To be called for from Collrs

Despd 23/12/98.

~~NOTE FOR THE~~ L & M.

Sir

I have the honour to submit for the infmn of Govt the fortnightly narrative of plague for the period from Sunday 4th Decr to Saturday 17th Decr 1898.

2. I regret that G.O. No 1553 P. of 9th Decr 1898 did not reach me in time to call for infn from Collectors as to the progress of inoculation.

W S 19/12

Progress of Plague.

During the fortnight the following cases were reported

	Imported Seizures	D.	Indigenous S.	D.
Anantapur District.	4	2	35	22
Bellary District.	3.	2.	57.	54.
Chingleput District.	4	3		
Kurnool District	1.		3.	1
North Arcot District	7	4	—	—
Salem District	8	4.	21.	14.
Trichinopoly District	1			
Madras City	5	2		
Total	33	18	116	91

Details are given in the appendix.

Anantapur District

2. The number of seizures and deaths reported from Guntakal showed a marked decrease, the deaths falling to 11 from 40 reported in the previous fortnight. It is probable that the reports are not accurate, for the people are all living in scattered encampments in the fields, & the collection of statistics is difficult. There can be little doubt, however, that things are taking a turn for the better in this village. The disinfection of this village is progressing satisfactorily & should be completed in a few days. Inoculation is not popular.

The people put up hospitals for themselves, but they will not make use of them. ~~Consequently~~ Deaths can often be traced only by fresh graves. A daily inspection of all would probably result in scattering the people, which is avoided.

During the last few days no deaths were discovered among the villagers.

The outbreak at Kotla, a hamlet of Guntakal, which was reported last fortnight became serious, there being 23 attacks and 9 deaths out of a population of about 250. The villagers almost evacuated the village immediately, many of them being helped with tents transferred from Guntakal. They have almost all settled in one encampment; ~~[illegible]~~ the returns may be regarded as ~~being~~ reliable. They themselves place their sick in sheds a small distance away from the encampment; sheds are being erected for them at a rather greater distance. The village will be disinfected as soon as the Sepoys have finished [illegible]. Inoculation is not popular

Hindupur. The disease has become indigenous in Hindupur. The affected houses have been disinfected, & the sick & contacts removed to the Govt. Camp. Three fourths of the population have taken to the fields. Subsequent reports show that the disease is spreading.

Inoculation is not popular.

Bellary District. The history of the first ~~imported~~ indigenous case is obscure, but it was undoubtedly not imported. ~~[illegible]~~ The disease proved very fatal in [illegible], there were no less than 55 ~~deaths~~ seizures & 52 deaths were reported; but these figures are probably below the mark. The village has been evacuated & is being disinfected by Sepoys. The people have gone to live in huts in the fields. The area of the village is a large one; the encampments are small & scattered, & information is difficult to obtain. The people cannot be got to attend the Govt. Camp. The village is

the Govt. policies is over done

very much isolated, there being no other village for 7 miles round. Inoculation has been started but is not very popular.

~~My~~ **Cuddapah District.** ~~In~~ At the close of the fortnight plague was reported from Maddikera a village [illegible] miles or so from Madanapalle & Punganur. The course of the outbreak has not been traced clearly, but is probably due to communication with Punganur. — It is probable that the disease had been in the town for some days before it was discovered.

The Collector has ~~[illegible]~~ acted promptly, & is preparing a camp for evacuated & sick, who are at present confined to isolated houses in the town. People are leaving for the fields. Arrangements are being made for inoculation.

E ~~5~~. **Salem District.**

In the last fortnightly report it was stated that a suspected indigenous case had occurred at Mathigiri in the Hosur Taluq about 30 miles from Bangalore.

3

Since then the disease has established itself indigenously, probably through the medium of infected grain. The Collector has taken prompt & energetic measures. The quarter affected has been evacuated, & is being disinfected by sepoys. People are [illegible] coming forward for inoculation.

E. 3. **Segregation &c.**

Segregation has ~~been~~ is been strictly carried out in practically all the imported cases, & also ~~[illegible]~~ in Mathigiri, Maddikera Hindupur & Hospet, & so far as the sick are concerned fairly in [illegible]. In the Punganur & Madanapalle where the people are widely scattered it has been found ~~difficult~~ practically impossible to secure segregation. In ~~almost~~ all the villages seriously affected the people have realised the value of evacuation.

