Sir,

I have the honor to submit an indent for a pulley wheel as required for the Priestman's Steam Dredger, sanctioned in G. O No 3075W dated 16-11-91 and supplied to this Division in 1892.

2. The boss of the present wheel is cracked in more than one place and though we must needs continue working with it for want of a spare one, it is in my opinion unsafe and may easily involve –

Serious

serious interruption to the sand-supply. Of the two pulleys at the end of the jib it is the one over which the big or lifting chain passes. Messrs Priestman have no doubt the pattern from which it was cast; but it may save delay for me to mention that its extreme diameter is 1' $9\frac{1}{2}$", bore $2\frac{1}{4}$" and that the chain in use is $\frac{3}{4}$".
