The Chief Engineer
P.W. Department.
Madras.

Sir

Enclosure 1

I have the honor to return herewith
Proceedings in the Local and Municipal
Department forwarded with your letter
4493C dated 2nd November 1897, and to
state that I have just inspected the
Marlinund reservoir at Cotoacamund
and have carefully examined with
the Divisional Officer Mr. Murray
the Bund which exhibits no outward
or visible signs of weakness or instability.
There is however a slight leak through
the revetment at F.T.L. close to surplus
weir. This should be traced. There
is also a very considerable discharge
probably 6 gallons a minute from the
dry stone drains running from rear
toe

re of the bund. I do not attach much im-
 portance at present to this leakage which
 may be mostly due to a spring. This
 however is a point to be investigated. I
 have accordingly requested Mr. Murray
 to trace the leak through the revetment
 and to open out (with the permission of
 the Municipal chairman) all the dry
 stone drains to the rear of the bund to
 ascertain where the leakage comes
 from, when this is done, a further
 report will be made. In the meanwhile
 and as the report has been urgently
 called for I give it as my present
 opinion that the bund in its existing
 condition and with the water level with
 the crest of the escape is quite safe.

I have the honor to be
 Sir
 Your most Obedt. Servant.
 W. Murray
 Superintending Engineer
 H. Circle.
