**Proceedings of the Madras Government, Public Works Department,
12th May 1874.**

Read the following letters:—

No. 294. From G. S. SAGE, Esq., District Engineer, Cuddapah, to Lieutenant-Colonel J. MULLINS, R.E., Chief Engineer for Irrigation, dated Cuddapah, 7th March 1874, No. 2,377.

- 1 Plan.
1 Abstract Estimate.
1 Specification.

I HAVE the honour to forward papers, as per margin, for constructing a new escape to the Budwail Raycheruvoo tank, the old escape was of rough stone and was destroyed in December 1872.

The ayacut of tank is	2,330
The average of five years	1,837
The highest revenue is	2,063

2. The catchment basin is about 15 miles, heaviest rainfall in 24 hours 13 inches, formula used is $75,000 \times \sqrt{15} = 3,420$ cubic feet a second, and for 4 feet going over requires 105 feet water-way, as there is a natural escape of 50 feet at one end of tank I have only allowed for 50 feet now.

3. The basin is surrounded by hills, but intermediate ground has only a moderate slope.

4. Early sanction is requested to enable work to be built early next official year.

No. 295. From the same Officer, dated Camp at Chittoor, 17th April 1874, No. 16-1.

WITH reference to your No. 204 of 13th ultimo, I have the honour to re-submit papers as per margin for calingulah to Budwail Raycheruvoo, prepared in accordance with your instructions. The delay in re-submitting was caused by my draughtsman having been sick.
