Not to be folded or roughly handled

No. 466. Read the following endorsement of the Chief Engineer for Irrigation, dated Ootacamund, 29th September 1874, No. 30 :—

From J. H. LATHAM, Esq., Chief Engineer and Manager, Madras Irrigation and Canal Company, to Lieutenant-Colonel J. MULLINS, R.E., Chief Engineer for Irrigation, dated Kurnool, 16th September 1874, No. 115.

I HAVE the honor to enclose* copies of the Upper and Lower Sections Reports, together with my own, for the month of August 1874.

* Per Book post.

MONTHLY REPORT FOR AUGUST 1874.

1. There was little rain during the month.	At Kurnool	...	...	2.77
	„ Soonkesala	...	...	2.70
	„ Jupaud	...	...	3.37
	„ Velapanoor	...	...	2.12
				—
			or an average of	2.74.

The water was easily regulated to the required height.

2. Paddy sowing was carried on extensively during this month about Kurnool and many parts of Nundicotkur taluq. But it is impossible to give any reliable estimate of the year's irrigation. The Rules are new and the Curnums have not yet got into the way of sending in the tickets quickly.

3. In Ramalakota taluq applications have been received for 757.35 acres. The actual total for last season was 901.78. Kurnool town irrigation and much of Kulloor and other villages has to be received.

There has already been an increase in the villages of Yeddaroor, Nidjood and Moonagalapaud.

4. In Nundicotkur applications have been received from eighteen villages, but none, from at least seventeen, where lands have been formerly irrigated. Some of the principal villages are included in these last, so that the total received up to date can give no true idea of what the year's irrigation will be. Up to this we have received applications for 998.44 acres in this taluq, and of these in three villages they have already exceeded last year's acreage.

5. In Nundial the total for the portion of this taluq in my range is 184.13 against the actual 106.74 of last year, and as many villages have not yet sent in their applications we may fairly say that the increase here is double already, and will, I hope, be quadrupled before long. Four new villages are included in the list of applicants from this taluq.

6. The Deputy Collector of Nundial has been visiting the villages in the lower ranges of my division, and seems to have succeeded in getting a few ryots to take the water on trial. It is conspicuous that the whole of the applications from these villages are for the progressive rates.*

It may here be remarked that the note to Rule. VI. Clauses 1 and 2, has given rise to much doubt and some little confusion; it has been variously interpreted by those who have had to explain it. In several villages I found the ryots very anxious to have a clear definition of the terms. The explanation given them, which was approved of by the Collector and the Chief Engineer, will be of considerable benefit, and tend to increase this year's irrigation a little.

*Proceedings of the Madras Government, Public Works Department,
21st October 1874.*

7. It must be remembered that we have had an exceedingly early and very wet season. This is much against the interests of the Company. There was no demand for water in Nundicotkur taluq till August.

When the Rules first reached the villages the ryots had sown their dry crops, and I believe they are very fine this year. The Collector has issued instructions to the Curnums, and in many ways assisted us in promoting irrigation.

8. As instructed I have to report that the staff was paid during the 8th and 16th of the month. On the 13th Overseer Sawmy while crossing Calingula No. 1 was thrown on to the ground below and broke his arm in three places. He was brought to the Kurnool Hospital and is going on well at present. I was laid up for a week with fever, and also six of the staff suffered more or less.

KURNOOL,
8th September 1874.

(Signed) C. H. WILKS,
Conservancy Engineer.

LOWER SECTIONS.

Report for the Month of August 1874.

ALL the works of the main canal and distribution channels have been maintained in good condition during the month, and the only works in progress of any consequence were the new sluice at Yalloor, which was partly washed away by the floods of July, but is now nearly finished; the sluice at Lock No. 14 in the 8th Section now complete and its channel nearly done, and the culvert in the Oopoloor Bridge approach which is also complete except the new approach now in hand.

2. In the 10th Section the new sluice and channel for Kokraipully are completed and will shortly be in action. The Goorumpaud channel, a continuation of the Chennai channel into a new district, is commenced, and will, I hope, be finished in time for a late crop of paddy.

3. During the month there were no floods in the Caulee, which, in fact, kept below its average height for the season, and in the Koond towards the end of the month the water was so low as to oblige my shutting all the under-sluices in order to obtain sufficient water in the canal for the 9th section irrigation. The Pennair has been continually rising and falling, but never obtained more than 2 feet over the ancient crest.

