Population as per census of 1891	3,482	3,512	6,994

Inspection Notes.

Chairman's Remarks.

Roads, Drainage, &c.—This is a small town consisting of 1,500 houses, crowded together on the inhabited area, which is limited on one side by the bund of a large tank and on the others by wet cultivation. The main streets, *i.e.*, Munro street, Reid street, Muche Bazaar road, Robertson's road, as well as the outlying roads near the railway station and Collector's bungalow, are in good order and clean. A few streets are provided with square drains of loose masonry, the water being conducted into the waste channel. Wet cultivation in proximity to dwellings has been prohibited; none is carried on between the tank and the town. When the tank is full there is considerable leakage through the bund near the slaughter-house and meat market and the water runs through this portion of the bazaar making it swampy and impassable. A scheme for the diversion of the sub-soil water of the tank is now under consideration of the Sanitary Board. The committing of nuisances on the streets, &c., though still practised, is not now so frequent as formerly owing to the greater activity shown by the police and the municipal authorities. In 1894-95 only 125 cases were prosecuted, all by the police. During the past eight months of 1895-96, 393 cases have been prosecuted, viz., 27 by the conservancy inspector and 366 by the police.

Inspection Notes.

There are seventy-six dust-bins—twenty-six fixed masonry structures, forty-one small, square, iron frames and five galvanized cylinders. Fourteen sweepers and three ordinary basket-carts are employed to collect and remove the rubbish to the depôt where it is sold annually as manure, realising Rs. 420-1-4 last year.

2. *Conservancy*.—The strength and pay of the conservancy establishment is shown below :—

One sanitary inspector on Rs. 25.
Two peons (one on Rs. 7 and the other on Rs. 6).
Three male toties on Rs. 5-8-0 each.
Two female toties on Rs. 5 each.
Three female toties on Rs. 4-8-0 each.
Fourteen sweepers on Rs. 5 each.
Three private scavenging toties on Rupees 5-8-0 each.

There are eight public latrines, all of the open-space pattern. No new ones have been provided. The dry-earth system is adopted and all are cleanly kept. Some of them are much too close to dwellings as already pointed out in previous reports, but the funds necessary to purchase new sites are not available. All the latrines are lighted. None have roofs. I am informed that in the next budget provision is to be made for roofing one of them. There are 125 private latrines (a decrease of nine since last year) cleaned by municipal agency. As there are numberless cesspools in the town it is very desirable that the system of cleaning both these and the private latrines by municipal agency should be extended. A new night-soil bullock-cart of good pattern has recently been purchased. As this is the only cart available for the removal of excreta from public and private latrines, it is evident that the work cannot be efficiently carried out. At least three more carts of similar pattern should be provided. The depôt is on the side of the Gooty road about one-and-a-half miles from the town. It is kept in proper order and clean. Nothing is realised by the sale of the night-soil.

3. *Water-supply*.—This is derived from the tank and numerous wells in the town. As the tank only holds water for a few months, it is not much resorted to. Of the wells, eight are public. All are of faulty construction, having the side walls formed of open masonry without chunam or cement. As they are all situated in close

Chairman's Remarks.

proximity to the courtyards of dwellings, &c., it is very desirable that these wells should be made impermeable. Of all these wells, only two retain water throughout the hot season, viz., Reddy's well and that known as No. 5. These are both largely used. The former has no parapet; the platform is formed of large rough stones not properly jointed; and, as in the majority of the wells in the town, stones are placed across the mouth for those drawing-water to stand upon. These are objectionable, as they admit of the drippings from dirty feet and limbs re-entering the well, and should be removed. No. 5 well has a parapet, but, being very close to dwellings, the cementing of its casing wall should be attended to. I understand that the Hussain Peran's and the Gaura wells, to which attention was drawn last year, are now to be put in thorough order and provided with pumps. The individual who promised to repair Charamallappah's well has not fulfilled his promise, and it remains in the state previously reported.

