From a Notification
in the Fox St. George Gazette
published on the 13th of October
1843, it is observed that the
new Light to be exhibited
at ~~Madras~~
was to be elevated 128 feet
above the mean level of the
Sea and to be seen from
the Deck of a Ship at the
Distance of 20 Miles. The
Government understand
that it has been asserted
~~Madras~~
that the Light is not visible
to such a Distance as to be
seen by Vessels off the
~~Madras~~ ~~Madras~~ and Pulicat
Shoals and to serve as

that
a beacon against ~~those~~
dangers. The Governor
in Council would wish to
know from the Marine
Board whether this is the
case - and if so what
remedy could be applied
