Assistant Chief Engineer for Irrigation.

13th February 1884.

Note.— The words "Tank group" in column 4 of the List are inserted when the terminal tank of the group is classed as "Minor" and the name of the group is therefore unknown.

The words "No Anicut at head" in column 4 of the List are inserted when a river system is not supplied by an anicut, and the name of the system is consequently unknown.

ABSTRACT Statement of "Imperial" irrigation works in the Tinnevelly district.

Particulars of work.	Channels. No.	Channels. Length.	No. of tanks.	Present irrigation. Area.	Present irrigation. Revenue.	Average revenue per acre.	Remarks.

4,000—16-8-94.

Local and Municipal Department.

CHIEF SECRETARIAT
MADRAS.

PROCEEDINGS OF THE MADRAS GOVERNMENT.

READ the following papers:—

From the Chairman municipal council, Tinnevelly dated 1st September 1894 No. 332.

One of the defects of the Town is want of good drainage; and the Sanitary Commissioner has prohibited the construction of any new drain except as part of a Scheme. Accordingly the Council resolved, in their Meeting of the 16th April 1894 No. 1 that the Services of a competent Public Works officer should be secured so as to draw up a complete drainage Scheme for the Town with the levels taken for the Water Supply Scheme some years back.

2. I accordingly addressed the Collector on the Subject who seems to have consulted the Superintending Engineer of the Circle who in his letter dated 16th June 1894 No. 287 has replied to the effect that he could spare no Competent Officer that

the matter is one for the Sanitary Engineer's Department and that the Government should be addressed on the Subject.

I accordingly lay the matter before Government for orders. What is wanted is the deputation of a Competent officer for a sufficient period to draw up a complete drainage Scheme for the Town with the helps of levels already taken for the water Supply project, if possible, and if not, with taking fresh levels also; and the Council will be prepared to pay the officer a reasonable amount. I beg that the Council may be informed whether the Government can spare the Services of an officer, what will be the period required for drawing up the Scheme and what will be the probable remuneration of such officer.

4. Copy of the Council's resolution as well as Copy of the Superintending Engineer's letter and the Collector's Endorsement thereon are herein enclosed for the information of Government.

From the Sanitary Engineer to Government, dated 18th October 1894, No. 2327.

With reference to your endorsement No 851, dated 22nd September 1894, I have the honor to refer you to my letter No. 2311 dated the 16th Instant and to State that it will be many years before this department can undertake the preparation of a drainage Scheme for Tinnevelly. The water Supply of Tinnevelly should receive consideration before its drainage and under the circumstances stated in my above letter the preparation of the former Scheme could not be undertaken before 1896 or 97. I therefore propose that the investigation and preparation of a drainage Scheme for Tinnevelly be deferred Sine die.

/Order dated 10th November 1894 No. 1671 M. Mis./

The Municipal Council will be informed that the Sanitary Engineer has so much work on hand at present that he is unable to prepare the drainage Scheme required. The Public Works Department will, however, be requested to State whether a Competent officer is available for the purpose as the Council is willing to provide for the cost of his deputation.

W
19 Nov.

I am afraid Tinnevelly is in no big a hurry. These places must wait their turn - and I am afraid it will be many years before they are all equipped with the water & drainage schemes which they undoubtedly ought to have.

Proceedings, Local and Municipal Dept. No. 1671 M.
Minute dated 10 November 1894.

Note by the Chief Engineer P. W. Dept.:—

I regret that I cannot recommend the deputation of any officer for the purpose specified; the Department is so short handed that it is with the greatest difficulty that its ordinary work can be carried on.

2. It seems questionable, whether any useful result would be obtained from the preparation of a drainage scheme, even if an officer

could be spared for
the purpose; it is not
likely that the Municipality
could be able to carry
out a drainage scheme
and a water supply
scheme simultaneously,
and as stated by the
Sanitary Engineer, the
latter should certainly
have the preference.
