20TH FEBRUARY 1893, No. 140, PUBLIC.

GOVERNMENT OF MADRAS.

PUBLIC DEPARTMENT.

READ—the following paper :—

From the Board of Revenue (Land Revenue), dated 23rd September 1892, No. 536.

ABSTRACT.—Suggesting an alteration in the footnote relating to lunar eclipses in the appendix to G.O., No. 754, dated 8th November 1890.

ORDER—dated 20th February 1893, No. 140, Public.

The Board will be informed that the omission to provide for instances in which an eclipse might occur in the evening, and fasting throughout the official hours of work might be necessary, was intentional.

2. As will be seen from the table appended to this order, the instances in which clerks will be prevented from taking their breakfast immediately or not long before starting for office will be of rare occurrence, and the Board and heads of departments may deal with them as may be thought best at the time. No modification of the present rule is called for.

(True Extract.)

C. A. GALTON,
Ag. Chief Secretary.

To the Board of Revenue (Land Revenue).

Note.—The table shows the exact hour of commencement, on selected days in the year, of the fast which precedes a lunar eclipse visible before midnight, at the hour of sunset, and one, two, three, four, five and six hours later.

Yamams are equal periods, reckoned from sunrise to sunrise, equivalent in length to three English hours, and the general custom of orthodox Hindus is to fast in the *yamam* within which an eclipse occurs, and also for the three *yamams* preceding that one. The fast preceding first contact or visibility will therefore cover the period between the hours entered in the minor columns numbered 1 and 3, and in certain instances will approach twelve hours. The hours of sunrise and sunset in the table are those of the leap year 1892. The differences in any year will be very small.

Note.—The table shows the exact hour of commencement, on selected days in the year, of the fast which precedes a lunar eclipse visible before midnight, at the hour of sunset, and one, two, three, four, five and six hours later.

Yamams are equal periods, reckoned from sunrise to sunset, equivalent in length to three English hours, and the general custom of orthodox Hindus is to fast in the yamam within which an eclipse occurs, and also for the three yamams preceding that one. The fast preceding first contact or visibility will therefore cover the period between the hours entered in the minor columns numbered 1 and 3, and in certain instances will approach twelve hours. The hours of sunrise and sunset in the table are those of the leap year 1892. The differences in any year will be very small.

GOVERNMENT OF MADRAS.
PUBLIC DEPARTMENT.

READ—the following paper:—

From the Board of Revenue (Land Revenue), dated 23rd September 1892, No. 536.

ABSTRACT.—Suggesting an alteration in the footnote relating to lunar eclipses in the appendix to G.O., No. 754, dated 8th November 1890.

ORDER—dated 20th February 1893, No. 140, Public.

The Board will be informed that the omission to provide for instances in which an eclipse might occur in the evening, and fasting throughout the official hours of work might be necessary, was intentional.

2. As will be seen from the table appended to this order, the instances in which clerks will be prevented from taking their breakfast immediately or not long before starting for office will be of rare occurrence, and the Board and heads of departments may deal with them as may be thought best at the time. No modification of the present rule is called for.

NOTE.—The table shows the exact hour of commencement, on selected days in the year, of the fast which precedes a lunar eclipse visible before midnight, at the hour of sunset, and one, two, three, four, five and six hours later.

Yamams are equal periods, reckoned from sunrise to sunrise, equivalent in length to three English hours, and the general custom of orthodox Hindus is to fast in the yamam within which an eclipse occurs, and also for the three yamams preceding that one. The fast preceding first contact or visibility will therefore cover the period between the hours entered in the minor columns numbered 1 and 3, and in certain instances will approach twelve hours. The hours of sunrise and sunset in the table are those of the leap year 1892. The differences in any year will be very small.
