GENERAL DEPARTMENT (PLAGUE).

Bombay Castle, 19th December 1898.

No. 6945—7049-P.—The following summary of Plague operations in Bombay City during the week ending the 10th December 1898 is published for information :—

A Ward.—Plague was epidemic in both Colába and North Fort, but so far the mortality has not been extraordinary. The attacks were well ascertained.

B Ward.—The health of Mándvi and Chukla continued on the whole to be satisfactory though there were sporadic cases of plague. The health of Dongri was eminently bad and the report of the work of the Committee is unsatisfactory. Umarkhádi also showed an increasing mortality, but the Committee is making progress.

C Ward.—In Fanasvádi and Kumbhárváda the death rate was a little high, but plague cases were fairly well reported and the plague administration was efficient.

D Ward.—The public health continued normal.

E Ward.—Byculla showed a markedly high mortality, both plague and relapsing fever being prevalent. The administration was efficient.

F and G Wards.—Only in Máhim was the death rate high, but there seems to be little plague.

Central District.—No separate remarks are called for at present.

The figures for plague attacks, deaths and total mortality are compared below—

Period.	Plague Attacks.	Plague Deaths.	Total Mortality.
Week ending 11th December 1897 ...	99	77	711
Ditto 19th November 1898 ...	51	41	597
Ditto 26th November 1898 ...	52	36	600
Ditto 3rd December 1898 ...	70	49	671
Ditto 10th December 1898 ...	121	83	691

A chart depicting the total mortality of the past two epidemic years and of the current year was published last week, on the plan of one kept in the Port Trust Office. It is interesting as showing the tendency of plague to increase with the beginning of December each year.

The admissions to hospitals and camps are shown in the following statement. 87 plague cases were under treatment at the beginning of the week. 83 were admitted during the week. Recoveries and deaths were 17 and 46 respectively. Appended are also statements showing information in regard to the plague operations and in regard to inoculation.

Return showing information regarding Plague under the following headings for the week ending 6 A.M. on Saturday the 10th December 1898.

Section.		Population by Census of 1891.	Average weekly Mortality.	Actual Mortality for the Week.	No. of Plague cases discovered.			No. of Patients removed to Hospitals.	No. of Persons sent to Hospitals or Camps as Contacts.	No. of Persons segregated in private quarters other than authorized Hospital or Camp.		Houses inspected.	Houses disinfected.	Houses or whole floors vacated.	No. of Persons sent to Camps as Evicts.

GENERAL DEPARTMENT (PLAGUE).

Bombay Castle, 27th December 1898.

No. 7098—7200-P.—The following summary of Plague operations in Bombay City during the week ending the 17th December 1898 is published for information:—

A Ward.—Plague was prevalent in Fort North, but the cases were almost all discovered and sent to hospital and a considerable number of people were transferred from infected dwellings to camps. The medical practitioners lent most substantial assistance in the endeavours made to prevent the spread of infection. The fact that when the actual mortality was 21 compared with an average mortality of 18, there were 25 cases of plague discovered speaks for itself. The health of Middle and Lower Colába improved.

B Ward.—The health of Dongri continued bad, but the Deputy Commissioner is able to report better working. In Mándvi, Chukla and Umarkhádi the mortality was normal.

C Ward.—The health of Dhobi Taláo, Fanasvádi, Bhuleshwar and Kumbhárváda deteriorated, the last-named section being specially bad. A number of patients were found and sent to hospital, but some cases are believed to have escaped detection and the Committees have been called upon for further efforts. The best work was done in the Market section.

D Ward.—The public health was generally good, but a small amount of plague was present in three sections.

E Ward.—The Byculla death rate was very high and gave cause for anxiety that all the plague is not found. In Mázagon and Tarwádi, 9 cases were found with a normal death rate. In Second Nagpáda there was a serious increase of mortality and only 2 deaths were put down to plague. In 20 cases the patient was seen during lifetime and the verification of the cause of death appears to have been fairly satisfactory.

F and G Wards.—In Parel the death rate was high and here again there may be more plague than is accounted for. In Máhim the deaths were also numerous, but practically every death was reported by members of the Committees. The people of these wards are erecting little camps of their own.

In the Central District the Deputy Commissioner reports that a slow progress is being made towards greater efficiency.

The work of erecting camps is being vigorously pushed. Many communities also have their own camps ready. Evacuation of the infected houses is carried out wherever possible.