4. *Markets*.—The meat market has been repaired and put in order since the last inspection. A new floor of Cuddapah slabs has been laid down and hooks provided for hanging meat. More of the latter are still required. The fish market is still held near the fishermen's huts on open ground. A weekly market is held on the open ground in Robertson's square.

5. *Slaughter-house*.—The flooring of this place has also been repaired. I am informed that an estimate has been prepared for the roof. Here also more hooks are required for hanging the carcasses during the process of skinning, cleaning, &c.

6. *Bandy Stand*.—There is one bandy stand on the Gooty road. It is simply an open piece of ground allotted for the purpose, and leased out for Rs. 50 for the current year.

7. *Cattle Yards*.—There are several of these in the town. Where over ten animals are collected licenses have been insisted upon, and some have been prosecuted for neglecting to keep their yards in proper order. None that I saw were provided with drains or paved flooring. The yard next to the latrine near Reid street is not properly attended to by the owner. In Robertson's street several of the front rooms of the houses are occupied by cattle.

The attention of the council has already been drawn to it, and when funds are available, carts for carrying away liquid sewage will be made.

The council have no funds at present. This will be done when funds are available.

The public have more than once been warned to keep their cattle-yards quite tidy and clean and separate their habitation from that of their cattle. Considering the rude and uncivilized state of the agricultural class of people, it will take some time before a marked improvement can be attained. All efforts are being made to modify matters.

Inspection Notes.

Chairman's Remarks.

proximity to the courtyards of dwellings, &c., it is very desirable that these wells should be made impermeable. Of all these wells, only two retain water throughout the hot season, viz., Reddy's well and that known as No. 5. These are both largely used. The former has no parapet; the platform is formed of large rough stones not properly jointed; and, as in the majority of the wells in the town, stones are placed across the mouth for those drawing-water to stand upon. These are objectionable, as they admit of the drippings from dirty feet and limbs re-entering the well, and should be removed. No. 5 well has a parapet, but, being very close to dwellings, the cementing of its casing wall should be attended to. I understand that the Hussain Peran's and the Gaura wells, to which attention was drawn last year, are now to be put in thorough order and provided with pumps. The individual who promised to repair Charamallappah's well has not fulfilled his promise, and it remains in the state previously reported.

4. *Markets*.—The meat market has been repaired and put in order since the last inspection. A new floor of Cuddapah slabs has been laid down and hooks provided for hanging meat. More of the latter are still required. The fish market is still held near the fishermen's huts on open ground. A weekly market is held on the open ground in Robertson's square.

5. *Slaughter-house*.—The flooring of this place has also been repaired. I am informed that an estimate has been prepared for the roof. Here also more hooks are required for hanging the carcasses during the process of skinning, cleaning, &c.

6. *Bandy Stand*.—There is one bandy stand on the Gooty road. It is simply an open piece of ground allotted for the purpose, and leased out for Rs. 50 for the current year.

7. *Cattle Yards*.—There are several of these in the town. Where over ten animals are collected licenses have been insisted upon, and some have been prosecuted for neglecting to keep their yards in proper order. None that I saw were provided with drains or paved flooring. The yard next to the latrine near Reid street is not properly attended to by the owner. In Robertson's street several of the front rooms of the houses are occupied by cattle.

These points will be attended to.

More will be done for the improvement of the market as funds are available. Accommodation for fish market will be made when funds are available.

This will be done next year.

The public have more than once been warned to keep their cattle-yards quite tidy and clean and separate their habitation from that of their cattle. Considering the rude and uncivilized state of the agricultural class of people, it will take some time before a marked improvement can be attained. All efforts are being made to modify matters.

2. Attention is requested to paragraph 2 of G.O., No. 1765 M., dated 23rd December 1893.

FORT ST. GEORGE, (Signed) W. G. KING, Surgeon-Lieut.-Colonel,
27th January 1896. Sanitary Commissioner for Madras.

Forwarded to the Chairman, Anantapur Municipality.

ANANTAPUR, (Signed) F. A. NICHOLSON,
30th January 1896. Collector.

