8th October 1884, No. 2489 W., Public Works.

2489

GOVERNMENT OF MADRAS.

PUBLIC WORKS DEPARTMENT.

Buildings and Roads.
Civil Works.

Read—the following papers:—

From C. NORFOR, Esq., Executive Engineer, Ganjam Division, to the Superintending Engineer, I Circle, dated Berhampore, 15th July 1884, No. 110 S.E.

1. Map of Cantonment of Berhampore.
2. Resolution of the townsmen of Bapore.
3. Extract from the proceedings of the Berhampore Municipal Board.
4. Letter, No. 193, dated 12th July from Vice-President, Municipal Commission, Berhampore.

With reference to your endorsement, No. 164 G.N., dated 14th ultimo, on G.O., No. 1318 W., dated 26th May last, I have the honor to forward the papers as per margin. The municipality, as a whole, are of opinion that the site selected by His Excellency the Commander-in-Chief is not suitable, and that the one chosen by the townsmen is the only place, where a good drinking-water well can be dug. In this opinion, I concur, and beg to draw your attention to my letter, No. 283 S.E., dated 11th February last. The site of well marked in pencil on the map is behind the old butts, is broken up, and is so circumstanced that the parade of troops there would be impossible.

2. There appears a good spring and an abundant supply of water near the tank at the south end of the parade ground, and as the proposed well is to be fifty yards away from the nearest military well, I do not see how it will interfere with the water-supply of the latter.

3. The parade ground, as Mr. Walch stated, can well be defined to include everything within the footpath shown in the plan, and in this opinion His Excellency the Commander-in-Chief apparently concurs, inasmuch as no objection has been raised by him to it.

Enclosures.

From the Vice-President, Municipal Commission, Berhampore, to the Executive Engineer, Ganjam Division, dated Berhampore, 12th July 1884, No. 193.

In forwarding extract from the resolution No. II of the Berhampore Municipal Board, held on 27th June 1884, I have the honor to inform you that the proposed site is distant about fifty yards from well No. 9, and it, therefore, is unlikely to interfere with the water-supply of that well. The Officer Commanding the station claims that the selection of this site will interfere with his parade ground. The opinion of all the Commissioners except the Divisional Officer is that it cannot do this, as the footpath found in the plan has been in existence from time immemorial, and has all along been freely and uninterruptedly used by the civil population and has been regarded as the boundary of the parade ground. The proposed site is beyond the said path. The same Commissioners state that the well No. 9 was able to supply the wants of both the civil and military population without drying up. Mr. Mounsey, the Special Assistant Collector in charge of the Goomsur Maliahs, and who has had the charge of the Berhampore division for the last two months, and who was Chairman of the meeting, however, thinks that this was not the case in the hot weather of 1882, and further that the apparent boundary of the parade ground is outside the pathways laid down in the map of 1876, and he has never heard during these years that any one considered these pathways to be the boundaries.

Extract from the Proceedings of the Berhampore Municipal Board at a Special Meeting held on Friday, the 27th June 1884.

* * * * *

II. Read letter, dated 20th June 1884, No. 102 X., from the Executive Engineer, Ganjam, requesting to inform him the opinion of the municipality as to the suitableness or otherwise of the site selected by His Excellency the Commander-in-Chief.

Read also G.O., dated 26th May 1884, No. 1318 W., directing the Superintending Engineer, I Circle, to prepare at once an estimate for a well for the civil population in the cantonment of Berhampore, if the site therefor indicated by His Excellency the Commander-in-Chief be considered suitable by the municipality.

Read also letter, dated 26th June 1884, from the Honorary Secretary of the Berhampore Association on behalf of the inhabitants of Bapore, stating that the site selected by His Excellency the Commander-in-Chief is not a suitable one for the construction of the proposed well, as it is apprehended that the water will turn out to be equally brackish with that of wells Nos. 12 and 13; that the spot already pointed out by the Association at right angles to Nos. 8 and 9 in the sketch plan is the best and most convenient; and that they can think of no other place near or convenient enough to the inhabitants of Bapore, where the new well may be sunk with a view to fresh drinkable water being obtained there.