Irrigation.—The new rules and rates for irrigation came into action throughout the Kurnool District early in August, and in the Nundial Taluq and upper part of the Sirwell Taluq the knowledge of them seems pretty well diffused among the Curnums and ryots of the villages in the neighbourhood of the canal, but the more distant villages are still many of them quite in ignorance of any change having taken place. Also in the lower part of Sirwell Taluq my Overseers found that in the villages of Rampully, Peddabojanum, Nelampaud and Maddur, no forms of applications had been given to the Curnums, and they and the ryots were entirely ignorant of any alteration in the rates and rules. Notwithstanding this uncertainty and ignorance, there is a marked increase in the amount of first crop ordinary irrigation, and from the reported observations of my Assistants I have reason to expect in the above taluqs an increase of from 50 to 80 per cent. on last season's outturn, but the actual amount of applications received from the village Curnums is not as yet 50 per cent. of the amount of the fields actually irrigated, and if my Overseers delayed supplying water to the fields, until they received the Curnums' applications, the season for sowing would be long past. In the Cuddapah District no

Proceedings of the Madras Government, Public Works Department,
21st October 1874.

attempt has been made to provide application forms for the Curnums, or to promulgate the new rates and rules; we are therefore taking our own printed forms at the new rates, and in Prodatur Taluq the result has so far been very successful. One Overseer has already received applications for 1,028 acres of ordinary irrigation, and will I doubt not double the amount of his last season's first crops. From Cuddapah Taluq I have as yet received no applications owing to my Overseer and his Amins having been during the last half of the month entirely occupied with the settlement accounts for last season, but I have myself seen in the villages of Kotakur, Chennoor, Kokraipully and Cotaloor, preparations making for a large increase of ordinary wet crops, and this, together with my Overseer's reports, makes me hope for an increase of 50 per cent. on last year's first crops.

General.—From the 13th to the 18th instant I was engaged at Adamapully with the Deputy Collector of Cuddapah; on the settlement of the irrigation claims for the season 1873-74 the accounts of Curnums of Chennoor were in such confusion that we were much delayed in that settlement, and at last the Revenue Officers had to accept as correct the measurements taken by my Overseer and his Amins, but as yet I have not received the Deputy Collector's abstract, and therefore cannot complete my report on the whole irrigation in my district for the past season.

The rainfall for August was much less than is usual for that month; at Dhoor, except on the 8th instant, when 3.44 inches fell, the few showers we had only produced a total of 3.99 inches for the month, and at Adamapully, 20 miles south, only 1.30 fell, and at Chintacoonta, 30 miles south, 1.33; the return for Ayaloor has not been made up owing to Mr. Dumphy's absence on duty.

* In Prodatur Taluq.
(Initialed) J. H. L.

The health of my staff has been good during the month except Mr. Dumphy, Assistant Engineer, who has never recovered the effects of the fever he got while the Ayaloor bungalow and compound was flooded in July. All the month he has worked on with continual attacks of fever, which only a period of rest and care will, I think, relieve him from permanently. The dry crops in this district have been very good and are now mostly harvested, and many of them are being replaced with paddy sown for the first time.

DHOOR,

5th September 1874.

(Signed) A. J. DODSON,
Conservancy Engineer.

Chief Engineer's Report to accompany the Divisional Reports for August 1874.

The August just past has been the driest recorded, since 1861, at Kurnool: but the heavy July rain had thoroughly wet the ground. The rainfall here was 2.77. Already in September we have had 5.39 inches. Many rice crops have not needed water from the canal yet, but have found the rain sufficient. I enclose the August rain table, collated from the divisional returns.

The following applications for water for Irrigation have been received:—
14th September 1874, Central Office.

Proceedings of the Madras Government, Public Works Department,
21st October 1874.

The cause of this decrease is, no doubt, due to the prohibition laid by the Madras Government upon the attention of the Company's servants to applications of the ryots for water for their crops—G. O., No. 830, of 3rd July last. This prohibition is based by Government upon the argument that all the proposed methods of sanctioning such attention interfere with the rights of the Secretary of State, by tending to make the application for water a transaction between the Company and the ryot, instead of between the Company and Government—a principle which was strongly approved by the Secretary of State (G. O., 26th August 1869, No. 2,427).

The first of these condemned methods was proposed by me, and approved by the Collector of Kurnool. If that method had been adopted, the ryot would have applied to the Curnum for water, and would have received a ticket to prove that he had applied: and the Canal Overseers were to have orders to make channels and supply the fields of every one who could show a ticket. The condemnation of this method on the ground of interference was specially approved, as above, by the Secretary of State.

