Public Works DEPARTMENT

G.O. No.	1911	Press
B.P.—No. 306-5308		Mis.
Dated	15-7-1874	195

Not to be folded or roughly handled

Read the following papers:—

No. 306. From Major J. O. HASTED R.E., Officiating Superintending Engineer, 1st Division, Kistna, to Lieutenant-Colonel J. MULLINS, R.E., Chief Engineer for Irrigation, dated Camp at Weyoor, 11th June 1874, No. 22.

I HAVE the honor to forward herewith sketch plan and estimate for cutting a channel, 6 feet wide at bottom and with side slopes of 2 to 1, to drain the low ground between Lingala sand ridge and the Polarazu Codu into Chinna Komileru swamp, called for in paragraph 33 of your Note No. 309-A, dated 7th May 1874.

1 Plan of Lingala Drainage.
1 Estimate.
1 Specification Report.

2. The channel follows the line of a proposed drainage channel now being estimated for in the completion project, and which will eventually drain the strip of country lying between the Chigurukota channel (extended) and the Polarazu Codu; the fall corresponds with the fall of the proposed channel, of which the details are now being worked out, and which will, I believe, require to be above 20 feet wide at bottom, and the work proposed to be done now is, therefore, a part of the completion project.

3. The discharge of the channel will vary according to the water in the swamp; when the swamp is full the quantity discharged will be very trifling, and, under favorable circumstances, will not probably be more than 45 feet per second; but the sand ridge on which the Chigurukota channel runs being about 12 feet above high water, and the starting point of the channel being the lowest ground between it and the Polarazu Codu, the cut will even in the heaviest rainfall give considerable relief.

4. It would, of course, be better to make the bottom width 12 feet instead of 6 feet, but looking to the amount of the present estimate, I have not ventured to increase the width. If money is forthcoming it may however be increased.

No. 432-C.

No. 307. *Note by the Chief Engineer for Irrigation.*

THE accompanying estimate, amounting to Rupees 3,905, for cutting a drain to relieve lands, the drainage of which is obstructed by the Polarazu Codu canal in the Eastern Delta, Kistna, is recommended for sanction as a Minor New Work chargeable to Capital, as it is part of the drainage of the Kykalur sub-section of the delta, which will be provided for in the completion estimates. The drainage of the land in question was noticed to be much required when the canal was inspected at the end of 1873.

OOTACAMUND, *22nd June* 1874. (Signed) JOHN MULLINS, Lieut.-Colonel, R.E., *Chief Engineer for Irrigation.*

No. 308. ORDER THEREON, 15th July 1874, No. 1,911.

IRRIGATION, No. 30.

THE estimate of Rupees 3,905 for cutting the Lingala drain, in the Kykalur sub-section of the Eastern Delta,

Proceedings of the Madras Government, Public Works Department,
15th July 1874.

Kistna, is sanctioned for execution from the Minor New Works allotment at the disposal of Government; and for the reasons stated by the Chief Engineer for Irrigation, the outlay will be charged to Capital.

(True Extract.)

Lieut.-Colonel, R.E.,
Joint Secretary to Government.

To the District Engineer, Kistna.
,, Chief Engineer for Irrigation.
,, Officiating Controller of Public Works Accounts.

MEMORANDUM.

Requested for reference the under-mentioned papers :—

1 { 3 Enclosures prepared to the Letter from the D.E. Kistna, No. 86 R. 1911 - 15 July /74
@ R. 309 A of 27 May /74 sent with abstract letter.

2 { R. No. 899 - 13 May /74 } Sent with Ch. Engr's Note R. 399

Office of the Chief Engineer for Irrigation,
28 — 7 — 1874.

Head Clerk.

To

The Registrar of the Govt Secl

Kilimo

This Government cannot sanction
expenditure from loan funds; and
is doubtful whether the Government
of India under sanction this small
estimate in anticipation of the
submission of the estimates for the
Kykaloor subsection which will
probably not be received until too
late to do anything this year. The want
of drainage in this particular locality
is a serious inconvenience to the villagers
and the only objection to the work being
carried out from the ordinary grant
is that it will absorb funds that are

under favorable circumstances will not be

not our Electrical. nevertheless as it
is only just that the present state of
things should be remedied as soon as
possible I would suggest that the carrying
out the work by the Irrigation Dept
Grant an Imprest

feet wide at bottom and with side slopes of 2 to 1
to drain the low ground between Lingala sand ridge &
the Pilarazy Canal into Chinna Kourtern Swamp.
called for in para 33 of your note No 309 A dated
7th May 1874.

2. The Channel follows the line of a proposed
drainage Channel now being estimated for in the
Completion Project and which will eventually drain
the strip of country lying between the Chequer
Channel (extended) and the Pilarazy Canal, the
fall corresponds with the fall of the proposed
Channel, of which the details are now being worked
out, and which will, I believe, require to be about
20 feet wide at bottom and the work proposed to be
done now is, therefore, a part of the completion project.

3. The discharge of the Channel will vary according
to the water in the swamps; when the swamps is full
the quantity discharged will be very trifling, and
under favorable circumstances will not probably be

more than 45 feet per second, but the sandridge on which the Chizuncota Channel runs being about 12 feet above High water and the starting point of the Channel being the lowest ground between it & the Pilarara Lagoon, the cut will insure the heaviest rain full time & considerable relief.

It would, of course, be better to make the bottom width 12 feet instead of 6 feet, but looking to the amount of the present estimate I have not ventured to increase the width. If Money is forthcoming, it may however be increased.
