To

Sir

I have the honour to submit the following suggestions with reference to the estimates of the Superintending Engineer sent to me with Proceedings No 91 of the District Court.

(1) The Compound wall and pillars, small are estimated to be of the height of $\frac{1}{2} + 3\frac{1}{2}$ or 4 feet from the ground level. It is respectfully submitted that this is rather low height and that it may be changed to five feet in height without much additional expense. On a rough calculation, I find that this will only add about 70 Rupees to the cost of "Brick in clay," about 20 Rs to cost of "Brick work in Churnam" and about 30 Rupees to the cost of plastering, Total 120 Rupees.

(2) Besides the front gate, a small gate (to be locked from inside) might be very conveniently put up at the north western corner (north west of the latrine) as

Letter 4540/92

as to facilitate access to the river and to the street on the northern side. This small gate opening need not be more than three feet broad and might be put up at an expense of 10 Rupees.

3. In front of the front gate, a small tunnel would have to be put up so as to allow the water on both sides of the frontage to run without obstruction underneath the ~~gate~~ and so that carriages might pass over the tunnel ~~by~~ into the Compound without inconvenience. This might cost about twenty Rupees.

Total Cost 150 Rupees over the estimate of 1750 Rupees.

I have the honour to be

Sir

Your most obedient Servant.

I have the honour to return herewith the enclosures to your letter No 367 dated 22nd July ultimo with a copy of a letter from the District Munsif of Srivaigantam No 125 dated the 10th Instant.

2.

The District Munsif considers that the height of the Compound wall is insufficient. But I agree with you in thinking that four feet is a sufficient height for a Compound wall. The other two suggestions made by the District Munsif seem reasonable and may be included in the estimate.
