Column B.—Items Nos. 6 and 12.—At the north pier, the Titan Crane was taken out and got into position for setting blocks on the 4th July, from which date very rapid progress was made, which is shown by 136 blocks being set against 30 blocks set last July. The advance was therefore 87¾ feet against 18½. With this progress and what has been built since, and continued fair weather, the north pier head should be reached by November.

Do. G.—Items Nos. 6 and 12.—The south peir head was advanced 12¼ feet by setting 31 of the special blocks made for widening the superstructure from the old section of 24 feet to 38 feet wide, which is founded 18 feet deeper. This heavier section contains 24 blocks per course of 6 feet, whereas 10 blocks of the same size, formerly, built a course in the ordinary superstructure; and considering that the excavations are getting deeper each course, and the Crane for setting the blocks is entirely unsuitable for the work, the progress during July must be considered an extraordinary rapid piece of work.

Do. L.—Items Nos. 8, 9 and 11.—Concrete block-making was carried on throughout the month, when 360 blocks were made, showing an outturn of 5,877½ cubic yards of concrete against half the quantity turned out last July. To date, all blocks for the superstructure are made, ⅔rds of the south pier head blocks are completed, and ⅓rd of the special blocks for the north pier head are made and hardening ready to set early next season.

Do. Q.—Item No. 2.—991½ tons of stone was deposited from wagons into the revetment at Cassimode, which, to-date, has prevented further erosion, but the revetment will require feeding with further stone for some time to come.

(Signed) A. L. POGSON,
Engineer, Harbour Trust Board.
