Weekly Report of Plague in Mysore, for the week ending 6th January 1899.

—○:o:○—

I. Civil and Military Station.

The following are the figures of plague during the week compared with the three previous weeks.

	Plague cases.	Plague deaths.	Deaths from all causes.
Week ending 16th December	516	415	483
,, 23rd ,,	309	261	324
,, 30th ,,	149	144	201
,, 6th January	82	68	128

The steady decrease has thus continued, and has been general throughout the town. Two of the fourteen medical circles remained entirely clear of plague throughout the week, for the first time since the spread of the disease, and in only five of the circles did plague continue to have any hold. Arrangements are being carried out to evacuate Knoxpett, a suburb of the town inhabited by a low caste population, among whom plague has lingered persistently A large number of coolies have been obtained from Belgaum, and the disinfection carried out by them will, it is hoped, stop the remnants of the disease in the interior of the town. The recorded plague cases and deaths now amount to 3,794 and 3,127 respectively but this is subject to the necessity, pointed out in previous reports, of allowing for incorrect recording of deaths in the early stages of the epidemic.

2. The reporting of cases continues to improve, and for the first time the cases of plague seen living by the medical officers exceeded those inspected after death. This may be considered satisfactory when the considerable proportion, especially among the aged and the very young, is considered in which the patient dies before the relatives can realise the seriousness of the illness. Attempts at burial without certificates have ceased, except in a few cases of obvious ignorance. One case of abandoning a patient in a nullah was detected and the offender sentenced to a month's imprisonment.

3. The cases during the week were distributed as follows:—

Mahomedans	14	Native Christians	7
Hindus	40	Pariahs ...	21

For the first time, one of the regimental sepoys on disinfection duty was attacked. He had been twice inoculated, and is recovering. The sepoys and coolies have suffered little from the disease; three of the latter, who were on ambulance work have died, but they were uninoculated.

4. During the week 111 persons were sent to segregation, and 46 others were exempted, on account of having been inoculated. The figures of the contact camps were:—

	Remaining.	Admissions.	Developed plague.	Discharged.	Remaining.
North Camp...	61	47	2	64	42
South Camp...	133	64	2	116	79

5. The inoculation figures were as follows:—

Captain Leumann, I. M. S.	...	...	227
Lieutenant Stevenson, I. M. S.	...	...	285
Lieutenant Dick, I, M. S.	...	...	54
Assistant Surgeon Appiah	...	...	174
			740

Of these 66 were second inoculations, and 91 were among Mahomedans. The total from the beginning, in addition to those done by medical officers on military duty, now amounts to 27,096 first and 882 second inoculations. Efforts are being made to get the people returning from outside inoculated as they reoccupy their houses, with a view both to the necessity of ending the present outbreak, and to the possibility of a second one.

During the week 10 inoculated persons were stated to have been attacked, but in 5 instances the statement appeared very doubtful, and all are subject to verification.

The hospital figures for verified inoculates now stand.:—

	Total admitted.	Discharged.	Died.	Remaining.
North Camp ...	33	11	5	17
South „ ...	38	14	10	14

6. The number of houses disinfected during the week was 782, and Rs. 336 was paid in compensation under this head. Many houses are being done by their owners, under the supervision of the disinfecting officers, and with the larger supply of labour available this branch of the work, now the most important, is proceeding far more rapidly.

During the week, the European soldiers who had been serving as escorts and orderlies to the medical officers were found to be no longer required in this capacity. Some were returned to military duty, and the remainder, to the number of 25, have been retained to supervise the gangs of coolies, under the Military Officers employed on this duty.

7. The hospital figures for the week were:—

	Remaining.	Admitted.	Discharged.	Died.	Remaining.
North Camp ...	94	21	28	13	74
South „ ...	133	24	33	18	106

The figures from the commencement now are:—

Admissions	...	...	...	1,617
Discharges	...	...	...	439
Deaths ...	...	...	...	998
Remaining	...	...	...	180

8. The camp at Venarapet has afforded another striking instance of the immediate success of evacuation. Cases had been occurring daily in the village; on the morning after the removal of the people, three were found in the huts: since then there have been none, and the health of the people has been so good that they will be allowed during the present week to re-occupy the village, which has been thoroughly disinfected.

9. For the first time since the rise of the disease, the arrivals from outside have exceeded the departures from the Station. The people are beginning to return in considerable numbers, and the occurrence of two auspicious days in the present week will probably induce many more to venture back. Their return, coming as many do from infected places, must cause anxiety. Every effort is being made to keep them under observation, and in some quarters the people who have remained and survived through the disease are anxious to assist the authorities in checking the unauthorised return of these who fled. The inward inspection of all trains arriving at Bangalore has been resumed, and the roads are watched by the police of the Mysore State.

II. Bangalore City.

10. The following are the figures in the City for the last four weeks.

	Plague cases.	Plague deaths.	Total mortality from all causes.
Week ending 16th December	87	51	135
„ 23rd „	55	50	115
„ 30th „	29	31	77
„ 6th January 1899.	14	22	63

The death rate is extremely low, and everything points to an early termination of the desease. The number of recorded seizures and deaths now amounts to 3,289, and 2,615 respectively. The total mortality due to plague is better shown by the accompanying chart, which by accident was not sent with last week's report.

11. The return of the people to the town continues, but it has been found possible to persuade all those who have come from the surrounding districts to undergo inoculation before re-occupying their houses, and all who appear in any way suspicious are detained for 10 days in the Health Camp.

12. The figures for the Health and Segregation Camps were as follows for the week.

	Remaining.	Admissions.	Discharges.	Developed Plague.	Remaining.
Health Camp ...	827	74	15	...	886
Segregation Camp ...	82	13	56	2	39

13. During the week 1,032 inoculations were performed, of which 38 were second inoculations. The totals since the commencement are now 26,157 first, and 1,317 second inoculations; 2,691 of these have been among Mahomedans. 217 inoculates are reported to have been attacked, of whom 143 have been verified.

14. The Hospital figures were as follows:—

Remaining.	Admitted.	Discharged.	Died.	Remaining.
42	5	15	15	17

and the totals since the commencement now are:—

Admissions	...	...	...	2,072
Discharges	...	...	...	714
Deaths	...	...	...	1,341
Remaining	...	...	...	17

The figures of inoculates in hospital are:—

Admitted.	Discharged.	Died.	Remaining.
96	54	38	4

15. During the week 230 houses were disinfected, and 15 cleaned before re-occupation.

III. Mysore State outside Bangalore.

16. The accompanying weekly return furnished by the Mysore State shows that the disease is probably still increasing. The return has however been very incorrectly compiled. In the Kolar District, for instance, the daily reports show 143 cases and 121 deaths to have occurred indigenously, while only 49 cases and 35 deaths are shown in the weekly return. The disease seems to be infecting many of the smaller villages.

17. Inoculation is being willingly accepted throughout the province, 3,135 persons having undergone it in the Bangalore District alone, and almost as many in other districts. The infected villages are being freely evacuated, and, although the efficiency of the arrangements necessarily depends on the energy of the local subordinates, and probably varies largely, yet so far as can be judged, the work is being well carried out.

18. In Mysore City only 67 cases and 46 deaths were recorded in the daily reports. The total mortality, however, rose to 238, and the town is undoubtedly thoroughly infected. The small number of cases reported shows that the concession of allowing the sick to remain in their houses does not lead the people to report the cases as plague with any greater readiness. The ward system has been extended throughout the town, and all houses in which deaths of all kinds occur are, so far as possible, disinfected.

P. R. CADELL,
Assistant to the Resident in Mysore.
