Explosion at Kilmool - I have carefully read the report and letter referring to this explosion. I may say at once that I know of no authenticated instance of Dynamite as supplied to you taking fire spontaneously. In this case the Dynamite appears to have been stored in an ordinary Godown, in which was also stored a lot of miscellaneous articles of iron and steel and probably combustible articles as well. The store was no doubt being constantly entered by workmen, without any precautions being taken against fire. In this country Dynamite would not be allowed to be stored under such conditions. The fact that the building was found in flames immediately after the explosion, some of the beams being charred would seem to show that the fire had been burning some time before the explosion took place.