Resolution.—Resolved that the site selected by His Excellency the Commander-in-Chief is not suitable, wells Nos. 12 and 13 not being used for drinking purposes, and that no other suitable site except that already selected near well No. 9 can be found.

The Chairman dissents from the latter part of the above resolution, as he agrees with the Officer Commanding the station, who states that that site will interfere with his parade ground.

From M.R.Ry. N. RAMAMURTI, Honorary Secretary, Berhampore Association, to the Chairman and Councillors, Berhampore Municipal Corporation, dated Berhampore, 26th June 1884.

With reference to your foot-note No. 151, dated the 23rd instant, to G.O., of 26th May last, No. 1318, I beg to state that the Association has called a meeting of the inhabitants of Bapore, and the following resolutions have been passed by the Municipal members of the Hindu and Muhammadan communities that attended the meeting under the presidency of M.R.Ry. Jayanti Ramakrishnayah Pantulu Garu, the Town Sub-Magistrate.

(1) Resolved that, in the opinion of the townsmen, the site selected by His Excellency the Commander-in-Chief is not a suitable one for the construction of the proposed well, as it is apprehended that the water will turn out to be equally brackish with that of wells Nos. 12 and 13.

The wells Nos. 12 and 13 do not supply good drinkable water, and, during a greater part of the year, are in a perfectly abandoned condition, recourse being had to them only in the hot season by the people living in the neighbourhood for water for ordinary household use only, the wells in the backyards of their houses, with a few exceptions, drying up. If wells Nos. 12 and 13 were fresh-water wells, another well about the same place would be quite superfluous, and one single fact may be mentioned to show that the water of these wells is not used for drinking purposes, and it is this:—these two wells are nearer to the sepoy lines by two to three hundred yards than wells Nos. 9 and 10, and the military authorities would not have passed over them if the quality of the water they supply had not been bad.

Under these circumstances, it cannot be presumed that a new well dug about, or near, wells Nos. 12 and 13, as suggested by His Excellency the Commander-in-Chief, will supply a better quality of water than those already existing on the spot.

(2) Resolved that it is the opinion of the townsmen that the spot already pointed out by the Association at right angles to Nos. 8 and 9 on the sketch plan is the best and most convenient.

The ground at this part is very low, and the presence of two fresh-water wells in the neighbourhood encourages a hope that the new well if sunk here is likely to supply good water for drink, and the people will not grumble on the score of distance or inconvenience, as it will be situated near the old well, from which they had been so long drawing water before it was taken possession of by the military. The objection raised by His Excellency the Commander-in-Chief may not be very serious after all if viewed in the following light:—The old well No. 9 used to supply water to the civil and military population alike, and its supply was never known to have run short before, and now that it is exclusively used by the military population alone, the construction of the proposed well on the spot pointed out will not at all interfere with the supply of the old well, at best it may equalize the supply to both. It is not uncommon for a number of wells to be all grouped at one place near each other, such as, for instance, the well-known Seven Wells of the Black Town and their namesake in Vizagapatam. The new well may not be dug deeper than the old well, and the civil population will not grudge their brethren of the military to avail themselves of the water of the new well as well if they choose.

2489
2

(3) Resolved that it is the opinion of the townsmen that they can think of no other place near or convenient enough to the inhabitants of Bapore where the well may be sunk with a view to fresh drinkable water being obtained there.

In conclusion, I am desired to request that if the Public Works Department concurs, as the correspondence shows it has concurred, with the townsmen in the suitability of the spot already selected by them, you will be good enough to bring the representation of the inhabitants of Bapore to the notice of Government and early secure to them a source of healthy drinkable water, as the water of the only tank which supplies at present drinking-water to Bapore must be more or less unhealthy for some time after the rains.
