THE UNITED STATES OF AMERICA
DO hereby certify that the foregoing is a true and correct copy of the original as the same appears in the custody of the Secretary of State.
IN WITNESS WHEREOF, I have hereunto set my hand and the seal of said Department at Washington, D.C., this _____ day of _____, A.D. 19____.

SECRETARY OF STATE

1. The first step in the process of identifying a problem is to define the problem. This involves identifying the symptoms of the problem and determining the scope of the problem. Once the problem has been defined, the next step is to identify the causes of the problem. This involves identifying the factors that are contributing to the problem and determining the underlying causes. Once the causes have been identified, the next step is to develop a plan of action. This involves identifying the steps that need to be taken to solve the problem and determining the resources that will be needed to implement the plan. Once a plan of action has been developed, the next step is to implement the plan. This involves carrying out the steps that have been identified in the plan and monitoring the progress of the implementation. Finally, the last step in the process is to evaluate the results of the implementation. This involves determining whether the problem has been solved and whether the resources have been used effectively.

Figure 1 is a schematic representation of the experimental design. It shows a sequence of four boxes labeled A, B, C, and D. Box A contains a question mark. Box B contains a question mark and a plus sign. Box C contains a question mark and a minus sign. Box D contains a question mark and a plus sign. Arrows indicate a flow from A to B, B to C, and C to D. Below the boxes, there are labels for 'Question' and 'Answer'.
