

GOVERNMENT OF MADRAS.

REVENUE DEPARTMENT.

READ—the following Proceedings of the Board of Revenue, dated 25th November 1884, Mis. No. 11112 :—

Read—the following letter from C. A. GALTON, Esq., Collector of Anantapur, to the Secretary to the Board of Revenue, dated Kottacheruvu, 16th November 1884, No. 519 :—

With reference to Board's Proceedings of 13th November, Mis. No. 10666, I have the honor to explain that I made no mention of artesian wells in my report on the state of the season in the Gooty and Tadpatri taluks, because I had already gathered from a passage in His Excellency the Governor's tour minute that the result of the inquiries made on the subject was not such as to hold out any prospect of success. In G.O., dated 7th September 1883, Mis. No. 1752, Public Department (not communicated to the Board apparently), is recorded a letter from Mr. Bruce Foote of the Geological Survey stating that "the geological configuration of the district, as far as is known, is such as totally to preclude any hope of successful borings for wells on the artesian principle." Mr. Bruce Foote also mentions that his opinion coincides with that formed by other officers of the Geological Survey of India acquainted with this part of the country. Under these circumstances it would be useless to make any experiments. I mentioned in my report that the Resident Engineer, Gooty, had bored to a depth of nearly 50 feet through rock without meeting with water. I can suggest no expedient beyond cleaning out existing wells, many of which are at present choked with silt, which might be removed at no great cost. I saw several wells in the town of Gooty itself which are now quite dry, but would, I believe, yield a supply if cleaned out. There is a large reservoir in the centre of the town which would contribute a considerable supply, but the water now in it, which is not fit for drinking purposes, must first be baled out, and steps taken to prevent the water being polluted afterwards. I have already instructed the Deputy Collector to reserve the square tank near the dispensary for drinking, and to prohibit bathing or the washing of cloths in it. If the Government will give a grant from Provincial Funds, the money will be expended to the best advantage by the Deputy Collector, who knows the localities which stand most in need of help, and will personally supervise the work. The Local Fund Board have no funds whatever, otherwise I would have taken steps to procure an allotment.

2. I am glad to be able to report much more favorably on this part of the district, the gram crops look most promising, there is an ample supply of fodder and no scarcity of water. The cattle appear to be in excellent condition, and though the tanks have not received a full supply, the ryots will be able to cultivate a portion of the ayacut, or, if they desire to raise dry crops, I shall give them permission to do so, subject to payment of the highest dry rate of assessment. From the appearance of the weather, I should say that the rains are over and that the tanks are not likely to receive a further supply. I will report more in detail on return to head-quarters after finishing my tour.

Resolution—dated 25th November 1884, Mis. No. 11112.

Submitted for the information of Government.

2. In a demi-official note received this morning, Mr Galton reports that there was rain in his district on the 21st. The Collector is requested to report if the aid now solicited will still be required.
