Camp - Guntakal.
Dated 16 October 1899.

From
M. R. Ry. P. Veerannah Naidu,
Acting District Medical
and Sanitary Officer,
Anantapur.

To
The District Medical and
Sanitary Officer,
Anantapur.

Sir,

With reference to your Memo. C. No. 4048, dated 15 Instant, I have the honour to report that I have this morning examined a woman named Lakshmammah, aged 24 years detained in suspect shed, and find that she is suffering from Genuine Plague which she is reported to have contracted at Hubli where the disease is now prevalent. She has high fever 104.4°. Tongue thickly coated with yellowish fur in the centre and clean at the edges. The cervical and the Parotid glands of the right side are swollen and tender. Pulse fairly strong The Inguinal glands are unaffected. She can freely flex and extend her legs and thighs

Her intellect is clear, Voice distinct. In the evening her temperature 103·8; had slight perspiration in the afternoon and slight increase in the enlargement of the glands of the neck. She is given stimulants and nourishment regularly.

I have,

(Signed) P. Veerannah Naidu.
Ag. Dist Medical and Sanitary
Officer.

Plague Report Guntakal Anantapur District

Date 17th October 99, No.

1. Name of town or village.— Government Suspect Camp Guntakal

2. Population of town or village.—

3. Plague cases up to date of last report. Since August 1899
   - Number of seizures.— 1
   - Number of deaths.— 1
   - Date of last report 19. 8. 99

4. Date of present attack.— 15. 10. 99

5. When reported by telegram ?— 15. 10. 99

6. Imported or indigenous ?— Imported

7. Brief history of case.— Luckshum Ammal a female brahmin vishnavite with her husband and also a male attendant and three children were travelling by train from Hoobly to Kuroor in the Coimbatore district. On the 13th morning the assistant surgeon at Guntakal detained them as she was suffering from fever with temperature 103-2°. There was no enlargement of glands then. The temperature continued to be between 103 and 104 till the morning of the 15th when bubo appeared at the upper part of her neck. It is in the course of development. This is declared by the two assistant surgeons Inspector Subbaiyer and Veeranna Naydu to be a real case of Plague. It is imported from Hoobly an infected area.

8. If imported, had patient a passport ?— No.

9. Steps taken to isolate and treat the patient.— Removed to Government suspect Camp Guntakal where she was isolated and kept in a separate shed and is taken care of.

10. Steps taken towards the segregation of contacts.— The patient's husband and also one female attendant and the three children are segregated in a separate shed in the Suspect Camp.

11. Steps taken towards the evacuation and disinfection of the infected house. — No house

12. Was there any opposition on the part of the inmates of the infected house or of the people of the village to the plague measures?— Nil

13. Remarks.— The Assistant Surgeon and also the Hospital Assistant in the Guntakal camp are treating the patient. The Dy: Collector of Gooty division has also visited Guntakal for the sake of this plague case.

(Signed) C Krishnayya
Special Dy: Tahsildar

Copy communicated to the Secretary to Government, Local and Municipal Department and the Sanitary Commissioner for Madras. in continuation of this Office telegram dated 15th October 1899.

2. Doctor Roberts could not proceed to Guntakal on the 15th instant as stated in the telegram, owing to the Medical Examination held at Anantapur. Assistant Surgeon P. Veerannah Naidu was sent to Guntakal to examine the patient.

Copy of his report is herewith submitted for information.

CURRENT No. 3112 P

Date of Receipt.

---

Plague Report Chingleput District.

