Expenditure during the previous four years

The area of the catchment basin is 0.5 square mile; the maximum flood-supply is calculated at 354 cubic feet per second, for discharging which as surplus there is an opening at the north end of the bund 50 feet in length, in addition to this it is proposed to open a cut 64 feet long at the same end, so as to make an aggregate length of 114 feet available for the surplus discharge and to plant the escape with grass. The bund is much eroded and the estimate provides for its thorough repair.

A longitudinal section of the bund should have been furnished on which the position of the escapes could have been shown.

The estimate is recommended for sanction.
