land revenue due to irrigation works.	Water-rates.	Owner's rates.	Sale of water.	Water-supply of towns.	Plantations.	Other canal produce.	Water-power.	Navigation receipts.	Rents of buildings.	Fines.	Miscellaneous.	Total.	1890-91.	1889-90.	1888-89.	1887-88.

1887-88	261,032	26,776	1,065	164	966	1,656	3,222	2,476	69,472	432	447	34,310	402,018				

35. It will be seen from the above that there has been on the whole a steady annual increase in the revenue derived from Minor Works during the four years ending 1890-91, but during the year under review there is a sudden decrease which occurs chiefly in Madras owing to the omission from the figures for 1891-92 of the irrigation revenue derived from the Palar, Pelandorai, Lower Coleroon and Shatiatope anicut systems; information regarding these works not having been supplied by the Board of Revenue before the accounts of the year were closed. The irrigation revenue derived from these systems in 1890-91 was Rx. 49,290. The growth of revenue is specially noticeable in Bombay, where it has increased from Rx. 99,243 in 1887-88 to Rx. 146,135 in 1891-92. The increase occurs chiefly on the canals in Sind, especially the Ghar, Sukkar and Fuleli. In some provinces the revenue remains comparatively stationary, in others there are considerable fluctuations.

36. The decrease in Rajputana was due to the unfavourable nature of the seasons.

37. The working expenses of the year 1891-92 and of the previous four years are shown in the following statement:—

	Extensions and improvements.	Maintenance and repairs.	Establishment.	Tools and plant.	Profit and loss.	Suspense.	Total direct charges.	Indirect charges.	Total.	Totals of previous four years. 1890-91.	1889-90.	1888-89.	1887-88.

38. Here also, as under Major Works, there is a large outlay on extensions and improvements charged to Revenue, a part of which in the case of railways would have been charged to Capital, *vide* para. 23, *ante*.

39. The annual increase in the outlay on maintenance and working of all works in this class taken collectively is closely commensurate with the annual increase in the revenue derived from them. The increase during 1891-92 over that of the previous year occurred chiefly in Lower Burma and Madras. In Lower Burma the increased outlay was necessary for raising, strengthening and retiring the Irrawaddy embankments threatened by river encroachments, and in Madras large outlay was incurred on the Buckingham Canal under maintenance and repairs, owing to heavy clearances and the opening of two bars so as to increase the depth of water in the canal.

The increase of Rs. 4,710 in Rajputana was due to the construction of famine relief works.

40. The following table gives the percentages of expenditure on revenue in each province during the past five years :—

Provinces.	1887-88.		1888-89.		1889-90.		1890-91.		1891-92.

41. The rates per irrigated acre in the different provinces during the year 1891-92 were as follows :—

	Irrigation revenue. (Assessed.)	Irrigated acreage.	Rate of revenue per acre.
	Rx.	Acres.	Rx.
Rajputana . . .	8,626	11,987	·72
Baluchistan . . .	1,641	7,732	·21
Bengal	1,100	5,965	·19
North-Western Provinces and Oudh .	24,115	133,549	·18
Bombay	142,864	787,604	·18
Madras . . .	61,750	378,998	...
Punjab	72,855	800,239	·09
Total .	312,951	2,126,074	...
Lower Burma . . .	(a) 77,706	...	...
Total .	390,657	...	...

(a) Represents actual collections.
NOTE.—No acreage is quoted against Lower Burma as the works concerned are only river embankments.

The rate per acre irrigated in Madras during 1891-92 has been omitted as the revenue from the Shatiatope and Lower Coleroon Anicut systems has not been included in the figures of irrigation revenue shown in the above statement for the reasons given in para. 35.

42 Besides the transactions noted in the foregoing paragraphs, a sum of Rx. 44 was spent in 1891-92 on the works shown below, for which Capital accounts are kept, but which are now in abeyance :—

	Rx.
Bengal—	
Damodar Project	—120
North-Western Provinces and Oudh—	
Bundelkhand Irrigation Survey	24
Bombay—	
Gokak Canal, 2nd Section	140
Total Rx. .	44

Works for which Capital Accounts are not kept.