Date 12th October 1899, Ref: on No. 576 Plague

1. Name of ~~town or~~ village.— Peravalur, near Perambur, Saidapet Taluk.

2. Population of ~~town or~~ village.— 1390 (as per Census of 1891).

3. Plague cases up to date of last report
   - Number of seizures.— "
   - Number of deaths.— "
   - Date of last report.— "

4. Date of present attack.— 5th October 1899.

5. When reported by telegram?— 12th October 1899.

6. Imported or indigenous?— Imported from Hubli.

7. Brief history of case.— Kamakshi Ammal aged 31 years was twice inoc-
-lated in 1898 and was inoculated a third time on the 26th Sept 1899. She arrived at Peravalur
on the 4th instant and was under the observation of the village munsiff. She was 4 months
pregnant and mis-carried on the 5th instant. The fact that she had high fever was re-
-ported on the evening of the 9th instant and on the 10th the Tahsildar & the Deputy Collector
went to the village and took the necessary precautions. The District Surgeon who had been
wired to and arrived at the village on the 11th considered the case to be one of plague but
the woman had died on the morning of the 11th before his arrival. The deceased is said to have
had convulsions and twitchings of the muscles for about 12 hours before her death. I am
making further enquiries the result of which will be reported. The Dist. Surgeon's report has not
yet come to hand.

8. If imported, had patient a passport?— She was inoculated and so had no passport but was under the observation of the local authority.

9. Steps taken to isolate and treat the patient.— The patient was removed on 10th October 1899 to an isolated house at a distance of about half a mile from the village and was under the treatment of a native physician as she was unwilling to take European medicines.

10. Steps taken towards the segregation of contacts.— The contacts 9 in number were also segregated and later another who had been temporarily absent in Madras was also segregated. The Tahsildar has given information in regard to the individual last mentioned to the President, Municipal Commission, Madras.

11. Steps taken towards the evacuation and disinfection of the infected house.— The infected house was evacuated and the disinfection of the house has been nearly completed. The District Surgeon has attended to this.

12. Was there any opposition on the part of the inmates of the infected house or of the people of the village to the plague measures?— There was no opposition. The patient and two contacts were quite willing to be segregated.

13. Remarks.— The corpse was disinfected and burnt without delay. Under the instructions of the District Surgeon the contacts in the segregation camp are to be kept there till the 20th instant. The Police are guarding the segregation camp and the infected house

**CURRENT No.** 3264 P.

Date of Receipt.

Plague Report Coimbatore District.

*Date* 19th October 1899, *No.* Roc 1345 (b) P. of 99.

1. Name of town or village.— Jagarapuram (Kollegal Taluk).

2. Population of town or village.— 1,529

3. Plague cases up to date of last report.
   - Number of seizures.— 6
   - Number of deaths.— 4
   - Date of last report.— -

4. Date of present attack.— 12th October 1899.

5. When reported by telegram?— 14th, 15th and 18th October 1899. 16th (to Sanitary Commissioner and Surg. General),

6. Imported or indigenous?— Indigenous.

7. Brief history of case.— Plague has been prevailing for some time in the Mysore village of Mugoor distant about 2 miles from Jagarapuram. Recently it also broke out in the Mysore village of Jellanore on the British frontier. It is suspected that the deceased must have got the infection from the Mysore villages in spite of careful watching of arrivals from infected areas. 3 of the deceased appear to be the inmates of the same house.

See C. No 3283

8. If imported, had patient a passport?— Not imported

9. Steps taken to isolate and treat the patient.— All the people are said to have evacuated the village.

10. Steps taken towards the segregation of contacts.—

The contacts are reported to have been segregated in huts outside the village.

11. Steps taken towards the evacuation and disinfection of the infected house.—

Houses have been evacuated and disinfection is said to have been arranged for and the new plague supervisor Mr. Lock instructed to carefully supervise the disinfection work.

12. Was there any opposition on the part of the inmates of the infected house or of the people of the village to the plague measures?—

No

13. Remarks.—

Recently there appears to have been an increase in fever cases at Jagarapuram, which attracted attention and with the approval of the District Medical and Sanitary officer, the — Ambulance Staff Hospital Assistant was deputed to make special enquiry and report. The Tahsildar and the Civil apothecary at Kollegal also inspected the village and examined the suspected cases. Meanwhile the Assistant Surgeon was also ordered to proceed to the village which he seems to have reached on the 16th. The Collector is also on the spot just now. Of the 6 cases of plague reported up to date, 2 are suspected and the remaining 4 ~~are those~~ (which have proved fatal) genuine. Of the 2 suspected cases, one is said to be lingering and the other recovering as already wired

# Plague Report Coimbatore District

Dated 21st. October 1899. No. —.

