From

THE HONORABLE MR. D. DUNCAN, M.A., D.Sc., LL.D.,

DIRECTOR OF PUBLIC INSTRUCTION,

Madras,

To

The Secretary to Government,

Educational Department,

Fort Saint George.

SIR,

In returning Government endorsement No. 37, Educational, dated 19th January 1899, I have the honour to state that the percentages furnished in my letters No T-160, dated 27th June 1898, No 7190, dated 2nd July 1898 and No 7817, dated 19th July 1898, relate to scholars in public institutions only, the qualifying expression "in public institutions" in paragraph 1 of the Government of India letter No 7 Educational/185, dated 28th March 1895, having been taken as referring to each of the four sets of percentages, for the reason that in the case of percentages of boys in the secondary and primary stages, figures for private institutions cannot be included, as the pupils therein are not divided into classes and forms and the instruction imparted in these schools is neither divided into distinct stages nor is it given in accordance with the departmental curricula. In the last quinquennial reports for the Bengal and Bombay Presidencies also, I find that the percentages of boys in the secondary and primary stages of instruction to the population of school ages are worked out for public institutions only for the purposes of these maps, presumably for the reason that pupils in private schools cannot be distinguished to instruction, (vide paragraphs 124 and 160 of 32 and 45 of the Bombay reports). In fact,

Chapters on Secondary and Primary Education in the Public Instruction Reports deal with public schools only, private schools being treated in a separate chapter. The distribution of pupils according to stages of instruction in general table 5 is required also for pupils in public institutions alone.

2. The figures given in the table appended to Paragraph (page 10) of my report for 1896-97, as also almost all the figures in the chapter on general statistics refer to scholars in both public and private institutions, whereas the percentages furnished in my letters referred to in paragraph 1 supra relate to scholars in public institutions only. Hence the disagreement.

3. The percentages of boys in the secondary and primary stages in the statements furnished with my letters under reference agree with the percentages in Chapters IV and V of the Education Report, inasmuch as they deal with public secondary and primary schools, respectively, as explained above.

4. The percentages (28.7) of girls under instruction in Madras City given in the statement furnished with my letter dated 27th June and presumably incorporated in the Government letter dated 4th July 1898, is different from the corresponding figure (29.7) in the table on page 10 of the Report; the slight excess in the latter case being due to the inclusion of girls (345) reading in private institutions; while the percentage in the statement in question appertains to public institutions alone. I regret I am unable to follow the remark in the Government of India telegram that the percentage of girls given in the statement furnished with letter of 4th July and the Education Report agree, as the percentage is 28.7 in the former and 29.7 in the latter.

5. For facility of reference, a consolidated statement shewing the percentages which have been furnished in the correspondence ending with my letter No 7817, dated 19th July 1898, is enclosed.

I have the honour to be,

Sir,

Your most obedient servant,

J. S. Srinivasan

Director of Public Instruction.

Public Institutions		Percentage of scholars under instruction to male and female population of Madras City		Percentage of boys in the Government and private institutions of instruction to male population of Madras City		Percentage of boys in the Government and private institutions of instruction to female population of Madras City		Percentage of girls under instruction to female population of Madras City
