Mr. Andrew Paul
of Ohio

Figure 1 is a 2x2 grid of line graphs. The y-axis for all graphs is 'Percentage of correct responses' ranging from 0 to 100. The x-axis for all graphs is 'Condition' with four categories: Control, MCI, AD, and DLB. The four groups being compared are Control (solid line with circles), MCI (dashed line with squares), AD (dotted line with triangles), and DLB (dash-dot line with diamonds). In the top-left graph (Control group), performance is high (80-90%) for all conditions. In the top-right graph (MCI group), performance is high for Control and AD conditions but drops significantly for the MCI condition. In the bottom-left graph (AD group), performance is high for Control and MCI conditions but drops significantly for the AD condition. In the bottom-right graph (DLB group), performance is high for Control and MCI conditions but drops significantly for the DLB condition.