## 7. Brief history of Case.

## Cause of the outbreak.

As the result of my local investigation I am informed that plague reached the village under the following circumstances:-

The Sanitary Inspector who was working in Tagarapuram took part in some faction in the village, siding with the Munsiff's faction. To annoy the munsiff the other faction intended to rob from the Sanitary Inspector's wife valuable jewelry she had and for these purposes gathered a gang of persons from Mugur, the Mysore infected village 1½ miles from Tagarapuram. To prevent this the Sanitary Inspector also collected persons from the same infected village to protect his house. No robbery took place but at or about this time the time the Sanitary Inspector got ill with fever and succumbed on the 14th September with what was stated to be typhoid fever. Two or three days after this, a woman living close to his house who was employed in sweeping it out also died of fever and in the next three weeks 5 or 6 deaths were reported from ordinary fever, 3 of which occurred in houses close to the woman's. I need not say that on the woman's death, special orders were issued to keep a watch on the village as it was clearly a suspicious case. On the 14th the fever cases were reported to be genuine cases of plague. 6 out of the 8 cases (two of these eight ~~only~~ are only suspicious cases so far) occurred in the families of those persons previously reported to have died of fever.

## 13. Remarks.

General:— I am glad to say that the villagers have given us every assistance. They had indeed completely evacuated the village before they were asked to do so. The Assistant Surgeon two Hospital Assistants, and a very experienced Plague Supervisor (Mr. Locke late of Ranipet) are on the spot. I have given special orders as to the construction of sheds for contacts advancing money to do so. Arrangements have also been made so that the villagers may get supplies without entering any other village — which they are not allowed to do.

(Sd). C. H. Mounsey.
Ag. Collector.
21-10-1899.

(True copy).

Submitted to the Secretary to the Government Local and Municipal Department, and the Sanitary Commissioner Madras, with a request that the above remarks made by the Collector after personal local investigation may be substituted for what appear against items Nos. 7 and 13 of the detailed plague report dated 19-10-99, Rc. 1345 (W)/Plague of 99 re plague at Jagarapuram in the Kollegal Taluk.

C. No. 3204 P. / 99 (kept below.)

C W Cotton
for Ag. Collector.

# Weekly Plague report of the Deputy Collector, Kollegal Division, Coimbatore District for the week ending Saturday the 21st October 1899

(Vide Plague Commissioner's letter dated 21.2.99 No 45)

1. Name of infected village   Tagarapuram in Kollegal Taluk.
   Population 1529

2. Number of attacks
   (a) In previous weeks   5
   (b) During present week   3

3. Number of deaths
   (a) In previous weeks   "
   (b) During present week   5

4. Measures taken for the suppression of plague.   The village has been completely evacuated. The people live in sheds specially built by them outside the village.

Vley

The infected houses have been thoroughly cleansed and disinfected. Plague sheds for segregation and other purposes are in course of construction. Two hospital Assistants are in charge of the Camp. The Assistant Surgeon, Coimbatore, who arrived on the 15' instant is supervising the arrangements. The Plague Supervisor and the Plague Inspector are also attending to disinfection and other sanitary matters.

5. Success of plague measures. The measures adopted have had the effect of preventing the spread of plague. It is hoped that plague will be stamped out in a short time.

6. Attitude of the people towards plague measures. The people are willing and ready to submit to the plague measures ordered by the authorities. They speedily constructed the required sheds for themselves and this has been of the greatest benefit in dealing with plague. Owing to the outbreak of plague in the neighbouring villages of Mysore the people have more or less

learnt what they should do on the occurrence of plague. No opposition is anticipated from them.

7. General remarks. The village of Tagarapuram is situated close to the villages of Magur and Tellanur in the Mysore Province where plague has been prevailing for sometime past. Communication with the infected area had been discouraged and controlled as far as possible and immunity from plague had thus been secured for some time. There were a few fever cases recently which aroused suspicion and when they were examined by local medical officers it was found that the cases were of a suspicious nature. Prompt action was then taken in accordance with the plague rules.