The second of the condemned methods was proposed by a meeting of the Collectors, Deputy Collectors, Government Consulting Engineer, Executive Engineer, and the Company's Chief Engineer, and Divisional Engineer, and recommended by the Revenue Board.* By this a ryot might leave his written application to the Curnum, in a form approved, in the hands of a Canal Overseer for transmission to the Curnum;

* Proceedings of the Board of Revenue, No. 1,050 of 6th May 1874.

and the Overseer thereupon at once supplied him with water, and was also authorized and instructed to give the ryot a descriptive receipt for his application, to protect him from overcharge for illicit irrigation. This was no more than any friend of the ryots may do for him except a canal officer.

By the present Rules, as sanctioned on the 3rd July, a ryot can only apply to the village Curnum, who is instructed, at such times as his many other duties permit, to record the application and send the ryot away without any acknowledgment or receipt. The Curnum then sends an advice to the Canal Overseer, by the first convenient official means, who then supplies water. The Canal Overseer, if he visit a village, may inspect the Curnum's record.

Thus the old rotten system was re-established with a slight improvement, in that the Curnum ought to send the Canal Overseer a direct advice, whereas before he ought only to do so to the Tahsildar. But if he used in fact never to do the last, to his own officer, he may possibly not treat the Overseer better. Two favorable changes had taken place, viz, (1) the Government superior officers were now fully alive to the failure of this system, as before tried, and to the importance of the failure; and (2) the ryots, after being accustomed for a year to receive immediate attention to their requirements from the Canal Overseers, might be expected to complain more readily, if not attended to by the Curnum.

But all hopes are fast going down before the impenetrable resistance of the astute Curnums. I have no hesitation in saying that in the Kurnool District the new system has been worked by the Collector with a promptness, completeness, and care, such as leaves nothing wanting to give it a favorable trial. Mr Hope got the new rules, carefully translated, into the hands of the village Curnums, much quicker than I could have done it; for he issued them from his press, and despatched them by the District tapals (posts) seven days after the passing of the Government Order, i.e., on the 11th July. The village Curnums more immediately under him were summoned, and their questions listened to and answered, and fresh notes and commentaries made; and these were communicated to the Deputy Collector, Tahsildars, and Canal Officers. For my part I have gladly aided the Collector to the full extent of my means, in order to get these Curnums to do their work, and to ensure the assistance of the Canal Overseers in case of any hitch or difficulty.

The result, so far, is not encouraging. The Curnums don't record all applications; they don't send advices to the Overseers in time to be of use, the intervals varying from a month downwards. Many applications for parts of fields require measurements which the Curnum may not have the skill, time, or inclination to make, these he must put off, telling the ryot that it is his interest to wait a bit and irrigate on the sly; or else he quietly enters the area of the whole

*Proceedings of the Madras Government, Public Works Department,
21st October 1874.*

field, and let the poor industrious ryot in for more than he bargained for—a tax of Rupees 6 an acre on the irrigated portion; or else he omits the area. If the Overseer complain of the state of the Curnum's book, the Curnum gives the following excuses: that he has not been enabled to measure the field, or that he does not know under which rate it comes, or that he does not understand the rules, or that he has never seen, nor got instructions about, any new rules, (this is chiefly about Sirwell and Koilkuntla,) or that he has no forms.

The above applies to the Kurnool District. The Cuddapah District is not yet brought under the new system; and so the Canal Overseers are taking applications for transmission, as last year; and, had not the Overseer been engaged most of the month with last year's settlement, so that Cuddapah Taluq has not been visited, no doubt the excess of applications in the Cuddapah District would have exceeded the deficiency in Kurnool. In the latter district in the Ramalakota Taluq, immediately under Mr. Hope's supervision, applications up to date are for 757.35 acres, or 240 acres more than this time last year, but in the rest of the Upper Division the applications are for 865 acres less than this time last year.

It seems, therefore, that had we Collectors like Mr. Hope put in charge of each taluq, as he specially looks after the strip of land between the canal and river Toombudra above Kurnool, the old system, as now amended, might work; that Mr. Horsley's inactivity, while he is well-informed of the energetic effort being made in Kurnool to work the new system, and of its result, deserves to be considered prudent and masterly; and that our busy Deputy Collector, of undoubted talent, and with a thorough knowledge of the working of irrigating districts, giving these Rules of application the best trial that can ever be expected for them from the Native Revenue Staff, is found failing from inability or misfortune.

