## Government of Madras.

Public works **DEPARTMENT.**

G.O. No. 4022 Press ~~Mis.~~

423-424.

Dated 20-12-1866.

***Not to be folded or roughly handled***

No. 423. Read the following letter from the Superintending Engineer, 3rd Division, to the Secretary to Government, Department Public Works, dated Bellary, 7th November 1866, No. 2,494 :—

1. With reference to the Orders as per margin,* I have the honor to forward, for the information of Government, an original docket† from the Deputy Assistant Quarter Master General of the Division, with copy of a report from the Officer Commanding Her Majesty's 76th Regiment. You will observe that the Major General Commanding the Division considers that it is not advisable that any further trials should be made, as the cost of the former trials had been so great.

* No. 2,571, dated 4th September 1865.
„ 2,769 „ 20th „ „

† No. 2,165, dated 5th November 1866.

2. I would, however, beg that this department may be permitted to make a trial, as a high wind was blowing when the former trials were made, and as there was no cover to the pan of course a longer space of time was necessary to bring the water to the boiling point. The cost of making the trial would not exceed Rupees 3.

3. A plan of the boiler, &c., is herewith forwarded.

---

Memorandum from the Deputy Assistant Quarter Master General, Ceded Districts, to the Superintending Engineer, 3rd Division, dated Bellary, 5th November 1866, No. 2,165.
Your Docket No. 2,406 of 3rd instant.

Forwards copy of last report on Bug Boilers, received from Officer Commanding 76th Regiment. Since the cover has been put on no trial has been made, as the trials which have already been made have cost so much the Major General does not consider it advisable another trial should be made.

By Order,
(Signed) R. D. THORPE, Captain,
*Dy. Asst. Quarter Master General.*

---

Memorandum from the Officer Commanding Her Majesty's 76th Regiment, to the Deputy Assistant Quarter Master General, Ceded Districts, dated Bellary, 18th May 1866, No. 628-2 M.

Reports as follows on another experiment made with a Bug Boiler :—

1*st.*—It took four hours to boil it full of water.

2*nd.*—It took 416 lbs. of wood to boil the water.

3*rd.*—The fire does not get round the bottom of the boiler for the want of ventilation on the sides, and it is not near enough to the boiler.

4*th.*—The chimney would not draw with the perforated tin fixed in it, and it had to be removed.

(True Copy.)
(Signed) R. D. THORPE, Captain,
*Dy. Asst. Quarter Master General,*
*Ceded Districts.*

No. 424. ORDER THEREON, 20th December 1866, No. 4,022.

MILITARY WORKS, No. 27.

The Government are not surprised to learn that the Bug Boiler reported upon in the foregoing papers was found to require an excessive expenditure of fuel to boil the water within it, as they

observe, from the unskil ful mode in which it is set, that the fire, instead of being placed in a properly constructed grate so that the air should pass through it and carry the flame against as large a surface as possible of the bottom of the boiler, is simply put upon the floor, and whatever heat is generated from it is carried by the draft directly to the flue. Moreover, only a small part of the boiler, equal to three feet in diameter, is exposed to what little heat can reach it. If the same boiler be set somewhat in the mode shown in the accompanying plan, there is little doubt that a comparatively moderate supply of fuel will suffice to heat it.