43. The receipts and expenditure on account of these works during 1891-92, as recorded in the Finance and Revenue accounts, are shown in the following statement, in comparison with the transactions of the previous four years : --

Works for which Capital Accounts are not kept.

(a) For Zara Karez, the outlay on which in previous years was recorded under the head "Works for which Capital and Revenue accounts are kept."

F

44. The rise in the expenditure during 1891-92 was due to the construction of famine relief works in Upper Burma, to the construction of a lock at Wimpadaw in connection with the Kyaikto-Sittang canal in Lower Burma, to the construction of a new canal from the Kabul river to Nowshera in the Punjab, and to larger amounts having been made available from Provincial funds for expenditure in Madras.

45. The share of enhanced land revenue due to irrigation by the Muzaffargarh canals in the Punjab amounts to Rx. 26,160 ; but as information regarding this source of revenue is not obtainable in conuection with other works under this head, it has not been included in the above statement.

46. Under this head appear at present the only irrigation works in Upper Burma. Orders have been issued by the Government of India for the preparation of Capital and Revenue Accounts of all important works. A trifling sum of Rx. 14 on account of Revenue has been credited to Government in the accounts of the Public Works Department in 1891-92. Whatever revenue may be due to irrigation from old Burmese works has since the annexation of Upper Burma been credited to "Land Revenue" in the accounts of the Civil Department.

R. G. MACDONALD,
Officiating Accountant General,
Public Works Department.

No. 21 I., dated Simla, 6th May 1893.

Submitted to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending at 8 a.m. on Saturday, August 5th, 1893.

During the whole of the week under review the weather throughout the Indian region has been of the normal monsoon type. The pressure has been highest in the extreme south and lowest over the Indus Valley, while a well marked trough of low pressure has existed over the Gangetic plain. Within this trough during a large portion of the week a shallow depression has existed, and drifted very slowly from the north-western angle of the Bay as far as the North-Western Provinces. The winds blew steadily from west over the Peninsula and the central parts of the country, from south-west and south-east over North-Eastern India, and from south-east and east in Northern India. The rainfall was moderate both in amount and extent during the first few days of the week, but became heavier and more general as the week progressed. Temperature followed the same course. It was slightly above the normal average during the first two days when the rainfall was light, but fell below the normal on the 1st August, and so continued till the end of the week.

The chart of Sunday, July 30th, showed that the barometer was falling everywhere. Pressure was highest in Malabar and lowest in the Punjab, while a feeble barometric depression existed over South-West Bengal and Ganjam. The pressure difference between Malabar and the Indus Valley was 0·449 inch. The winds were irregularly cyclonic in the neighbourhood of the disturbance noticed above between south-west and south-east in Burma, and generally westerly elsewhere. The force was fresh over a large part of the Indian region. Rain had fallen over the Peninsula and North-Eastern India, but there was very little in the centre and north-west. The heaviest amount reported was 3·80 inches at Akyab, but Mandalay, Darjeeling, Silchar, Raipur, and Hyderabad (Deccan) had 2 inches or more. On the 31st the pressure changes were somewhat irregular, a rise being reported from Burma, the South Carnatic, and the North-West Provinces, and a fall elsewhere. The depression over South-West Bengal had become somewhat better defined, but otherwise there was little change in the distribution. The pressure difference between Malabar and the Indus Valley was 0·465 inch, but the steepest gradient was over the Bay. The wind circulation was generally the same as on the preceding day, except that some easterly winds had appeared along the line of the hills. There was more rain on the north side of the Gangetic plain and in the Central Provinces than on the 30th, but the principal rainfall was still over the Peninsula and North-Eastern India. Silchar and Jubbulpore had over 2 inches and many stations over 1 inch. On August 1st the barometer was rising over Burma, North-Western India, and the Peninsula and falling over Bengal. The depression over South-West Bengal had begun to move north-westward. Gradients were steep generally, and the pressure difference between Malabar and the Indus Valley was 0·518 inch. The easterly current of air along the line of the hills in Northern India was more pronounced than on the 31st, and the cyclonic circulation had moved north-westward with the depression ; otherwise there was little change in the winds. There was no rain over North-Western India, except on and near the hills, but elsewhere rain was very general. Cuttack reported 3·70 inches of rain, Tavoy 3·55 inches, and Moulmein, Sibsagar, and Sambalpur over 2 inches. On the 2nd the barometer was rising over Assam, Burma, and a large part of the Peninsula, but was falling or changing irregularly elsewhere. The depression over South-West Bengal had again moved very slowly north-westward, and gradients remained very steep over the Bay. The pressure difference between Malabar and the Indus Valley was 0·502 inch. The easterly current of air up the Gangetic plain had still further increased, and the wind circulation was now normal, except for the slight cyclonic movements near the depression. Rain was falling generally, except in the Punjab, Rajputana, Sind, and Guzerat. Silchar

