Enclosure 2

The statement transmitted by the Board of Revenue gives the area of irrigation and revenue under the Palas Ancient Channels for Suly 1233 (1873-74) and the Board mention that they have asked the Collector to state, he cannot in future give the Revenue under each canal. In its present form the statement does not show what the irrigation on the right and left bank respectively of the river was, and it will be necessary that the abstract statement should show the irrigation under each principal channel while for the practical purposes of the irrigation Department it will be needful that the areas and revenue under each branch channel, with the tanks supplied by them should be clearly exhibited. The statement submitted has been compiled from numerous details and the latter entered

entered up in regular order will give just that information which the District Engineer and Range Officers want in order that the water available may be turned to the best account by such improvements of the regulating works and such adjustments of the discharge of the branch channels as the circumstances thus brought under notice may indicate to be required.

2. It is of much importance that the statements for all the years should be prepared as far as possible on the same system and with the same details. It will be noticed that column 4 appears to exhibit the consolidated assessment on at any rate nearly the whole area, and that column 5 is the water tax on only a very small part of that area. It is of course necessary that the area to which the water tax ascertains should be noted and that the

the portion on which a consolidated assessment was levied, should likewise be shown separately and columns 4 and 5 bracketed to indicate that this was the case. This arrangement was prescribed in the order of the 18th June 1873, No. 1592. Similar remarks apply to all the other assessment and water

tax columns.
