DEPARTMENT of INDUSTRIES

Technical Institute,
Madura, 9th July, 1912.

NO 31 of 12.

From

F. Marsden., M.Sc. Ph.D.

Tinctorial Expert,

M a d u r a .

TO

The Director of

Public Instruction,

Through

The Superintendent of

Industrial Education,

M a d r a s .

Sir,

In connection with the work of the Tinctorial Laboratory I beg to submit the following report.

As mentioned in my No. 26 of 7-6-12—which at the request of the Superintendent of Industrial Education, was forwarded direct to you, a copy at the same time being sent to him—I reported that I was arranging to obtain a supply of water from a well in the compound here. This has now been done and I have an ample supply for all ordinary purposes.

For special purposes, such as making up solutions and general chemical work I have arranged with the Manager of the Madura Mills to keep me supplied with condensed water from the boilers, for the well water here is so hard, and charged with soluble salts, that its use for these purposes is precluded. The total Hardness amounts to no less than 110° (English), but I am able to reduce this by softening to $2-3^{\circ}$, though naturally with a slight increase in the amount of soluble salts contained.

I have now concluded my arrangements for starting an instructional course and I am pleased to find that I could have obtained more students than I have accommodation for. The students I have selected have passed through the Sourashtra High School, 1 having

studied up to Matriculation standard, two having

been in the 5th Form and one in the 4th, and all but one are related either directly or by marriage with leading dyers in the town, the 4th being related to a large yarn merchant and dye-ware agent. The ages of the students (all of whom have been actively engaged in the respective businesses of their relatives) range from 17-20.

I proposed to hold a class daily for 4 hours but the general opinion of the members of the Dyeing Community with whom I have discussed the matter, is that this would be rather too severe a strain, so I have arranged for the students to have 3 full hours on 4 afternoons a week and if I find that it is possible to increase this, I will do so.

The course commences on Thursday, July 11th.

I may also mention that there is a desire among some of the dyers that I should give a course of lectures at an hour at which those engaged in business would be able to attend, but I had to point out that, however desirable and likely to be useful this idea might be, we could not at present give effect to it, though we could do so later if the necessary provision were made in the New Technical Institute. I may say I am doubtful whether at present any large proportion of the dyers would be able to take an advantage of such lectures, owing to a want of knowledge of English, but in time I have no doubt that the numbers of those who could do so will increase.

*You might sketch out a set of
prospective - syllabus with
from for reference, so that
the starting of the classes
may be made known.
K.D.*

I have the honour to be,

Sir,

Your most obedient servant,

Fred Marsden
Tinctorial Expert.

Note. Please see G.O. No. 390. Ed of 4.5.12 for the last report. (X)

2. Dr. Marsden ~~has not~~ would have studied the class by now. Though in para. 5 of G.O. No 647, Ed, dated 18th July 1912, detailed inspectors have only just been called for, G.O. No 112, Ed dated 9th February 1912 may be taken to have given sufficient authority to ~~him~~ commence giving instruction to local Dyers when it becomes feasible to do so. Please see also Dr Marsden's letter on page 4 of G.O. No. 287. Ed of 20.3.12. The provisional class~~es~~ now opened need not therefore be objected to. More details about ~~the~~ it might have been given in the report.
