The report which accompanies the plans and estimates describes the project in detail.

The extension is designed to serve a population of 25,276, and the supply required at 15 gallons per head will amount to 424,140 gallons. The works as at present arranged were designed to supply 1,059,000 gallons. The total supply with the proposed extensions will thus be 1,481,140 gallons.

The following is an abstract of the estimated cost of the extensions :—

The Sanitary Board approves the plans and estimates and recommends them to Government for sanction.
