For orders
with reference to
Major Brubaker's
note of 21-2-91,
attached to memo
No 1041 C of 24-2-91

Cu

4-4-91

Sanctioned by
the undersigned
that there is permanent
allowance to be made
for the tools after
repaired & returned
per
L. 91

1045
Copy of letter no 563 dated Thurnool 23rd
March 1891 from J. L. Johnston Esquire Esq.
Engineer Thurnool Division to the Superin-
tending Engineer S. C. Girdle

In reply to your endorsement No 304.5
dated 16th Instant and para 1 of your no. 3612
dated 21 March 1891, I have the honor to state
that a reference had to be made to the Bumbun
Sub Division Officer, whose reply was received
only this day.

2 There are at

(a) Bumbun — 88,668 tools

(b) Thurnool — 49,590 — " —

(c) Deebaguntla 47,436 — " —

arranged in heaps of 2000, the Export and
Import sheds and the present Tahsildar's
butchery (which will probably be given up
to this Department) at Thurnool will
accommodate about 70000 to 80000 tools
and in the same way Deebaguntla will
absorb 20000

3 It remains to house the tools at
Bumbun, where there are in round number
90000. A shed 100' x 30' will be necessary

This shed constructed in Bumbum itself near the present storeroom including removing tools and packing them again will cost Rs 500. If constructed at Papayapalli near the Inspection Lodge including the packing and packing will cost Rs 5200 to 5300.

4. The foundation at the former site will be 6 feet deep and at the latter 3 feet hence the difference in cost.

5. The tools at Bumbum are at present housed in the old Sub Division Lodge and Office a building with insufficient foundations divided into small rooms and whose walls are cracked. The building is unsafe. The tools within are piled up in large irregular heaps and it is useless attempting to keep a correct account of tools so piled up. I know by personal experience that the counting of large heaps varies on each occasion of a count. They have either to be arranged outside in hundreds

or counted from ^{one} heap to another in a room already crowded. In the first case it takes days to arrange them and they are left night after night in the open guarded by irresponsible coolies and in the second case it is easy to make an error of 100 and this necessitates a recount. The chances of error are reduced with plenty of space and tools arranged a thousand or two thousand in a heap. In any doubtful case it would be necessary only to recount some special heap and not the whole quantity of several thousands.

6. If one of the Canal sheds at Stunool is to be cleared for merchant's goods then further accommodation will be required for about 25000 tools and costing Rs 1500.

No 6.

(Copy)

Forwarded to the Chief Engineer P.W. Department with reference to his Memo No. 1041 of 24 February 1891.

If so many tools must be kept at Bumbum, the best site for new shed is admittedly at Papayapalli where the Sub

Divisional Officer is it is the healthiest part
of Lumbani. The post is given at Rs 5300 which
is not considered too high for the safe housing
of some 90000 tools of ports.

The undersigned adheres to his opinion
that it would be better to concentrate the
bulk of these Lumbani Tools at Dharmool
leaving a maximum working balance only
at Lumbani and Nandyal available for
relief works in those parts when required.
