Plague Report Salem District.

Date 13th September 99 No. 1

1. Name of town or village.— Kumaranapally (village)

2. Population of town or village.— 391

3. Plague cases up to date of last report
   - Number of seizures.— 2 } Imported
   - Number of deaths.— 1
   - Date of last report.— –

4. Date of present attack.— about 5th (but exact date cannot be ascertained)

5. When reported by telegram?— 13th September 99

6. Imported or indigenous?— Indigenous

7. Brief history of case.— Five adults (three men & two women) and one child were discovered to have fever in this village by the Circle Inspector on the 9th instant all their names were entered in the fever register. The additional Medical Office and I went to see them on the 10th one of the women was very bad and delirious and one man had fever. None of them had any plague symptoms except the two other men who had enlarged glands in the right groin but scarcely any fever, the child was very much emaciated but had no other symptoms except slight fever. The A. M. O. did not think it was plague at the time but due to damp & cold as the village is in a very unhealthy situation.

8. If ~~imported, had patient a passport?~~—

9. Steps taken to isolate and treat the patient.— He had them all however — including contacts 13 in number removed to the Frontier Station at Kumaranapalli where a man & two of the women have since died

10. Steps taken towards the segregation of contacts.— All at Frontier Station

11. Steps taken towards the evacuation and disinfection of the infected house.— The infected houses were evacuated at once and the village has been evacuated gradually since. The houses have not been disinfected yet as the Coolies are just finishing Audivadi; they will go here next.

12. Was there any opposition on the part of the inmates of the infected house or of the people of the village to the plague measures?— None whatever, they all readily went to the Frontier Station

13. Remarks. I visited this village this morning 18th as the A. M. O was not well. On my way I went to the Frontier Station & saw the two dead bodies of the women were lying there since yesterday. I had them cremated; the fuel could not be got before as the people were busy ~~ev~~ evacuating the village. I had the Plague shed stripped of its matting & will be disinfected. The other patients (the two men with enlarged glands) have scarcely any fever & the child is still very weak. I found the village almost entirely evacuated & the munsiff informed me that a dead rat had been found in one of the houses (not any of the patients' houses) and that almost in every house an unpleasant smell is perceptible.

Note. The case is perhaps only suspicious. No plague symptoms have been given.
[illegible] 25/9/99

Plague Report Salem District.

Date 23 September 99, No. 1620 / D

1. Name of town or village.— Salem Town

2. Population of town or village.— 67.710.

3. Plague cases up to date of last report
Number of seizures.— 3
Number of deaths.— 3
Date of last report.— 23rd november 1898

4. Date of present attack.— 20th September 1899

5. When reported by telegram?— ~~21st~~ 23rd September 1899

6. Imported or indigenous?— Imported

7. Brief history of case.— One Natesan Chetty who came from Bangalore cantonment on 13.9.'99 was passported and was under observation for 7 days. He was taken ill on the night of the 20th instant & died on the morning of the 21st. The body was cremated before information reached the authorities. It is said that he had an oil-bath on the 20th, went to bed with his wife, suddenly got convulsions in the night and died.

8. If imported, had patient a passport?— Yes.

9. Steps taken to isolate and treat the patient.— Patient was not isolated as information reached the authorities after the cremation of the body.

10. Steps taken towards the segregation of contacts.— All the inmates of the house have been segregated in the house which is a large one, a Police constable and a circle Inspector being posted there to see that the contacts do not leave the house and mingle with others.

11. Steps taken towards the evacuation and disinfection of the infected house.— The rooms and the verandah of the house in which the patient was lying was thoroughly disinfected with mercurial lotion, clothing was also disinfected in the same lotion, rags &c were burnt & the roofing opened out for ventilation. I have directed that the whole house & saman should be disinfected and also a mandi in Shevapett (Salem Town) belonging to deceased.

12. Was there any opposition on the part of the inmates of the infected house or of the people of the village to the plague measures ?—

No.

13. Remarks.— It appears that some of the deceased's relations from Panamarathupatti, mallur and Rasipur near Salem came and attended the funeral. Orders have been sent to the local authorities of these places to watch the health of these persons.

File

dms 27/9/99

Plague Report Salem District.