reported 3·80 inches, Jubbulpore 3·54 inches, Akyab and Tavoy over 2 inches, and many stations over 1 inch. The chart of the 3rd showed that the feeble depression had reached the east of the North-West Provinces. The barometer was falling over those Provinces as well as over the Central Provinces and the west of the Peninsula, but was rising elsewhere. Gradients were still steep over the Bay, but the pressure difference between Malabar and the Indus Valley had decreased to 0·440 inch. The winds blew from the normal monsoon directions. Rain continued general, except over the Punjab, Rajputana, Sind, and Central India (West). The rainfall was heavier than on the previous day. Saugor Island reported 5·85 inches of rain, Dehra Dun 5·67 inches, Tavoy 5·15 inches, Raipur 4·50 inches, Cuttack, Seoni, Pachmarhi, and Jubbulpore over 3 inches, and Akyab, Dacca, and Benares over 2 inches. On the 4th the barometer was falling over the North-West and Central Provinces, the Konkan, Assam, and Burma, and rising elsewhere. The feeble depression had continued to advance north-westward, and lay immediately over the North-West Provinces. Gradients had become slighter over the Bay, and the pressure difference between Malabar and the Indus Valley had decreased to 0·417 inch. The wind continued to blow from the normal monsoon directions. Rain continued general or fairly general, and in the Central Provinces the amounts were again heavy. Jubbulpore reported 7·32 inches, Pachmarhi 4·50 inches, Tavoy 4·39 inches, Hoshangabad 3·51 inches, Saugor 3·06 inches, and Akyab and Ratnagiri over 2 inches. By the morning of the 5th the feeble depression over the North-West Provinces had disappeared, but the barometer was falling, except over the North-West Provinces, where a recovery had taken place. Pressure decreased steadily from a high pressure area in the extreme south to a low pressure area in the north. The easterly current of air up the Gangetic plain had largely broken down and the wind was generally westerly, except over Burma, Assam, and part of Bengal, where it was southerly. Except on the West Coast and in Burma the rainfall was more scattered than on the two previous days, and the heavy rainfall in the Central Provinces had ceased. Tavoy reported 4·16 inches of rain, Bassein 3·20 inches, Chittagong 3·01 inches, Neemuch 2·90 inches, and several stations over 1 inch.

Temperature.—The following table shows the variations of the mean temperature from the normal on each day of the week for the different Provinces of India:

Province.	July.		August.					Mean variation of week.
	30th.	31st.	1st.	2nd.	3rd.	4th.	5th.	
	°	°	°	°	°	°	°	°
Burma	+0·2	—0·2	—2·2	—1·8	—1·1	—0·2	—1·2	—0·9
Bengal and Assam	+0·4	—0·3	—0·8	—1·3	—1·7	—1·0	+0·1	—0·7
North-Western Provinces and Oudh	+2·1	+1·4	0	—1·0	—2·2	—1·5	0	—0·2
Punjab	+0·2	+1·4	+1·7	+1·7	+0·5	+0·6	+1·0	+1·0
Bombay	—0·8	—1·0	0	+0·7	+0·4	—0·8	—0·7	—0·3
Central Provinces and Berar	+2·6	+2·1	+0·4	+0·7	—2·7	—5·6	—2·2	—0·7
Central India and Guzerat	+2·0	+1·8	+2·0	+1·8	+0·6	—0·3	—1·6	+0·9
Sind and Rajputana	+0·1	+1·2	+1·5	+1·1	+0·9	+1·5	+3·1	+1·3
Madras	—3·0	—4·6	—3·4	—3·0	—3·3	—2·6	—1·1	—3·0
Mean for whole of India	+0·4	+0·2	—0·1	—0·1	—1·0	—1·1	—0·3	—0·3