No. 226.

Submitted to the Chief Secretary to Government, Local and Municipal Department, Fort St. George, through the Collector of Anantapur, with a copy of council's resolution on the subject.

It is submitted that in the current year a debt of Rs. 3,000 has been liquidated and there remains still Rs. 600 to get clear of debts incurred in previous years. Not only a heavy debt was cleared but at the same time slight sanitary improvements were effected, as Government will be pleased to observe from these inspection notes. More could not therefore be done at present.

ANANTAPUR, (Signed) H. M. HAKIM, Surgeon-Major,
3rd March 1896. Chairman.

ENCLOSURE.

EXTRACT from the Proceedings of the Municipal Council, Anantapur, passed at a meeting held on Saturday, the 29th February 1896.

2. Read Notes of the Deputy Sanitary Commissioner, Madras, on the inspection of this municipality for the current year.

Resolution.—Passed. Chairman's remarks are approved.

ANANTAPUR,
6th March 1896.

Submitted.

(Signed)

F. A. NICHOLSON,
Collector.

Inspection Notes.

Chairman's Remarks.

8. Vaccination is in charge of first-class vaccinator P. Varaalla Rajaloo Naidu (service sixteen years, pay Rs. 15), and carefully supervised by the District Medical and Sanitary Officer, who verifies all the cases. The vaccinator's records are neatly kept and up to date. His instruments are clean and in good order. Glycerine vaccine paste is purchased at one rupee per tube from the local fund vaccine depôt at Anantapur. The returns required by G.O., No. 1502 M., dated 19th October 1894, have been regularly submitted up to date. I examined a large number of children in the streets and found only five unprotected. Of 226 school children nine were found unprotected.

9. Registration.—In April last a special registrar was appointed on Rs. 8 per month. Domestic occurrences are reported by the relatives of those concerned and enquiries are also made by the registrar himself. A marked improvement in the registration of births is shown in the accompanying table. During the eight months since a special man was appointed, 256 births have been registered as compared with a total for 1894 of 186, although there has been no corresponding increase in the population:—

The attention of the Council has already been drawn to it and where funds are available carts for carrying away liquid sewage will be made.

The Council have no funds at present. This will be done when funds are available.

on the side of the Gorty road about 1 1/2 miles from the town. It is kept in proper order and clean. Nothing is realised by the sale of the night soil.

3. Water supply. This is derived from the tank and numerous wells in the town. As the tank only holds water for a few months, it is not much resorted to. Of the wells, 8 are public. All are of faulty construction, having the side walls formed of open masonry without chunams or cement. As they are all situated in close proximity to the courtyards of dwellings, it is very desirable that these walls should be made impervious. Of all these wells, only 2 retain water throughout the hot season, viz. Reddy's well and that known as No. 5. These are both largely used

used. The former has no
parapet; the platform is
formed of large rough
stones not properly jointed;
and, as in the majority
of the wells in the town,
stones are placed across
the mouth for those
drawing water to stand
upon. These are objectionable,
as they admit of the
drummings from dirty feet
and limbs reentering
the well, and should
be removed. No. 5 well
has a parapet, but being
very close to dwellings,
the cementing of its
casing wall should be
attended to. I understand
that the Hussain Perani
and the Gaura wells, to
which attention was
drawn last year, are
now to be put in thorough
order and provided
with pumps. The individual
who promised to repair
Charamallappa's well, has
not

These points will be attended to

More will be done for the improve-
ment of the market, as funds are

fish market will be made where
funds are available.

This will be done next year.

not fulfilled his promise,
and it remains in the
state previously reported.

4. Markets. The meat market
has been repaired and put
in order since the last
inspection. A new floor
of Cuddapah slabs has
been laid down and
hooks provided for
hanging meat. More
of the latter are still re-
quired. The Fish Market
is still held near the
fishermen's huts on open
ground. A weekly
market is held on the
open ground in
Robertson's square.

