JULY.

Odenthorai Channel

Sanctioning the execution, by the Public Works Department, of the contribution work of demarcating the new diversion cut of — in the Coimbatore taluk.

GOVERNMENT OF MADRAS.

PUBLIC WORKS DEPARTMENT.

Irrigation.

Read—the following paper :—

From J. HANNAN, Esq., Superintending Engineer, IV Circle, to the Chief Engineer for Irrigation, dated Coimbatore, 1st July 1897, No. 124/I.

I have the honour to submit herewith an estimate amounting to Rs. 20, including percentage charges for establishment and tools and plant, for demarcating the new diversion cut of Odenthorai channel in the Coimbatore taluk, Coimbatore district, and to request you will be good enough to obtain the sanction of Government to proceed with the same as a contribution work.

The Executive Engineer has reported that the full amount of contribution has already been recovered from the petitioner.

The necessity for demarcating the new diversion is explained in the report.

Enclosure.

Report to accompany the estimate for demarcating the new diversion cut in the first mile of the Odenthorai channel, Coimbatore taluk.

	RS.
Amount of estimate	20

One Aravamuthu Iyengar of Odenthorai applied to me in December 1896 for making use of a new diversion cut, opened by him at his own expense, in lieu of the main one called the Alavadi channel; and represented that in times of high flood this channel washes down trees on either sides of its banks and the surrounding plantations, thereby causing heavy loss to him. His request was, after making a reference to the Collector who had no objection to the same, granted by me on certain conditions which were accepted by the petitioner.

One of these conditions was that the land occupied by the new cut should be handed over to Government and demarcated at petitioner's cost.

Petitioner has paid the estimated cost of demarcating the land including percentage charges into the treasury.

The demarcation was ordered for the purpose of securing Government right to the land.

Specification.

The stones will be fixed in concrete below ground level and projecting 9 inches above. There will be two stones just at where the diversion commences — two at end and two midway between. They will be fixed 9 feet from the rear toe of lower bank and 6 feet from the upper bank of new cut.

(Signed) A. A. G. MALET,
Executive Engineer.

Order—No. 648 I., dated 13th July 1897.

The execution by the Public Works Department of the work referred to is sanctioned.

(True Extract.)

Under Secretary to Government,
Irrigation Branch.

To the Chief Engineer for Irrigation.
" Superintending Engineer, IV Circle, with two enclosures.
