GOVERNMENT OF MADRAS.

LOCAL AND MUNICIPAL DEPARTMENT.

READ—the following paper :—

From M.R.Ry. V RAMAMURTI CHETTI GARU, Chairman, Municipal Council, Anakápalle, to the Chief Secretary to Government, dated Anakápalle, 15th July 1895, No. 150.

I have the honour to submit, herewith, the inspection notes by the Deputy Sanitary Commissioner, Madras, on the sanitary condition of this municipality, together with my explanations thereon.

2. Copy of the council's resolution on the subject is also enclosed.

ENCLOSURES.

INSPECTION NOTES of the Inspector of Vaccination and Deputy Sanitary Commissioner for Madras.

VIZAGAPATAM DISTRICT.

ANAKAPALLE MUNICIPALITY.

Inspected 9th and 10th April 1895.

	Males.	Females.	Total.
Population per census of 1891	8,489	8,521	17,010

Inspection notes.

The main roads are in good order and clean. On the smaller bye-roads and narrow streets people are allowed to throw rubbish, and house sweepings opposite their doors. The number of dust-bins provided is not nearly sufficient. At present in the whole town there are only forty-two, thirty-two being circular moveable galvanized iron structures and the remainder square masonry receptacles; the ten new ones promised by the late chairman last year have not yet been provided. In the crowded parts of the town, such as Govarapálaiyam, where detached circular huts are crowded together, provision should be made for collecting the house and stable refuse and rubbish; at present this is thrown into pits which abound in the locality having apparently been dug to provide material for the walls of the

Chairman's remarks.

The council has resolved that some more dust-bins be provided for lanes. As a temporary measure strong wicker dust-bins have already been provided to be shortly replaced by galvanized iron ones.

For want of funds none were purchased as promised in the last year.

Here also are provided wicker dust-bins.

Inspection notes.

adjoining huts. They should be filled with earth and levelled. The rubbish is removed in carts to three depôts, where small cinerators have been constructed. These are simple walled circular conical enclosures with small arched apertures below, and a diameter of about 8 feet. They should be provided with an iron grating (above the draught apertures) on which the dry rubbish should be thrown and fired from below. None of these were at work at the time of my visit, the rubbish having been collected on the ground around (and in some instances burnt as it lay). This was said to have been sold to cultivators. The neighbourhood of Paraiya street was in a filthy state; its borders are evidently used freely for purposes of nature.

2. *Drainage.*—A large number of the main streets are provided with V-shaped drains terminating in large U-shaped channels which are continued into broad earthen ditches, where the foul-smelling contents stagnate until washed by the monsoon floods into the water channel below the tank, and so carried into the river. Near the cart-stand one of these drains terminates in a road-side ditch, from which, it is said, the contents are baled out into an adjoining field. In Govarapálaiyam and Govarapetta there is no drainage of any sort, all surface water finding its way into the pits already mentioned. The drainage of these parts should be taken in hand and developed as funds permit.

3. *Conservancy.*—The strength of the conservancy establishment is shown in the margin. The duties of Sanitary Inspector if properly carried out are quite sufficient for one man, and I would therefore suggest that they should be separated from those of the municipal overseer, with which they are at present amalgamated. There are 23 public latrines and 150 private latrines, 125 of the latter (an increase of 69 since last year) being cleaned daily by the municipality. Of the public latrines, two are built of masonry throughout, two are brick-wall enclosures, eighteen are open spaces of large extent enclosed by mud walls or

Chairman's remarks.

Notices have been issued to fill up the pits with earth as suggested.

The present cinerators will accordingly be provided with an iron grating.

During the greater portion of the year the rubbish was burnt in the cinerators, but under recent instructions the town refuse was offered for sale.

A latrine will shortly be provided for Paraiyas separately. Steps are now being taken to keep the borders of the street in good condition.

The making of drains has been stopped awaiting the preparation of a proper scheme for the whole town area.

This question will be duly considered at the time of the preparation of the budget for the next year.

Inspection notes.

hedges. None are provided with air-tight receptacles. In one (Valupalapetta) I saw trenches dug inside the latrine into which the excreta was thrown; in all, the pigs appear to find congenial occupation. For the removal of the filth from all these public and private latrines only one hand night-soil cart is provided and it has been lying useless for some time owing to its handle being broken. This is manifestly insufficient; six carts should be at once provided, with extra receptacles to be left at each latrine, and their number yearly increased as funds permit until complete. At present the filth is said to be removed in baskets by the sweepers to the night-soil depôt in Rama Raja's garden in many cases over a mile distant from the latrines. Such a method, if carried out, would create a disgusting nuisance, but I should say that not half the material finds its way there. At the depôt the trenches are too large and deep; they should be prepared in the manner explained to the Inspector. Besides these latrines, there are thirteen cess-pools, eleven of which are said to be cleaned daily by the municipality. It is difficult to understand how this can be properly done, as there is no means at present available for the removal of liquid filth. Owing to the large increase in the amount of work required from the conservancy staff the number of sweepers employed requires revision. The suggestion made last year by Surgeon-Captain Bannerman, but not acted upon, namely, to reduce the number of road-sweepers, and correspondingly increase that of the scavengers, affords a simple solution of the question without additional expenditure.

4. *Water-supply.*—There are 23 public wells besides numerous private ones, and are drinking-water tanks. Most of the wells are properly conserved. The new one lately sunk at Sarabanda requires a platform. Near this village is an old well with a large opening in the side wall through which surface water enters. This should be repaired or the well, if not used, filled in. Ground has been acquired in which to sink a second new well, but the work has not yet been commenced. At Govarapálaiyam near the new cinerator, there is a well largely used; its parapet wall is too high and should be reduced; it also requires a platform. The tank is filled by a channel through which water

Chairman's remarks.

