Proceedings of the Madras Government, Public Works Department, 19th September 1866.

No. 506.

Dated 19th September 1866, *No.* 3,014.

CIVIL WORKS, No. 95.

Funds having now been placed at the disposal of Government for appropriation to the construction of the Central Jail which it is proposed should be erected at Vellore, it is desirable that no time should be lost in making a commencement of the work. The Superintending Engineer will therefore hasten the submission of the plans and estimates of the building.

2. As it is desirable that the Jail should be completed as economically as possible, the Government consider that, with the exception of the foundations throughout, and of the Hospital, Store and Office, and the Wards, as also the entrances, the building may be of brick in mud. For the enclosure wall, strong piers of brick or stone in mortar may be built at intervals of twelve or fifteen feet, and the interspaces filled up with a wall of sun-dried brick in clay. The Government are of opinion that considerable saving may probably be made in roofing and palisading, if the latter be entirely constructed of palmyra, and only the trusses and brestsummers of the former of teak, the rafters, the joists and the couples of all the buildings being of palmyra, or of jungle wood if the latter be procurable of tolerable quality at a cheap rate.

PROCEEDINGS of the MADRAS GOVERNMENT.

Under date the 19th Septr 1866.

Read the following

(Here enter No. 186 .)

Funds having now been placed at the disposal of Government for appropriation to the construction of the Central Jail which it is proposed should be erected at Vellore, it is desirable that no time should be lost in making a commencement of the work. The Supg Engineer will therefore hasten the submission of the plans and

and estimate of the building)

2. As it is desirable that the Jail should be completed as economically as possible, the Govt consider that with the exception of the foundations, strengthening the Hospital, Mess and Office, and the wards, as also the entrances, the building may be of brick in mud. For the enclosure wall, strong piers of brick or stone in mortar may be built at intervals of 12 or 15 feet, and the intervals filled up with a wall of sun dried bricks

3. The Govt are of opinion that considerable saving may probably be made in roofing and paling, if the latter be entirely constructed of Palmyra, and only the trusses and beams of the former of teak, the rafters, the joists and the couples of all the buildings being of Palmyra, or of jungle wood, if the latter be procurable of tolerable quality at a cheap rate.
