inclination of
lock gates.

THE Government of India have recently ruled that the rise of the mitre sills of lock gates should be equal to one-sixth of the span, His Honor the Lieutenant-Governor is pleased to direct that this rule shall be observed in all future designs. All locks now under construction should be modified in accordance with this order, if not already at too advanced a stage to admit of its being done.

A rise of $\frac{1}{6}$ th of the span gives an angle at the abutting of the gates equal to $143^{\circ} 07' 48''$, but in order to avoid inconvenient dimensions, the rise may be taken to the nearest half a foot; thus with a lock 20 feet wide, the rise will be $3\frac{1}{2}$ feet, and with a 16 feet lock $2\frac{1}{2}$ feet.
