JANUARY.

Treatment of Pneumonic cases of Plague.

Communicating to the Plague and Sanitary Commissioners and the Surgeon-General letter from the Government of India forwarding copy of the resolution of the Government of Bombay regarding the — in hospitals.

GOVERNMENT OF MADRAS.

LOCAL AND MUNICIPAL DEPARTMENT.

READ—the following paper:—

From R. NATHAN, Esq., Under Secretary to the Government of India, Home Department Sanitary, (Plague)—to the Secretary to the Government of Madras, Local and Municipal Department, dated Calcutta, 3rd January 1899, No. 13.

I am directed to forward, for the information of the Governor in Council, a copy of a Resolution* of the Government of Bombay regarding the treatment of pneumonic cases of plague in hospitals.

ENCLOSURE.

EXTRACT from the Proceedings of the Government of Bombay in the General Department (Plague), No. 6350—6455-P., dated Bombay Castle, the 21st November 1898.

Read—

Extract from a report by Khan Saheb Fazl Ahmed accompanying Political Agent, Kathiawar's No. 1082, dated the 8th October 1898:—

"His expectoration contains blood which in similar cases at Karachi was found, under microscope, to be full of bacilli. This variety of plague I have found the most contagious. I have seen five persons attacked, one after the other, by attending on a typical case of plague-pneumonia. These cases generally die within 48 hours. The case alluded to also ended fatally. Memon hospital is not a place suited at all for the treatment of such cases. There all the patients are placed in a number of large rooms side by side, a circumstance highly prejudicial in pneumonic cases especially. Fortunately a little room was available at the time and the patient was accommodated therein. The attendants were instructed not to sit facing the mouth of the patient, and a spittoon containing mercury lotion was provided for receiving expectoration."

Letter to the Municipal Commissioner for the City of Bombay, No. 5962-P., dated the 21st October 1898:—

"I venture to send for your information an extract from a report by Khan Saheb Fazl Ahmed, who has done very good service indeed. I do so because you kindly let me see Dr. Gibson's report on the Mahratta hospital, where somewhat similar advice is given. It may be worth while to consult your medical advisers whether the pneumonic type should not be treated in separate wards with much greater air space and whether such cases should be left in houses."

Memorandum from the Municipal Commissioner of the City of Bombay, No. P.—815, dated the 28th October 1898:—

Forwards copy of the following letter from Lieutenant-Colonel J. S. Wilkins, I.M.S., Special Medical Officer for Plague Operations, dated the 26th idem:—

"With reference to letter No. 5962-P. of 1898, from the Honourable Mr. A. Wingate, I beg to state that orders have already been issued by me to the hospitals that all pneumonic plague cases are to be isolated, and I have pointed out the danger of treating these cases in general wards. I am strongly of opinion that no pneumonic cases should be treated in private houses, unless, in the opinion of the Medical Officer of the district, the room occupied by the case is suited for a complete isolation of such case, and that proper control over the number of attendants could be had;"

and adds that circular orders in the direction indicated by the Special Medical Officer are being issued to District Officers.

Resolution.—Recorded.

ORDER—No. 126 P., dated 24th January 1899.

Communicated to the Plague and Sanitary Commissioners and the Surgeon-General.
