MARCH 1895, No. M., LOCAL AND MUNICIPAL.

GOVERNMENT OF MADRAS.

LOCAL AND MUNICIPAL DEPARTMENT.

READ—the following paper:—

From J. W. MAIDEN, Esq., Chairman, Municipal Council, Masulipatam, to the Chief Secretary to Government (through the Collector of Kistna), dated 18th February 1895, No. 760.

I have the honour to forward herewith the inspection notes of the Inspector of Vaccination and Deputy Sanitary Commissioner, Madras, for the year 1894 on this municipality, together with my replies thereon. The resolution of the municipal council passed at a meeting held on the 15th instant is also enclosed.

ENCLOSURES.

INSPECTION notes of the Inspector of Vaccination and Deputy Sanitary Commissioner, Madras.

KISTNA DISTRICT.

MASULIPATAM MUNICIPALITY.

Inspected 20th, 22nd and 23rd October 1894.

	Males.	Females.	Total.
Population as per census of 1891	18,601	20,208	38,809

Inspection Notes.	Chairman's Remarks.
The town is situated on the alluvial plain formed by the Kistna about 2 miles from the sea. The town is surrounded by wet cultivation and salt marshes known as the swamps. These were all under water at the time of my visit, as the monsoon had just burst. As a consequence of such a site, the sub-soil water is found within a few feet of the surface, and houses show the effects of damp in crumbling and eroded walls. Damp-proof courses should be introduced into all new houses as one of the terms of granting license to build.	Yes.
2. *Drainage.*—The usual earthen cuts exist in many roads, but no stone-lined drains have been made. On account of the flooding of the swamps these drains were not working well and large areas in the town were flooded. I would recommend the council to address the Collector on the subject of getting the swamps properly drained as, until this is done, it appears vain to hope for any relief to the flooding of the town.	The Collector will be addressed on this subject.
3. *Roads.*—The roads were, as a rule, in fair order as far as the main lines are concerned; by-the-by lanes were in very bad order, being simply composed of sandy earth. They were kept clean and well swept.	As far as funds are available the council propose to metal some of the most important lanes also.

Inspection Notes.	Chairman's Remarks.
4. *Sewage disposal.*—Except the contents of eighteen cess-pools, the whole of the sewage soaks into the town site. There are said to be 39 cess-pools altogether. The amount removed cannot be said to be sufficient to practically benefit the town.	No pains are spared to bring more cess-pools under departmental management. I hope to be able to bring all these under control before the close of the year.
5. *Removal of rubbish.*—There are 73 dust-bins, or one for every 531 inhabitants—an utterly inadequate number. They should be increased speedily. The rubbish is removed in basket carts of very imperfect design, the ends being open so that only the minimum of rubbish is capable of being carried at one time. The ends should be closed by means of wicker work doors. There are six depôts in the swamps where rubbish is stored and partially burnt in cinerators of inefficient design. The council have, however, purchased a "Silchar" cinerator so that better results may be hoped for in future. Rubbish was sold last year for Rs. 21.	Provision has been made in the budget for the next official year for fifty more dust-bins.
6. *Conservancy.*—There are thirteen public latrines, of which eight are open-space masonry structures with permeable floors, and five are Horbury's pattern but without buckets, so that, as far as prevention of soil contamination goes, they are both utterly bad. The masonry ones should be converted into standard plan ones, and the Horbury's should be provided with buckets as originally intended. The number of latrines is inadequate; they should be increased; and the inhabitants be prevented from resorting to the numerous open spaces and gardens as at present. Night-soil is removed in iron carts to the Weld forest reserve where it is buried in deep trenches. I would recommend that it be buried in trenches placed close together in rows and not exceeding one foot in depth so that the nitrifying organisms which abound in the first foot of soil may be able to convert the night-soil into harmless useful humus. If buried deeper, where these organisms do not live, the result is putrefaction with all its attendant evils. The total amount of night-soil removed is very small.	The cinerator is under construction. This year four latrines will be constructed as provided in the budget, and provision is also made for four more latrines during the next official year. Communicated to the District Forest-officer, Kistna, for necessary action.
Private scavenging.—As noted above people largely resort to backyards and gardens for purposes of nature, but there are said to be 1,000 privies in town; of these the municipality undertakes the cleansing of 303, and this number will, it is reported, shortly be increased by about 200. The staff employed is one inspector on Rs. 10 and twelve scavengers at Rs. 56; this is sufficient but more scavengers must, of course, be entertained when the service is extended.	
Condition of back-yards, &c.—The town is made up of a congeries of small villages, many of the houses having gardens attached; and there are many open spaces here and there between overgrown with crotons and other rank vegetation. The back-yards are usually very filthy, manure heaps being common. An endeavour should be made, by prosecuting for insanitary premises, to get the owners to remove the manure outside the inhabited area.	Every endeavour will be made to keep the back-yards clean.
7. *Water-supply.*—The drinking water is obtained from the Kistna at Bezwada being conducted by means of the Masulipatam canal; this is distributed to numerous wells by means	

