GENERAL DEPARTMENT (PLAGUE).

Bombay Castle, 6th February 1899.

No. 850-P.—The following Summary of Plague Operations in Bombay City during the week ending the 28th January 1899 is published for information :—

A Ward.—There was no sign of improvement in the health of the ward, but good work continued in the way of dealing with cases and vacating infected chawls.

B Ward.—In Mándvi and most of Chukla, the Committees co-operate heartily, and little plague escapes detection. In Dongri and part of Umarkhádi excellent work in evacuation was done. The Umarkhádi Committees also work well.

C Ward.—The Committees continue to give great assistance and the ward is efficiently worked.

D Ward.—More assistance was obtained from the Committees, and a large proportion of the cases were found early.

E Ward.—The death-rate in Byculla was heavy, but much plague was successfully dealt with. In Kámáthipura, 1st Nágpáda and Tárdeo sections, cases still escape detection, but the volunteers are making efforts. A great loss was experienced by the death from plague of Dr. Pathare, whose services have been invaluable.

F and G Wards.—There are large private camps in this district which require a good deal of attention, and there is still much plague.

In addition to the plague deaths shown in the return, 65 deaths were treated as suspicious. During the week there was no marked decline in the death-rate in any section and there was a marked increase in Chukla. Umarkhádi, Fanaswádi, Bhuleshvar, Khára Taláv, Kumbhárwáda, Tádwádi, and specially in Byculla.

The figures for plague attacks, deaths, and total mortality are compared below.

Period.	Plague Attacks.	Plague Deaths.	Total Mortality.
Week ending 29th January 1898	848	852	1,731
Ditto 7th January 1899	227	168	1,001
Ditto 14th January 1899	290	276	1,201
Ditto 21st January 1899	445	384	1,321
Ditto 28th January 1899	648	515	1,555

The admissions to hospitals and camps are shown in the following statement. 239 plague cases were under treatment at the beginning of the week. 365 were admitted during the week. Recoveries and deaths were 28 and 281 respectively. Appended are also statements showing information in regard to the plague operations and in regard to inoculation.

one S.C. sent to Dr. C
18/2

Return showing information regarding Plague under the following headings for the week ending 6 A.M. on Saturday the 28th January 1899.

Section.	Population by Census of 1881	Average weekly Mortality.	Actual Mortality for the Week	No. of Plague cases discovered.			No. of Patients removed to Hospitals.	No. of Persons sent to Hospital or Camps as Contacts.	No. of Persons segregated in private quarters other than authorized Hospital or Camp.		Houses inspected.	Houses disinfected.	Houses or whole floors vacated.	No. of Persons sent to Camps as Evicts.

* 4 suspicious cases in hospital under observation.

† One suspicious case in hospital under observation.

‡ 11 cases of Relapsing Fever: 1 isolated in the house.

§ Three cases of Relapsing Fever.

|| One patient too ill to be removed.

NOTE.—The total number of cases discovered is shown. If a man is discovered sick he is entered as an attack, but if he subsequently dies he is not again entered as a death. Similarly when the first intimation of a case is after the patient's death, he is entered as a death, but not also entered as an attack.

Marine Lines	347

The admissions into the Hospitals have been very large in number and the disease very virulent in type. Taking all the admissions and the cases remaining in Hospitals and comparing them with the total mortality the death-rate is only 41 per cent., but in reality of those admitted during the present week the mortality is very excessive. The Marátha Hospital is having the largest number of admissions and seems the most popular.

(Signed) JAMES S. WILKINS,
Special Medical Officer, Plague Operations.

Prophylactic Inoculations reported to the Municipal Commissioner on 27th January 1899.