The figures for plague attacks, deaths and total mortality are compared below—

Period.	Plague Attacks.	Plague Deaths.	Total Mortality.
Week ending 18th December 1897 ...	173	135	824
Ditto 26th November 1898 ...	52	36	600
Ditto 3rd December 1898 ...	70	49	671
Ditto 10th December 1898 ...	121	83	691
Ditto 17th December 1898 ...	123	110	754

The admissions to hospitals and camps are shown in the following statement. 110 plague cases were under treatment at the beginning of the week. 96 were admitted during the week. Recoveries and deaths were 29 and 69 respectively. Appended are also statements showing information in regard to the plague operations and in regard to inoculation.

Return showing information regarding Plague under the following headings for the week ending 6 A.M. on Saturday the 17th December 1898.

By order of His Excellency the Right Honourable the Governor in Council,

A. WINGATE,

Acting Chief Secretary to Government.

GENERAL DEPARTMENT (PLAGUE).

Bombay Castle, 4th January 1899.

No. 13-P.—The following Summary of Plague Operations in Bombay City during the week ending the 24th December 1898 is published for information:—

A Ward.—There was still a good deal of plague in the Fort. The majority of cases were found in time to remove to hospital or went themselves.

B Ward.—Dongri continued to cause anxiety. It is a badly built locality, and evacuation seems to be the only effectual way of dealing with it. The Committee are now working hard, but concealment is still rife there. The Umarkhádi Committee continued to give considerable help, as also the Lohána Committee in Mándvi. A new Bhátia Committee under Mr. Ranchordás Haridas has been constituted.

C Ward.—In Kumbhárwáda the death-rate continued high, but otherwise the mortality was normal. In the Market Section a considerable number of plague cases has been dealt with, pointing to efficient work. Very excellent work was also done in getting people out of infected localities into camps.

D Ward.—The health of Khetwádi improved; that of Girgaum deteriorated. Nine cases were sent to hospital, but 4 deaths were only heard of through the Cemetery Returns, which was not satisfactory.

E Ward.—Byculla occasioned anxiety by its high mortality. There are a certain number of deaths reported from the cemeteries as belonging to this section which, through incorrect addresses, cannot be verified. An additional doctor has been detailed for duty. The Committees in Kámátipura, Second Nágpáda, Tárdeo, and First Nágpáda are working well.

F and G Wards.—The death-rate continued high. The District Officer has now got two military officers to assist him, and an additional doctor and a sub-inspector have been added to his staff.

The figures for plague attacks, deaths, and total mortality are compared below—

Period.	Plague Attacks.	Plague Deaths.	Total Mortality.
Week ending 25th December 1897 ...	216	183	912
Ditto 3rd December 1898 ...	70	49	671
Ditto 10th December 1898 ...	121	83	691
Ditto 17th December 1898 ...	123	110	754
Ditto 24th December 1898 ...	137	108	736

The admissions to hospitals and camps are shown in the following statement. 115 plague cases were under treatment at the beginning of the week. 82 were admitted during the week. Recoveries and deaths were 16 and 66 respectively. Appended are also statements showing information in regard to the plague operations and in regard to inoculation.

Returns showing information regarding Plague under the following headings for the week ending 6 A.M. on Saturday the 24th December 1898.

Section.		Population by Census of 1891.	Average weekly Mortality.	Actual Mortality for the Week.	No. of Plague cases discovered.			No. of Patients removed to Hospitals.	No. of Persons sent to Hospitals or Camps as Contacts.	No. of Persons segregated in private quarters other than Authorized Hospital or Camp.		Houses inspected.	Houses disinfected.	Houses or whole floors vacated.	No. of Persons sent to Camps as Evicts.

* Too ill to be removed.
† One case presumably suspicious.
‡ 3 cases of Relapsing fever and one under observation.
§ 2 cases of Relapsing fever.

NOTE.—The total number of cases discovered is shown. If a man is discovered sick he is entered as an attack, but if he subsequently dies he is not again entered as a death. Similarly when the first intimation of a case is after the patient's death, he is entered as a death, but not also entered as an attack.

No. 100/P of 1899

GENERAL DEPARTMENT: (Plague)

Bombay Castle, 7th January 1899

FROM

THE (ag: chief) SECRETARY TO GOVERNMENT;

To

THE SECRETARY TO THE GOVERNMENT OF MADRAS.

SIR,

I am directed to forward, for the information of the Government of Madras, the marginally noted Notifications issued by this Government, ~~under the Epidemic Diseases Act, 1897~~.

No. 6945/7049P dated 19th December 1898
No. 7098/7200P dated 27th December 1898
No. 13P dated 4th January 1899

I have the honour to be,

Sir,

Your most obedient Servant,

For acting chief Secretary to Government.

× By Book Post.