The mean temperature of the whole of India for the week was only 0·3° below the normal average. On the 30th and 31st of July the mean temperature of the whole country showed a slight excess, but on the 1st August the mean fell below the normal, and so continued till the close of the period. The coolest day relatively to the normal was the 4th. In the Punjab, Guzerat, Central India, Sind, and Rajputana the mean temperature of the week was above the average, but in all the other Provinces it was below, the greatest defect being in Madras.

Rain.—The concluding table shows that during the week under review rain has fallen in all the divisions of India, except the Punjab (South and West), Sind, and Rajputana (West), though in the divisions Punjab (Central), Kathiawar,

and Madras (South) the average actual rainfall of each division was less than one-tenth of an inch of rain. In all the other divisions effective rain was received. The heaviest average actual rainfall was 13·99 inches in Arakan: this was followed by 9·02 inches in the Konkan, by 8·87 inches in the Central Provinces (Central), by 7·95 in the Central Provinces (East), and by 7·69 inches in Tenasserim. The lightest amounts were received in the divisions noted above. According to the normal, the heaviest rainfall during the week under review is 9·40 inches in Tenasserim, followed by 9·27 inches in Arakan, by 7·47 inches in Coorg, and by 7·10 inches in the Konkan, while the lightest rainfall is in South Madras. There are then considerable differences between the actual and normal distribution of rainfall, the principal being the excessive rain in Arakan and the Central Provinces, and the lightness of the rainfall in North-Western India.

The third column of the table shows that in eighteen of the rainfall divisions the total rainfall of the week has exceeded and in thirty-three has been below the average. The regions which received excessive rain included the following divisions, *viz.*, Lower and Central Burma, Arakan, the Assam divisions, Orissa, Malabar, the Konkan, Deccan, Khandeish, the Central Provinces divisions, Central India (East), the East Coast (North and Central), and Hyderabad (South). In all the remaining divisions the rainfall was deficient. The greatest absolute excess was 5·10 inches in the Central Provinces (East), followed by 4·99 inches in the Central Provinces (Central) and by 4·72 inches in Arakan. The greatest absolute deficiency was 3·07 inches in the hill districts of the Punjab.

The concluding columns which give the state of the monsoon rainfall up to date show that from May 28th to August 5th the rainfall of Central Burma, of Arakan, of Assam (Brahmaputra), of North Bengal, of the North-West Provinces (Submontane *a* and West), of the Punjab (Central, Hills, and West), of Malabar, of Madras (South-Central), of Mysore, of the Konkan, of Kathiawar, of Central India, of Rajputana (East), and of the East Coast (North *a*) has been approximately normal, and that of Tenasserim, Lower Burma, Orissa, Coorg, Berar, and the Central Provinces (West) has been short of the normal, while all the other divisions have had an excess of rain. The greatest excess relatively to the normal has been in the Punjab (North-West), where more than twice the average fall of the division has been received.

