to Government
Local & Municipal Department

Enclosure.

SIR,

With reference to G.O. N° 20852 dated
31st October 1895, I have the honor to make
the following suggestions:-

The various so-called "Sections"
of the Report which are referred to
in the opening page need no longer
appear, as they have been gradually
superseded.

The following subject headings
should then be adopted:-

Section i. Meteorology of the year, in
connection with the prices of food,
and mortality.

Note. The Tables on pages 9-11 show-
ing the average quantities of food &
grains &c., obtainable might be abolish-
ed, in favor of the tables shown on
pages 12-13. The diagrams illustrating
the facts as to food, mortality and
Meteorology should be continued. The

value

value of these tables lies in the fact that they represent a continuous record that having been maintained for some years past will eventually be of great utility to both the sanitarian and political economist.

Section II - Sanitary Condition of the General Population -

- (1) The Presidency considered as a whole.
 - (2) ——— do ——— District war.
- The following forms would give the chief information required under Section II (2):-

District (Name). Area (in sq miles)

Population:			Density of population per square mile according to the Census of 1891	Total birth rate	Total death rate	Staple food grain	
According to Census of 1891	According to registration returns	Estimated for 1895				Average price	Warming up

* To be particularized.

Vital Statistics

	Birth rate			Death rate			Infantile mortality	Mortality of children under 5 years of age	Causes of death					
	Municipal towns	Rural towns	Villages	Municipal towns	Rural towns	Villages			Cholera	Small-pox	Fever	Ague & dysentery	Injuries	All other causes
Average of the 5 years ending 1894														
Of the year 1893														
do — 1894														
do — 1895														

(1) Condition of registration (a) birth and death rates in rural, urban and zemindary tracts for the year, and compared with the average of the two preceding years [no remarks to be made unless the figures require explanation beyond well recognized facts as to defective registration methods in force]

(2) Sanitary administration by Local Fund bodies (a) finance, (b) improvements effected, or contemplated, during the year.

(3) Municipalities - mutatis mutandis, the same information.

(4) Work effected by District Medical and Sanitary officers, and sanitary staff.

Section III - Major Sanitary Works.

Sanitary efficiency, as disclosed by inspection

inspection and consideration of results upon the sickness and mortality.

Section IV. Personal Proceedings.

(1) Inspection work fulfilled *performed*

(2) Recommendations made to Government and Local Bodies with results.

(3) Brief record of areas affected and of nature of efforts made to combat epidemics or special diseases and facts gathered by officers of the sanitary department and others, that may be of utility in this direction.

2. The review of the year's work as above suggested will not exhibit in detail the existence of defects. Government would be kept sufficiently informed of these by means of the routine Inspection Reports, but at the end of every third year, it would be advisable, in addition, to recapitulate briefly existing defects and show how far they have been remedied in the interval.

I have the honor to be

Sir

Your most obedient servant

W. H. King