The canal and distributing channels have been maintained in efficient work throughout the month; and where extension of channels is necessary, to meet demand for water, the necessary work has been vigorously pushed, and several considerable extensions in the 8th and 10th Sections are just completed.

SUBMITTED for the information of Government.

2. It will be observed that the prospects of this season's irrigation in Kurnool are not particularly good, though the Collector and Deputy Collector have done all that was possible to make the new Rules widely known, and to afford information regarding them.

3. In Cuddapah, on the other hand, where the advantages offered by those Rules appear to be less well understood, but where the system which has prevailed during the last two or three years of canal officers and employés receiving and attending to applications for water has not yet been done away, irrigation has progressed more satisfactorily. No zeal on the part of the Revenue Officers will, it would seem, compensate for the inability of the Curnums, from whatever cause arising, to do what the canal officers could readily effect.

(Signed) JOHN MULLINS, Lieut.-Colonel, R.E.,
Chief Engineer for Irrigation.

No. 467. ORDER THEREON, 21st October 1874, No. 2,996.

IRRIGATION, No. 33.

THE new Rules were promulgated at a date which was unfortunately late for this season's operations, and it will take time for their influence to be felt throughout the villages commanded by the canal.

2. The Government notice with satisfaction the prompt exertions made by the Collector and Deputy Collector of Kurnool to ensure the understanding of the Rules by the Village Revenue Officers, and it is hoped that an equally favorable report of the arrangements made in the Cuddapah District will ere long be received. Inquiry will be made in the Revenue Department regarding the action taken by the Collector of Cuddapah in connection with the Rules.

3. The question of the manner in which applications for canal water are to be made and recorded cannot be re-opened until some further experience on the subject has been obtained, but at the end of the current season's irrigation reports on this subject should be submitted not only by the Chief Engineer and Manager of the Company, but by the Collectors of Kurnool and Cuddapah also.

4. In the meantime the Board of Revenue will institute immediate inquiry into the dilatoriness of the Curnums complained of by Mr. Latham. It is obvious that these officers may in the manner stated cause serious obstructions to the intentions of Government.

No: 6393

From

The Chief Engr. for
Irrigation

Dated 29. Sept. 1874.
Recd. 12. Oct. 1874.
C. F. Thew.

No: 35.

Submitting
the Chief Engineer's
Report on the Madro
Irrigation & Canal
Company's Canal
for August 1874 -

El. No: 2996. 21-10-74.

Ch 466

Proceedings of the Public Works Department
From the Chief Engineer
& managed Madros
Luz. H. Canal Co. (H. Co. 115 dated
16 Sept 1874)
"Chief Engr for Madros (H. Co. 1630 dated 29
Sept 1874)

2996

The new rules were
promulgated at a date
which was unfortunately
late for this season's opera-
tions, and it will take
time for their influence
to be felt throughout the
villages commanded
by the Canal.

The Government
noted with satisfaction
the prompt exertions made
by the Collector and Deputy
Collector

The B. of Madros
Nucleus recommended
that the Rules
should be reduced
from 6 to 4 ft
is in fact perfect
was decided that this
should be done: but when
it was not done.

This - & the change affects
the agency of currents - all
I believe imperatively necessary

rec. Collector of Thurnool
-ed to ensure the under-
do standing of the rules
by the Village Revenue
Officers, and it is hoped
that an equally fa-
vourable report of the
arrangements made
in the Cuddapah District
will ere long be received.
Enquiry will be made
in the Revenue Dept.
regarding the action taken
by the Collector of Cuddapah
in connection with the
rules.

3. (At present) The
question of the manner
in

I wish
"with a view to
further experience in the
which has been obtained"
I believe we shall
have to adopt the
plan of the N. of Revenue
the L. & C. of Irrigation,
as suggested to do
at first
We add in the mean time the
Board of the. will establish
an immediate inquiry into
the delinquency of the Thurnool
Complained of by the Thurnool
It is obvious that these officers
may in the manner noted
cause serious obstruction
to the intentions of Govt.
MR

Chief Commr. for Thurnool
" & Manager S. C. Cases

S. C. Cases Dept. 29/10/74.

in which applications
for canal water are to
be made and recorded
cannot be reopened,
but at the end of the
current season's irriga-
tion reports on this sub-
ject should be submitted
not only by the Chief
Engineers and Managers
of the Company, but by
the Collectors of Thurnool
and Cuddapah also.

Mr. 29/9/74
G.M.
I have thought
very much about
this matter
and I am
satisfied
that the
arrangement
is a good
one.
