GOVERNMENT OF MADRAS.
PUBLIC WORKS DEPARTMENT.

4th September 1878, No 3,511 W.

Buildings and Roads
Civil Works

Read the following paper —

No. 41 From J. W. RUNDALL, Esq; District Engineer, Bellary, to the Chief Engineer, Public Works Department, Buildings and Roads, dated Bellary, 22nd June 1878, No 1,287.

I have the honor to submit, for the sanction of Government, an estimate of Rupees 400, accompanied by a plan and report for providing iron railings for the Lock-up on the Taluk Cutchery at Kadlgi.

One plan
" estimate
" report

2 The estimate has been framed at the request of the Collector, by whom it has been countersigned in token of approval.

3 As the work is said to be urgently needed, I solicit early sanction to the estimate and an allotment of funds.

No 42 ORDER-IN-REPLY, 4th September 1878, No 3,511 W.

The estimate is sanctioned, and funds are appropriated from the Provincial Reserve.

2 This sanction has been registered as Provincial, No 92 B, of 1878-79.

Estimate of the probable
cost of improving the lock
up at Andhghur - in the
Gossett Range of the Bellary
District.

References. District Engineer to Range
office, Gossett No 5628 of 25th March 1878

Report

The Thasildars Cutcherry at
Andhghur is built on the old plan
all the rooms opening into a quadrangle,
and the lock up is simply formed by
pulling off a part of one side. The present
enclosure is formed of wooden lattice work
like the sketch in the margin, but this has
decayed a good deal, and besides is very
unsuitable on the score of ventilation. The
simplest design that could be adopted has
been made, on the double ground of economy
and the difficulty we shall have in getting
any thing

anything in the way of
of iron bars or rods in such a way
interior, with a view to the
sides of the structure, and to be
replaced by iron bars or rods
to be in such a way as to
prevent the structure from
sinking or settling in any way
or in any other manner.

Specification.

All the vertical bars to be of good
iron $\frac{3}{4}$ " of an inch diameter, (except
those marked a.a. in the drawing, which
are to be 1 inch diameter) and to be 3"
Centre to Centre. The rods to be run
through flat horizontal bars $2 \times \frac{1}{4}$ ", the
top & bottom bars to be spiked to the
timber as shown in the drawing and, when
possible, the intermediate flat bars
are to be bolted to each other right
through the uprights, the part of the iron
bolt projecting beyond the nut to be
hammered down so as to prevent the
nut being unscrewed. The vertical
rods marked a.a.a. are to have small
holes drilled through them, just below the
under side of the flat bars. Through
these holes a pin is to be driven and
beaten round the bar, so as to prevent the
flat bar sagging under pressure.

The beams & posts to be of the best
Country wood procurable, and dressed
to

... of a ... on the morning ...
... to have ...

... work to be done ...