5. Slaughter houses. The floor-
ing of this place has also
been repaired, and I am
informed that an estimate
has been prepared for
the roof. Here also more
hooks are required for
hanging the carcasses
during the process of
skinning, cleaning, &c.
Bandy Stand

6. Bandy stand. There is one bandy stand on the Booby road. It is simply an open piece of ground allotted for the purpose, and leased out for Rs 50 for the current year.

7. Cattle yards. There are several of these in the town. The public have more than once been warned to keep their Cattle-Yards where over 10 animals are collected, licenses have been insisted upon, and some have been prosecuted for neglecting to keep their yards in proper order. None that I saw were provided with drains or paved flooring. The yard next to the latrine near Reid street is not properly attended to by the owner. In Robertson's street several of the front rooms of the houses are occupied by cattle.

8. Vaccination is in charge of 1st class vaccinator

The public have more than once been warned to keep their Cattle-Yards quite tidy and clean and separate their habitation from that of their cattle. Considering the rude and uncivilized state of the Agricultural class of people it will take some time before a marked improvement can be obtained. All ^{being} efforts are made to modify matters.

P Varaalla Rajulu Vaccin-
service 16 years. pay Rs 15,
and carefully supervised
by the District Medical
and Sanitary Officer
who verifies all the cases.
The vaccinators records
are neatly kept and up
to date. His instruments
are clean and in good
order. Glycerine vaccine
paste is purchased at
one rupee per tube from
the L. F. Vaccine Depot
at Anantapur. The returns
required by G.O. No. 1502 M
dated 19th October 1894
have been regularly sub-
mitted up to date. I
examined a large number
of children in the streets
and found only 5 un-
protected. Of 226 school
children 9 were found
unprotected.

Births	206	233	182	181	256

9. Registration. In April last a special Registrar was appointed on Rs 8 per month. Domestic occurrences are reported by the relatives of those concerned and enquiries are also made by the Registrar himself. A marked improvement in the registration of births is shown in the accompanying table. During the 8 months since a special man was appointed 256 births have been registered as compared with a total for 1894 of 186 although there has

has been no corresponding increase in the population.

Submitted to the Chief Secretary to Govt.
(Local and Municipal Department)
Fort Saint George, through the Collector
of Anantapur, with a copy of Council's
resolution on the subject. —
It is submitted that in the Current year
a debt of Rs 3000 has been liquidated
and there remains still Rs 600 to get clear
of debts incurred in previous years.
Not only a heavy debt was cleared
but at the same time slight Sanitary
improvements were effected as Govern-
ment will be pleased to observe from
these Inspection notes. More could
not therefore be done at present. —

No. 643 M., 8TH APRIL 1896.

GOVERNMENT OF MADRAS.

LOCAL AND MUNICIPAL DEPARTMENT.

READ—the following paper:—

INSPECTION NOTES of the Inspector of Vaccination and Deputy Sanitary
Commissioner, Madras.

ANANTAPUR DISTRICT.

ANANTAPUR MUNICIPALITY.

Inspected 7th and 5th December 1895.

Population as per census of 1891

Males.	Females.	Total.
3,482	3,512	6,994

Inspection Notes.

Chairman's Remarks.

Roads, Drainage, &c.—This is a small town consisting of 1,500 houses, crowded together on the inhabited area, which is limited on one side by the bund of a large tank and on the others by wet cultivation. The main streets, i.e., Munro street, Reid street, Muche Bazaar road, Robertson's road, as well as the outlying roads near the railway station and Collector's bungalow, are in good order and clean. A few streets are provided with square drains of loose masonry, the water being conducted into the waste channel. Wet cultivation in proximity to dwellings has been prohibited; none is carried on between the tank and the town. When the tank is full there is considerable leakage through the bund near the slaughter-house and meat market and the water runs through this portion of the bazaar making it swampy and impassable. A scheme for the diversion of the sub-soil water of the tank is now under consideration of the Sanitary Board. The committing of nuisances on the streets, &c., though still practised, is not now so frequent as formerly owing to the greater activity shown by the police and the municipal authorities. In 1894-95 only 125 cases were prosecuted, all by the police. During the past eight months of 1895-96, 393 cases have been prosecuted, viz., 27 by the conservancy inspector and 366 by the police.

