GOVERNMENT OF MADRAS.
PUBLIC WORKS DEPARTMENT.

General.
Establishment.

READ—the following letter from M.R.Ry. D. ANANTHAYA GARU, Rao Bahadur, Chairman of the Municipal Council, Adóni, to the Chief Secretary to Government, dated Adóni, 1st December 1887, No. 214:—

With reference to G.O., dated 22nd October 1887, Mis. No. 1085 M., I have the honor to inform you that I placed Mr. Garrett's note before the council, and, as requested by them, I have the honor to report as follows.

2. Mr. Garret seems to be favorably disposed towards taking up the Nallacheruvu tank for the supply of water for the town of Adóni.

3. Upon Mr. Garret's report what the council now desire to do is that a thorough water scheme should be prepared by an experienced professional Engineer, as suggested by the Collector, Mr. Goodrich, in his letter of the 1st December 1886, No. 3910, a copy of which has already been forwarded to Government with my letter of the 15th March 1887, No. 219. I am therefore requested by the council to make an earnest request, on behalf of the council, to spare the services of a well-experienced Government Engineer to prepare the necessary estimates, &c., without burdening the municipality with any cost for his pay or allowances.

4. The savings of this municipality in a year, after paying all the fixed charges of Rs. 17,000, are only Rs. 5,000 if no expenditure be made on any other new improvements or on any new works, though the town is badly in want of many other improvements, especially in the way of widening the tortuous lanes by removing some of the houses, &c. As the council are very anxious to have, in the first instance, a good drinking water supply, they have resolved upon putting off all other improvements till these intended water works are completed.

5. Under these circumstances the council trust that Government will be pleased to depute a professional Government Engineer, well experienced in such matters, to prepare the necessary specifications, plans and estimates, without charging the municipality with any cost in the way of the Engineer's pay or allowances. The Government were pleased to lend free the services of an experienced Engineer to the Cuddapah Municipality, whose income is much larger than that of this municipality, which is poor owing to the poverty of the population, which is, however, larger than that of Cuddapah.

6. The following outline of the work the council desire to carry out for the present in connection with this water supply will show that the Engineer's services will not be required for a very great length of time.

7. All that the council intend doing for the present for the water supply is this—

I. The supply channels of the tank are to be put in thorough order to prevent any diversion of water.

- II. The bund of the tank is to be raised and strengthened to ensure an unfailing supply of water required for two years to the 25,000 inhabitants and the cattle of the town.
- III. The area of the municipal town being about 3 square miles, not less than 24 cisterns, like wells, will have to be constructed in different parts of the town as to meet the convenience of the inhabitants of the whole town. They must be so constructed as to prevent all percolations therein of any impurity.
- IV. Pipes should be laid to carry water from the tank to the said cisterns, as well as to the several good pukka-built public wells scattered throughout the town. They are all rain-fed, having no springs of any kind. In a good season, when there is a good rainfall, these wells receive a very scanty supply of water, just sufficient for about three months in a year, for a few houses in their neighbourhood.
- V. The pipes should be so laid as they might be extended throughout the town if the tank and the cisterns receive and hold such a good and large supply of water as would suffice to be taken by pipes to every street in the town, as it has been done in some of the towns fortunately situated as regards water supply.

8. In conclusion, I am requested by the council to request Government to be good enough to pass early orders on this letter, and lend the services of an experienced Government Engineer without delay, as the water supply of the town is the saddest want felt by the inhabitants of the town, and the council are very anxious to do something in that direction at as early a date as possible with the kind assistance of Government now asked for in this letter.

9. The resolutions of the municipal council are herewith forwarded.

No. 5078.

Submitted to Government for favorable consideration.

7th December/1887.

thorough water scheme should
be prepared by an experienced
professional Engineer, as
suggested by the Collector
Mr. Woodruff in his letter
of the 1st December 1886
No. 5910 a copy of which
has already been forwarded
to Government with my
letter of the 15th March 1887
No. 219. I am therefore
requested by the Council
to make an earnest request
on behalf of the Council
to spare the services of a
well experienced Government
Engineer to prepare the
necessary estimates &c.
without burdening the
Municipality with any
cost for his pay or
allowances.

4. The savings of this
Municipality in a year, after
paying all the fixed charges
of Rs. 17000, are only
Rs. 5000. If no expenditures
made on any other new improve-
ments or on any new
works. Though the town
