Endorsement no 673 dated 29th May 1897
 on the Ellore Municipal Chairman's
 letter no 74 of 29-4-97.

Resubmitted

2 Ellore is notoriously a very dirty and
 unsanitary town and it lies so low that it
 is difficult to do much for it. It is consequently
 specially subject to attacks of cholera
 and though the Council has perhaps acted
 rather prematurely in taking precautionary
 measures against the plague now when
 that disease has not appeared within
 a distance of some hundred miles, still
 that disease appears the chief association
 with bad sanitation and the extra establishment
 employed by the Council must have found
 and can always find ample useful work to
 do. The proposed establishment may therefore
 I think be sanctioned with advantage for
 a period of say 6 months with permission
 to the Council to apply for an extension of this
 period if necessary.

3. The cholera preventive staff is said to consist of two ^{sub} Inspectors and 6 and 8 respectively per mensem, 11 peons and 11 toties. To describe men as such has as sub Inspectors appears to me to be misleading and maistries would be a more appropriate appellation. The number of peons appears to be excessive though this may be the case. Were we told how many wards the Town is divided into and what number of peons and toties are deputed for service in each it would be possible to form an opinion, practically though. Current letter gives no information at all. As however the establishment was only appointed on Cholera breaking out, has been at work for over a month and the cost has been provided for in the budget, I think this item can also be sanctioned with the remark that full reasons should be given in the papers accompanying such proposition statements.

both for the employment of such and establishment and for the employment of an establishment of the strength proposed. I am glad to be able to say that the precautionary and curative measures taken by the Council appear to have been effectual as I have received no recent report of cholera from Muz and infer that the outbreak has died out.