Inspection Notes.	Chairman's Remarks.
of earthenware pipes and conduits. Wells in the sub-soil are also used. Both these sources of supply are liable to gross pollution, so I trust no time may be lost in pushing on with the preliminaries for a new and properly protected supply. The well in the compound of the Munsif's court has not yet been taken in hand and is still unprotected; the cost of repairing and covering the well ought not to be great; and then, if fitted with a rotary action pump and reservoir, such as the chairman delegate has in his house, a source of water that can be fairly relied on will be obtained.	The necessary repairs have been made to the well after the departure of the Deputy Sanitary Commissioner. A water pump is to be put up.
8. *Slaughter-house.*—This is a tiled shed with asphalted floor and cement gutters at the sides. It was in good condition. The offal, &c., is thrown out on to the swamp land close by. Fifty sheep are said to be slaughtered daily, and they are passed by the market inspector. Cattle are killed in an open patch of ground close by, and the offal is removed to the swamp. A beef slaughter-house should be erected.	Will be attended to when there is sufficient demand.
9. *Market.*—Vegetables and fruits are sold in Robinson's square, the sellers being accommodated in small tiled godowns or bamboo screen sheds. The whole has a most untidy appearance and is not worthy of its surroundings; the council should erect a proper building to accommodate all classes of food stuffs under one roof. Meat and fish are sold close together in a small square space with tiled sheds around the sides and in the centre. It was not well kept, the smells encountered being most disgusting and the cause thereof most detrimental to the meat. The meat is still displayed on old boxes, and the flooring of the stalls is out of repair. The floors should be cemented and provided with drains for flushing; and stone-slab tables should be provided for the meat. Fish and meat should not be exposed for sale in such close proximity, as the clouds of flies attracted by the former settle abundantly on the latter. The beef market is in a small enclosed shed close by, and it was in a very dirty condition. The place should be paved and properly drained.	
10. *Vaccination.*—The municipality maintains an animal vaccine depôt of its own; but as noted last year—and there has been no change since—the accommodation provided is quite unsuitable. Cement flooring at least should be provided and would not cost much.	Will be attended to.
Out of 169 children examined 101 were vaccinated, 20 were unprotected and 48 bore marks of small-pox.	
In the first three months of this year the number of births registered was 264, of which number 104 have been vaccinated, 54 have died or left, and 106 still remain unprotected, which is certainly not a good record. No prosecutions for failure to vaccinate were instituted.	There was no necessity for instituting prosecutions.

Inspection Notes.

First-class Vaccinator C. H. Brahmaya has 25 years' service. Pay Rs. 18; keeps his register in English properly. Instruments, &c., clean. I marked 29 cases for verification, and found 22 successful, one unsuccessful and six absent. All the cases seen were correctly entered in the register.

Chairman's Remarks.

—	1889.	1890.	1891.	1892.	1893.	1894 up to end of September.

Births	1,018	1,324	1,071	1,111	1,005	778

11. *Registration.*—Two registrars are employed on Rs. 12 and Rs. 10. Registers kept neatly in English. The column "date of vaccination" is filled in every three months; in future I would recommend that this be done regularly at the close of each month. In the death register the cause is not shown, but the vague grouping of the rural register form is used. This should be stopped and a proper system of headings for the register adopted; a specimen form may be obtained on application at the Sanitary Commissioner's office.

I have called for a specimen form of the register and it will be adopted.

LOCAL AND MUNICIPAL DEPARTMENT.

Papers to be read in Proceedings:—

Again G.O., dated 189 , No.

Current No. 83/M of 1895, dated 18th February from the Chairman M.C. Masulipatam

Order. M 17.4.95 No 671 M

Recorded with the following remarks

(1) The Council would do well to put the existing metalled roads into thorough order before undertaking the metalling of any new ones.