The Collector arrived here on the 18th and inspected the village and the plague arrangements on the following day.

It is difficult to say how the infection was carried into the village. Probably communication stealthily carried on by the people with the infected areas

Vlls

in the Mysore Province accounts for the outbreak.

Plague report

Vaniambody Municipality

Salem District

5 OCT. 1899

| | |
|---|---|
| 1. Name of town or village | Vaniambodi |
| 2. Population of town or village | 16090. |
| 3. Plague cases upto date of last report | Number of seizures — 9<br>Number of deaths — 6<br>Date of last report — 5th April 99. |
| 4. Date of present attack | 5th October 1899 |
| 5. When reported by telegram | 6th October 1899 |
| 6. Imported or Indigenous | Imported. |
| 7. Brief history of the case | One Govinda chetty a native of this place and who had been to Bangalore &c on trade business left Bangalore on the morning of the |

the 3d instant for Kuppam where he was passported on that date - It is said that he remained at Kuppam on the 4th instant and left that place for Patchur on morning of the 5th. Reaching the latter place about 4 P.M. that day he is said to have appeared before the village Munsiff ~~of~~ for observation immediately and left the same for ~~Pad~~ Vaniambody which place he reached at about 8 P. M. the same day. One Arunachella chetty who accompanied him throughout from Bangalore has furnished the above information - He also alleges that the patient came walking by road (via Patchur) all the day on the 5th instant and that he got fever between Natrampolli (about 10 miles from Vaniambodi) and Vaniambodi. The passport held by the patient bears the signature of the local authority of Kuppam under date the 4th instant and of one Ramaswami Gounden without designation under date the 5th. The said Arunachella chetty appeared for observation at the hospital on the morning of the 6th instant and gave no information of the illness of the patient. The information ~~reach~~ reached the Hospital Assistant at about 6 P.M. on the 6th instant through ~~the~~ a relative the 3rd instant for Kup-

relative of the patient who appeared at the hospital with the passport of the patient. The Hospital Assistant immediately inspected the case and reported that the patient had high fever, the thermometer reading 105° that the glands of his neck were much inflamed and swollen, that he was delirious and had all other symptoms of plague.

8. If unreported, had patient a passport.

The patient had passport No 6419 dated 3-10-99 issued at Kuppam.

9. Steps taken to isolate and treat the patient.

The relatives of the patient having objected to his being removed to the plague hospital he was isolated in the house in which he was located. Tin Canisters with Carbolic Sawdust were at once provided for the collection of the patient's evacuation, and a watchman and a toty were appointed and kept at the house to disinfect the ~~case~~ same. Perchloride of Mercury lotion was sprinkled all over the patient's room.

10. Steps taken toward the segregation of the contacts.

The Contacts having refused to be segregated in the plague camp they (16 in number) were all segregated in the same house and police Constables and a Municipal watchman were posted to guard the house to prevent ingress and egress.

| | |
|---|---|
| 11. Steps taken towards the evacuation and disinfection of the infected house. | The Contacts are segregated in the same house and no disinfection has been done at present. This will be attended to later on. |
| 12. Was there any opposition on the part of the inmates of the infected house or of the people of the village to the plague measures. | There was no opposition except the refusal of the inmates to remove the patient to the plague hospital. |
| 13. Remarks. | I was present in the affected house from 9 to 10-30. P.M. last night with the Sanitary Inspector and other staff and posted Constables, a watchman and a toty at the house at once giving them all the necessary instructions. I also held an enquiry at the spot as to the antecedent of the case. The story that the patient came walking all the way from Kuppam and reached Vaniambodi in one day spending some hours at Patchur for appearing for observation and that symptoms of fever set in between Natrampalli and Vaniambodi is incredible. I have addressed the Tahsildar of Tirupattur to kindly make enquiries of the Village Munsiff of Patchur as to the hour at which the patient appeared before him for observation on the 5th instant, in what state he then was, and what other particulars he |

~~od instant for Sup-~~
he can furnish regarding
the patient

Plague Report Salem District.

