FURTHER PAPERS.

G.O.	No.	Department.	Date.

Weekly Report of Plague in the Civil and Military Station, Bangalore, for week ending 17th March 1899.

The following are the plague figures for the week compared with those of the preceding three weeks:—

	Plague cases.	Plague deaths.	Deaths from all causes.	Normal recorded mortality for same period.
From 28th Sept. to 17th Feb.	3,991	3,291	6,166	760
Week ending 24th February ...	6	6	62	41
" 3rd March ...	9	9	64	44
" 10th " ...	11	6	50	49
" 17th " ...	3	4	43	49

One of the three cases was a surreptitious burial, which was presumed to be plague, though this may be doubted as the quarter in which it occurred has been free for some time. They were thus only two undoubted cases, which occurred in the congested quarter of the town which has always remained infected. There now appears every likelihood of the disease terminating almost immediately.

There were no imported cases during the week, and the observation system is working fairly well. A considerable number of persons escape observation by giving false addresses, and being afterwards difficult to trace. All those, not to be relied on to report themselves properly, will now be escorted by police to their districts.

There have been several cases sent recently for observation, which did not develop plague, but in which some plague symptoms were slightly apparent: but whether these are attenuated forms of the disease, or are due to all cases of sickness being now reported, is doubtful.

2. Of the three cases, two were Hindus and one a Mahomedan.

3. The figures for the segregation camp were:—

	Remaining.	Admitted.	Developed plague.	Discharged.	Remaining.
North Camp ...	44	23	...	53	14

The segregation rules are being strictly carried out, as every means of suppressing the infection is at this stage of the disease to be employed, and the contacts are now easily obtainable.

4. During the week 181 first and 2 second inoculations were performed, bringing the totals to 30,652 first and 966 second inoculations, in addition to 11,815 first and 5,639 second inoculations among the Military population. No inoculated person was attacked during the week.

5. The number of houses disinfected was four, and Rs. 491 were paid in compensation, mostly on account of sums not previously claimed. The two houses in which cases occurred had been disinfected during the systematic disinfection 54 to 58 days previously. There was no instance of a second seizure occurring in a house in which there had previously been a case.

6. The Hospital figures were:—

	Remaining.	Admitted.	Discharged.	Died.	Remaining.
<i>North Camp.</i>					
For the week ...	10	1	3	1	7
Since commencement ...	...	949	342	600	7
Inoculates ...	...	88	60	24	4
<i>South Camp.</i>					
Since commencement ...	...	768	306	462	...
Inoculates ...	...	41	29	12	...
<i>Military Population.</i>					
For the week ...	...	...	...	...	...
Since commencement ...	...	195	56	139	...
Inoculates ...	...	123	41	82	...

7. The inhabitants of Knoxpet, who have been kept in their camp till they agreed to rebuild their houses, dismantled during the epidemic, on more sanitary principles, are now rebuilding them and reoccupying them, compensation being paid them for any expense they are put to.

8. Owing to the decrease of the disease in both the City and the Civil and Military Station, persons leaving Bangalore will no longer be required to take out passes, but are still subjected to medical examination.

P. R. CADELL,

Assistant to the Resident
in Mysore.

Weekly Report of Plague in the Mysore State, excluding the Civil and Military Station, for the Week ending 17th March 1899.

Bangalore City.

I. The following are the figures in the City up to date:—

	Plague Cases.	Plague Deaths.	Deaths from all causes.	Normal recorded mortality in the same period.
From 12th August 1898 to 17th February 1899..	3,330	2,651	7,045	676
Week ending 24th February 1899	...	...	31	32
Week ending 3rd March 1899	1	1	35	31
Week ending 10th March 1899	1	1	37	32
Week ending 17th March 1899	2	2	26	32

The one case of plague recorded as having occurred during the week ending 24th February, was proved during the week under report to be no case of plague, and is therefore omitted in the above tabular statement.

There were 2 cases during the week as against 1 in each of the previous two weeks. They were reported from Sher Khan Galli, Taluk Cutcherry Road and Cubbon Petta, respectively in Ward No. III. But in both these cases distinct evidence of plague was wanting. They were returned as plague cases on examination after death, as the sickness had not been previously reported and as the deaths were sudden.

The total mortality has, however, decreased by 11 as compared with the previous week and is even less than the normal recorded mortality of the previous 5 years. The number of arrivals in the City was 1,674 in the current week as against 1803 in the previous week, the total population of the City being estimated at 56,229 at the end of the current week as against 55,132 at the end of the previous week.

II. The figures for the Health and Segregation Camps were as follows:—

	Remaining	Admitted	Discharged	Developed plague	Remaining.
Health camps	272	22	3	...	291
Segregation camps	16	...	7	...	9

III. During the week there were 676 first inoculations and 2 second inoculations bringing the totals to 32,830 and 1,371 respectively. One inoculated person was attacked with plague during the week. The total number of such persons attacked since the outbreak is 232, of which the number verified is 157.

In the Gold Fields, however, the number of indigenous cases increased from 49 to 53, while the number of infected villages decreased from 19 to 16. Only one village was newly infected during the week as against three villages the week previous. The following statement shows the incidence of cases among the several Mines for the past 4 weeks:—

[illegible]

In the Kolar District, excluding the Gold Fields, the number of indigenous cases decreased from 22 in the previous week to 11 in the present week, and the number of infected villages from 12 to 7. One village of the above was re-infected.

This week also, for the third time, the Tumkur Town presented a clean sheet; while in the District the number of cases increased from 4 to 8, and the number of infected villages decreased from 8 to 5. Only one village was newly infected during the week.

In the Mysore District excluding the Mysore City, the number of cases was 29 as against 27 and the number of infected villages was the same as in the previous week, viz., 9. In the Mysore Taluk the number of cases increased from 2 to 4 and in the Seringapatam Taluk from 18 to 25, while in the Taluks of Hunsur and Heggaddevankote there were no cases in this week as against 4 and 3 in the previous weeks.

Mandya Taluk has been free now for 3 weeks continuously.

In the Mysore City the figures were as follows:—

	Plague Cases.	Plague Deaths.	Total Mortality.	Normal recorded mortality for past 5 years during the same period.
For the week ending 24th February 1899	264	204	255	33
For the week ending 3rd March 1899	194	186	233	35
For the week ending 10th March 1899	140	124	160	36
For the week ending 17th March 1899	110	91	139	36

The steady decrease in Plague in the Mysore City was well maintained during the present week, the number of attacks decreasing from 140 to 110 and total mortality from 160 to 139.

R. B. PLUMER,
For Plague Commissioner in Mysore.

Statement showing Plague Cases and Deaths (imported as well as indigenous) in the Mysore Province reported in daily returns to the Plague Commissioner from 12th August 1898 to week ending Friday, the 17th March 1899.