Some will be provided shortly.

The council has resolved to purchase two more iron hand carts for night-soil during the current year.

They are now prepared in the manner explained.

The cess-pools are daily emptied by a sewage-carrier specially employed for the purpose. The liquid filth is removed in tins by means of a cavady to the outside of the town.

Will be attended to.

The platform will be constructed this year.

The well has been ordered to be repaired at once.

The new well is almost complete and the public will be permitted to use the water in a short time.

The platform will soon be constructed when the existing parapet wall will become shorter.

Inspection notes.

is conveyed from the river during the rains. This cannot enter the tank until it has reached a certain height, by which time the channel has been cleared of all impurities accumulated in its bed during the dry season. A watchman is employed to prevent fouling of the water; the latter is very muddy and requires clearing before use. On the other side of the road there is a smaller tank reserved for washing vessels, bathing, &c.

5. *Markets.*—There are two markets, one near the trunk road and the other near Chintavari street. Both are provided with thatched stalls and kept fairly clean. They realized Rs. 415 last year.

6. *Slaughter-house.*—There is one slaughter-house; its annual income is estimated at Rs. 98. The floor and walls require repair. A masonry cistern is provided outside to catch liquid refuse and water used for cleansing the building. It is useless for the purpose, as its contents run into the adjoining ground through a hole in its side. The neighbourhood of the slaughter-house is an abandoned rubbish depôt. The ground is full of pits and holes and should be levelled, as it is now largely used for purposes of nature. Here also I saw a number of dhobies washing clothes. The locality is not a good one for such purposes.

7. *Vaccination*—is extremely backward. In a town of 17,000 inhabitants, of whom only 256 are Muhammadans, it is hardly, I think, a judicious policy to employ a Muhammadan vaccinator. At present and for the past ten years vaccination has been carried on by second-class vaccinator Shaikh Daud. He keeps his records neatly in English and up to date; his instruments are clean and in good order, but his work is most unsatisfactory. An examination of his rigister shows that of 349 cases vaccinated in the past three months only 20 were children under one year of age; and of 234 births available for vaccination within the past six months only 42 had been vaccinated. Of 212 children examined in the streets no less than 102 or 48·1 per cent. were unvaccinated and 13 marked with small-pox. Of 107 children examined in five schools, 23 or 21·5 per cent. were unprotected and 8 marked with small-pox. As vaccination has been compulsory since 1891, these results are disgraceful. The vaccinator has already been warned; he should now be heavily fined or dismissed. A list of all unprotected children should be made out at once, and their parents directed to produce them for vaccination when required. One hundred and fifty cases are said to have been prosecuted for neglect in this matter during the past year.

Chairman's remarks.

They will be repaired this year.

The hole is now closed.

The ground will be levelled as suggested.

The dhobies will be directed to discontinue washing clothes.

He has once more been warned by the council. He will be dismissed if he does not show good work. The list of unprotected children will be ordered to be prepared as suggested.

* * * * *

(I) Read again Inspection notes of the Deputy Sanitary Commissioner, Madras, on the sanitary condition of this municipality for 1894–95.

Roads.—Resolved that some more dust-bins be provided for lanes.

Conservancy.—The present Overseer is doing the duties of both the Sanitary Inspector and Overseer for the last five years. If these are now separated the Overseer's salary will be too little for his needs. The matter will therefore be considered at the time of the preparation of the next budget. Two more night-soil carts will be purchased. Sanction of Government will be obtained for the transfer of funds from Grant I—New Works, Buildings, to Grant III "Conservancy," "Other Charges."

Water-supply.—The suggestions of the Sanitary Commissioner will be carried out.

Slaughter-house—will be attended to.

Vaccination.—A list of the unprotected children will be prepared as suggested. The vaccinator will be warned that, unless his work is thoroughly done, he will be dismissed.

Registration of Births and Deaths.—A man who speaks English will be appointed instead of the present registrar as early as possible.

Order—dated 30th August 1895, No. 1410 M., Local and Municipal.
Recorded.

2. The excuse put forward by the Chairman for omitting to purchase the dust-bins which in his remarks on the inspection notes printed in G.O., dated 17th August 1894, Mis. No. 1101, he promised to obtain, is inadequate. Sufficient funds were available during the year.

3. The Chairman will be requested to report why the suggestion made in the same inspection notes, that two of the road sweepers should be dispensed with and two more toties employed, was not complied with.

4. The Government considers that, in view of the disgraceful condition of vaccination in the town, the council's treatment of the vaccinator was unduly lenient. He was warned before without effect, and now deserves punishment. The council will be requested to reconsider the matter, and the Chairman should report to Government the action that is taken by it.

that a further
default would be reported to
Govt. He Council will be requested to
consider the matter & report the action
taken.

MC 28.5.95

V
Ps
1

order

Recorded.

2. ~~Every endeavour should~~
be made to effect an improvement
in infantile vaccination which appears
to be very backward and in this connection
the municipal Council's attention will
be drawn to the instructions issued
in G.O. 19th October 1894 No. 1502 M.

V.R.
21/5/95

3. The Secretary put forward by
the Chairman for omitting
to enclose the dust-bins which in his
September
letter of the inspection notes in G.O. dated
17th August 1894. No. 1101. M. he promised
to obtain, is inadequate. Sufficient funds
were available during the year.

3. The Chairman will be requested
to report on the suggestion made in the
same inspection notes that two of the
road sweepers should be dispensed
with.

The Chairman Mc Anakapalle. V2
" Collector of Vizagapatam V6
" Sanitary Commissioner V6
" " Engineer V3 Desp. 19/9/95

Editorial Table.

4. The Govt. considers that in
view of the disgraceful condition of
vaccination in the town the Council's
proposed was not complied with.