(2) Steps should be taken for converting the masonry latrines into buildings on the standard plan and for providing buckets for those on Hor pattern.

(3) It is not clear why the Deputy Sanitary Commissioner's suggestion regarding the bur of night soil has been communicated to the District Forest officer. It seems to Government that the necessary action in this matter should be taken by the municipal Council itself

(4) The action which the Municipal Council proposes to take on the Deputy Sanitary Commissioner's suggestions for the improvement of the markets should be reported.

(5) In the face of the remarks contained in para 4 (4) of G.O. of 1st Oct. 1894 No. 1358 M, the Government cannot accept the Chairman's statement that there was no necessity for instituting prosecutions for failure to vaccinate. The provisions of the law relating to compulsory vaccination should be rigidly enforced in the case of all who fail to comply

GOVERNMENT OF MADRAS.

LOCAL AND MUNICIPAL DEPARTMENT.

READ—the following paper :—

From J. W. MAIDEN, Esq., Chairman, Municipal Council, Masulipatam, to the Chief Secretary to Government (through the Collector of Kistna), dated 18th February 1895, No. 760.

I have the honour to forward herewith the inspection notes of the Inspector of Vaccination and Deputy Sanitary Commissioner, Madras, for the year 1894 on this municipality, together with my replies thereon. The resolution of the municipal council passed at a meeting held on the 15th instant is also enclosed.

ENCLOSURES.

INSPECTION notes of the Inspector of Vaccination and Deputy Sanitary Commissioner, Madras.

KISTNA DISTRICT.

MASULIPATAM MUNICIPALITY.

Inspected 20th, 22nd and 23rd October 1894.

	Males.	Females.	Total.
Population as per census of 1891	18,601	20,208	38,809

Inspection Notes.	Chairman's Remarks.
The town is situated on the alluvial plain formed by the Kistna about 2 miles from the sea. The town is surrounded by wet cultivation and salt marshes known as the swamps. These were all under water at the time of my visit, as the monsoon had just burst. As a consequence of such a site, the sub-soil water is found within a few feet of the surface, and houses show the effects of damp in crumbling and eroded walls. Damp-proof courses should be introduced into all new houses as one of the terms of granting license to build.	Yes.
2. *Drainage.*—The usual earthen cuts exist in many roads, but no stone-lined drains have been made. On account of the flooding of the swamps these drains were not working well and large areas in the town were flooded. I would recommend the council to address the Collector on the subject of getting the swamps properly drained as, until this is done, it appears vain to hope for any relief to the flooding of the town.	The Collector will be addressed on this subject.
3. *Roads.*—The roads were, as a rule, in fair order as far as the main lines are concerned; but the by-lanes were in very bad order, being simply composed of sandy earth. They were kept clean and well swept.	As far as funds are available the council propose to metal some of the most important lanes also.

Inspection Notes.	Chairman's Remarks.
4. *Sewage disposal.*—Except the contents of eighteen cess-pools, the whole of the sewage soaks into the town site. There are said to be 39 cess-pools altogether. The amount removed cannot be said to be sufficient to practically benefit the town.	No pains are spared to bring more cess-pools under departmental management. I hope to be able to bring all these under control before the close of the year.
5. *Removal of rubbish.*—There are 73 dust-bins, or one for every 531 inhabitants—an utterly inadequate number. They should be increased speedily. The rubbish is removed in basket carts of very imperfect design, the ends being open so that only the minimum of rubbish is capable of being carried at one time. The ends should be closed by means of wicker work doors. There are six depôts in the swamps where rubbish is stored and partially burnt in cinerators of inefficient design. The council have, however, purchased a "Silchar" cinerator so that better results may be hoped for in future. Rubbish was sold last year for Rs. 21.	Provision has been made in the budget for the next official year for fifty more dust-bins.
6. *Conservancy.*—There are thirteen public latrines, of which eight are open-space masonry structures with permeable floors, and five are Horbury's pattern but without buckets, so that, as far as prevention of soil contamination goes, they are both utterly bad. The masonry ones should be converted into standard plan ones, and the Horbury's should be provided with buckets as originally intended. The number of latrines is inadequate; they should be increased; and the inhabitants be prevented from resorting to the numerous open spaces and gardens as at present. Night-soil is removed in iron carts to the Weld forest reserve where it is buried in deep trenches.