4. ~~The~~ Attitude of the people –

There has been no active hostility ~~[illegible]~~ during the fortnight. In ~~many~~ most parts the people distrust the Government Camps, & ~~[illegible]~~ the camps at [illegible] village & Molagavalli have been of little use. Inoculation is unpopular in the affected area except at [illegible], & for a short time at Molagavalli. In the latter village a woman was seized with plague a few hours after inoculation, & died, & ~~this gave a [illegible] check~~ people then grew suspicious. The feeling of the people is reported to be improving in taluk Anantapur, & the Collr is organizing observation circles which were held in abeyance after the ~~death~~ murder of the Hindupur Tahsildar. I have questioned several of the [illegible] detained in Hindupur Camp. They

were taken there much against their will, but they express themselves pleased with their treatment, & promise to tell their friends when they get out. Two persons went from [illegible] to Kentalam, 30 miles away. The villagers seized them & sent them back under the escort of the village servants. ~~The villages~~ In western Bellary it is ~~[illegible]~~ reported that the people are fencing their villages with thorns to keep out intruders. They are apparently awakening to the necessity for protecting themselves.

19/12 VB

Statement showing plague seizures and deaths during the fortnight ending 17th Dec.

Statement showing the number of persons inoculated

NOTE FOR THE Plague Court

A Statement of plague Cases for fortnight 4 – 17 Dec is submitted, with papers so far as available.

Guntakal

2. ~~At Guntakal~~ [illegible] [illegible] ~~for fear of plague~~ In Guntakal village, there were 10 seizures & 11 deaths. [illegible] The deaths occurred mostly in huts in the fields where the people have encamped by castes. The whole village has been evacuated and more than half of it has been disinfected by sepoys. In the camp there are 70 families of Muhammadans.

Kotala

This is a village 8 miles from Kotala. Practically all the people have left the village & greater part of them are encamped in one place and some have gone to their fields. ~~Sepoys will be shortly employed to disinfect the village.~~

Hospet

Of the two ~~cases~~ deaths, one is that of a child of the local ~~Stationmaster~~. The ~~cause~~ source of infection has not been definitely ascertained. The child had been inoculated by the

Statement showing the number of persons inoculated

Sanitary Comsr 8 days previously with less than half the prescribed dose. It seems probable that this dose was an insufficient protection and that the child must have come in contact with some infected person or things. It must be noted however that the last previous case of plague occurred in Hospet on the 27th Nov. 98.

Molagavalli. This is a large village having a population of 3216 (census of 1891) but isolated. The nearest village is 7 miles off. ~~The~~ Molagavalli has been deserted to a very great extent about 3/4 of the people having left it. They live in the fields in encampments according to castes. Infected houses have been roughly disinfected but the whole village requires thorough disinfection & this is now being done by sappers.

Malapur: ~~The infection is supposed to~~ This village is ~~very~~ near Bangalore and appears to have got the infection through imported grain. ~~Dead rats generally preceded the seizures which began in the cases~~ The seizures were mostly among people living or working in shops, and were preceded by mortality among rats. The Collr has taken prompt measures to stop the progress of the disease. The whole of the infected quarter consisting of one hundred houses has been evacuated, the ~~occupants~~ occupants have been removed into tents, huts & available buildings. Contacts have been segregated, & disinfection with the aid of sappers is about to be, or has been, commenced. People are freely coming forward to be inoculated.

Madikera. The history of the cases has not been reported but is ~~known~~ perhaps known already to the S.C. The Collr's telegram is submitted.

~~Hindupur~~.

3 As regards the attitude of the people there has been considerable improvement. No riots or active opposition is reported. On the other hand, people have come to recognise the value of segregation & ~~[illegible]~~ voluntarily evacuate infected quarters, and even separate the sick from the healthy as at Kotala.

4. It is doubtful whether the Kuppam case (indigenous) referred

referred to in para 3 of the last report is a case of plague at all. Further inquiry is being made & the report is awaited.
