Wangere District & Native Municipality
Walter of the Public Buildings at Wangere
Specification.

The design of the Building is similar to the
design of District & Municipal Court (enacted by
proclamation & Resolutions dated 7th May 1895
& 1893).

The building is to consist of a Court
room 20' long and 18' wide, an Clerk's room 20' x 18'
a Judge's room 10' x 18', a lost property or
lumber room 8' x 18' and a Record room
16' x 18'. The height from floor to roof inside
is 15' 6" all round. A detached building 25' x 14'
called an Urns which is to be built at the south
west corner of the Building Compound for the
accommodation of parties attending the Court.
The District Collector considers this building
necessary.

The excavation for the foundations of
the main walls should be 2' deep and 5'
wide.

wide at bottom with sides of 1 1/2' at top and
ends of the concrete wall 1 1/2' deep and 1 1/2' wide
at bottom. The coping should be raised 6" and
at distance from the parapet that it cannot be
dragged back again by the workmen when
the masonry is in place. The coping should
be brought to a uniform level with mallet and
rammed.

The benches should be raised by a
concrete to a height of 18" this will rest on each of
3 courses each course to be worked as follows
to a depth of 6" and to be allowed to set
before the next course above is commenced, the
last or 3rd course to be very carefully finished.

The masonry of the four sides is to be
raised 3' over the concrete in 4 courses 1 1/2' high,
the bottom step of the main wall is to be 3'
thick and the top step 2 1/2' thick, the bottom step
of the retaining or verandah wall is to be 2'
thick and the top step 1 1/2' thick.

The basement of the main wall is to be
2' thick and 1 1/2' high all round the basement

of the verandah wall is to be 1' thick and 1 1/2' high.

The main walls are to be 1 1/2' thick
and 1 1/2' high all round.

The masonry is to be of the best quality
made bricks of 9" x 4 1/2" x 2 1/4" laid in English
bond in mortar composed of 1 part of the best
lime and 3 parts of clean sand and 1 1/2 parts
of clean sharp sand.

The walls are to be plastered inside
and out with 3 coats of Chamois in the usual
manner the ground is to be a warm color, the
outside of the walls buff, and the inside light
chamois.

The warm color is to be obtained by
mixing ground Chamois. Buff color by mixing
yellow ochre, and Chocolate color by mixing red
ochre and lamp black with the mortar in each
case the proper proportions should be obtained
by trial beforehand. These colors are to be applied
in each case to the last coat only. The 1st and 2nd
coats to be of lime and sand as usual and
according to the standard specifications of the
District.

Particulars.

The walls under the floor are to be well
watered and rammed and built to a uniform
at a height of 18" below the floor level. The walls
10" thick should thus be put in a uniform and
rammed as before. A layer of 1" of concrete is to be
laid on the ground in the same manner and the
work finished off with a course of concrete. The
bricks should be with Chanane and with mortar
down and smoothed to a perfect finish. The floor
is to be nicely filled in with rich sand or gravel
Chanane.

The roof is to be of the best brick work
Shower proof and square. Cover to be flat and
paved with Chanane border in the usual
manner. Gable ends. Breach to be in air
of the best technique.

The doors are to be 6' x 8' in the clear
13" frame and 13" opening of the best technique.
The panels are to be half sunk on the outer side
of the style and frame and secured in this way,
and not secured in the ordinary way. The panels
and doors are to be 1 1/2" thick and hung on the
frames.

frames with little hinges, the panels are to be 1 1/2"
thick and the frames 5" square. The windows
are to be 12' x 6' in the clear, vertical throughout.
The timber being of the same dimensions as for doors,
the windows of the Record room are to have 3
iron bars each on the outer side, the bars are to
be 3/4" square and kept rigid by 2 flat bars at
equal distances from the top and bottom frames
and from each other. These flat bars are to be
screwed on to the side frames and the uprights
bars will pass through them in the usual
manner.

The clerestory lights are to be 2' square
in the clear and glazed. It may be a question
for consideration whether the upper panes of
these windows should not be closed by wire
netting instead of by glass. This can be settled
during construction. The object would be
for ventilation, but if the walls are left open
between the rafters sufficient ventilation may be
secured in this way and the wire netting may
not be required for the windows. The frames
of the windows are to be 4" square.

The Posts shed is on the
standards.

Standard Plans but as the number of sections
attends the Deputy District Officer is empowered
to be less than the number indicated. When
otherwise the size is reduced.

The materials are to be precisely
the same as for the main building. The dimensions
are clearly shown on the Plans and require
no further description.

A Plain 10' x 8' as shown on the
Plan is provided for the Deputy District Officer.

Recessed Patches are also provided for
in the Columns they are uniformly described
in the accompanying Plans and in the Columns.

The debris is to be removed. The
Compound cleared and leveled and the whole
work finished off in a regular manner. When
it is handed over to the Engineer Department.