The following gives the largest total amounts received during the week as reported in the rainfall telegrams of the week:

Division.	District.	Station.	Amount.
Central Burma	Shwegyin	Kyaikto	14·38 inches.
Arakan	Akyab	Minbya	15·52 ,,
East Bengal	Chittagong	Cox's Bazar	11·25 ,,
Assam	Cachar	Sudder	10·24 ,,
North-Western Provinces.	Garhwal	Kotdwara	6·73 ,,
Punjab	Kangra	Sudder	9·74 ,,
Malabar	South Kanara	Beltangadi	15·62 ,,
Madras (South-Central)	Nilgiris	Devala	13·63 ,,
Konkan	Colaba	Mahad	19·58 ,,
Deccan	Kolhapur	Bavda	23·08 ,,
Central Provinces	Balaghat	Sudder	16·36 ,,
East Coast	Ganjam	Narasannapeta	6·35 ,,

PROVINCE.	DIVISION.	Rainfall data for week ending August 5th.			Rainfall data from May 28th to August 5th, 1893.

Simla, *10th August, 1893.*

W. L. DALLAS,
Asst. Meteorological Reporter to the Government of India.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the state of the Season and Prospects of the Crops.

Madras.—*For week ending 5th August.*—Rainfall heavy in the Circars, on the West Coast, and in the Nilgiris; moderate in the Deccan and Karnatic; and in eight or nine Central and Southern districts. Good freshets in rivers. In Tinnevelly cultivation and sowing continue active. Standing crops generally thriving, but more rain is required in the Southern districts. Fair harvest of earliest crops commencing. Pasture and water-supply generally abundant. Prospects favourable. Prices slightly easier in the Circars, Deccan, and Karnatic; stationary in the Central and West Coast districts; and rather dearer in the Southern districts.

Bombay.—*For week ending 9th August.*—Rain more or less throughout the Presidency, but deficient in four districts. Young crops injured by rats, locusts, or other insects in parts of four, and withering for want of rain in parts of two, districts. Agricultural operations progressing generally, but sowing retarded in one district owing to excessive rain. Transplantation progressing in parts of eight districts. Prices steady, except in parts of three districts. Agricultural stock good and fodder sufficient.

Bengal.—*For week ending 5th August.*—There was general rain during the week, but the falls were light over the greater part of the Province. Transplantation of winter rice is going on rapidly and the prospects are favourable, except in some low-lying tracts in Bengal Proper. Early rice and jute are being reaped, but these crops have been much damaged in parts of East and South-West Bengal. The autumn crops in Behar and Chota Nagpur have also suffered some loss from heavy rain and floods, and the general prospects of the indigo manufacture are not satisfactory. No important change in prices of common rice. Cattle are generally in good condition, except in Noakhali and Tipperah, where scarcity of fodder is reported.

North-Western Provinces and Oudh.—*For week ending 9th August.*—Rain has been general and rather heavy in some districts. More is, however, required in the Western districts. Crops are flourishing and the autumn crop prospects are good. Preparations for sowings for the spring crops have commenced in places. Supplies and fodder are plentiful. Prices generally steady.

Punjab.—*For week ending 9th August.*—Rain has fallen in parts of two districts. Sowings for the autumn crops nearly over. Preparation for spring crops commenced. Weeding of standing autumn crop going on and prospects are generally good but average in three districts. The crops in some districts are suffering for want of rain. Maize and *juar* (*sorghum vulgare*) have been damaged by rats in parts of Umballa, and the young crops in parts of Mooltan by heavy floods. Cattle are generally in good condition. Fodder sufficient throughout the Province. The outturn of poppy-heads and opium in Lahore is not good, as the crops were damaged by untimely rain and hailstorms. Prices unsettled in one district, rising in three others, and stationary elsewhere.

Central Provinces.—*For week ending 9th August.*—Rainfall heavy in the Northern districts—particularly heavy fall in Jubbulpore. Autumn crops greatly benefited by the rain. Weeding of fields and transplanting of rice progressing. Prospects favourable. Prices easy.

Burma.—*For week ending 5th August.*— In Lower Burma the rainfall was sufficient. Agricultural operations are progressing satisfactorily and the crop prospects are good. Rain fell in all districts in Upper Burma, except Pakokku. Ploughing and sowing generally are progressing, but are retarded in parts of two districts for want of rain. Early sesamum and paddy are being reaped in some districts. Crop prospects are generally good, but rain is very much required in parts of Yeu and Shwebo. The price of paddy has risen in six districts, but has fallen in two others.
