GENERAL DEPARTMENT (PLAGUE).

Bombay Castle, 14th February 1899.

No. 1135-P.—The following Summary of Plague Operations in Bombay City during the week ending the 4th February 1899 is published for information :—

A Ward.—There was little change in the health of this ward. The Plague administration continued to work well.

B Ward.—With the exception of Dongri, good information continued to be obtained. The mortality was generally high.

C Ward.—In this ward very few plague cases are escaping detection and excellent work is being done in removing people from infested localities.

D Ward.—The working of the Committees in this ward is unfavourably reported on.

E Ward.—The mortality of Byculla was very high, but deaths from plague are well looked after and evacuation work is good. Most of the plague in Mazagon and Tār wādi was also found.

F and G Wards.—The cases here are not all discovered. The village of Worli, which suffered severely in the past, was vacated.

Central District.—The number of untraced deaths in this district is great. Some of the Committees are however doing excellent service.

The figures for plague attacks, deaths, and total mortality are compared below.

Period.	Plague Attacks.	Plague Deaths.	Total Mortality.
Week ending 5th February 1898 ...	1,158	1,037	2,049
Ditto 14th January 1899 ...	290	276	1,201
Ditto 21st January 1899 ...	445	384	1,321
Ditto 28th January 1899 ...	648	515	1,555
Ditto 4th February 1899 ...	631	569	1,640

The admissions to hospitals and camps are shown in the following statement. 376 plague cases were under treatment at the beginning of the week. 421 were admitted during the week. Recoveries and deaths were 38 and 332 respectively. Appended are also statements showing information in regard to the plague operations and in regard to inoculation.

1/s. e. sent to P.C.
25/2

Return showing information regarding Plague under the following headings for the week ending 6 A.M. on Saturday the 4th February 1899.

Section.	Population by Census of 1891.	Average weekly Mortality.	Actual Mortality for the Week.	No. of Plague cases discovered.			No. of Patients removed to Hospitals.	No. of Persons sent to Hospitals or Camps as Contacts.	No. of Persons segregated in private quarters other than authorized Hospital or Camp.		Houses inspected.	Houses disinfectd.	Houses or whole floors vacated.	No. of Persons sent to Camps as Evicts.

* 2 Municipal Bigaries segregated in huts.

† 1 case too ill to be removed and 1 Municipal Bigari segregated in his quarters.

‡ One case suspicious.

|| Too ill to be removed.

§ 2 suspicious cases in hospital under observation.

¶ One case of Relapsing Fever.

NOTE.—The total number of cases discovered is shown. If a man is discovered sick he is entered as an attack, but if he subsequently dies he is not again entered as a death. Similarly when the first intimation of a case is after the patient's death, he is entered as a death, but not also entered as an attack.

Weekly Return of Hospitals, Public and Private, for Infectious Diseases from 6 A.M., Saturday, 29th January, to 6 A.M., Saturday, 4th February 1899.

The disease still continues virulent in character and the cases are largely brought to the hospitals. I am glad to bring to notice the good work that the Sarvajnik Hospital at Government House, Parel, is doing; they have had 28 admissions during the week and the Committee is to be congratulated on the result of opening a hospital at Parel. Of the other private hospitals, the Lohánás, Jains, Pársis and Juddís Hospitals have had satisfactory admissions.

The death-rate still continues very high.

(Signed) JAMES WILKINS,
Special Medical Officer, Plague Operations.

Prophylactic Inoculations against Plague performed in Bombay during the week ending 1st February 1899 reported to the Plague Research Laboratory by the undermentioned operators.
