FURTHER PAPERS.

G.O.	No.	Department.	Date.

Weekly Report of Plague in Mysore, for the week ending 20th January 1899.

I. Civil and Military Station.

The following are the figures of plague compared with those of the three previous weeks :—

	Plague cases.	Plague deaths.	Deaths from all causes.	Normal mortality for same period as recorded in 5 previous years.
From 28th Sept. to 23rd Dec.	3,563	2,919	5,305	462
Week ending 30th December ...	149	144	201	35
6th January ...	87	70	130	36
13th " ...	79	56	99	36
20th " ...	43	41	85	36

The decrease was general throughout the town, though nearly all the quarters remained infected. A large number of persons continue to return, and it is difficult to carry out their adequate supervision; so far, however, there is no indication of fresh infection having been introduced by them.

2. The cases during the week were distributed as follows :—

Mahomedans ...	8	Native Christians ...	4
Hindus ...	24	Pariahs ...	7

3. During the week 66 persons were sent into segregation, and 42 others exempted on account of their having been inoculated. The figures for the contact camps were :—

	Remaining.	Admitted.	Developed plague.	Discharged.	Remaining..
North Camp ...	23	26	...	22*	27
South Camp ...	101	40	...	60	81

4. 500 inoculations were performed during the week, of which 479 were first and 21 second inoculations. Only 25 of these were among Mahomedans. There have now been 29,346 inoculations, in addition to 8,683 persons inoculated among the troops and followers.

During the week 11 inoculated persons were attacked.

5. The number of houses disinfected during the week was 1,464, and Rs. 85 were paid as compensation.

There were several cases of plague in a village, Nilsundra, which had been entirely disinfected, but not wholly evacuated. With so many sources of infection still open, however, it would be unsafe to say that the disinfection had been ineffectual in itself.

In the town the work progressed rapidly, and the quarters in which the disease was at the outset most virulent have now been completed.

6. The hospital figures were as follows :—

	Remaining.	Admitted.	Discharged.	Died.	Remaining.
North Camp.					
For the week ...	78	7	11	7	67
Since the commencement .	...	910	266	577	67
Verified inoculates ...	...	45	12	10	23
South Camp.					
For the week ...	97	7	12	5	87
Since commencement ...	...	762	219	456	87
Verified inoculates ...	...	41	15	12	14
Military Hospital.					
For the week ...	17	...	5	...	12
Since commencement ...	...	193	44	137	12
Verified inoculates ...	...	121	31	82	8

*Two under observation.

The large number of inoculates admitted to the Military plague hospital compared with the civil camps, is due partly to the figures regarding inoculates in the latter not having been verified throughout, but more especially to the population attended by the Military hospital having been inoculated *en masse*, at an early stage of the outbreak.

7. The result of the evacuation of Knoxpett was that after three cases had occurred within three days of the people leaving the village, the camp has since remained free. The figures of population will be given when the people return to their houses.

8. Lieutenants Walton and Douglas of the Indian Medical Service, who were in Bangalore under the orders of the Plague Commission have left for Bombay. The following figures, supplied by the officer in charge South Camp, show the figures of cases treated with Roux serum compared with the mortality during December, at the end of which month the treatment was begun.

Total treated in hospital.	Total deaths.	Death rate.
516	262	50.7
For December and January to date with Roux serum		
49	31	63.2

II. Bangalore City.

9. The following are the figures in the City up to date.

	Plague Cases.	Plague Deaths.	Deaths from all causes.	Normal recorded mortality in same period.
From 12th Aug. to 23rd Dec.	3,246	2,562	6,670	467
For week ending 30th Dec.	29	31	77	26
" 6th January	14	22	63	23
" 13th "	8	13	52	23
" 20th "	7	5	27	23

In comparing the normal mortality, it must be remembered that, as in the Civil and Military Station, the previous registration of deaths could not have been completely accurate.

The decrease has been maintained, and the special establishment has now been largely reduced.

10. The figures for the Health and Segregation Camps were as follows:—

	Remaining.	Admitted.	Discharged.	Developed plague.	Remaining.
Health Camp	741	50	183	...	608
Segregation Camp	28	27	33	1	21

11. During the week there were 557 first, and 3 second inoculations, bringing the totals to 27,384 and 1,327 respectively, of these 2,745 were Mahomedans.

12. The Hospital figures are as follows:—

	Remaining.	Admitted.	Discharged.	Died.	Remaining.
For the week	5	4	2	...	7
Since commencement.	...	2,083	728	1,348	7
Inoculates	...	100	61	38	1

13. During the week 389 houses were disinfected, and 3 cleaned before re-occupation. 295 houses have been demolished during the epidemic.

14. Some mention should perhaps be made of the outbreak of supposed plague among the animals in the Lal-Bagh menagerie, although it has now been over for some time. In all, four monkeys, three barking deer, a wallaby and several guineapigs and a rabbit have died. In the monkeys and wallaby there were pronounced external swellings, and in the spleen of a guinea pig, and of a rabbit, bacilli resembling the plague bacillus were found. The sources of in-

fection may have been dead rats which were found in some of the cages, and squirrels which died in numbers in the gardens: there was also a case of plague in the family of a keeper, and the infection may in some cases have been caused by people from the town giving the monkeys food, brought from the town in their clothes.

III. Mysore State outside Bangalore.

15. The accompanying weekly return shows the progress of the epidemic in the Province. The inaccuracy attributed to this return for the week ending 13th January was due to the return being based on daily postal not telegraphic reports. The return was accurate for the period it covered, and had been prepared with care.

16. There has been a considerable decrease in the districts, though the number of infected villages has risen from 78 to 82. The disease is decreasing in most of the smaller towns attacked. In the villages the inhabitants have in several instances employed their own watchmen, and have bound themselves to keep out strangers. The following instance is however quoted to show the ease with which infection can be spread. A police constable on duty at Tumkur, an infected town, went without leave to Tiptur, an uninfected village, with some clothes and grain. This being found out at Tumkur, a few days afterwards, orders were telegraphed to Tiptur to disinfect the house and property, as it was suspected that some of the latter might have belonged to plague patients. On the tiles of the house being removed, a dead rat was found which was sent to the Bangalore laboratory, and was found to have died of plague. As Tiptur is free from other infection, it is to be presumed that the rat contracted the disease from the clothes or grain brought by the constable.

17. In Mysore City, the cases and deaths reported up to the 20th were 178 and 127 as against 116 and 93 in the previous week. The total mortality however only rose from 254 to 261, so that the increase was almost entirely due to better reporting of cases. The spread of the disease has been decidedly slow. The exodus from the town which was at first small, is reported to have increased considerably within the last few weeks.

P. R. CADELL,

Assistant to the Resident
in Mysore.

1
CNo 215P 999