*Date* 13th October 99. *No.*

1. Name of town or village.— Kotakondapalli

2. Population of town or village.— 412

| | | Village | F.S |
|---|---|---|---|
| 3. Plague cases up to date of last report | Number of seizures.— | 9 — | 3 |
| | Number of deaths.— | 3 — | 3 |
| | Date of last report.— | | |

4. Date of present attack.— 12th October 99

5. When reported by telegram?— 13th October 99

6. Imported or indigenous?— Indigenous.

7. Brief history of case.— Police constable No 1167 Venkataswami was detailed about a week ago to guard a man called Motappa at Kotakondapalli village who was a contact in a plague case and was giving trouble by not ~~giving~~ keeping in his hut where he was segregated. This Constable was sent on the 11th from the above village to Jibi another infected village near Hosur in charge of some disinfection coolies and was to return to Kotakondapalli at once. Having left the coolies at Jibi he went to have his meals in the town of Hosur to his house & then returned. He was taken ill at Kotakondapalli village & ~~8. If imported, had patient a passport?—~~ went to the frontier station. The Hospital assistant there finding he had temperature 103-2 sent him in here yesterday to Hosur Plague shed

9. Steps taken to isolate and treat the patient.—

10. Steps taken towards the segregation of contacts.— When he came to the frontier station he went & lay down in the new guard room on night of the 11th with the other Constables. So I have had the other constables who are contacts, observed – They cannot be segregated as they have patrolling duties daily.

11. Steps taken towards the evacuation and disinfection of the infected house.— The new guard room has been disinfected this morning by the Hospital Assistant at the Frontier Station, the other constables' clothes have been immersed in Mercurial solution. I saw this done myself this morning and Constables have evacuated the Guard room. At the village the Constable was not in any shed but walking about in the open and when relieved used to go to the Frontier Station.

12. Was there any opposition on the part of the inmates of the infected house or of the people of the village to the plague measures?— None.

13. Remarks.— It is impossible to say where this man got infected, certainly not in the Frontier Station or the guard shed. This is perfectly new. My theory is that he must have eaten some infected stuff in his house in Hosur. I am having enquiries made there.

Plague Report Salem District.

Date 16th Octr 99, No.

1. Name of town or village.— Between Kotten and Kothakondapalli

2. Population of town or village.— Nil

3. Plague cases up to date of last report
Number of seizures.—
Number of deaths.—
Date of last report.—
Nil

4. Date of present attack.— Not known

5. When reported by telegram?— 15th October 99.

6. Imported or indigenous?— Doubtful, probably imported.

7. Brief history of case.— Yesterday 15th about 3 P.m. I got a message from the village Munsiff of Kotten that a body had been found between the above two villages by some of the villagers. I went down alone and saw the body. It was of a young man of about 20 with a swelling on left side of neck. No one in the village identified it

8. If imported, had patient a passport?— None.

9. Steps taken to isolate and treat the patient.— None.

10. Steps taken towards the segregation of contacts.— None

11. Steps taken towards the evacuation and disinfection of the infected house.— Nil

12. Was there any opposition on the part of the inmates of the infected house or of the people of the village to the plague measures?— Nil

13. Remarks.—

On further enquiry I find that a villager of Kotten saw a young man of the description coming across from Mysore Territory about 12 noon on 14th in a very weak condition, he was evading Frontier inspection, when asked he was told that the man came from Oosoor in Mysore Territory. I am inclined to doubt this it may be only a blind on the part of the Kottenites to prevent being turned out! I have however written to the Amildar of Anekal and have asked him to let me know whether such a man has been missed from Oosoor, will report further on reply being received

No. $\frac{1903}{P}$

Salem Collector's Office,
20th November 1899.

From
Robert B. Clegg Esq.,
ag Collector and District Magistrate,
Salem,

To
The Secretary to Government,
Local & Municipal Department,
Madras.

