MADRAS RECORD OFFICE.

Government of Madras.

Public Works DEPARTMENT.

G.O. No. <u>3054</u>	Press
<u>329-330</u>	Mis.
Dated <u>14-10</u>	18 <u>63</u> .

Not to be folded or roughly handled

*Proceedings of the Madras Government, Public Works Department,
14th October 1865.*

No. 329. Read the following letter from Captain J. G. RYVES, R. E., Superintending Engineer, 1st Division, to Colonel C. A. ORR, R. E., Secretary to Government, Department Public Works, dated Waltair, 29th September 1865, No. 1,119 :—

SIR,

1. With reference to paragraph 4 of my letter in Proceedings of Government, dated 22nd instant, and paragraph 2 of the Order thereon, I do myself the honor of explaining that during the six months, May to October inclusive, Godavery water carrying silt in suspension flows sluggishly into the Cocanada river and there deposits the silt.

2. Although there generally is a freshet in the Yellairu and other local streams and drainages which fall into the Cocanada river in August, the most effective fresh water scour occurs in November.

3. But these land freshets do not, I think, do much good, they probably bring in nearly as much mud as they scour out. The tidal ebb and flow though very feeble has, I believe, more effect in keeping the channel clear.

4. The report called for in paragraph 3 of the Order of Government will be prepared and submitted without delay.

No. 330.

ORDER THEREON, 14th October 1865, No. 3,057.

CIVIL WORKS, No. 42.

Ordered to be recorded.

(True Extract.)

(Signed) CHARLES A. ORR, Colonel, R. E.,
Secretary to Government.

Superintending Engineer's Office,
7th Dec. 29th Sept 1865
No. 1119.

From Captain J. G. Sykes R.E.
Superintending Engineer, W.
To Colonel C. A. Orr R.E.
Secretary to Govt., D.F.W.

Madras.
Sir,

With reference to para 4 of my letter
in Proceedings of Government dated
22nd instant, & para 2 of the order there-
on, I do myself the honor of explain-
ing that during the six months May
to October inclusive Godavery water
carrying silt in suspension flows slug-
gishly into the Cocanada River and
there deposits the silt.

2. Although there generally is a fresh-
et in the Yellairu & other local
streams & drainages which fall into
the Cocanada river in August, the most
effective fresh water scour occurs in
November.

November.

3. But these land-freshets do not
I think, do much good; they probably
bring in nearly as much mud as they
scour out. The tidal ebb and flow though
very feeble has I believe more effect,
in keeping the channel clear.

4. The report called for in para
3 of the Order of Government will
be prepared and submitted without
delay.

I have the honor to be,

Sir,
Your Most Obedt. Servt.

W. L. S. (Capt. H. E.)

Superintending Engineer, W. P.
