FOR ORDERS.

In March last, the Chairman of the municipal council of Tanjore reported to Government that the water in the pumping well attached to the water works recently opened in that town had gone down very low and requested that water ^{might} be let down to the works from the Vannar for a few days. The Public Works Department to which the papers were transferred returned them with a copy of a letter received from the Executive Engineer, Tanjore, to the effect that there was no water in the Vannar to send down. The Sanitary Engineer was thereupon requested to submit suggestions to remedy the existing state of affairs. Before this order reached him, however, the Sanitary Engineer in his letter No. 1078, dated 9th April 1896, the proposed that a set of sluices should be constructed across the river just below the

the following case A

B

the filterbed, the sluices to be lifting
 mes — to be raised during floods &
 closed when the river ~~should~~ fall, so
 as to keep 2 to 3 feet of water standing
 above the river bed. But after the
 receipt of the order above referred to
 he visited Tanjore and in his letter
 No. 1151 dt 15th April 1896, made another
 proposal viz:- to lay one or two lines
 of pipes up the river in gravel with
 crossfeeders to the centre line, but
 suggested that until the lowest water
 level should be known neither plan
 should be decided upon. These letters with
 the Chief Engineer's remarks thereon
 were accordingly recorded by Govern-
 ment pending further report.

2. In the current read above,
 the Public Works Department now
~~forwards~~ the further report of the San-
 itary Engineer on the subject. In his
 note on this report, the Chief Engineer
 considers that the second proposal of
 the Sanitary Engineer referred to in the
 above paragraph is the better one, and
 with reference to para. 8 of the San-
 itary Engineer's letter he states that
 in April, May & June whatever water
 is available in the river could be

turned

8

Yes, and also let the
 Mr. C. see - I may have some-
 thing to say. It strikes me that
 the situation of this year
 was so exceptionally dry that
 a similar scarcity of water in the
 river bed might occur for a long
 time. After all, the water was
 actually run out - they were
 always able to pump from 5 A.M.
 to noon & again for some hours
 after 3 P.M. The W.C. was for
 of my opinion that under the
 circumstances it is not worth while to
 spend any more money at
 present

 D.A. No 10 No 10/96

turned down the river so as to feed
 the waterworks. The Sanitary Engi-
 neer's estimate of the cost of carrying
 out this proposal is Rs 19,500. This
 amount can be met from the un-
 expended balance of Rs. 24,400 re-
 maining out of the estimated cost
 of the water supply scheme.

The estimate it is submitted
 may be sent to the San. Bd.
 for approval - as it is apparently
 the best thing to be done. ~~to~~
 The scheme may be successful &
 even if it is not, it will not have
 cost much money.

No 1751 Mm dt 14.10.96
 Order The plan & estimate submitted
 by the San. Engineer will be referred
 to the San. Board for approval.
 (Promoted)
 1/10/96

Letter when this is received back from the
 San. Bd. it may be submitted before
 sent to the M.C. as the Bd. may have
 some further remarks to make on it
 which the M.C. can consider
