Buddapah
24th August 1892

From

G. B. Venkataarnier,

Asst. Engineer.

To

The Executive Engineer,

Bellary.

"thru Exec Engineer, Buddapah."

Sir,

In obedience to the Memorandum of the Chief Engineer for Irrigation N^o III dated 20th July 1892, I have the honor to explain the breach of the Gundigerur Tank as follows.

1. The direct cause of the breach was leakage through the newly formed bund across the nanka which is about 80 feet wide at bottom. Previous to breaching there was about 12 feet of water in the tank and it was only when the water rose above this that it leaked through.

2. The leakage was evidently due to the existence of unbroken clods of earth which escaped my notice in spite of the careful supervision that I could possibly exercise residing in a village about 3 miles distant from the tank.

3. The labour employed was Famine labour and as such worked under task system;

consequently, to do their prescribed task the coolies probably did not break up all the clods and this the Maistry and Head coolies connived at as their wages too depended on the task performed by their respective gangs. All this was in spite of frequent warnings and fines.

4. Moreover while the latter half of the work was progressing no water was available for watering the earth work.

5. Lastly as I was new, I was not induced to scrutinize the work done in my absence very minutely and this has taught me a good lesson for my future.

I have the honor to

/Signed/ G. R. Venkatramier
Asst. Engineer.