Sir,

In continuation of my endorsement No $\frac{1767}{P}$ * dated 20.10.99 on the Special Plague Officer's report regarding a dead body discovered between Kothur and Kothagoundapalli, I have the honour to state that further enquiries show that the deceased, a native of Kasamhalli in Hoskote Taluk of the Mysore Province, was going to old Mathagiri to his father-in-law's house, was taken ill and died on the way. The case

* C No 3236-P.
in G.O. No. 1542-P

Noted 27.10.99

Plague Report Salem District.

Date 21 October 99 No.

1. Name of town or village.— Kotten

2. Population of town or village.— 203

3. Plague cases up to date of last report

| | | Imported | Indigenous |
|---|---|---|---|
| | Number of seizures.— | 1 | 10 |
| | Number of deaths.— | 1 | 9 |
| | Date of last report.— | - | - |

4. Date of present attack.— 18th October

5. When reported by telegram?— 20. October

6. Imported or indigenous?— Indigenous

7. Brief history of case.— A woman aged 35 was taken ill with fever on 18th but only reported on 19th when Circle Inspector found her in her house. She died yesterday morning. I examined body and found swelling on right side of neck.

8. If imported, had patient a passport?— nil

9. Steps taken to isolate and treat the patient.— Circle Inspector put her out in a field where she died. She was too bad to be moved.

10. Steps taken towards the segregation of contacts.—Usual Steps taken

11. Steps taken towards the evacuation and disinfection of the infected house.—Usual Steps taken

12. Was there any opposition on the part of the inmates of the infected house or of the people of the village to the plague measures?— None.

13. Remarks.— I have now finally decided to have the whole village evacuated as it is beyond a doubt now that there is still infection here, & it wants thoroughly disinfecting

i. The first two cases here lately were two people husband and wife in one house: this house only was disinfected

ii. Then the son of the above two people was supposed to have gone to Mysore got married there & brought his wife to Kottur who was not admitted into the village (so they said) & who died next day in fields. I had grave doubts about this but as circle Inspector assured me that it was true I reported it as "imported".

iii. Then two cases occurred in Pariah quarters & as this was quite separate from village I only had that quarter evacuated.

iv. Then a body was found not far from Kottur unclaimed! this was suspicious but as I had no positive proof that it came from Kottur I left them again alone.

V. But this last case now occurring in the village itself in a different house, confirms my suspicion that the ones mentioned in paras ii & iv were from the village itself.

(Signed) T. Ffrench,
Captain
Special Plague officer.

4. Date of present attack.— 16th October 1899

5. When reported by telegram?— Do

6. Imported or indigenous?— Indigenous

7. Brief history of case.— a female child aged 3 years "Achari" caste was found dead in a house in Hosur on 16th instant. The child had evidently been ill for some time but the case had not been reported the child had enlarged glands on both sides of the neck

8. If imported, had patient a passport?— Nil

9. Steps taken to isolate and treat the patient.— No steps taken as case was not reported till after death

10. Steps taken towards the segregation of contacts.— Contacts all segregated in Hosur observation sheds.

27 OCT. 1899

11. Steps taken towards the evacuation and disinfection of the infected house.— Has been evacuated and disinfected today.

12. Was there any opposition on the part of the inmates of the infected house or of the people of the village to the plague measures?— None.

13. Remarks— I am sending a detailed statement of ~~these~~ cases as I think it is one of a series of so far ones & though indigenous I do not think that the infection has been brought in by rats but owing to the following circumstances (i) a disinfection cooly named Kangumani related to this ~~child~~ child used to live in this house. He was discharged some time ago when it was discovered that he had been in jail before & was not a desirable character to have. He disappeared & went to live at "Bolleri" in Mysore territory. There has been plague in this village and a girl who went from Kottur died there of it. This man may have come to his house without our knowing it & brought infection (ii) Some of the child's relatives live at Mukondapalli an infected village & I believe the moment the child was taken ill the people in the house tried to take the child to Mukondapalli but the latter villagers would not receive them. (iii) Another man called Ramachari also related to child was seen coming from Kolar Dt. on 14th through Bagalur frontier Station, he was given a passport & returned to Kolar on 15th through the same frontier Station and when Hospital assistant examined his passport he found that the man had not presented himself for examination.