Inspection Notes.

There are seventy-six dust-bins—twenty-six fixed masonry structures, forty-one small, square, iron frames and five galvanized cylinders. Fourteen sweepers and three ordinary basket-carts are employed to collect and remove the rubbish to the depôt where it is sold annually as manure, realising Rs. 420-1-4 last year.

2. *Conservancy.*—The strength and pay of the conservancy establishment is shown below:—

One sanitary inspector on Rs. 25.
Two peons (one on Rs. 7 and the other on Rs. 6).
Three male toties on Rs. 5-8-0 each.
Two female toties on Rs. 5 each.
Three female toties on Rs. 4-8-0 each.
Fourteen sweepers on Rs. 5 each.
Three private scavenging toties on Rupees 5-8-0 each.

There are eight public latrines, all of the open-space pattern. No new ones have been provided. The dry-earth system is adopted and all are cleanly kept. Some of them are much too close to dwellings as already pointed out in previous reports, but the funds necessary to purchase new sites are not available. All the latrines are lighted. None have roofs. I am informed that in the next budget provision is to be made for roofing one of them. There are 125 private latrines (a decrease of nine since last year) cleaned by municipal agency. As there are numberless cesspools in the town it is very desirable that the system of cleaning both these and the private latrines by municipal agency should be extended. A new night-soil bullock-cart of good pattern has recently been purchased. As this is the only cart available for the removal of excreta from public and private latrines, it is evident that the work cannot be efficiently carried out. At least three more carts of similar pattern should be provided. The depôt is on the side of the Gooty road about one-and-a-half miles from the town. It is kept in proper order and clean. Nothing is realised by the sale of the night-soil.

3. *Water-supply.*—This is derived from the tank and numerous wells in the town. As the tank only holds water for a few months, it is not much resorted to. Of the wells, eight are public. All are of faulty construction, having the side walls formed of open masonry without chunam or cement. As they are all situated in close

Chairman's Remarks.

proximity to the courtyards of dwellings, it is very desirable that these walls should be made impermeable. Of all these wells, only two retain water throughout the hot season, viz., Reddy's well and that known as No. 5. These are both largely used. The former has no parapet; the platform is formed of large rough stones not properly jointed; and, as in the majority of the wells in the town, stones are placed across the mouth for those drawing water to stand upon. These are objectionable, as they admit of the drippings from dirty feet and limbs re-entering the well, and should be removed. No. 5 well has a parapet, but being very close to dwellings, the cementing of its casing wall should be attended to. I understand that the Hussain Peran's and the Gaura wells, to which attention was drawn last year, are now to be put in thorough order and provided with pumps. The individual who promised to repair Charamallappah's well has not fulfilled his promise, and it remains in the state previously reported.

4. *Markets.*—The meat market has been repaired and put in order since the last inspection. A new floor of Cuddapah slabs has been laid down and hooks provided for hanging meat. More of the latter are still required. The fish market is still held near the fishermen's huts on open ground. A weekly market is held on the open ground in Robertson's square.

5. *Slaughter-house.*—The flooring of this place has also been repaired. I am informed that an estimate has been prepared for the roof. Here also more hooks are required for hanging the carcasses during the process of skinning, cleaning, &c.

6. *Bandy Stand.*—There is one bandy stand on the Gooty road. It is simply an open piece of ground allotted for the purpose, and leased out for Rs. 50 for the current year.

7. *Cattle Yards.*—There are several of these in the town. Where over ten animals are collected licenses have been insisted upon, and some have been prosecuted for neglecting to keep their yards in proper order. None that I saw were provided with drains or paved flooring. The yard next to the latrine near Reid street is not properly attended to by the owner. In Robertson's street several of the front rooms of the houses are occupied by cattle.