Date 20-9-99, No. 1

1. Name of town or village.— Elaviranapalli

2. Population of town or village.— 95.

3. Plague cases up to date of last report
Number of seizures.—
Number of deaths.— Nil.
Date of last report.—

4. Date of present attack.— 19-9-99

5. When reported by telegram ?— 20-9-99

6. Imported or indigenous ?— Indigenous.

7. Brief history of case.— 1. Yelligan, boy 10 years, attacked suddenly with fever morning 19th, rapid exhaustion & collapse died cardiac failure morning 20th without any further symptoms — illness with slight glandular enlargement discernible in both femoral regions. The day before his attack was apparently in good health tending the cattle in fields — no history of any previous illness.
2. The morning of his death, his grandmother Giri about 75 years age attacked with fever & unable to walk — no glandular enlargement yet observed.

8. If imported, had patient a passport ?—

9. Steps taken to isolate and treat the patient.— Boy removed to a separate hut and the old woman to another which they had already constructed in the fields outside village. native treatment, if any

10. Steps taken towards the segregation of contacts.— Segregated in a separate shed in fields.

11. Steps taken towards the evacuation and disinfection of the infected house.— The triangular portion of wall beneath gable ends of roof will be removed for purposes of ventilation (weather precludes unroofing) and house drenched with acid Perchloride of mercury solution. This will be carried out generally in the village

12. Was there any opposition on the part of the inmates of the infected house or of the people of the village to the plague measures?—

No

13. Remarks.—This village is within 1 mile of Kalgondapally village which was rat infected.

It is reported in neighbouring villages that dead or dying rats have been observed at periods during past 15 days at Elavirana palli. For the past 3 or 4 days inhabitants have been building sheds & shelters in the fields but maintained this was only a general precautionary measure in case of necessity & not on account of actual warning from rats or illness in the village. However they were preparing to move and today village is completely evacuated.

Madras —

A

Sir

I have the honour to submit an abstract report on the state of Plague in the Salem Observation area for the week ending September 16th.

9 fresh attacks with 5 deaths occurred. The decrease due to subsidence of outbreak in the 3 villages furnishing returns for previous week — as result of evacuation.

1 fresh village (Komarapalli) on Anikal frontier has become infected, where 5 suspicious cases of fever discovered at commencement of week, and isolated for observation at the neighbouring Frontier Inspection Sheds, turned out to be Plague. The village has been evacuated.

Infection remains & continues to spread along this border of the observation area only.

Disinfection of Kalukondapally and Andiradi has been completed — as well as of ~~disinfect~~ the Samban removed to the huts in the fields at the latter.

Removal of roofs is no longer practicable in the present weather, ~~and~~ ventilation & syringing of interiors with antiseptic solutions alone has to be relied on.

several dead rats being found or traced out during the process.

Plague returns for the week.	Attack	Death

Subject

Submitting an abstract report on the state of Plague in the Salem observation area for the week ending September 16th.

C A 02918P

From the Addl. Medical Officer
Salem Distt.

To the Secretary Local and Municipal Departmt.
Madras.

Sir

I have the honor to submit an abstract report on the state of Plague in the Salem Observation area for the week ending September 23rd

9 fresh attacks with 8 deaths notified during the week. The figures remaining practically stationary from last week.

No fresh cases occurred at either Mudigoripally or Kalukondapally villages, but the death of a boy attacked (10.9.99) from the former occurred at the temporary Hospital shed at Andivadi - to which he had been removed.

2 attacks and deaths occurred at a small village Ulivaranapally - within a few furlongs of Kalukondapally - while in process of being evacuated owing to discovery of dead rats there.

Kottagondapally village furnished another attack & death, (after a freedom for 1 month) due to the handling of grain purchased and stored from an infected house.

Returns for the week

	attacks	ds.
Kothagondapally	1	1
Andiradi	3	2
Midigiripally	0	1 at Andiradi Hospital
Komarnapally	3	2
Mirranapally	2	2
Total	9 attacks	8 deaths

Cases discharged (recovered) during the week.

from Settipalli	2.	both attacked 15.7.99
" Kothapally	1.	attacked 18.8.99 a imported case from Kothur

No. of cases remaining at commencement of week.	fresh Cases.	deaths	discharged
22.	9	8	3.

Cases remaining at end of week under observation or treatment.

Settipally	3.	in temporary Hospital at Kothur Station.
