READ—the following papers :—

Letter—from the Hon'ble Mr. J. H. STONE, M.A., F.R.H.S., Acting Director of Public Instruction.
To—the Secretary to Government, Educational Department.
Dated—Madras, the 30th November 1910.
No.—Ref. on Cur. 5023.

I have the honour to submit the enclosed plans with estimate, amounting to Rs. 10,080, for the construction of a building for the Roman Catholic Convent Girls' school, Kumbakonam, and to recommend that a maximum grant of Rs. 2,000 be sanctioned to be paid when funds are available.

2. A portion of the proposed building is to be used as a chapel—an item towards the cost of which no aid is given under the Grant-in-aid Code.

3. An application for aid in the prescribed form is enclosed.

II

**Note by the Chief Engineer, Public Works Department, dated
2nd February 1911.**

The Director of Public Instruction submits for sanction an estimate, amounting to Rs. 10,080, and two plans for constructing a girls' school for the Roman Catholic Convent at Kumbakonam.

The plans and estimates have been scrutinized in the Chief Engineer's office and the sections of the roof timbers have been corrected.

The terracing must be in accordance with Circular No. 234-C of 9th January 1908 and the scantlings have been corrected accordingly.

The beams supporting the roof over the "main rooms" are not strong enough and have been changed in the Chief Engineer's office to rolled steel joists 14" × 6" × 46 lb., spaced so as to rest over the pillars and not over the arches as drawn.

Camber pieces have been provided for in the Chief Engineer's office and should be laid on the girders to give a fall of not less than 1 in 40 to the terraced roof.

The verandah rafters may be 3" × 6" as figured on the plan submitted, spaced 21 inches centre to centre; and the bressummers may be 5" × 8" instead of 7" × 8".

The joists over the rooms allotted to the museum, library, first standard, second standard and entrance should be 2½" × 8", spaced at 18" centres.

No section is given showing the roof timbers of the chapel. As the clear span is 13 feet it will be desirable to use girders. The plan and estimate have been corrected in the Chief Engineer's office to provide for the chapel three rolled steel joists 10" × 5" × 30 lb. and timber joists 2½" × 8", spaced at 18" centres.

The verandah pillars, for which ground-moulded brick in mortar is provided in the estimate, should be built 12 inches least diameter with through stones 3 inches thick the full diameter of the pillar at intervals of 3 feet vertically. Provision for this has been made in the estimate in the Chief Engineer's office.

By these alterations the amount of the estimate is increased from Rs. 10,080 to Rs. 10,220.

The Superintending Engineer should satisfy himself that the foundations provided are suitable. As the soil is reported to be "hard clay" above level 43.00 and "alluvial" below, it is not understood why the foundations are carried down to 43.00 with practically no footings.

With these remarks the estimate as altered in the Chief Engineer's office amounting to Rs. 10,220, is recommended for sanction.

C. A. SMITH,
Chief Engineer, P.W.D.

Order—No. 97, Educational, dated 13th February 1911.

Chief Engineer's note on page 3.

Public Instruction, however, recommends only a maximum grant of Rs. 2,000, as a portion of the building is to be used as a chapel towards the cost of which no grant is payable under the Grant-in-aid Code.
